EXHIBIT T-4

MASTER SPECIFICATIONS

EXHIBIT T-4 (MASTER SPECIFICATIONS)

1. For the purposes of the Project Agreement, the Master Specifications means, collectively, the following documents:

   (a) the negotiating period design development summary identified in Part A of this Exhibit T-4 Master Specifications (the "**Exhibit T-4 Negotiation Period Summary**"); and

   (b) the PGCPS technical specification documents identified in Part B of this Exhibit T-4 Master Specifications (collectively, the "**Exhibit T-4 PGCPS Master Specification Documents**").

2. In the event of any ambiguities, conflicts or inconsistencies between or among any of the documents comprising the Exhibit T-4 PGCPS Master Specification Documents and the Exhibit T-4 Negotiation Period Summary, the Exhibit T-4 Negotiation Period Summary shall prevail in all matters; and

3. For greater certainty, where any element, sketch, feature or other document or item contained in any part of the Exhibit T-4 PGCPS Master Specification Documents is modified, superseded, qualified, conflicts with or is otherwise amended by the Exhibit T-4 Negotiation Period Summary, the Exhibit T-4 Negotiation Period Summary shall prevail.

PART A

EXHIBIT T-4 NEGOTIATION PERIOD SUMMARY

NEGOTIATED DESIGN SPECIFICATION CHANGES (2020.11.19)

NO.	DESCRIPTION
1	Master Specifications, Section 262414 Generator Quick Connect Switchboard is deleted in its entirety.

PART B

EXHIBIT T-4 PGCPS MASTER SPECIFICATION DOCUMENTS

SECTION 07 0150.19
PREPARATION FOR RE-ROOFING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Replacement of existing roofing system in preparation for entire new roofing system.

B. Partial replacement of existing roofing system in preparation for replacement roofing system in designated areas as indicated on drawings.

C. Re-cover of existing roofing system in preparation for entire new roofing system.

D. Removal of existing flashing and counterflashings.

E. Temporary roofing protection.

1.02 RELATED REQUIREMENTS

A. Section 07 5100 - Built-Up Bituminous Roofing.

B. Section 07 5200 - Modified Bituminous Membrane Roofing.

C. Section 07 5300 - Elastomeric Membrane Roofing.

D. Section 07 5400 - Thermoplastic Membrane Roofing.

E. Section 07 5600 - Fluid-Applied Roofing.

F. Section 07 5700 - Coated Foamed Roofing.

G. Section 07 6200 - Sheet Metal Flashing and Trim: Replacement of flashing and counterflashings.

1.03 REFERENCE STANDARDS

A. ASTM C177 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus 2013.

B. ASTM C208 - Standard Specification for Cellulosic Fiber Insulating Board 2012.

C. ASTM C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation 2018.

D. ASTM C728 - Standard Specification for Perlite Thermal Insulation Board 2017a.

E. ASTM C1153 - Standard Practice for Location of Wet Insulation in Roofing Systems Using Infrared Imaging 2010 (Reapproved 2015).

F. ASTM C1177/C1177M - Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing 2013.

G. ASTM C1278/C1278M - Standard Specification for Fiber-Reinforced Gypsum Panel 2017.

H. ASTM D2178/D2178M - Standard Specification for Asphalt Glass Felt Used in Roofing and Waterproofing 2015a.

I. ASTM D312/D312M - Standard Specification for Asphalt Used in Roofing 2016a.

J. ASTM D41/D41M - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing 2011 (Reapproved 2016).

K. ASTM D4601/D4601M - Standard Specification for Asphalt-Coated Glass Fiber Base Sheet Used in Roofing 2004, with Editorial Revision (2012).

L. PS 1 - Structural Plywood 2009.

M. PS 2 - Performance Standard for Wood-Based Structural-Use Panels 2010.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordinate with affected mechanical and electrical work associated with roof penetrations.

B. Preinstallation Meeting: Convene one week before starting work of this section.

1. Attendees:

a. Architect.

b. Contractor.

c. Owner.

d. Installer.

e. Roofing system manufacturer's field representative.

2. Meeting Agenda: Provide agenda to participants prior to meeting in preparation for discussions on the following:

a. Removal and installation schedule.

b. Necessary preparatory work.

c. Protection before, during, and after roofing system installation.

d. Removal of existing roofing system.

e. Installation of new roofing system.

f. Temporary roofing and daily terminations.

g. Transitions and connection to and with other work.

h. Inspections and testing of installed systems.

C. Schedule work to coincide with commencement of installation of new roofing system.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Submit for each type of material.

C. Shop Drawings: Indicate size, configuration, and installation details.

D. Preconstruction Test Reports.

E. Materials Removal Company Qualification Statement.

F. Installer's Qualification Statement.

G. Preconstruction Testing Agency Qualification Statement.

1.06 QUALITY ASSURANCE

A. Materials Removal Company Qualifications: Company specializing in performing work of type specified with at least three years of documented experience.

1. Comply with EPA notification regulations prior to start of roofing removal work.

2. Comply with removal and disposal regulations of local authorities having jurisdiction (AHJ).

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least five years of documented experience.

1. When same installer as new roofing system, comply with related requirements of section indicated for new roofing system.

2. Approved by existing roofing system warrantor to work on existing warranted roof system.

C. Preconstruction Testing: Conduct testing by an independent test agency, in accordance with provisions of Section 01 4000 - Quality Requirements.

1. Infrared Roof Moisture Survey: Conduct ground-based, walk-over type survey of roofing system in accordance with ASTM C1153.

a. Conduct survey using non-destructive testing (NDT) procedures.

2. Submit report of roofing survey including thermal images of suspect roof areas and corresponding daytime photos of these same areas.

3. Provide required testing to locate hazardous materials, such as asbestos, by licensed agency as required for project location.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Ensure storage and staging of materials does not exceed static and dynamic load-bearing capacities of roof decking.

1.08 FIELD CONDITIONS

A. Existing Roofing System: Built-up asphalt roofing.

B. Do not remove existing roofing membrane when weather conditions threaten the integrity of building contents or intended continued occupancy.

C. Maintain continuous temporary protection prior to and during installation of new roofing system.

D. Provide notice at least three days before starting activities that will affect normal building operations.

E. Verify that occupants have been evacuated from building areas when work on structurally impaired roof decking is scheduled to begin.

F. Owner will not occupy building areas directly below re-roofing area.

1. Provide Owner with at least 48 hours written notice of roofing activities that may affect their operations and to allow them to prepare for upcoming activities as necessary.

2. Maintain access of Owner's personnel to corridors, existing walkways, and adjacent buildings.

1.09 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Existing Warranties: Perform this work using methods and materials that will maintain existing roof system warranties.

1. Notify existing roof system warrantor prior to starting this work and obtain written instructions for procedures necessary to maintain this existing warranty.

2. Upon completion of this work, notify warrantor of reroofing completion and obtain documentation to verify that existing roofing system has been inspected and warranty is still in effect.

a. Submit documentation upon project closeout.

PART 2 PRODUCTS

2.01 COMPONENTS

A. Refer to following sections for additional information on components relating to this work:

1. Partial removal of existing roofing system in preparation for new roofing system in designated areas as indicated on drawings, refer to Section 07 5100.

2. Remove existing flashing and counterflashings in preparation for replacement of these materials as part of this work, refer to Section 07 6200 for material requirements.

2.02 MATERIALS

A. Patching Materials: Provide necessary materials in accordance with requirements of existing roofing system.

B. Temporary Roofing Protection Materials:

1. Contractor's responsibility to select appropriate materials for temporary protection of roofing areas as determined necessary for this work.

2. XPS Sheathing: Extruded Polystyrene (XPS) board insulation, ASTM C578.

C. Roofing Recover Materials:

D. Glass Mat Gypsum Substrate: ASTM C1177/C1177M, Type X (special fire-resistant) and moisture resistant.

1. Board Size: 4 feet by 8 feet (1219 mm by 2438 mm).

2. Board Thickness: 1/2 inch (12.7 mm).

3. Board Edges: Square.

4. Fiber-Reinforced Gypsum Roof Board Panels: ASTM C1278/C1278M, water-resistant.

a. Board Size: 4 feet by 8 feet (1219 mm by 2438 mm).

b. Board Thickness: 1/2 inch (12.7 mm).

c. Board Edges: Square.

5. Fiber Insulation Board: ASTM C208, Type II, Grade 2 cellulosic fiber insulating board, 1-1/2 inch (38 mm) thick.

a. Board Size: 4 feet by 8 feet (1219 mm by 2438 mm).

b. Board Edges: Square.

6. Perlite Recover Board: ASTM C728, Type 2 perlite thermal insulation board.

a. Compressive Strength: 45 psi (310 kPa), minimum, at 10 percent deformation.

b. Board Size: 4 feet by 8 feet (1219 mm by 2438 mm).

c. Board Thickness: 1/2 inch (12.7 mm).

d. Thermal Resistance, R-value (RSI-value): 1.3 (0.23) at 75 degrees F (24 degrees C) mean temperature using ASTM C177 test method.

2.03 ACCESSORIES

A. Fasteners: Type and size as required and compatible with existing and new roofing system to resist local wind uplift.

B. Sheathing Paper: Red rosin paper type, at least 3 lbs per 100 sq ft (141 grams per sq m).

C. Base Sheet: Non-perforated, asphalt-coated glass fiber base sheet, Type II in accordance with ASTM D4601/D4601M.

D. Glass Fiber Felt: Asphalt-impregnated, glass fiber felt, Type IV in accordance with ASTM D2178/D2178M.

E. Asphalt Primer: Apply to concrete decking in preparation for temporary roofing, Type II in accordance with ASTM D41/D41M.

F. Roofing Asphalt: Type III or Type IV, in accordance with ASTM D312/D312M.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that existing roof surface has been cleared of materials being removed from existing roofing system and ready for next phase of work as required.

3.02 PREPARATION

A. Sweep roof surface clean of loose matter.

B. Remove loose refuse and dispose of properly off-site.

3.03 MATERIAL REMOVAL

A. Remove only existing roofing materials that can be replaced with new materials the same day.

B. Remove metal counter flashings.

C. Scrape roofing gravel from membrane surface without causing serious damage to membrane felts.

D. Remove damaged portions of roofing membrane, perimeter base flashings, flashings around roof protrusions, pitch pans and pockets.

E. Cut and lay flat any membrane blisters.

F. Remove damaged insulation and fasteners, cant strips, blocking.

G. Remove vapor retarder.

H. Repair existing wood deck surface to provide smooth working surface for new roof system.

3.04 INSTALLATION

A. Coordinate scope of this work with requirements for installation of new roofing system, refer to Section 07 5100 for additional requirements.

3.05 FIELD QUALITY CONTROL

A. Independent agency inspection and testing will be provided under provisions of Section 01 4000.

B. Testing will identify the condition of existing materials and their reuse, repair or removal.

C. Test Reports: Indicate existing insulation moisture content and existing bitumen quality.

3.06 PROTECTION

A. Provide protection of existing roofing system that is not having work performed on it.

B. Provide temporary protective sheeting over uncovered deck surfaces.

C. Turn sheeting up and over parapets and curbing. Retain sheeting in position with weights.

D. Provide for surface drainage from sheeting to existing drainage facilities.

E. Do not permit traffic over unprotected or repaired deck surface.

F. Install recover board over existing membrane.

3.07 SCHEDULES

A. Entire Roofing Area: Remove existing roofing gravel, perimeter flashings, base flashings, counter flashings, vent stack flashings, roofing membrane, insulation and vapor retarder.

B. Remove roof mounted mechanical equipment and electrical equipment.

END OF SECTION

SECTION 07 0150.61
ROOF RE-COATING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Field applied, heat reflective and emissive coatings for existing metal panel and concrete or clay tile roofs.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 09 9113 - Exterior Painting.

1.03 REFERENCE STANDARDS

A. ASTM B117 - Standard Practice for Operating Salt Spray (Fog) Apparatus 2018.

B. ASTM D522/D522M - Standard Test Methods for Mandrel Bend Test of Attached Organic Coatings 2017.

C. ASTM D714 - Standard Test Method for Evaluating Degree of Blistering of Paints 2002 (Reapproved 2009).

D. ASTM D4587 - Standard Practice for Fluorescent UV-Condensation Exposures of Paint and Related Coatings 2011.

E. ASTM D4803 - Standard Test Method for Predicting Heat Buildup in PVC Building Products 2018.

F. ASTM D6904 - Standard Practice for Resistance to Wind-Driven Rain for Exterior Coatings Applied on Masonry 2003 (Reapproved 2013).

G. SSPC-SP 2 - Hand Tool Cleaning 1982, with Editorial Revision (2004).

H. SSPC-SP 3 - Power Tool Cleaning 1982, with Editorial Revision (2004).

I. SSPC-SP 6 - Commercial Blast Cleaning 2007.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data indicating coating materials .

C. Samples: Submit two samples illustrating colors available for selection.

1.05 QUALITY ASSURANCE

A. Maintain one copy of each referenced document that applies to application on site.

B. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with at least three years documented experience.

1.06 FIELD CONDITIONS

A. Do not install materials when temperature is below 45 degrees F (7 degrees C) or above 100 degrees F (38 degrees C).

B. Maintain this temperature range, 24 hours before, during, and 72 hours after installation of coatings.

C. Provide lighting level of 80 ft candles (860 lx) measured mid-height at substrate surface.

D. Restrict traffic from area where coating is being applied or is curing.

1.07 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective work within a five year period after Date of Substantial Completion.

C. Warranty: Include coverage for bond to substrate.

PART 2 PRODUCTS

2.01 ROOF RE-COATINGS

A. Water Based Heat Reflective Coating System for Metal Roofs: Water based, three coat system consisting of manufacturer's metal primer, bonding primer, and polyvinylidene fluoride and acrylic solar reflective color finish coat.

1. Stated by manufacturer as suitable for metal surfaces.
2. Dry Film Thickness: 6 to 8 mils (0.152 to 0.203 mm), minimum.
3. Accelerated Weathering: Pass, when tested according to ASTM D4587 for 3000 hours.
4. Salt Spray Resistance: Pass, when tested according to ASTM B117 for 500 hours.
    a. Rust: 9.
    b. Scribe Creep: 0.007 inch (2 mm).
5. Flexibility: Pass, when tested according to ASTM D522/D522M with 1/8 inch (3.17 mm) mandrel.
6. Blistering Resistance: Pass, when tested according to ASTM D714 for 100 hours.
7. Wind Driven Rain Resistance: Pass, when tested according to ASTM D6904 at 98 miles per hour (158 km/h) for 24 hours.
8. Surface Temperature Reduction Based on Solar Reflectance: ASTM D4803 modified; estimated increase in solar reflectance and emissivity when compared to control sample of conventional acrylic paint.
9. Color: To be selected by Architect from manufacturer's standard range.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that substrate surfaces are ready to receive work as instructed by the coating manufacturer. Obtain and follow manufacturer's instructions for examination and testing of substrates.

3.02 PREPARATION

A. Clean surfaces of loose foreign matter.

B. Remove substances that would bleed through finished coatings.

C. Remove mildew, dirt, grease, oil, chalk and other contaminants that would interfere with the adhesion and bonding of the coating.

D. Existing Painted and Sealed Surfaces:

1. Strip existing paint and coatings from surface.

E. Galvanized Surfaces: Remove surface contamination and oils and wash with solvent.

F. Ferrous Metal:

1. Solvent clean.

2. Remove loose rust, loose mill scale, and other foreign substances using hand tools according to SSPC-SP 2, power tools according to SSPC-SP 3 or blast cleaning according to SSPC-SP 6 or SSPC-SP 7.

G. Protect adjacent surfaces and materials not receiving coating from spatter and overspray; mask if necessary to provide adequate protection. Repair damage.

3.03 PRIMING

A. Apply primer to all surfaces. Apply in accordance with coating manufacturer's written instructions.

3.04 COATING APPLICATION

A. Apply coatings in accordance with manufacturer's instructions, to thicknesses specified.

B. Apply in uniform thickness coats, without runs, drips, pinholes, brush marks, or variations in color, texture, or finish. Finish edges, crevices, corners, and other changes in dimension with full coating thickness.

3.05 CLEANING

A. Collect waste material that could constitute a fire hazard, place in closed metal containers, and remove daily from site.

B. Clean surfaces immediately of overspray, splatter, and excess material.

C. After coating has cured, clean and replace finish hardware, fixtures, and fittings previously removed.

3.06 PROTECTION

A. Protect finished work from damage.

END OF SECTION

SECTION 07 0553
FIRE AND SMOKE ASSEMBLY IDENTIFICATION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Identification markings for fire and smoke rated partitions, and fire rated walls.

1.02 RELATED REQUIREMENTS

A. Section 09 9123 - Interior Painting: Paint finish.

1.03 REFERENCE STANDARDS

A. ICC (IBC) - International Building Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's printed product literature for each type of marking, indicating font, foreground and background colors, wording, and overall dimensions.

C. Schedule: Completely define scope of proposed marking. Indicate location of affected walls and partitions, and number of markings.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years of documented experience.

1.06 FIELD CONDITIONS

A. Do not install adhered markings when ambient temperature is lower than recommended by label or sign manufacturer.

B. Do not install painted markings when ambient temperature is lower than recommended by coating manufacturer.

PART 2 PRODUCTS

2.01 FIRE AND SMOKE ASSEMBLY IDENTIFICATION

A. Regulatory Requirements: Comply with "Marking and Identification" requirements of "Fire-Resistance Ratings and Fire Tests" chapter of ICC (IBC).

B. Applied Fire and Smoke Assembly Identification: Identification markings applied to partition with paint and a code compliant stencil. See Section 09 9123 for products.

C. Languages: Provide all markings in English.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that substrate surfaces are ready to receive work.

3.02 PREPARATION

A. See Section 09 9123 for substrate preparation for painted markings.

3.03 INSTALLATION

A. Locate markings as required by ICC (IBC).

B. Install neatly, with horizontal edges level.

C. Protect from damage until Substantial Completion; repair or replace damaged markings.

END OF SECTION

SECTION 07 1113
BITUMINOUS DAMPPROOFING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Bituminous dampproofing.

B. Protection boards.

C. Drainage panels.

1.02 RELATED REQUIREMENTS

A. Section 07 2100 - Thermal Insulation: Rigid insulation board used as protection board.

B. Section 31 2323 - Fill.

C. Section 33 4100 - Subdrainage.

1.03 REFERENCE STANDARDS

A. ASTM D41/D41M - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing 2011 (Reapproved 2016).

B. ASTM D43/D43M - Standard Specification for Coal Tar Primer Used in Roofing, Dampproofing, and Waterproofing 2000 (Reapproved 2012).

C. ASTM D449/D449M - Standard Specification for Asphalt Used in Dampproofing and Waterproofing 2003 (Reapproved 2014).

D. ASTM D450/D450M - Standard Specification for Coal-Tar Pitch Used in Roofing, Dampproofing, and Waterproofing 2007 (Reapproved 2013).

E. ASTM D1187/D1187M - Standard Specification for Asphalt-Base Emulsions for Use as Protective Coatings for Metal 1997 (Reapproved 2018).

F. ASTM D1227 - Standard Specification for Emulsified Asphalt Used as a Protective Coating for Roofing 2013.

G. ASTM D4479/D4479M - Standard Specification for Asphalt Roof Coatings - Asbestos-Free 2007, with Editorial Revision (2012).

H. ASTM D4586/D4586M - Standard Specification for Asphalt Roof Cement, Asbestos-Free 2007, with Editorial Revision (2012).

I. ASTM D5643/D5643M - Standard Specification for Coal Tar Roof Cement, Asbestos Free 2006, with Editorial Revision (2012).

J. NRCA (WM) - The NRCA Waterproofing Manual 2005.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide properties of primer, bitumen, and mastics.

C. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing the work of this section with at least three years of documented experience.

1.06 FIELD CONDITIONS

A. Maintain ambient temperatures above 40 degrees F (5 degrees C) for 24 hours before and during application until dampproofing has cured.

PART 2 PRODUCTS

2.01 BITUMINOUS DAMPPROOFING

A. Bituminous Dampproofing: Cold-applied, spray-grade; asphalt base, volatile petroleum solvents, and other content, suitable for application by spray, brush, roller, or squeegee; asbestos-free; suitable for application on vertical and horizontal surfaces.

1. Composition: ASTM D4479/D4479M Type I, minimum, asbestos free.
2. VOC Content: Not more than permitted by local, State, and federal regulations.
3. Applied Thickness: 1/16 inch (1.5 mm), minimum, wet film.

B. Primers, Mastics, and Related Materials: Type as recommended by dampproofing manufacturer.

2.02 BITUMEN MATERIALS

A. Hot Asphaltic Type:

1. Bitumen: ASTM D449/D449M, Type I, asphalt.
2. Primer: ASTM D41/D41M, compatible with substrate.
3. Sealing Mastic: Asphalt roof cement, ASTM D4586/D4586M, Type I, asbestos-free.

B. Coal Tar Type:

1. Bitumen: ASTM D450/D450M, Type II, coal tar pitch.
2. Primer: ASTM D43/D43M, coal tar type.
3. Sealing Mastic: ASTM D5643/D5643M, coal tar roof cement, asbestos-free.

2.03 ACCESSORIES

A. Drainage Panel: 1/4 inch (6 mm) thick formed plastic, hollowed sandwich.

B. Protection Board: Rigid insulation specified in Section 07 2100.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions are acceptable prior to starting this work.

B. Verify substrate surfaces are durable, free of matter detrimental to adhesion or application of dampproofing system.

C. Verify that items penetrating surfaces to receive dampproofing are securely installed.

3.02 PREPARATION

A. Protect adjacent surfaces not designated to receive dampproofing.

B. Clean and prepare surfaces to receive dampproofing in accordance with manufacturer's instructions.

C. Do not apply dampproofing to surfaces unacceptable to manufacturer.

D. Apply mastic to seal penetrations, small cracks, or minor honeycombs in substrate.

3.03 APPLICATION

A. Foundation Walls: Apply two coats of asphalt dampproofing.

B. Foundation Walls: Patch disturbed areas of existing dampproofing with two additional coats of dampproofing of the same generic type.

C. Perform this work in accordance with manufacturer's instructions and NRCA (WM) applicable requirements.

D. Prime surfaces in accordance with manufacturer's instructions and NRCA (WM) applicable requirements.

E. Prime surfaces at a rate approved by manufacturer for application indicated, and allow primer to dry thoroughly.

F. Apply bitumen with roller or by Spray Applcation or with mop.

G. Apply bitumen at a temperature limited by equiviscous temperature (EVT) plus or minus 25 degrees F (14 degrees C); do not exceed finish blowing temperature for four hours.

H. Apply bitumen in one coat, continuous and uniform, at a rate of 25 sq ft/gal (0.6 sq m/L) per coat.

I. Apply from 2 inches (50 mm) below finish grade elevation down to top of footings.

J. Seal items watertight with mastic, that project through dampproofing surface.

K. Place drainage panel directly over dampproofing, butt joints, place to encourage drainage downward.

L. Place protection board directly over dampproofing, butt joints, and adhere to tacky dampproofing.

M. Place protection board over drainage panel, butt joints, and adhere with mastic.

N. Scribe and cut boards around projections, penetrations, and interruptions.

END OF SECTION

SECTION 07 1200
BUILT-UP BITUMINOUS WATERPROOFING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Hot applied asphaltic waterproofing.

B. Cold applied asphaltic waterproofing.

C. Hot applied coal tar waterproofing.

D. Cant strips.

E. Drainage panels.

F. Protective cover.

1.02 RELATED REQUIREMENTS

A. Section 07 2100 - Thermal Insulation: Protection board.

B. Section 22 1006 - Plumbing Piping Specialties: Roof drain and plumbing vent flashing flanges.

1.03 REFERENCE STANDARDS

A. ASTM D41/D41M - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing 2011 (Reapproved 2016).

B. ASTM D173/D173M - Standard Specification for Bitumen-Saturated Cotton Fabrics Used in Roofing and Waterproofing 2003 (Reapproved 2018).

C. ASTM D226/D226M - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing 2017.

D. ASTM D227/D227M - Standard Specification for Coal-Tar-Saturated Organic Felt Used in Roofing and Waterproofing 2003 (Reapproved 2018).

E. ASTM D449/D449M - Standard Specification for Asphalt Used in Dampproofing and Waterproofing 2003 (Reapproved 2014).

F. ASTM D1668/D1668M - Standard Specification for Glass Fabrics (Woven and Treated) for Roofing and Waterproofing 1997a (Reapproved 2014).

G. ASTM D2178/D2178M - Standard Specification for Asphalt Glass Felt Used in Roofing and Waterproofing 2015a.

H. ASTM D4586/D4586M - Standard Specification for Asphalt Roof Cement, Asbestos-Free 2007, with Editorial Revision (2012).

I. NRCA (WM) - The NRCA Waterproofing Manual 2005.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide properties of primer, bitumen, mastics, and characteristics of reinforcement fabric.

C. Shop Drawings: Indicate flashings, control joints and expansion joints, sealing at openings, projections, penetrations and reglets, and waterproofing of holes, slots and sleeves.

D. Certificate: Certify that products meet or exceed specified requirements.

E. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

F. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner 's name and registered with manufacturer.

1.05 QUALITY ASSURANCE

1.06 MOCK-UP

A. Construct mock-up 100 sq ft (10 sq m) of horizontal and vertical waterproofed panel; to represent finished work including internal and external corners, sealing, drainage panel, base flashings, control joints, expansion joints and protective cover.

1.07 FIELD CONDITIONS

A. Maintain ambient temperatures above 40 degrees F (5 degrees C) for 24 hours before and during application until membrane has cured.

1.08 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Contractor shall correct defective work within a five year period after Date of Substantial Completion; remove and replace materials concealing waterproofing at no extra cost to Owner.

C. Provide five year manufacturer warranty against failure of waterproofing to resist penetration of water, except where such failures are the result of structural failures of building.

1. Hairline cracking of concrete due to temperature change or concrete shrinkage is not considered a structural failure.

1.09 DELIVERY AND STORAGE

A. Materials Packaging

PART 2 PRODUCTS

2.01 PRODUCT SUSTAINABILITY CRITERIA

Where allowed by performance criteria:

1. Deliver materials in bundles, rolls, and sealed containers in accordance

B. Reduce Volatile Organic Compounds (VOC) Contents

Provide products with reduced VOC content and provide certificates of

compliance in accordance with Section 01 33 29 SUSTAINABILITY REPORTING

paragraph REDUCE VOLATILE ORGANIC COMPOUNDS.

C. Recycled Content

Provide products with recycled content and provide certificates of

compliance in accordance with Section 01 33 29 SUSTAINABILITY REPORTING

paragraph RECYCLED CONTENT.

2.02 BITUMEN

NOTE: Type I is suitable for use below grade under uniformly moderate temperature conditions (foundations, tunnels, and subways); Type II is suitable for use above grade where not exposed to temperatures exceeding 50 degrees C 122 degrees F (railroad bridges, culverts, retaining walls, tanks, dams, conduits, and spray decks); Type III is suitable for use above grade on vertical surfaces exposed to direct sunlight or temperatures above 50 degrees C 122 degrees F.

Asphalt; ASTM D449/D449M, Type I, II or III

1. with manufacturer's printed handling instructions and bearing
2. manufacturer's original labels. Material labels indicate dates for use or
3. shelf life; remove outdated material, damaged, and deteriorated material
4. from the jobsite. Keep materials wrapped and separated from off-gassing
5. materials (such as drying paints and adhesives). Do not use materials that
6. have visible moisture or biological growth.

B. Materials Storage

1. Asphalt
2. Protect asphalt from freezing. Store asphalt in a weathertight enclosure,
3. free from contact with soil. Store and maintain at not less than 10
4. degrees C 50 degrees F for at least 24 hours before use.

C. Reinforcement Fabrics

1. Handle and store reinforcement fabrics in accordance with manufacturer's
2. printed instructions. Protect fabrics from moisture damage and absorption
3. in a weathertight enclosure or off the ground on pallets, and covered on
4. top and all sides with breathable-type canvas tarpaulins. Plastic sheets
5. cause condensation buildup therefore do not use them to cover waterproofing
6. materials.

D. Bulk Liquid Asphalt

NOTE: Bulk liquid asphalt may be included as a Contractor's option when the project is constructed within 160 kilometers 100 miles of a bulk liquid asphalt manufacturer's plant.

Deliver bulk liquid asphalt in fully insulated, heated transport tanker vehicles with circulating pump devices. Maintain the temperature of the liquid asphalt between 204 and 232 degrees C 400 and 450 degrees F during storage, provided the transport and storage time does not exceed 12 hours. If the transport and storage time exceeds 12 hours, lower the temperature to between 150 and 165 degrees C 300 and 325 degrees F at the time the 12 hours are exceeded. Use liquid asphalt within 36 hours after loading in the transport tanker. Provide bulk liquid asphalt certified laboratory reports for results of tests performed on asphalt delivered to the construction site by bulk liquid asphalt tankers.

E. Asphalt Shipment Records

Obtain from the bulk liquid asphalt manufacturer a certified shipping statement for each asphalt shipment. Following completion of the

waterproofing installation, submit certificates to the Contracting Officer for verification and recordkeeping. Indicate the following:

F. Manufacturer's name

G. Specification identification of asphalt

H. Quantity of asphalt

I. Documentation of transport tanker having been empty and free of foreign and incompatible materials at the time of loading

J. Date, time, and temperature of asphalt at time of loading

K.]1.6 Flame Heated Equipment

L. Fire Protection

Locate melt kettles no closer than 8 meters 25 feet from buildings or combustible materials. Provide and maintain two approved 4-A:40-B:C fire extinguishers within 8 meters 25 feet of each operating kettle. Fire extinguishers, operations and locations must comply with NFPA 1 Section Tar Kettles. Equip asphalt (tar) kettles with tight fitting lids.

M. Operational Requirements

Equip kettles with automatic thermostatic control capable of maintaining asphalt temperature. Calibrate and maintain controls in working order for the duration of the work. Equip kettles with means of agitation and ensure they are operating as necessary to produce a controlled uniform temperature throughout kettle contents to prevent spot heating. Do not heat contents above flash point. Do not place flame heated equipment on the roof.

A. Drippage of Bitumen

Seal joints in and at edges as necessary to prevent drippage of asphalt into the building or onto adjacent surface

2.03 MANUFACTURERS

2.04 WATERPROOFING APPLICATIONS

A. Foundation Walls, Basement Walls, Back side of retaining walls : Three plies of hot asphaltic OR Cold asphalitc OR Coal tar waterproofing, glass fiber reinforcing fabric.

2.05 HOT ASPHALTIC MATERIALS

A. Asphalt: ASTM D449/D449M, Type I.

B. Asphalt Primer: ASTM D41/D41M, compatible with substrate.

C. Sealing Mastic: Asphalt roof cement, ASTM D4586/D4586M, Type I, asbestos free.

D. Reinforcing Fabric: Cotton, ASTM D173/D173M, woven, 10 oz/sq yd (340 g/sq m) average net mass of asphalt saturated fabric.

E. Reinforcing Fabric: ASTM D226/D226M Type I ("No. 15"), asphalt saturated felt.

2.06 COAL TAR MATERIALS

A. Coal Tar: ASTM D450/D450M, Type II.

B. Coal Tar Primer: ASTM D43/D43M.

C. Coal Tar Sealing Mastic: ASTM D5643/D5643M, coal tar roof cement, asbestos free.

D. Reinforcing Fabric: Glass fiber, ASTM D1668/D1668M Type II, woven, coal tar saturated.

2.07 COLD ASPHALTIC MATERIALS

A. Asphalt Emulsion: Complying with ASTM D3747.

B. Reinforcing Fabric: Glass fiber, ASTM D1668/D1668M, Type I, woven, asphalt treated.

2.08 ACCESSORIES

A. Protection Board: Rigid insulation specified in Section 07 2100.

B. Drainage Panel: 1/4 inch (6.4 mm) thick formed plastic, and embossed with cover sheet.

C. Cant Strips: Premolded composition material.

D. Flexible Flashings: Formed plastic, butyl.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify substrate surfaces are durable and free of matter detrimental to adhesion or application of waterproofing system.

B. Verify that items that penetrate surfaces to receive waterproofing are securely installed.

3.02 PREPARATION

A. Protect adjacent surfaces not designated to receive waterproofing.

B. Clean and prepare surfaces to receive waterproofing in accordance with manufacturer's instructions.

C. Do not apply waterproofing to surfaces unacceptable to manufacturer.

D. Apply mastic to seal penetrations, small cracks, or minor honeycomb in substrate.

3.03 WATERPROOFING INSTALLATION

A. Install waterproofing in compliance with NRCA (WM) and applicable requirements.

B. Prime surfaces at a rate approved by manufacturer for application indicated, and allow primer to dry thoroughly.

C. Install cant strips at inside corners.

D. Apply moppings of bitumen and embed reinforcement in accordance with manufacturer's instructions.

E. Apply hot bitumen at a temperature limited by equiviscous temperature (EVT) plus or minus 25 degrees F (14 degrees C); do not exceed finish blowing temperature for four hours.

F. Roll or press reinforcing fabric firmly into bitumen eliminating wrinkles, air pockets, or disruptions of continuity. Lap edges and ends . Weather lap sheet materials.

G. Apply two plies of reinforcing fabric at corners, intersections, angles, and over joints.

H. Apply two plies of reinforcing fabric diagonal to inside corner interruptions to membrane.

I. Extend membrane over cants and up intersecting surfaces at membrane perimeter minimum 6 inches (150 mm) above horizontal surface for first ply at subsequent plies laid in shingle fashion.

J. Extend membrane and flexible flashing into drain clamp flange, apply adequate coating of mastic to assure clamp ring seal. Coordinate with drain installation, refer to Section 22 1006.

K. Terminate top edge of membrane and flexible flashing under counter flashings, seal with mastic. Coordinate with metal flashing installation.

L. Continue reinforced membrane over control joints in accordance with reinforcement manufacturer's instructions.

M. Apply coating to fully conceal reinforcement.

N. Seal protrusions to and penetrations through membrane with multiple plies of reinforcement. Seal watertight.

3.04 PROTECTION BOARD AND DRAINAGE PANEL INSTALLATION

A. Place drainage panel directly against membrane; butt joints; position to direct drainage downward.

B. Place protection board directly against drainage panel; butt joints.

C. Adhere protection board and drainage panel to substrate with mastic, and scribe and cut boards around projections, penetrations, and interruptions.

3.05 FIELD QUALITY CONTROL

A. Provide independent inspection agency services under provisions of Section 01 4000 - Quality Requirements.

B. Upon completion of horizontal membrane installation, dam installation area in preparation for flood testing.

C. If leaking is found, remove water, repair leaking areas with new waterproofing materials as directed by Architect ; repeat flood test. Repair any damage to building caused by leaking.

D. When area is proven watertight, drain water and remove dam.

3.06 PROTECTION

A. Do not permit traffic over unprotected or uncovered membrane.

B. Protect membrane and board from damage.

END OF SECTION

SECTION 07 1300
SHEET WATERPROOFING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Sheet membrane waterproofing.

B. ccessories.

C. Drainage panels.

1.02 REFERENCE STANDARDS

A. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers- Tension.

B. ASTM D570 - Standard Test Method for Water Absorption of Plastics.

C. ASTM E96/E96M - Standard Test Methods For Water Vapor Transmission of Materials.

1.03 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data for membrane.

C. Shop Drawings: Indicate special joint or termination conditions and conditions of interface with other materials.

D. Certificate: Certify that products meet or exceed specified requirements.

E. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.04 QUALITY ASSURANCE

A. Membrane Manufacturer Qualifications: Company specializing in waterproofing sheet membranes with three years experience.

B. Installer Qualifications: Company specializing in performing the work of this section with minimum three years experience.

1.05 FIELD CONDITIONS

A. Maintain ambient temperatures above 40 degrees F for 24 hours before and during application and until liquid or mastic accessories have cured.

1.06 WARRANTY

A. See Section 01 78 00 - Closeout Submittals, for additional warranty requirements.

B. Contractor shall correct defective Work within a five year period after Date of Substantial Completion; remove and replace materials concealing waterproofing at no extra cost to Owner.

C. Provide five year manufacturer warranty for waterproofing failing to resist penetration of water, except where such failures are the result of structural failures of building. Hairline cracking of concrete due to temperature change or shrinkage is not considered a structural failure.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Carlisle Coatings & Waterproofing Inc.; Product CCW MiraDRI 860/861.

B. Other Acceptable Laminated Composite Manufacturers:

1. Grace Construction Products; Product Bituthene 3000: www.na.graceconstruction.com.

2. Henry Company; Blueskin WP 200.
3. Substitutions: See Section 01 60 00 - Product Requirements.

2.02 APPLICATIONS

A. Waterproof for building surfaces:

1. Exterior face of foundation/building walls where finished grade is above finished floor elevation; waterproofing installed from top of footing to finished grade elevation.
2. Concealed vertical face of separation of stepped floor elevations.

2.03 MEMBRANE MATERIALS

A. Composite Laminate Membrane: Comprised of 56 mils thickness of rubberized asphalt and a 4 mils thickness of polyethylene film with release liner on adhesive-side; 60 mils total thickness.

1. Tensile Strength: 325 psi, measured in accordance with ASTM D 412.
2. Water Absorption: 231 percent increase in weight, maximum, measured in accordance with ASTM D 570, 24 hour immersion.
3. Water Vapor Permeability: 0.05 perm inch, measured in accordance with ASTM E 96/E 96M.

B. Seaming Materials: As recommended by membrane manufacturer.

C. Membrane Sealant: As recommended by membrane manufacturer.

D. Termination Bars: Aluminum; compatible with membrane and adhesives.

2.04 ACCESSORIES

A. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Manufactured composite subsurface drainage panels consisting of a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 sieve laminated to one side with a polymeric film bonded to the other side of a studded, nonbiodegradable, molded-plastic-sheet drainage core, with a vertical flow rate of 9 to 15 gpm per ft.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify substrate surfaces are durable; free of matter detrimental to adhesion or application of waterproofing system.

C. Verify that items that penetrate surfaces to receive waterproofing are securely installed.

3.02 PREPARATION

A. Protect adjacent surfaces not designated to receive waterproofing.

B. Clean and prepare surfaces to receive waterproofing in accordance with manufacturer's instructions. Vacuum substrate clean.

C. Do not apply waterproofing to surfaces unacceptable to membrane manufacturer.

D. Seal cracks and joints with sealant using depth to width ratio as recommended by sealant manufacturer.

E. Surfaces for Adhesive Bonding: Apply surface conditioner at a rate recommended by manufacturer. Protect conditioner from rain or frost until dry.

3.03 INSTALLATION - MEMBRANE

A. Install membrane waterproofing in accordance with manufacturer's instructions.

B. Roll out membrane. Minimize wrinkles and bubbles.

C. Self-Adhering Membrane: Remove release paper layer. Roll out on substrate with a mechanical roller to encourage full contact bond.

D. Overlap edges and ends and seal by method recommended by manufacturer, minimum 3 inches. Seal permanently waterproof. Apply uniform bead of sealant to joint edge.

E. Reinforce membrane with multiple thickness of membrane material over joints, whether joints are static or dynamic.

F. Weather lap joints on sloped substrate in direction of drainage. Seal joints and seams.

G. Install flexible flashings. Seal items penetrating through membrane with flexible flashings. Seal watertight to membrane.

H. Seal membrane and flashings to adjoining surfaces. Install termination bar at all edges. Install counterflashing over all exposed edges.

3.04 INSTALLATION - DRAINAGE PANEL

A. Place drainage panel directly against membrane, butt joints, place to encourage drainage downward. Scribe and cut boards around projections, penetrations, and interruptions.

END OF SECTION

SECTION 07 1400
FLUID-APPLIED WATERPROOFING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Fluid-Applied Waterproofing:

1. Hot-applied rubberized asphalt waterproofing.
2. Cold-applied rubberized asphalt waterproofing.
3. Polyurethane waterproofing.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Concrete substrate.

B. Section 03 4100 - Precast Structural Concrete: Grouting joints of precast concrete deck surfaces.

C. Section 04 2000 - Unit Masonry: Masonry joints prepared to receive flashings.

D. Section 07 2100 - Thermal Insulation: Insulation used for protective cover.

E. Section 07 5050 - Vegetated Roof Components: Protection, drainage, root barriers, soil, plants, and other vegetated roof components installed above waterproofing.

F. Section 07 6200 - Sheet Metal Flashing and Trim: Metal parapet covers, copings and counterflashings.

G. Section 07 9200 - Joint Sealants: Sealing moving joints in waterproofed surfaces that are not part of work in this section.

H. Section 22 1006 - Plumbing Piping Specialties: Roof drain and plumbing vent flashing flanges.

I. Section 31 2323 - Fill.

1.03 REFERENCE STANDARDS

A. ASTM C836/C836M - Standard Specification for High Solids Content, Cold Liquid-Applied Elastomeric Waterproofing Membrane for Use with Separate Wearing Course 2015.

B. ASTM C1306/C1306M - Standard Test Method for Hydrostatic Pressure Resistance of a Liquid-Applied Waterproofing Membrane 2008, with Editorial Revision (2016).

C. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers--Tension 2016.

D. ASTM D746 - Standard Test Method for Brittleness Temperature of Plastics and Elastomers by Impact 2014.

E. ASTM D2240 - Standard Test Method for Rubber Property--Durometer Hardness 2015e1.

F. ASTM D4541 - Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers 2017.

G. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials 2016.

H. ASTM E154/E154M - Standard Test Methods for Water Vapor Retarders Used in Contact with Earth Under Concrete Slabs, on Walls, or as Ground Cover 2008a, with Editorial Revision (2013).

I. ICC-ES AC29 - Acceptance Criteria for Cold, Liquid-Applied, Below-Grade, Exterior Dampproofing and Waterproofing Materials 2011, with Editorial Revision (2014).

J. NRCA (WM) - The NRCA Waterproofing Manual 2005.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data for membrane, surface conditioner, flexible flashings, joint cover sheet and joint and crack sealants.

C. Shop Drawings: Indicate special joint or termination conditions and conditions of interface with other materials.

D. Certificate: Certify that products meet or exceed specified requirements.

E. Manufacturer's Installation Instructions: Indicate special procedures, perimeter conditions requiring special attention and acceptable installation temperatures.

F. Warranty:

1. Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

2. Submit installer's certification that installation complies with warranty conditions for the waterproofing membrane.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience.

C. Single Source Responsibility for Vegetated Roof Assemblies Over Waterproofing: Provide and install products from single source.

1.06 MOCK-UP

A. Construct mock-up consisting of 100 sq ft (10 sq m) of horizontal waterproofed panel; to represent finished work including internal and external corners, drainage panel, base flashings, control joints, expansion joints, counterflashings and protective cover.

B. Mock-up may remain as part of this Work.

1.07 FIELD CONDITIONS

A. Maintain ambient temperatures above 40 degrees F (5 degrees C) for 24 hours before and during application and until cured.

1.08 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Contractor shall correct defective Work within a five year period after Date of Substantial Completion; remove and replace materials concealing waterproofing at no cost to Owner .

C. Provide five year manufacturer warranty for waterproofing failing to resist penetration of water, except where such failures are the result of structural failures of building. Hairline cracking of concrete due to temperature change or shrinkage is not considered a structural failure.

D. Vegetated Roof Assemblies Over Waterproofing: Provide manufacturer's twenty year, single-source "full system" warranty.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Hot-Applied Rubberized Asphalt Waterproofing:

1. American Hydrotech, Inc: www.hydrotechusa.com/#sle.
2. AVM Industries, Inc; Aussie Membrane 570: www.avmindustries.com/#sle.
3. Hydro-Gard; Hydro-Tuff: www.hydro-gard.com/#sle.
4. Substitutions: See Section 01 6000 - Product Requirements.

B. Cold-Applied Rubberized Asphalt Waterproofing:

1. AVM Industries, Inc; AVM System 500 (Aussie Membrane): www.avmindustries.com/#sle.
2. Epro Waterproofing Systems; ECOLINE-S: www.eproserv.com/#sle.
3. Substitutions: See Section 01 6000 - Product Requirements.

C. Polyurethane Waterproofing:

1. Karnak Corporation: www.karnakcorp.com/#sle.
2. Master Builders Solutions by BASF: www.master-builders-solutions.basf.us/en-us/#sle.
3. Tremco Commercial Sealants & Waterproofing; TREMproof 250GC: www.tremcosealants.com/#sle.
4. Substitutions: See Section 01 6000 - Product Requirements.

2.02 FLUID APPLIED WATERPROOFING MATERIALS

A. Hot-Applied Rubberized Asphalt Waterproofing: Elasticized rubberized asphaltic compound, hot-applied and quick setting.

1. Suitable for installation over concrete, gypsum board and plywood substrates.
2. Water Vapor Permeance: 0.016 perms (0.9 ng/(Pa s sq m)), maximum, measured in accordance with ASTM E96/E96M.

B. Cold-Applied Rubberized Asphalt Waterproofing: Rubberized asphaltic compound, suitable for installation on concrete and concrete masonry.

1. Cured Thickness: 60 mils, 0.060 inch (1.52 mm), minimum.
2. Complying with ICC-ES AC29; evidence of compliance includes current ICC-ES evaluation report citing ICC-ES AC29.
3. Hydrostatic Pressure Resistance: When tested in accordance with ASTM C1306/C1306M, at least 50 pounds per square inch (340 kPa) by the rapid test and at least 35 pounds per square inch (240 kPa) by the long term test.
4. Low Temperature Resistance: No cracking, loss of adhesion, splitting or pinholes when tested at minus 15 degrees F (minus 25 degrees C) in accordance with ASTM C836/C836M.
5. Adhesion: No separation when tested in accordance with ASTM C836/C836M.
6. Decay Resistance: No decay when tested in accordance with ASTM E154/E154M.
7. Wet Film Sag Resistance: No sag or sag within plus/minus 5 mils (0.1 mm) when tested in accordance with ASTM C836/C836M.
8. Water Vapor Permeance: Less than one perm (60 ng/(Pa s sq m)), when tested in accordance with ASTM E96/E96M.
9. Heat Aging Resistance: No cracking, splitting, or pinholes when tested in accordance with ASTM C836/C836M.
10. Elongation at Break: 1000 percent, minimum, when tested in accordance with ASTM D412.
11. Products:

a. Substitutions: See Section 01 6000 - Product Requirements.

C. Polyurethane Waterproofing: Cold-applied one or two component polyurethane, complying with ASTM C836/C836M.

1. Cured Thickness: 60 mils, 0.060 inch (1.52 mm), minimum.
2. VOC Content: None.
3. Tensile Strength: 400 psi (2.758 MPa), measured in accordance with ASTM D412.
4. Ultimate Elongation: 180 percent, measured in accordance with ASTM D412.
5. Durometer Hardness, Type A: 30, minimum, in accordance with ASTM D2240.
6. Adhesion: Greater than 150 psi (1.03 MPa), measured in accordance with ASTM D4541.
7. Brittleness Temperature: Based on minus 50 degrees F (minus 46 degrees C), measured in accordance with ASTM D746.
8. Products:
   a. Carlisle Coatings & Waterproofing, Inc; CCW 703 Liquiseal: www.carlisleccw.com/#sle.
   b. Gaco Western; GacoFlex LM-60: www.gaco.com/#sle.
   c. Tremco Commercial Sealants & Waterproofing; TREMproof 250GC: www.tremcosealants.com/#sle.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify substrate surfaces are free of frozen matter, dampness, loose particles, cracks, pits, projections, penetrations, or foreign matter detrimental to adhesion or application of waterproofing system.

C. Verify that substrate surfaces are smooth, free of honeycomb or pitting, and not detrimental to full contact bond of waterproofing materials.

D. Verify items that penetrate surfaces to receive waterproofing are securely installed.

3.02 PREPARATION

A. Protect adjacent surfaces from damage not designated to receive waterproofing.

B. Clean and prepare surfaces to receive waterproofing in accordance with manufacturer's instructions; vacuum substrate clean.

C. Do not apply waterproofing to surfaces unacceptable to waterproofing manufacturer.

D. Fill non-moving joints and cracks with a filler compatible with waterproofing materials.

E. Seal moving cracks with sealant and non-rigid filler, using procedures recommended by sealant and waterproofing manufacturers.

F. Prepare building expansion joints at locations as indicated on drawings.

G. Install cant strips at inside corners.

3.03 INSTALLATION

A. Install waterproofing to specified minimum thickness in accordance with manufacturers instructions and NRCA (WM) applicable requirements.

B. Apply primer or surface conditioner at a rate recommended by manufacturer, and protect conditioner from rain or frost until dry.

C. Center joint cover sheet over joints, roll sheet into 1/8 inch (3.2 mm) thick coating of waterproofing material and apply second coat over sheet extending at least 6 inches (152 mm) beyond sheet edges.

D. Extend membrane over cants and up intersecting surfaces at membrane perimeter minimum 6 inches (150 mm) above horizontal surface for first ply and at subsequent plies laid in shingle fashion.

E. Extend waterproofing material and flexible flashing into drain clamp flange, apply adequate coating of liquid membrane to ensure clamp ring seal, and coordinate with drain installation requirements specified in Section 22 1006.

F. Seal membrane and flashings to adjoining surfaces.

3.04 FIELD QUALITY CONTROL

A. Owner will provide testing services in accordance with Section 01 4000 - Quality Requirements. Contractor shall provide temporary construction and materials for testing.

B. Upon completion of horizontal membrane installation, dam installation area in preparation for flood testing.

1. Flood to minimum depth of 1 inch (25 mm) with clean water, and after 48 hours inspect for leaks.
2. If leaking is found, remove water, repair leaking areas with new waterproofing materials as directed by Architect; repeat flood test, and repair damage to building.
3. When area is proven watertight, drain water and remove dam.

3.05 PROTECTION

A. Do not permit traffic over unprotected or uncovered membrane.

END OF SECTION

SECTION 07 1616
CRYSTALLINE WATERPROOFING

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Crystalline waterproofing.

1.02 REFERENCE STANDARDS

A. COE CRD-C 48 - Standard Test Method for Water Permeability of Concrete.

1.03 SUBMITTALS

A. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Test data showing hydraulic permeability.
2. Details for waterproofing at joints, intersections, and other special conditions.

B. Specimen warranty.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacture of products of the type specified and providing technical representatives to visit project site.

B. Installer Qualifications: Acceptable to manufacturer, with documented experience on at least 5 projects of similar nature within the last 5 years.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Take necessary precautions to keep cementitious materials dry.

1.06 FIELD CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.07 WARRANTY

A. See Section 01 78 00 - Closeout Submittals, for additional warranty requirements.

B. Provide installer's warranty agreeing to correct leaking waterproofing for 2 years from the Date of Substantial Completion, unless leakage is caused by structural failure, movement of the structure, or other causes beyond the installer's control.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Crystalline Waterproofing:

1. Anti-Hydro International, Inc.; Hydro Cap.
2. Conproco Corp.; Super Seal.
3. Tamms Industries, Inc.; Hey'Di K-11.
4. ThoRoc, Div. of ChemRex; Tegraproof.
5. Tremco Incorporated; Permaquik Crystalline Waterproofing.
6. Xypex Chemical Corporation; Xypex.

2.02 APPLICATIONS

A. Waterproofing for building surfaces:

1. Inside of elevator pits.

2.03 MATERIALS

A. Crystalline Waterproofing: Portland cement and chemical compound that when applied to the surface of concrete forms insoluble crystals in the capillary pores preventing the passage of liquids, while having no adverse effect on the normal properties of concrete.

1. Hydraulic Permeability: No measurable leakage or water flow at 200 psi pressure when tested in accordance with COE CRD-C 48, using minimum 2 inch thick sample and 20 days duration.
2. Toxicity: Non-toxic.
3. Color: Gray.

B. Patching Compound: Ready-mixed cementitious mortar recommended or approved by waterproofing manufacturer.

PART 3 - EXECUTION

3.01 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions. Use sand blasting, water blasting, or acid etching as recommended.

C. Plug water leaks.

D. Patch holes, construction joints, and cracks. Remove defective concrete.

E. Obtain approval of manufacturer's field representative before beginning installation.

3.02 INSTALLATION

A. Install in strict accordance with manufacturer's instructions. Maintain environmental conditions required and recommended by manufacturer. Keep a copy of manufacturer's instructions on site.

B. Coordinate installation with installation of products that must penetrate waterproofed surfaces.

C. Prevent excessive drying of surface.

1. Cure waterproofing for at least 3 days, or length of time required by manufacturer, with water spray and adequate air circulation.
2. Do not use chemical curing agents unless explicitly approved by waterproofing manufacturer.

D. Do not backfill, fill water or liquid holding structures, or apply finish coatings until time period recommended by manufacturer has passed.

END OF SECTION

SECTION 07 1619
METAL OXIDE WATERPROOFING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Interior waterproofing for concrete floors.

B. Interior waterproofing for concrete walls.

C. Interior waterproofing for masonry walls.

D. Protective coating for metallic oxide waterproofing.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Concrete finishing requirements.

B. Section 07 9200 - Joint Sealants: Sealing moving joints in waterproofed surfaces.

C. Section 09 6613 - Portland Cement Terrazzo Flooring: Floor finish.

1.03 REFERENCE STANDARDS

A. ASTM C33/C33M - Standard Specification for Concrete Aggregates 2016, with Editorial Revision (2016).

B. ASTM C144 - Standard Specification for Aggregate for Masonry Mortar 2017.

C. ASTM C150/C150M - Standard Specification for Portland Cement 2018.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturers printed information, including mixing and installation instructions. Include factory test reports with:

1. Iron content of metallic waterproofing.
2. Oxidizing agent content of metallic waterproofing.

1.05 QUALITY ASSURANCE

A. Testing: Prepare a 100 gram sample. Using a magnet over a watch glass, transfer magnetic portion into separate pile leaving nonmagnetic behind. Weigh nonmagnetic portion.

1. Total iron content: Determine total iron by percentage of sample weight using standard qualitative chemical analysis procedures.
2. Oxidizing agent content: Determine percentage of oxidizing agent by standard qualitative chemical analysis technique.

B. Certification: Provide certified statement attesting that chemical and physical composition of metallic waterproofing material has been determined by testing methods above and material has been found to comply with specification requirements.

1.06 MOCK-UP

A. Apply metallic waterproofing to a test area not less than 100 square feet (1000 square meters) using materials and methods specified, at location indicated by Architect .

B. Examine waterproofing for bond and loose materials, using a wide-blade putty knife or similar tool, in presence of Architect . Failure of waterproofing to bond or appearance of excessive loose materials will be cause for disapproval of proposed material and method of application.

C. Clean disapproved test area free of applied finish, leaving base clean and acceptable for new application. If test area is disapproved, make an additional test area.

D. Do not apply waterproofing in other areas until application of test area has been approved by representative of waterproofing materials manufacturer and accepted by Architect .

E. Maintain approved installation in place and open to observation as criteria for all metallic waterproofing on project, until all other areas of waterproofing have been covered.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to project site in original sealed containers with manufacturer's name and brand clearly identified.

B. Store in dry locations with adequate ventilation and handle in a manner to prevent damage or contamination.

1.08 FIELD CONDITIONS

A. Enclose or protect surfaces to be treated from excessive temperature changes. Ambient temperature shall be above 50 degrees F (10 degrees C) during application and for duration of curing period.

B. Keep water level below location of surfaces being treated until completion of the treatment and curing period.

C. Provide adequate ventilation to oxidize metallic waterproofing properly.

PART 2 PRODUCTS

2.01 MATERIALS

A. Portland Cement: ASTM C150/C150M, Type I.

B. Fine Aggregate: ASTM C144 (sand) for waterproofing coats and ASTM C33/C33M for protective coat.

C. Water: Potable and free from injurious amounts of oil, alkalis, acids, organic matter, and other deleterious substances.

D. Metallic Waterproofing Compound: Clean, commercial, pulverized cast iron mixed in dust-confining container with chemical oxidizing agent such as sodium peroxide, potassium peroxide, or ammonium chloride.

1. Pulverized Cast Iron: 85 percent minimum by weight of metallic iron of magnetic portion. Chemical oxidizing agent content shall be a minimum of 3 percent and a maximum of 5 percent by weight of compound. Presence of dirt, paraffin, bitumen, or other foreign substances in excess of one percent by weight of waterproofing compound will be cause for rejection.

2. Iron Oxide Content: Do not exceed 5 percent by weight of magnetic iron. Magnetic portion of iron shall not contain more than 0.05 percent by weight of oil.

3. Magnetic Iron Particles Graded as follows:

    a. No. 20 Screen: 100 percent passing.

    b. No. 35 Screen: 95 to 100 percent passing.

    c. No. 40 Screen: 90 to 100 percent passing.

    d. No. 60 Screen: 65 to 100 percent passing.

    e. No. 100 Screen: 45 to 70 percent passing.

    f. No. 200 Screen: 10 to 25 percent passing.

E. Non-Moving Joint Filler: Type as recommended by waterproofing manufacturer.

2.02 MIXING

A. Follow mixing instructions supplied by the manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine all surfaces to be waterproofed to ensure that substrate has properly cured, all shrinkage has occurred, laitance has been removed, cracks and honeycombs have been cut out and filled, and surfaces have been roughened to provide bond for waterproofing material.

B. Correct all defects that will adversely affect proper completion of waterproofing.

3.02 SURFACE PREPARATION

A. Comply with waterproofing manufacturer's instructions and recommendations.

B. Concrete Surfaces:

1. Roughen concrete wall and floor surfaces by light bushhammering, sandblasting, acid etching or high pressure water cleaning to provide firm, unspalled granular surface, clean and free from loose materials, debris, and detrimental substances such as dust, dirt, oil, grease, or other coatings.

C. Walls:

1. Clean wall areas that have been cut out, moisten with water, and fill flush with a stiff mortar mix composed of one 94 pound (42.6 kilogram) sack of Portland cement, 188 pounds (85.3 kilograms) of sand, and 15 pounds (6.8 kilograms) of metallic oxide waterproofing compound.
2. Apply filling and patching in layers not exceeding 3/4 inch (19 mm) thickness, worked into voids, compacted, and finished flush with adjacent surfaces.
3. Roughen patched areas to provide level, firm, granular surface.

D. Grooves, Joints, and Intersections:

1. Strip, clean, and remove all loose material from construction joints, grooved recesses, and intersections of vertical and horizontal surfaces.
2. Pack nonmoving joints with waterproofing mortar mixed in proportions of one 94 pound (42.6 kilogram) sack of Portland cement and 188 pounds (85.3 kilograms) of sand, and 15 pounds (6.8 kilograms) of metallic oxide waterproofing compound. Finish compacted mortar flush with adjacent surfaces; finish internal angles to a round cove.
3. Clean expansion and control joints (moving joints) and keep clear of waterproofing materials.

E. Penetrations: Install joint filler around all items that penetrate the surfaces to be waterproofed, including but not limited to pipes, drains, and conduits.

F. Penetrations: Do not apply waterproofing until anchorage items or other items passing through or protruding from the surfaces have been installed. Treatment shall be completed and approved prior to attachment of utilities to anchorage items.

3.03 APPLICATION

A. Limits of Application:

1. Completely coat columns integral with exterior walls.
2. Return wall waterproofing at least 24 inches (600 mm) on interior concrete walls that are in place at the time of the waterproofing application.
3. Return wall waterproofing at least 48 inches (1200 mm) onto masonry walls that are in place at the time of the waterproofing application.

4. Return floor waterproofing at least 12 inches (300 mm) vertically up on the face of all interior walls, partitions, and interior columns in place at the time of waterproofing application.
5. Recesses: Waterproof recesses, but do not fill to a lesser opening dimension than detailed.

B. Walls, Columns and Floors:
1. Thoroughly dampen surfaces to receive waterproofing.
2. Apply coats of slurry as directed by manufacturer.
3. Apply two coats of thick slurry to each 100 square feet (10 square meters) of surface.
   a. First coat: 94 pounds (42.6 kilograms) of Portland cement, 188 pounds (85.3 kilograms) of sand, and 10 pounds (4.5 kilograms) of metallic oxide waterproofing compound.
   b. Second coat: Same mix as first coat except with 8 pounds (3.6 kilograms) of metallic oxide waterproofing for each 94 pounds (42.6 kilograms) of cement.
4. Apply each coat by brushing with stiff bristle brushes to seal all pores.
5. Allow sufficient time between coats to permit oxidation of material, but not more than 24 hours before application of subsequent treatment.
6. Periodically spray each coat with fine fog spray during oxidation period to ensure thorough curing.
7. Where air circulation is insufficient to properly oxidize waterproofing, provide fans or other means to ensure adequate circulation.

C. Bond Coat:
1. Prior to application of plaster, cement mortar topping or thick-set wall and floor finishes specified in other sections, apply a bond coat of metallic oxide waterproofing mixed in same proportions as specified for second coat.
2. Prior to application of protective finish coating specified in this section, apply a bond coat of metallic oxide waterproofing mixed in same proportions as specified for second coat on walls and columns.
3. Prior to bond coat application, thoroughly broom previously treated surfaces with thick bristle broom to remove all traces of unoxidized compound, and dampen with water.
4. Apply bond coat immediately before finish coat so there will be no premature curing or setting of bond coat before finish coat is applied.

D. Protective Finish Coating: Waterproofed surfaces not scheduled to receive plaster, floor topping, or other finish shall receive a protective coating applied directly over the bond coat.
1. Floors: After application of bond coat, apply protective topping of 1 1/2 inch (38 mm) minimum thickness.
   a. Mix topping in proportions by volume of one part Portland cement, one part sand, and two parts fine aggregate complying with ASTM C33/C33M and proportioned by volume.
   b. Perform mixing in a mechanical batching-type mixer for not less than 3 minutes after all materials have been included, using not more than 4 gallons (15 liters) of water for each bag of cement when floating is done by machine and 5 gallons (19 liters) for each bag of cement when floating is done by hand.
   c. After screeding to established finish lines and levels, compact and then float with wood floats or power floating machines.
   d. After finish has sufficiently hardened to prevent excess fine material from being worked to surface, steel trowel to obtain smooth surface free from defects and blemishes.

e. After topping has set to ring, trowel again to a burnished finish.

2. Curing: Protect finish coating from loss of moisture and cure by periodic fog spraying and cover with impervious sheeting or other approved method until coating has set.

END OF SECTION

SECTION 07 1713
BENTONITE WTAERPROOFING

PART 1 - GENERAL

1.01 SUMMARY

A. The work of this section includes, but is not limited to the furnishing and installing the following materials, per project specifications and drawings, or as directed by bentonite waterproofing manufacturer:

1. Bentonite panel waterproofing membrane.
2. Bentonite geotextile waterproofing membrane.
3. Prefabricated drainage composite
4. All applicable accessory products.

1.02 SYSTEM DESCRIPTION

A. Provide bentonite waterproofing and prefabricated drainage composite system to prevent the passage of liquid water and install without defects, damage or failure.

B. Waterproofing shall consist of the following:

1. Biodegradable corrugated kraft board containing one pound per square foot of granular sodium bentonite.
2. Two high strength geotextiles interlocked encapsulating minimum 1.10-lbs per square foot granular sodium bentonite.

1.03 SUBMITTALS

A. Product Data: Submit manufacturer’s product data, with complete general and specific installation instructions, recommendations, and limitations.

B. Product Samples: Submit representative samples of the following for approval:

1. Panel waterproofing membrane
2. Geotextile waterproofing membrane
3. Prefabricated drainage composites

C. Waterproofing Warranty: Submit a sample copy of the Manufacturer’s Waterproofing warranty complete with all coverage’s, limitations, and conditions.

D. Material Certificates: Submit certificate(s) signed by manufacturer certifying materials comply with specified performance characteristics and physical requirements. Submit certification that waterproofing system and components, drainage and protection materials are supplied by a single-source manufacturer.

E. Contractor Certificate: Submit written certification that installer has current Approved Applicator status with waterproofing material manufacturer.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: Installing company should have at least three (3) years experience in work of the type required by this section, who can comply with manufacturer's warranty requirements, and who is an Approved Applicator as determined by waterproofing/drainage system manufacturer.

B. Manufacturer Qualifications: Bentonite waterproofing and all accessory products shall be provided by a single manufacturer with a minimum of 30 years experience in the direct production of bentonite waterproofing systems. Manufacturer shall be capable of providing field service representation during construction, approving an acceptable installer, recommending appropriate installation methods of the

bentonite waterproofing and prefabricated drainage system applied.

C. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field installation to establish procedures to maintain required working conditions and to coordinate this work with related and adjacent work. Verify that final waterproofing and waterstop details comply with waterproofing manufacturer's current installation requirements and recommendations. Pre-con meeting attendees should include representatives for the Owner, Architect, Contractor, waterproofing installer, concrete installer, excavating/backfill contractor, and mechanical and electrical contractors if work penetrates the waterproofing.

D. Materials: Obtain bentonite waterproofing products and prefabricated drainage materials from a single manufacturer.

E. Inspection: Manufacturer’s representative shall inspect waterproofing installation periodically during application to verify that waterproofing has been installed in accordance with manufacturer’s guidelines and recommendations.

1.05 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Delivery and Handling: Deliver materials in factory sealed and labeled packaging. Sequence deliveries to avoid delays, while minimizing on-site storage. Handle and store following manufacturer's instructions, recommendations and material safety data sheets. Protect from construction operation related damage, as well as, damage from weather, excessive temperatures and prolonged sunlight. Remove damaged material from site and dispose of in accordance with applicable regulations.

B. Storage: Do not double-stack pallets during shipping or storage. Protect waterproofing materials from moisture, excessive temperatures and sources of ignition. Provide cover, top and all sides, for materials stored on-site, allowing for adequate ventilation.

1.06 PROJECT CONDITIONS

A. Substrate Condition: Proceed with work only when substrate construction and preparation work is complete and in condition to receive waterproofing system. All plumbing, electrical, mechanical and structural items to be under or passing through the waterproofing shall be positively secured in their proper positions prior to waterproofing system installation. Substrate preparation shall be per waterproofing manufacturer’s guidelines.

B. Weather Conditions: Perform work only when existing and forecasted weather conditions are within the guidelines established by the manufacturer of the waterproofing materials. Do not apply waterproofing materials in areas of standing or active water; or over ice and snow. The Contractor shall maintain site conditions to remove standing water from precipitation or ground water seepage in a timely manner. Should waterproofing materials be subjected to pre-hydration as a result of prolonged immersion, inspection of the material and written acceptance from manufacturer will be required prior to concrete or backfill placement.

1.07 WARRANTY

A. Waterproofing Warranty: Upon completion and acceptance of the work required by this section, the waterproofing materials manufacturer shall provide a written five (5) year material warranty. Issuance of Manufacturer's Material Warranty requires the following:

1. Manufacturer's Approved Applicator shall install bentonite waterproofing system and prefabricated drainage composite in full accordance with manufacturer’s requirements.

2. Bentonite Waterstop must be installed in all applicable horizontal and vertical concrete construction joints and around applicable penetrations.

B. Manufacturer's warranty shall be independent from any other warranties made by the Contractor under requirements of the Contract Documents and may run concurrent with said warranties.

PART 2 - PRODUCTS

2.01 MANUFACTURER

A. Provide bentonite waterproofing membrane and all applicable accessory products as manufactured by Colloid Environmental Technologies Company (CETCO), Arlington Heights, Illinois, or an approved substitution. Phone: (847) 392-5800; Fax: (847) 506-6195; Web-site: www.cetco.com.

2.02 MATERIALS

A. Sodium Bentonite: Specially selected Wyoming granular sodium bentonite with 90% passing through a 20-mesh sieve and less than 10% passing through a 200-mesh sieve. Sodium bentonite shall have a 2 gram free swell minimum volume of 16 cc and a maximum fluid loss of 18 ml in de-ionized water.

B. Bentonite Panel Waterproofing

1. Type 1 Panels: 1 lb. per square foot of specially treated granular sodium bentonite contained inside a biodegradable, corrugated kraft board measuring 48" x 48" x 3/16" thick.
2. Type 1-C Panels: same as Type 1 panels with the printed side of the kraft board treated with a clear, water-resistant coating.
3. Bentonite Geotextile Waterproofing Membrane: 4’ x 15’ roll of interlocked geotextiles encapsulating a minimum 1.10-lbs per square foot of granular sodium bentonite. Composite shall consist of one woven and one nonwoven polypropylene geotextile, interlocked using a needle-punching process that produces several interlocks per square inch over the entire area of the product. Typical membrane performance properties:

PROPERTY	TEST METHOD	TYPICAL VALUE
Hydrostatic Pressure Resistance	ASTM D 5385 mod.	231 ft.
Permeability	ASTM D 5084	1 x 10-9 cm/sec.
Grab Tensile Strength	ASTM D 4632	95 lbs.
Puncture Resistance	ASTM D 4833	100 lbs.
Low Temperature Flexibility	ASTM D 1970	Unaffected at -25°F
Peel Adhesion to Concrete	ASTM D 903 mod.	15 lbs. /in.

C. Accessory Waterproofing Products: All accessory waterproofing materials shall be provided by the bentonite waterproofing manufacturer or shall have manufacturer’s written approval for substitution.

1. Bentonite Sealant: Trowel grade sodium bentonite compound used as a detailing mastic around penetrations, corner transitions and grade terminations.
2. Bentonite Tubes: 2” diameter x 2’ long, water soluble tube container filled with granular sodium bentonite.
3. Granular sodium bentonite.
4. Seam Tape: 2” wide butyl rubber sealant tape.
5. Termination Bar: Min. 1” wide aluminum bar with pre-punched holes on 12” centering for fastening.

D. Prefabricated Drainage Composite

1. Vertical: Aquadrain 15XP - 4-ft by 52-ft roll of a three-dimensional polypropylene drainage core with a nonwoven geotextile adhered to one side to allow water passage while restricting soil particles. Composite includes a thin polyethylene sheet on the back of the drainage core.
    a. Compressive Strength: 15,000 psf

b. Water Flow Rate: 20 gpm/ft

c. Thickness: 7/16”

E. Deck Sub-Surface Drainage

1. Horizontal: Aquadrain 20H - 4-ft by 52-ft roll of a three-dimensional polypropylene drainage core with a nonwoven geotextile adhered to one side to allow water passage while restricting soil particles.

a. Compressive Strength: 21,000 psf

b. Flow Rate: 18 gpm/ft.

c. Thickness: 7/16”

PART 3 - EXECUTION

3.01 SUBSTRATE INSPECTION AND CONDITIONS

A. The installer shall examine conditions of substrates and other conditions under which this section work is to be performed and notify the contractor, in writing, of circumstances detrimental to the proper completion of the work. Do not proceed with work until unsatisfactory conditions are corrected and are acceptable for compliance with manufacturer's warranty requirements. General substrate conditions acceptable for the waterproofing installation are listed below. For conditions not covered in this Section, contact the waterproofing manufacturer for guidance.

B. Concrete Walls: Cast-in-place concrete to receive waterproofing shall be of sound structural grade with a smooth finish, free of debris, oil, grease, laitance, dirt, dust, or other foreign matter which will impair the performance of the waterproofing and drainage system and which do not comply with manufacturer's warranty requirements.

1. Form fins, ridges, and other protrusions shall be level and smooth with monolithic concrete surface. Honeycombing, aggregate pockets, tie-rod holes and other voids shall be completely filled with non-shrink cementitious grout and level with monolithic concrete wall surface.

C. Gravel Sub-Grade: Aggregate sub-grades shall consist of 3/4” stone or smaller and be rolled flat, free from any protruding sharp edges.

D. Mechanical Or Other Penetrations: Mechanical, structural, or architectural materials that will pass through the plane of the waterproofing membrane shall be properly installed and secured in their final position prior to installation of the waterproofing system.

3.02 SURFACE PREPARATION

A. Remove dirt, debris, oil, grease, cement laitance, or other foreign matter which will impair or negatively affect the performance of the waterproofing and drainage system.

B. Protect adjacent work areas and finish surfaces from damage or contamination from waterproofing products during installation operations.

3.03 GENERAL INSTALLATION GUIDELINES

A. Comply with contract documents and manufacturer's product data, including product application and installation instructions.

B. Prevent bentonite waterproofing products from hydrating before material is contained with backfill or concrete. When threat of rain is imminent, installed bentonite products not already contained by backfill should be covered with polyethylene sheeting to decrease the chance of hydration. Remove polyethylene prior to overburden or backfill operations.After any precipitation, standing water should be pumped away from waterproofing as soon as possible.

3.04 BENTONITE PANEL INSTALLATION

A. Use Type 1 Panels or Type 1-C Panels (one-side coated).

B. Trowel Bentonite sealant over all concrete construction joints 1/8” thick by 3” wide. Form Tie holes or recesses shall be completely filled with non-shrink cementitious grout. Trowel bentonite sealant 1/8" thick over each grouted form tie hole.

C. Trowel 3/4" continuous fillet of bentonite sealant in all inside corner transitions.

D. Install bentonite panels with the printed side facing installer and the print oriented horizontally. Turn Panel with print vertically oriented when transitioning around inside and outside wall corners.

E. Starting at a wall base corner, bend Volclay Panel along 1/3 panel "Starter Line" (printed on panel) and install with the kraft board corrugations and print vertically oriented. Cut the Panel at the bottom edge of the "Starter Line" so that the Panel can be extended 6" onto the footing. Secure Panels with washer-head fasteners along each edge. After installing corner Panel, install all succeeding Panels with kraft board corrugations and print horizontally oriented - continuing Panel onto footing minimum 6". Overlap all adjoining edges minimum 1-1/2". When applicable, the base Panel course shall overlap the underslab waterproofing a minimum 6" to form a continuous waterproofing layer.

F. Stagger vertical Panel overlap joints of succeeding courses by folding the next courses corner Panel on the 2/3 panel "Lap Line" (printed on panel) and install overlapping lower Panel course minimum 1-1/2”. After installing corner Panel, install all succeeding Panels with kraft board corrugations and print horizontally oriented - overlapping adjoining edges minimum 1-1/2".

G. Penetration: On flat surface cut Panel to fit around penetration. Immediately seal cut Panel edge by applying water with cloth or sponge prior to panel installation. After Panel is installed around penetration, trowel 3/4" thick fillet of bentonite sealant around the penetration and extending onto Panel 1-1/2" at a 1/8” minimum thickness.

   1. Multiple Penetrations: Trowel 1/2" thick layer of bentonite sealant covering entire area between penetrations and extend layer outside of penetration area minimum 3" to allow Panels to overlap. At base of each penetration apply 3/4" fillet of bentonite sealant over the main bentonite sealant layer. Cut Panels and overlap bentonite sealant layer a minimum 1-1/2".

H. Continue Panels up to grade line. Terminate Panels at grade under a 12" wide strip of UV resistant flashing secured with a rigid termination bar fastened 12" on center. Seal top edge of termination detail with UV resistant caulk. Consult manufacturer’s representative or manufacturer when special conditions exist.

I. Repair any small Panel damage by applying a 1/2” thick layer of Bentonite sealant. Repair any large Panel damage by placing a new panel into position.

3.05 BENTONITE GEOTEXTILE WATERPROOFING MEMBRANE INSTALLATION

A. Place geotextile directly on properly prepared substrate (white geotextile side down; dark gray geotextile side up facing installer) with adjoining edges overlapped a minimum of 4”. Stagger sheet end seams a minimum of 24”. Mechanically fasten or staple geotextile membrane as required to prevent movement from construction operations or concrete placement. When the slab is poured in sections, extend geotextile a minimum 12" beyond the slab edge to enable proper overlapping.

B. Install waterproofing system where shown on drawings in accordance with manufacturer’s detail for specific project condition(s).

C. Slab Penetrations: For all pipe, rebar, structural or other penetrations install waterproofing system in accordance with manufacturer’s standard detail for specific project condition(s).

D. Inspect finished geotextile installation and repair any damaged material prior to concrete slab placement.

E. Before placing concrete, lay bentonite tubes against the inside face of the wall at the wall/footing transition. Bentonite tubes should be positioned end-to-end forming a continuous line. Manually place a shovel of concrete over bentonite tubes to hold them in position prior to main concreting operation.

3.06 PREFABRICATED DRAINAGE COMPOSITE INSTALLATION

A. Vertical

1. Install the bottom course of Aquadrain 15XP sheet drainage (plastic core side against the wall) with the 15XP bottom core edge in contact with the footing. Secure sheet drain to wall with washer-head fasteners.
2. Install subsequent courses of Aquadrain 15XP sheet drainage in a shingle overlap style to finished grade or as shown on the project drawings. Prior to subsequent course, seal top and side core edges by tucking the products extra fabric edge flap behind the core before securing with washer-head fasteners. Install drainage sheet panels overlapped, bottom edge of higher course installed to the outside of the lower course to shed water like a roof shingle. Seal all outward overlap core edges by securing extra fabric flap with tape or general construction adhesive to filter fabric of previously installed sheet.
3. Around penetrations and other details, cut sheet drainage composite to fit and wrap extra filter fabric around open core edge to prevent soil from entering core.
4. At the top of the sheet drain installation, wrap the filter fabric flap behind the exposed top core edge to prevent intrusion of soil into the core and secure sheet drain to wall with termination bar fastened 12" on center.

3.07 BACKFILL EXCAVATED CAST-IN-PLACE CONCRETE WALLS

A. Care should be used during backfill operation to avoid damage to the waterproofing system. Follow generally accepted practices for backfilling and compaction. Backfill should be added in 6" to 12" lifts and compacted to a minimum 85% Modified Proctor density. Protection course required with gravel backfill. Limit gravel backfill to <3/4” angular aggregate with fines.

3.08 CLEAN UP

A. Clean areas where adjacent finished surfaces are soiled by work of this Section. Remove all tools, equipment and remaining product on-site. Dispose of section work debris and damaged product following all applicable regulations.

END OF SECTION

SECTION 07 1800
TRAFFIC COATINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Coating for waterproofing and traffic surface

1.02 REFERENCE STANDARDS

A. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers--Tension 2016.

B. ASTM D903 - Standard Test Method for Peel or Stripping Strength of Adhesive Bonds 1998 (Reapproved 2010).

C. ASTM D4060 - Standard Test Method for Abrasion Resistance of Organic Coatings by the Taber Abraser 2014.

D. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

E. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials 2016.

1.03 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Include product characteristics and limitations. Identify dissolving solvents, fuels, and potential destructive compounds.

C. Manufacturer's Installation Instructions: Include special field conditions required to install traffic membrane and potential incompatibilities with adjacent materials.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section, with not less than three years of documented experience.

1.05 MOCK-UP

A. Provide traffic coating & substrate mock-up, [20] feet ([6.09] m) long by [10] feet ([3.04] m) wide, with membrane system applied to representative substrate.

B. Locate where directed.

C. Mock-up may remain as part of the Work.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Maintain storage area at minimum ambient temperature of 55 degrees F (13 degrees C).

B. Keep away from fire or open flame.

1.07 FIELD CONDITIONS

A. Do not install materials when temperature is below 50 degrees F (10 degrees C) or above 90 degrees F (32 degrees C).

B. Maintain this temperature range, 24 hours before, during and 72 hours after application.

C. Restrict traffic from area where materials are being installed or are curing.

1.08 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Provide five year manufacturer warranty for repair and/or replacement.

1. Include coverage for delamination of system from substrate.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Polyurethane Traffic Coating:

1. Gaco Western: www.gaco.com/#sle.
2. Pacific Polymers International, Inc: www.pacpoly.com/#sle.
3. Tremco Commercial Sealants & Waterproofing: www.tremcosealants.com/#sle.
4. Substitutions: See Section 01 6000 - Product Requirements.

B. Acrylic Traffic Coating:

1. GAF; StreetBond SB150 Pavement Coating: www.gaf.com/#sle.
2. Substitutions: See Section 01 6000 - Product Requirements.

2.02 TRAFFIC COATINGS

A. Pedestrian Polyurethane Waterproof Coating System: Fluid applied polyurethane system with base and top coat.

1. Finished Coating Thickness: 55 mils, 0.055 inch (1.4 mm), minimum.
2. Color: Gray.
3. Manufacturers:
    a. Tremco Commercial Sealants & Waterproofing; Vulkem 350NF/351: www.tremcosealants.com/#sle.

B. Traffic Deck Waterproof Coating System: Modified polyurethane system with base coat, intermediate coat, and top coat.

1. Finished Coating Thickness: 49 mils, 0.049 inch (1.24 mm), minimum.
2. Color: Gray.
3. Manufacturers:
    a. Tremco Commercial Sealants & Waterproofing; Vulkem 350NF/950NF/951NF: www.tremcosealants.com/#sle.

C. Light Pedestrian, Low-Odor, Low-VOC Waterproof Coating System: Fluid applied, aliphatic urethane based system with single coating.

1. Finished Coating Thickness: 25 mils, 0.025 inch (0.635 mm), minimum.
2. Color: Gray.
3. Manufacturers:
    a. Tremco Commercial Sealants & Waterproofing; Vulkem OC810: www.tremcosealants.com/#sle.

D. Pedestrian Coating: Fluid-applied polyurethane with slip-reducing aggregate surface.

1. Finished Coating Thickness: 50 mils, 0.050 inch (1.3 mm), minimum.
2. Manufacturers:
    a. Tremco Commercial Sealants & Waterproofing: www.tremcosealants.com/#sle.

E. Vehicular Coating: Fluid-applied polyurethane with slip-reducing aggregate surface.

1. Finished Coating Thickness: 50 mils (0.050 inch) (1.3 mm), minimum.
2. Manufacturers:
    a. Tremco Commercial Sealants & Waterproofing: www.tremcosealants.com/#sle.

F. Vehicular Coating: Fluid-applied acrylic with slip-reducing aggregate surface.
1. Finished Coating Thickness: 50 mils (0.050 inch) (1.3 mm), minimum.
2. Manufacturers:
    a. GAF; StreetBond SB150 Pavement Coating: www.gaf.com/#sle.
    b. Substitutions: See Section 01 6000 - Product Requirements.

2.03 MATERIALS

A. Membrane: Fluid applied polyurethane; waterproof; color as selected; complying with the following:
1. Tensile Strength (ASTM D412).
2. Water Vapor Permeance (ASTM E96/E96M).
3. Surface Burning Characteristics (ASTM E84).
4. Adhesive Bond Peel Strength (ASTM D903).
5. Abrasion Resistance (ASTM D4060).

B. Surfacing: Clean sand.

C. Filler and Primer: As recommended by membrane manufacturer.

D. Cant Strips: 1 inch by 1 inch (25.4 mm by 25.4 mm) by 45 degrees, of dense sponge rubber compatible with adjacent materials.

E. Sealant: As recommended by membrane manufacturer, and compatible with system and adjacent materials.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that substrate is ready to receive work, surface is clean, dry and free of substances that could adversely affect bond.

3.02 PREPARATION

A. Clean substrate surface free of foreign matter.

B. Patch wood substrate with latex filler to produce surface conducive to bond.

C. Patch concrete substrate with filler to produce surface conducive to bond.

D. Install cant strips securely at intersecting surfaces.

E. Protect adjacent surfaces.

3.03 INSTALLATION

A. Apply system materials in accordance with manufacturer's instructions.

B. Apply primer to prepared substrate to a dry film thickness of .

C. Apply surfacing to top coat before set.

D. Apply sealant to junction of horizontal and intersecting surfaces to achieve watertight seal.

3.04 PROTECTION

A. Do not permit traffic over unprotected surfaces.

END OF SECTION

SECTION 07 1900
WATER REPELLENTS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Water repellents applied to exterior and interior, masonry, stone and concrete surfaces.

B. Pressure washing.

C. Concrete etching.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

1.03 REFERENCE STANDARDS

A. MPI (APSM) - Master Painters Institute Architectural Painting Specification Manual Current Edition.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene a meeting at least one week prior to starting work; require attendance of affected installers; invite Architect and Owner .

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide product description.

C. Manufacturer's Installation Instructions: Indicate special procedures and conditions requiring special attention; cautionary procedures required during application.

D. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

E. Manufacturer's Qualification Statement.

F. Installer's Qualification Statement.

G. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.

1.06 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years documented experience.

B. Installer Qualifications: Company specializing in performing work of type specified and with at least three years of documented experience

C. Owner reserves the right to provide continuous independent inspection of surface preparation and application of water repellent.

1.07 MOCK-UP

A. Prepare a representative surface 36 inch by 36 inch (0.91 m by 0.91 m) in size using specified materials and preparation and application methods on surfaces identical to those to be coated; approved mock-up constitutes standard for workmanship.

B. Mock-up may remain as part of the Work.

1.08 FIELD CONDITIONS

A. Protect liquid materials from freezing.

B. Do not apply water repellent when ambient temperature is lower than 50 degrees F (10 degrees C) or higher than 100 degrees F (38 degrees C).

1.09 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a five year period after Date of Substantial Completion.

C. Provide five year manufacturer warranty for all materials.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Acrylic Water Repellents:

1. BASF Construction Chemicals: www.buildingsystems.basf.com/#sle.
2. Sherwin-Williams Company: www.sherwin-williams.com/#sle.
3. Textured Coatings of America, Inc: www.texcote.com/#sle.

2.02 MATERIALS

A. Specific product to be used will be determined by side-by-side mock-up testing of at least three products meeting specified requirements; prepare mock ups as specified above; submit cost breakdown for each product used in mock-up, including both unit and total costs.

B. Water Repellent: Non-glossy, colorless, penetrating, water-vapor-permeable, non-yellowing sealer, that dries invisibly leaving appearance of substrate unchanged.

1. Applications: Vertical surfaces and non-traffic horizontal surfaces.
2. VOC Content: As specified in Section 01 6116.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify joint sealants are installed and cured.

C. Verify surfaces to be coated are dry, clean, and free of efflorescence, oil, or other matter detrimental to application of water repellent.

3.02 PREPARATION

A. Protection of Adjacent Work:

1. Protect adjacent landscaping, property and vehicles from drips and overspray.
2. Protect adjacent surfaces not intended to receive water repellent.

B. Prepare surfaces to be coated as recommended by water repellent manufacturer for best results.

C. Do not start work until masonry mortar substrate is cured a minimum of 60 days.

D. Remove oil and foreign substances with a chemical solvent that will not affect water repellent.

E. Scrub and rinse surfaces with water and let dry.

F. Pressure wash surfaces to be coated:

G. Acid etch smooth concrete surfaces to be coated, using procedures described in MPI (APSM) - Architectural Painting Specifications Manual; match approved mock-up.

H. Allow surfaces to dry completely to degree recommended by water repellent manufacturer before starting coating work.

3.03 APPLICATION

A. Apply water repellent in accordance with manufacturer's instructions, using procedures and application methods recommended as producing the best results.

B. Apply at rate recommended by manufacturer, continuously over entire surface.

C. Remove water repellent from unintended surfaces immediately by a method instructed by water repellent manufacturer.

END OF SECTION

SECTION 07 2100
THERMAL INSULATION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Board insulation and integral vapor retarder at cavity wall construction, perimeter foundation wall, underside of floor slabs, over roof deck, over roof sheathing, exterior wall behind _ wall finish and interior wall with facer providing exposed finish.

B. Batt insulation and vapor retarder in exterior wall, ceiling and roof construction.

C. Batt insulation for filling perimeter window and door shim spaces and crevices in exterior wall and roof.

1.02 RELATED REQUIREMENTS

A. Section 07 2500 - Weather Barriers: Separate air barrier and vapor retarder materials.

1.03 REFERENCE STANDARDS

A. ASTM C553 - Standard Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications 2013.

B. ASTM C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation 2018.

C. ASTM C612 - Standard Specification for Mineral Fiber Block and Board Thermal Insulation 2014.

D. ASTM C665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing 2017.

E. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

F. NFPA 285 - Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Non-Load-Bearing Wall Assemblies Containing Combustible Components 2012.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on product characteristics, performance criteria and product limitations.

C. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

D. Manufacturer's Installation Instructions: Include information on special environmental conditions required for installation and installation techniques.

1.05 FIELD CONDITIONS

A. Do not install insulation adhesives when temperature or weather conditions are detrimental to successful installation.

PART 2 PRODUCTS

2.01 APPLICATIONS

A. Insulation on Inside of Concrete and Masonry Exterior Walls: Glass fiber board.

B. Insulation in Metal Framed Walls: Batt insulation with integral vapor retarder.

C. Insulation in Wood Framed Walls: Batt insulation with separate vapor retarder.

D. Insulation in Wood Framed Ceiling Structure: Batt insulation with separate vapor retarder.

E. Insulation Above Lay-In Acoustical Ceilings: Batt insulation with no vapor retarder.

F. Insulation Over Roof Deck: Extruded polystyrene (XPS) board.

2.02 FOAM BOARD INSULATION MATERIALS

A. Expanded Polystyrene (EPS) Board Insulation: Complies with ASTM C578.
   1. Flame Spread Index (FSI): Class A - 0 to 25, when tested in accordance with ASTM E84.
   2. Smoke Developed Index (SDI): 450 or less, when tested in accordance with ASTM E84.
   3. Manufacturers:
      a. AFM Corp: www.r-control.com/#sle.
      b. Diversifoam Products: www.diversifoam.com/#sle.
      c. Mar-flex Waterproofing & Building Products; ArmorFoam 25: www.mar-flex.com/#sle.
      d. Substitutions: See Section 01 6000 - Product Requirements.

B. Termite-Resistant Expanded Polystyrene (EPS) Board Insulation: Complies with ASTM C578.
   1. Flame Spread Index (FSI): Class A - 0 to 25, when tested in accordance with ASTM E84.
   2. Smoke Developed Index (SDI): 450 or less, when tested in accordance with ASTM E84.

C. Extruded Polystyrene (XPS) Board Insulation: Complies with ASTM C578 with either natural skin or cut cell surfaces.
   1. Flame Spread Index (FSI): Class A - 0 to 25, when tested in accordance with ASTM E84.
   2. Smoke Developed Index (SDI): 450 or less, when tested in accordance with ASTM E84.
   3. Type and Thermal Resistance, R-value (RSI-value): Type IV, 5.0 (0.88) per 1 inch (25.4 mm) thickness at 75 degrees F (24 degrees C) mean temperature.
   4. Complies with fire resistance requirements shown on the drawings as part of an exterior non-load-bearing exterior wall assembly when tested in accordance with NFPA 285.

2.03 FIBERBOARD INSULATION MATERIALS

A. Where fiberboard insulation is indicated, either glass fiber or mineral fiberboard insulation may be used, at Contractor's option.

B. Glass Fiberboard Insulation: Rigid glass fiber, in accordance with ASTM C612.
   1. Facing: None, unfaced.
   2. Flame Spread Index: 25 or less, when tested with facing, if any, in accordance with ASTM E84.
   3. Smoke Developed Index: 50 or less, when tested with facing, if any, in accordance with ASTM E84.
   4. Board Thickness: 1 inch (25.4 mm).

C. Mineral Fiberboard Insulation: Rigid or semi-rigid mineral fiber, ASTM C612 or ASTM C553; unfaced flame spread index of 0 (zero) when tested in accordance with ASTM E84.
   1. Smoke Developed Index: 450 or less, when tested in accordance with ASTM E84.

2.04 BATT INSULATION MATERIALS

A. Where batt insulation is indicated, either glass fiber or mineral fiber batt insulation may be used, at Contractor 's option.

B. Glass Fiber Batt Insulation: Flexible preformed batt or blanket, complying with ASTM C665; friction fit.
   1. Combustibility: Non-combustible, when tested in accordance with ASTM E136, except for facing, if any.

C. Mineral Fiber Batt Insulation: Flexible or semi-rigid preformed batt or blanket, complying with ASTM C665; friction fit; unfaced flame spread index of 0 (zero) when tested in accordance with ASTM E84.

1. Smoke Developed Index: 0 (zero), when tested in accordance with ASTM E84.

2.05 ACCESSORIES

A. Sheet Vapor Retarder: Specified in Section 07 2500.

B. Interior Vapor Retarder: Modified polyethylene/polyacrylate (PE/PA) film reinforced with polyethylene terephthalate (PET) fibers, 12 mils, 0.012 inch (0.30 mm) thick.

1. Width: 4.9 feet (1.5 m).

C. Tape: Reinforced polyethylene film with acrylic pressure sensitive adhesive.

1. Application: Sealing of interior circular penetrations, such as pipes or cables.

2. Width: Are required for application.

D. Flashing Tape: Special polyolefin film with high performance adhesive.

1. Application: Interior window and door sill flashing tape.

2. Width: Are required for application.

E. Adhesive: Type recommended by insulation manufacturer for application.

PART 3 EXECUTION

3.01 BOARD INSTALLATION AT FOUNDATION PERIMETER

A. Install boards horizontally on foundation perimeter.

B. Cut and fit insulation tightly to protrusions or interruptions to the insulation plane.

3.02 BOARD INSTALLATION AT EXTERIOR WALLS

A. Install boards horizontally on walls.

B. Cut and fit insulation tightly to protrusions or interruptions to the insulation plane.

3.03 BOARD INSTALLATION AT CAVITY WALLS

A. Install boards to fit snugly between wall ties.

B. Install boards horizontally on walls.

C. Cut and fit insulation tightly to protrusions or interruptions to the insulation plane.

3.04 BOARD INSTALLATION UNDER CONCRETE SLABS

A. Place insulation under slabs on grade after base for slab has been compacted.

B. Cut and fit insulation tightly to protrusions or interruptions to the insulation plane.

C. Prevent insulation from being displaced or damaged while placing vapor retarder and placing slab.

3.05 BOARD INSTALLATION OVER LOW SLOPE ROOF DECK

3.06 BOARD INSTALLATION OVER STEEP SLOPE ROOF SHEATHING OR ROOF STRUCTURE

A. Installation of board insulation over steep slope roof structure or roof sheathing is specified in Section 06 1000.

3.07 BATT INSTALLATION

A. Install insulation and vapor retarder in accordance with manufacturer's instructions.

B. Install in exterior wall and roof spaces without gaps or voids. Do not compress insulation.

C. Trim insulation neatly to fit spaces. Insulate miscellaneous gaps and voids.

D. Fit insulation tightly in cavities and tightly to exterior side of mechanical and electrical services within the plane of the insulation.

3.08 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for additional requirements.

3.09 PROTECTION

A. Do not permit installed insulation to be damaged prior to its concealment.

END OF SECTION

SECTION 07 2119
FOAMED-IN-PLACE INSULATION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Foamed-in-place insulation.
   1. In masonry cavity walls.
   2. In exterior framed walls.
   3. In exterior wall crevices.
   4. At junctions of dissimilar wall and roof materials.

B. Foamed-in-place intumescent insulation.

C. Protective intumescent coating.

1.02 REFERENCE STANDARDS

A. ASTM C518 - Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus 2017.

B. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

C. ASTM E283 - Standard Test Method for Determining the Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen 2004 (Reapproved 2012).

D. ASTM E2178 - Standard Test Method for Air Permeance of Building Materials 2013.

1.03 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section, with not less than three years of documented experience.

1.05 MOCK-UP

A. Provide insulation mock-up, include insulation overcoat, wall construction, window and frame and door frame in mock-up.

B. Locate where directed.

C. Mock-up may remain as part of the Work.

1.06 FIELD CONDITIONS

A. Do not apply foam when temperature is below that specified by the manufacturer for ambient air and substrate.

B. Do not apply foam when temperature is within 5 degrees F (2.78 degrees C) of dew point.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Foamed-In-Place Insulation:
   1. Accella Polyurethane Systems: www.accellapolyurethane.com/#sle.
   2. BASF Corporation; WALLTITE US Series Closed Cell: www.spf.basf.com/#sle.

3. Demilec LLC; DEMILEC APX: www.demilec.com/#sle.
4. Substitutions: See Section 01 6000 - Product Requirements.

B. Monolithic Foamed-In-Place Intumescent Insulation:

1. Preferred Solutions, Inc; Staycell ONE STEP 255 Spray Foam Insulation: www.stayflex.com/#sle.

2.02 MATERIALS

A. Foamed-In-Place Insulation: Low-density, flexible, open celled, water vapor permeable polyurethane foam; foamed on-site, using blowing agent of water or non-ozone-depleting gas.

1. Regulatory Requirements: Comply with applicable code for flame and smoke, concealment and overcoat limitations.
2. Thermal Resistance: R-value (RSI-value) of 3.0 (0.53), minimum, per 1 inch (25.4 mm) thickness at 75 degrees F (24 degrees C) mean temperature when tested in accordance with ASTM C518.
3. Air Permeance: 0.04 cfm/sq ft (0.2 L/second sq meter), maximum, when tested at intended thickness in accordance with ASTM E2178 or ASTM E283 at 1.57 psf (75 Pa).
4. Surface Burning Characteristics: Flame spread/Smoke developed index of 25/450, maximum, when tested in accordance with ASTM E84.

B. Monolithic Foamed-In-Place Intumescent Insulation: Medium-density, semi-rigid, two-part, closed cell polyurethane foam; foamed on-site using blowing agent of non-ozone-depleting gas.

1. Thermal Resistance: R-value (RSI-value) of 4.6 (0.81), minimum, per 1 inch (25.4 mm) thickness at 140 degrees F (60 degrees C) mean temperature, at 90 days, when tested in accordance with ASTM C518.
2. Water Vapor Permeance: 0.99 perms (56.64 ng/(Pa s sqm)), maximum, when tested at 2.4 inch (61 mm) thickness in accordance with ASTM E96/E96M.
3. Air Permeance: 0.0014 cfm/sq ft (0.007 L/second sq meter), maximum, when tested at 1-1/4 inch (31.8 mm) thickness in accordance with ASTM E2178 or ASTM E283 at 1.57 psf (75 Pa).
4. Closed Cell Content: At least 90 percent.
5. Density: 2.0 lbs/cu ft (32 kg/cu m), nominal, in accordance with ASTM D1622/D1622M.
6. Tensile Strength: 28 psi (193 kPa), minimum, in accordance with ASTM D1623.
7. Compressive Strength: 22 psi (152 kPa), minimum, in accordance with ASTM D1621.
8. Surface Burning Characteristics: Flame spread/Smoke developed index of 25/450, maximum, at 4 inch (102 mm) thick when tested in accordance with ASTM E84.

2.03 ACCESSORIES

A. Primer: As required by insulation manufacturer.

B. Protective Coating: Intumescent coating of type recommended by insulation manufacturer and as required to comply with applicable codes.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify work within construction spaces or crevices is complete prior to insulation application.

B. Verify that surfaces are clean, dry, and free of matter that may inhibit insulation or overcoat adhesion.

3.02 PREPARATION

A. Mask and protect adjacent surfaces from over spray or dusting.

B. Apply primer in accordance with manufacturer's instructions.

3.03 APPLICATION

A. Apply insulation in accordance with manufacturer's instructions.

B. Apply insulation by spray method, to a uniform monolithic density without voids.

C. Apply overcoat monolithically, without voids to fully cover foam insulation, to achieve fire rating required.

D. Patch damaged areas.

E. Where applied to voids and gaps assure space for expansion to avoid pressure on adjacent materials that may bind operable parts.

F. Trim excess away for applied trim or remove as required for continuous sealant bead.

3.04 FIELD QUALITY CONTROL

A. Field inspections and tests will be performed by an independent testing agency under provisions of Section 01 4000 - Quality Requirements.

B. Inspection will include verification of insulation and overcoat thickness and density.

3.05 PROTECTION

A. Do not permit subsequent construction work to disturb applied insulation.

END OF SECTION

SECTION 07 2129
SPRAYED INSULATION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Cellulosic insulation placed in walls.

B. Surface sealer.

1.02 REFERENCE STANDARDS

A. ASHRAE Std 90.1 I-P - Energy Standard for Buildings Except Low-Rise Residential Buildings Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

B. ASTM C518 - Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus 2017.

C. ASTM C739 - Standard Specification for Cellulosic Fiber Loose-Fill Thermal Insulation 2017.

D. ASTM D1622/D1622M - Standard Test Method for Apparent Density of Rigid Cellular Plastics 2014.

E. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

F. ASTM E136 - Standard Test Method for Behavior of Materials in a Vertical Tube Furnace At 750 Degrees C 2016a.

G. ITS (DIR) - Directory of Listed Products current edition.

H. UL (DIR) - Online Certifications Directory Current Edition.

1.03 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on materials, describing insulation properties.

C. Certificates: Certify that products of this section meet or exceed specified requirements.

D. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

E. Manufacturer's Qualification Statement.

F. Installer's Qualification Statement.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years of documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience.

C. Products Specified by Flammability Criteria: Listed and classified by ITS (DIR), UL (DIR) or authorities having jurisdiction (AHJ).

1.05 MOCK-UP

A. Provide air and water test mock-up, [8] feet ([2.5] m) long by [8] feet ([2.5] m) wide, illustrating wall construction.

B. Locate where directed.

C. Mock-up may remain as part of the Work.

1.06 FIELD & ENVIRONMENTAL CONDITIONS

A. Do not install insulation, sealer when ambient and surface temperatures are lower than 40 degrees F. Install SPF within the range of ambient and substrate surface temperatures in accordance with manufacturer's written instructions. Do not apply SPF to damp or wet substrates. Do not apply SPF during inclement weather or when ice, frost, surface moisture, or visible dampness is present on surfaces to be covered, or when precipitation is imminent. Do not apply SPF to exterior building surfaces when wind speeds exceed 40 kilometers 25 miles per hour. Use moisture measuring methods and equipment to verify that the moisture conditions of substrate surfaces are in accordance with SPF manufacturer requirements prior to application. Substrate temperatures must be within Maintain acceptable ambient and substrate surface temperatures prior to, during, and after

   installation of primer and insulation materials and overcoat.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Cellulosic Fiber Sprayed Insulation:

   1. GreenFiber: www.greenfiber.com/#sle.
   2. International Cellulose Corp: www.spray-on.com/#sle.
   3. ThermoCon, Inc: www.thermocon.com/#sle.
   4. Substitutions: See Section 01 6000 - Product Requirements.

B. Fiberglass/Mineral Fiber Sprayed Insulation:

   1. CertainTeed Corporation: www.certainteed.com/#sle.
   2. Johns Manville: www.jm.com/#sle.
   3. Substitutions: See Section 01 6000 - Product Requirements.

2.02 MATERIALS

A. Cellulosic Fiber Insulation: ASTM C739; treated cellulosic fiber, white color.

   1. Thermal Resistance (R-value (RSI-value)): 3.9 (0.67), at 1 inch (25.4 mm) thick when tested in accordance with ASTM C177 at 75 degrees F (23 degrees C) temperature
   2. Density: 2 lb/cu ft (32 kg/cu m), when tested in accordance with ASTM D1622/D1622M.
   3. Noise Reduction Coefficient (NRC): 0.75 for 1 inch (25 mm) thickness.
   4. Moisture Absorption: Maximum 15 percent by weight.
   5. Flame Spread / Smoke Developed Index: 0-25 / 0-450, Class A, when tested in accordance with ASTM E84.
   6. Combustibility: Passing ASTM E136.

B. Provide blown insulation in accordance with requirements of Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

C. Thermal Resistance [R-value (RSI-value)]: Provided minimum values in accordance with applicable edition of ASHRAE Std 90.1 I-P for envelope requirements of building location and climate zone.

2.03 ACCESSORIES

A. Primer: As required by insulation manufacturer.

B. Surface Sealer: Clear, latex based for placement over insulation.

C. Insulation Stop: Plastic, profiled and sized to suit rafter spacing and wall/sloped roof configuration.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that surfaces are clean, dry, and free of matter that may inhibit adhesion.

B. Verify that ceiling hangers and supporting clips have been are installed correctly.

C. Verify other work on and within spaces to be insulated is complete prior to application.

3.02 PREPARATION

A. Mask and protect adjacent surfaces from overspray or damage.

B. Apply primer in accordance with manufacturer's instructions.

C. Install insulation stops between rafters at wall/sloped roof construction to prevent insulation from covering soffit vents or from limiting air circulation from soffit to attic space.

3.03 INSTALLATION

A. Install sprayed insulation in accordance with manufacturer's instructions.

B. Install sprayed insulation to a uniform monolithic density without voids.

3.04 FIELD QUALITY CONTROL

A. Independent agency field inspection will be provided under provisions of Section 01 4000 - Quality Requirements.

B. Inspection will include verification of sprayed insulation and surface sealer thickness and density.

3.05 PROTECTION

A. Do not permit subsequent construction work to disturb applied sprayed insulation.

END OF SECTION

SECTION 07 2405
POLYMER BASED EXTERIOR INSULATION AND FINISH SYSTEMS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and General Provisions of Contract, including Division 1 Specification Sections, apply to the Work of this Section.

1.02 DESCRIPTION OF WORK

A. Provide all labor, materials equipment and labor necessary to install the exterior insulation and finish system (EIF System-Class PB) indicated on the drawings.

B. Related work specified elsewhere:

1. Unit Masonry: Section 04 2000.
2. Joint Sealants: 07 9200
3. Gypsum Board Assemblies: Section 09 2116.

C. General System Description:

1. The exterior insulation and finish system shall be a field applied system consisting of expanded polystyrene insulation board (EPS), glass fabric reinforcing mesh, mechanical anchors, base coat, and finish coat(s).
2. The following is not acceptable:
    a. Non-mechanical adhesive systems (Exception: adhesive systems shall be acceptable for application over existing glass block).

1.03 QUALITY ASSURANCE

A. Single Source Responsibility: Provide only products supplied by a single EIFS manufacturer, purchased directly from the Manufacturer or its authorized distributor.

B. Qualifications

1. EIF Manufacturer:
    a. Shall have marketed exterior insulation and finish systems in the United States for at least 10 years.
    b. Shall have a record of satisfactory completion of at least 1,000 projects utilizing the specified EIF system(s).
    c. Shall be a member of the Exterior Insulation Manufacturer's Association (EIMA) and shall comply with EIMA Guide Specifications and Standards for PB Systems.
    d. Shall have been approved for use by the following Model Building Code organizations in published research or compliance reports:
        1) BOCA ES
        2) ICBO ES
        3) SBCCI (Southern Building Code Congress International) PST and ESI
2. Insulation Board Manufacturer:
    a. Shall be listed by the approved Manufacturer and capable of producing the expanded polystyrene (EPS) in accordance with EIFS Manufacturer’s specifications.

b. Shall participate in the EIFS Manufacturer's third party certification and quality assurance program.

3. Applicator:
   a. Shall have trained and approved in the installation of the approved system(s).
   b. Shall process a current certificate of membership in approved manufacturers trained network of applicators.
   c. Shall be experienced and competent in the installation of Class PB EIF Systems.
4. Performance Requirements:
   a. The EIF System shall have been tested for durability and shall have passed based on the following test procedures:
      1) Abrasion Resistance: ASTM D968 after 500 Liters.
      2) Freeze/Thaw Resistance: EIMA 101.01 (modified ASTM C67); 60 cycles.
      3) Accelerated Weathering: ASTM G23; 2000 hours.
      4) Mildew Resistance: MIL STD 810B or ASTM D3273.
      5) Moisture Resistance: ASTM D2247, 14 day exposure.
      6) Salt Spray: ASTM B117, 300 hours.
      7) Water Penetration: EIMA 101.02 (modified ASTM E331).
      8) Water Vapor Transmission: ASTM E96, Procedure B.
   b. The EIF System shall have been tested for structural Performance as follows:
      1) Impact resistance: EIMA 101.86, Ultra-High (>150 in-lbs,
      2) Full Scale Structural Tests: ASTM E330.
   c. The EIF System shall have been tested for fire characteristics as follows:
      1) Flame Spread/Smoke Development (ASTM E84):
         (a) Adhesives and coatings: Less than 20 and less than 10 respectively.
         (b) Insulation Board: Less than 25 and less than 450 respectively.
      2) ASTM E108 (Modified): No significant contribution to flame spread (horizontally or vertically).
      3) ASTM E119: No effect on rating of wall assemblies (where applicable).

1.04 SUBMITTALS

A. Samples:
   1. Submit samples of EIF System for approval prior to beginning work. Minimum size of samples shall be 12" X 12". Samples shall clearly indicate each component of the system and shall be of suitable size to accurately represent each required color and texture. Colors will be selected from the Manufacturer's standard chart.
   2. Each sample shall be fabricated using the same tools and techniques as required for the actual application.
   3. One (1) approved sample shall be available and maintained at the job site.

B. Shop Drawings:

1. Submit complete drawings showing wall layout, all details, connections, expansion joints, the system components and installation sequence.

C. Reports, Calculations, and Certificates:

1. Submit copies of selected test reports by independent laboratories verifying the performance of the finish system and insulation board.
2. When requested, submit engineering calculations verifying the structural performance of the EIF System.
3. Applicator shall submit a copy of his current certificate of membership as an approved applicator of the approved EIF System.

D. Installation Procedures: Submit copies of Manufacturers approved installation instructions.

1.05 DELIVERY, STORAGE, AND HANDLING

A. All materials supplied by the Approved Manufacturer shall be delivered to the site location in the original unopened containers and packages with labels intact.

B. Upon arrival, materials shall be inspected for damage. Notify the manufacturer should damaged, incorrect or otherwise unsatisfactory material be encountered. Unsatisfactory materials, including coatings and admixtures damaged by freezing, shall not be used.

C. All materials shall be stored in a cool dry location, out of sunlight, protected from weather and other damage and at temperatures not less than 40 degrees F.

1.06 JOB CONDITIONS

A. Environmental Conditions:

1. The ambient air temperature shall be a minimum of 40 degrees F or greater and rising at the time of installation of the coatings and shall remain at 40 degrees F for at least 24 hours after application.
2. Application of the finish coat shall not take place during inclement weather unless appropriate protection acceptable to the manufacturer is employed.

B. Protection:

1. Surrounding materials and areas shall be protected during the installation of the EIF System.
2. The EIF System shall be protected from weather and other damage immediately after installation, including damage from installation of flashing and sealants.

C. Coordination and Scheduling:

1. Installation of system shall be coordinated with other construction trades.
2. Tops of walls shall be immediately covered to avoid water infiltration.
3. All sealants shall be installed in a timely manner to avoid water infiltration.
4. Sufficient manpower shall be employed to ensure a continuous operation, free of cold joints, scaffolding lines, or other conditions that would adversely affect integrity of system and finished appearance.

1.07 WARRANTY

A. The Approved Manufacturer shall provide a five (5) year limited warranty stating that all materials have been installed as specified and are free from defects in manufacturing and installation.

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Polymer Based (PB) EIF System:

1. Dryvit "Outsulation” (with "Panzer 15 Mesh"). (Basis of Specification)
2. Finestone "Pebbletex 55" type PB (with "Hi-Impact" mesh)
3. STO "Classic System" Type PB (with "Armor Mat" mesh)
4. Other EIF System manufacturer(s), pre-bid approved in accordance with Section 01630 (Substitutions and Product Options).

2.02 MATERIALS

A. Expanded Polystyrene Insulation Board:

1. Shall meet ASTM specification ASTM C578, Type I
2. Nominal Density: Minimum 0.95 pcf; maximum 1.25 pcf
3. Minimum compressive strength: 10 psi
4. Maximum water absorption: 2.5% by volume
5. Shall be labeled with Model Building Code approvals and UL listings
6. Tested in accordance with ASTM E84 Tunnel Test
    a. Flame Spread: Not greater than 25
    b. Smoke Developed: Not greater than 450
7. Board Thickness: Minimum 3/4"; maximum 4”

B. Fasteners:

1. Expansion Fastener: Concrete and masonry substrates - expandable sheath with corrosion resistant hammer driven pin, pre-drilled and used with the manufacturer's washer attachment. Anchor spacing not to exceed 12" vertically and 16" horizontally, with minimum penetration of 1".
2. Screw: Steel stud/gypsum sheathing substrate screws shall be corrosion resistant steel drill screws meeting the requirements of ASTM C 1002. Screw threads shall be adequate to pull screw head below the surface of the insulation board using the manufacturer's washer attachment.

C. Adhesives (Glass Block Installations): Liquid Polymer, field mixed with Portland cement; “Primus”.

D. Reinforcing Mesh:

1. Shall be balanced, open weave glass fiber fabric.
    a. Panzer 15: 15 oz/sq. yd. Tensile Strength: 400 lbs/in.
    b. Corner Mesh: 7.2 oz/sq. yd. Tensile Strength: 274 lbs/in.

E. Base Coats:

1. PB (Polymer Based) System: "Primus" acrylic-based adhesive/base coat, field mixed with Portland cement in accordance with manufacturer's instructions. Shall be compatible with EPS insulation board and reinforcing meshes.

F. Finish Coat:

1. Water based acrylic coating, factory blended and integrally colored synthetic finish.
    a. Standard formulation with dirt pickup resistance (DPR); “Quarzputz” coarse texture.

G. Accessories: As indicated on the Drawings.

H. Sealants: Comply with manufacturer's recommendations and EIMA Guidelines for compatible sealants and application procedures.

PART 3 - EXECUTION

3.01 INSPECTION

A. Prior to beginning work, examine all substrates for soundness, such as tightness of connections, crumbling or looseness of surface, level tolerance of surface, and other conditions when would affect the installation.

1. Level tolerance: ¼” in a 4 foot radius.

B. Notify the Owner’s Representative and Architect of any adverse or unsatisfactory conditions encountered. Work shall not proceed until such conditions are corrected.

3.02 INSTALLATION

A. Installation shall conform to Approved Manufacturer's printed application instructions, except as otherwise specified herein or as shown on the drawings.

B. Insulation Board and Reinforcing Fabric:

1. Board shall be placed horizontally from a level base line, vertical joints shall be staggered and insulation boards interlocked at corners. Insulation boards shall be butted tightly. Surfaces of adjacent boards shall be flush at joints. Reinforcing glass fabric edges shall be overlapped 3". Insulation and reinforcing fabric shall be mechanically anchored with manufacturer's standard fasteners, spaced not more than 12" vertically nor more than 16" horizontally. Where required, provide expansion through both the reinforcing mesh and board. Vertical joints shall be continuous with butt end located at mid points of panel. Horizontal joints shall butt into vertical joints. Apply a bead of preliminary caulk at butt end conditions and intersections of vertical and horizontal joints.

a. The fasteners shall be installed so that the insulation board is pulled snug to the wall and is slightly dimpled by the washer.

C. Base Coat:

1. Base coat shall be mixed in accordance with manufacturer's instructions and applied to insulated wall surfaces trowelling the material into the reinforcing fabric in a tight coat and doubling back to 1/8" -3/16" thickness. (Refer to EIF System Application Instructions for proper thickness). Base coats shall be applied to level out surface areas and to fill joints smooth with adjacent area.

2. The mesh shall be fully embedded into the wet adhesive/base coat mixture. (Apply the base coat in two passes to ensure that the mesh pattern shall not be visible).

3. Allow the base coat to dry for a period of at least 24 hours before applying finish coat.

4. Correct surface imperfections prior to applying finish coat.

D. Finish Coat:

1. Finish shall be applied continuously and in one operation to the entire surface. A wet edge shall be maintained. Texture shall be maintained by trowelling, floating or spraying as necessary to achieve the required finish. Texture shall match approved sample. (See 1.04A3).

2. Protect the finish from dust or other airborne contamination and effects of weather until completely dry. Protect surface from construction damage until acceptance by Owner.

E. Installation on Existing Glass Block

1. Prior to installation of the EIFS, the existing glass block surface shall be completely cleaned with a mild detergent, rinsed with clean water, and allowed to dry. The surface shall be free of dirt, debris

and soap film, or other foreign surfaces.

2. Install a test sample approximately one foot square: Apply a sample of polystyrene insulation board to the cleaned glass block surface with manufacturer's adhesive/base coat. Adhesive base coat shall be properly mixed and applied in accordance with Manufacturer's recommendations. Allow sample to dry for minimum of 3 days or as otherwise recommended by the manufacturer.
3. Perform a “pull-off” test in the presence of an authorized representative of the system manufacturer and the Owner’s Representative. A successful test of adhesion is indicated by failure within the insulation board.
4. Do not proceed unless adhesion of test sample is satisfactory. Perform a second cleaning of glass block surface if adhesion proves inadequate, and perform a second "pull-off" test.

3.03 FIELD QUALITY CONTROL

A. During installation, the work shall be inspected by the approved manufacturer or its authorized representative in order to ensure compliance with installation instructions.

B. Make all repairs or modifications resulting from use of improper materials or procedures, at no additional cost to the Owner.

3.04 PROTECTION

A. Protect EIFS from weather and damage from work of other trades, until flashings and sealants are installed, and until completed system is accepted by Owner.

3.05 CLEAN-UP

A. Excess materials shall be removed and disposed of legally.

B. The applicator shall clean adjacent materials and surfaces and the work area to remove foreign materials resulting from the work of this Section.

END OF SECTION

SECTION 07 2410
POLYMER MODIFIED EXTERIOR INSULATION AND FINISH SYSTEMS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and General Provisions of Contract, including Division 1 Specification Sections, apply to the Work of this Section.

1.02 DESCRIPTION OF WORK

A. Provide all labor, materials equipment and labor necessary to install the exterior insulation and finish system (EIF System – Class PM) indicated on the drawings.

B. Related work specified elsewhere:

1. Unit Masonry: Section 04 2000.
2. Joint Sealants: Section 07 9200.
3. Gypsum Board Assemblies: Section 09 2116

C. General System Description:

1. The exterior insulation and finish system shall be a field applied system consisting of extruded polystyrene insulation board (XPS), glass fabric reinforcing mesh, mechanical anchors, chopped fiberglass reinforcing fibers, base coat, and finish coat(s).

1.03 QUALITY ASSURANCE

A. Single Source Responsibility: Provide only products supplied by a single EIFS manufacturer, purchased directly from the Manufacturer or its authorized distributor.

B. Qualifications

1. EIFS Manufacturer:
    a. Shall have marketed exterior insulation and finish systems in the United States for at least 10 years.
    b. Shall have a record of satisfactory completion of at least 1,000 projects utilizing the specified EIF system(s).
    c. Shall be a member of the Exterior Insulation Manufacturer's Association (EIMA) and shall comply with EIMA Guide Specifications and Standards for PM Systems.
    d. Shall be approved for use by the following Model Building Code organizations in published research or compliance reports:
        1) BOCA ES
        2) ICBO ES
        3) SBCCI (Southern Building Code Congress International) PST and ESI.
2. Insulation Board Manufacturer:
    a. Shall be listed by the approved manufacturer and capable of producing the extruded polystyrene (XPS) in accordance with EIFS Manufacturer’s specifications.
    b. Shall participate in the EIFS Manufacturer’s third party certification and quality assurance program.
3. Applicator:

a. Shall be trained and approved in the installation of the approved system.

b. Shall process a current certificate of membership in approved manufacturers trained network of applicators.

c. Shall be experienced and competent in the installation of Class PM EIF Systems.

4. Performance Requirements:

a. The EIF System shall have been tested for physical and chemical characteristics and shall have passed based on the following test procedures:

1) Absorption/Freeze/Thaw resistance: EIMA 101.1 (Modified ASTM C67); 60 cycles.

2) Salt Spray Resistance: ASTM B117; 300 hours.

3) Mildew Resistance: MIL STD 810B; Method 508.

4) Abrasion Resistance: ASTM D968; 500 liters.

5) Accelerated Weathering: ASTM G23; 2000 hours.

b. The EIF System shall have been tested for structural performance as follows:

1) Compressive Strength and tensile Strength: ASTM C190.

2) Flexural Strength: ASTM C203.

3) Impact Resistance: ASTM E695.

4) Full Scale Structural Test: ASTM E330.

c. The EIF System shall have been tested for fire characteristics as follows:

1) Flame Spread per ASTM E84: Less than 25 for EIFS coatings.

2) Systems Tests:

(a) Diversified Fire Test: ASTM E108 (Modified)

(b) Multi-Story Fire Test: UBC 17-6.

1.04 SUBMITTALS

A. Samples:

1. Submit samples of EIF System for approval prior to beginning work. Minimum size of samples shall be 12” X 12”. Samples shall clearly indicate each component of the system and shall be of suitable size to accurately represent each required color and texture. Colors will be selected from the Manufacturer's standard chart.

2. Each sample shall be fabricated using the same tools and techniques as required for the actual application.

3. One (1) approved sample shall be available and maintained at the job site.

B. Shop Drawings:

1. Submit complete drawings showing wall layout, all details, connections, expansion joints, the system components and installation sequence.

C. Reports, Calculations, and Certificates:

1. Submit copies of selected test reports by independent laboratories verifying the performance of the finish system and insulation board.

2. When requested, submit engineering calculations verifying the structural performance of the EIF System.

3. Applicator shall submit a copy of his current certificate of membership as an approved applicator of the approved EIF System.

D. Installation Procedures: Submit copies of Manufacturers approved installation instructions.

1.05 DELIVERY, STORAGE, AND HANDLING

A. All materials supplied by the Approved Manufacturer shall be delivered to the site location in the original unopened containers and packages with labels intact.

B. Upon arrival, materials shall be inspected for damage. Notify the manufacturer should damaged, incorrect or otherwise unsatisfactory material be encountered. Unsatisfactory materials, including coatings and admixtures damaged by freezing, shall not be used.

C. All materials shall be stored in a cool dry location, out of sunlight, protected from weather and other damage and at temperatures not less than 40 degrees F.

1.06 JOB CONDITIONS

A. Environmental Conditions:

1. The ambient air temperature shall be a minimum of 40 degrees F or greater and rising at the time of installation of the coatings and shall remain at 40 degrees F for at least 24 hours after application.

2. Application of the finish coat shall not take place during inclement weather unless appropriate protection acceptable to the manufacturer is employed.

B. Protection:

1. Surrounding materials and areas shall be protected during the installation of the EIF System.

2. The EIF System shall be protected from weather and other damage immediately after installation, including damage from installation of flashing and sealants.

C. Coordination and Scheduling:

1. Installation of system shall be coordinated with other construction trades.

2. Tops of walls shall be immediately covered to avoid water infiltration.

3. All sealants shall be installed in a timely manner to avoid water infiltration.

4. Sufficient manpower shall be employed to ensure a continuous operation, free of cold joints, scaffolding lines, or other conditions that would adversely affect integrity of system and finished appearance.

1.07 WARRANTY

A. The Approved Manufacturer shall provide a five (5) year limited warranty stating that all materials have been installed as specified and are free from defects in manufacturing and installation.

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Polymer Modified (PM) EIF System:

1. Dryvit "Ultralation" System (Type PM). (Basis of Specification)

2. "Finestone" Class PM "Impact-R" EIFS

3. STO "Toughwall"

4. Other PM EIF System Manufacturer(s), pre-bid approved in accordance with Section 01630 (Substitutions and Product Options).

2.02 MATERIALS

A. Extruded Polystyrene Insulation Board:

1. Shall meet ASTM specification ASTM C578, Type IV
2. Nominal Density: 2.0 PCF
3. Minimum compressive strength: 40 PSI (ASTM C 1621-73)
4. Maximum water absorption: 3% by volume (ASTM C272-76)
5. Shall be labeled with Model Building Code approvals and UL listings
6. Tested in accordance with ASTM E84 Tunnel Test
    a. Flame Spread: Not greater than 25
    b. Smoke Developed: Not greater than 450
7. Board Thickness: 1" minimum to 2” maximum

B. Fasteners:

1. Expansion Fastener: Concrete and masonry substrates - expandable sheath with corrosion resistant hammer driven pin, pre-drilled and used with the manufacturer's washer attachment. Anchor spacing not to exceed 12" vertically and 16" horizontally, with minimum penetration of 1".
2. Screw: Steel stud/gypsum sheathing substrate screws shall be corrosion resistant steel drill screws meeting the requirements of ASTM C 1002. Screw threads shall be adequate to pull screw head below the surface of the insulation board using the manufacturer's washer attachment.

C. Reinforcing Fabric:

1. Shall be balanced, open weave glass fiber mesh for reinforcement of starter base coat; “Utramesh”.

D. Base Coats:

1. PM (Polymer Modified) System:
    a. Portland Cement: ASTM C150, Type I
    b. Sand: Dry, bagged; #40-45 sieve silica or bulk sand complying with ASTM C 897
    c. Chopped fiberglass strands; “Ultrafibers”.
    d. Acrylic based additive, field mixed with cement, sand and fibers in accordance with manufacturer's instructions.

E. Finish Coat:

1. Water based acrylic coating; factory blended and integrally colored synthetic finish.

F. Accessories (As indicated on the Drawings): Expansion joints, control joints and corner beads of zinc or exterior grade vinyl as supplied by EIF System manufacturer.

G. Sealants: Comply with manufacturer's recommendations and EIMA Guidelines for compatible sealants and application procedures.

H. Water: Clean, cool and potable.

PART 3 - EXECUTION

3.01 INSPECTION

A. Prior to beginning work, examine all substrates for soundness, such as tightness of connections, crumbling or looseness of surface, level tolerance of surface, and other conditions when would affect the installation.

1. Level Tolerance: ¼” in a 4 foot radius.

B. Notify the Owner’s Representative and Architect of any adverse or unsatisfactory conditions encountered. Work shall not proceed until such conditions are corrected.

3.02 INSTALLATION

A. Installation shall conform to Approved Manufacturer's printed application instructions, except as otherwise specified herein or as shown on the drawings.

B. Insulation Board:

1. The insulation board shall be mechanically fastened to the substrate using one (1) fastener every eight (8) sq. ft.
2. The fasteners shall be installed so that the insulation board is pulled snug to the wall.
3. At penetrations where control joints are not used, the insulation board shall be installed so that its edges do not coincide with the corners of the opening.
4. A ½ in wide by ¾ in deep groove shall be cut into the insulation board to accommodate the “Deep V” control joints. The groove shall be cut so that a minimum of 6 mm (1/4 in) of insulation remains at the base of the groove.
5. Protect the finish from dust or other airborne contamination and effects of weather until completely dry. Protect surface from construction damage until acceptance by Owner.

C. Reinforcing Mesh:

1. Mesh shall be installed over the entire face of the wall and fastened through the insulation board and into the structural substrate. Ends of mesh shall overlap a minimum of 2 ½ in to a maximum of 4 in.
2. The remaining fasteners shall be installed to complete a 12 in by 16 in pattern and shall be installed so that the face of the washer sits not more than 1/16 in above or below the face of the insulation board.
3. Care shall be taken to ensure that mesh lays flat and has no tears, wrinkles, waves or cuts.

D. Trim Accessories:

1. Control joints, corner reinforcing, and other trim accessories shall be properly located and fastened into the insulation board using all nylon fasteners.
2. At all control joint intersections, neutral cure silicone bedding sealant, such as DOW Corning 790, shall be applied in the routed groove, and the control joint is set into the sealant so that the gaps between the joints are completely sealed.

E. Starter Base:

1. General:
    a. Prior to application of the Starter base coat, the surface of the insulation board shall be inspected by the applicator as follows:
        1) Fasteners, control joints and other trim accessories are properly installed and spaced.
        2) The Ultramesh shall lay flat with no wrinkles, tears, waves or cuts.
        3) All insulation board gaps greater than 1/8 in shall be silvered with insulation board.
        4) There shall be no surface degradation of the insulation board due to weathering. Affected areas shall be corrected by replacing, sanding or high pressure washing.
2. Mixing:

a. Mix the Starter base coat in the following proportions in accordance with manufacturers written instructions.

b. No other additives, except water, of any kind shall be added.

3. Base Coat Application:

a. Apply a tight coat of Starter mixture to fully embed the mesh.

b. Immediately double back, adding additional material as needed to achieve a smooth surface 6 mm (1/4 in) to 10 mm (3/8 in) thick.

c. Strike to a smooth level plane using a rod, darby or similar tool.

d. Apply starter mixture to entire panels, without interruption, to avoid cold joints.

e. The desired texture shall be applied to the set base coat using the Starter mixture.

F. Finish Application:

1. The finish shall be applied to distinct wall surfaces in a continuous application.

2. Sufficient manpower, scaffolding and equipment shall be employed to ensure a continuous operation and a uniform appearance.

3. Finish shall be protected from airborne contamination such as dust, soot, etc. and from weather and other damage until dry.

4. No additives shall be added under any circumstances.

5. Finish shall be applied utilizing the same tools and techniques to match the approved sample.

G. Sealants and Flashings:

1. All sealants and flashings shall be installed as soon as practical after completion of system installation and shall be designed and installed so that no water enters behind the system.

2. Temporary protection shall be provided until sealants and flashings are installed to prevent damage from water entry behind the System.

H. Protect the finish from dust or other airborne contamination and effects of weather until completely dry. Protect surface from construction damage until acceptable by Owner.

3.03 FIELD QUALITY CONTROL

A. During installation, the work shall be inspected by the approved manufacturer or its authorized representative in order to ensure compliance with installation instructions.

B. Make all repairs or modifications resulting from use of improper materials or procedures, at no additional cost to the Owner.

3.04 PROTECTION

A. Protect EIF System from weather and damage from work of other trades, until flashings and sealants are installed, and until completed system is accepted by Owner.

3.05 CLEAN-UP

A. Excess materials shall be removed and disposed of legally.

B. The applicator shall clean adjacent materials and surfaces and the work area to remove foreign materials resulting from the work of this Section.

END OF SECTION

SECTION 07 2500
WEATHER BARRIERS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Water-Resistive Barrier: Under exterior wall cladding, over sheathing or other substrate; not air tight or vapor retardant.

B. Vapor Retarders: Materials to make exterior walls, joints between exterior walls and roof and joints around frames of openings in exterior walls water vapor resistant and air tight.

C. Air Barriers: Materials that form a system to stop passage of air through exterior walls, joints between exterior walls and roof and joints around frames of openings in exterior walls.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Vapor retarder under concrete slabs on grade.

B. Section 07 5100 - Built-Up Bituminous Roofing: Vapor retarder installed as part of roofing system.

C. Section 07 5200 - Modified Bituminous Membrane Roofing: Vapor retarder installed as part of roofing system.

1.03 REFERENCE STANDARDS

A. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings; U.S. Environmental Protection Agency current edition.

B. AATCC Test Method 127 - Water Resistance: Hydrostatic Pressure Test 2014.

C. ASTM D1970/D1970M - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection 2017.

D. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

E. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials 2016.

F. ASTM E2178 - Standard Test Method for Air Permeance of Building Materials 2013.

G. ICC-ES AC38 - Acceptance Criteria for Water-Resistive Barriers 2016.

H. ICC-ES AC212 - Acceptance Criteria for Water-Resistive Coatings Used as Water-Resistive Barriers over Exterior Sheathing 2015.

I. ICC-ES AC380 - Acceptance Criteria for Termite Physical Barrier Systems 2014, with Editorial Revision (2017).

J. NFPA 285 - Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Non-Load-Bearing Wall Assemblies Containing Combustible Components 2012.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on material characteristics.

C. Shop Drawings: Provide drawings of special joint conditions.

D. ABAA Field Quality Control Submittals: Submit third-party reports of testing and inspection required by ABAA QAP.

E. Manufacturer's Installation Instructions: Indicate preparation.

F. ABAA Manufacturer Qualification: Submit documentation of current evaluation of proposed manufacturer and materials.

G. ABAA Installer Qualification: Submit documentation of current contractor accreditation and current installer certification; keep copies of each contractor accreditation and installer certification on site during and after installation, and present on-site documentation upon request.

H. Testing Agency Qualification Statement.

1.05 QUALITY ASSURANCE

A. Air Barrier Association of America (ABAA) Quality Assurance Program (QAP); www.airbarrier.org/#sle:

1. Installer Qualification: Use accredited contractor, certified installers, evaluated materials, and third-party field quality control audit.

2. Manufacturer Qualification: Use evaluated materials from a single manufacturer regularly engaged in air barrier material manufacture, and use secondary materials approved in writing by primary material manufacturer.

1.06 MOCK-UP

A. Install air barrier, vapor retarder and water-resistive barrier mock-up use materials specified.

1.07 FIELD CONDITIONS

A. Maintain temperature and humidity recommended by the materials manufacturers before, during and after installation.

PART 2 PRODUCTS

2.01 WEATHER BARRIER ASSEMBLIES

A. Water-Resistive Barrier: Provide on exterior walls under exterior cladding.

1. Use building paper unless otherwise indicated.

2. Under siding, use two separate layers of building paper.

B. Air Barrier:

1. On outside surface of inside wythe of exterior masonry cavity walls use air barrier coating.

2. On outside surface of single wythe masonry and concrete exterior walls use air barrier weather barrier as specified on drawing.

3. On outside surface of sheathing of exterior walls use air barrier weather barrier as specified on drawing.

C. Interior Vapor Retarder:

1. On inside face of studs of exterior walls, under cladding, use mechanically fastened vapor retarder sheet.

2. On bottom face of rafters, under cladding, use mechanically fastened vapor retarder sheet.

3. On inside face of masonry and concrete walls use vapor retarder weather barrier as specified on drawing.

4. On elevated floors over enclosed soffit space use vapor retarder .

5. On elevated floors over crawl space use vapor retarder .

D. Exterior Vapor Retarder:

1. On outside surface of inside wythe of masonry cavity wall use vapor retarder coating.

2.02 WATER-RESISTIVE BARRIER MATERIALS (NEITHER AIR BARRIER OR VAPOR RETARDER)

A. Building Paper: Asphalt-saturated Kraft building paper complying with requirements of ICC-ES AC38 Grade D.

1. Water Penetration Resistance: Withstand a water head of 21 inches (55 cm), minimum, for minimum of five hours, when tested in accordance with AATCC Test Method 127.
2. Manufacturers:
    a. Fortifiber Building Systems Group; Super Jumbo Tex 60 Minute: www.fortifiber.com/#sle.
    b. Fortifiber Building Systems Group; HydroTex: www.fortifiber.com/#sle.
    c. Substitutions: See Section 01 6000 - Product Requirements.

B. Weather-Resistive Barrier, Composite: Tear-resistant polyester sheet with UV-resistant acrylic coating.

1. Air Permeance: 0.178 cubic feet per minute per square foot (0.09 L/s/sq m), maximum, when tested in accordance with ASTM E2178.
2. Water Vapor Permeance: 200 perms (11.4 micrograms/(Pa s sq m)), minimum, when tested in accordance with ASTM E96/E96M Procedure A (desiccant procedure).
3. Ultraviolet and Weathering Resistance: Approved in writing by manufacturer for up to 210 days of weather exposure.
4. Surface Burning Characteristics: Flame spread index of 25 or less, smoke developed index of 450 or less (Class A), when tested in accordance with ASTM E84.
5. Seam and Perimeter Tape: As recommended by sheet manufacturer.

C. Drainable Barrier Sheet: Non-woven and non-perforated polypropylene material with 1/16 inch (1.5 mm) gap created by spacers providing drainage space.

1. Width: 5 feet (1.52 m), minimum.
2. Water Vapor Permeance: 19 perms (1087 ng/(Pa s sq m)), minimum, when tested in accordance with ASTM E96/E96M Procedure A (desiccant procedure).
3. Ultraviolet and Weathering Resistance: Approved in writing by manufacturer for up to 120 days of weather exposure.
4. Surface Burning Characteristics: Flame spread index of 25 or less, smoke developed index of 450 or less (Class A), when tested in accordance with ASTM E84.
5. Seam and Perimeter Tape: As recommended by sheet manufacturer.
6. Manufacturers:
    a. Tamlyn; Drainable Wrap - TWD5X100: www.tamlyn.com/#sle.
    b. Substitutions: See Section 01 6000 - Product Requirements.

2.03 AIR BARRIER MATERIALS (WATER VAPOR PERMEABLE AND WATER-RESISTIVE)

A. Air Barrier, Fluid Applied: Vapor permeable, elastomeric waterproofing.

1. Air Barrier Coating:
    a. Air Permeance: 0.001 cubic feet per minute per square foot (0.005 L/s/sq m), maximum, when tested in accordance with ASTM E2178.
    b. Water Vapor Permeance: 18 perms (1030 ng/(Pa s sq m)), minimum, when tested in accordance with ASTM E96/E96M, Procedure B.

c. Ultraviolet (UV) and Weathering Resistance: Approved in writing by manufacturer for up to six months of weather exposure after application.

d. Complies with NFPA 285 wall assembly requirements.

e. Nail Sealability: Pass, when tested in accordance with ASTM D1970/D1970M.

f. Manufacturers:

1) 3M Company: www.3M.com/construction/#sle.

2) BASF Corporation; MasterSeal AWB 660: www.master-builders-solutions.basf.us/#sle.

3) Dow Chemical Company; DOWSIL DefendAir 200: consumer.dow.com/en-us/industry/ind-building-construction.html/#sle.

4) Substitutions: See Section 01 6000 - Product Requirements.

2. Air Barrier Membrane:

a. Air Permeance: 0.004 cubic feet per minute per square foot (0.02 L/s/sq m), maximum, when tested in accordance with ASTM E2178.

b. Water Vapor Permeance: 5 perms (287 ng/(Pa s sq m)), minimum, when tested in accordance with ASTM E96/E96M, Procedure B.

c. Ultraviolet (UV) and Weathering Resistance: Approved in writing by manufacturer for up to three months of weather exposure.

d. Nail Sealability: Pass, when tested in accordance with ASTM D1970/D1970M.

3. Foamed-in-Place Air and Vapor Barrier: Medium-density, rigid or semi-rigid, closed cell polyurethane foam; foamed on-site, using blowing agent of water or non-ozone-depleting gas.

a. Regulatory Requirements: Comply with applicable code for flame and smoke limitations.

b. Water Vapor Permeance: Vapor retarder; 2 perm (115 ng/(Pa s sqm)), maximum, when tested at intended thickness in accordance with ASTM E96/E96M, desiccant method.

c. Closed Cell Content: At least 90 percent.

B. Air Barrier, Trowel-Applied:

1. Air Permeance: 0.004 cubic feet per minute per square foot (0.02 L/s/sq m), maximum, when tested in accordance with ASTM E2178.

2. Water Vapor Permeance: 10 perms (572 ng/(Pa s sq m)), minimum, when tested in accordance with ASTM E96/E96M Procedure A (desiccant procedure).

3. Water Penetration Resistance Around Nails: Pass, when tested in accordance with ASTM D1970/D1970M (modified).

4. Ultraviolet (UV) and Weathering Resistance: Approved in writing by manufacturer for up to 180 days of weather exposure.

5. Surface Burning Characteristics: Flame spread index of 25 or less, smoke developed index of 450 or less (Class A), when tested in accordance with ASTM E84.

6. Code Acceptance: Comply with applicable requirements of ICC-ES Acceptance Criteria AC212.

7. Seam Tape, Perimeter Tape, and Sealants: As recommended by sheet manufacturer.

2.04 AIR BARRIER MATERIALS (AIR AND VAPOR BARRIER)

A. Air and Vapor Barrier Sheet, Self-Adhered:

1. Air Permeance: 0.0002 cubic feet per minute per square foot (0.001 L/s/sq m), maximum, when tested in accordance with ASTM E2178.
2. Water Vapor Permeance: 0.02 perms (1.14 ng/(Pa s sq m)), maximum, when tested in accordance with ASTM E96/E96M.
3. Water Penetration Resistance Around Nails: Pass, when tested in accordance with ASTM D1970/D1970M (modified).
4. Ultraviolet (UV) and Weathering Resistance: Approved in writing by manufacturer for up to 30 days of weather exposure.
5. Surface Burning Characteristics: Flame spread index of 25 or less, smoke developed index of 450 or less (Class A), when tested in accordance with ASTM E84.
6. Seam and Perimeter Tape: As recommended by sheet manufacturer.
7. Manufacturers:
    a. Tremco Commercial Sealants & Waterproofing; ExoAir 110AT: www.tremcosealants.com/#sle.
    b. Substitutions: See Section 01 6000 - Product Requirements.

B. Air and Vapor Barrier Sheet, Fluid-Applied:
1. Air Permeance: 0.0001 cubic feet per minute per square foot (0.0005 L/s/sq m), maximum, when tested in accordance with ASTM E2178.
2. Water Vapor Permeance: 0.1 perms (5.72 ng/(Pa s sq m)), maximum, when tested in accordance with ASTM E96/E96M Procedure A (desiccant procedure).
3. Water Penetration Resistance Around Nails: Pass, when tested in accordance with ASTM D1970/D1970M.
4. Surface Burning Characteristics: Flame spread index of 25 or less, smoke developed index of 450 or less (Class A), when tested in accordance with ASTM E84.
5. Complies with NFPA 285 wall assembly requirements.
6. Seam and Perimeter Tape: As recommended by sheet manufacturer.

2.05 VAPOR RETARDER MATERIALS (AIR BARRIER AND WATER-RESISTIVE)

A. Vapor Retarder Sheet: ASTM D1970/D1970M.
1. Type: Rubberized asphalt bonded to thermoplastic sheet, self-adhesive.
2. Seam and Perimeter Tape: As recommended by sheet manufacturer.

B. Vapor Retarder Coating: Liquid applied, resilient, UV-resistant coating and associated joint treatment.
1. Water Vapor Permeance: 1.0 perm (57 ng/(Pa s sq m)), maximum, when tested in accordance with ASTM E96/E96M.
2. VOC Content: Less than 50 g per L when tested in accordance with 40 CFR 59, Subpart D (EPA Method 24).
3. Resistance to Fungal Growth: No growth when tested according to ASTM D5590.
4. Suitable for use on concrete, masonry, plywood and gypsum sheathing.
5. Joint Preparation Treatment: Coating manufacturer's recommended method, either tape or reinforcing mesh saturated with coating material.
6. Joint Filler: As recommended by coating manufacturer and suitable to the substrate.

2.06 ACCESSORIES

A. Sealants, Tapes, and Accessories for Sealing Weather Barrier and Sealing Weather Barrier to Adjacent Substrates: As specified or as recommended by weather barrier manufacturer.

B. Flexible Flashing: Self-adhesive sheet flashing complying with ASTM D1970/D1970M, except slip resistance requirement is waived if not installed on a roof.

1. Composition: Any material that meets physical requirements of ASTM D1970/D1970M with exceptions indicated.

C. Termite-Resistant Barrier Foundation Flashing: Peel and stick flashing membrane; polyethylene film bonded to sealant.

1. Thickness: 40 mil, 0.040 inch (1.016 mm) overall.
2. Roll Width: 12 inch (305 mm).
3. Termite Resistance: 100 percent when tested in accordance with ICC-ES AC380.

D. Pre-formed Transition Membrane: Semi-rigid silicone or polyester composition, tapered edges, tear resistant.

E. Liquid Flashing: One part, fast curing, non-sag, elastomeric, gun grade, trowelable liquid flashing.

F. Stainless Steel Flashing: Flexible flashing with 8 mil, 0.008 inch (0.203 mm) thick sheet of Type 304 stainless steel, 8 mil, 0.008 inch (0.203 mm) of butyl adhesive and a siliconized release liner.

G. Vapor Retarder Tape: Coated polyester film with acrylic adhesive backing; pressure sensitive.

H. Sheet Membrane Mounting Tape: Double-sided strip of pressure-sensitive, acrylic adhesive reinforced with embedded fiber-strand carrier layer and plastic backing.

1. Width: 3/4 inch (19 mm).
2. Roll Length: 164 feet (50 m).
3. Thickness: 14 mil, 0.014 inch (0.356 mm).

I. Liquid Flashing: One part, fast curing, non-sag, gun grade, trowelable liquid flashing.

J. Termite-Resistant Barrier Seam and Window Flashing: Peel and stick flashing membrane; polyethylene film bonded to sealant.

1. Thickness: 40 mil, 0.040 inch (1.016 mm) overall.
2. Roll Width: 4 inch (102 mm).
3. Termite Resistance: 100 percent when tested in accordance with ICC-ES AC380.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that surfaces and conditions are ready to accept the work of this section.

3.02 PREPARATION

A. Remove projections, protruding fasteners, and loose or foreign matter that might interfere with proper installation.

B. Clean and prime substrate surfaces to receive adhesives in accordance with manufacturer's instructions.

3.03 INSTALLATION

A. Install materials in accordance with manufacturer's instructions.

B. Water-Resistive Barriers: Install continuous barrier over surfaces indicated, with sheets lapped to shed water but with seams not sealed.

C. Air Barriers: Install continuous air tight barrier over surfaces indicated, with sealed seams and with sealed joints to adjacent surfaces.

D. Vapor Retarders: Install continuous air tight barrier over surfaces indicated, with sealed seams and with sealed joints to adjacent surfaces.

E. Apply sealants and adhesives within recommended application temperature ranges. Consult manufacturer if temperature is out of this range.

F. Mechanically Fastened Sheets - On Exterior:

1. Install sheets shingle-fashion to shed water, with seams generally horizontal.
2. Overlap seams as recommended by manufacturer but at least 6 inches.
3. Overlap at outside and inside corners as recommended by manufacturer but at least 12 inches (305 mm).
4. Install water-resistive barrier over jamb flashings.
5. Install air barrier and vapor retarder UNDER jamb flashings.
6. Install head flashings under weather barrier.
7. At openings to be filled with frames having nailing flanges, wrap excess sheet into opening; at head, seal sheet over flange and flashing.

G. Mechanically Fastened Sheets - Vapor Retarder On Interior:

1. When insulation is to be installed in assembly, install vapor retarder over insulation.
2. Seal seams, laps, perimeter edges, penetrations, tears, and cuts with self-adhesive tape, making air tight seal.
3. Locate laps at a framing member; at laps fasten one sheet to framing member then tape overlapping sheet to first sheet.
4. Seal entire perimeter to structure, window and door frames, and other penetrations.
5. Where conduit, pipes, wires, ducts, outlet boxes, and other items are installed in insulation cavity, pass vapor retarder sheet behind item but over insulation and maintain air tight seal.

H. Self-Adhered Sheets:

1. Prepare substrate in manner recommended by sheet manufacturer; fill and tape joints in substrate and between dissimilar materials.
2. Lap sheets shingle-fashion to shed water and seal laps air tight.
3. Once sheets are in place, press firmly into substrate with resilient hand roller; ensure that laps are firmly adhered with no gaps or fishmouths.
4. Use same material, or other material approved by sheet manufacturer for the purpose, to seal to adjacent construction and as flashing.
5. At wide joints, provide extra flexible membrane allowing joint movement.

I. Coatings:

1. Prepare substrate in manner recommended by coating manufacturer; treat joints in substrate and between dissimilar materials as recommended by manufacturer.
2. Use flashing to seal to adjacent construction and to bridge joints.

J. Openings and Penetrations in Exterior Weather Barriers:

1. Install flashing over sills, covering entire sill frame member, extending at least 5 inches (125 mm) onto weather barrier and at least 6 inches (150 mm) up jambs; mechanically fasten stretched edges.
2. At openings to be filled with frames having nailing flanges, seal head and jamb flanges using a continuous bead of sealant compressed by flange and cover flanges with sealing tape at least 4 inches (100 mm) wide; do not seal sill flange.
3. At openings to be filled with non-flanged frames, seal weather barrier to each side of opening framing, using flashing at least 9 inches (230 mm) wide, covering entire depth of framing.
4. At head of openings, install flashing under weather barrier extending at least 2 inches (50 mm) beyond face of jambs; seal weather barrier to flashing.
5. At interior face of openings, seal gap between window/door frame and rough framing, using joint sealant over backer rod.
6. Service and Other Penetrations: Form flashing around penetrating item and seal to weather barrier surface.

3.04 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for additional requirements.

B. Coordination of ABAA Tests and Inspections:

1. Provide testing and inspection required by ABAA QAP.
2. Notify ABAA in writing of schedule for air barrier work, and allow adequate time for testing and inspection.
3. Cooperate with ABAA testing agency.
4. Allow access to air barrier work areas and staging.
5. Do not cover air barrier work until tested, inspected, and accepted.

C. Do not cover installed weather barriers until required inspections have been completed.

D. Obtain approval of installation procedures by the weather barrier manufacturer based on a mock-up installed in place, prior to proceeding with remainder of installation.

3.05 PROTECTION

A. Do not leave materials exposed to weather longer than recommended by manufacturer.

B. Do not leave paper- or felt-based barriers exposed to weather for longer than one week.

END OF SECTION

SECTION 07 4113
METAL ROOF PANELS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Structural roofing system of preformed steel panels.

B. Structural roofing system of preformed aluminum panels.

C. Architectural roofing system of preformed steel panels.

D. Architectural roofing system of preformed aluminum panels.

E. Thermal roof insulation.

F. Attachment system.

G. Finishes.

H. Accessories.

1.02 RELATED REQUIREMENTS

A. Section 05 1200 - Structural Steel Framing: Roof framing and purlins.

B. Section 06 1000 - Rough Carpentry: Roof sheathing.

C. Section 06 1500 - Wood Decking: Roof sheathing.

D. Section 07 2100 - Thermal Insulation: Rigid roof insulation.

E. Section 07 4213 - Metal Wall Panels: Preformed wall panels.

F. Section 07 9200 - Joint Sealants: Sealing joints between metal roof panel system and adjacent construction.

G. Section 09 9113 - Exterior Painting: Field priming and painting roofing panels.

1.03 REFERENCE STANDARDS

A. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures Most Recent Edition Cited by Referring Code or Reference Standard.

B. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process 2017.

C. ASTM A792/A792M - Standard Specification for Steel Sheet, 55% Aluminum-Zinc Alloy-Coated by the Hot-Dip Process 2010 (Reapproved 2015).

D. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength 2018a.

E. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate 2014.

F. ASTM B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate (Metric) 2014.

G. ASTM C1363 - Standard Test Method for Thermal Performance of Building Materials and Envelope Assemblies by Means of a Hot Box Apparatus 2011.

H. ASTM D226/D226M - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing 2017.

I. ASTM D1970/D1970M - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection 2017.

J. ASTM D4869/D4869M - Standard Specification for Asphalt-Saturated Organic Felt Underlayment Used in Steep Slope Roofing 2016a.

K. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

L. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials 2016.

M. ASTM E108 - Standard Test Methods for Fire Tests of Roof Coverings 2017.

N. ASTM E1592 - Standard Test Method for Structural Performance of Sheet Metal Roof and Siding Systems by Uniform Static Air Pressure Difference 2005 (Reapproved 2017).

O. ASTM E1646 - Standard Test Method for Water Penetration of Exterior Metal Roof Panel Systems by Uniform Static Air Pressure Difference 1995 (Reapproved 2018).

P. ASTM E1680 - Standard Test Method for Rate of Air Leakage Through Exterior Metal Roof Panel Systems 2016.

Q. IAS AC472 - Accreditation Criteria for Inspection Programs for Manufacturers of Metal Building Systems 2017.

R. ICC-ES AC188 - Acceptance Criteria for Roof Underlayments 2012, with Editorial Revision (2015).

S. UL 580 - Standard for Tests for Uplift Resistance of Roof Assemblies Current Edition, Including All Revisions.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Include layouts of roof panels, details of edge and penetration conditions, spacing and type of connections, flashings, underlayments, and special conditions.

1. Show work to be field-fabricated or field-assembled.

C. Selection Samples: For each roofing system specified, submit color chips representing manufacturer's full range of available colors and patterns.

D. Verification Samples: For each roofing system specified, submit samples of minimum size 12 inches (305 mm) square, representing actual roofing metal, thickness, profile, color, and texture.

E. Manufacturer Qualification Statement: Provide documentation showing metal roof panel fabricator is accredited under IAS AC472.

F. Test Reports: Indicate compliance of metal roofing system to specified requirements.

G. Warranty: Submit specified manufacturer's warranty and ensure that forms have been completed in Owner's name and are registered with manufacturer.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years of documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Provide strippable plastic protection on prefinished roofing panels for removal after installation.

B. Store roofing panels on project site as recommended by manufacturer to minimize damage to panels prior to installation.

1.07 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Finish Warranty: Provide manufacturer's special warranty covering failure of factory-applied exterior finish on metal roof panels and agreeing to repair or replace panels that show evidence of finish degradation, including significant fading, chalking, cracking, or peeling within specified warranty period of five years from Date of Substantial Completion.

C. Waterproofing Warranty: Provide manufacturer's warranty for weathertightness of roofing system, including agreement to repair or replace roofing that fails to keep out water within specified warranty period of five years from Date of Substantial Completion.

PART 2 PRODUCTS

2.01 STRUCTURAL METAL ROOF PANELS

A. Structural Metal Roofing: Provide complete roofing assemblies, including roof panels, clips, fasteners, connectors, and miscellaneous accessories, tested for compliance with the following minimum standards:

1. Structural Design Criteria: Provide panel assemblies designed to safely support design loads at support spacing indicated, with deflection not to exceed L/180 of span length(L) when tested in accordance with ASTM E1592.
    a. Dead Loads: Weight of roofing system.
    b. Live Loads: As required by ASCE 7.
2. Overall: Complete weathertight system tested and approved in accordance with ASTM E1592.
3. Wind Uplift: Class 90 wind uplift resistance of UL 580.
4. Air Infiltration: Maximum 0.06 cfm/sq ft (1.1 cubic meters/hr/sq m) at air pressure differential of 6.24 lbf/sq ft (300 Pa), when tested according to ASTM E1680.
5. Water Penetration: No water penetration when tested according to procedures and recommended test pressures of ASTM E1646. Perform test immediately following air infiltration test.
6. Thermal Movement: Design system to accommodate without deformation anticipated thermal movement over ambient temperature range of 100 degrees F (56 degrees C).
7. Thermal Performance: Provide thermal resistance through entire system, R-value (RSI-value) of 15 deg F hr sq ft/BTU; 2 inch thick (2.6 K sq m /W; 50.8 mm thick), when tested in accordance with ASTM C1363.

B. Metal Panels: Factory-formed panels with factory-applied finish.

1. Type: Double skin, factory-assembled with foamed-in-place urethane insulation.
2. Steel Panels:
    a. Zinc-coated SS (structural steel) sheet complying with ASTM A653/A653M; minimum G60 (Z180) galvanizing.
    b. Aluminum-zinc alloy-coated SS (structural steel) sheet complying with ASTM A792/A792M; minimum AZ50 (AZM150) coating.
    c. Steel Thickness: Minimum 24 gage (0.024 inch) (0.61 mm).
3. Aluminum Panels:
    a. Alloy: Aluminum complying with ASTM B209 (ASTM B209M); temper as required for forming.
    b. Thickness: Minimum 20 gage (0.032 inch) (0.8 mm).
4. Texture: Smooth.

5. Length: Maximum possible length to minimize lapped joints.
6. Width: Maximum panel coverage of 16 inches (406 mm).
7. Mill-Finish Steel Panels: Treat with passivating chemical prior to shipment, to inhibit formation of corrosion.

2.02 ARCHITECTURAL METAL ROOF PANELS

A. Architectural Metal Roofing: Provide complete engineered system complying with specified requirements and capable of remaining weathertight while withstanding anticipated movement of substrate and thermally induced movement of roofing system.

B. Metal Panels: Factory-formed panels with factory-applied finish.

1. Steel Panels:
   a. Zinc-coated steel complying with ASTM A653/A653M; minimum G60 (Z180) galvanizing.
   b. Aluminum-zinc alloy-coated steel complying with ASTM A792/A792M; minimum AZ50 (AZM150) coating.
   c. Steel Thickness: Minimum 24 gage (0.024 inch) (0.61 mm).
2. Aluminum Panels:
   a. Alloy and Temper: Aluminum complying with ASTM B209 (ASTM B209M); temper as required for forming.
   b. Thickness: Minimum 20 gage (0.032 inch) (0.81 mm).
3. Texture: Smooth.
4. Length: Maximum possible length to minimize lapped joints. Where lapped joints are unavoidable, space laps so that each sheet spans over three or more supports.
5. Width: Maximum panel coverage of 24 inches (610 mm).
6. Mill-Finish Steel Panels: Treat with passivating chemical prior to shipment, to inhibit formation of corrosion.

2.03 ATTACHMENT SYSTEM

A. Concealed System: Provide manufacturer's standard stainless steel or nylon-coated aluminum concealed anchor clips designed for specific roofing system and engineered to meet performance requirements, including anticipated thermal movement.

2.04 SECONDARY FRAMING

A. Miscellaneous Secondary Framing: Light gage steel framing incidental to structural supports; fabricated from steel sheet.

B. Framing Material: ASTM A 1011/A 1011M, Designation SS steel sheet.

1. Profile: Manufacturer's standard cee, zee, asymmetrical zee, hat channel, plain channel, single slope eave strut, double slope eave strut and angle.
2. Thickness: 12 gage, 0.1046 inch (2.657 mm).
3. Finish: Galvanized per ASTM A653/A653M, G90.

2.05 FABRICATION

A. Panels: Provide factory or field fabricated panels with applied finish and accessory items, using manufacturer's standard processes as required to achieve specified appearance and performance requirements.

B. Joints: Provide captive gaskets, sealants, or separator strips at panel joints to ensure weathertight seals, eliminate metal-to-metal contact, and minimize noise from panel movements.

2.06 FINISHES

A. Custom Fluoropolymer Coating System: Polyvinylidene fluoride (PVDF) multi-coat thermoplastic fluoropolymer coating system, including minimum 70 percent PVDF color topcoat and minimum total dry film thickness of 0.9 mil (0.023 mm); color and gloss as indicated on drawings.

B. Solar Reflectance Index (SRI): 113.

2.07 ACCESSORIES

A. Miscellaneous Sheet Metal Items: Provide flashings, gutters, downspouts, trim, moldings, closure strips, preformed crickets, caps and equipment curbs of the same material, thickness, and finish as used for the roofing panels. Items completely concealed after installation may optionally be made of stainless steel.

B. Rib and Ridge Closures: Provide prefabricated, close-fitting components of steel with corrosion resistant finish or combination steel and closed-cell foam.

C. Sealants:

1. Exposed Sealant: Elastomeric; silicone, polyurethane, or silyl-terminated polyether/polyurethane.
2. Concealed Sealant: Non-curing butyl sealant or tape sealant.
3. Seam Sealant: Factory-applied, non-skinning, non-drying type.

D. Thermal Insulation: Provide flexible blanket, rigid or semi-rigid type, faced with white, flexible, non-dusting vapor retarder tested for maximum flame spread index of 50, per ASTM E84; for installation using spacer blocks.

1. Thermal Resistance: Minimum, R-value of 9.4 (RSI of 1.7).

E. Underlayment: Synthetic non-asphaltic sheet, intended by manufacturer for mechanically fastened roofing underlayment without sealed seams.

1. Self Sealability: Passing nail sealability test specified in ASTM D1970/D1970M.
2. Flammability: Minimum of Class A, when tested in accordance with ASTM E108.
3. Low Temperature Flexibility: Passing test specified in ASTM D1970/D1970M.
4. Water Vapor Permeance: Vapor retarder; maximum of 1 perm (57.2 ng/(Pa s sq m)), when tested in accordance with ASTM E96/E96M Procedure A (desiccant method).
5. Performance: Meet or exceed requirements for ASTM D226/D226M, Type II asphalt-saturated organic felt.
6. Liquid Water Transmission: Passes ASTM D4869/D4869M.
7. Functional Temperature Range: Minus 70 degrees F (56.7 C) to 212 degrees F (100 C).
8. Fasteners: As specified by manufacturer and building code qualification report or approval.

F. Underlayment: Self-adhering rubber-modified asphalt sheet complying with ASTM D1970/D1970M; 22 mil (0.55 mm) total thickness; with strippable release film and woven polypropylene sheet top surface.

1. Minimum Requirements: Comply with requirements of ICC-ES AC188 for non-self-adhesive sheet.

PART 3 EXECUTION

3.01 EXAMINATION

A. Do not begin installation of preformed metal roof panels until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.02 PREPARATION

A. Broom clean wood sheathing prior to installation of roofing system.

B. Coordinate roofing work with provisions for roof drainage, flashing, trim, penetrations, and other adjoining work to assure that the completed roof will be free of leaks.

C. Coordinate installation of waterproof membrane over roof sheathing with 06 1000.

D. Remove protective film from surface of roof panels immediately prior to installation. Strip film carefully, to avoid damage to prefinished surfaces.

E. Separate dissimilar metals by applying a bituminous coating, self-adhering rubberized asphalt sheet, or other permanent method approved by roof panel manufacturer.

F. Where metal will be in contact with wood or other absorbent material subject to wetting, seal joints with sealing compound and apply one coat of heavy-bodied bituminous paint.

3.03 INSTALLATION

A. Overall: Install roofing system in accordance with approved shop drawings and panel manufacturer's instructions and recommendations, as applicable to specific project conditions. Anchor all components of roofing system securely in place while allowing for thermal and structural movement.

1. Minimize field cutting of panels. Where field cutting is absolutely required, use methods that will not distort panel profiles. Use of torches for field cutting is absolutely prohibited.

B. Accessories: Install all components required for a complete roofing assembly, including flashings, gutters, downspouts, trim, moldings, closure strips, preformed crickets, caps, equipment curbs, rib closures, ridge closures and similar roof accessory items.

C. Install roofing felt and building paper slip sheet on roof deck before installing preformed metal roof panels. Secure by methods acceptable to roof panel manufacturer, minimizing use of metal fasteners. Apply from eaves to ridge in shingle fashion, overlapping horizontal joints a minimum of 2 inches (50 mm) and side and end laps a minimum of 3 inches (75 mm). Offset seams in building paper and seams in roofing felt.

D. Roof Panels: Install panels in strict accordance with manufacturer's instructions, minimizing transverse joints except at junction with penetrations.

E. Insulation: Install insulation between roof covering and supporting members to present a neat appearance. Fold, staple, and tape seams unless otherwise approved by Architect.

3.04 CLEANING

A. Clean exposed sheet metal work at completion of installation. Remove grease and oil films, excess joint sealer, handling marks, and debris from installation, leaving the work clean and unmarked, free from dents, creases, waves, scratch marks, or other damage to the finish.

3.05 PROTECTION

A. Do not permit storage of materials or roof traffic on installed roof panels. Provide temporary walkways or planks as necessary to avoid damage to completed work. Protect roofing until completion of project.

B. Touch-up, repair, or replace damaged roof panels or accessories before Date of Substantial Completion.

END OF SECTION

SECTION 07 4213.19
INSULATED METAL WALL PANELS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Factory-assembled metal panel system for walls, with trim, related flashings and accessory components.

B. Secondary sub-girt framing system, attached to building structural frame.

1.02 RELATED REQUIREMENTS

A. Section 05 1200 - Structural Steel Framing: Structural steel building frame.

B. Section 07 2100 - Thermal Insulation.

C. Section 07 2500 - Weather Barriers: Separate air barrier and vapor retarder materials.

D. Section 07 4213 - Metal Wall Panels: Field-assembled wall panel system.

E. Section 07 6200 - Sheet Metal Flashing and Trim.

F. Section 13 3419 - Metal Building Systems: Building framing system.

G. Placement of anchors in concrete work for attachment of panel components specified by this section.

1.03 REFERENCE STANDARDS

A. AAMA 609 & 610 - Cleaning and Maintenance Guide for Architecturally Finished Aluminum (Combined Document) 2015.

B. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process 2017.

C. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar 2015.

D. ASTM C177 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus 2013.

E. ASTM D1621 - Standard Test Method for Compressive Properties Of Rigid Cellular Plastics 2016.

F. ASTM D2842 - Standard Test Method for Water Absorption of Rigid Cellular Plastics 2012.

G. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

H. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements 2009 (Reapproved 2016).

I. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials 2016.

J. ASTM E413 - Classification for Rating Sound Insulation 2016.

K. FLA (PAD) - Florida Building Code Online - Product Approval Directory Current Edition.

L. FM 4880 - Approval Standard for Class 1 Fire Rating of Building Panels or Interior Finish Materials 2015.

M. FM 4881 - Approval Standard for Class 1 Exterior Wall Systems 2016.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer documentation on tested structural, thermal and fire resistance capabilities of assembled panel.

C. Shop Drawings: Indicate dimensions.

D. Samples: Submit two samples of panel, in size illustrating finish color, sheen, and texture.

E. Design and Performance Data: Indicate panel profile and dimensions.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this Section with minimum three years documented experience.

1.06 MOCK-UP

A. Construct mock-up that includes panels.

B. Demonstrate component assembly including panel and glazing materials, weep drainage system, attachments, anchors, and perimeter sealant.

C. Locate where directed.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Protect panels from accelerated weathering by removing or venting sheet plastic shipping wrap.

B. Store pre-finished material off ground with weather protection to prevent twisting, bending, or abrasion, and to provide ventilation. Slope metal sheets to ensure drainage.

1.08 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a five year period after Date of Substantial Completion, including:

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Other Acceptable Manufacturers:

1. All Weather Insulated Panels, a Vicwest company; Flat Wall Panel FL40: www.awipanels.com/#sle.
2. Alply Insulated Panels, LLC; Snug Seam: www.alply.com/#sle.
3. ATAS International, Inc: www.atas.com/#sle.
4. Centria: www.centria.com/#sle.
5. MBCI: www.mbci.com/#sle.
6. Substitutions: See Section 01 6000 - Product Requirements.

2.02 PANEL SYSTEM

A. Metal Panel System: Factory-assembled metal panel system, with trim, related flashings and accessory components.

1. Provide positive drainage to exterior for moisture entering or condensation occurring within panel system.
2. Accommodate tolerances of building structural framing.
3. Provide continuity of thermal barrier at building enclosure elements.
4. Provide continuity of vapor retarder at building enclosure elements in conjunction with vapor retarders specified in Section 07 2500.
5. Provide continuity of air barrier seal at building enclosure elements in conjunction with air seal materials specified in Section 07 2500.

B. Performance Requirements:

1. Thermal Performance: Provide thermal resistance through entire system.
2. Structural Performance: Design and size to withstand all dead loads and wind loads caused by positive and negative wind pressure acting normal to plane of panel.
    a. Verify structural performance in accordance with ASTM E330/E330M, using test pressure 1.5 times design wind pressure, with 10 seconds duration of maximum load.
3. Fire Resistance: Class 1 fire rated, without height limitation, when tested in accordance with FM 4880.
4. Wind Resistance: Class 1 approval for wall and roof construction, without height limitation, in accordance with FM 4881.
5. Wind-Borne-Debris Resistance: Identical full-size assembly without auxiliary protection, having Florida Building Code approval for Large and Small Missile impact and pressure cycling at design wind pressure.
6. Acoustical Performance: Provide sound attenuation through system (exterior to interior) of STC 38, calculated in accordance with ASTM E413, tested in accordance with ASTM E90.
7. Movement: Accommodate the movement caused by the following without damage to system, components, or deterioration of seals:
    a. Normal movement between system components.
    b. Seasonal temperature cycling.
    c. Deflection of structural support framing,
    d. Shortening of building concrete structural columns.

2.03 PANELS AND TRIM

A. Wall Panels: Exterior and interior metal sheet skin, factory-assembled, with foamed in place insulation; exterior and interior sheet interlocking at edges, fitted with continuous gaskets.
    1. Exterior Sheet: Pre-finished galvanized steel, 22 gage, 0.0299 inch (0.76 mm) minimum base metal thickness; stucco embossed.

B. Soffit Panels: Exterior and interior metal sheet skin, factory-assembled, with foamed in place insulation; exterior and interior sheet interlocking at edges, fitted with continuous gaskets.
    1. Exterior Sheet: Pre-finished galvanized steel, 22 gage, 0.0299 inch (0.76 mm) minimum base metal thickness; stucco embossed.
    2. Interior Sheet: Galvanized steel, pre-finished, 22 gage, 0.0299 inch (0.76 mm) minimum base metal thickness.

C. Internal and External Corners: Same material, thickness, and finish as exterior sheets; factory-fabricated mitered to required angles in one continuous piece with minimum 18 inch (450 mm) returns.

D. Trim, Closure Pieces, Expansion Joints, Caps, Flashings, Fascias and Infills: Same material , thickness and finish as exterior sheets; factory-fabricated to required profiles; fabricated in longest practicable lengths.

2.04 PANEL MATERIALS

A. Precoated Galvanized Steel Sheet: ASTM A653/A653M, Commercial Steel (CS) or Forming Steel (FS), with G90/Z275 coating; continuous-coil-coated with acrylic primer coat, silicone polyester top coat, and polyester washcoat for panel back.

B. Foamed-in-Place Insulation: Urethane type.

1. Thermal Conductivity (k factor): as determined by ASTM C177.
2. Water Vapor Transmission: tested in accordance with ASTM E96/E96M.
3. Water Vapor Absorption: percent by volume as tested in accordance with ASTM D2842.
4. Compressive Strength: tested in accordance with ASTM D1621.
5. Surface Burning Characteristics: Flame spread index of 25 or less, smoke developed index of 450 or less, when tested in accordance with ASTM E84.

C. Gaskets: Manufacturer's standard type suitable for use with panel system, permanently resilient; ultraviolet and ozone resistant; color as selected by Architect.

D. Panel Sealants: Manufacturer's standard type suitable for use with installation of panel system; non-staining, skinning, non-shrinking, non-sagging, ultra-violet and ozone resistant; color as selected by Architect.

2.05 ACCESSORIES

A. Concealed Sealants: Non-curing butyl sealant or tape sealant.

B. Exposed Sealants: Elastomeric; silicone, polyurethane, or silyl-terminated polyether/polyurethane.

1. Products:

a. Franklin International, Inc; Titebond WeatherMaster Metal Roof Sealant: www.titebond.com/#sle.

b. Substitutions: See Section 01 6000 - Product Requirements.

C. Fasteners: Manufacturer's standard type to suit application; hot-dip galvanized steel with soft neoprene washers. Fastener cap same color as exterior panel.

D. Field Touch-up Paint: As recommended by panel manufacturer.

E. Bituminous Paint: Asphalt base.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that structural framing is ready to receive panel system.

3.02 INSTALLATION

A. Install panel system on walls and soffits in accordance with manufacturer's instructions.

B. Protect panel surfaces in contact with cementitious materials with bituminous paint. Allow to dry prior to installation.

C. Permanently fasten panel system to structural supports; aligned, level, and plumb, within specified tolerances.

D. Locate panel joints over supports.

E. Use concealed fasteners unless otherwise approved by Architect .

F. Seal and place gaskets to prevent weather penetration. Maintain neat appearance.

3.03 TOLERANCES

A. Maximum Offset From True Alignment Between Adjacent Members Butting or In Line: 1/16 inch (1.6 mm).

3.04 CLEANING

A. Remove site cuttings from finish surfaces.

B. Clean and wash prefinished surfaces with mild soap and water; rinse with clean water.

C. Upon completion of installation, thoroughly clean prefinished aluminum surfaces in accordance with AAMA 609 & 610.

END OF SECTION

SECTION 07 5050
VEGETATED ROOF COMPONENTS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Vegetated roof components that occur above waterproof membrane, including:

1. Pre-planted, garden roof trays and accessories ("modular extensive").
2. Vegetated roofing system with less than 6 inches (152 mm) of soil/growth medium ("extensive").
3. OR Vegetated roofing system with 6 inches (152 mm) or more of soil/growth medium ("intensive").
4. Roof pavers systems.
5. Plants.

1.02 RELATED REQUIREMENTS

A. Section 07 1400 - Fluid Applied Waterproofing: Fluid-applied waterproofing for deck below vegetated roof.

B. Section 07 5200 - Modified Bituminous Membrane Roofing: Below vegetated roof using modular trays.

C. Section 07 5400 - Thermoplastic Membrane Roofing: Single-ply roofing over deck below vegetated roof.

1.03 REFERENCE STANDARDS

A. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures Most Recent Edition Cited by Referring Code or Reference Standard.

B. ASTM D1557 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft3 (2,700 kN m/m3)) 2012, with Editorial Revision (2015).

C. ASTM D1929 - Standard Test Method for Determining Ignition Temperature of Plastics 2016.

D. ASTM E303 - Standard Test Method for Measuring Surface Frictional Properties Using the British Pendulum Tester 1993 (Reapproved 2013).

E. SPRI RP-4 - Wind Design Standard for Ballasted Single-Ply Roofing Systems 2013.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide product data on components of vegetated roof.

C. Shop Drawings: Indicate size and outline of roof, location and type of materials, and details of accessories and edge treatments.

D. Manufacturer Certification: Submit written approval by membrane manufacturer of the proposed vegetated roof assembly and its components.

E. Manufacturer's Instructions: Submit copies of manufacturer's written installation instructions and other recommendations.

F. Preinstallation Field Report: Provide documentation that membrane installation has been approved by manufacturer and has passed specified testing.

G. Manufacturer's Qualification Statement.

H. Installer's Qualification Statement.

I. Project Record Documents: Record actual locations of planted areas, hardscape features, existing concealed drains, and irrigation system (if provided).

J. Maintenance Data: Submit manufacturer recommendations for maintenance of materials and plants.

K. Warranty Documentation:

1. Submit manufacturer warranty and ensure that forms have been completed in Owner 's name and registered with manufacturer.

2. Submit installer's certification that installation complies with warranty conditions for waterproof membrane.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years of documented experience.

B. Installer Qualifications: Company specializing in performing the work specified in this section, with not less than three years of documented experience.

C. Single Source Responsibility: Provide and install products from single source.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to project site in original, unopened containers or wrappings.

B. Store materials under cover and elevated above grade.

C. Store roll material lying down and on pallets fully protected from moisture.

D. Ensure storage and staging of materials does not exceed static and dynamic load-bearing capacities of roof decking.

E. Remove damaged materials from job site, and replace damaged materials.

1.07 FIELD CONDITIONS

A. Ambient Conditions: Install garden roof between April 1st and October 15th, unless otherwise indicated, or recommended in writing by manufacturer.

B. Roof Slope: Do not install vegetated roofing over substrate with slope of less than 2 percent.

C. Existing Conditions: Obtain written certification from the Architect or Owner that structure can safely withstand additional load imposed by soil and plant overburden.

1.08 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a one year period after Date of Substantial Completion.

C. Provide manufacturer's twenty year, single-source "full system" warranty.

PART 2 PRODUCTS

2.01 VEGETATED ROOFING USING MODULAR ROOF TRAYS

A. Vegetated Roofing Assembly: Modular trays and protective layers installed over waterproofing or membrane roofing system.

1. Protection Layers (in Order from Bottom Up): Provided and approved by waterproofing or membrane manufacturer:

a. Protection layer.

b. Cover board.

2. Number of protective materials may be reduced provided equivalent protection and functionality is achieved and is approved by waterproofing or membrane manufacturer.

3. Acceptable Roofing Manufacturers:
    a. Firestone Building Products Company: www.firestonebpco.com/#sle.
    b. Soprema: www.soprema.us/#sle.
    c. Substitutions: See Section 01 6000 - Product Requirements.

B. Trays: Pre-planted, modular, plastic garden roof trays, with integral drainage/filter fabric and manufacturer's standard growth medium.
1. Plants: Drought-resistant mix of grasses, perennials and groundcovers suitable to a non-irrigated or minimally-irrigated installation.
2. Size: Provide manufacturer's standard size trays as indicated on drawings. Single-tray size not to exceed 8 square feet (0.74 sq m).
3. Depth and Weight: 4 inches (101 mm) (nominal) deep and weighing no more than 18 pounds per square foot (88 kg per sq m) fully saturated.
4. Irrigation System: Black polystyrene drip irrigation and flow control emitters pre-installed with attachment for exterior hose bibb or other water supply; provide 50 feet (15.25 m) of extra tubing.
5. Manufacturers:
    a. Any manufacturer approved by membrane roofing or waterproofing manufacturer.

2.02 VEGETATED ROOFING OVER SINGLE-PLY MEMBRANE ROOFING

A. Membrane Roofing System: Specified in Section 07 5400.

B. Vegetated Roofing Assembly: Provide less than 6 inches (less than 152 mm) of growth medium, drainage layers and protection layers installed over mechanically-fastened single-ply membrane roofing.
1. Protection Layers (in Order from Bottom Up): Provided by, or approved by, membrane manufacturer.
    a. Protection fabric.
    b. Horizontal drain board.
2. Type and number of protective materials may be reduced provided equivalent protection and functionality is achieved and is approved by manufacturer.

C. Protection Fabric: 6 ounce per square yard (34 g per sq m), minimum, and 0.120 inch (3 mm) thick, needle-punched polyester fabric.

D. Horizontal Drain Board: 0.25 inch (6.35 mm) thick, minimum, with 10,800 pounds per square foot (517 kPa) minimum compressive strength and molded polystyrene core-only configuration specifically designed for horizontal application.

2.03 VEGETATED ROOFING OVER WATERPROOFING

A. Waterproofing System: Specified in Section 07 1400.

B. Vegetated Roofing Assembly: 6 inches or more (152 mm or more) of growth medium and protective layers installed over fluid-applied waterproofing membrane with additional insulation above membrane.
1. Protection Layers (in Order from Bottom Up):
    a. Protection board.
    b. Root barrier.
    c. Drain board.

2. Number and type of protective materials may be reduced provided equivalent protection and functionality is achieved and is approved by manufacturer.
3. Vegetated Waterproofing Manufacturers:
    a. American Hydrotech, Inc; 6125EV: www.hydrotechusa.com/#sle.
    b. Carlisle Coatings and Waterproofing, Inc: www.carlisleccw.com/#sle.
    c. Henry Company; 790-11 (as part of Henry's Vegetative Roof Assembly - VRA): www.henry.com/#sle.
    d. Substitutions: Section 01 6000 - Product Requirements.

C. Protection Layer Materials: Membrane manufacturer's recommended types.

D. Protection Board: 0.090 inch (2.8 mm) minimum thickness, glass-fiber, modified-bitumen mat with SBS rubber and asphalt blend.

2.04 FIELD-INSTALLED SOIL/GROWTH MEDIUM

A. Provide manufacturer's custom growing media mix capable of supporting vigorous growth of specified vegetation.

2.05 FIELD-INSTALLED PLANTS

A. See drawings for plants required.

2.06 ROOF PAVERS SYSTEMS

A. Precast Concrete Roof Pavers: Precast concrete tiles, with texture and color as indicated; supported by adjustable pedestal system.
1. Comply with local wind load resistance requirements of ASCE 7.
2. Texture: As selected by Architect from manufacturer's standard line.
3. Slip Resistance: Provide walking surfaces of exterior pavers with pendulum test values of at least 40 in accordance with ASTM E303 test method.

B. Paver Pedestals: Adjustable stand of multiple high impact copolymer polypropylene components to level and adjust height of pavers using 4-3/16 inch (107 mm) diameter SDR-35 PVC pipe, with maximum static load of 2,000 lbs (907 kgs) per pedestal.
1. Comply with local wind load resistance requirements of ASCE 7.
2. Self-Ignition Temperature: Provide plastic pedestal components with self-ignition temperature greater than 650 degrees F (343 degrees C) in accordance with ASTM D1929 test method.
3. Pedestal Height: Within 1/2 inch (12.7 mm) to 2-1/4 inch (57 mm), without use of PVC pipe in pedestal system.
4. Pedestal Height: Within 2-1/4 inch (57 mm) to 36 inch (914 mm), with use of PVC pipe in pedestal system.

2.07 ACCESSORIES

A. Stone Ballast: No.4 size, 1-1/2 inch (38.1 mm) nominal diameter, rounded, water-worn gravel complying with ASTM D448 and applied at a minimum of 10 pounds per square foot (0.48 kPa).

B. Paver Edge Restraints: Provide closure to underside of pavers at perimeter edge of pavers or areas that change elevation or step-down; restraint system shall fully contain pavers and tie back into building wall or parapet.

C. Edge Treatment: Provide dividers and edge elements to separate vegetated portion of roof from other areas as indicated on drawings.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that waterproof membrane work is complete.

B. Verify that surface of membrane is ready to accept vegetated roofing components.

C. Inspections and Testing Prior to Installation of Vegetated Roof Components:

1. Verify that installed waterproofing or membrane roofing system has been inspected by manufacturer's representative.

2. Verify that installed waterproofing or membrane roofing system has been tested by controlled flooding, electronic testing or other leak detection method approved by manufacturer.

3. Provide documentation that membrane installation has been approved by manufacturer and passed specified testing.

3.02 PREPARATION

A. Clean membrane surfaces of ponded water, snow, ice, dirt, debris, and foreign materials.

3.03 INSTALLATION, GENERAL

A. Install in accordance with membrane manufacturer's instructions and warranty restrictions, if any.

B. Dry surfaces thoroughly before vegetated roofing work begins.

C. Protect waterproofing or roof membrane as necessary to prevent damage during application of vegetated roof system.

D. Provide temporary ballast in partially completed sections of vegetated roof to protect overburden from wind effects during installation; ensure ballast has no sharp edges, protrusions, chemical contaminants, or other composition that could damage waterproof membrane.

3.04 PROTECTION BOARD OVER WATERPROOFING INSTALLATION

A. Embed protection board in fluid-waterproofing while waterproofing is still hot and overlap edges 2 to 3 inches (51 to 76 mm).

B. Seal laps with additional fluid waterproofing.

3.05 DRAIN BOARDS INSTALLATION

A. Horizontal Surfaces: Install boards by method required or recommended by membrane manufacturer.

1. Loose Laid Boards: Loose-lay drain boards; abut square edges tightly together; overlap flanged edges for tight fit with flange at highest end of board (away from drains); secure panels if high winds are predicted before placement of soil/growth media and plants.

B. Vertical Surfaces: Fasten to substrate in accordance with manufacturer's recommendations.

C. Corners:

1. Bend panels to make inside corners.

2. Cut panel flush with corner but leave 3 inches (76 mm) of additional fabric, and wrap fabric around edge of drain board and secure with tape to back of board, as required.

D. Penetrations: Cut drain board to fit tightly around penetrations.

E. Inspect completed drain board installation, and repair holes and tears by lapping each hole or tear at least 6 inches (152 mm) with new, undamaged filter fabric and sealing with manufacturer-approved tape.

3.06 INSULATION INSTALLATION

A. Handle insulation carefully, and avoid damaging or rupturing facer or finished surface.

B. Install insulation with staggered end joints.

C. Abut edges tightly together.

D. Inspect completed insulation installation; cut out broken corners or other damaged areas of insulation, and replace with undamaged insulation custom cut to fit damaged or broken area removed.

3.07 PROTECTION FABRIC INSTALLATION

A. Unroll protection fabric and draw tight without folds or wrinkles.

B. Overlap adjacent sheets [6 inches] ([152 mm]), and fasten edges with hot-air welding or with manufacturer's recommended construction adhesive.

C. Attach protection fabric to substrate, as required, with manufacturer's recommended construction adhesive.

D. Extend protection fabric on vertical surfaces to a point at least 2 inch (51 mm) above top of overburden.

E. Inspect completed protection fabric installation; repair any holes or tears by lapping each hole or tear at least 6 inches (152 mm) with new, undamaged protection fabric and sealing with manufacturer-approved tape.

3.08 PROTECTION FABRIC/WATER RETENTION MAT INSTALLATION

A. Loose-lay protection fabric/water retention mat, draw tight without folds or wrinkles, and overlap edges 3 inches (76 mm).

B. Temporarily attach protection fabric to substrate during installation, as required, with manufacturer's recommended construction adhesive.

C. Inspect completed protection fabric/water retention mat installation; repair any holes or tears by lapping each hole or tear at least 6 inches (152 mm) with new, undamaged material and sealing with manufacturer-approved tape.

3.09 PAVERS AND ACCESSORIES INSTALLATION

A. Edge Treatment: Install dividers and edging where indicated.

1. Provide intermittent spacing between dividers to allow water to flow between areas.

2. Extend protection layers up vertical surfaces of dividers and edging to retain overburden.

B. Install pavers on pedestals, fully support each edge, and shim and/or adjust pavers to provide level surface.

C. Paver Edge Restraints: Install exposed paver edge restraints in accordance with roof paver manufacturer's instructions.

D. Ballast: Install ballast in accordance with SPRI RP-4.

3.10 SOIL/GROWTH MEDIUM INSTALLATION

A. General: Place soil/growth medium carefully to avoid damaging or displacing other materials and accessories.

B. Placement, Depth Greater than 8 inches (203 mm):

1. Place soil/growth medium in lifts of 6 inches (152 mm) or less, except final lift.

2. Compact each lift as described below.
3. Place final lift of 6 inches (152 mm) or less and 1 inch (25 mm) greater than proposed finish grade prior to compaction.
4. Compact final lift until top of soil is within 1 inch (25 mm) of proposed finish grade.

C. Placement, Soil Depth Less than 8 inches (203 mm):

1. Place soil/growth medium in single lift of 8 inches (203 mm) or less and to 1 inch (25 mm) greater than proposed finish grade.
2. Compact lift until top of soil is within 1 inch (25 mm) of proposed finish grade

D. Compaction:

1. Use landscape rollers or handheld mechanical compactors.
2. Compact soil/growth medium to between 50 and 60 percent compaction as measured by ASTM D1557.

E. Install and maintain erosion control devices as recommended by manufacturer until plant installation is complete.

3.11 PLANTS INSTALLATION

A. Install plants in accordance with good horticultural practice.

B. Maintain plants in a live and healthy condition until Date of Substantial Completion.

3.12 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for additional requirements.

B. Have completed garden roof inspected by manufacturer's field representative.

C. Obtain waterproof membrane manufacturer's written approval of completed garden roof installation.

3.13 CLEANING

A. See Section 01 7419 - Construction Waste Management and Disposal, for additional requirements.

B. In areas where finished surfaces are soiled by work of this section, consult manufacturers of surfaces for cleaning advice and comply with their documented instructions.

C. Repair or replace defaced or damaged finishes caused by work of this section.

3.14 PROTECTION

A. Protect installed vegetated roof system from construction traffic and subsequent construction operations.

B. Provide substantial barricades or other barriers where necessary to prevent traffic across vegetation.

3.15 MAINTENANCE

A. See Section 01 7000 - Execution and Closeout Requirements, for additional requirements relating to maintenance service.

B. Maintain plants in vegetated roof for a period of one year after Date of Substantial Completion.

C. Provide a separate maintenance contract for specified maintenance service.

END OF SECTION

SECTION 07 5100
BUILT-UP BITUMINOUS ROOFING

PART 1 GENERAL

1.01 RELATED REQUIREMENTS

A. Section 05 3100 - Steel Decking: Product requirements for acoustical insulation for deck flutes, for placement by this section.

B. Section 06 1000 - Rough Carpentry: Wood nailers and curbs.

C. Section 07 0150.19 - Preparation for Re-Roofing.

D. Section 07 6200 - Sheet Metal Flashing and Trim: Counterflashings, reglets.

E. Section 07 7100 - Roof Specialties: Prefabricated roofing expansion joint flashing.

F. Section 07 7200 - Roof Accessories: Roof-mounted units.

G. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 REFERENCE STANDARDS

A. ASTM C208 - Standard Specification for Cellulosic Fiber Insulating Board 2012.

B. ASTM C552 - Standard Specification for Cellular Glass Thermal Insulation 2017, with Editorial Revision (2018).

C. ASTM C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation 2018.

D. ASTM C1289 - Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board 2018a.

E. ASTM C1396/C1396M - Standard Specification for Gypsum Board 2017.

F. ASTM D41/D41M - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing 2011 (Reapproved 2016).

G. ASTM D312/D312M - Standard Specification for Asphalt Used in Roofing 2016a.

H. ASTM D1863/D1863M - Standard Specification for Mineral Aggregate Used on Built-Up Roofs 2005, with Editorial Revision (2012).

I. ASTM D2178/D2178M - Standard Specification for Asphalt Glass Felt Used in Roofing and Waterproofing 2015a.

J. ASTM D3909/D3909M - Standard Specification for Asphalt Roll Roofing (Glass Felt) Surfaced with Mineral Granules 2014.

K. ASTM D4897/D4897M - Standard Specification for Asphalt-Coated Glass-Fiber Venting Base Sheet Used in Roofing 2016.

L. ASTM E1980 - Standard Practice for Calculating Solar Reflectance Index of Horizontal and Low-Sloped Opaque Surfaces 2011.

M. FM (AG) - FM Approval Guide current edition.

N. NRCA (RM) - The NRCA Roofing Manual 2018.

O. UL (FRD) - Fire Resistance Directory Current Edition.

1.03 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data indicating membrane and bitumen materials, base flashing materials, insulation, vapor retarder and surfacing.

1. Sustainable Design Submittal: Include test documentation of solar reflectance and thermal emissivity of membrane, and calculation of solar reflectance index (SRI).

C. Shop Drawings: Indicate joint or termination detail conditions, conditions of interface with other materials and setting plan for tapered insulation.

D. Samples for Verification: Submit two samples illustrating insulation and colored coating.

E. Samples of Pavers: Submit walkway pads or rolls of color required.

F. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

G. Manufacturer's Field Reports: Indicate procedures followed, ambient temperatures, humidity and supplementary instructions given.

H. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner 's name and registered with manufacturer.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years of documented experience.

B. Installer Qualifications: Company specializing in performing the work of this section with minimum three years documented experience.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's original containers, dry and undamaged, with seals and labels intact.

B. Store materials in weather protected environment, clear of ground and moisture.

C. Ensure storage and staging of materials does not exceed static and dynamic load-bearing capacities of roof decking.

D. Protect foam insulation from direct exposure to sunlight.

1.06 FIELD CONDITIONS

A. Do not apply roofing membrane during unsuitable weather.

B. Do not apply roofing membrane when ambient temperature is below 40 degrees F (5 degrees C).

C. Do not apply roofing membrane to damp or frozen deck surface or when precipitation is expected or occurring.

D. Do not expose materials vulnerable to water or sun damage in quantities greater than can be weatherproofed the same day.

E. Schedule applications so that no partially completed sections of roof are left exposed at end of workday.

1.07 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within the warranty year period after Date of Substantial Completion.

C. Provide 20 year manufacturer's material and labor warranty to cover failure to prevent penetration of water.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Sheet and Bitumen Materials:
   1. GAF: www.gaf.com/#sle.
   2. Johns Manville: www.jm.com/#sle.
   3. Substitutions: See Section 01 6000 - Product Requirements.

B. Insulation:
   1. Blue Ridge Fiberboard: www.blueridgefiberboard.com/#sle.
   2. Dow Chemical Company: www.dow.com/#sle.
   3. ROCKWOOL (ROXUL, Inc): www.rockwool.com/#sle.
   4. Substitutions: See Section 01 6000 - Product Requirements.

C. Source Limitations: Obtain components including roof insulation fasteners for built-up roofing from same manufacturer as built-up roofing or manufacturer approved by built-up roofing manufacturer.

2.02 ROOFING - CONVENTIONAL APPLICATION

A. Built-up Bituminous Roofing: Asphalt felt membrane, four ply plus base sheet, with vapor retarder and insulation.

B. Roofing Assembly Performance Requirements:
   1. Solar Reflectance Index (SRI): 78, minimum, calculated in accordance with ASTM E1980, based on 3-year aged data.
      a. Field applied coating may not be used to achieve specified SRI.
   2. Roof-Ceiling Fire Resistance Rating: Comply with FM (AG) Assembly Design.
   3. Roof Covering External Fire Resistance Classification: UL (FRD) Class A.
   4. Insulation Thermal Resistance (R-Value): 3 per inch, minimum; provide insulation of thickness required.

C. Acceptable Insulation Types: Any type that meets requirements and is approved by membrane manufacturer for application.
   1. Minimum 2 layers of composite board.
   2. Bottom layer of polyisocyanurate board covered with single layer of cellulose or extruded polystyrene board.

D. Acceptable Insulation Types - Tapered Application: Any of the types specified.

E. Surfacing: Aggregate, as indicated on drawings.

2.03 SHEET MATERIALS

A. Vapor Retarder Felt: Asphalt-saturated organic, ASTM D226/D226M Type I ("No.15") felt, unperforated.

B. Base Sheet: Asphalt-saturated and -coated, venting glass fiber felt; ASTM D4897/D4897M Type II, heavy-duty.

C. Roofing Felt: ASTM D2178/D2178M Asphalt-saturated glass fiber felt; standard duty.

D. White Cap Sheet: Asphalt-saturated glass fiber roll roofing surfaced with flexible acrylic coating and ceramic granules; complying with ASTM D3909/D3909M.
   1. Solar Reflectance: 0.75, minimum, initial, and 0.60, minimum, 3-year aged, certified by Cool Roof Rating Council.

2. Thermal Emissivity: 0.80, minimum, initial, and 0.85, minimum, 3-year aged, certified by Cool Roof Rating Council.
3. Manufacturers:
    a. CertainTeed Corporation; Flintglas MS Cap CoolStar: www.certainteed.com/#sle.
    b. GAF: www.gaf.com/#sle.
    c. Johns Manville: www.jm.com/#sle.
    d. Substitutions: See Section 01 6000 - Product Requirements.

E. Base Flashing Material: Granule Surfaced Flashing Sheet.
1. Elasticity: 50 percent with full recovery without set.
2. Color: White.

F. Flexible Flashing Material: Modified bitumen, SBS type.
1. Tensile Strength: 1,200 psi (8.3 MPa).
2. Elasticity: 50 percent with full recovery without set.
3. Color: White.

G. Separation Sheet: Sheet polyethylene; 2 mil (0.05 mm) thick.

H. Water Pervious Fabric: Woven polyethylene, UV stabilized, open to moisture movement, black.

2.04 BITUMINOUS MATERIALS

A. Bitumen: ASTM D312/D312M Type I, asphalt.

B. Primer: ASTM D41/D41M, asphalt type.

C. Roof Cement: ASTM D4586/D4586M, Type I, asbestos free.

2.05 DECK SHEATHING AND COVER BOARDS

A. Deck Sheathing: Gypsum sheathing, ASTM C1396/C1396M, Type X special fire resistant type, paper face, 5/8 inch (16 mm) thick.

B. Cover Boards: Coated cellulosic fiberboard, complying with ASTM C208.
1. Manufacturers:
    a. Blue Ridge Fiberboard; STRUCTODEK HD with Primed Red Coating: www.blueridgefiberboard.com/#sle.
2. Substitutions: See Section 01 6000 - Product Requirements.

2.06 INSULATION

A. Cellulose Fiber Board Insulation: ASTM C208 Type II, both faces finished with mineral fiber, asphalt and kraft paper.
1. Board Size: 48 by 96 inch (1219 by 2438 mm).
2. Board Thickness: 1/2 inch (13 mm).
3. Board Edges: Square.
4. Thermal Conductivity (k-value): 0.38 Btu in/hr sq ft degrees F (0.055 W/m K) at 75 degrees F (24 degrees C).

B. Extruded Polystyrene (XPS) Board Insulation: Complies with ASTM C578 with natural skin surfaces, with drainage channels on one face.

C. Composite Board Insulation: Top layer high-density wood fiberboard (HDF), bottom layer polyisocyanurate, with polyisocyanurate complying with ASTM C1289.

1. Polyisocyanurate surfaces faced with aluminum foil.
2. Board Size: 48 by 96 inch (1220 by 2440 mm).
3. Board Thickness: 1.5 inch (37.5 mm).
4. Tapered Board: Slope as indicated; minimum thickness as shown on plans; fabricate of fewest layers possible.

D. Cellular Glass Board Insulation: Complying with ASTM C552, Type IV.

1. Board Size: 48 inches long by 24 inch wide (1219 mm long by 610 mm wide) .
2. Board Thickness: 1-1/2 inch (38 mm).
3. Apparent Thermal Conductivity: K (Ksi) value of 0.31 Btu inch/hr sq ft degrees F (0.045 W/m K) at 75 degrees F (24 degrees C) mean temperature.

2.07 SURFACING MATERIALS - CONVENTIONAL APPLICATION

A. Aggregate: ASTM D1863/D1863M sound, hard washed river gravel; 1/4 inch (6 mm) minimum to 1/2 inch (12 mm) maximum size.

B. Walkway Pads: Suitable for maintenance traffic, contrasting color or otherwise visually distinctive from roof membrane.

1. Composition: Asphaltic with mineral granule surface.
2. Surface Color: White or yellow.
3. Manufacturers:
   a. W. R. Meadows, Inc; Whitewalk: www.wrmeadows.com/#sle.
   b. Substitutions: See Section 01 6000 - Product Requirements.

2.08 ACCESSORIES

A. Prefabricated Roofing Expansion Joint Flashing: As specified in Section 07 7100.

B. Cant and Edge Strips: Bitumen-impregnated wood fiberboard, compatible with roofing materials ; cants formed to 45 degree angle, tapered edge strips and other configurations as detailed.

C. Insulation Joint Tape: Glass fiber reinforced type as recommended by insulation manufacturer, compatible with roofing materials; 6 inches (150 mm) wide; self adhering.

D. Insulation Fasteners: Appropriate for purpose intended and approved by roofing manufacturer.

1. Length as required for thickness of insulation material and penetration of deck substrate, with metal washers.

E. Roofing Nails: Galvanized, hot dipped type, size and configuration as required to suit application.

F. Roof Insulation Vents: Aluminum , with perforated inner tube; protective cap and mounting flange.

G. Strip Reglet Devices: Galvanized steel, maximum possible lengths per location, with attachment flanges.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that surfaces and site conditions are ready to receive work.

B. Verify deck is supported and secure.

C. Verify deck is clean and smooth, flat, free of depressions, waves, or projections, properly sloped and suitable for installation of roof system.

D. Verify deck surfaces are dry and free of snow or ice.

E. Verify that roof openings, curbs, and penetrations through roof are solidly set, and cant strips are in place.

3.02 WOOD DECK PREPARATION

A. Verify flatness and tightness of joints of wood decking. Fill knot holes with latex filler.

B. Confirm dry deck by moisture meter with 12 percent moisture maximum.

C. Conventional Application: Apply mopped two-ply vapor retarder; nail along ply laps at 12 inches (300 mm) on center.

D. Protected Membrane Application: Extend two plies of felt from 12 inches (300 mm) around roof perimeter to roof edge and onto wall air seal material with lap; seal air tight.

E. Protected Membrane Application: Mop cant strips in place with hot bitumen.

3.03 CONCRETE DECK PREPARATION

A. Fill surface honeycomb and variations with latex filler.

B. Confirm dry deck by moisture meter with 12 percent moisture maximum.

3.04 METAL DECK PREPARATION

A. Install deck sheathing on metal deck:

1. Lay with long side at right angle to flutes; stagger end joints; provide support at ends.
2. Cut sheathing cleanly and accurately at roof breaks and protrusions to provide smooth surface.
3. Tape joints.

B. Conventional Application: Apply fire resistant vapor retarder.

3.05 VAPOR RETARDER INSTALLATION - CONVENTIONAL APPLICATION

A. Mopped Two-Ply Vapor Retarder:

1. Apply primer at a rate of 1.0 gal/square (100 sq ft) (3.8 L/square (9.3 sq m)) and allow to dry.
2. Mop surface with hot bitumen and embed two plies of vapor retarder felt; lap plies 19 inches (480 mm), full mop each ply.
3. Apply bitumen at 20 lbs/square (100 sq ft) (9 kgs/square (9.3 sq m)).
4. Glaze top surface of the vapor retarder with bitumen if insulation is not placed immediately.

B. Extend vapor retarder under cant strips and blocking.

3.06 MEMBRANE APPLICATION

A. Install built-up bituminous roofing system in accordance with manufacturers recommendations and NRCA (RM) applicable requirements.

B. Equiviscous Temperature (EVT) at Point of Application: Comply with NRCA (RM) recommendations.

C. Apply membrane plies, weather lap edges and ends, and mop with 20 lbs/square (100 sq ft) (9 kgs/square (9.3 sq m)) of bitumen per ply. Apply plies 2 on 2 in same direction.

D. Apply smooth, free from air pockets, wrinkles, fish-mouths, or tears.

E. At end of day's operation, install two plies membrane and bitumen glaze coat for cut-off. Glaze exposed felts. Remove cut-off before resuming roofing.

F. At intersections with vertical surfaces:

1. Extend membrane and base sheet over cant strips and up a minimum of 4 inches (100 mm) onto vertical surfaces.

2. Mop on base flashing of two additional plies of felt and one ply of base flashing material.

G. Around roof penetrations, mop in and seal flanges and flashings with two additional plies of felt.

H. Install one roof vent per 1,000 sq ft (93 sq m) or part thereof, of roof area.

I. Install roofing expansion joints where indicated. Make joints watertight.

J. Coordinate installation of roof drains and related flashings.

3.07 AGGREGATE SURFACING - CONVENTIONAL APPLICATION

A. Apply uniform flood coat of bitumen at rate of 60 lbs/square (100 sq ft) (27.2 kgs/square (9.3 sq m)).

B. While flood coat is hot, embed aggregate at rate of 400 lbs/square (100 sq ft) (181 kgs/square (9.3 sq m)).

C. Evenly distribute aggregate and ensure bond with flood coat. Extend aggregate to bottom edge of cant strips.

3.08 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for general requirements for field quality control and inspection.

B. Field testing will be performed to:

1. Ascertain bitumen quantities placed.

2. Take and evaluate test cuts of installed membrane.

C. Require site attendance of roofing and insulation material manufacturers daily during installation of the Work.

3.09 CLEANING

A. Remove bituminous markings from finished surfaces.

B. In areas where finished surfaces are soiled by bitumen or other source of soiling caused by work of this section, consult manufacturer of surfaces for cleaning advice and comply with their documented instructions.

C. Repair or replace defaced or damaged finishes caused by work of this section.

3.10 PROTECTION

A. Protect installed roofing and flashings from construction operations.

B. Where traffic must continue over finished roof membrane, protect surfaces using durable materials.

END OF SECTION

SECTION 07 5113
BUILT UP ASPHALT ROOFING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and Division 1 Specifications apply to this Section.

B. State of Maryland Department of General Services Office of Facilities Planning, Design and Construction Project Management and Design Division - Procedure Manual for Professional Services Roofing Standards July 2015 VII-8

1.02 SUMMARY

A. This Section Includes:

1. Gravel surfaced, asphalt and glass-fiber felt roofing membrane.
2. Roof insulation.
3. Roof drain and drain line installation.
4. Roof Drain flashings.
5. Wood nailers and curbs.
6. Roof hatches.
7. Deck repair
8. Roof Walkways

B. Related Sections: The Following Sections contain requirements related to this Section:

1. Division 2 “Selective Demolition” for demolition of existing roofing membrane and appurtenances.
2. Division 7 Section 07600 “Flashing and Sheet Metal” for metal counterflashings, through-wall Flashings, expansion joints, and other associated flashings.

1.03 DEFINITIONS

A. Thermal resistivity (r-value) is the reciprocal of thermal conductivity (k-value) which is the rate of heat flow through a homogenous material exactly 1 inch thick. Thermal resistivity (r-value) is expressed by the temperature difference in degrees F between two parallel surfaces required to cause 1 Btu to flow through 1 sq. ft. of a homogenous material exactly 1 inch thick per hour at the mean temperature indicated.

1.04 SUBMITTALS

A. General: Submit the following according to Conditions of the Contract and Division 1 Specification Sections.

B. Submit a letter from the roofing system manufacturer stating that the Contractor is a certified applicator and that the roofing system manufacturer has reviewed the Construction Documents and will warranty the proposed roofing system if construction proceeds in accordance with the Drawings and Specifications.

C. Product data, including manufacturer’s technical product information, installation instructions, and recommendations for each type of roofing product required. Include data substantiating that materials comply with requirements.

1. For asphalt bitumen, provide a label on each container or certification with each load of bulk bitumen, indicating flash point (FP), softening point (SP), and equiviscuous temperature (EVT).

D. Three copies of tapered insulation and cricket Shop Drawings indicating drainage pattern to provide positive slope to roof drains, scuppers or gutters. Field verify dimensions, scupper locations and swales built into this roof deck prior to submitting information to the insulation manufacturer to obtain shop drawings.

E. Manufacturer's Certification indicating that all bulk bituminous materials delivered to Project comply with required Standards. Include quantity and statistical and descriptive data for each product. Submit certificate with each load before it is used.

1. Include continuous log showing time and temperature for each load of bulk bitumen, indicating date obtained from the manufacturer, where held, and how transported prior to final heating and application on roof.

F. Field Bitumen Heating Reports: Provide and use two calibrated thermometers, 0-500 degrees F, one on the tanker and one on the roof at all times. Also, provide one 24 hour or one 8 day recording tanker thermometer, 0- 600 degrees F, calibrated at 350 degrees F. Submit dated recording sheets to PGCPS Contract Representative weekly.

G. Letter and Shop Drawing from the roof membrane manufacturer stating fastener pull-out test results are acceptable and indicating the base sheet lapping requirements, fastener spacing requirements and insulation thickness requirements for compliance with FM uplift Classification I-120.

H. Work Schedule. Prior to starting roof work, submit a complete schedule indicating start and completion dates. Every Monday morning, submit (via email or fax to the Owner's Representative and the Engineer) indicating the location of roofing work scheduled for the subsequent six days.

I. Photographs of existing conditions of structure surfaces, equipment, and adjacent improvements that might be misconstrued as damage related to roofing operations. File with PGCPS Contract Representative prior to start of work.

J. Sampling and Analysis of Built-Up Roof Membrane: provide sampling and analysis of completed built-up roofing membrane in accordance with ASTM D 3617-83. Submit laboratory test results from an independent testing firm.

1. Provide for two, 12 inch x 12 inch text cuts at locations designated by the Architect or PGCPS Contract Representative. Repair test cuts in accordance with manufacturer's recommendations.

2. Where deficiencies are indicated in membrane, make corrective repairs as specified by manufacturer. Additional retesting and testing to determine extent of deficient areas shall be completed at the Contractor's expense.

K. Submit executed copy of manufacturer's written Warranty within 30 days of Substantial Completion. Final Payment will not be released without the submission of executed manufacturer's warranty to Owner.

L. Submit a copy of the written reports, provided by an independent consultant, indicating the results from the thermographic inspections of all roofing insulation. Provide copies of additional reports until wet or missing insulation is replaced.

M. Copy of State licenses for mechanics who perform electrical or mechanical work.

N. Submit, during execution of contract, a plan showing quantity and location of all work performed on a unit price basis.

O. Submit letter to the PGCPS Contract Representative stating date of substantial completion within 24 hours after substantial completion.

P. Submit letter to the PGCPS Contract Representative stating date of final completion within 24 hours after final completion

1.05 QUALITY ASSURANCE

A. General: Install replacement roofing in accordance with the manufacturer's specifications and details. More stringent requirements of this Section and Drawings shall govern unless they conflict with the manufacturer's warranty requirements. In this case, the Contractor is responsible for notifying the Engineer of all such conflicts.

B. Installer qualifications: Engage an experienced installer (Roofer) to perform built-up asphalt roofing work who has specialized in installing built-up asphalt roofing systems similar to that required for this Project and who is acceptable to manufacturer of primary roofing materials.

   1. Installer Certification: Obtain written certification from manufacturer of built-up roofing system certifying that Installer is approved by manufacturer to install specified roofing system. Provide copy of certification for the PGCPS Contract Representative prior to beginning work.

   2. Installer's Field Supervision: Require Installer to maintain a full-time supervisor foreman who is fluent in English and on job site at all times. The Foreman shall be experienced in installing roofing systems similar to type and scope required for this Project.

C. Manufacturer Qualifications: Obtain primary products, including each type of roofing felt, bitumen and composition flashings from a single manufacturer. Provide secondary products as recommended by Manufacturer of primary products to use with roofing system specified.

D. Insurance and Code Requirements: Provide built-up roofing system and component materials complying with governing regulations that have been tested for application and slopes indicated and can be installed to comply with the following.

   1. Factory Mutual requirements for Class I or Noncombustible, including zoned wind resistance.

   2. Underwriter's Laboratories for Class A external fire exposure.

E. Insurance Certification: Assist Owner in preparing and submitting roof installation acceptance certification as necessary in connection with fire and extended-coverage insurance on roofing and associated work.

F. Fire Performance Characteristics: Provide insulation materials that are identical to materials whose fire performance characteristics per requirements listed in Part 2 of this Section, have been determined from tests by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.

G. Preconstruction Roofing Conference: Approximately 2 weeks prior to scheduled commencement of built-up roofing installation and associated work, meet at the Project site with installer, Installer of each component of associated work, Engineer and Owner's Representative.

H. Thermographic Inspection of insulation: After work is complete, perform a thermographic inspection. Retain an independent firm to perform a thermographic inspection. Retain an independent firm to perform a thermographic inspection of all roofing insulation and provide a written report in accordance with ASTM C 1060. For each survey, schedule to take core samples of at least two locations selected by the Building Owner to verify findings. Take additional test cuts at anomalies if requested by the Owner or Engineer. The independent testing firm shall submit copies of the report directly to the PGCPS Contract Representative. The Contractor shall replace damaged, missing or wet insulation identified in the report.

   1. Provide for additional inspections and reports by the independent testing firm until all damaged, missing or wet insulation has been replaced and submit the final report indicating no damaged, missing or wet insulation exists.

   2. Where deficiencies are indicated in the insulation, make corrective repairs as specified by the Engineer or Manufacturer, whichever is more stringent. Additional inspections and reports required to eliminate all deficient areas shall be completed at the Contractor's expense.

   3. If the Contractor finds that the existing insulation is dry and in good condition at two or more locations, where thermographic inspection indicates insulation anomalies, notify the PGCPS

Contract Representative and ask for additional direction. If the PGCPS Contract Representative requests that the Contractor continues to take and repair test cuts at the areas outlined in the thermographic inspection report, then the Contractor will be reimbursed on a time and material basis for any additional locations where damaged, missing or wet insulation was suspected, but not uncovered.

1.06 PROJECT CONDITIONS

A. Weather Condition Limitations: Proceed with roofing work only when existing and forecasted weather conditions will permit work to be performed according to manufacturer's recommendations and warranty requirements.

B. Temporary Roofing: When adverse job conditions prevent permanent roofing and associated work from being installed according to requirements, and Contractor determines that roofing cannot be delayed because of need for job progress or protection of other work, install temporary roofing.

1. Installation and removal of temporary roofing, as required prior to proceeding with permanent roofing Shall be performed at no additional cost to the Owner.

2. Temporary roofing must be removed entirely prior to installation of roofing membrane unless otherwise directed by Engineer.

C. Provide positive retaining barricades on ground below work areas to prevent injury to pedestrians.

D. Protections: Provide temporary barricades and other forms of protection to protect general public and employees from injury and damage to property due to selective demolition work and roofing operations.

1. Provide protective measures as required to provide free and safe passage of pedestrians (employees and general public) to occupied portions of the building.

2. Erect temporary covered passageways as required by authorities having jurisdiction.

3. protect from damage existing finish work that is to remain in place and becomes exposed during demolition Operations

4. Schedule and sequence demolition of existing membrane, flashings, etc., so that the specified roofing and flashings can be installed within the same day as demolition, or sooner if rain is expected. Provide temporary weather protection during interval between demolition and removal of existing construction and installation of new construction to ensure that no water leakage or damage occurs to structure or interior areas of existing building.

5. Seal tie-in between existing and new roofing with positive watertight seal that is capable of resisting water ponding to two inches or maximum depth possible due to tearoff sequence. Where practical, raise edge of existing roofing above height required to prevent water flowing into insulation or building.

6. Remove protections at completion of work.

E. Damages: Promptly repair damages caused to adjacent facilities by demolition work.

F. Protect adjacent building surfaces from spilling and splattering of roofing materials. Clean all spilled and splattered materials at once.

G. Tankers only may be used. Kettles are not permitted. Tankers must be paced downwind of air intake vents and windows on the ground. Relocate tanker if winds shift or if directed by the Owner's representative because of complaints received from occupants. (Allow for down time to relocate tanker at Owner's request.) Place tarps and plywood under tankers at site and provide positive retaining barricades around tankers to prevent injury to pedestrians. Tankers must be removed from site daily after cessation of day's operations. No hot kettles will be used. These precautions must be taken due to special considerations of safety of children that may access school grounds after normal school hours of

operation.

H. Access to Building Interior: Contractor may not access the building to use restrooms or telephones. Access to building interior will only be granted for work purposes (i.e. finding and repairing leaks, installing roof drains and drain lines, etc.).

I. Electricity and Water: The Facility will provide access to electricity and water for Contractor's use while work is being performed.

J. Phased construction of built-up roofing membrane will not be permitted.

1.07 SPECIAL CONDITIONS

A. The Contractor is responsible for conducting work so normal routines, activities and procedures at the building are not disturbed. Coordinate work with the Owner's Site Representative. The Contractor must have a foreman, who is fluent in English, on site whenever any Contractor or Sub-Contractor employee is at the site.

B. The Owner's Site Representative shall have the power to order the permanent removal from the premises any employee of the Contractor for interference with the building's operation or for incompetency. Furthermore, the Owner's Site Representative shall have the power to stop work if the Representative believes the work is not progressing in accordance with the Contract Documents or membrane manufacturer's specifications. The Contractor shall immediately comply with this order.

1.08 DELIVERY STORAGE AND HANDLING

A. Store and handle roofing materials to ensure dryness. When pallets of insulation arrive at the site, completely remove manufacturer's wrapper after confirmation of product meeting specification criteria and cover insulation with tarps. Provide tarps free of holes or tears and extend tarps below top surface of wood pallets. Alternatively, store in a dry, well- ventilated, weather-tight place. Unless protected from weather or other moisture sources, do not leave unused felts on the roof overnight or when roofing work is in progress. Store rolls of felt and other sheet materials on end on pallets or another raised surface. Handle and store materials or equipment in a manner to avoid significant or permanent deck deflection.

1.09 WARRANTY

A. Manufacturer's Warranty: Submit executed copy of roofing manufacturer's "No Dollar Limit" total roofing system warranty covering the roofing membrane, flashing INCLUDING LIQUID FLASHING, manufacturer fabricated metal components and insulation. Warranty must be signed by an authorized representative of built-up roofing system manufacturer, on a form that was published with product literature as a date of Contract Documents.

1. Warranty Period: Twenty (20) years from date of Substantial Completion.

2. Wind Speed Provisions: Up to and including wind speeds of 90 miles per hour.

B. The warranty shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and will be in addition to and run concurrent with other warranties made by the Contractor under requirements of the Contract Documents.

C. Contractor's Warranty: Submit an executed copy of the Contractor's written warranty covering workmanship failures for a period of two years in accordance with article 19 of the General Conditions. In the first two years, the Contractor shall repair all leaks within 24 hours of notification of leak.

D. State Warranty Requirements from DGS Manual:

1. CONTRACTOR'S GUARANTEE

a. THE CONTRACTOR must have at least 5 years experience installing the type of roofing they are bidding on.

b. THE CONTRACTOR must be a NDL certified roofing system installer for at least 5 Years continuously (currently), and must provide to the State a current letter from a roofing materials manufacturer stating this and that their workmanship, including flashings and sheet-metal work, will be fully covered by the Manufacturers' 20 year 'NDL' warranty without exception.

c. THE CONTRACTOR must also provide the State with a minimum 2 year workmanship guarantee.

PART 2 - PRODUCTS

ROOF INSULATION

A. General: The insulation system on each section of replaced roofing may vary depending on specific site conditions. The optimum Long Term Thermal Resistance (LTTR) R-value is R-25 or better, however lower R- values may result due to existing site conditions.

1. State Insulation Guidelines from DGS Manual:

a. HEAT TRANSMISSION: Insulation heat transmission values shall be established in accordance with the Energy Conservation Guidelines, Chapter V and Code Update of 2015 DGS Procedure Manual. For new buildings the suggested R value of the roof area envelope is R-30CI (Cont. Insul.) for low slope roofs. For roof replacements/renovations on older buildings, a lower "R" value will be considered.

b. INSULATION shall be applied in several layers, with the joints staggered, in accordance with the manufacturer's recommendation.

c. COMPATIBILITY: Insulation material installed between the roof deck and the roof ply shall be compatible with the roof ply material and asphalt bitumen binder or other adhesive used in the roofing system.

d. WARRANTY: Insulation materials shall be considered an integral component of the roofing system; and shall be furnished or approved by the roofing system manufacturer; and shall be covered fully by the roofing system warranty.

2. Important Roofing Replacement New Roof Insulation Design Considerations:

a. At older buildings with design live loads less than the current standard (30 PSF plus drift) and where roof insulation was not originally a component of the roof design (dead load vs. live load), care must be taken not to subtract from the existing substandard live load so that the weight of heavy wet snow may still be safely accommodated. In such circumstances, less base insulation as well as less or no tapered insulation or insulation with less slope will be applied to reduce the overall added weight of the new insulation reducing the R-value by necessity as well. Manufacturer's new insulation systems must be designed with the structural limitations of older structures as an important consideration.

b. Building roof areas with perimeter through-wall flashings that transfer internal wall moisture via the through- wall flashing require special consideration. Do not bury or overtop existing through-wall flashings. Apply less base insulation in these areas if required as well as less or no tapered insulation so as not to negate the original building flashing design and cause long term roof moisture infiltration.

c. At buildings with windows, translucent wall panels or other fenestration low to the roof surface require special consideration with regard to the depth of new insulation. Window sills should be no less than 8" above the finished roof surface and preferably 12" above the finished roof surface. For roof areas with window sills that are already below the minimum, less base insulation and no tapered insulation may be required.

d. At roof areas with a high concentration of mechanical equipment, ductwork, piping, etc., improving the existing roof slope of the roof with tapered insulation may not be practical due to the amount of effort and expense required in such a restricted space.

e. At historic buildings, the overall rise of new tapered insulation systems at the roof perimeter with relation to established architectural features may detract from the building's historic appearance or may not be entirely compatible with the original architectural design.

f. Insulation systems should be designed with knowledge of specific site conditions. Evidence of ponding, too few drains, and other specific observable conditions at specific roof areas should be considered and accommodated within the manufacturer's insulation system design. Manufacturer's insulation system designs should not be based solely on the most straightforward geometric configuration. Larger scale ponding issues should be remedied by the application of tapered insulation as opposed to excessive flood coating and graveling to reduce the overall weight of the remedial improvements.

3. Manufacturer's shop drawings should reflect and accommodate the above Design Considerations.

4. Manufacturer's shop drawings should include revised roof perimeter details if the manufacturer's design does not resemble the Architect's design.

a. The Contractor must make the Manufacturer aware of specific site conditions and limitations that will affect the manufacturer's insulation system design.

b. State Site Visit Requirements from DGS Manual:

1) A SITE VISIT to verify existing conditions will be made for all roof replacement and roof repair projects to verify existing conditions and dimensions even though as- built drawings are provided. Where composition, thickness or make up of the existing roof system or any of its components cannot be determined by visual means alone, an exploratory investigation shall be conducted to include dismantling or opening up a representative portion of the roof system. Patch and make watertight all areas disturbed during investigation.

5. Manufacturer's Shop Drawings that do not reflect the Architect's State Approved Design, must be submitted to the State for approval prior to construction taking place.

B. Slope: The desired slope for the finished surface of the insulation is ¼ inch per foot. The existing structural concrete deck has some sloped gypsum fill in place. So new tapered insulation must be diligently coordinated with the structure to provide the required slope. In addition, provide tapered insulation crickets to improve drainage between scuppers. Provide Manufacturer's Shop Drawings indicating the tapered or flat insulation plan for each roof section. Note that the Roofing Contractor must carefully coordinate installation of insulation, crickets, membrane and membrane patches with other Contractor's work to ensure there is no ponding on the roof when the work is complete. The roofing Contractor will be required to replace insulation and membranes as required to eliminate ponding.

1. State roof slope guideline:

a. LOW SLOPE ROOFS shall be required to have a minimum slope of 1/4 inch per foot. New buildings shall be designed to achieve the minimum slope of 1/4 inch per foot structurally. Existing buildings may have to be provided with tapered insulation to achieve the minimum slope. Lightweight concrete shall not be used to create slope.

2. The desired slope (1/4 inch per foot) may be affected by specific mitigating site conditions at existing buildings or specific roof areas that limit or restrict the finished roof elevation or the amount of additional weight that can be added to the existing roof structure. In such cases, insulation of a lesser slope (1/8" per linear foot) for a lesser overall rise (depth) or even no additional slope or rise

may be necessary.

3. State roofing design criteria:

   a. FOR ROOF REPLACEMENT PROJECTS, the selection of the replacement roofing system shall be based on an evaluation of costs associated with factors affecting the proposed system, including span dimension, structural condition, foundation design/capacity, and disposition or accommodation of roof top equipment.

C. Base(flat) Insulation:

1. First layer: (Polyisocyanurate Foam Board): Rigid boards with minimum density of 1.7 pcf polyisocyanurate- based foam core, permanently bonded to roofing felt facer sheets. Provide boards 2 inches thick. If there are mitigating specific site factors restricting insulation depth (height) or weight, 1 inch polyisocyanurate insulation may be used in place of 2 inch. Use thickness shown on Drawing or the approved Manufacturer's Shop Drawings.

2. Second layer (cover board): (Perlite Duraboard or equal): Rigid Boards. Provide boards 1/2 inch thick.

3. The first layer of insulation will be 4'0" x 4'0" and must be walked in place per the Manufacturer. The second layer is to be the same size and also walked in place.

4. The desired average R-value (R-20) or less if there are mitigating site factors. Minimum desired thickness is 2 inches for flat or base insulation with a minimal R-value of 12.00.

D. Tapered Insulation:

1. Provide tapered Polyisocyanurate boards to improve slope to drain where indicated, fabricated with taper of 1/8 inch or 1/4 inch per foot. The desired finished slope of the roof is ¼" per foot. The finished slope is a combination of the built in slope (slope of roof deck) plus tapered insulation. A roof with a 1/8" built in slope requires a 1/8" slope improvement with tapered insulation to provide a ¼" finished slope to drain. Older buildings with structural weight limitations may only receive partial slope improvement or improvement that is less than the desired ¼" finished slope. The weight of any new insulation may not exceed the existing buildings structural limitations.

2. Provide tapered crickets to provide improved slope to drain where indicated, generally fabricated with ½ inch tapered Perlite insulation. Crickets covering a larger area to remediate ponding for example may consist of tapered insulation of a lesser slope to reduce weight and or height..

3. Install ½" perlite cover board (Duraboard) over all polyisocyanurate tapered insulation.

E. Minimal R-value:

1. Minimum depth for flat or base insulation is 2 inches with a minimal R-value of 12.00. The desired R-Value overall including tapered insulation is R-20 and optimum desired R-factor of older buildings would be R-25 plus, however specific site conditions must be considered.

2. State Insulation Guideline:

   a. ALL LOW SLOPE ROOFING SYSTEMS shall include insulation. The majority of insulating value shall be accomplished with the necessary thickness of flat poly-isocyanurate boards. Where necessary, roof slope shall be developed with tapered perlite or tapered poly-isocyanurate board.. Organic insulation material shall not be used under built-up roofs. Light weight concrete insulating fill is not acceptable. In all cases a minimum 1/2" cover board must be installed over the Isocyanurate insulation. Perlite and "Densdeck" are acceptable cover board materials.

F. Coverboard if specified (Perlite Board Duraboard or equal): Rigid, noncombustible, perlite/fiber boards.

G. Insulation R-value of 2.78 at 75 deg. F (24 deg C), complying with ASTM C 728: manufacturer’s standard sizes.

H. Fill and Replacement Insulation (Perlite Board): Rigid , noncombustible, perlite/fiber boards. Provide thickness required so top surface of fill insulation at low point is flush with level surface of adjacent deck. Trim perimeter of fill insulation as required to provide level surface. Provide ½ or 1 inch thick (or thickness required by manufacturer) cover boards over tapered polyisocyanurate insulation.

I. Preformed Edge Strips: Rigid insulation units matching roof insulation molded to form 2-1/2-by 3-1/2inch 45 degree cant strips and 1-1/2-by-12-inch tapered-edge strips

J. Insulation fasteners (Steel Deck): Extended corrosion resistant carbon steel screws with composite fluorocarbon coating in a matrix of organic polymers, resins, pigments and corrosion inhibitors. Finish must survive 30 or more cycles of Kesternich testing (DIN 50018) with no significant corrosion (Sentri by Dekfast) with steel or plastic plate for factory mutual [I-75} I-120 approved installation.

K. State guidelines for Substrate Preparation Prior to Placement of Insulation and the Roofing System:

1. PRIOR TO PLACEMENT OF INSULATION and the roofing system, all low slope roof decks shall have:

   a. Steel Deck: 1" perlite insulation mechanically fastened and 2 plies of fiberglass felts.

   b. Concrete Deck: Asphaltic primer and 2 plies of fiberglass felts.

   c. Nailable Decks: (other than Wood, Lightweight Concrete, Gypsum, and Tectum) Rosin-sized sheathing paper, 75 lb. ventilated base sheet, mechanical fasteners dictated by deck type, and 2 plies of fiberglass felts.

   d. Wood Decks: Mechanically fasten 1" thick perlite insulation to deck and install 2 plies of fiberglass felts with hot asphalt.

L. Provide products specified by roofing manufacturer to comply with the above requirements for the specific deck type(s) included in this project - as required by the roofing Manufacturer.

1. PGCPS specifications typically require one 28 lb. base sheet only for nailable deck types requiring a base sheet (gypsum, perlite concrete, tectum, wood).

3.02 MECHANICAL EQUIPMENT INSULATION

A. Duct--Rigid Insulation System

1. Install rigid foil-faced fiberglass duct insulation as made by Knauf (FSK 1-1/2 inches thick or thickness specified). Adhere using adhesive or non-penetrating, stick-on fastener that does not penetrate the metal duct work. Miter the insulation at all joints and access openings. Follow manufacturer's specifications.

2. Install a fully-adhered, white EPDM 45 mil rubber sheeting over the insulation. Miter and lap all joints; laps will not block the flow of water.

3. Use the white EPDM rubber as made by Carlisle. The rubber is to be fully adhered with glue/.

4. Install as a patch over the metal fastener. This is to eliminate sharp points going into the outside membrane.

5. Perform minor duct repairs as required to furnish a completed system. Re-support duct work as required to protect the roofing system and provide for a completed project.

B. Chilled water pipe insulation will be polyethylene tubing. Insulate the chill water and return lines from the roof unit to the roof deck. Use an insulated tubing as manufactured by Thermocell or equal. Apply glue to all joints and tapered connections. Sidewall thickness of tubing will be 3/4 inch minimum, but not less than that required by the 1996, BOCA National Mechanical Code, Amended.

3.03 BASE SHEET

A. Base Sheet: ASTM D 4601, Type I, 28 pound, nonperforated, asphalt-impregnated and-coated, glass-fiber sheet, dusted with fine mineral surfacing on both sides.

B. Fasteners (base sheet): provide industry-standard types of mechanical fasteners, including cap or plate. For built-up roofing system work, tested by manufacturer for required pull-out strength to meet Factory Mutual Uplift Resistance Classification I-120.

C. Gypsum Patching Material (deck repairs): ASTM C317, Class A, minimum compressive strength 500 psi, Density not more than 60 pounds per cubic foot, Mill mixed gypsum concrete consisting of calcinated gypsum and suitable aggregate, requiring addition of drinkable water and fibrous reinforcement only at the job site, use bonding compound recommended by gypsum material manufacturer.

D. A smaller square footage of ventilated base sheet may appear as an Alternate for application as needed at areas of saturated deck.

3.04 BUILT-UP ROOF MEMBRANE SYSTEM

A. Insulated-Deck, Asphalt, Glass Fiber, Gravel Surfaced, Roofing: Provide built-up gravel surfaced roofing system with asphalt bitumen and four plies of glass-fiber felts (not counting base sheet) for layup as follows:

1. Ply Felts: Four(4) plies of asphalt-impregnated, glass-fiber felts, complying with ASTM D 2178, Premium Type VI.

2. Bitumen: Roofing Asphalt: Asphalt shall be approved grade steep complying with latest revision of ASTM D312 Specification for Type III and Type IV asphalt, unless otherwise specified. The Contractor must maintain and be able to prove, the following temperatures at all times to the satisfaction of the Owner’s Representative. Failure to do so will constitute grounds for a halt in production. There is some leeway in the manufacturer’s application temperature. It is our intent to obtain equiviscuous temperature (EVT) of asphalt. Application of asphalt throughout the day will be at that temperature.

   a. Type III Steep:

      1) 425° F. ± 25° F

      2) 450° F. ± 25° F

   b. Type IV Steep: Temperature for Mop

      1) 450° F. ± 25° F

      2) 475° F. ± 25° F

   c. Asphalt Fume Odor: Contractors must identify areas that may collect or allow odors to enter the building. Therefore, locate the tanker in the best location to reduce odors. On a daily basis, plastic must be installed over air intakes of the building in the areas where the contractor is working. The asphalt will have the additive from Roof Odors Solutions (or equal) added per manufacturer’s recommendation to all asphalt to help control fume odors.

3. Aggregate Surfacing: ASTM D 1863, Texas white chip #7 (a 3/4" stone), Georgia grade white marble chip free of sharp edges, or equal, and shall be acceptable for roofing (clean, dry and free of dust, soil, and foreign matter). No pea gravel or other riverbed materials are acceptable. Provide samples to the PGCPS Contract Representative for approvals prior to application.

4. Mineral Surfaced cap Sheet (Flashing): Single Ply of non woven polyester felt with asphalt coating and factory-applied ceramic coated granules and acrylic coating; ASTM D 6163

   a. Thickness: 160 mils

b. Asphalt: SBS modified for setting in hot asphalt.

c. Color/Coating: Provide white, ceramic coated granules and factory applied white, acrylic coating with minimum Solar Reflective Index (SRI) of 92, minimum initial solar reflectivity of 0.76, and minimal initial emissivity of 0.84.

d. Provide DynaKap or equal.

5. Comply with NRCA “Roofing and waterproofing Manual”, Specification Plate 42--IAGA, Diagram A.

3.05 BUILT-UP ASPHALT ROOFING SYSTEM EDGE/PENETRATION MATERIALS

A. Roofing Cement: Fibrated asphaltic cement, asbestos-free, complying with ASTM D 4586.

B. Fabric: ASTM D 173, asphalt saturated cotton fabric, 3.5 ounces per square yard.

C. Base Flashing: Two Type VI ply felts covered with mineral surfaced cap sheet (DynaLastic 180 FR CR G or approved equal).

1. The base flashing shall be a high performance flashing membrane. This product shall be a polymer-modified bitumen product made with polyester reinforced layers.

2. This material must meet and exceed the manufacturer’s 20 year guarantee.

D. lead Flashing: 3 lb/sf or 4 lb/sf sheet of common pig lead.

3.06 ROOF DRAINS AND PIPING

A. Roof Drains: Cast iron roof drains with flange, cast iron clamping ring, under deck clamps and cast iron domes. Provide stainless steel hardware (washers, bolts, threaded rod, nuts, etc…) for securing clamping rings to drain bodies. Field measure to match size of existing drains and to fit existing storm drain lines, 4 inch diameter (typical). Confirm all drain dimensions on site prior to ordering replacement drains.

1. Wade Division Tyler Pipe; W-3000 and 3200

2. Jay R. Smith; # 1010 and 1330

3. Josam; 21500

4. Zurn; ZC100 and ZC111-W4

B. Pipe (cast iron): ASTM A 74, Service Grade (SV) 4 inch diameter typical), cast iron pipe fittings to be used for this work. Use ASTM C564 rubber gaskets for pipe and fitting. EPDM (rubber) no-hub (plain end flexible) pipe couplings, with stainless steel band clamps, may also be used. Provide all required plumbing accessories. Confirm all piping dimensions on site prior to ordering piping components.

C. Pipe hangers: Fed Spec WW-H-171E, Type 1 or 10, adjustable pipe hangers with steel hanger straps and ½ inch diameter threaded rods.

1. Use ASTM C 564 rubber gaskets for pipe and fitting. EPDM (rubber) no-hub (plain and flexible) pipe Couplings, with stainless steel band clamps, may also be used.

2. Provide all plumbing accessories required to tie drains into existing storm drain lines.

D. Pipe insulation: ASTM C 547, heavy density fiberglass, I inch thick with embossed kraft paper, polyester scrim And aluminum foil jacket vapor barrier; size to fit pipe, tape joints.

3.07 SHEET METAL ACCESSORY MATERIALS

A. See “ Sheet metal and Flashing”

3.08 MISCELLANEOUS MATERIALS

A. Anchor Bolts (Wood blocking): Federal Specification FF-S-325, Group II, Type 4, Class 1 or type 3, Class 3; 1/2 inch diameter galvanized steel anchor bolt stud with expansion collar (Power-Stud® or Power Bolt ® by Power ® Fasteners). Length to penetrate substrate 2 ½ inches. Provide data showing proven performance of galvanized steel bolts in pressure treated lumber over a period of 30 years or upgrade specification to stainless steel.

B. Substrate Joint Tape: 6-inch - or 8-inch-wide, coated, glass-fiber joint tape.

C. Asphaltic Primer: Comply with ASTM D 41.

D. Galvanized sheet steel (deck repair): ASTM A 361, G90. 20 gauge.

E. Liquid Flashing System: JM Permaflash system including scrim and 2-part MBR flashing cemrent or pre-approved equal. System must be warranted by the roofing manufacture.

F. Nalins: Stainless steel nail with mushroom head in zinc body, 1/4" inch diameter, length to bed in substrate a minimum 1 ½" inches (Zamac Nailin by Powers). Predrill holes before installing fastener. Provide 1 inch diameter washers for securing base flanges.

G. Nails (roofing): Annular ring, flat head, 11 ga, compatible with material to be fastened, 1" diameter cap.

H. Nails (wood): 10 , 12, or 16 d, Type 304 stainless steel annular nails, length to penetrate substrate a minimum of 1 ¼ inches.

I. Plywood: 4 x 8 sheets of ½ inch or ¾ inch as specified FRT exterior grade plywood impregnated with chemicals by a pressure process or other means during manufacture, and which, when tested in accordance with UBC Standard 8-1 for a period of 30 minutes, shall have a flame spread of not over 25 and show no evidence of progressive combustion. Must have FRT stamp with fire rating.

J. Screws: (stainless steel): ASTM A 478, Type 304 stainless steel, pan or truss head, with neoprene washers, No. 8 x 1/2 inch for counterflashing.

K. Screws: (self- tapping): ASTM A 478, Type 18/8 stainless steel, pan or truss head self tapping screws, with neoprene washers; No. 10 x ½ inch foe fastening sheet metal and No. 12 x 2 ½ inch or length or diameter as required for fastening wood products to steel members.

L. Toggle Bolt: 3/8 0r ½ inch diameter, zinc plated two part machine screw and spring wing toggle bolt (Toggle Bolt by Powers or equal)

M. Walkpads: Preformed, modified asphalt, skid resistant walkpads recommended or provided by roofing system Manufacturer.

N. Wood members, Units: Provide wood pressure treated with waterborne preservatives for above-ground use (AWPB LP-2)

PART 3 - EXECUTION

4.01 DEMOLITION (SEE DIVISION 2)

A. Carefully layout the extent of existing roofing to be replaced as required for the renovation project. At locations Indicated on the Drawings, remove existing roofing ballast, membrane, flashings and insulation down to the deck as shown or indicated on the Drawings.

B. At tie-ins between new roofing and flashings and the existing membrane to remain, carefully spud away the existing gravel surfacing and flood coat to expose a minimum of 16 inches of the existing membrane. DO NOT damage the membrane. If the Contractor damages the membrane, the Contractor must spud additional 16 inches past the damaged area.

4.02 ROOF DRAIN INSTALLATION

A. Prior to starting membrane installation, replace existing roof drains with new cast iron roof drains. Relocate existing drains and install new drains and drain lines at locations indicated on Drawings and as

required to comply with current plumbing codes. Provide all cast iron pipe and plumbing accessories required to tie into existing storm drain lines or install new storm drain lines in accordance with current plumbing codes. Slightly modify the new drain locations where required to install drain lines around mechanical lines or duct work. Slope drain lines 1/8 inch per foot minimum. Support horizontal line with steel hangers. 5 feet on center (maximum).

B. Insulate drain lines in accordance with current plumbing code. Neatly core drill (do not use impact tools) through concrete decks and masonry walls (where required) to install new drain lines. Seal openings between pipe and masonry walls with grout, backer rod and fire rated sealant as required to maintain wall's current fire rating. Field verify locations for new drains and drain lines prior to submitting Manufacturer's tapered insulation Shop Drawings.

1. To reduce the chance of leaks, the Roofing Contractor (not the plumber) must (mandatory) provide the temporary watertight tie-ins at all roof drains.

C. Fill voids in deck, in accordance with Paragraph 3.4, caused by removal of existing roof drains. Install steel angles or wood blocking as required to provide sound substrate around new roof drain body. Repair or replace, in accordance with Paragraph 3.4, roof deck that is damaged by installation of roof drains. Please note that this work is included in the base bid and will not be reimbursed on a unit price basis.

D. Install roof drains so that top of flange is set on stable wood blocking and the flange will be 1 inch below surface of completed surrounding membrane and stripping. Secure drain bodies with under deck clamps.

E. Immediately after installation of drains and piping, plug drain line and flood test connections for 30 minutes. Insulate drain body after successful water tests.

F. Provide 8 foot sumps for drains if and whenever possible.

4.03 SUBSTRATE EXAMINATION

A. At locations where existing insulation has been removed down to the decking, examine substrate surfaces to receive replacement insulation. If deteriorated deck is uncovered, do not proceed with roofing until unsatisfactory conditions have been corrected in a manner acceptable to the membrane manufacturer. Repair deteriorated decking in accordance with the project Architect's or Engineer's direction.

B. Deteriorated sections of existing wood blocking specified to be re-used may be uncovered. Match existing wood dimensions. Secure new wood in accordance with the requirements of Factory Mutual Publication 1-49, perimeter Flashing"

4.04 GENERAL INSTALLATION REQUIREMENTS

A. Cooperate with inspection and test agencies engaged or required to perform services in connection with installation of built-up roof system.

B. Protect other work from spillage of built up roofing materials, and prevent liquid materials from entering or clogging drains and conductors, Replace/restore other work damaged when installing built-up roof system.

C. Insurance Code Compliance: Install built-up roofing system to comply with governing regulations and the following insurance requirements:

1. FM requirements for Class I or Noncombustible, including zoned wind resistance as specified by FM.

2. UL Fire Classified and Class 120 uplift resistance.

D. Install roof drains, overflow roof drains, scuppers and overflow scuppers on each roof section prior to installing built-up membrane on that section. Coordinate overflow scupper placement with windows and doors below and with the Manufacturer's Tapered insulation design. Do not install overflow scuppers in

locations where they will not be effective or will drain at window and door locations.

E. Existing perimeter wood blocking is designated to remain. Secure existing wood blocking, within 8 feet of corners or terminations, with anchor bolts spaced 48” on center. Stagger anchor bolts with existing anchors. Countersink anchors below surface of blocking and provide 3 inch minimum embedment depth into masonry or concrete.

F. Asphalt Bitumen Heating: Heat and apply bitumen according to EVT Method as recommended by NRCA. Do not raise temperature above 525° F; point of application temperature is 425°F±25°F for mop and 450° F±25°F for spreader. Do not raise temperature above minimum normal fluid-holding temperature necessary to attain EVT more than 1 hour prior to application. Discard bitumen that has been held at a temperature exceeding finished blowing temperature (FBT) for more than 3 hours. Determine flash point. FBT and EVT of bitumen, either by information from bitumen producer or by suitable tests. Determine maximum fire-safe handling temperature and do not exceed that temperature in heating bitumen. In no case heat bitumen to a temperature higher than 25 deg F below flash point. For aggregate-surfaced pour coats of bitumen, limit application temperature to minimum required for proper aggregate embedment and maximum that will permit retaining a coating of weight required. (depends on slope of surface).

1. Provide and use thermometers at the tanker and on the roof at the point of application. If thermometers are not on site during site visits by Owner’s Representative, work will be halted until thermometers are delivered.
2. The proposed location(s) of tankers, vehicles, and refuse containers shall be coordinated and approved by the Board. The use of asphalt kettles will not be allowed at any time during the course of this project.
3. Asphalt tankers must be in good working order and able to maintain the proper performance temperatures. The Board reserves the right to have any defective or non-properly functioning equipment removed from the premises by the contractor.
4. Asphalt tankers must not be stored on Board property overnight.
5. Asphalt Fume Odor: Contractors must identify areas that may collect or allow odors to enter the building. Therefore, locate the tanker in the best location to reduce odors. On a daily basis, plastic must be installed over air intakes of the building in the areas where the contractor is working.

G. Bitumen Mopping Weights: For interplay mopping, and for other moppings except as otherwise indicated, apply bitumen between plies at the rate of 25 lb of asphalt per roof square (plus or minus 20 percent on a total-job average basis).

H. Felt Application: Apply felts in bitumen at application temperature (425° ± 25° F for Mop to 450° F ± 25° F for spreader and immediately broom felts into bitumen. If felts are not broomed, work will be halted until project superintendent returns to site and supervises installation. In addition, The project Architect/Engineer, and or the PGCPS Contract Representative reserves the right to require two additional membrane test cuts (see above), for every time the Architect/Engineer or a PGCPS Representative observes the Contractor not brooming the felts.

I. Substrate Joint Penetrations: Do not allow bitumen to penetrate substrate joints and enter building or damage insulation, vapor retarders, or other construction. Tape joints where mopping is applied directly to the substrate.

J. Tie-Ins: Where tying into existing roofing after carefully preparing the existing membrane as described above, clean and prime the existing membrane before applying the new roofing materials. At several tie-in locations between new and existing membranes with differing insulation heights, install tapered edge strips in order to provide a smooth transition between the new insulation and existing insulation to remain.

K. Cutoffs: At the end of each day's roofing installation, provide watertight tie-in to adjacent existing roofing. At a minimum, install a temporary tie-in of two plies of No. 15 roofing felt set in full moppings of hot bitumen; remove at beginning of the next day's work. Note that the two plies tie-in is the minimum required, the Contractor must prepare the existing membrane and install whatever system necessary for protection from water penetration.

L. General: Comply with insulation manufacturer's instructions and recommendations for handling, installing, and mopping or anchoring insulation to substrate. Coordinate State requirements for deck preparation prior to insulation installation with Manufacturer's requirements for the type(s) of deck included.

M. Base Sheet: Mechanically fasten base sheet to the existing deck with fasteners specifically designed and sized for the attachment of the specified base sheet to the site specific prepared substrate.

N. Two-layer insulation (mandatory): Install flat polyisocyanurate insulation (bottom layer) and flat perlite (Duraboard) or tapered polyisocyanurate insulation followed by flat perlite (Duraboard) as follows:

1. Mechanically fasten the base layer of polyisocyanurate insulation to steel deck (where applicable) with Manufacturer specified screws and plates to meet Factory Mutual I-120 (uplift) approved installation and approved Manufacturer's Shop Drawings. Run long joints of insulation in continuous straight lined, perpendicular to roof slope, with end joints staggered (6 inches minimum) between rows.:

2. Install base layer of insulation at metal deck areas and second and subsequent layer(s) of flat or tapered insulation with joints of second layer offset from joints of first layer a minimum of 12 inches in each direction, Install subsequent layers in full mopping of hot Type III asphalt applied within temperature range of EVT, plus or minus 25 deg F and at a rate of 25 lb per 100 sq. ft. (plus or minus 25 percent on total-job average basis). For tapered insulation, follow insulation drainage pattern shown on Drawing or State Approved Manufacturer's tapered insulation Shop Drawings

O. Check tapered insulation placement with 4 foot level on 10 foot straight edge to confirm slope prior to placing built-up membrane. Advise the PGCPS Contract Representative immediately if slope is less than ¼ inch per foot. NOTE: If ponding greater than ¼" deep remains after 48 hours after rain, the Contractor may be required to cut out, remove and replace the roofing system to make it free draining, if it is determined that the tapered insulation has been incorrectly installed or fill insulation was not installed.

P. Install insulation crickets in 33 lbs per square mopping of hot asphalt to provide drainage. Install crickets as shown on approved Manufacturer's tapered insulation Shop Drawings and with a minimum aspect ratio of 3:1 (length to (width) unless otherwise directed by the project Architect/Engineer.

Q. Trim surface of insulation at primary roof drains/scuppers so insulation is lower than adjacent insulation as typically shown on the drawings to promote effective drainage. Provide 8' sumps at roof drains.

R. Cant strips/tapered edge strips: Except as otherwise shown, install preformed 45-degree insulation cant strips at junctures of built-up asphalt roofing system membrane with vertical surfaces and install tapered edge strips in 33 pounds per square mopping of hot asphalt at perimeter nailers and other areas to provide drainage and a smooth transition for the new built-up membrane. Trim tapered edge strips to provide smooth transition to adjacent surfaces.

4.05 ROOF MEMBRANE INSTALLATION

A. Shingling Plies: Install membrane with ply sheets shingled uniformly to achieve specified membrane thickness throughout.

B. Membrane Ply Sheets: Install four (4) plies of Type VI Premium fiberglass felts lapped (shingled) to form a continuous, uniform membrane with continuous bitumen moppings between sheets so that ply sheet does not touch ply sheet.

1. Mop base ply of membrane to insulation. Broom in with soft broom or squeegee. THIS IS MANDATORY.
2. Sequence work to minimize foot traffic on recently installed felts and to prevent cart traffic (i.e. - lugger, mop cart, etc.) on recently installed felts. THIS IS MANDATORY. If cart traffic or excessive foot traffic is discovered/observed by the Architect/Engineer, the Contractor will be directed to install an additional 4 plies of membrane, extending three feet beyond the affected area (in all directions), at the Contractor's expense.
3. Provide a folded-back envelope at edges and penetrations of built-up roofing membrane where it is not turned up on a tapered edge strip to provide positive protection against flow of bitumen into building or off the edge. Install one ply of coated felt set in steep asphalt with joints sealed. Seal corners and other interruptions of envelope with large beads of roofing cement to protect against bitumen flow.

C. Aggregate Surfacing: Promptly after installing and testing roofing membrane, base flashing, and stripping, flood Coat roof surface with 60lb/sq. ft. of hot roofing asphalt. While flood coat is hot and fluid, cast the following average weight of aggregate in a uniform course:
   1. Ballast or Aggregate shall be Texas white chip #7 (a 3/4" stone), Georgia grade white marble chip, or equal, and shall be acceptable for roofing (dry and free of dust, soil, and foreign matter). No pea gravel or other riverbed materials are acceptable. Provide samples to the PGCPS Contract Representative for approvals prior to application.
   2. Aggregate weight: 500 lb/100 sq. ft.
   3. If aggregate surfacing is delayed, promptly apply glaze coat of hot asphalt at a rate of 10 lb/100 sq. ft.

D. Set-on Accessories: Where small roof accessories are set on built-up membrane, set metal flanges in a bed of roofing cement and seal membrane penetration with bead of roofing cement to prevent flow of bitumen from membrane

E. Equipment Closures and Curbs: Coordinate shutdown with mechanical contractor and remove and reinstall exhaust fans and other equipment flashings as required to install wood blocking and base flashing. Install additional treated wood blocking as required to raise equipment curbs to provide a minimum of 10 12 inches clearance between top of curb and top of completed roof membrane. Install new aluminum curbs for exhaust fans and gravity vents if specified.
   1. The existing gravity vent curbs will be replaced with new aluminum curbs. The Mechanical contractor shall perform a site survey to gather all required information for replacement prior to ordering replacement curbs.
   2. The existing rooftop power ventilator curbs will be replaced with new aluminum curbs. The Mechanical contractor shall perform a site survey to gather all required information for replacement prior to ordering replacement curbs.

F. Perimeter Nailing: At the roof perimeter, secure loose existing wood blocking to remain to meet the Factory Mutual Data Sheet 1-49, "Perimeter Flashing" requirements. At a minimum, anchor bolts must be located 2 feet on center in the field and 1 foot on center within eight feet on the corners. As required by tapered insulation heights, secure additional wood blocking (as shown on Drawings) or as needed to the existing blocking with stainless steel nails in accordance with Factory Mutual Data Sheet 1-49, "Perimeter Flashing". Where indicated, install new wood blocking over existing substrates with anchors/fasteners specified. After installing wood for gravel stops, cover wood with manufacturer's peel and stick membrane prior to cladding with aluminum. Lap peel and stick membrane about one inch over wall below. Specified gravel stop/fascias must cover peel and stick membrane.

4.06 COMPOSITION FLASHING AND STRIPPING

A. Install composition flashing at cant strips, at other sloping and vertical surfaces, at roof edges, and at penetrations through roof. Install composition flashing in accordance with membrane manufacturer's specifications and the following:

1. Base flashing: In uniform coats of hot steep asphalt, install first felt extending from within ½ inch of the top of the counterflashing to not less than 4 inches into the membrane and second felt extending from within ½ inch of the top of the counterflashing to not less than 8 inches onto the membrane. (Extend felts to the top of curbs). On top of this, apply a uniform coat of hot applied steep asphalt and embed one ply of pre-coated, mineral surfaced, modified cap sheet base flashing in accordance with membrane manufacturer's requirements. Plies must be laid in smoothly with no pockets, wrinkles, buckles or voids. Care should be taken to assure that all flashing membrane end laps (3 inch minimum) are fully embedded in asphalt. All plies and cap sheet shall be extended (3) three, (6), and (9) inches respectively onto the deck surface. Seal all exposed flashing joints with roofing cement and fabric. Apply asphalt surface coat and gravel up to toe of cant. Fasten top of base flashing with capped nail-ins (masonry) or screws (wood), 6 inches on center. Where top of flashing is less than 8" above membrane, seal top of flashing with 2 plies of cement and fabric. Immediately install counterflashings over completed base flashings or cover with temporary waterproofing. Where the top of base flashing is left exposed longer than 48 hours or exposed to moisture, the base flashing shall be replaced if requested by the PGCPS Contract Representative or Architect/Engineer.

   a. Base flashing (Dynalastic 180 FR CR G or approved equal) at perimeter edge detail will be the full width 18" wide.

   b. On a wall cap, install Dynalastic 180 FR CR G or approved equal up the wall and under the new metal cap.

   c. An additional cap sheet layer (Dynalastic 180 FR CR G or approved) equal will be installed along all perimeter cants and gravel stops 18 inches wide.

   d. An additional cap sheet layer (Dynalastic 180 FR CR G or approved equal) will be installed along all built-up roof ridges and along all built-up roof valleys.

2. Stripping (gravel stop, vent pipe, etc.): Strip flanges to membrane with two plies of flashing felts set in hot bitumen. Install first felt extending from vertical projection to not less than 6 inches onto the membrane and second felt extending from vertical projection to not less than 8 inches onto the membrane. On top of this, apply a uniform coat of hot applied steep asphalt and imbedded one ply of pre-coated, mineral surfaced, modified cap sheet base flashing in accordance with membrane manufacturer's requirements.

3. Roof Drains: After 4-ply base plies are installed, flash roof drains with manufacturer's warranted liquid drain flashing system including scrim and 2-part dry curing flashing cement. Inspectors will look for scrim and liquid flashing extending into the drain bowl per the manufacturer's installation details. Apply liquid drain flashing per manufacturer's requirements. On top of this, apply a uniform coat of hot applied steep asphalt and embed one ply of mineral surfaced cap sheet in accordance with membrane manufacturer's requirements. Extend membrane plies, liquid flashing and cap sheet under clamping ring. Install clamping ring secured to drain body with stainless steel hardware. Do not allow bitumen to migrate to drain openings. If flashing causes a dam around drain, the Contractor will be required to remove and reinstall drain as required to eliminate ponding. To protect the insulation, install clamping rings over the membrane at the end of each day before leaving site, even if liquid flashing and cap sheet have not been installed. Where Contractor relocates existing drains, ensure the drain bodies are set an inch below the adjacent insulation. Then install the new membrane, liquid flashing, and mineral surface cap sheet as described above.

B. Allow for expansion of running metal flashing and edge trim that adjoins roofing.

C. Counterflashings, gravel stops, through-wall flashings, vent pipe flashings, expansion joints, and similar sheet metal work to be coordinated with built-up roofing work are specified in other sections of these specifications.

4.07 WALKPADS

A. Install modified bitumen walkpads at described locations in the job description or on drawing. Use DynaTread Plus as made by Johns Manville, 813mm X 813mm or equal.

1. Walkpads will be placed around the entire perimeter of large rooftop units and equipment, at ladders, roof scuttles, and where indicated on the bid drawing.

2. Walkpads will be fully adhered.

4.08 PROTECTING ROOFING

A. Upon completing roofing, including associated work, institute appropriate procedures for surveillance and protection of roofing during remainder of construction period. At end of construction period, or at a time when remaining construction will in no way effect or endanger roofing, inspect roofing and prepare a written report with copy to Owner’s Representative describing nature and extent of deterioration or damage found.

B. Repair or replace, as required, deteriorated or defective work found at time of above inspection to a condition free of damage and deterioration at time of Substantial Completion and according to requirements of specified warranty. Then, perform the specified moisture survey.

PART 4 - ADDITIONAL MECHANICAL EQUIPMENT REQUIREMENTS AND CONSIDERATIONS

5.01 GENERAL

A. All mechanical work shall be performed by a licensed mechanical contractor. All mechanical work shall be performed with strict adherence to all pertinent codes and regulations. All mechanical work shall be performed in a manner that causes the least amount of disruption and shortest service interruption to this facility. Work requiring service disruptions shall be planned during off hours as much as possible. All service disruptions must be scheduled in advance Mechanical work performed in a substandard fashion will be photo- documented and may affect future bidding eligibility.

B. Stacks and vents:

1. Replace the existing boiler and water heater stacks and collars with new stainless steel double wall stacks and new stainless steel collars. See Specification Section 15550.

C. Freon lines for HVAC units: Re-insulate all freon lines for HVAC units.

D. Gravity Vents:

1. The existing gravity vents will be replaced with new aluminum gravity vents matching existing. The Mechanical contractor shall perform a site survey to gather all required information for replacement prior to ordering replacement gravity vents.

E. Raise existing rooftop HVAC equipment to accommodate the new finished roof elevation after installation of new base and tapered insulation. Provide new and or extend existing supports and curbs as needed to maintain required height above new roof surface. Extend existing ductwork and piping in kind as required. Replace missing or deteriorated pipe and ductwork insulation. The contractor is responsible for performing a rooftop survey to ascertain the scope of the mechanical work required.

F. All rooftop mechanical equipment must be curb or steel frame mounted. Any equipment previously mounted on loose wooden supports laying directly on the roof’s surface will be re-installed on new curb style equipment supports as shown in plans on the drawing sheet labeled Typical Details. See the State

of MD DGS Chapter VII Standards for New Roofing Construction, Re-Roofing Construction and Roof System Guarantee Requirements. All mechanical equipment shall be mechanically attached to equipment curbs mechanically attached to the roof structure. New equipment curbs shall be properly flashed, counter flashed and capped. All piping and electrical conduit must be firmly supported. All equipment installations must match general roofing uplift requirements. Re-installing equipment on loose lumber supports (in-kind) is not acceptable.

G. All existing equipment support penetrations shall be re-flashed with new stainless steel and will receive new base flashing. All caps for all penetrations shall fit securely over base flashing. Install additional stainless steel counter flashing as required to ensure that metal flashing laps over asphalt base flashing.

H. Provide required labor and materials to disconnect/connect and raise existing electrical service to all rooftop HVAC equipment as required. Electrical work permits and inspections are to be included in the base bid to raise ventilators and perform other electrical work. All electrical work shall be performed by a licensed electrical contractor. All electrical work shall be performed with strict adherence to all applicable codes and regulations. All electrical work shall be performed in a manner that causes the least amount of disruption and shortest service interruption to this facility. Work requiring service disruptions shall be planned during off hours as much as possible. All service disruptions must be scheduled in advance. See electrical Division 26.

I. Electrical work performed in a shoddy or substandard fashion will be photo-documented and may affect future bidding eligibility.

END OF SECTION

SECTION 07 6205
SHEET METAL FLASHING AND TRIM FOR ROOFING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and Division 01 Specifications apply to this Section.

B. State of Maryland Department of General Services Office of Facilities Planning, Design and Construction Project Management and Design Division - Procedure Manual for Professional Services Roofing Standards July 2015 VII-8

1.02 SUMMARY

A. This Section Includes:

1. Aluminum Copings.
2. Stainless steel flashing receivers.
3. Prefinished aluminum counterflashings.
4. Prefinished aluminum expansion joint covers.
5. Lead vent pipe flashings.
6. Rigid conduit enclosures.
7. Stainless steel scuppers and overflow scuppers.
8. Rooftop unit curbs.

B. This Section Includes:

1. Division 02 “Selective Demolition” for demolition of existing roofing membrane and appurtenances.
2. Division 06 Section “Miscellaneous Rough Carpentry” for wood blocking and nailers.
3. Division 07 for roofing membrane installations.

1.03 PERFORMANCE REQUIREMENTS

A. General: Sheet metal flashing and trim assemblies as indicated shall withstand loads , structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, other defects in construction. Completed sheet metal flashing and trim shall not rattle, leak, or loosen, and shall remain watertight.

B. Fabricate and install roof edge flashings and copings capable of resisting the following forces according to recommendations in FMG Loss Prevention Data Sheet 1-49:l

1. Wind Zone 1: For velocity pressures of 21 to 30 lbf/sq. ft.: 60 lbf/sq. ft. perimeter uplift force, 90-lbf/sq.ft. corner uplift force, and 30-lbf/sq. ft. outward force.

C. Thermal Movements: Provide sheet metal flashing and trim that allows for thermal movements from ambient and surface temperature changes.

1.04 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each manufactured product and accessory.

B. Samples of the following flashing, sheet metal, and accessory items:

1. One, 8 inch square sample of each sheet metal material. Also provide one painted sample of stainless steel
2. One, 12 inch long section of stainless steel counterflashing and receiver.
3. One, 12 inch long section of stainless steel expansion joint cover with standing seam and continuous cleat.
4. One fully soldered lead boot and cap flashing for vent pipes.
5. One 12 inch long corner section of the prefinished aluminum coping with mitered corner, rubberized asphalt sheet metal stripping, back-up plate continuous cleat, and cover plate.
6. One rigid conduit enclosure. Approved submittal will be returned to Contractor.
7. One, fabricated stainless steel scupper including prefinished aluminum cover trim plate if through-wall type. Approved submittal will be returned to Contractor.
8. Manufacturer's Shop Drawings indicating proposed detail for each flashing condition or termination not specifically shown on Contract Drawings. Details must be similar to details shown on Contract Drawings and be permanently water tight without relying on sealant. Detail Shop Drawings that vary from Contract Drawing Details must be submitted along with the Manufacturer's Tapered Insulation Shop Drawings for State approval prior to performing detail work in field.

C. Warranty: Sample of special warranty.

1.05 QUALITY ASSURANCE

A. Fabricator Qualifications: Shop that employs skilled workers who custom fabricate sheet metal flashing and trim similar to that required for this Project and whose products have a record of successful in-service performance.

B. Sheet Metal Flashing and Trim Standard: Comply with SMACNA's "Architectural Sheet Metal Manual" unless more stringent requirements are specified or shown on Drawings.

C. Fasteners for Treated Lumber and Sheathing: All fasteners securing or penetrating treated lumber and sheathing shall be stainless steel.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage. Store sheet metal flashing and trim materials away from uncured concrete and masonry.

B. Protect strippable protective covering on sheet metal flashing and trim from exposure to sunlight and high humidity, except to the extent necessary for the period of sheet metal flashing and trim installation.

1.07 PROJECT CONDITIONS

A. Coordinate work of this section with interfacing and adjoining work for proper sequencing of each installation. Ensure best possible weather resistance and durability of work and protection of materials and finishes. The Drawings indicate most of the required details. Where a particular detail is not provided, provide a shop drawing and obtain the PGCPS Contract Representative'/Architect's approval for the proposed flashing detail. Solder all joints water tight, similar to those shown on Drawings. Note, all terminations shall be made watertight without relying on sealant or cement.

B. Masonry Mock-Up: Prior to ordering masonry materials, remove small sample of existing mortar and obtain custom color-matched masonry cement. Prepare masonry and point two square feet of three different mortar and sand mixes (6 sf total) at location selected by the Owner. Also install two different replacement brick masonry units. After 7 days of curing, the Owner's Representative will review the mock-ups. Obtain written approval of mortar and brick masonry selection before starting work. If

necessary, provide additional mortar and brick masonry until color and texture of dry , interior portions of the existing materials are replicated. Once approved, the mock-up area will become the standard for remaining work.

C. Masonry mock-up must be completed within 1 week of mobilization.

1.08 WARRANTY

A. Special warranty on Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace sheet metal flashing and trim that shows evidence of deterioration of factory-applied finishes within specified warranty period.

B. Exposed Panel Finish: Deterioration includes, but is not limited to the following:

1. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
2. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
3. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

C. Finish Warranty will be equal to Englert's warranty for it's PermaColor / Permametallic 2000 and Perma Color 3500 ULTRA-Cool finishes .

D. Finish Warranty Period: 20 years from date of Substantial Completion.

E. Submit copies of the standard 2- year roofing Workmanship warranty per Section 075556.l

PART 2 - PRODUCTS

2.01 SHEET METALS

A. General:

1. The Metalwork will be supplied by the Roofing Manufacturer and will be part of the total system NDL warranty.
2. Protect mechanical and other finishes on exposed surfaces from damage by applying a strippable, temporary protective film before shipping.

B. Prefinished Aluminum: Alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated and with not less than the strength and durability of alloy and temper designated below:

1. Aluminum Sheet : ASTM B 209, 3003-H14, with a minimum thickness of 0 .040inch, unless Otherwise indicated. Continuous gutters may be .032 inch. Cleats shall be one gauge heavier than material fastened or as recommended by metal manufacturer.
2. Fluoropolymer 2-Coat Coating System: Manufacturer's Standard 2-coat, thermocured system composed of specially formulated inhibitive primer and Fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 605.2
3. Provide 70% Kynar/Hylar based finish coating system equal in all aspects to that specified and warranted For 20 years by Englert as PermaColor2000
4. Finish coating shall be 1.0 + 1.0 mil total dry film thickness.
5. Wash coat of .3 to .4 mil dry film thickness shall be applied to reverse side.
6. The pre-painted, finished side shall be coated with a factory installed , strippable plastic film for protection of the finished surface during shipping, fabrication, and installation.
7. Color and Gloss: As selected by Owner from Manufacturer's full range of choices for color and gloss. a. The PGCPS Project Manager will choose the color to be used for this facility/project.
8. All prefinished aluminum shall be STUCCO EMBOSSED unless specifically stated otherwise.

C. Stainless Steel: Type 304, .025 (24 gauge) dead soft (Microflex), soft annealed stainless steel, and .015 terned stainless steel.

D. Lead: ASTM B 749, Type L51121, copper bearing sheet lead, minimum 4lb/ sf for drains and 4lb/sf for vent pipes. Fabricated vent pipe flashing boots a maximum one inch greater in diameter than vent pie to be flashed.

2.02 MISCELLANEOUS MATERIALS

A. General: Provide materials and types of fasteners, solder, welding rods, protective coatings, separators, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation and as recommended by sheet metal/roofing Manufacturer.

B. Anchor Bolt (epoxy): ICC-ES ESR-1531, stainless steel epoxy anchor for use in normal weight structural Concrete, ½ inch in diameter (HIT-RE500 + HAS-R 304/316 By Hilti) Provide stainless steel nuts. Provide minimum 3-1/2 inch embedment or as shown on Approved Shop Drawings. All epoxy anchors MUST be installed by installers certified by the fastener manufacturer. Anchors must be capable of sustaining, without failure, a load equal to for times the load imposed when installed in concrete, as determined by testing according to ASTM E 488, conducted by a qualified testing agency.

C. Backer Rod: Closed cell polyethylene foam rod or rope, 25 percent greater in diameter than joint width to be sealed. Joint widths vary. Different sizes will be required.

D. Band Clamp: ½ inch wide. All stainless steel band clamp with slotted worm drive fastening mechanism.

E. Batt Insulation: ASTM C 665, Type III, Class A fiberglass insulation.

F. Bituminous Coating: SSPC - Paint 12, solvent-type bituminous mastic, nominally free of sulfur, compounded for 15-mil dry film thickness per coat.

G. Brick Masonry: ASTM C 652, Grade SW, Type HBX, Size, shape and texture to match existing.

H. Fasteners: Same metal as flashing/sheet metal or other non corrosive metal as recommended by sheet metal manufacturer. Match finish of exposed heads with material being fastened. Galvanized steel fasteners are not acceptable for exposed applications. All treated lumber must be fastened with stainless steel fasteners.

I. Gypsum Board: ASTM C 36, 5/8 inch thick (or thickness to match existing), 4 x 4 or 4 x 8 sheets of gypsum board. Provide materials for joints and corner treatment complying with ASTM C 475, ASTM C 840, and recommendations of gypsum board and joint treatment materials Manufacturers.

J. Hammer5 Screws/Nailins: One step nail drive anchor with Zamac alloy body and stainless steel drive screw (Zamac Hammer Screw by Powers).

K. Hardware Cloth: Stainless steel hardware cloth, ½ inch by ½ inch, minimum wire diameter 0.30 inches.

L. Liquid Flashing System: JM Permaflash system including scrim and 2-part MBR flashing cemrent or pre-approved equal. System must be warranted by the roofing manufacture.

M. Mastic Sealant: Polyisobutylene; nonhardening, nonskinning, non-drying, nonmigrating sealant

N. metal Accessories: Provide sheet metal clips, straps, anchoring devices, and similar accessory units as required for installation work, matching or compatible with material being installed, noncorrosive, size and gage required for performance.

O. Mortar: ASTM C 270 proportion specification, Custom blended, color-matched and pre packaged Type N Portland cement and Type S hydrated lime (Eaglebond by Lefarge; Flamingo-Brixment by Essroc; Custom Color Portland/Lime by Lehigh), 3 3/8 to 6 ¾ parts clean washed sand (not less than 2 ¼ and not more than 3 times the sum of the separate volumes of cementitious materials) and the maximum amount of water which produces a workable consistency. Color to match existing joints.

P. Nails (roofing): Stainless steel, 0.120-inch-diameter barbed shank, sharp-pointed, conventional roofing nails with a minimum 3/8-inch diameter head and of sufficient length to penetrate ¾ inches into solid decking or at least 1/8 inch through plywood sheathing.

Q. Nails (stainless steel - for wood): Type 316, stainle3ss steel common nails. Provide 10d, 12d, or 16d nails as required to penetrate at least 1 ¼ inch into wood framing.

R. Paint System (for stainless steel): Primer and top coat recommended by stainless steel manufacturer. Apply primer and 2 coats of paint in accordance with Manufacturer's recommendations. Color to match adjacent prefinished sheet metal.

S. Paper Slip Sheet: 5-lb. rosin-sized building paper.

T. Plywood: 4 x 8 sheets of ½ inch or ¾ inch as specified FRT exterior grade plywood impregnated with chemicals by a pressure process or other means during manufacture, and which, when tested in accordance with UBC Standard 8-1 for a period of 30 minutes, shall have a flame spread of not over 25 and show no evidence of progressive combustion. Must have FRT stamp with fire rating.

U. Roofing Cement: ASTM D 4586, Type I, non-asbestos roofing cement, asphalt, wet and dry.

V. Rubberized asphalt sheet membrane: Roofing Manufacturer's self adhering rubberized asphalt bonded to polyethylene sheeting and formed into flexible sheets, 56 mils minimum thickness (equal to Bituthene 3000/3100 by W.R. Grace and Co.; Polyguard 650 by Polyguard Products, Inc.) and for use under metal. Use primers , mastics and liquid membrane supplied by membrane manufacturer.

W. Rubberized asphalt sheet membrane: Roofing Manufacturer's self adhering, butyl based membrane bonded to polyethylene sheeting and formed into flexible sheets, 30 mils minimum thickness (equal to Ultra by W.R. Grace and Co) and for use under metal. Use primers, mastics and liquid membrane supplied by membrane manufacturer.

X. Screws (masonry): 1,4 inch diameter, corrosion resistant case hardened steel screws with composite Fluoropolymer coating. Length to penetrate substrate 1 ½ inches.

Y. Screws (stainless steel): ASTM A 478, Type 18/8 stainless steel, pan or truss head self-tapping screws, with neoprene washers; No. 8 x ½ inch for fastening metal to metal, No. 10 x 1 ½ inches for fastening metal to wood.

Z. Screws (self-tapping): ASTM A 478, Type 18/8 stainless steel , pan or truss head self-tapping screws, with neoprene washers; No. 10 x ½ inch for fastening sheet metal and No. 12 x 2 ½ inch in length and diameter as required for fastening wood products to steel members.

AA. Sealant (polyurethane): ASTM C 920, Grade NS, Class 25, two (type m) part polyurethane, non sag, sealant (Sikaflex 2c by Sika; Dynatrol II by Pecora; Sonolastic NP2 by Sonneborn). Color: to blend with primary material at sealant line.

BB. Sealant (polyurethane): One part polyurethane sealant, non sag, sealant. Color: to blend with primary material at sealant line.

CC. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyosobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape ½ inches wide and 1/8" thick.

DD. Solder for Stainless Steel: ASTM B 32, Grade Sn60, with an acid flux of type recommended by stainless-steel manufacturer.

EE. Splash Blocks:

1. Provide Standard precast concrete splashblocks, 3000 psi precast concrete dish-profile units manufactured for purpose. Light weight patio blocks are not acceptable.

2. For downspouts draining onto built-up- roof areas, fabricate stainless steel splash pans and bed in hot bitumen.

FF. Termination Bar: ASTM A 276, type 304 or 316 stainless steel, 1-inch wide by 3/16-inch thick, pre drilled holes inches on center as required, no burrs.

GG. Weep Vent: Provide UV-resistant polyester mesh weep hole vent, Color; match adjacent mortar (Weep Vent by Mortar Net USA, 800-664-6638).

HH. Pitch Pockets: Roof penetrations will be flashed with preformed flexible flashings (stainless steel) using clamps and tents, unless the penetration is such a complex shape or size dimension that a pitch pocket is required. Place pourable sealer in all pitch pockets.

2.03 FABRICATION GENERAL

A. General Metal Fabrication: Field verify dimensions and provide factory manufactured components to greatest extent possible. Comply with details shown and with applicable requirements of SMACNA “Architectural Sheet Metal Manual” , 6th edition 2003, and other recognized industry practices. Fabricate for waterproof and weather-resistant performance, with expansion provisions for running work, sufficient to permanently prevent leakage, damage, or deterioration of the work. Form work to fit substrates. Comply with material manufacturer instructions and recommendations for forming material. Form exposed sheet metal work without excessive oil-canning, buckling, and tool marks, true to line and levels indicated, with exposed edges folded back to form hems.

B. Provide 4-inch-wide flanges for setting on roofing membrane with concealment by composition stripping.

C. Seams: Fabricate nonmoving seams in sheet metal with flat-lock seams. Tin edges to be seamed, form seams, and solder. Rivet joints for additional strength where required. Use 1inch standing seams where indicated on drawings (parapet and expansion joint caps).

D. Expansion Provisions: At locations where specific information for metal expansion joints is not specified, provide drive cleat expansion joint or alternate permanently watertight expansion joint approved by the PGCPS Contract Representative and Architect/Engineer. Spacing between expansion joints shall be a maximum of thirty feet. At bends in metal flanges, to receive drive cleat, solder fill pieces watertight at corners. (Note that expansion joints must be installed 30 feet on center even when drawings state to solder joints watertight.)

E. Sealant Joints: Where movable , nonexpansion type joints are indicated or required for proper performance of work, form metal to provide for proper installation of elastomeric sealant, in compliance with SMACNA standards.

F. Separations: Provide for separation of metal from noncompatible or corrosive substrates such as treated lumber by covering concealed surfaces at locations of contact, with sheet membrane. Note: install sheet membrane even if NOT shown on Drawing.

G. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of sheet metal exposed to public view.

H. Fabricate cleats and attachment devices from same material as sheet metal component being anchored or from compatible, noncorrosive metal recommended by sheet metal manufacturer.

1. Size: As recommended by SMACNA manual or sheet metal manufacturer for application, but cleat shall never be less than one gage heavier than metal being secured.

I. Fabricate penetration sleeves with minimum 10-inch high stack, of diameter 1 inch larger than penetrating element.

J. Seams (stainless steel): Fabricate nonmoving seams with flat-lock seams. Tin edges to be seamed, form seams, and solder. Use 1inch standing seams where indicated on drawings (expansion joint caps or

covers).

K. Seams (aluminum): Fabricate nonmoving seams with flat-lock seams. Form seams and seal with elastomeric sealant unless otherwise recommended by sealant manufacturer for intended use. Cover joints with 5 inch wide strip of sheet membrane and 6 inch wide cover plates. Rivet joints where necessary for strength. Use 1inch standing seams where indicated on drawings (parapet and expansion joint caps or covers).

L. Do not use graphite pencils to mark metal surfaces.

2.04 SHEET METAL FABRICATIONS

A. Z flashing: Fabricate from 0.040 inch thick prefinished aluminum to profiles shown on Drawings.

B. Receiver: Fabricate from 0.018 inch thick stainless steel prefinished to profiles shown on Drawings.

C. Counter Flashing: Fabricate from 0.018 inch thick stainless steel and prefinished 0.040 aluminum as shown on Drawings.

D. Drip Edge: Fabricate from 0.040 inch thick prefinished aluminum to profiles shown on Drawings.

E. Fascia: : Fabricate from 0.040 inch thick prefinished aluminum to profiles shown on Drawings.

F. Closures: Field verify dimensions and fabricate closure pieces from 0.018 inch thick stainless steel as shown on the Drawings or to match existing. Solder all joints watertight. Paint exposed metal to match adjacent prefinished metal l cover with prefinished metal.

G. Copings: Fabricate from 0.040 inch thick prefinished aluminum as indicated on Drawings or to standard profiles if not shown. Provide mitered, riveted, and sealed corners and sections. Fabricate so outside vertical face of corners is continuous with no cuts. Fabricate and provide 12 inch wide concealed backup plates and 6 inch wide cover plate. At corners, cover plate needs only to extend one inch onto outside face of coping.

H. Conduit and Pipe Enclosures: Fabricate from 0.018 inch thick stainless steel with locked and soldered joints, except where noted to provide locked joints only. Profiles indicated on Drawings or Shop Drawings approved by the Architect/Engineer where not indicated.

I. Cap Flashing: General: Field verify dimensions and fabricate from .018 inch thick stainless steel as shown on drawings.

J. Scuppers and Overflow Scuppers: Field verify dimensions and fabricate from stainless steel as shown on the Drawings. Solder all joints watertight. At building exterior, cover exposed stainless steel with pre-finished metal (matching the adjacent prefinished metal color). Lock cover over cleat and fasten top with two fasteners. Paint any remaining exposed stainless steel to match prefinished metal color.

K. Spoutheads: Replacement Spoutheads will be stainless steel.

L. Gutters: New gutters shall be 6" fabricated from a minimum .032 sierra- tan aluminum to match new roof perimeter components. Downspouts are to be made from .040 aluminum. Gutters shall be installed with hidden brackets which are to be installed every 24 inches.

M. Downspouts: Fabricate new downspouts with shop formed sierra-tan aluminum. Replace damaged or broken cast iron boots with new to match existing. Provide new pre-cast concrete splash blocks where indicated or required .

N. Vent Pipes: Fabricate vent pipe boots and caps from 4 pound lead sheet as shown on the Drawings. Solder Edge Metal and flashing metal greater than 8 inches tall shall be fabricated out of multiple pieces of sheet metal with each piece not exceeding 8 inches in height.

O. Pitch Pockets: Roof penetrations will be flashed with preformed flexible flashings (stainless steel) using clamps and tents, unless the penetration is such a complex shape or size dimension that a pitch pocket

is required. A pourable sealer is to be placed in all pitch pockets.

P. The use of the words "pitch pocket" in the specification will not excuse the contractor from constructing and installing the preformed flexible flashing.

1. Pitch pockets, if approved, will be installed in all locations that exist and in locations that may have been omitted but are needed.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with installer present, to verify locations, dimensions and other conditions affecting performance of the work.

1. Verify compliance with requirements for installation tolerances of substrates.

2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.

B. For the record, prepare written report, endorsed by the Installer, listing conditions detrimental to performance of the Work.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 WOOD BLOCKING INSTALLATION

A. Reuse existing perimeter wood blocking where indicated. Prior to installing new wood blocking, grout cores of CMU solid and install anchor bolts spaced 32 inches on center, except space bolts 16 inches on center within 15 feet of corners.

B. Rip standard size wood blocking as required to fit openings, to form specified conditions and to provide flush surfaces to receive roofing components. Fasten blocking as indicated on Drawings and to comply with current building code requirements.

C. Cover all wood blocking with rubberized asphalt sheet membrane immediately after installing blocking. and before cladding with aluminum components.

D. Wood Blocking:

1. Existing conditions and new construction dictate that new wood blocking is required for numerous details. Fasten blocking as indicated on Drawings and to comply with current Building Code requirements. At a minimum, fasten wood blocking to adjacent wood blocking with nails, 12 inches on center staggered. Within 8 feet of corners, fasten 6 inches on center, staggered. Secure blocking with screws where shown on Drawings. All fastening conditions must comply with Factory Mutual Data Sheet 1-49.

2. Install new wood blocking on existing curbs or install new wood curbs so that top of base flashing will be 10 inches above membrane surfaces. Where new wood curbs exceed 11 inches in height, Contractor may substitute wood stud walls with ¾ inch plywood faces for solid wood curbs.

3.03 UNDERLAYMENT INSTALLATION

A. General: Install underlayment as indicated on Drawings.

B. Self-Adhering Sheet Underlayment: Install self-adhering sheet underlayment, wrinkle free. Apply primer recommended by underlayment manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation; use primer rather than nails for installing underlayment at low temperatures. Apply in shingle fashion to shed water, with end laps of not less than 6 inches staggered 24 inches between courses.

C. Where metal is to be installed directly on cementitious or wood substrates, install sheet membrane even if not shown on drawings.

3.04 INSTALLATION, GENERAL

A. General: Except as otherwise indicated, comply with Manufacturer's installation instructions and recommendations and with SMACNA "Architectural Sheet Metal Manual" Review Thickness of sheet metal to be installed and confirm that proposed thickness meets or exceeds minimum thickness required by SMACNA. Anchor units of work securely in place by methods indicated, providing for thermal expansion of metal units; conceal fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weatherproof.

B. Install exposed sheet metal Work that is without excessive oil canning, buckling, and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance. Verify shapes and dimensions of surfaces to be covered before fabricating sheet metal.

C. Remove and reinstall ducts and/or curbs on the roof as needed to install sheet metal flashing. Coordinate shutdown of equipment with Owner's Representative.

D. Torch cutting of sheet metal flashing and trim is not permitted.

E. Do not use Graphite pencils to mark metal surfaces.

F. Priming: Prime metal surfaces and allow primer to dry before contacting metal with asphaltic materials.

G. Metal Flanges: Bed Flanges of work in bituminous roofing membrane where required for waterproof performance.

H. Roof Edge Flashings: Secure metal flashings at roof edges according to FM Loss Prevention Data Sheet 1-49.

I. Expansion Provisions: Provide for thermal expansion of exposed sheet metal Work. Space movement joints at maximum of 10 feet with no joints allowed 24 inches of corner intersection. At locations where specific information for metal expansion joints is not specified, provide drive cleat expansion joint or lap metal four inches, cover with a five inch wide piece of sheet membrane and protect membrane with a six inch cover plate as approved by the Architect /Engineer. Spacing between expansion joints shall be a maximum of 30 feet. At bends in metal flanges to receive drive cleat, solder fill pieces watertight at corners.

J. Fastener Sizes: Use fasteners of sizes that will penetrate wood sheathing not less than 1-1/4 inches for nails and not less than ¾ inch for wood screws. Use fasteners of sizes that will penetrate metal decking not less than recommended by fastener manufacturer to achieve maximum pull-out resistance.

K. Seal joints as required for watertight construction.

1. Sealant-filled joints will not be used. If such joints are encountered, substitute stainless steel flashing for existing/specified metal and solder the joints watertight as described below.

L. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter. Pre-tin edges of sheets to be soldered to a width of 1-1/2 inches, except reduce pre-tinning where pre-tinned surface would show in completed work.

1. Do not solder aluminum sheet.

2. Do not use torches for soldering. Heat surfaces to receive solder and flow solder into joint. Fill joint completely. Completely remove flux and spatter from exposed surfaces.

3. Stainless-Steel Soldering: Tin edges of uncoated sheets using solder recommended for stainless steel and acid flux. Promptly remove acid flux residue from metal after tinning and soldering. Comply with solder manufacturer's recommended methods for cleaning and neutralization.

M. Rivets: Rivet joints in where indicated and where necessary for strength.

3.05 FLASHING INSTALLATION

A. Counterflashing: Fasten counterflashing to receivers with stainless steel screws with neoprene washers, 24 inches on center. Lap sections 4 inches minimum.

B. Vent Pipes: All roof penetrations will be sealed with the manufacturer's warranted liquid flashing system designed specifically for use with the type of roof penetration. Only the manufacturer's roof penetration detail will be accepted. The manufacturer's 20 year NDL warranty will include the liquid drain flashing system at roof penetrations. Confirmation of inclusion in the NDL warranty will be required at time of scope review. Penetrations not suitable for liquid flashing must be flashed per NRCA guidelines. All ductwork penetrations will include curbs. If vent pipes require extending pipes above the roof surface then:

1. Vent pipes shall be reflashed with new four (4) pound lead collars, turned down three inches, and shall be installed over all four (4) plies of roof mat. Prior to installation of roof mat, patch opening between projection and deck edge with oakum or like material to provide even surface and prevent dripping of hot asphalt into interior of building. If the lead collar is too short for the vent pipe, install a lead cap that is formed to have a standing seam channel locking action when squeezed.
2. After installation of lead collars, embed three (3) overlapping plies of reinforcing glass fiber flashing, cut to fit neatly around projections, into uniform solid mopping or hot asphalt at a rate of 30 pounds per 100 square feet. Apply asphalt surface coat and gravel up to base of projection caps and gooseneck where existing shall be replaced upon completion.

C. Pitch Pockets: are to be avoided if possible. Roof penetrations will be flashed with preformed flexible flashings (stainless steel) using clamps and tents, unless the penetration is such a complex shape or size dimension that a pitch pocket is required.

1. The use of the words "pitch pocket" in the specification will not excuse the contractor from constructing and installing the preformed flexible flashing.
2. Pitch pockets, if approved, will be installed in all locations that exist and in locations that may have been omitted but are needed.
3. Place pourable sealer in all pitch pockets.

D. Penetration collars (umbrella type) are to be watertight and made of stainless steel.

1. Band and caulk around roof penetration.

E. Roofing Expansion Joint Curbs:

1. Install wood cur as shown on the Drawings. Install membrane and flashings, then cover top of curb with rubberized asphalt sheet membrane. Fabricate and install continuous cleat and expansion joint cover. Fasten continuous cleat with stainless steel nails spaced 16 inches on center. Lock cover with as shown on Drawings. Fasten other side of cover with screws with neoprene washers, 24 inches on center.
2. Where expansion joint intersects or runs parallel with walls, provide stainless steel end dam/closures extending up under coping or counterflashing. Solder all joints watertight. Fasten vertical leg to wall with stainless steel nails (wood), screws (metal) or Nailins (masonry) spaced 16 inches on center. Cover vertical leg with roofing base flashing, coping or counterflashing as shown on the Drawings.
3. All terminations shall be made watertight without relying on sealant. Where a particular detail is not provided, provide a shop drawing and obtain the Architect's/Engineer's approval for the proposed flashing detail. Prime and paint all stainless steel exposed to view from the ground.
4. The top of all expansion joint curbs must be a minimum of 8" above the finished roof surface.

F. Cap Flashing: Install treated wood nailers, plywood cap, membrane and flashing for wood support curb as shown on the Drawings. Cover plywood with sheet membrane and lap top of base flashing all around. Fabricate stainless steel cap flashing with flat locked and soldered seams and place over curb. Fasten entire perimeter with stainless steel screws with neoprene washers spaced 24 inches on center as shown on Drawings. Where units to be set on new curb are required to be secured, fasten through sheet metal through a full bed of sealant.

G. Drip Edge:

1. Install wood nailers/blocking as shown on Drawing and fasten in accordance with Factory Mutual Data Sheet 1-49. After membrane installation, field verify dimensions, fabricate drip edge and install as shown on Drawings. Fasten outside continuous cleat with stainless steel nails (wood), stainless steel screws, (metal) or Nailins (masonry), spaced 12 inches on center or as shown on approved Manufacturer's Shop Drawings. Provide full ¾ inch lock at cleat. Install drip edge in full bed of rubberized asphalt and fasten 4 inch flange to wood nailer with stainless steel nails spaced 3 inches on center staggered. At joints, install a 12 inch wide back-up plate and gravel stop sections centered over backup plate with ¼" gap between sections: then, install rubberized sheet membrane stripping and 6 inch wide cover plates embedded in mastic and nailed through the opening between the drip edge sections. Inspect to ensure the drip edge is uniform in appearance and has no oil canning, dings, or warps. Replace defective sections prior to installing stripping. Prime metal and install membrane stripping.
2. Prefabricate corners and ends in shop with mitered and soldered joints. Form outside corners by cutting roof side flange and bending drip edge fascia around corner. Rivet flanges where lapped and solder watertight. At inside corners, fabricate and install corner section with mitered . riveted and soldered joints. At ends against vertical surfaces, install a stainless steel end dam with soldered joints, strip in with sheet membrane and install 6 inch wide cover plate covering as much stainless steel as possible. Solder all joints in the end dam watertight and extend a minimum of 4 inches away from drip edge against the vertical surfaces. Cover end dams with counterflashing or other flashing as required.
3. All terminations shall be made watertight without relying on sealant. Where a particular detail is not provided, provide a Manufacturer's Shop Drawing for the proposed detail to be installed. Flashings must be installed similar to those shown on drawings.

H. Expansion Joints:

1. Install wood curbs/stud walls and plywood to provide a minimum eight inches clearance between Roof membrane and top of curbs as shown on the Drawings. Install membrane and flashings. Fabricate and install expansion joint cleats and covers. For covers, use standing seam joints a minimum of 1" high. Install peel & stick membrane on all wood slope cover ½ inch minimum shed water.
2. At fascia cover expansion joint terminations, fabricate fascia cover from stainless steel, with soldered end dam as shown on drawings or follow SMACNA guidelines and Roofing Manufacturer's installation details. Prime metal and strip in closure/fascia cover with two felts and mineral surfaced cap sheet set in hot bitumen. Paint exposed stainless steel to match prefinished metal. Paint exposed metal to match fascia cover or cover with prefinished metal.
3. Where the curb terminates at a corner, provide a single closure piece (all joints soldered watertight) with a 2 inch v -crimp to allow for expansion.
4. Where expansion joints terminate at counterflashings, slope wood curb/stud wall down (if necessary) and provide stainless steel end dam/closures extending up under counterflashing. Solder all joints watertight. Solder one inch high diverter as required to divert to channel water away

from the termination.

5. All terminations shall be made watertight without relying on sealant. Where a particular detail is not provided, follow SMACNA guidelines and Roofing Manufacturer's installation details.

6. The top of all expansion joints must be a minimum of 8" above the finished roof surface.

I. Painting: Remove all rust., dirt, cement and other materials incompatible with painting system, in accordance with paint Manufacturer's specifications and recommendations, for all stainless steel surfaces to be painted. Apply primer and two coats of paint to prepared surface in accordance with paint manufacturer's specifications and recommendations.

J. Exhaust Fans/Vents: Disconnect and raise mechanical equipment to allow installation of additional blocking and base flashing as necessary. Fasten wood blocking to existing integral wood blocking to provide 12 inches of clearance between the membrane and the top of the flashing. Obtain inside access to extend electrical conduit and provide duct extensions as required to raise units. Install wood blocking and flashings as shown on the Drawings or in accordance with standard industry practice if not shown. Reinstall and reconnect mechanical equipment so units function equal to or better than the operating condition prior to disconnection. All mechanics performing electrical and mechanical work must be licensed to perform work in the State (Maryland) where the facility is located and approved by the Owner.

K. Fascia/Fascia Cover:

1. Install wood nailers/blocking shown on Drawing and fasten in accordance with Factory Mutual Data Sheet 1- 49. After membrane installation, field verify dimensions, fabricate fascia covers and fascias, and install as shown on Drawing. Fasten outside continuous cleat for fascia with stainless steel nails spaced 12 inches on center . Lock bottom of fascia over cleat with full ¾ inch lock and fasten top edge with stainless steel nails spaced 16 inches on center. Double the quantity of nails screws within 15 feet of corners. Install fascia cover in full bed of roofing cement and fasten 4" flange to wood nailer with stainless steel nails spaced 3 inches on center staggered. Provide ¼ inch gap between fascia cover sections. Install 5 inch wide strip of sheet membrane and 6 inch wide top cover plate embedded in mastic and nailed through the opening between the fascia cover sections. Inspect to ensure the fascia cover is uniform in appearance and has no oil canning, dings, or warps. Replace defective sections prior to installing stripping.

2. Form outside corners by cutting roof side flange and bending fascia cover around corner. Rivet flanges where lapped and seal with sealant. At inside corners, fabricate and install corner section with mitered, pop riveted and sealed joints. At ends against vertical surface, provide a stainless steel end plate soldered watertight and extending a minimum 4 inches away from gravel stop against the vertical surfaces as shown on approved Shop Drawings. Cover end dams with counterflashing or other flashing where indicated on Shop Drawings. All terminations should be made watertight without relying on sealant. Where a particular detail is not provided, provide a shop drawing for the proposed detail to be installed. Flashings must be installed similar to those shown on drawings.

3. For Roofing Manufacturer's factory fabricated perimeter metal systems, follow Roofing Manufacturer's instructions and details. Most PGCPS facilities will have a wood cant gravel stop and a Two- piece, factory fascia system. Each fascia, upper and lower will have a continuous cleat. The top cover will also be a cleat for the upper fascia. SEE Contract Drawings and provide Roofing Manufacturer's fascia system as shown

4. Fascia will be stucco-embossed aluminum.

L. Multiple Conduit Enclosures: Disconnect existing conduit and refrigerant lines (if necessary) as required to reroute conduit and refrigerant lines to configurations shown on drawing. Install wood nailers, membrane and flashing for conduit enclosures as shown on the Drawing. Fasten wood curbs to the deck

with screws or toggle bolts, minimum two per side. Install curbs to provide 10 inch minimum vertical clearance above the finished membrane. Reinstall electrical conduit and refrigerant lines to original configuration. Field verify dimensions and install stainless steel counterflashing and enclosure as shown on Drawing. Solder all joints, except as noted. Reinstall and reconnect conduit and refrigerant lines so units function in accordance with or better than the operating condition stated in the report at the start of the project. Provide a second written report as stated below.

M. Single Rigid Conduit Penetrations: Reroute and flash all individual, rigid conduit penetrations with stainless steel boots and rain shields as shown on the Drawings or as required. Extend conduit as required to install boot with 10” vertical flange. Set flange of boot in a full bead of roofing cement. Prime flanges of boots and install two -ply stripping.

N. Equipment Recertification: Reinstall and reconnect all conduit and refrigerant lines so all types of units function in accordance with or better than the operating condition stated in the report at the start of the project. Provide a second written report co-signed by the Owner’s representative, the Roofing Contractor’s Representative and the Mechanical Subcontractor’s representative stating the operating conditions of each unit and the condition of the conduits/lines feeding the units following completion of work. After units are reconnected and properly functioning, install batt insulation and conduit/wiring enclosure as shown on the Drawing or as required. All mechanics performing electrical and mechanical work must be licensed in the State where the facility is located (Maryland) and approved by the owner.

O. If Re-using Existing Coping: (Re-use as opposed to replacement must be specified in Scope of Work).

1. Mark each coping piece with a unique designation and then remove and store the existing coping for reinstallation. After membrane and base flashing installation, Install sheet membrane under coping and reinstall coping pieces in the exact locations from where they were removed. Reinstall cleats, anchor plates, and other anchoring and attachment accessories and devices with concealed fasteners.

2. Coping Joint Covers: Provide new metal (match coping) plate under each joint. The plate shall be 12 inches wide and extend at least 3-inches down the inside and outside faces of the wall . After coping installation, install a 5-inch wide piece of sheet membrane over the coping joint and then reinstall the joint covers.

P. Painting: Remove all rust, dirt, cement and other materials incompatible with painting system, in accordance with paint manufacturer’s specifications and recommendations, from all exposed existing ferrous metal surfaces to remain (HVAC Units, exhaust fans, etc.) and from stainless steel surfaces to be painted. Apply primer and two coats of paint to prepared surfaces in accordance with paint Manufacturer’s specifications and recommendations

Q. Counterflashing in Brick Masonry: Reuse existing counterflashing receiver if in good condition and at required height. If existing receiver is damaged or otherwise unreusable, saw cut a 1 ½ inch deep reglet in the mortar joint about 3 inches or as needed above the top of the existing wall flashing. Cut the joint at a 15 degree angle and install a stainless steel counterflashing receiver extending 1 ½ inches into saw cut mortar joint. Secure receiver with lead wedges , spaced 10 inches on center. Lap and solder joints watertight. Provide for expansion every 30 feet by lapping joints and covering with 5 inch wide strip of sheet membrane and a 6 inch cover plate. After flashing installation, repoint reglet with mortar. Provide cotton wick weeps with two inch wide, L-shaped metal covers, 24” on center. Metal covers to be fabricated from same material as flashing receiver.

1. Replacement counterflashing metal shall be, stainless steel, or aluminum mill or Kynar finish, stucco-embossed aluminum, or copper as specified.

    a. Clean out reglet before replacing flashing.

2. New reglets and counter flashing will be installed when specified. On masonry walls, the mortar joint will be cut out and a new stainless steel or aluminum reglet installed.
3. In areas where a reglet cannot be installed, a Philadelphia-type counterflashing may be allowed by the Board's representative with prior approval. This counter flashing will have multiple bends for caulk and an aluminum stiffener strip. The stiffener strip will be predrilled and have the dimensions of 1" wide x 3/16" thick.
4. Do not compromise (cover) existing through-wall flashing systems that are designed to weep internal wall moisture.

R. Masonry Control Joints: At_____, remove the existing sealant and backer rod from the masonry control joints from the top of the parapet to the wall flashing below. Use grinders as required to remove all existing sealant. Then, prime the masonry and install backer rod and sealant in accordance with manufacturer's recommendations.

S. Overflow Scuppers:

1. Provide completely soldered stainless steel overflow scuppers through parapets or perimeter cants as shown on the Drawings. Locate bottom of scupper no more than five inches above membrane surface at locations shown on Drawing or as required to comply with current code. Fasten flanges of scupper liners to the masonry/concrete with Nailins, or to metal/wood blocking with stainless steel screws. At the exterior of the parapet. Extend the outside scupper flange under fascia/coping or install a new piece of stainless steel or prefinished aluminum flashing extending from under the coping and lapping the top of the scupper a minimum of 3 inches. Secure the bottom of the flashing with a continuous cleat and secure the top with 3 nailins or screws. Prime metal and strip in roof side scupper flanges. Cover both ends of each scupper opening with hardware cloth soldered to the scupper. Wrap exposed outside scupper flanges with prefinished aluminum so scupper matches color of fascia. At masonry walls where the top of the scupper is more than 12 inches from the top of the parapet, install a counterflashing (matching coping material) in a 1 ½ inch deep saw cut reglet. Extend counterflashing 4 inches beyond ends of scupper flanges. a. Extend scupper pan at least 2" past face of wall.
2. Scupper Drains: Provide completely soldered stainless steel scupper drains through parapets or perimeter cants as shown on the Drawings. Locate bottom of drain at base insulation height for optimum drainage at locations shown on Drawing or as required as an auxiliary drain. Taper/sump the insulation as required to ensure positive drainage. Fasten flanges of scupper liners to the masonry/concrete with Nailins, or to metal/wood blocking with stainless steel screws. At the exterior of the parapet. Extend the outside scupper flange under fascia/coping or install a new piece of stainless steel or prefinished aluminum flashing extending from under the coping and lapping the top of the scupper a minimum of 3 inches. Secure the bottom of the flashing with a continuous cleat and secure the top with 3 nailins or screws. Prime metal and strip in roof side scupper flanges. Cover both ends of each scupper drain opening with hardware cloth soldered to the scupper. Wrap exposed outside scupper flanges with prefinished aluminum so scupper matches color of fascia. At masonry walls where the top of the scupper is more than 12 inches from the top of the parapet, install a counterflashing (matching coping material) in a 1 inch deep saw cut reglet. Extend counterflashing 4 inches beyond ends of scupper flanges. Provide scupper box and downspout fabricated from prefinished aluminum. See detail on drawing. Use SMACNA design detail for scupper box.

T. Minimum Overflow Scupper Dimensions:

1. Serving 6" roof drain or multiple drains: No less than 8" wide x 4" tall or 32 S.I. (square inches)
2. Serving 5" roof drain or multiple drains: No less than 6" wide x 4" tall or 24 S.I

3. Serving 4” roof drain or multiple drains: No less than 6” wide x 3” tall or 18 S.I.
4. Serving 3” roof drain or multiple drains: No less than 4” wide x 3” tall or 12 S.I.

U. Spoutheads: In stall spoutheads where shown on Drawing.

V. Gutters: Gutters shall be installed with hidden brackets which are to be installed every 24 inches. Coordinate gutter installation with downspout locations. When possible, provide a minimum pitch and install gutters in straight runs so that the gutter flow is toward the downspout(s) without ponding at gutter midpoint. Seal all gutter downspout penetrations and caps.

1. New gutters will receive downspouts as indicated or per code requirement.
2. Match the gutters with the metal for the fascia etc. Typically, Sierra Tan gutters and downspouts are specifically called for in the individual job description.

W. Downspouts: Fabricate and install downspouts in locations shown on Drawings. Fabricate gutter attachment straps to match gutters.

1. The downspout size will match the existing on-site dimensions. Seal around the downspout at the boot connection. Downspouts will be installed one-for-one with all straps per code. New gutters will receive downspouts as indicated or per code requirement.
2. Use a Pittsburgh lock-seam to form downspouts.

X. Flashing Receivers:

1. At locations indicated on site or on Drawings, remove and discard existing equipment, supports and metal flashings.

Y. Z- Flashing Receiver: Install z-flashing receiver with 4 inch vertical leg on wall sheathing as shown on Drawings. Fasten vertical leg to backup wall with stainless steel screws (wood or metal) spaced 16 inches on center. For prefinished aluminum, lap joints and cover with a 5 inch wide strip of rubberized asphalt sheet membrane and a 6 inch wide cover plate. For stainless steel, lap, rivet, and solder all joints watertight. Strip vertical leg to wall with sheet membrane.

3.06 CLEANING AND PROTECTION

A. Clean and neutralize flux materials. Clean off excess solder.

B. Clean off excess sealants.

C. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer’s written installation instruction. On completion of installation, remove unused materials and clean finished surfaces. Maintain in a clean condition during construction.

D. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar repair procedures.

END OF SECTION

SECTION 07 7100
MANUFACTURED ROOFING SPECIALTIES

PART 1 - GENERAL

1.01 GENERAL

A. Where required in the job description, provide and install:

1. New painted galvanized steel roof access scuttles.
2. New telescopic roof hatch access ladder safety posts at roof scuttle locations.
3. Replacement and additional new aluminum rooftop roof access ladders.

PART 2 - PRODUCTS

2.01 ROOF ACCESS SCUTTLES

A. Where required in the job description, provide and install heavy-duty roof access scuttles. This unit or units will be new and manufactured by the Bilco Company of New Haven, Connecticut. Orientation of hatches shall be approved by the PGCPS Contract Representative prior to installation and shall allow safe usage of the ladder system.

B. Roof Scuttle Specifications:

1. Manufacturer: Bilco
2. Model: Type "S"
3. Hardware: Stainless Steel
4. Lifting Mechanisms: 2 each/one on each corner of hinge side.
5. Cover and curb: 14 gauge painted galvanized steel
6. Cover liner: 14 gauge painted galvanized steel
7. Insulation: 1 inch fiberglass
8. Curb height: 12 inches

5.	**COVER AND CURB**	**14 GAUGE PAINTED GALVANIZED STEEL**
6.	**COVER LINER:**	**14 GAUGE PAINTED GALVANIZED STEEL**
7.	**INSULATION:**	**1 INCH FIBERGLASS**
8.	**CURB HEIGHT:**	**12 INCHES**

2.02 ROOF ACCESS SAFETY POST

A. Provide and install 3 new BILCO LU-2 galvanized steel “LADDERUP” telescopic safety posts.

B. Attach new safety post to existing roof hatch access ladder located in stairwell per manufacturer’s installation instructions/requirements.

2.03 ROOF WALL LADDERS

A. Where required in the job description, provide and install aluminum wall ladders as made by Precision Stair Corporation and LYNN Ladders. Follow manufacturer's installation instructions and comply with all OSHA/MOSH requirements.

1. Bottom rung to be at twelve (12) inches above the roof elevation or OSHA standard.
2. Center of rungs to be a minimum of 7” from wall
3. Install forty-eight (48) inch handrail above the roofline or OSHA standard if greater.
4. Provide cage on ladders twenty (20) feet long and longer, or as required by OSHA.

5. Provide previously specified walk-pad material at top and bottom of each ladder.
6. Provide equipment style capped curbs at roof for added support/attachment of ladder rails at overhanging roofs that make wall connection brackets exceedingly long and unable to accommodate the weight of the ladder and user.

PART 3 - EXECUTION

3.01 GENERAL

A. Install new heavy-duty roof access scuttles per manufacturer's instructions and recommendations.
   1. Align scuttle properly with scuttle access ladder.
   2. Provide additional wood blocking at roof opening to accommodate added roof insulation. Scuttle curb shall no less than 12 inches above the finished roof surface.
   3. Install new scuttle level and properly aligned on new wood blocking at scuttle opening. Use stainless steel hardware to attach to new treated wood blocking per manufacturer's installation recommendations.

B. Install new "ladder-up safety posts at existing roof scuttle access ladder per manufacturer's instructions and recommendations.
   1. Align scuttle properly with scuttle access ladder.
   2. Provide additional wood blocking at roof opening to accommodate added roof insulation. Scuttle curb shall no less than 12 inches above the finished roof surface.
   3. Install new scuttle level and properly aligned on new wood blocking at scuttle opening. Use stainless steel hardware to attach to new treated wood blocking per manufacturer's installation recommendations

END OF SECTION

SECTION 07 7123
GUTTERS AND DOWNSPOUTS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Pre-fabricated aluminum gutters and downspouts.

B. Related Sections include the following:

1. Division 7 Section "Sheet Metal Flashing and Trim" for flashings and other sheet metal work.
2. Division 7 Section "Manufactured Roof Specialties" for fasciae and copings.
3. Division 7 Section "Metal Roof Panels" for metal roofing systems.
4. Division 7 Section "Joint Sealants" for field-applied sealants not otherwise specified in this Section.

1.02 REFERENCES

A. American Architectural Manufacturers Association:

1. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum.
2. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels.

B. ASTM International: ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

C. Federal Specification Unit: FS TT-C-494 - Coating Compound, Bituminous, Solvent Type, Acid Resistant.

D. Sheet Metal and Air Conditioning Contractors' National Association, Inc.: SMACNA - Architectural Sheet Metal Manual.

1.03 SUBMITTALS

A. Shop Drawings: Indicate locations, configurations, jointing methods, fastening methods, locations, and installation details.

B. Product Data: Submit data on manufactured components, materials, and finishes.

C. Samples: Submit two samples, 24 inches long illustrating component design, finish, color, and configuration.

D. LEED Submittals:

1. Credit MR 4.1 and 4.2: Product Data and certification letter indicating percentages by weight of post-consumer and pre-consumer recycled content for products having recycled content. Include statement indicating costs for each product having recycled content.
    a. Contributions to this Credit include recycled content aluminum.
2. Coordinate with Construction Waste Management requirements.

1.04 QUALITY ASSURANCE

A. Perform Work in accordance with SMACNA Manual; maintain one copy of manual on site.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Stack products to prevent twisting, bending, and abrasion, and to provide ventilation; slope to drain.

B. Prevent contact with materials during storage capable of causing discoloration, staining, or damage.

PART 2 - PRODUCTS

2.01 GUTTERS AND DOWNSPOUTS

A. Available Manufacturers:

1. Berger Building Products Corp.
2. Metal-Era.
3. P. Hickman Company.

B. Product Description:

1. Gutters: SMACNA Rectangular style profile; Figure 1-2, Style F.
2. Downspouts: SMACNA round profile; Figure 1-32A.

2.02 COMPONENTS

A. Pre-Finished Aluminum Sheet:

1. ASTM B209, manufacturer’s standard alloy and temper for specified finish; shop pre-coated with three coat PVDF (polyvinylidene fluoride) coating.
    a. Gutters: 0.050 inch thick.
    b. Downspouts: 0.050 inch thick.
2. Color: Match Architect's sample.

2.03 ACCESSORIES

A. Anchors and Supports: Profiled to suit gutters and downspouts.

1. Anchoring Devices: In accordance with SMACNA requirements.
2. Gutter Supports: Brackets and straps sized per SMACNA Table 1-B.
3. Downspout Supports - Typical: Brackets; SMACNA Figure 1-35E.

B. Strainers: 15 gage stainless steel wire baskets.

C. Fasteners: Aluminum or Stainless steel, with EPDM washers.

D. Protective Backing Paint: FS TT-C-494, Bituminous.

2.04 FABRICATION

A. Form gutters and downspouts of profiles and sizes indicated.

B. Fabricate with required connection pieces.

C. Form sections to shape indicated on Drawings, square, and accurate in size, in maximum possible lengths, free of distortion or defects detrimental to appearance or performance; allow for expansion at joints.

D. Hem exposed edges of metal.

E. Fabricate gutter and downspout accessories; seal watertight.

2.05 FACTORY FINISHING

A. PVDF (polyvinylidene fluoride) Coating: Multiple coat, thermally cured, fluoropolymer system conforming to AAMA 2605.

B. Color: Custom to match Architect's sample.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify surfaces are ready to receive gutters and downspouts.

3.02 PREPARATION

A. Paint concealed metal surfaces and surfaces in contact with dissimilar metals with protective backing paint to minimum dry film thickness of 15 mils.

3.03 INSTALLATION

A. Join lengths with formed seams sealed watertight.

B. Support Spacing:

1. Gutters:
    a. Brackets: 36 inch o.c.
    b. Straps: 36 inch o.c. offset 18 inches o.c. of bracket locations.
2. Downspouts: SMACNA Figure 1-35.

C. Flash and seal gutters to downspouts and accessories.

D. Slope gutters minimum 1/16 inch per foot.

E. Provide gutter slip joints every 20 feet in length for contraction and expansion; seal joints with sealant of matching color.

F. Set downspouts plumb and not less than 1 inch from the wall.

G. Provide leaders to connect gutters on overhanging eaves to downspouts; set leaders with a slope not less than 1/16 inch per foot or more than 30 degrees below a horizontal line.

H. Fit leaders over the outlet tube in gutter bottom riveted to the downspout; rivet spacing shall be not more than 2 inches.

I. Set strainers loosely in the outlet tube opening in gutter.

J. Make joints between lengths of downspouts by telescoping the end of the upper lengths at least 3/4 inch into the lower length.

END OF SECTION

SECTION 07 7200
ROOF ACCESSORIES

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes the following:

1. Roof curbs.
2. Equipment supports.
3. Hatch-type heat and smoke vents; acoustical.
4. Ladder safety post.

1.02 SUBMITTALS

A. Product Data: For each type of roof accessory indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings: Show fabrication and installation details for roof accessories. Show layouts of roof accessories including plans and elevations. Indicate dimensions, weights, loadings, required clearances, method of field assembly, and components. Include plans, elevations, sections, details, and attachments to other work.

C. Coordination Drawings: Roof plans, drawn to scale, and coordinating penetrations and roof-mounted items. Show the following:

1. Size and location of roof accessories specified in this Section.
2. Method of attaching roof accessories to roof or building structure.
3. Other roof-mounted items including mechanical and electrical equipment, ductwork, piping, and conduit.

1.03 QUALITY ASSURANCE

A. Sheet Metal Standard: Comply with SMACNA's "Architectural Sheet Metal Manual" details for fabrication of units, including flanges and cap flashing to coordinate with type of roofing indicated.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Pack, handle, and ship roof accessories properly labeled in heavy-duty packaging to prevent damage.

1.05 PROJECT CONDITIONS

A. Field Measurements: Verify required openings for each type of roof accessory by field measurements before fabrication and indicate measurements on Shop Drawings.

1.06 COORDINATION

A. Coordinate layout and installation of roof accessories with roofing membrane and base flashing and interfacing and adjoining construction to provide a leakproof, weathertight, secure, and noncorrosive installation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, manufacturers listed in other Part 2 articles.

2.02 METAL MATERIALS

A. Prepainted, Metallic-Coated Steel Sheet: Steel sheet metallic coated by hot-dip process and prepainted by coil-coating process to comply with ASTM A 755.
   1. Galvanized Steel Sheet: ASTM A 653, G90 coated.
   2. Exposed Finishes:
      a. Roof Curbs, Equipment Curbs and Pipe Supports: Manufacturer's standard powder coat.
      b. Roof Vents: Manufacturer's standard powder coat.

B. Steel Shapes: ASTM A 36, hot-dip galvanized to comply with ASTM A 123, unless otherwise indicated.

2.03 MISCELLANEOUS MATERIALS

A. Wood Nailers: Softwood lumber, pressure treated with waterborne preservatives for aboveground use, complying with AWPA C2; not less than 1-1/2 inches thick.

B. Bituminous Coating: Cold-applied asphalt mastic, SSPC-Paint 12, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

C. Fasteners: Same metal as metals being fastened, or nonmagnetic stainless steel or other noncorrosive metal as recommended by roof accessory manufacturer. Match finish of exposed fasteners with finish of material being fastened. Provide nonremovable fastener heads to exterior exposed fasteners.

D. Gaskets: Manufacturer's standard tubular or fingered design of EPDM, or PVC; or flat design of foam rubber.

E. Elastomeric Sealant: ASTM C 920, polyurethane sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.

2.04 ROOF CURBS

A. Roof Curbs: Provide metal roof curbs, internally reinforced and capable of supporting superimposed live and dead loads, including equipment loads and other construction to be supported on roof curbs. Fabricate with welded or sealed mechanical corner joints, with stepped integral metal cant raised the thickness of roof insulation and integral formed mounting flange at perimeter bottom. Coordinate dimensions with rough-in information or Shop Drawings of equipment to be supported.
   1. Available Manufacturers:
      a. Custom Curb, Inc.
      b. LM Curbs.
      c. Pate Company (The).
      d. Roof Products & Systems Corporation.
      e. Roof Products, Inc.
      f. ThyCurb; Div. of Thybar Corporation.
   2. Load Requirements: Indicated on Drawings.
   3. Material: Galvanized steel sheet, 14 gage thick.
      a. Finish: High-performance organic coating.
   4. Liner: Same material as curb, of manufacturer's standard thickness and finish.
   5. Factory install wood nailers at tops of curbs.
   6. Factory insulate curbs with 1-1/2-inch thick, glass-fiber board insulation.

7. Curb height may be determined by adding thickness of roof insulation and minimum base flashing height recommended by roofing membrane manufacturer. Fabricate units to minimum height of 10 inches above surface of finished roof, unless otherwise indicated.
8. Sloping Roofs: Where slope of roof deck exceeds 1:48, fabricate curb units with water diverter or cricket and with height tapered to match slope to level tops of units.

2.05 EQUIPMENT SUPPORTS

A. Equipment Supports: Provide metal equipment supports, internally reinforced and capable of supporting superimposed live and dead loads, including equipment loads and other construction to be supported. Fabricate with welded or sealed mechanical corner joints, with stepped integral metal cant raised the thickness of roof insulation and integral formed mounting flange at perimeter bottom. Coordinate dimensions with rough-in information or Shop Drawings of equipment to be supported.

1. Available Manufacturers:
    a. Custom Curb, Inc.
    b. LM Curbs.
    c. Pate Company (The).
    d. Roof Products & Systems Corporation.
    e. Roof Products, Inc.
    f. ThyCurb; Div. of Thybar Corporation.
2. Load Requirements: Indicated on Drawings.
3. Material: Galvanized steel sheet, 14 gage thick.
    a. Finish: High-performance organic coating.
4. Factory-install continuous wood nailers at tops of equipment supports.
5. Metal Counterflashing: Manufacturer's standard removable counterflashing, fabricated of same metal and finish as equipment support.
6. Fabricate units to minimum height of 12 inches, unless otherwise indicated.
7. Sloping Roofs: Where slope of roof deck exceeds 1:48, fabricate curb units with water diverter or cricket and with height tapered to match slope to level tops of units.

2.06 LADDER SAFETY POST

A. Furnish and install at all roof hatch ladders a ladder safety post. The ladder safety post shall be pre-assembled from the manufacturer.

1. Basis-of-Design: Bilco Model LU-1.

B. Performance characteristics:

1. Tubular post shall lock automatically when fully extended.
2. Safety post shall have controlled upward and downward movement.
3. Release lever shall disengage the post to allow it to be returned to its lowered position.
4. Post shall have adjustable mounting brackets to fit ladder rung spacing up to 14” on center and clamp brackets to accommodate ladder rungs up to 1-3/4” in diameter.

C. Post: Shall be manufactured of high strength square tubing. A pull up loop shall be provided at the upper end of the post to facilitate raising the post.

D. Material of construction: Shall be steel.

E. Balancing spring: A stainless steel spring balancing mechanism shall be provided to provide smooth, easy, controlled operation when raising and lowering the safety post.

F. Hardware: All mounting hardware shall be Type 316 stainless steel.

G. Finishes: Factory finish shall be yellow powder coat.

2.07 HEAT AND SMOKE VENTS - ACOUSTICAL

A. Hatch-Type Heat and Smoke Vents: Manufacturer's standard double-leaf, hatch-type heat and smoke vents with integral double-wall insulated curbs and frame, with welded or sealed mechanical corner joints, integral condensation gutter, and cap flashing. Fabricate with insulated double-wall lid, continuous weathertight perimeter lid gaskets, and equip with automatic self-lifting mechanisms, UL-listed fusible links rated at 165 deg F, and corrosion-resistant or hot-dip galvanized hardware including hinges, hold-open devices, and independent manual-release devices for inside and outside operation of lids; unit to be provided with winch operated manual remote to be located on Stage - final location to be coordinated.

1. Basis-of-Design: Nystrom SVG-Steel Acoustical Smoke Vent - STC 45 Motorized.
2. Loads: Fabricate heat and smoke vent to withstand a minimum 40-lbf/sq. ft. external live load and 30-lbf/sq. ft. uplift.
    a. When release is actuated, lid shall open against 10-lbf/sq. ft. snow or wind load and lock in position.
3. Regulatory Requirements: UL 793 and NFPA 204.
4. Heat and Smoke Vent Compliance: Provide units that have been tested and UL listed.
5. Fire Resistance of Lids: UL Class A rating.
6. Integral Curb, Framing, and Lid Material: Galvanized steel sheet, 0.079 inch thick.
    a. Finish: Powder coat.
7. Insulation: Glass-fiber board.
8. Fabricate integral curbs to minimum height of 12 inches, unless otherwise indicated.
9. STC Rating: Minimum 45.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of work.

1. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored and is ready to receive roof accessories.
2. Verify dimensions of roof openings for roof accessories.
3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. General: Install roof accessories according to manufacturer's written instructions. Anchor roof accessories securely in place and capable of resisting forces specified. Use fasteners, separators, sealants, and other miscellaneous items as required for completing roof accessory installation. Install roof accessories to resist exposure to weather without failing, rattling, leaking, and fastener disengagement.

B. Install roof accessories to fit substrates and to result in watertight performance.

C. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.

1. Underlayment: Where installing exposed-to-view components of roof accessories directly on cementitious or wood substrates, install a course of felt underlayment and cover with a slip sheet, or install a course of polyethylene underlayment.

2. Bed flanges in thick coat of asphalt roofing cement where required by roof accessory manufacturers for waterproof performance.

D. Install roof accessories level, plumb, true to line and elevation, and without warping, jogs in alignment, excessive oil canning, buckling, or tool marks.

E. Roof Curb Installation: Set roof curb so top surface of roof curb is level.

F. Equipment Support Installation: Set equipment support so top surface of equipment support is level.

G. Seal joints with elastomeric sealant as required by manufacturer of roof accessories.

3.03 CLEANING

A. Clean exposed surfaces according to manufacturer's written instructions.

END OF SECTION

SECTION 07 7233
ROOF HATCHES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and General Provisions of Contract, including General Conditions and other Division 1 Specification Sections, apply to the Work of this Section.

1.02 RELATED WORK

A. Section 07510 – 4 ply Built-up Roofing with Gravel Ballast and Insulation.

B. Section 16620 - Security Intrusion System.

1.03 SUBMITTALS

A. Submit shop drawings indicating materials, methods of fabrication and requirements for anchoring to adjacent and supporting construction.

B. Submit manufacturer’s product data, including catalog sheets and technical information.

1.04 WARRANTY

A. Provide five (5) year written guarantee on installation labor.

B. Provide ten (10) year written guarantee on roof hatch.

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Babcock –Davis (www.babcockdavis.com): Model BRHPA – 3’-0”X2’-6”

B. Bilco (www.bilco.com): Type S-50 - 3'-0" x 2' x 6".

C. Milcor, Inc. (www.milcorinc.com): Type RD-1 - 3'-0" x 2'-6".

D. Dur-Red Products (www.dur-red.com): LH-A - 3'-0" X 2'-6".

E. Other manufacturers, pre-bid approved in accordance with Section 01630, shall be acceptable.

2.02 PRODUCT DESCRIPTION

A. Product Features:

1. Cover and Liner: .090 Aluminum (11 GA) cover and .040 Aluminum liner.
2. Frame: .090 Aluminum, 12 high, with 3 ½” wide mounting flange
3. Insulation Core: 1” rigid fiberglass for cover and curb perimeter.
4. Cover Operation: Torsion bar spring, concealed in telescoping tube, and contained within the confines of the hatch.
5. Hold-open Arm: Automatically locking, with grip handle
6. Latching Device: Spring latch with exterior and interior turn handles
7. Hinges: Zinc plated steel tamper proof hinge assembled on the inside of the hatch as part of spring assembly
8. Padlock hasp mounted on inside of hatch
9. Weatherseal: Closed-cell rubber.
10. Hardware Finish: Zinc plated.

2.03 SAFETY RAILING SYSTEM

A. Provide roof hatch manufacturer’s standard roof hatch safety railing system, compatible with hatch size specified. Safety railing shall comply with OSHA Fall Protection Regulation 29 FR 1910.23.

PART 3 - EXECUTION

3.01 INSPECTION

A. Inspect the locations where hatch(es) shall be installed. Verify that openings are properly constructed, and that adjacent supporting substrates are clean, dry and free of foreign matter. Notify Owner’s Representative and Architect if any adverse conditions are encountered that would interfere with proper installation. Do not proceed until such conditions have been corrected.

3.02 INSTALLATION

A. Install hatch(es) in accordance with manufacturer's written installation instructions. Securely attach to supporting substrates.

B. Hatch(es) shall be provided with security intrusion switch connected to building Security Intrusion system as part of the work of Division 28.

END OF SECTION

SECTION 07 8400
FIRESTOPPING

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Firestopping systems.

B. Firestopping of all joints and penetrations in fire-resistance rated and smoke-resistant assemblies, whether indicated on drawings or not, and other openings indicated.

C. Smoke seals.

1.02 RELATED REQUIREMENTS

A. Section 01 61 16 - Volatile Organic Compound (VOC) Content Restrictions.

1.03 REFERENCE STANDARDS

A. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.

B. ASTM E814 - Standard Test Method for Fire Tests of Through-Penetration Fire Stops.

C. ITS (DIR) - Directory of Listed Products; Intertek Testing Services NA, Inc..

D. FM 4991 - Approval of Firestop Contractors; Factory Mutual Research Corporation.

E. FM P7825 - Approval Guide; Factory Mutual Research Corporation.

F. UL (FRD) - Fire Resistance Directory; Underwriters Laboratories Inc..

1.04 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Schedule of Firestopping: List each type of penetration, fire rating of the penetrated assembly, and firestopping test or design number.

C. Product Data: Provide data on product characteristics, performance ratings, and limitations.

D. LEED Report: Submit VOC content documentation for all adhesives, sealants and primers.

1. Comply with VOC content limits of Section 01 61 16.

E. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

F. Qualification statements for installing mechanics.

1.05 QUALITY ASSURANCE

A. Fire Testing: Provide firestopping assemblies of designs that provide the specified fire ratings when tested in accordance with ASTM E 814 and ASTM E 119.

1. Listing in the current-year classification or certification books of UL, FM, or ITS (Warnock Hersey) will be considered as constituting an acceptable test report.

2. Valid evaluation report published by ICC Evaluation Service, Inc. (ICC-ES) at www.icc-es.org will be considered as constituting an acceptable test report.

B. Installer Qualifications: Company specializing in performing the work of this section and:

1. Approved by Factory Mutual Research under FM Standard 4991, Approval of Firestop Contractors, or meeting any two of the following requirements:.

2. With minimum 3 years documented experience installing work of this type.

3. Able to show at least 5 satisfactorily completed projects of comparable size and type.

4. Approved by firestopping manufacturer.

C. Installing Mechanic's Qualifications: Trained by firestopping manufacturer and able to provide evidence thereof.

1.06 FIELD CONDITIONS

A. Comply with firestopping manufacturer's recommendations for temperature and conditions during and after installation. Maintain minimum temperature before, during, and for 3 days after installation of materials.

B. Provide ventilation in areas where solvent-cured materials are being installed.

PART 2 - PRODUCTS

2.01 FIRESTOPPING SYSTEMS

A. F-Rated (Flame Rated) Through-Penetration Firestop Systems: Provide through-penetration firestop systems with F ratings indicated as determined per ASTM E814, UL 1479 but not less than that equaling or exceeding the fire resistance rating of the construction penetrated.

B. T-Rated (Temperature Rated) Through-Penetration Firestop Systems: Provide through-penetration firestop systems with T ratings, in addition to F ratings, as determined per ASTM E814, where indicated and where systems protect penetrating items exposed to contact with adjacent materials in occupiable floor areas; T-rated assemblies are required where specified by codes or where the following conditions exist:

1. Where firestop systems protect penetrations located outside of wall cavities.
2. Where firestop systems protect penetrations located outside fire resistive shaft enclosures.
3. Where firestop systems protect penetrations located in construction containing doors required to have a temperature rise rating.
4. Where firestop systems protect penetrating items larger than a 4 inch diameter nominal pipe or 16 square inches in overall cross sectional area.

C. Fire Resistive Joint Sealants: Provide joint sealants with fire resistance ratings indicated, as determined per UL 2079 or (ASTM E1399, E1966 and E2307), but not less than that equaling or exceeding the fire resistance rating of the construction in which the joint occurs.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify openings are ready to receive the work of this section.

3.02 PREPARATION

A. Clean substrate surfaces of dirt, dust, grease, oil, loose material, or other matter that could adversely affect bond of firestopping material.

B. Remove incompatible materials that could adversely affect bond.

C. Install backing materials to arrest liquid material leakage.

3.03 INSTALLATION

A. Install materials in manner described in fire test report and in accordance with manufacturer's instructions, completely closing openings.

B. Do not cover installed firestopping until inspected by authority having jurisdiction.

C. Install labelling required by code.

3.04 FIELD QUALITY CONTROL

A. Provide independent third-party inspection of the installed firestopping after application and prior to its concealment.

B. Repair or replace any damaged areas of firestopping.

3.05 PROTECTION

A. Clean adjacent surfaces of firestopping materials.

B. Protect adjacent surfaces from damage by material installation.

END OF SECTION

SECTION 07 8700
SMOKE CONTAINMENT BARRIERS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Smoke and Fire Curtains:

1. Fixed fabric draft curtains.
2. Fire-protective smoke curtains.
3. Accordion fire-protective smoke curtains.
4. Horizontal fire-protective smoke curtains.

B. Operational controls.

1.02 RELATED REQUIREMENTS

A. Section 07 7200 - Roof Accessories: Smoke and relief vents.

B. Section 21 1300 - Fire-Suppression Sprinkler Systems: Connections with supervisory, alarm, and actuating devices installed in sprinkler system.

C. Section 26 0533.13 - Conduit for Electrical Systems: Conduit from electric circuit to operator and from operator to control station.

D. Section 26 0583 - Wiring Connections: Power to disconnect.

E. Section 28 4600 - Fire Detection and Alarm: Connections with fire alarm and smoke detectors.

1.03 REFERENCE STANDARDS

A. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process 2017.

B. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

C. FM (AG) - FM Approval Guide current edition.

D. ICC-ES AC77 - Acceptance Criteria for Smoke-Containment Systems Used with Fire-resistance-rated Elevator Hoistway Doors and Frames and at the Intersection of Elevator Lobby and Corridor 2013, with Editorial Revision (2017).

E. ITS (DIR) - Directory of Listed Products current edition.

F. NFPA 3 - Recommended Practice on Commissioning and Integrated Testing of Fire Protection and Life Safety Systems 2018.

G. NFPA 4 - Standard for Integrated Fire Protection and Life Safety System Training 2018.

H. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

I. UL (DIR) - Online Certifications Directory Current Edition.

J. UL 10D - Standard for Safety Fire Tests of Fire Protective Curtain Assemblies Current Edition, Including All Revisions.

K. UL 263 - Standard for Fire Tests of Building Construction and Materials Current Edition, Including All Revisions.

L. UL 864 - Control Units and Accessories for Fire Alarm Systems Current Edition, Including All Revisions.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Submit manufacturer's technical literature describing product components, connections, operation details, and required electrical equipment.

C. Shop Drawings: Submit shop drawings that include elevations, sections, details and dimensions, materials, finishes, anchorage methods, and hardware locations for specified protective curtains.

D. Certificate: Submit certificate that products of this section meet or exceed applicable requirements and regulations of authorities having jurisdiction .

E. Evaluation Service Reports: Submit report showing compliance with requirements of ICC-ES AC77.

F. Manufacturer's Installation Instructions: Submit instructions that indicate installation sequence, adjustment and alignment procedures.

G. Field Quality Control Submittals: Report of field testing for proper operation of system.

H. Designer's Qualification Statement.

I. Manufacturer's Qualification Statement.

J. Installer's Qualification Statement.

K. Maintenance Contracts.

1. Indicate in proposal the services, obligations, conditions, and terms for agreement period and for renewal options.

L. Operating and Maintenance Manuals: Submit complete set of manuals describing materials, devices and procedures required in operation and maintenance of specified protective curtain system(s).

M. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years of documented experience.

B. Installer Qualifications: Company specializing in performing work of type specified and with at least five years of documented experience.

C. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of the type specified in this section.

1.06 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Provide 5 year manufacturer's warranty for smoke and fire control curtain system and components.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Fixed Fabric Draft Curtains:

1. Door Systems, Inc: www.doorsysinc.com/#sle.

2. Substitutions: See Section 01 6000 - Product Requirements.

2.02 COMPONENTS

A. Protective Curtain: Woven reinforced and coated fabric curtain in compliance with UL 10D and UL 263 fire tests, and with flame spread index of 25 or less and smoke developed index of 50 or less when

tested in accordance with ASTM E84.

1. Fabric and Coating Materials: Manufacturer's standard for application(s) as indicated.
2. Fire Rating: As indicated on drawings.
3. Label: Provide applicable UL (DIR) label affixed to assembly.

B. Roller Assembly: Horizontal structural support with minimal deflection of protective curtain assembly and sized to incorporate motor drive unit.

1. Roller Shape: Manufacturer's standard.
2. Roller Material: Manufacturer's standard.

C. Motor Drive Unit: Motor and gearbox assembly are within hood and connected to roller assembly, with motor control circuiting in metal enclosure mounted on motor end of hood assembly.

D. Mounting Brackets: Plates and brackets for supporting hood assembly.

1. Sheet Metal Thickness: 14 gage, 0.0747 inch (1.9 mm) galvanized steel.
2. Type of Mount: As indicated on drawings.

E. Vertical Guide Assemblies: Side guide rails support each edge of protective curtain with flush configuration having profile not to exceed 3/8 inch (9.5 mm) in width and provided with concealed and internally fitted UL (DIR) approved smoke seals.

2.03 OPERATIONAL CONTROLS

A. Operator, Controls, Actuators, and Safeties: Provide products listed by FM (AG), ITS (DIR), UL (DIR) or testing agency acceptable to authorities having jurisdiction.

1. Operable curtain shall deploy within 10 seconds upon actuation signal from fire alarm system, local smoke detector, sprinkler alarm system or loss of electric power to unit with listed releasing device in compliance with UL 864.

B. Electric Motor: Inboard motor including gearbox assembly, electromechanical travel limit switches linked to electromagnetic brake in compliance with NFPA 70.

1. Power Supply: Provide connection to building's 120 VAC power supply for drive-control system.
2. Mounting: Roller assembly mounted.
3. Motor Voltage: 24 VDC.
4. Descent Speed: 6 inches per second (152 mm per second), minimum; 24 inches per second (609 mm per second), maximum.

2.04 MATERIALS

A. Galvanized Steel Sheet: ASTM A653/A653M, galvanized to minimum G90/Z275 (G90/Z275) coating.

PART 3 EXECUTION

3.01 INSTALLERS

3.02 EXAMINATION

A. Verify areas of installation and conditions, with installer present, for compliance with requirements for supporting members, blocking, installation tolerances, clearances, and other conditions for proper installation of this work.

B. Verify for proper installation of inserts, clips, blocking, or other components being installed by others to hood and control panel.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.03 INSTALLATION

A. Install system in accordance with manufacturer's written installation instructions.

B. Install anchorage devices to securely fasten hood assembly to substrate and building framing without distortion or stress.

C. Securely and rigidly brace components suspended from structure.

D. Fit and align assembly including vertical guides; level and plumb, to provide smooth operation.

E. Install conduit and wiring from disconnect to unit components; coordinate installation of electrical service with Section 26 0533.13 and Section 26 0583 requirements.

F. Coordinate fire suppression sprinkler system connection in compliance with requirements of Section 21 1300.

G. Coordinate fire alarm system and smoke detector connection in compliance with requirements of Section 28 4600.

H. Coordinate installation of smoke and relief vents as required for draft curtain system in compliance with requirements of Section 07 7200

3.04 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for additional requirements.

B. Provide services of manufacturer's field representative to observe installation, conduct field testing and inspection, and submit report.

C. Provide testing and inspection for the following:

1. Verify deployment of protective curtain upon signal from fire alarm system and smoke detectors.

2. Verify protective curtain deploys properly by gravity upon damage to control panel or loss of power; possibly caused by emergency situation.

D. Replace protective curtain components that have failed field testing and retest until performance is satisfactory.

3.05 CLEANING

A. Remove labels and visible markings from protective curtain components.

3.06 CLOSEOUT ACTIVITIES

A. See Section 01 7800 - Closeout Submittals, for closeout submittals.

B. See Section 01 7900 - Demonstration and Training, for additional requirements.

3.07 MAINTENANCE

A. See Section 01 7000 - Execution and Closeout Requirements, for additional requirements relating to maintenance service.

B. Provide a separate maintenance contract for periodic inspection and performance analysis of smoke and fire protective curtain assemblies in compliance with NFPA 3 and NFPA 4 for one year from Date of Substantial Completion.

END OF SECTION

SECTION 07 9200
JOINT SEALANTS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Nonsag gunnable joint sealants.

B. Self-leveling pourable joint sealants.

C. Joint backings and accessories.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions: Additional requirements for sealants and primers.

B. Section 07 1300 - Sheet Waterproofing: Sealing cracks and joints in waterproofing substrate surfaces using materials specified in this section.

C. Section 07 2500 - Weather Barriers: Sealants required in conjunction with air barriers and vapor retarders.

D. Section 07 8400 - Firestopping: Firestopping sealants.

E. Section 07 9100 - Preformed Joint Seals: Precompressed foam, gaskets, and strip seals.

F. Section 07 9513 - Expansion Joint Cover Assemblies: Sealants forming part of expansion joint cover assemblies.

G. Section 08 7100 - Door Hardware: Setting exterior door thresholds in sealant.

H. Section 08 8000 - Glazing: Glazing sealants and accessories.

I. Section 09 2116 - Gypsum Board Assemblies: Sealing acoustical and sound-rated walls and ceilings.

J. Section 09 2216 - Non-Structural Metal Framing: Sealing between framing and adjacent construction in acoustical and sound-rated walls and ceilings.

K. Section 09 2300 - Gypsum Plastering: Sealing acoustical and sound-rated walls and ceilings.

L. Section 09 2613 - Gypsum Veneer Plastering: Sealing acoustical and sound-rated walls and ceilings.

M. Section 09 3000 - Tiling: Sealant between tile and plumbing fixtures and at junctions with other materials and changes in plane.

N. Section 23 3100 - HVAC Ducts and Casings: Duct sealants.

1.03 REFERENCE STANDARDS

A. ASTM C794 - Standard Test Method for Adhesion-In-Peel of Elastomeric Joint Sealants 2018.

B. ASTM C834 - Standard Specification for Latex Sealants 2017.

C. ASTM C919 - Standard Practice for Use of Sealants in Acoustical Applications 2012 (Reapproved 2017).

D. ASTM C920 - Standard Specification for Elastomeric Joint Sealants 2018.

E. ASTM C1087 - Standard Test Method for Determining Compatibility of Liquid-Applied Sealants with Accessories Used in Structural Glazing Systems 2016.

F. ASTM C1193 - Standard Guide for Use of Joint Sealants 2016.

G. ASTM C1248 - Standard Test Method for Staining of Porous Substrate by Joint Sealants 2008 (Reapproved 2012).

1.04 SUBMITTALS

A. Product Data for Sealants: Submit manufacturer's technical data sheets for each product to be used, that includes the following.
   1. Physical characteristics, including movement capability, VOC content, hardness, cure time, and color availability.
   2. List of backing materials approved for use with the specific product.
   3. Substrates that product is known to satisfactorily adhere to and with which it is compatible.
   4. Substrates the product should not be used on.

B. Samples for Verification: For each kind and color of joint sealant required, provide Samples with joint sealants in 1/2-inch- (13-mm-) wide joints formed between two 6-inch- (150-mm-) long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.

C. Preconstruction Laboratory Test Reports: Submit at least four weeks prior to start of installation.

D. Installation Plan: Submit at least four weeks prior to start of installation.

E. Installation Log: Submit filled out log for each length or instance of sealant installed.

F. Field Quality Control Log: Submit filled out log for each length or instance of sealant installed, within 10 days after completion of inspections/tests; include bagged test samples and photographic records, if any.

G. Joint-Sealant Schedule: Include the following information:
   1. Joint-sealant application, joint location, and designation.
   2. Joint-sealant manufacturer and product name.
   3. Joint-sealant formulation.
   4. Joint-sealant color.

1.05 QUALITY ASSURANCE

A. Maintain one copy of each referenced document covering installation requirements on site.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

C. Installer Qualifications: Company specializing in performing the work of this section and with at least three years of documented experience.

D. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of the type specified in this section. Agency must bey qualified according to ASTM C 1021 to conduct testing indicated.

E. Preconstruction Laboratory Testing: Arrange for sealant manufacturer(s) to test each combination of sealant, substrate, backing, and accessories.
   1. Adhesion Testing: In accordance with ASTM C794.
   2. Compatibility Testing: In accordance with ASTM C1087.
   3. Stain Testing: In accordance with ASTM C1248; required only for stone substrates.
   4. Allow sufficient time for testing to avoid delaying the work.
   5. Deliver to manufacturer sufficient samples for testing.
   6. Report manufacturer's recommended corrective measures, if any, including primers or techniques not indicated in product data submittals.

7. Testing is not required if sealant manufacturer provides data showing previous testing, not older than 24 months, that shows satisfactory adhesion, lack of staining, and compatibility.

F. Installation Plan: Include schedule of sealed joints, including the following.

1. Joint width indicated in contract documents.

G. Mockups: Install sealant in mockups of assemblies specified in other Sections that are indicated to receive joint sealants specified in this Section. Use materials and installation methods specified in this Section.

1.06 FIELD CONDITIONS

A. Do not proceed with installation of joint sealants under the following conditions:

1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer.
2. When joint substrates are wet.
3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

1.07 WARRANTY

A. Correct defective work within a five year period after Date of Substantial Completion.

B. Warranty: Include coverage for installed sealants and accessories that fail to achieve watertight seal , exhibit loss of adhesion or cohesion, or do not cure.

PART 2 PRODUCTS

2.01 JOINT SEALANT APPLICATIONS

A. Scope:

1. Exterior Joints: Seal open joints, whether or not the joint is indicated on drawings, unless specifically indicated not to be sealed. Exterior joints to be sealed include, but are not limited to, the following items.
    a. Wall expansion and control joints.
    b. Joints between door, window, and other frames and adjacent construction.
    c. Joints between different exposed materials.
    d. Openings below ledge angles in masonry.
    e. Other joints indicated below.
2. Interior Joints: Do not seal interior joints unless specifically indicated to be sealed. Interior joints to be sealed include, but are not limited to, the following items.
    a. Joints between door, window, and other frames and adjacent construction.
    b. Other joints indicated below.
3. Do not seal the following types of joints.
    a. Intentional weepholes in masonry.
    b. Joints indicated to be treated with manufactured expansion joint cover or some other type of sealing device.

c. Joints where sealant is specified to be provided by manufacturer of product to be sealed.

d. Joints where installation of sealant is specified in another section.

e. Joints between suspended panel ceilings/grid and walls.

B. Butyl Joint Sealants:

1. Comply with ASTM C 1311.

2. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. Bostik, Inc.

b. Pecora Corporation.

2.02 JOINT SEALANTS - GENERAL

A. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.

B. Colors of Exposed Joint Sealants: As selected by Architect from manufacturer's full range.

2.03 NONSAG JOINT SEALANTS

A. Type Silicone, S, NS 50, NT - Silicone Sealant: ASTM C920, Uses S and T; single-component, explicitly approved by manufacturer for traffic exposure when recessed below traffic surface; not expected to withstand continuous water immersion.

1. Manufacturers:

a. Dow Corning Corporation

b. GE Construction Sealants

c. Momentive Performance Materials, Inc.

d. May National Associates, Inc., a subsidiary of Sika Corporation

e. Pecora Corporation

f. Sika Corporation

B. Type Silicone, Acid Curing, S, NS, 25, NT - Mildew-Resistant Silicone Sealant: ASTM C920, Grade NS, Uses M and A; single component, mildew resistant; not expected to withstand continuous water immersion or traffic.

1. Manufacturers:

a. Dow Corning Corporation.

b. GE Construction Sealants;

c. Momentive Performance Materials Inc.

d. May National Associates, Inc., a subsidiary of Sika Corporation.

e. Sika Corporation

f. Soudal USA

g. Tremco Incorporated

C. Type OP, Grade NF - Acrylic Emulsion Latex: Water-based; ASTM C834, single component, non-staining, non-bleeding, non-sagging; not intended for exterior use.

1. Manufacturers:
    a. BASF Construction Chemicals - Building Systems.
    b. May National Associates, Inc.; a subsidiary of Sika Corporation.
    c. Pecora Corporation.
    d. Sherwin-Williams Company (The).
    e. Tremco Incorporated.

2.04 SELF-LEVELING SEALANTS

2.05 ACCESSORIES

A. Primer: Material recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.

B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.

C. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer's written instructions and the following requirements:

1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
2. Remove laitance and form-release agents from concrete.
3. Clean nonporous joint substrate surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants. Nonporous joint substrates include the following:
    a. Metal
    b. Glass
4. Joint Priming: Prime joint substrates where recommended by joint-sealant manufacturer or as indicated by preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint- sealant bond; do not allow spillage or migration onto adjoining surfaces.
5. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling

without disturbing joint seal.

3.03 INSTALLATION

A. Perform work in accordance with sealant manufacturer's requirements for preparation of surfaces and material installation instructions.

B. Perform installation in accordance with ASTM C1193.

C. Perform acoustical sealant application work in accordance with ASTM C919.

D. Install sealant backings of kind indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.

1. Do not leave gaps between ends of sealant backings.
2. Do not stretch, twist, puncture, or tear sealant backings.
3. Remove absorbent sealant backings that have become wet before sealant application, and replace them with dry materials.

E. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints.

F. Install sealants using proven techniques that comply with the following and at the same time backings are installed:

1. Place sealants so they directly contact and fully wet joint substrates.
2. Completely fill recesses in each joint configuration.
3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.

G. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified in subparagraphs below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.

1. Remove excess sealant from surfaces adjacent to joints.
2. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
3. Provide concave joint profile per Figure 8A in ASTM C 1193 unless otherwise indicated.
    a. Use masking tape to protect surfaces adjacent to recessed tooled joints.

3.04 FIELD QUALITY CONTROL

A. Field-Adhesion Testing: Field test joint-sealant adhesion to joint substrates as follows:

1. Extent of Testing: Test completed and cured sealant joints as follows:
    a. Perform 1 tests for the first 10 of joint length for each kind of sealant and joint substrate.
2. Test Method: Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1 in ASTM C 1193 or Method A, Tail Procedure, in ASTM C 1521.
    a. For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
3. Inspect tested joints and report on the following:
    a. Whether sealants filled joint cavities and are free of voids.

b. Whether sealant dimensions and configurations comply with specified requirements.

c. Whether sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. Compare these results to determine if adhesion complies with sealant manufacturer's field-adhesion hand-pull test criteria.

4. Record test results in a field-adhesion-test log. Include dates when sealants were installed, names of persons who installed sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, sealant material, sealant configuration, and sealant dimensions.

5. Repair sealants pulled from test area by applying new sealants following same procedures used originally to seal joints. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.

B. Evaluation of Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing or noncompliance with other indicated requirements will be considered satisfactory. Remove sealants that fail to adhere to joint substrates during testing or to comply with other requirements. Retest failed applications until test results prove sealants comply with indicated requirements.

3.05 CLEANING

A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.

3.06 PROTECTION

A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out, remove, and repair damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.

3.07 JOINT SEALANT SCHEDULE

A. Joint-Sealant Application: Interior joints in vertical surfaces and horizontal nontraffic surfaces.

1. Joint Locations:

a. Control and expansion joints on exposed interior surfaces of exterior walls.

b. Tile control and expansion joints.

c. Vertical joints on exposed surfaces of walls and partitions.

d. Other joints as indicated on Drawings.

2. Joint Sealant: Silicone joint sealant

3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.

B. Joint-Sealant Application: Interior joints in vertical surfaces and horizontal nontraffic surfaces not subject to significant movement.

1. Joint Locations:

a. Control joints on exposed interior surfaces of exterior walls.

b. Perimeter joints between interior wall surfaces and frames of interior doors and windows.

c. Other joints as indicated on Drawings.

d. Joint Sealant: Silicone joint sealant

e. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.

C. Joint-Sealant Application: Mildew-resistant interior joints in vertical surfaces and horizontal nontraffic surfaces

1. Joint Locations:

a. Joints between plumbing fixtures and adjoining walls, floors, and counters.

b. Tile control and expansion joints where indicated.

c. Joints between countertop and walls and floors

d. Other joints as indicated on Drawings.

2. Joint Sealant: Silicone, mildew resistant, acid curing, S, NS, 25, NT. 3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.

D. Joint-Sealant Application: Concealed mastics.

1. Joint Locations:

a. Aluminum thresholds.

b. Sill plates.

c. Other joints as indicated on Drawings.

d. Joint Sealant: Butyl-rubber based.

3.08 POST-OCCUPANCY

A. Post-Occupancy Inspection: Perform visual inspection of entire length of project sealant joints at a time that joints have opened to their greatest width; i.e. at low temperature in thermal cycle. Report failures immediately and repair.

END OF SECTION

SECTION 08 0671
DOOR HARDWARE SCHEDULE

PART 1 GENERAL

1.01 RELATED REQUIREMENTS

A. Section 08 7100 - Door Hardware: Requirements to comply with in coordination with this section.

1.02 REFERENCE STANDARDS

A. BHMA (CPD) - Certified Products Directory 2017.

B. BHMA A156.3 - American National Standard for Exit Devices 2014.

C. BHMA A156.5 - American National Standard for Cylinders and Input Devices for Locks 2014.

D. BHMA A156.13 - American National Standard for Mortise Locks & Latches Series 1000 2017.

E. BHMA A156.18 - American National Standard for Materials and Finishes 2016.

F. DHI (H&S) - Sequence and Format for the Hardware Schedule 1996.

1.03 PROJECT INFORMATION

A. Architect: Department of Capital Programming at Prince Georges County Public Schools.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Only manufacturers listed in Door Hardware Schedule or Section 08 7100 are considered acceptable, unless noted otherwise.

B. Obtain each type of door hardware as indicated from a single manufacturer and single supplier.

C. Manufacturer's Abbreviations: Coordinate with manufacturers listed in Section 08 7100.

2.02 DESCRIPTION

A. Door hardware sets provided represent the design intent, they are only a guideline and should not be considered a detailed or complete hardware schedule.

1. Provide door hardware item(s) as required for similar purposes, even when item is not listed for a door in Door Hardware Schedule.

2. Necessary items that are not included in a Hardware Set should be added and have the appropriate additional hardware as required for proper application and functionality.

3. Door hardware supplier is responsible for providing proper size and hand of door for products required in accordance with Door Hardware Schedule and as indicated on drawings.

4. Quantities listed are for each Pair (PR) of doors, or for each Single (SGL) door, as indicated in hardware sets.

2.03 LOCK FUNCTION CODES

A. Function Codes for Cylindrical Locks: Complying with BHMA A156.5.

1. Code F76; Privacy Lock: Outside knob/lever locked by pushbutton on inside knob/lever. Rotating inside knob/lever or closing door releases/unlocks button. Emergency release in outside knob/lever.

2. Code F84; Classroom Lock: Outside knob/lever locked/unlocked by key in outside knob/lever. Inside knob/lever always free. Deadlocking latchbolt.

3. Code F85: Classroom Lock with Hold Back Feature: Deadlocking latch bolt by knobs. Outside knob is locked by key in outside knob. Inside knob is always free. Latch may be held back by depressing

latch and rotating key.

4. Code F88; Entry/Restroom Lock: Deadlocking latch bolt by levers except when outside lever is locked by key inside, then by key outside.
5. Code F109; Entry/Office Lock: Turn/Push button locking. Pushing and turning button on inside locks outside knob/lever requiring use of a key until button is manually unlocked. Push button locking. Pushing button locks the outside knob/lever until unlocked by key or by turning the inside knob/lever. Inside knob/lever always free.

B. Function Codes for Mortise Locks: Complying with BHMA A156.13.

1. Code F01; Passage/Closet Latchset: Latch bolt by knobs at all times.
    a. Connecting Room/Exit Latch: Deadlocking latch bolt by inside knob. Non-removable blank plate outside.
2. Code F02; Privacy Lock: Latch bolt by knobs, deadbolt by turn inside or emergency key outside.
3. Code F04: Entry/Office Lock: Deadlocking latch bolt by knobs except when outside knob is locked by buttons in face (edge), then by key outside.
4. Code F05; Classroom Lock: Deadlocking latch bolt by knobs. Outside knob locked by key outside. Inside knob always free.
    a. Schoolhouse Safety Deadlock: Deadbolt retracted by key outside or turn inside. Deadbolt projected by key outside.
5. Code F07; Storeroom/Exit Lock: Deadlocking latch bolt by inside knob or key outside. Outside knob rigid.
    a. Storeroom - Fail Secure: Latch bolt operated by knob from inside except when outer knob is electrically unlocked, then latch bolt from either side. When locked, key in cylinder outside retracts latch bolt. Deadlocking latch.
6. Code F08; Front Door Lock: Latch bolt is operated by knob from either side except when outside knob is made inoperative by a stop or mechanical means other than key. Deadbolt is operated by turn inside. Key outside operates both locks.
7. Code F09; Entry/Restroom Lock: Deadlocking latch bolt by knobs except when outside knob is locked by key inside, then by key outside.
    a. Asylum Lock: Deadlocking latch bolt by key from either side. Both knobs rigid.
8. Codes F10, F12, and F20; Entry/Office Lock: Latch bolt by knobs except when outside knob is made inoperative by buttons in face. Deadbolt by key outside and turn inside. Rotating inside knob retracts both bolts. Deadlocking latch.
9. Code F11; Exit Lock: Latch bolt operated by knob from either side except when outside knob is made inoperative by buttons in lock face. Deadbolt projected by key from either side. Deadbolt retracted by key from outside. Both bolts retracted by inside knob. Deadlocking latch.
10. Code F16; Deadlock: Deadbolt by key from either side.
11. Code F17; Deadlock: Deadbolt by key outside or turn inside.
12. Code F18; Deadlock: Deadbolt by key outside.
13. Code F21; Entry/Office Lock: Latch bolt by knobs. Deadbolt by key outside or turn inside.
    a. Entry: Latch bolt by knob both sides except when deadbolt is projected/retracted by key outside or T-turn inside. When deadbolt is projected both inner and outer knob is rigid. Deadlocking latch.

14. Code F22; Privacy Lock: Latch bolt operated by knob from either side except when outside knob is locked by inside T-turn. Operating inside knob, closing door, or operating outside emergency release unlocks outside knob. Emergency tool finished with lock.
    a. Double Cylinder - Fail Safe: Latch bolt operated by knob from either side except when electrically locked, then both knobs become inoperative. When lock is electrically locked, key in either cylinder retracts latch bolt. Deadlocking latch.
    b. Double Cylinder - Fail Secure: Both knobs inoperative except when electrically unlocked, then latch bolt operated by knob from either side. Latch bolt by key in either cylinder when lock is locked. Deadlocking latch.

C. Function Codes for Exit Devices: Complying with BHMA A156.3.
    1. Code 01; Exit Device: Exit only/no trim.
    2. Code 02; Exit Device: Entrance by pull/trim when actuating bar is locked down (Dogged-Down). Note-Fire Exit devices cannot be locked down.
    3. Code 03; Exit Device: Entrance by trim when latchbolt is retracted by key (pullside). Unit is locked when the key is removed.
    4. Code 04; Exit Device: Entrance by trim when latchbolt is retracted by key (pullside) or set in a retracted position by key.
    5. Code 05; Exit Device: Entrance by thumbpiece. Key (pullside) locks/unlocks thumbpiece.
    6. Code 06; Exit Device: Entrance by thumbpiece only when released by key (pullside). Unit is locked when the key is removed.
    7. Code 07; Exit Device: Entrance by thumbpiece. Inside key (on pushside/on active device case) locks/unlocks thumbpiece. Outside key (pullside) retracts latch.
    8. Code 08; Exit Device: Entrance by knob/lever. Key (pullside) locks/unlocks knob/lever.
    9. Code 09; Exit Device: Entrance by knob/lever with key (pullside) only. Unit is locked when the key is removed.
    10. Code 10; Exit Device: Entrance by knob/lever. Inside key (pushside) locks/unlocks knob/lever. Outside key (pullside) only retracts latch.
    11. Code 11; Exit Device: Entrance by auxiliary control turnpiece. Key (pullside) locks/unlocks auxiliary control.
    12. Code 12 ; Exit Device: Entrance by auxiliary control turnpiece only when released by turning key (pullside). Unit is locked when the key is removed.

2.04 FINISHES

A. Finishes: Complying with BHMA A156.18.
    1. [_____].

PART 3 EXECUTION

3.01 DOOR HARDWARE SCHEDULE

A. Organize listing of door hardware components within each hardware set in compliance with 10-Part scheduling sequence indicated in DHI (H&S), unless otherwise indicated.

3.02 HARDWARE SET # [___]: "[_____]"

A. For use on Door Number(s): [_____].

B. Provide for each Single (SGL) door(s).

UNITS	LOCK	ITEM	DESCRIPTION	FINISH	MFR

3.03 HARDWARE SET # 01: "UNISEX RESTROOM"

A. For use on Door Number(s): 105A, 106A, and 108A.

B. Provide for each Single (SGL) door(s).

UNITS	LOCK	ITEM	DESCRIPTION	FINISH	MFR
4 Each		HINGE	5BB1 4.5 X 4.5	652	IVE
1 Each	F76	PRIVACY LOCK	L9040 17A L583-363	626	SCH
1 Each		WALL STOP	WS407CVX	630	IVE
3 Each		SILENCER	SR64	GRY	IVE

3.04 HARDWARE SET # 02: "CORRIDOR TO RECEPTION ROOMS"

A. For use on Door Number(s): 100A, 104A, and 104B.

B. Provide for each Single (SGL) door(s).

UNITS	LOCK	ITEM	DESCRIPTION	FINISH	MFR
4 Each		HW HINGE	5BB1HW 4.5 X 4.5	652	IVE
1 Each	F84	CLASSROOM LOCK	L9070HD 17A	626	SCH
1 Each		PERMANENT CORE	OWNER SUPPLIED	626	BAS
1 Each		SURFACE CLOSER	4111 EDA	689	LCN
1 Each		KICK PLATE	8400 10 Inch X 2 Inch LDW	630	IVE
1 Each		WALL STOP	WS407CVX	630	IVE
3 Each		SILENCER	SR64	GRY	IVE

3.05 HARDWARE SET # 03: "BOARDROOM ENTRY FROM RECEPTION ROOM"

A. For use on Door Number(s): 203A.

B. Provide for each Pair (PR) door(s).

UNITS	LOCK	ITEM	DESCRIPTION	FINISH	MFR
6 Each		HW HINGE	5BB1HW 4.5 X 4.5	652	IVE
2 Each		PUSH PLATE	8200 4 X 16 INCH	630	IVE
2 Each		PULL PLATE	8303-8 3.5 X 15 INCH	630	IVE
2 Each		SURFACE CLOSER	4011	689	LCN
2 Each		KICK PLATE	8400 10 X 2 Inch LDW	630	IVE
2 Each		WALL STOP	WS407CVX	630	IVE
2 Each		SILENCER	SR64	GRY	IVE

3.06 HARDWARE SET # 04: "CLOSET"

A. For use on Door Number(s): 123A.

B. Provide for each Pair (PR) door(s).

UNITS	LOCK	ITEM	DESCRIPTION	FINISH	MFR
6 Each		HINGE	5BB1 4.5 X 4.5	652	IVE

2 Each		ROLLER LATCH	RL32	626	IVE
2 Each		DOOR PULL	SWC1500-04		FOR
1 Each		OH STOP	450S	630	GJ
1 Each		WALL STOP	WS407CVX	630	IVE

3.07 HARDWARE SET # 05: "OFFICE"

A. For use on Door Number(s): 102A, 106A, 110A, and 117A.

B. Provide for each Single (SGL) door(s).

UNITS	LOCK	ITEM	DESCRIPTION	FINISH	MFR
3 Each		HINGE	5BB1 4.5 X 4.5	652	IVE
1 Each	F17	MORTISE LOCK	L9056HD 17A L583-363	626	SCH
1 Each		PERMANENT CORE	OWNER SUPPLIED	626	BAS
1 Each		FLOOR STOP	FS434	604	IVE
3 Each		SILENCER	SR64	GRY	IVE

3.08 HARDWARE SET # 06: "STAIRWAY"

A. For use on Door Number(s): S-1L, and S-2L.

B. Provide for each Single (SGL) door(s).

UNITS	LOCK	ITEM	DESCRIPTION	FINISH	MFR
4 Each		HW HINGE	5BB1HW 4.5 X 4.5	652	IVE

1 Each		WALL STOP	WS33	626	IVE
3 Each		SILENCER	SR64	GRY	IVE

END OF SECTION

SECTION 08 1113
HOLLOW METAL DOORS AND FRAMES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Non-fire-rated hollow metal doors and frames.

B. Hollow metal frames for wood doors.

C. Fire-rated hollow metal doors and frames.

D. Thermally insulated hollow metal doors with frames.

E. Sound-rated hollow metal doors and frames.

F. Bullet-resistant hollow metal doors and frames.

G. Stainless-steel hollow metal doors and frames.

H. Accessories, including glazing, louvers and matching panels.

1.02 RELATED REQUIREMENTS

A. Section 08 1119 - Stainless-Steel Doors and Frames.

B. Section 08 3473 - Sound Control Door Assemblies.

C. Section 08 7100 - Door Hardware.

D. Section 08 8000 - Glazing: Glass for doors and borrowed lites.

1.03 REFERENCE STANDARDS

A. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design 2010.

B. ANSI/SDI A250.3 - Test Procedure and Acceptance Criteria for Factory Applied Finish Coatings for Steel Doors and Frames 2007 (R2011).

C. ANSI/SDI A250.4 - Test Procedure and Acceptance Criteria for Physical Endurance for Steel Doors, Frames and Frame Anchors 2011.

D. ANSI/SDI A250.6 - Recommended Practice for Hardware Reinforcing on Standard Steel Doors and Frames 2003 (R2009).

E. ANSI/SDI A250.8 - Specifications for Standard Steel Doors and Frames (SDI-100) 2017.

F. ANSI/SDI A250.10 - Test Procedure and Acceptance Criteria for Prime Painted Steel Surfaces for Steel Doors and Frames 2011.

G. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process 2017.

H. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable 2018.

I. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength 2018a.

J. BHMA A156.115 - American National Standard for Hardware Preparation in Steel Doors and Steel Frames 2016.

K. ICC A117.1 - Accessible and Usable Buildings and Facilities 2017.

L. ITS (DIR) - Directory of Listed Products current edition.

M. NAAMM HMMA 805 - Recommended Selection and Usage Guide for Hollow Metal Doors and Frames 2012.

N. NAAMM HMMA 830 - Hardware Selection for Hollow Metal Doors and Frames 2002.

O. NAAMM HMMA 831 - Hardware Locations for Hollow Metal Doors and Frames 2011.

P. NAAMM HMMA 840 - Guide Specifications for Installation and Storage of Hollow Metal Doors and Frames 2007.

Q. NAAMM HMMA 850 - Fire-Protection and Smoke Control Rated Hollow Metal Door and Frame Products 2014.

R. NAAMM HMMA 860 - Guide Specifications for Hollow Metal Doors and Frames 2013.

S. NAAMM HMMA 861 - Guide Specifications for Commercial Hollow Metal Doors and Frames 2014.

T. NFPA 80 - Standard for Fire Doors and Other Opening Protectives 2019.

U. NFPA 105 - Standard for Smoke Door Assemblies and Other Opening Protectives 2016.

V. NFPA 252 - Standard Methods of Fire Tests of Door Assemblies 2017.

W. SDI 117 - Manufacturing Tolerances for Standard Steel Doors and Frames 2013.

X. UL (DIR) - Online Certifications Directory Current Edition.

Y. UL 10C - Standard for Positive Pressure Fire Tests of Door Assemblies Current Edition, Including All Revisions.

Z. UL 752 - Standard for Bullet-Resisting Equipment Current Edition, Including All Revisions.

AA. UL 1784 - Standard for Air Leakage Tests of Door Assemblies Current Edition, Including All Revisions.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Materials and details of design and construction, hardware locations, reinforcement type and locations, anchorage and fastening methods, and finishes; and one copy of referenced standards/guidelines.

C. Shop Drawings: Details of each opening, showing elevations, glazing, frame profiles, and any indicated finish requirements.

D. Samples: Submit two samples of metal, showing factory finishes, colors, and surface texture.

E. Design Submittals: Manufacturer to submit anchor design analysis calculations for blast-resistant doors signed and sealed by specialty design engineer experienced in this type of work and licensed in Maryland.

F. Installation Instructions: Manufacturer's published instructions, including any special installation instructions relating to this project.

G. Manufacturer's Certificate: Certification that products meet or exceed specified requirements.

H. Manufacturer's Qualification Statement.

I. Installer's Qualification Statement.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience.

C. Maintain at project site copies of reference standards relating to installation of products specified.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Comply with NAAMM HMMA 840 or ANSI/SDI A250.8 (SDI-100) in accordance with specified requirements.

B. Protect with resilient packaging; avoid humidity build-up under coverings; prevent corrosion and adverse effects on factory applied painted finish.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Hollow Metal Doors and Frames:

1. Ceco Door, an Assa Abloy Group company: www.assaabloydss.com/#sle.
2. Curries, an Assa Abloy Group company: www.assaabloydss.com/#sle.
3. Fleming Door Products, an Assa Abloy Group company: www.assaabloydss.com/#sle.
4. Steelcraft, an Allegion brand: www.allegion.com/#sle.
5. Substitutions: See Section 01 6000 - Product Requirements.

B. Bullet-Resistant and Detention Security Hollow Metal Doors and Frames:

1. Fleming Door Products, an Assa Abloy Group company: www.assaabloydss.com/#sle.
2. Mesker, dormakaba Group; BR Series Bullet-Resistant Doors and Frames: www.meskeropeningsgroup.com/#sle.
3. Republic Doors, an Allegion brand: www.republicdoor.com/#sle.
4. Substitutions: See Section 01 6000 - Product Requirements.

2.02 PERFORMANCE REQUIREMENTS

A. Requirements for Hollow Metal Doors and Frames:

1. Steel Sheet: Comply with one or more of the following requirements; galvannealed steel complying with ASTM A653/A653M, cold-rolled steel complying with ASTM A1008/A1008M, or hot-rolled pickled and oiled (HRPO) steel complying with ASTM A1011/A1011M, commercial steel (CS) Type B, for each.
2. Accessibility: Comply with ICC A117.1 and ADA Standards.
3. Exterior Door Top Closures: Flush end closure channel, with top and door faces aligned.
4. Glazed Lights: Non-removable stops on non-secure side; sizes and configurations as indicated on drawings. Style: Manufacturers standard.
5. Hardware Preparations, Selections and Locations: Comply with NAAMM HMMA 830 and NAAMM HMMA 831 or BHMA A156.115 and ANSI/SDI A250.8 (SDI-100) in accordance with specified requirements.

B. Hollow Metal Panels: Same construction, performance, and finish as doors.

C. Combined Requirements: If a particular door and frame unit is indicated to comply with more than one type of requirement, comply with the specified requirements for each type; for instance, an exterior door that is also indicated as being sound-rated must comply with the requirements specified for exterior doors and for sound-rated doors; where two requirements conflict, comply with the most stringent.

2.03 HOLLOW METAL DOORS

A. Door Finish: Factory finished.

B. Exterior Doors: Thermally insulated.

1. Based on NAAMM HMMA Custom Guidelines:
    a. Comply with guidelines of NAAMM HMMA 860 for Hollow Metal Doors and Frames.
    b. Performance Level 1 - Light Duty, in accordance with NAAMM HMMA 805.
    c. Physical Performance Level C, 250,000 cycles; in accordance with ANSI/SDI A250.4.
    d. Door Face Metal Thickness: 20 gage, 0.032 inch (0.8 mm), minimum.
2. Door Core Material: Manufacturers standard core material/construction and in compliance with requirements.
3. Door Thermal Resistance: R-Value of 6.0 minimum, for installed thickness of polystyrene.
4. Door Thickness: as indicated on plans.
5. Weatherstripping: Refer to Section 08 7100.

C. Interior Doors, Non-Fire-Rated:

1. Based on NAAMM HMMA Custom Guidelines:
    a. Comply with guidelines of NAAMM HMMA 860 for Hollow Metal Doors and Frames.
    b. Performance Level 1 - Light Duty, in accordance with NAAMM HMMA 805.
    c. Physical Performance Level C, 250,000 cycles; in accordance with ANSI/SDI A250.4.
    d. Door Face Metal Thickness: 20 gage, 0.032 inch (0.8 mm), minimum.
2. Door Thickness: 1-3/4 inch (44.5 mm), nominal.

D. Fire-Rated Doors:

1. Fire Rating: As indicated on Door Schedule, tested in accordance with UL 10C and NFPA 252 ("positive pressure fire tests").
2. Provide units listed and labeled by UL (DIR) or ITS (DIR).
    a. Attach fire rating label to each fire rated unit.
3. Smoke and Draft Control Doors (Indicated with letter "S" on Drawings and/or Door Schedule): Self-closing or automatic closing doors in accordance with NFPA 80 and NFPA 105, with fire-resistance-rated wall construction rated the same or greater than the fire-rated doors, and the following;
    a. Maximum Air Leakage: 3.0 cfm/sq ft (0.02 cu m/sec/sq m) of door opening at 0.10 inch w.g. (24.9 Pa) pressure, when tested in accordance with UL 1784 at both ambient and elevated temperatures.
    b. Gasketing: Provide gasketing or edge sealing as necessary to achieve leakage limit.
    c. Label: Include the "S" label on fire-rating label of door.
4. Door Thickness: 1-3/4 inch (44.5 mm), nominal.

E. Sound Control Door Assemblies: Refer to Section 08 3473.

2.04 HOLLOW METAL FRAMES

A. Comply with standards and/or custom guidelines as indicated for corresponding door in accordance with applicable door frame requirements.

B. Exterior Door Frames: Full profile/continuously welded type.

1. Weatherstripping: Separate, see Section 08 7100.

C. Interior Door Frames, Non-Fire Rated: Full profile/continuously welded type.

D. Door Frames, Fire-Rated: Knock-down type.

1. Fire Rating: Same as door, labeled.

E. Sound-Rated Door Frames: Knock-down type.

F. Bullet-Resistant Door Frames: Comply with UL 752, with same level of bullet resistance as door; face welded construction, ground smooth, fully prepared and reinforced for hardware installation.

1. Frame Metal Thickness: 16 gage, 0.053 inch (1.3 mm), minimum.

G. Provide mortar guard boxes for hardware cut-outs in frames to be installed in masonry or to be grouted.

H. Frames in Masonry Walls: Size to suit masonry coursing with head member 4 inch (102 mm) high to fill opening without cutting masonry units.

2.05 FINISHES

A. Primer: Rust-inhibiting, complying with ANSI/SDI A250.10, door manufacturer's standard.

B. Factory Finish: Complying with ANSI/SDI A250.3, manufacturer's standard coating.

2.06 ACCESSORIES

A. Louvers: Roll formed steel with overlapping frame; finish same as door components ; factory-installed.

1. In Fire-Rated Doors: UL (DIR) or ITS (DIR) listed fusible link louver, same rating as door.

B. Glazing: As specified in Section 08 8000, factory installed.

C. Removable Stops: Formed sheet steel, shape as indicated on drawings, mitered or butted corners; prepared for countersink style tamper proof screws.

D. Astragals for Double Doors: Specified in Section 08 7100.

E. Mechanical Fasteners for Concealed Metal-to-Metal Connections: Self-drilling, self-tapping, steel with electroplated zinc finish.

F. Grout for Frames: Portland cement grout with maximum 4 inch (102 mm) slump for hand troweling; thinner pumpable grout is prohibited.

G. Silencers: Resilient rubber, fitted into drilled hole; provide three on strike side of single door, three on center mullion of pairs, and two on head of pairs without center mullions.

H. Temporary Frame Spreaders: Provide for factory- or shop-assembled frames.

I. Drip Caps: Provide for all exterior doors. Secure to top of frame.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that opening sizes and tolerances are acceptable.

C. Verify that finished walls are in plane to ensure proper door alignment.

3.02 PREPARATION

A. Coat inside of frames to be installed in masonry or to be grouted, with bituminous coating, prior to installation.

3.03 INSTALLATION

A. Install doors and frames in accordance with manufacturer's instructions and related requirements of specified door and frame standards or custom guidelines indicated.

B. Install prefinished frames after painting and wall finishes are complete.

C. Install fire rated units in accordance with NFPA 80.

D. Coordinate frame anchor placement with wall construction.

E. Grout frames in masonry construction, using hand trowel methods; brace frames so that pressure of grout before setting will not deform frames.

F. Install door hardware as specified in Section 08 7100.

1. Comply with recommended practice for hardware placement of doors and frames in accordance with ANSI/SDI A250.6 or NAAMM HMMA 861.

G. Comply with glazing installation requirements of Section 08 8000.

H. Coordinate installation of electrical connections to electrical hardware items.

I. Touch up damaged factory finishes.

3.04 TOLERANCES

A. Clearances Between Door and Frame: Comply with related requirements of specified frame standards or custom guidelines indicated in accordance with SDI 117 or NAAMM HMMA 861.

B. Maximum Diagonal Distortion: 1/16 inch (1.6 mm) measured with straight edge, corner to corner.

3.05 ADJUSTING

A. Adjust for smooth and balanced door movement.

B. Adjust sound control doors so that seals are fully engaged when door is closed.

C. Test sound control doors for force to close, latch, and unlatch; adjust as necessary in compliance with requirements.

END OF SECTION

SECTION 08 1116
ALUMINUM DOORS AND FRAMES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Aluminum doors and frames.

B. Weatherstripping.

C. Perimeter sealant.

D. Frame mounted light shelf.

1.02 PERFORMANCE REQUIREMENTS

A. Design and size components to withstand the following load requirements without damage or permanent set, when tested in accordance with ASTM E 330, using loads 1.5 times the design wind loads and 10 second duration of maximum load.

1. Design Wind Loads: Comply with requirements of IBC 2006 - International Building Code.

2. Member Deflection: Limit member deflection to flexure limit of glass in any direction, with full recovery of glazing materials.

B. Movement: Accommodate movement between perimeter framing and deflection of lintel, without damage to components or deterioration of seals.

C. Air Infiltration: Limit air infiltration through assembly to 0.06 cu ft/min/sq ft of wall area, measured at a reference differential pressure across assembly of 6.24 psf as measured in accordance with ASTM E 283.

D. Condensation Resistance Factor: CRF of not less than 57 (exterior frames) when measured in accordance with AAMA 1503.1.

E. Thermal Resistance of Exterior Framing: Thermal transmittance U value not more than 0.44 BTU/HR/FT²/°F when measured in accordance with AAMA 1503.1.

F. Water Leakage: None, when measured in accordance with ASTM E 331 with a test pressure difference of 12 lbf/sq ft.

G. System Internal Drainage: Drain to the exterior by means of a weep drainage network any water entering joints, condensation occurring in glazing channel, and migrating moisture occurring within system.

H. Expansion/Contraction: Provide for expansion and contraction within system components caused by cycling temperature range of 170 degrees F over a 12 hour period without causing detrimental effect to system components, anchorages, and other building elements.

1.03 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide component dimensions, describe components within assembly, anchorage and fasteners, glass and infill, door hardware, internal drainage details .

C. Shop Drawings: Indicate system dimensions, framed opening requirements and tolerances, affected related Work, expansion and contraction joint location and details, and field welding required.

1. Shop drawings must be prepared by the manufacturer under the supervision of a Professional Structural Engineer licensed in the State of Maryland.

2. Shop drawings must be signed and sealed by the supervising Professional Structural Engineer.

D. Design Data: Provide framing member structural and physical characteristics, engineering calculations, dimensional limitations, including the impact of the frame mounted sunshades.

1. Must be signed and sealed by the supervising Professional Structural Engineer.

E. Manufacturer's Certificate: Certify that the products supplied meet or exceed the specified requirements.

F. LEED Report: Accurately document the use of recycled materials and local/regional materials, as required by Section 01 35 14, Section 01 35 15, Section 01 35 16 and appropriate forms, and Section 01 60 00.

G. LEED Submittals: Provide VOC content documentation for field-applied sealants and primers; comply with VOC content limits of Section 01 61 16.

H. Report of field testing for water leakage.

I. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.04 QUALITY ASSURANCE

A. Designer Qualifications: Design structural support framing components under direct supervision of a Professional Structural Engineer experienced in design of this Work and licensed at the State of Maryland.

B. Manufacturer and Installer Qualifications: Company specializing in manufacturing aluminum glazing systems with minimum five years of documented experience.

1.05 PRE-INSTALLATION MEETING

A. Convene one week before starting work of this section.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Handle products of this section in accordance with AAMA CW-10.

B. Protect finished aluminum surfaces with wrapping. Do not use adhesive papers or sprayed coatings that bond to aluminum when exposed to sunlight or weather.

1.07 FIELD CONDITIONS

A. Do not install sealants when ambient temperature is less than 40 degrees F. Maintain this minimum temperature during and 48 hours after installation.

1.08 WARRANTY

A. See Section 01 78 00 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a ten year period after Date of Substantial Completion.

C. Provide ten year manufacturer warranty against excessive degradation of exterior finish. Include provision for replacement of units with excessive fading, chalking, or flaking.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. EFCO, a Pella Company; Product System 403 (T) Wall (exterior) and Product System 402 (interior): www.efcocorp.com.

B. (Basis-of-Design) Kawneer North America; Product TriFab VG 451T (exterior) and TriFab VG 451 (interior): www.kawneer.com.

C. YKK AP America; Product System YES 45 TU (exterior) and Product System YES 45 FI (interior): www.ykkap.com.

2.02 COMPONENTS

A. Aluminum Framing Members: Tubular aluminum sections, thermally broken with interior section insulated from exterior, drainage holes and internal weep drainage system.

1. Framing members for interior applications need not be thermally broken.
2. Glazing stops: Flush.
3. Structurally Reinforced Members: Extruded aluminum with internal reinforcement of structural steel member.

B. Doors: Glazed aluminum.

1. Thickness: 2 inches.
2. Glazing Stops: Square.

C. Horizontal Sun Shades: Shop fabricated, shop finished, extruded aluminum outriggers, louvers, and fascia, free of defects impairing strength, durability or appearance.

1. Basis-of-Design: Kawneer; SunShade, other approved sunshades are as follows:
   a. YKK; ThermaShade
   b. EFCO; X-Therm E-Shade
2. Configuration: Horizontal.
3. Louver Type: 4" Airfoil.
4. Outrigger Shape: Tapered as indicated on the drawings.
5. Fascia: 3 inch diameter round.
6. Design Criteria: Design and fabricate to resist the same loads as storefront system as well as the following loads without failure, damage, or permanent deflection:
   a. Snow: 30 psf; minimum.
   b. Live: 30 psf; minimum.
   c. Thermal Movement: Plus/minus 1/8 inch, maximum.
7. Size: 2'-8" projection.
8. Shop fabricate to the greatest extent possible; disassemble if necessary for shipping.
9. Finish to match storefront framing system.

2.03

A. Lightshelf: (Basis-of-Design) InLighten, or equal by EFCO or YKK.

1. Aluminum horizontal supporting extrusions shall have a minimum wall thickness of .063” (1.5 mm) to .125" (3 mm).
2. Shelf receiver shall be extrusions with a nominal wall thickness of .125” (3 mm).
3. Struts shall be extrusions with a nominal wall thickness of .094” (2.5 mm).
4. Shading Device:
   a. Horizontal components shall be mechanically fastened by means of aluminum sheets.
5. Finish: Match Storefront System color and finish.

B. Vents: Provide project-out units.

1. The windows shall be Architectural Aluminum Project Out windows in accordance with ANSI/AAMA/nwwda 101/I.S.2-97 or NAFS-1 Voluntary Specifications for Aluminum and Poly Prime Windows and Glass Doors for a Class and Grade of P-HC40 to P-HC70 for Project Out Windows.
    a. Units submitted for laboratory testing shall be manufacturer's standard construction, glazed and assembled in accordance with manufacturer's specifications and ANSI/AAMA/nwwda 101/I.S.2-97 or NAFS-02.
2. Hinge: Concealed stainless steel four- or six-bar friction hinge; two per ventilator.
3. Lock: Manufacturer's cam lock and keeper.
4. Finish to match storefront framing system.
5. Basis-of-Design: Kawneer.
6. Insect Screens: Extruded aluminum frames, 6063-T5 alloy and temper, joined at corners; 18 x 16 mesh aluminum screen cloth; splines shall be extruded vinyl, removable to permit rescreening.
    a. Frame Finish: To match aluminum window.
    b. Screen Finish: Black anodized.

2.04 MATERIALS

A. Extruded Aluminum: ASTM B221 (ASTM B221M).

B. Sheet Aluminum: ASTM B209 (ASTM B209M).

C. Structural Steel Sections: ASTM A36/A36M; galvanized in accordance with requirements of ASTM A123/A123M.

D. Fasteners: Stainless steel.

E. Concealed Flashings: 0.018 inch thick stainless steel.

F. Perimeter Sealant: Type ES-1 or ES-4 specified in Section 07 90 05.

G. Glass: As specified in Section 08 80 00.

H. Touch-Up Primer for Galvanized Steel Surfaces: SSPC-Paint 20, zinc rich.

2.05 FINISHES

A. Superior Performance Organic Coating System: AAMA 2605 multiple coat, thermally cured polyvinylidene fluoride system; custom color to match approved sample.

1. Manufacturer's standard 3-coat, thermocured system consisting of specially formulated inhibitive primer, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with AAMA 2605 and with coating and resin manufacturers' written instructions.

2.06 HARDWARE

A. Weatherstripping: Wool pile, continuous and replaceable; provide on all doors.

B. Sill Sweep Strips: Resilient seal type, retracting, of neoprene; provide on all doors.

2.07 FABRICATION

A. Fabricate components with minimum clearances and shim spacing around perimeter of assembly, yet enabling installation and dynamic movement of perimeter seal.

B. Accurately fit and secure joints and corners. Make joints flush, hairline, and weatherproof.

C. Construct with shear block system of assembly.

D. Prepare components to receive anchor devices. Fabricate anchors.

E. Coat concealed metal surfaces that will be in contact with cementitious materials or dissimilar metals with bituminous paint.

F. Arrange fasteners and attachments to conceal from view.

G. Reinforce components internally for door hardware .

H. Reinforce framing members for imposed loads.

I. Finishing: Apply factory finish to all surfaces that will be exposed in completed assemblies.

1. Touch-up surfaces cut during fabrication so that no natural aluminum is visible in completed assemblies, including joint edges.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify dimensions, tolerances, and method of attachment with other work.

B. Verify that wall openings and adjoining air and vapor seal materials are ready to receive work of this section.

3.02 INSTALLATION

A. Install wall system in accordance with manufacturer's instructions.

B. Attach to structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.

C. Provide alignment attachments and shims to permanently fasten system to building structure.

D. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances, aligning with adjacent work.

E. Provide thermal isolation where components penetrate or disrupt building insulation.

F. Install sill flashings. Turn up ends and edges; seal to adjacent work to form water tight dam.

G. Where fasteners penetrate sill flashings, make watertight by seating and sealing fastener heads to sill flashing.

H. Coordinate attachment and seal of perimeter air and vapor barrier materials.

I. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.

J. Install operating sash.

K. Set thresholds in bed of mastic and secure.

L. Install hardware using templates provided.

M. Install glass and infill panels in accordance with Section 08 80 00, using glazing method required to achieve performance criteria.

N. Install perimeter sealant in accordance with Section 07 90 05.

O. Touch-up minor damage to factory applied finish; replace components that cannot be satisfactorily repaired.

3.03 TOLERANCES

A. Maximum Variation from Plumb: 0.06 inches every 3 ft non-cumulative or 1/16 inches per 10 ft, whichever is less.

B. Maximum Misalignment of Two Adjoining Members Abutting in Plane: 1/32 inch.

3.04 FIELD QUALITY CONTROL

A. Test installed storefront for water leakage in accordance with AAMA 501.2.

1. Test a minimum area of 75 feet by 1 story of aluminum-framed systems designated by Architect, before installation of interior finishes; test area may not show evidence of water penetration.

3.05 ADJUSTING

A. Adjust operating hardware and sash for smooth operation.

3.06 CLEANING

A. Remove protective material from pre-finished aluminum surfaces.

B. Wash down surfaces with a solution of mild detergent in warm water, applied with soft, clean wiping cloths. Take care to remove dirt from corners. Wipe surfaces clean.

C. Remove excess sealant by method acceptable to sealant manufacturer.

3.07 PROTECTION

A. Protect installed products from damage during subsequent construction.

END OF SECTION

SECTION 08 1416
FLUSH WOOD DOORS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Flush wood doors; flush configuration; fire rated, non-rated, and acoustical.

1.02 RELATED REQUIREMENTS

A. Section 08 80 00 - Glazing.

1.03 REFERENCE STANDARDS

A. ASTM E413 - Classification for Rating Sound Insulation.

B. ASTM E1408 - Standard Test Method for Laboratory Measurement of the Sound Transmission Loss of Door Panels and Door Systems.

C. AWI/AWMAC (QSI) - Architectural Woodwork Quality Standards Illustrated; Architectural Woodwork Institute and Architectural Woodwork Manufacturers Association of Canada.

D. ITS (DIR) - Directory of Listed Products; Intertek Testing Services NA, Inc..

E. NFPA 80 - Standard for Fire Doors and Other Opening Protectives.

F. UL (BMD) - Building Materials Directory; Underwriters Laboratories Inc..

G. UL 10C - Standard for Positive Pressure Fire Tests of Door Assemblies.

1.04 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements for submittal procedures.

B. Product Data: Indicate door core materials and construction; veneer species, type and characteristics.

C. Specimen warranty.

D. Test Reports: Show compliance with specified requirements for the following:

1. Sound-retardant doors and frames; sealed panel tests are not acceptable.

E. Shop Drawings: Illustrate door opening criteria, elevations, sizes, types, swings, undercuts required, special beveling, special blocking for hardware, factory machining criteria, factory finishing criteria, identify cutouts for glazing and louvers.

F. Samples: Submit two samples of door veneer, 12 x 12 inch in size illustrating wood grain, stain color, and sheen.

G. LEED Submittals:

1. LEED Report: Accurately document the use of recycled content as required by Section 01 35 14, Section 01 35 15, Section 01 35 16 and appropriate forms and Section 01 60 00.

2. Certificates for Credit MR 7: Chain-of-custody certificates certifying that flush wood doors comply with forest certification requirements. Include evidence that manufacturer is certified for chain of custody by an FSC-accredited certification body.

3. Include statement indicating costs for each certified wood product.

4. Product Data for Credit EQ 4.4: For adhesives and composite wood products, documentation indicating that product contains no added urea formaldehyde.

H. Warranty, executed in Owner's name.

1.05 QUALITY ASSURANCE

A. Installed Fire Rated Door Assembly: Conform to NFPA 80 for fire rated class as indicated.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Package, deliver and store doors in accordance with specified quality standard.

B. Accept doors on site in manufacturer's packaging. Inspect for damage.

C. Protect doors with resilient packaging sealed with heat shrunk plastic. Do not store in damp or wet areas; or in areas where sunlight might bleach veneer. Seal top and bottom edges with tinted sealer if stored more than one week. Break seal on site to permit ventilation.

1.07 PROJECT CONDITIONS

A. Coordinate the work with door opening construction, door frame and door hardware installation.

1.08 WARRANTY

A. See Section 01 78 00 - Closeout Submittals for additional warranty requirements.

B. Interior Doors: Provide manufacturer's warranty for the life of the installation.

C. Include coverage for delamination of veneer, warping beyond specified installation tolerances, defective materials, and telegraphing core construction.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Wood Veneer Faced Doors:

B. Eggers Industries: www.eggersindustries.com.

C. Marshfield DoorSystems, Inc: www.marshfielddoors.com.

D. Algoma Hardwoods, Inc. .

E. Oshkosh Architectural Door Company.

F. VT Industries, Inc.

2.02 DOORS

A. All Doors: See drawings for locations and additional requirements.

1. Quality Level: Custom Grade, in accordance with AWI/AWMAC Architectural Woodwork Quality Standards Illustrated, Section 1300.

    a. Grade A faces.

2. Wood Veneer Faced Doors: 5-ply unless otherwise indicated.

3. Faces are bonded to core using a hot press.

4. Provide wood doors made from wood harvested from forests certified by an FSC-accredited certification body.

5. Provide doors assembled with glues containing no added urea-formaldehyde.

6. Recycled Content: Provide particleboard door substrates with minimum 80 percent recycled content; mineral core doors with maximum recycled content feasible.

B. Interior Doors: 1-3/4 inches thick unless otherwise indicated; flush construction.

1. Provide solid core doors at all locations .

2. Fire Rated Doors: Tested to ratings indicated on drawings in accordance with UL 10C or UBC Standard 7-2-97 ("positive pressure"); UL or WH (ITS) labeled without any visible seals when door

is open.

3. Sound Retardant Doors: Minimum STC of 42 or better, calculated in accordance with ASTM E413, tested in accordance with ASTM E1408.
    a. Provide doors specifically designed for sound transmission control with a high density core and damping.
    b. Refer to hardware specification for required hardware items.
4. Wood veneer facing with factory transparent finish .

2.03 DOOR AND PANEL CORES

A. Non-Rated Solid Core and 20 Minute Rated Doors: Type particleboard core (PC), plies and faces as indicated above.

B. Fire Rated Doors: Mineral core, Type FD, plies and faces as indicated above; with core blocking as required to provide adequate anchorage of hardware without through-bolting.

C. Sound Retardant Doors: Equivalent to Type PC construction with core as required to achieve rating specified; plies and faces as indicated above.

2.04 DOOR FACINGS

A. Wood Veneer Facing for Transparent Finish: White Maple, veneer grade as specified by quality standard, plain sliced, book veneer match, running assembly match; unless otherwise indicated.
    1. Vertical Edges: Any option allowed by quality standard for grade.
    2. Pairs: Pair match each pair; set match pairs within 10 feet of each other when doors are closed.
    3. Room Match: Match door faces within each separate room or area of building. Corridor door faces do not need to match where they are separated by 20 feet or more.

2.05 ACCESSORIES

A. Glazing Stops: Wood, of same species as door facing, butted corners; prepared for countersink style tamper proof screws.

2.06 DOOR CONSTRUCTION

A. Fabricate doors in accordance with door quality standard specified.

B. Cores Constructed with Bonded Stiles and Rails:
    1. Provide solid blocks at lock edge for hardware reinforcement.
    2. Provide solid blocking for other throughbolted hardware.

C. Fit door edge trim to edge of stiles after applying veneer facing.

D. Factory machine doors for hardware other than surface-mounted hardware, in accordance with hardware requirements and dimensions.

E. Factory fit doors for frame opening dimensions identified on shop drawings, with edge clearances in accordance with specified quality standard.

F. Provide edge clearances in accordance with the quality standard specified.

2.07 FACTORY FINISHING - WOOD VENEER DOORS

A. Factory finish doors in accordance with specified quality standard:
    1. Transparent Finish: Transparent catalyzed polyurethane, Premium quality, TR-6, satin sheen.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install doors in accordance with manufacturer's instructions and specified quality standard.
   1. Install fire-rated doors in accordance with NFPA 80 requirements.
B. Factory-Finished Doors: Do not field cut or trim; if fit or clearance is not correct, replace door.
C. Use machine tools to cut or drill for hardware.
D. Coordinate installation of doors with installation of frames and hardware.
E. Coordinate installation of glazing.

3.02 TOLERANCES

A. Conform to specified quality standard for fit and clearance tolerances.
B. Conform to specified quality standard for telegraphing, warp, and squareness.

3.03 ADJUSTING

A. Adjust doors for smooth and balanced door movement.
B. Adjust closers for full closure.

END OF SECTION

SECTION 08 1433
STILE AND RAIL WOOD DOORS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Wood doors, stile and rail design; fire rated and non-fire rated.

B. Panels of wood, glass and louvers.

1.02 RELATED REQUIREMENTS

A. Section 06 2000 - Finish Carpentry: Wood door frames.

B. Section 08 1113 - Hollow Metal Doors and Frames.

C. Section 08 7100 - Door Hardware.

D. Section 08 8000 - Glazing.

1.03 REFERENCE STANDARDS

A. ASTM E2112 - Standard Practice for Installation of Exterior Windows, Doors and Skylights 2007 (Reapproved 2016).

B. AWI/AWMAC/WI (AWS) - Architectural Woodwork Standards 2014, with Errata (2016).

C. AWMAC/WI (NAAWS) - North American Architectural Woodwork Standards, U.S. Version 3.1 2016, with Errata (2017).

D. NFPA 80 - Standard for Fire Doors and Other Opening Protectives 2019.

E. NFPA 105 - Standard for Smoke Door Assemblies and Other Opening Protectives 2016.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Indicate stile and rail core materials and construction; veneer species, type and characteristics.

C. Shop Drawings: Illustrate door opening criteria, elevations, sizes, types, swings, undercuts required , special beveling , special blocking for hardware , factory machining criteria , factory finishing criteria , identify cutouts for glazing and louvers.

D. Samples: Submit two samples of door construction cut from top corner of door.

E. Samples: Submit two samples of door veneer illustrating wood grain, stain color, and sheen.

F. Certificate: Submit labels and certificates required by quality assurance and quality control programs.

G. Manufacturer's Installation Instructions: Indicate special installation instructions.

H. Manufacturer's Qualification Statement.

I. Installer's Qualification Statement.

J. Warranty, executed in Owner 's name.

1.05 QUALITY ASSURANCE

A. Maintain one copy of specified door quality standard on site for review during installation and finishing.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section, with not less than three years of documented experience.

1. Company with at least one project within the past 5 years with value of woodwork within 20 percent of cost of woodwork for this project.
2. Accredited participant in the specified certification program prior to the commencement of fabrication and throughout the duration of the project.

C. Installer Qualifications: Company specializing in performing work of the type specified in this section, with not less than three years of documented experience.

D. Quality Certification:

1. Provide labels or certificates indicating that the installed work complies with AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS) requirements for grade or grades specified.
2. Provide designated labels on shop drawings as required by certification program.
3. Provide designated labels on installed products as required by certification program.
4. Submit certifications upon completion of installation that verifies this work is in compliance with specified requirements.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Package, deliver, and store doors in accordance with quality standard specified.

B. Protect doors with resilient packaging sealed with heat shrunk plastic. Do not store in damp or wet areas; or in areas where sunlight might bleach veneer. Seal top and bottom edges with tinted sealer if stored more than one week. Break seal on site to permit ventilation.

1.07 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Include coverage for delamination of veneer, warping beyond specified installation tolerances, defective materials and telegraphing core construction.

PART 2 PRODUCTS

2.01 DOORS

A. Quality Standard: Custom Grade, Heavy Duty performance, in accordance with AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS), unless otherwise indicated.

B. Exterior Doors: 1-3/4 inches (44.45 mm) thick unless otherwise indicated; solid lumber construction; mortise and tenon joints; water repellent treated. Transparent finish as indicated on drawings.

2.02 DOOR AND PANEL FACINGS

A. Veneer Facing for Transparent Finish: Species as specified above, veneer grade in accordance with quality standard indicated, plain sliced (flat cut), with book match between leaves of veneer, running match of spliced veneer leaves assembled on door or panel face.

B. Adhesive: Type I - Waterproof.

2.03 DOOR CONSTRUCTION

A. Vertical Exposed Edge of Stiles: Of same species as veneer facing.

B. Fit door edge trim to edge of stiles after applying veneer facing.

C. Panels: Raised, solid wood.

D. At exterior doors, provide aluminum flashing at the top and bottom rail for full thickness and width of door.

E. Glazed Openings: Non-removable stops on non-secure side; sizes and configurations as indicated on drawings.

2.04 FACTORY FINISHING

A. Finish work in accordance with AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS), Section 5 - Finishing for grade specified and as follows:

1. Transparent:

a. Stain: As selected by Architect.

2.05 ACCESSORIES

A. Glazing: As specified in Section 08 8000.

B. Panel or Glass Retention Molding: Wood of same species as door facing with butted corners; prepared for countersink style screws.

C. Door Hardware: As specified in Section 08 7100.

D. Wood Louvers: Wood, of same species as door facing.

E. Metal Louvers: As specified in Section 08 1113.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that opening sizes and tolerances are acceptable.

C. Do not install doors in frame openings that are not plumb or are out of tolerance for size or alignment.

3.02 INSTALLATION

A. Install doors in accordance with manufacturer's instructions and specified quality standards.

1. Install fire-rated doors in accordance with NFPA 80 requirements.

2. Install smoke and draft control doors in accordance with NFPA 105 requirements.

3. Install exterior doors in accordance with ASTM E2112.

B. Factory-Finished Doors: Do not field cut or trim; if fit or clearance is not correct, replace door.

C. Field-Finished Doors: Trimming to fit is acceptable.

D. Machine cut for hardware.

E. Coordinate installation of doors with installation of frames and hardware.

F. Coordinate installation of glazing.

3.03 TOLERANCES

A. Comply with specified quality standard for fit, clearance, and joinery tolerances.

3.04 ADJUSTING

A. Adjust doors for smooth and balanced door movement.

B. Adjust closers for full closure.

END OF SECTION

SECTION 08 3100
ACCESS DOORS AND PANELS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Access door and frame units, fire-rated, in wall locations.

1.02 REFERENCE STANDARDS

A. ITS (DIR) - Directory of Listed Products; Intertek Testing Services NA, Inc..

B. UL (FRD) - Fire Resistance Directory; Underwriters Laboratories Inc..

1.03 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide sizes, types, finishes, hardware, scheduled locations, and details of adjoining work.

C. Shop Drawings: Indicate exact position of all access door units.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Babcock-Davis / Nystrom.

1. Non-Rated: B-NT / NT Series.
2. Rated: B-IT / IT Series.

B. Karp Associates, Inc: www.karpinc.com.

C. Milcor by Commercial Products Group of Hart & Cooley, Inc: www.milcorinc.com.

D. L. Industries, Inc. .

E. Larsen's Manufacturing Company.

F. Williams Bros. Corporation of America (The).

2.02 ACCESS DOORS AND PANELS

A. All Units: Factory fabricated, fully assembled units with corner joints welded, filled, and ground flush; square and without rack or warp; coordinate requirements with assemblies units are to be installed in.

B. Units in Fire Rated Assemblies: Fire rating equivalent to the fire rated assembly in which they are to be installed.

1. Provide products listed and labeled by UL or ITS (Warnock Hersey) as suitable for the purpose specified and indicated.

2.03 ACCESS DOOR UNITS - WALLS AND CEILINGS

A. Door and Frame Units: Formed steel.

1. Door: Minimum 16 gage thick sheet metal, set flush with exposed face flange of frame.
2. Frame: Minimum 16 gage thick sheet metal with 1 inch wide, surface-mounted trim.
3. Hinges: Concealed pivot rod.
4. Lock: Provide door panel with cylinder keyed to building masterkey program.

B. Fire-Rated, Insulated, Flush Access Doors and Frames with Exposed Trim: Formed steel.

1. Fire-Resistance Rating: Not less than that of adjacent construction.
2. Temperature Rise Rating: 250 deg F at the end of 30 minutes.
3. Door: Flush panel with a core of mineral-fiber insulation enclosed in sheet metal with a minimum thickness of 20 gage.
4. Frame: Minimum 16 gage thick sheet metal with 1-inch wide, surface-mounted trim.
5. Hinges: Concealed-pin type.
6. Automatic Closer: Spring type.
7. Lock: Self-latching device with cylinder lock.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install units in accordance with manufacturer's instructions.

B. Install frames plumb and level in openings. Secure rigidly in place.

C. Position units to provide convenient access to the concealed work requiring access.

END OF SECTION

SECTION 08 3313
COILING COUNTER DOORS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Non-fire-rated coiling counter doors and operating hardware.

B. Fire-rated coiling counter doors and operating hardware.

C. Electric motor operation; wiring from electric circuit disconnect to operator to control station.

1.02 RELATED REQUIREMENTS

A. Section 06 1000 - Rough Carpentry: Rough openings.

B. Section 08 7100 - Door Hardware: Cylinder cores and keys.

C. Section 26 0583 - Wiring Connections: Power to disconnect.

D. Section 28 4600 - Fire Detection and Alarm: Fire alarm interconnection.

1.03 REFERENCE STANDARDS

A. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process 2017.

B. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes 2014.

C. NFPA 80 - Standard for Fire Doors and Other Opening Protectives 2019.

D. UL (DIR) - Online Certifications Directory Current Edition.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Submit manufacturer's standard literature showing materials and details of construction and finish. Include data on electrical operation.

C. Shop Drawings: Indicate rough and actual opening dimensions, anchorage methods, hardware locations, and installation details.

D. Samples: Submit two slats, 4 inch long (102 mm long), illustrating shape, color and finish texture.

1.05 QUALITY ASSURANCE

A. Products Requiring Electrical Connection: Listed and classified by UL (DIR) as suitable for the purpose specified and indicated.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Coiling Counter Doors:

1. Substitutions: See Section 01 6000 - Product Requirements.

B. Coiling Counter Fire Doors:

2.02 COILING COUNTER DOORS

A. Coiling Counter Doors, Non-Fire-Rated: Aluminum slat curtain.

1. Mounting: Between jambs, within prepared opening.

2. Nominal Slat Size: 1-1/4 inches (32 mm) wide.

3. Slat Profile: Flat, perforated.
4. Finish, Aluminum: Anodized.
5. Guides: Formed track; same material and finish unless otherwise indicated.
6. Locking Devices: Lock and latch handle on outside.

B. Coiling Counter Doors, Fire-Rated: Galvanized steel slat curtain.

1. Mounting: Between jambs, within prepared opening.
2. Fire Rating: 3/4 hour; comply with NFPA 80.
3. Nominal Slat Size: 1-1/4 inches (32 mm) wide.
4. Slat Profile: Flat.
5. Guides: Formed track; same material and finish unless otherwise indicated.

2.03 MATERIALS

A. Curtain Construction: Interlocking, single thickness slats.

1. Slat Ends: Alternate slats fitted with end locks to act as wearing surface in guides and to prevent lateral movement.
2. Curtain Bottom: Fitted with angles to provide reinforcement and positive contact in closed position.
3. Steel Slats: ASTM A653/A653M galvanized steel sheet, with minimum G90/Z275 coating; minimum thickness 16 gage, 0.06 inch (1.5 mm).
4. Aluminum Slats: ASTM B221 (ASTM B221M), aluminum alloy Type 6063; minimum thickness 0.05 inch (1.3 mm).

B. Guide Construction: Continuous, of profile to retain door in place, with mounting brackets of same metal.

1. Aluminum Guides: Extruded aluminum channel, with wool pile runners along inside.

C. Lock Hardware:

1. Cylindrical Locking Mechanism: Latchset lock cylinder, specified in Section 08 7100.
2. Latching Mechanism: Inside mounted, adjustable keeper, spring activated latch bar feature to keep in locked or retracted position.

D. Roller Shaft Counterbalance: Steel pipe and torsion steel spring system, capable of producing torque sufficient to ensure smooth operation of curtain from any position and capable of holding position at mid-travel; with adjustable spring tension; requiring 25 lb (10 kg) nominal force to operate.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that opening sizes, tolerances and conditions are acceptable.

3.02 INSTALLATION

A. Install units in accordance with manufacturer's instructions.

B. Install fire-rated doors in accordance with NFPA 80.

C. Use anchorage devices to securely fasten assembly to wall construction and building framing without distortion or stress.

D. Securely and rigidly brace components suspended from structure. Secure guides to structural members only.

E. Fit and align assembly including hardware; level and plumb, to provide smooth operation.

F. Coordinate installation of electrical service with Section 26 0583.

G. Install perimeter trim as indicated.

3.03 TOLERANCES

A. Maintain dimensional tolerances and alignment with adjacent work.

B. Maximum Variation From Plumb: 1/16 inch (1.5 mm).

C. Maximum Variation From Level: 1/16 inch (1.5 mm).

D. Longitudinal or Diagonal Warp: Plus or minus 1/8 inch per 10 ft (3 mm per 3 m) straight edge.

3.04 ADJUSTING

A. Adjust operating assemblies for smooth and noiseless operation.

3.05 CLEANING

A. Clean installed components.

B. Remove labels and visible markings.

END OF SECTION

SECTION 08 3323
OVERHEAD COILING DOORS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Overhead coiling doors , operating hardware, exterior, electric operation.

B. Wiring from electric circuit disconnect to operator to control station.

1.02 REFERENCE STANDARDS

A. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

B. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum); National Electrical Manufacturers Association.

C. NEMA ICS 2 - Industrial Control and Systems: Controllers, Contactors, and Overload Relays, Rated Not More Than 2000 Volts AC or 750 Volts DC; National Electrical Manufacturers Association.

1.03 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide general construction, component connections and details, electrical equipment .

C. Shop Drawings: Indicate pertinent dimensioning, anchorage methods, hardware locations, and installation details.

D. Samples: Submit two slats, length of 24 inch in size illustrating shape, color and finish texture.

E. LEED Report: Accurately document the use of recycled materials, as required by Section 01 35 14, Section 01 35 15, Section 01 35 16 and appropriate forms, and Section 01 60 00.

F. Maintenance Data: Indicate lubrication requirements and frequency and periodic adjustments required.

1.04 QUALITY ASSURANCE

A. Products Requiring Electrical Connection: Listed and classified by testing firm acceptable to the authority having jurisdiction as suitable for the purpose specified and indicated.

1.05 WARRANTY

A. Warranty Period: Two years for defects in material and workmanship.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Cornell Iron Works, Inc: www.cornelliron.com.

B. The Cookson Company: www.cooksondoor.com.

C. Overhead Door Company .

2.02 COILING DOORS

A. Exterior Coiling Doors: Steel slat curtain.

1. Capable of withstanding positive and negative wind loads of 20 psf, without undue deflection or damage to components.

2. Sandwich slat construction with insulated core of closed cell pressure foamed in place urethane type insulation; insulation (u-) value: 0.50 BTU/hr sq ft deg F

3. Nominal Slat Size: 2 inches wide x required length.

4. Finish: primed steel with powder coated finish..
5. Guides: Angles; galvanized steel.
6. Hood Enclosure: Manufacturer's standard; primed steel with powder coated finish.
7. Electric operation.
8. Mounting: Surface mounted.

2.03 MATERIALS

A. Curtain Construction: Interlocking slats.
   1. Slat Ends: Alternate slats fitted with end locks to act as wearing surface in guides and to prevent lateral movement.
   2. Curtain Bottom: Fitted with angles to provide reinforcement and positive contact in closed position.
   3. Weatherstripping: Moisture and rot proof, resilient type, located at jamb edges and where curtain enters hood enclosure of exterior doors.

B. Steel Slats: Minimum exterior skin of 20 gage/interior skin of 24 gage ASTM A653/A653M galvanized steel sheet.
   1. Galvanizing: Minimum G90/Z275 coating.

C. Steel Guides: Minimum 3/16 inch angle assemblies bolted to wall; powder coat finish.

D. Roller Shaft Counterbalance: Steel pipe and helical steel spring system, capable of producing torque sufficient to ensure smooth operation of curtain from any position and capable of holding position at mid-travel; with adjustable spring tension; requiring 25 lb nominal force to operate.

2.04 ELECTRIC OPERATION

A. Electric Operators:
   1. Mounting: Side mounted.
   2. Motor Rating: 1/2 hp; continuous duty.
   3. Motor Controller: NEMA ICS 2, full voltage, reversing magnetic motor starter.
   4. Controller Enclosure: NEMA 250 Type 1.
   5. Opening Speed: 12 inches per second.
   6. Brake: Adjustable friction clutch type, activated by motor controller.
   7. Manual override in case of power failure.

B. Control Station: Standard three button (OPEN-STOP-CLOSE) momentary control for each operator.
   1. 24 volt circuit.
   2. Surface mounted.
   3. Provide key switch control station on exterior; location to be determined.

C. Safety Edge: Located at bottom of curtain, full width, electro-mechanical sensitized type, wired to stop operator upon striking object, hollow neoprene covered.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install units in accordance with manufacturer's instructions.

B. Use anchorage devices to securely fasten assembly to wall construction and building framing without distortion or stress.

C. Securely and rigidly brace components suspended from structure. Secure guides to structural members only.

D. Fit and align assembly including hardware; level and plumb, to provide smooth operation.

E. Coordinate installation of electrical service with Section 26 27 17.

F. Complete wiring from disconnect to unit components.

G. Coordinate installation of sealants and backing materials at frame perimeter as specified in Section 07 90 05.

3.02 TOLERANCES

A. Maintain dimensional tolerances and alignment with adjacent work.

B. Maximum Variation From Plumb: 1/16 inch.

C. Maximum Variation From Level: 1/16 inch.

D. Longitudinal or Diagonal Warp: Plus or minus 1/8 inch per 10 ft straight edge.

3.03 ADJUSTING

A. Adjust operating assemblies for smooth and noiseless operation.

3.04 CLEANING

A. Clean installed components.

B. Remove labels and visible markings.

END OF SECTION

SECTION 08 3326
OVERHEAD COILING GRILLES

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Overhead coiling metal grilles and operating hardware, electric operation.

B. Wiring from electric circuit disconnect to operator to control station.

1.02 REFERENCE STANDARDS

A. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

B. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes [Metric].

C. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum); National Electrical Manufacturers Association.

D. NEMA ICS 2 - Industrial Control and Systems: Controllers, Contactors, and Overload Relays, Rated Not More Than 2000 Volts AC or 750 Volts DC; National Electrical Manufacturers Association.

E. NEMA MG 1 - Motors and Generators; National Electrical Manufacturers Association.

1.03 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide general construction, component connections and details, electrical equipment .

C. Shop Drawings: Indicate pertinent dimensioning, anchorage methods, hardware locations, and installation details.

D. LEED Report: Accurately document the use of recycled materials, as required by Section 01 35 14, Section 01 35 15, Section 01 35 16 and appropriate forms, and Section 01 60 00.

E. Maintenance Data: Indicate lubrication requirements and frequency.

1.04 WARRANTY

A. Warranty Period: Two years for defects in material and workmanship.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Overhead Coiling Grilles:

1. Cornell Iron Works, Inc: www.cornelliron.com.
2. The Cookson Company: www.cooksondoor.com.
3. Wayne-Dalton, a Division of Overhead Door Corporation: www.waynedalton.com.
4. Overhead Door Company: www.overheaddoor.com .

2.02 GRILLE AND COMPONENTS

A. Grille: Aluminum; horizontal bar curtain, coiling on overhead counterbalanced shaft.

1. Finish: Clear anodized.
2. Electric operation.
3. Mounting: Within framed opening.

B. Curtain: Round horizontal bars connected with vertical links.
   1. Horizontal bars: 5/16 inch diameter.
   2. Bar spacing: 1 1/2 inch on center.
   3. Vertical Chains: Eyeletted links standard of manufacturer.
   4. Link spacing: 6 inch on center.
   5. Bottom Bar: Extruded aluminum tubular section.

C. Guides: Extruded aluminum angles, of profile to retain grille in place with snap-on trim, mounting brackets of same metal.

D. Roller Shaft Counterbalance: Steel pipe and helical steel spring system, capable of producing torque sufficient to ensure smooth operation of curtain from any position and capable of holding position at mid-travel; with adjustable spring tension; requiring 25 lb nominal force to operate.

2.03 MATERIALS

A. Aluminum: ASTM B221 (ASTM B221M).

2.04 ELECTRIC OPERATION

A. Electric Operators:
   1. Mounting: Side mounted.
   2. Motor Enclosure:
      a. Interior grilles: NEMA MG 1 Type 1; open drip proof.
   3. Motor Rating: 1/2 hp; continuous duty.
   4. Motor Controller: NEMA ICS 2, full voltage, reversing magnetic motor starter.
   5. Controller Enclosure: NEMA 250 Type 1.
   6. Brake: Adjustable friction clutch type, activated by motor controller.
   7. Manual override in case of power failure.

B. Control Station: Standard three button (OPEN-STOP-CLOSE) momentary control for each operator.
   1. 24 volt circuit.
   2. Surface mounted.

C. Safety Edge: Located at bottom of curtain, full width, electro-mechanical sensitized type, wired to stop operator upon striking object, hollow neoprene covered.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install grille unit assembly in accordance with manufacturer's instructions.

B. Use anchorage devices to securely fasten assembly to wall construction and building framing without distortion or stress.

C. Securely and rigidly brace components suspended from structure.

D. Fit and align assembly including hardware; level and plumb, to provide smooth operation.

E. Complete wiring from disconnect to unit components.

3.02 ADJUSTING

A. Adjust grille, hardware and operating assemblies for smooth and noiseless operation.

3.03 CLEANING

A. Clean grille and components.

B. Remove labels and visible markings.

END OF SECTION

SECTION 08 3473
SOUND CONTROL DOOR ASSEMBLIES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Sound control door assemblies.

1. Metal doors and frames.
2. Wood doors and metal frames.
3. Fire-rated doors and frames.
4. Interior doors and frames, non-fire-rated.
5. Thermally insulated exterior door and frames.

B. Accessories, including glazing and matching panels.

1.02 RELATED REQUIREMENTS

A. Section 08 7100 - Door Hardware.

B. Section 08 8000 - Glazing: Glass for doors and borrowed lites.

C. Section 09 9113 - Exterior Painting: Field painting.

D. Section 09 9123 - Interior Painting: Field painting.

1.03 REFERENCE STANDARDS

A. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design 2010.

B. ANSI/SDI A250.3 - Test Procedure and Acceptance Criteria for Factory Applied Finish Coatings for Steel Doors and Frames 2007 (R2011).

C. ANSI/SDI A250.4 - Test Procedure and Acceptance Criteria for Physical Endurance for Steel Doors, Frames and Frame Anchors 2011.

D. ANSI/SDI A250.8 - Specifications for Standard Steel Doors and Frames (SDI-100) 2017.

E. ANSI/SDI A250.10 - Test Procedure and Acceptance Criteria for Prime Painted Steel Surfaces for Steel Doors and Frames 2011.

F. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process 2017.

G. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable 2018.

H. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength 2018a.

I. ASTM E336 - Standard Test Method for Measurement of Airborne Sound Attenuation between Rooms in Buildings 2017.

J. ASTM E413 - Classification for Rating Sound Insulation 2016.

K. AWI/AWMAC/WI (AWS) - Architectural Woodwork Standards 2014, with Errata (2016).

L. AWMAC/WI (NAAWS) - North American Architectural Woodwork Standards, U.S. Version 3.1 2016, with Errata (2017).

M. BHMA A156.115 - American National Standard for Hardware Preparation in Steel Doors and Steel Frames 2016.

N. ICC A117.1 - Accessible and Usable Buildings and Facilities 2017.

O. ITS (DIR) - Directory of Listed Products current edition.

P. NAAMM HMMA 830 - Hardware Selection for Hollow Metal Doors and Frames 2002.

Q. NAAMM HMMA 831 - Hardware Locations for Hollow Metal Doors and Frames 2011.

R. NAAMM HMMA 840 - Guide Specifications for Installation and Storage of Hollow Metal Doors and Frames 2007.

S. NAAMM HMMA 865 - Guide Specifications for Sound Control Hollow Metal Doors and Frames 2013.

T. NFPA 80 - Standard for Fire Doors and Other Opening Protectives 2019.

U. NFPA 252 - Standard Methods of Fire Tests of Door Assemblies 2017.

V. SDI 117 - Manufacturing Tolerances for Standard Steel Doors and Frames 2013.

W. UL (DIR) - Online Certifications Directory Current Edition.

X. UL 10C - Standard for Positive Pressure Fire Tests of Door Assemblies Current Edition, Including All Revisions.

Y. UL 1784 - Standard for Air Leakage Tests of Door Assemblies Current Edition, Including All Revisions.

Z. WDMA I.S. 1A - Interior Architectural Wood Flush Doors 2013.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Materials and details of design and construction, hardware locations, reinforcement type and locations, anchorage and fastening methods, and finishes; and one copy of referenced standards/guidelines.

C. Shop Drawings: Details of each opening, showing elevations, glazing, frame profiles, and any indicated finish requirements.

D. Samples: Submit two samples of metal, 2 inch by 2 inch in size (50 mm by 50 mm in size) showing factory finishes, colors, and surface texture.

E. Installation Instructions: Manufacturer's published instructions, including any special installation instructions relating to this project.

F. Manufacturer's Certificate: Certification that products meet or exceed specified requirements.

G. Manufacturer's Qualification Statement.

H. Installer's Qualification Statement.

I. Testing Agency's Qualification Statement.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience.

C. Testing Agency Qualifications: Independent testing agency accredited as an acoustical laboratory and certified to perform specified field testing.

D. Maintain at project site copies of reference standards relating to installation of products specified.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Protect metal doors in compliance with NAAMM HMMA 840 or ANSI/SDI A250.8 (SDI-100) and specified requirements.

B. Protect wood doors in compliance with WDMA I.S. 1A and specified requirements.

C. Store wood doors with resilient packaging sealed with heat shrunk plastic; do not store in damp or wet areas, or in areas where sunlight might bleach veneer; seal top and bottom edges with tinted sealer if stored more than one week, and break seal on site to permit ventilation.

D. Remove doors and frames from resilient packaging upon delivery on site and inspect for damage, provide cover over doors for protection until installed, and store in vertical position properly braced with blocking to permit air circulation between components.

PART 2 PRODUCTS

2.01 REGULATORY REQUIREMENTS

A. Accessibility: Comply with ICC A117.1 and ADA Standards.

B. Opening Force of Sound Control Doors, Non-Fire Rated: 5 lbs (22.2 N), maximum, in compliance with ADA Standards.

C. Hardware Preparations, Selections and Locations: Comply with NAAMM HMMA 830 and NAAMM HMMA 831 or BHMA A156.115 and ANSI/SDI A250.8 (SDI-100) in accordance with specified requirements.

D. Combined Requirements: If a particular door and frame unit is indicated to comply with more than one type of requirement, comply with specified requirements for each type; for instance, a sound control door is also indicated as being an exterior door must comply with requirements specified for sound control doors and exterior doors; where two requirements conflict, comply with most stringent.

2.02 COMPONENTS

A. Panels: Same construction, performance, and finish as doors.

B. Exterior Metal Door Top Closures: Flush end closure channel, with top and door faces aligned.

C. Door Edge Profile: Manufacturer's standard for application indicated.

2.03 SOUND CONTROL DOORS

A. Metal Sound Control Interior Doors:

1. Metal Doors: Refer to drawings for locations and additional requirements.
    a. Based on SDI Standards: ANSI/SDI A250.8 (SDI-100).
        1) Level 1 - Standard-duty.
        2) Physical Performance Level C, 250,000 cycles; in accordance with ANSI/SDI A250.4.
        3) Model 1 - Full Flush.
        4) Door Face Metal Thickness: 20 gage, 0.032 inch (0.8 mm), minimum.
    b. Steel Sheet: Comply with one or more of the following requirements; galvannealed steel complying with ASTM A653/A653M, cold-rolled steel complying with ASTM A1008/A1008M, or hot-rolled pickled and oiled (HRPO) steel complying with ASTM A1011/A1011M, commercial steel (CS) Type B, for each.
        1) Zinc Coating for Typical Interior and/or Exterior Locations: Provide metal components zinc-coated (galvanized) and/or zinc-iron alloy-coated (galvannealed) by the hot-dip

process in accordance with ASTM A653/A653M, with manufacturer's standard coating thickness, unless noted otherwise for specific hollow metal doors and frames.

(a) Based on SDI Standards: Provide at least A40/ZF120 (galvannealed) where necessary, coating not required for typical interior door applications, and at least A60/ZF180 (galvannealed) for corrosive locations.

2. Door Thickness: As required to comply with sound control requirements as indicated.
3. Sound Seals: As required by manufacturer to meet indicated sound control ratings.
4. Exterior Doors, Thermally Insulated:
    a. Door Core Material: Manufacturers standard core material and construction to comply with sound control requirements as indicated.

B. Wood Sound Control Interior Doors: Provide fire-rated door construction as indicated.
1. Wood Doors: Refer to drawings for locations and additional requirements.
    a. Quality Standard: Custom Grade, Heavy Duty performance, in accordance with AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS), unless otherwise indicated.
2. Sound Seals: As required by manufacturer to meet indicated sound control ratings.
3. Fire-Rated Doors:
    a. Fire Rating: As indicated on Door Schedule, complying with NFPA 80 and tested in accordance with UL 10C and NFPA 252 as positive pressure fire tests.
    b. Temperature-Rise Rating (TRR) Across Door Thickness: Comply with requirements of local building code and authorities having jurisdiction (AHJ).
    c. Provide units listed and labeled by UL (DIR) or ITS (DIR).
        1) Attach fire rating label to each fire rated unit.
    d. Smoke and Draft Control Doors (Indicated as "S" on Drawings): In addition to required fire rating, provide sound control door assemblies tested in accordance with UL 1784 and maximum air leakage of 3.0 cfm per sq ft (0.01524 cu m/s/sq m) of door opening at 0.10 inch wg (24.9 Pa) pressure at both ambient and elevated temperatures for 'S' label.
    e. Door Core Material: As required by manufacturer to meet indicated fire and sound control ratings.

2.04 SOUND CONTROL DOOR FRAMES

A. Comply with standards and/or custom guidelines as indicated for corresponding door in accordance with applicable door frame requirements.

B. Metal Sound Control Interior Door Frames: Face welded type.
1. Frame Finish: Factory finished.
2. Interior Door Frames, Non-Fire Rated:
    a. Terminated Stops: Provide at interior doors; closed end stop terminated 6 inch (150 mm), maximum, above floor at 45 degree angle.
3. Fire-Rated Door Frames:
    a. Fire Rating: Same as door, and labeled.
    b. Terminated Stops: Provide at interior doors; closed end stop terminated 6 inch (150 mm), maximum, above floor at 45 degree angle.

2.05 DOOR HARDWARE

A. Astragals for Double Doors: Overlapping or meeting stile for field installation in compliance with sound control requirements.

1. Fire-Rated Doors: Steel, and shape as required for fire rating.

B. Silencers: Resilient rubber, fitted into drilled hole; provide three on strike side of single door, three on center mullion of pairs, two on head of pairs without center mullions, and in compliance with sound control requirements.

C. Hinges: Cam lift type by door manufacturer, coordinate with Section 08 7100.

D. Threshold: Provide sound control/acoustic seal for sill of door in closed position by door manufacturer.

E. Sound Control Seals: Provide sound control/acoustic seals for jambs and head of door in closed position by door manufacturer.

2.06 FINISHES

A. Primer, Metal Doors and Frames: Rust-inhibiting, complying with ANSI/SDI A250.10, door manufacturer's standard, in compliance with local VOC requirements.

B. Metal Door and Frame Finish: Complying with ANSI/SDI A250.3, manufacturer's standard coating.

C. Bituminous Coating: Asphalt emulsion or other high-build, water-resistant, resilient coating.

2.07 ACCESSORIES

A. Glazing: As specified in Section 08 8000, factory installed, and tested to comply with specified sound control and fire ratings as indicated.

B. Mechanical Fasteners for Concealed Metal-to-Metal Connections: Self-drilling, self-tapping, steel with electroplated zinc finish.

C. Grout for Frames: Portland cement grout with maximum of 4 inch (102 mm) slump for hand troweling; thinner pumpable grout of higher slump is not permitted.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that opening sizes and tolerances are acceptable.

C. Verify that finished walls are in plane to ensure proper door alignment.

D. Beginning of installation means acceptance of existing conditions.

3.02 PREPARATION

A. Coat inside of frames to be installed in masonry or to be grouted, with bituminous coating, prior to installation.

3.03 INSTALLATION

A. Install doors and frames in accordance with manufacturer's instructions and related requirements of specified door and frame standards or custom guidelines indicated.

B. Install prefinished frames after painting and wall finishes are complete.

C. Install fire rated units in accordance with NFPA 80.

D. Coordinate frame anchor placement with wall construction.

E. Touch up damaged factory finishes.

3.04 TOLERANCES

A. Clearances Between Door and Frame: Comply with related requirements of specified frame standards or custom guidelines indicated in accordance with SDI 117 or NAAMM HMMA 865.

B. Maximum Diagonal Distortion: 1/16 inch (1.6 mm) measured with straight edge, corner to corner.

3.05 FIELD QUALITY CONTROL

A. Refer to Section 01 4000 - Quality Requirements, for independent field testing and inspection requirements, and requirements for monitoring quality of specified product installations.

B. Provide field testing of installed sound control doors by independent laboratory in accordance with ASTM E336 test methods, with results calculated in accordance with ASTM E413 and having acceptable field noise isolation class (NIC) values within 5 dB of laboratory STC rating values.

1. Testing agency to submit testing report to Contractor and Architect within 24 hours after field testing has been completed.

C. Repair or replace sound control door components that have failed designated field testing, and retest to verify performance complies with specified requirements.

3.06 ADJUSTING

A. Adjust for smooth and balanced sound control door movement.

B. Adjust sound control doors so that seals are fully engaged when door is closed.

C. Adjust sound control doors for force to close, latch, and unlatch; adjust as necessary in compliance with requirements.

3.07 SCHEDULE

A. Refer to Door and Frame Schedule on drawings.

END OF SECTION

SECTION 08 3613
SECTIONAL DOORS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Overhead sectional door electrically operated.

B. Operating hardware and supports.

C. Electrical controls.

1.02 RELATED REQUIREMENTS

A. Section 05 5000 - Metal Fabrications: Steel channel opening frame.

B. Section 08 7100 - Door Hardware: Lock cylinders.

C. Section 26 0533.13 - Conduit for Electrical Systems: Conduit from electric circuit to operator and from operator to control station.

D. Section 26 0583 - Wiring Connections.

1.03 REFERENCE STANDARDS

A. DASMA 102 - American National Standard Specifications for Sectional Overhead Type Doors 2011.

B. ITS (DIR) - Directory of Listed Products current edition.

C. NEMA ICS 2 - Industrial Control and Systems Controllers, Contactors and Overload Relays Rated 600 Volts 2000, with Errata (2008).

D. NEMA MG 1 - Motors and Generators 2017.

E. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum) 2014.

F. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

G. UL (DIR) - Online Certifications Directory Current Edition.

H. UL 325 - Standard for Door, Drapery, Gate, Louver, and Window Operators and Systems Current Edition, Including All Revisions.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate opening dimensions and required tolerances, connection details, anchorage spacing, hardware locations and installation details.

C. Product Data: Show component construction, anchorage method and hardware.

D. Samples: Submit two panel finish samples, indicate sizes, illustrating color and finish.

E. Manufacturer's Installation Instructions: Include any special procedures required by project conditions.

F. Manufacturer's Qualification Statement.

G. Installer's Qualification Statement.

H. Operation Data: Include normal operation, troubleshooting, and adjusting.

I. Maintenance Data: Include data for motor and transmission, shaft and gearing, lubrication frequency, spare part sources.

J. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years of documented experience.

B. Installer Qualifications: Company specializing in performing work of type specified and with at least three years documented experience.

C. Comply with applicable code for motor and motor control requirements.

D. Products Requiring Electrical Connection: Listed and classified by ITS (DIR), UL (DIR) or testing firm acceptable to authorities having jurisdiction, as suitable for purpose specified.

1.06 WARRANTY

A. See Section 01 7800 - Closeout Submittals for warranty requirements.

B. Correct defective Work within a five year period after Date of Substantial Completion.

C. Warranty: Include coverage for electric motor and transmission.

D. Provide five year manufacturer warranty for electric operating equipment.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Other Acceptable Manufacturers - Sectional Doors:

1. C.H.I. Overhead Doors; Model 3295 Aluminum Full-View Doors: www.chiohd.com/#sle.
2. Clopay Building Products; Model 3720: www.clopaydoor.com/#sle.
3. Substitutions: See Section 01 6000 - Product Requirements.

2.02 STEEL DOORS

A. Steel Doors: Flush steel, insulated; standard lift operating style with track and hardware; complying with DASMA 102, Commercial application.

1. Door Nominal Thickness: [1 3/4] inches ([1.0] mm) thick.

B. Door Panels: Steel construction; outer steel sheet of 1 3/4" minimum thickness, with insulation.

2.03 ALUMINUM DOORS

A. Aluminum Doors: Flush aluminum, insulated; standard lift operating style with track and hardware; complying with DASMA 102, Commercial application.

1. Door Nominal Thickness: as indicated on plans.

B. Door Panels: Flush aluminum construction; outer aluminum sheet; flat profile; core reinforcement of roll formed aluminum; rabbeted weather joints at meeting rails; insulated.

2.04 COMPONENTS

A. Track: Galvanized steel angles, 0.094 inch (2.4 mm) minimum thickness; 2-5/16 x 4 inch (59 x 102 mm) size, continuous one piece per side; galvanized steel mounting brackets 1/4 inch (6 mm) thick.

B. Pass Door: Manufacturers standard, finish to match.

C. Hinge and Roller Assemblies: Heavy duty hinges and adjustable roller holders of galvanized steel; floating hardened steel bearing rollers, located at top and bottom of each panel, each side.

D. Lift Mechanism: Torsion spring on cross head shaft, with braided galvanized steel lifting cables.

E. Sill Weatherstripping: Resilient hollow rubber strip, one piece; fitted to bottom of door panel, full length contact.

F. Jamb Weatherstripping: Roll formed steel section full height of jamb, fitted with resilient weatherstripping, placed in moderate contact with door panels.

G. Head Weatherstripping: EPDM rubber seal, one piece full length.

H. Panel Joint Weatherstripping: Neoprene foam seal, one piece full length.

I. Lock: Inside center mounted, adjustable keeper, spring activated latch bar with feature to retain in locked or retracted position; interior and exterior handle.

J. Lock Cylinders: Keyed alike.

2.05 MATERIALS

A. Sheet Steel: Hot-dipped galvanized steel sheet, ASTM A653/A653M, with G60/Z180 coating, plain surface.

B. Aluminum Sheet: ASTM B209 (ASTM B209M), 5005 alloy, H14 temper, plain surface.

C. Insulation: Foamed-in-place polyurethane, bonded to facing.

2.06 ELECTRIC OPERATION

A. Operator, Controls, Actuators, and Safeties: Comply with UL 325; provide products listed by ITS (DIR), UL (DIR) or testing agency acceptable to authorities having jurisdiction.

1. Provide interlock switches on motor operated units.

B. Electric Operators:

1. Mounting: Side mounted on cross head shaft.
2. Motor Enclosure:
    a. Exterior Doors: NEMA MG 1, Type 4; open drip proof.
    b. Interior Doors: NEMA MG 1, Type 1; open drip proof.
3. Motor Rating: 1/3 hp (250 W); continuous duty.
4. Motor Voltage: 120 volts, single phase, 60 Hz.
5. Motor Controller: NEMA ICS 2, full voltage, reversing magnetic motor starter.
6. Controller Enclosure: NEMA 250, Type 1.
7. Opening Speed: 12 inches per second (300 mm/s).
8. Brake: Adjustable friction clutch type, activated by motor controller.
9. Manual override in case of power failure.
10. Refer to Section 26 0583 for electrical connections.

C. Wiring Terminations: Provide terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated; enclose terminal lugs in terminal box sized to comply with NFPA 70.

D. Control Station: Provide standard three button (Open-Close-Stop) momentary-contact control device for each operator complying with UL 325.

1. 24 volt circuit.
2. Surface mounted, at interior door jamb.

3. Entrapment Protection Devices: Provide sensing devices and safety mechanisms complying with UL 325.

E. Safety Edge: Located at bottom of sectional door panel, full width; electro-mechanical sensitized type, wired to stop and reverse door direction upon striking object; hollow neoprene covered to provide weatherstrip seal.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that wall openings are ready to receive work and opening dimensions and tolerances are within specified limits.

B. Verify that electric power is available and of the correct characteristics.

3.02 PREPARATION

A. Prepare opening to permit correct installation of door unit to perimeter air and vapor barrier seal.

B. Apply primer to wood frame.

3.03 INSTALLATION

A. Install door unit assembly in accordance with manufacturer's instructions.

B. Anchor assembly to wall construction and building framing without distortion or stress.

C. Securely brace door tracks suspended from structure. Secure tracks to structural members only.

D. Fit and align door assembly including hardware.

E. Coordinate installation of electrical service. Complete power and control wiring from disconnect to unit components.

F. Install perimeter trim.

3.04 TOLERANCES

A. Maximum Variation from Plumb: 1/16 inch (1.5 mm).

B. Maximum Variation from Level: 1/16 inch (1.5 mm).

C. Longitudinal or Diagonal Warp: Plus or minus 1/8 inch (3 mm) from 10 ft (3 m) straight edge.

D. Maintain dimensional tolerances and alignment with adjacent work.

3.05 ADJUSTING

A. Adjust door assembly for smooth operation and full contact with weatherstripping.

3.06 CLEANING

A. Clean doors and frames and glazing.

B. Remove temporary labels and visible markings.

3.07 PROTECTION

A. Protect installed products from damage until Date of Substantial Completion.

B. Do not permit construction traffic through overhead door openings after adjustment and cleaning.

END OF SECTION

SECTION 08 3800
TRAFFIC DOORS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Double-acting self-closing swinging traffic doors.

B. Door accessories.

C. Door frames.

1.02 RELATED REQUIREMENTS

A. Section 05 5000 - Metal Fabrications: Steel jambs and header.

B. Section 08 1213 - Hollow Metal Frames: Flat-faced frame.

C. Section 08 7100 - Door Hardware: Wall-mounted door stops.

1.03 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's technical information for each type of door specified, including details about materials, components, profiles, gaskets, and finishes; include:

1. Preparation and installation instructions and methods.
2. Storage and handling requirements and recommendations.
3. Operation and maintenance data.

C. Shop Drawings: Show installation details of doors and frames, including elevations and attachment.

D. Selection Samples: For each finish requiring color selection, submit color samples indicating full line of available colors and finishes.

E. Warranty: Submit manufacturer warranty and ensure that forms have been completed in Owner 's name and registered with manufacturer.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section, with not less than three years of documented experience.

B. Installer Qualifications: Company specializing in performing type of work specified in this section with not less than three years of documented experience and approved by manufacturer.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver product in manufacturer's original unopened packages with label legible and intact.

B. Store doors at project site on edge or in upright position, under cover and elevated above grade, following manufacturer's instructions.

1.06 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Provide two year manufacturer warranty for molded polyethylene doors against damage due to worker-ridden vehicle traffic; state limitations in executed warranty.

PART 2 PRODUCTS

2.01 RIGID AND SEMI-RIGID TRAFFIC DOORS

A. Molded Polyethylene Double-Acting Traffic Doors : Integrally molded polyethylene plastic faces and edges with urethane foam fill.

1. Thickness: 1-1/2 inches (38 mm).
2. Faces: 1/8 inch (3 mm) minimum thickness; textured or pebble finish.
3. Construction: Manufacturer's standard construction reinforced for durability and rigidity, with all edges, cut-outs, and hardware preparations factory fabricated; provide view window cut-outs with joints sealed independently of glazing or trim.
4. Hardware Preparations: Factory reinforce, machine, and prepare for all hardware including field installed items; provide solid blocking for each hardware item; make field cutting, drilling or tapping unnecessary.

B. Lightweight Aluminum Double-Acting Traffic Doors : Aluminum sheet with formed or reinforced edges for stiffness.

1. Material: Aluminum sheet, thick, satin anodized finish.

C. Door Assemblies: Provide double-acting, self-closing pairs of doors for installation in frame provided by others; factory fabricated and finished, complete with hinges and specified accessories.

1. Door Swing: Minimum of 90 degrees each direction.
2. Hinges: V-cam gravity hinges at top and pivots at bottom; mounted on bottom of header and on top of floor; maximum rise 1-1/2 inches (38 mm); vertical and horizontal adjustment in the field ; manufacturer's standard lower hinge guards.
3. Hinge Guards: Manufacturer's standard material and configuration, to protect lower hinges from damage.
4. Exposed Metal Parts: Either stainless steel, extruded aluminum, or powder coated.
5. View Windows: Provide view window in each door panel unless otherwise indicated, centered in door width, and 48 inches (1220 mm), maximum, from finish floor to bottom of viewing area.
6. Dimensional Tolerances: Plus or minus 1/4 inch (6 mm) in width and height of each panel.

D. View Windows: Factory installed glazing in molded or extruded black thermoplastic or rubber gasket; centered in door width; use single glazing unless otherwise indicated.

1. Single Glazing: Acrylic glazing sheet, 1/4 inch (6 mm) thick, clear.

2.02 FLEXIBLE TRAFFIC DOORS

A. Transparent Flexible Traffic Doors : Pair of double-acting doors.

1. Material: Clear, flexible polyvinylchloride sheet, 0.12 inch (3 mm) thick; reinforced vinyl header, 1/8 inch (3 mm) thick, affixed on both sides of panel with vinyl cement.
2. Hinges: Top mounted, gravity-operated self-closing hinging system and bracket support for door leaf; no lower hinge.
3. Overlap at Center: 3/4 to 1-1/2 inch (19 to 38 mm).

2.03 ACCESSORY COMPONENTS

A. Frames: Provide doors pre-hung in frames by door manufacturer; tubular steel welded frame.

B. Provide tamper proof fasteners and other hardware as recommended by manufacturer for complete installation.

C. Additional Door Hardware: Specified in Section 08 7100.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that jambs and frames are square and plumb.

B. Verify that opening is ready to receive work and opening dimensions and clearances are as indicated on drawings.

C. If substrate preparation is responsibility of another installer, notify Architect of unsatisfactory conditions before proceeding.

D. Commencement of work by installer is acceptance of opening conditions.

3.02 PREPARATION

A. Clean surfaces thoroughly prior to installation.

3.03 INSTALLATION

A. Install doors with clearances, anchors, hardware, and accessories according to the manufacturer's instructions and as specified.

B. Install doors plumb, level, and properly aligned.

3.04 ADJUSTING

A. Clean and lubricate operating parts.

B. Adjust doors to open and close smoothly and freely without binding and for proper fit of seals.

3.05 CLEANING

A. Clean surfaces using methods as recommended by manufacturer.

3.06 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION

SECTION 08 4126
ALL-GLASS ENTRANCES AND STOREFRONTS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. All-glass entrances.

B. All-glass storefronts.

C. Swinging doors.

D. Interior sliding doors.

E. Interior multi-folding doors.

1.02 RELATED REQUIREMENTS

A. Section 05 4000 - Cold-Formed Metal Framing: Supplementary supports.

B. Section 08 7100 - Door Hardware.

C. Section 09 2116 - Gypsum Board Assemblies.

1.03 REFERENCE STANDARDS

A. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar 2015.

B. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes 2014.

C. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric) 2013.

D. ASTM B455 - Standard Specification for Copper-Zinc-Lead Alloy (Leaded-Brass) Extruded Shapes 2010 (Reapproved 2017).

E. ASTM C920 - Standard Specification for Elastomeric Joint Sealants 2018.

F. ASTM C1036 - Standard Specification for Flat Glass 2016.

G. ASTM C1048 - Standard Specification for Heat-Strengthened and Fully Tempered Flat Glass 2018.

H. BHMA A156.4 - American National Standard for Door Controls - Closers 2013.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene at project site seven calendar days prior to scheduled beginning of construction activities of this section to review section requirements.

1. Require attendance by representatives of installer and entities effected by adjacent or other work related to this section.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's descriptive literature for each component in all-glass entrance assembly.

C. Shop Drawings: Drawings showing layout, dimensions, identification of components, and interface with adjacent construction.

D. Selection Samples: Two sets, representing manufacturer's full range of available metal materials and finishes.

1.06 QUALITY ASSURANCE

A. Designer Qualifications: Design under direct supervision of a Professional Engineer experienced in design of this type of work and licensed in Maryland.

B. Installer Qualifications: Minimum three years of experience installing entrance assemblies similar to those specified in this section.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until installation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. All-Glass Entrances and Storefronts:

1. Avanti Systems USA; Eclipse Standard Doors: www.avantisystemsusa.com/#sle.
2. C.R. Laurence Company, Inc; CRL-Blumcraft 1301 Series Entrance System: www.crl-arch.com/#sle.
3. Substitutions: See Section 01 6000 - Product Requirements.

B. Fittings and Hardware:

1. Avanti Systems USA; Double Glazed Acoustic Swing Door Hardware: www.avantisystemsusa.com/#sle.
2. DORMA USA, Inc: www.dorma.com/#sle.
3. Substitutions: See Section 01 6000 - Product Requirements.

2.02 ALL-GLASS ENTRANCES AND STOREFRONTS ASSEMBLIES

A. Entrances and Storefronts: Factory fabricated assemblies consisting of frameless glass panels fastened with metal structural fittings in configuration indicated on drawings.

1. Operational Loads: Designed to withstand door operation under normal traffic without damage, racking, sagging, or deflection.
2. Prepared for all specified hardware whether specified in this section or not.
3. Finished metal surfaces protected with strippable film.
4. Factory assembled to greatest extent practicable; may be disassembled to accommodate shipping constraints.

B. Swinging Door Fittings and Hardware:

1. Top and bottom pivots concealed in full width rails top and bottom.
2. Single Doors: Floor mounted door stop.

C. Interior Top Hung Sliding Door Fittings and Hardware:

1. Top Track: Box channel, designed for support of panels of size and weight required.
2. Hangers: Overhead mounted twin roller assembly, concealed within top track, with concealed clamps.
3. Pulls Both Sides: .
4. Floor guides.

D. Interior Bottom Roller Sliding Door Fittings and Hardware:

1. Top and bottom box tracks, designed for support of panels of size and weight required.

2. Roller Assembly: Tandem rollers, concealed within bottom fitting.
3. Pulls Both Sides:
4. Positive stops, both ends.

E. Interior Multi-Folding Door Fittings and Hardware:

1. Top Track: Box channel, design for support of panels of size and weight required.
2. Hangers: Overhead mounted twin roller assembly, attached to pivots concealed in full width top and bottom rails.

2.03 FITTINGS AND HARDWARE

A. Rail Style Fittings for Swinging Doors and Related Fixed Glazing:

B. Patch Style Fittings for Swinging Doors and Related Fixed Glazing:

C. Headers for Swinging Doors and Related Fixed Glazing:

D. Pivot Systems for Glass Swinging Doors:

E. Overhead Concealed Closers and Bottom Pivots for Glass Swinging Doors: Non-handed closer for both single and double-acting doors with mechanical backcheck, and meeting requirements of BHMA A156.4, Grade 1.

1. Application: Center hung, with swing as indicated on drawings.
2. Hold Open: Fixed.
3. Opening Force: Comply with requirements of authorities having jurisdiction.
4. Door Weight: Maximum 200 lbs (91 kgs) for exterior doors, and 250 lbs (113 kgs) for interior doors, including hardware.
5. Provide accessories as required for complete installation, including wall/floor stop.

F. Floor Mounted Concealed Door Closers and Top Pivots for Glass Swinging Doors: Non-handed closer for both single and double-acting doors with mechanical backcheck, and meeting requirements of BHMA A156.4, Grade 1.

1. Application: Center hung, with swing as indicated on drawings.
2. Hold Open: Fixed.
3. Opening Force: Comply with requirements of authorities having jurisdiction.
4. Cover Plate Finish: As indicated.

2.04 BASIS OF DESIGN - FITTINGS AND HARDWARE

A. Rail Style Fittings for Swinging Doors and Related Fixed Glazing:

1. Basis of Design: C.R. Laurence Company, Inc; CRL Wedge-Lock Dry Glaze Door Rail System: www.crl-arch.com/#sle.
    a. Full Length Top Rails:
    b. Full Length Bottom Rails:

B. Patch Style Fittings for Swinging Doors and Related Fixed Glazing:

1. Basis of Design: C.R. Laurence Company, Inc; CRL Wedge-Lock Dry Glaze Patch System: www.crl-arch.com/#sle.

C. No-Rail, No-Patch Style Fittings for Swinging Doors:

D. Locksets and Exit Devices for Glass Doors:

E. Closers for Glass Doors:

F. Locking and Non-Locking Ladder Pulls for Glass Doors:

G. Full Height Handles, Hinges, and Door Closure Hardware:

H. Acoustic Double Glazed Handles, Hinges, Pivots, and Door Closure Hardware:

I. Glazing Accessories for Related Fixed Glazing:

J. Other Manufacturers: Not permitted; provide the product identified as "Basis of Design".

2.05 MATERIALS

A. Glass: Flat glass meeting requirements of ASTM C1036, Type I - Transparent Flat Glass, Quality Q3, and Kind FT, fully tempered, in accordance with ASTM C1048, and as follows:

1. Thickness: 3/8 inch (9.5 mm).
2. Color: Class 1, Clear.
3. Prepare glazing panels for indicated fittings and hardware before tempering.
4. Polish edges that will be exposed in finished work to bright flat polish.
5. Temper glass materials horizontally; visible tong marks or tong mark distortions are not permitted.

B. Aluminum Components: Comply with ASTM B221 (ASTM B221M), Alloy 6063, Temper T5.

C. Stainless Steel Components: Comply with ASTM A666, Type 304.

D. Brass Components: Comply with ASTM B455, UNS C38500, Architectural Bronze.

E. Sealant: One-part silicone sealant, comply with ASTM C920, clear.

2.06 ACCESSORIES

A. Exposed Fittings and Hardware: Stainless steel, brushed finish.

B. Fixed Glazed Panel Fittings: Sufficient to structurally support glazing and doors under specified loads; including but not limited to cover caps for door hardware, glazing mullions, clamp fittings and panel corner patches.

C. Sidelight and Transom Fittings: No rails; provide extruded aluminum channels, for recessed installation in construction above and below glazing panels for frameless appearance.

D. Sliding Door Fittings: Continuous rail at top and bottom of door:

1. Rail Cross-Section: 1-3/4 inches (44.4 mm) wide by 4 inches (101 mm) high.
2. Rail Profile: Tapered.

E. Latching Hardware: Manufacturer's standard flush bolt assemblies, concealed within bottom rail of indicated panels, prepared for lock cylinders specified in 08 7100; recessed dustproof bolt keeper.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that openings are acceptable.

B. Do not begin installation until substrates and openings have been properly prepared.

C. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.02 PREPARATION

A. Clean substrates thoroughly prior to installation.

B. Prepare substrates using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.03 INSTALLATION

A. Installation of cold-formed metal framing for openings as specified in Section 05 4000.

B. Installation of metal framing for openings as specified in Section 09 2116.

C. Install in accordance with manufacturer's installation instructions.

D. Tolerances:

1. Horizontal Components and Sight Lines: Not more than 1/8 inch in 10 feet (3.2 mm in 3 m) variation from level, non-cumulative.
2. Vertical Components and Sight Lines: Not more than 1/8 inch in 10 feet (3.2 mm in 3 m) variation from plumb, non-cumulative.
3. Variation from Plane or Indicated Location: Not more than 1/16 inch (1.6 mm).

3.04 ADJUSTING

A. Adjust doors to operate correctly, without binding to frame, sill, or adjacent doors.

B. Adjust door hardware for smooth operation.

3.05 CLEANING

A. Clean installed work to like-new condition.

3.06 PROTECTION

A. Protect installed products until Date of Substantial Completion.

B. Touch-up, repair or replace damaged products before Date of Substantial Completion.

END OF SECTION

SECTION 08 4313
ALUMINUM-FRAMED STOREFRONTS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Aluminum-framed storefront, with vision glass.

B. Infill panels of metal and glass.

C. Weatherstripping.

D. Door hardware.

1.02 RELATED REQUIREMENTS

A. Section 08 7100 - Door Hardware: Hardware items other than specified in this section.

B. Section 08 8000 - Glazing: Glass and glazing accessories.

1.03 REFERENCE STANDARDS

A. AAMA CW-10 - Care and Handling of Architectural Aluminum From Shop to Site 2015.

B. AAMA 501.2 - Quality Assurance and Diagnostic Water Leakage Field Check of Installed Storefronts, Curtain Walls, and Sloped Glazing Systems 2015.

C. AAMA 503 - Voluntary Specification for Field Testing of Newly Installed Storefronts, Curtain Walls and Sloped Glazing Systems 2014.

D. AAMA 609 & 610 - Cleaning and Maintenance Guide for Architecturally Finished Aluminum (Combined Document) 2015.

E. AAMA 1503 - Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections 2009.

F. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate 2014.

G. ASTM B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate (Metric) 2014.

H. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes 2014.

I. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric) 2013.

J. ASTM E283 - Standard Test Method for Determining the Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen 2004 (Reapproved 2012).

K. ASTM E330/E330M - Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference 2014.

L. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference 2000 (Reapproved 2016).

M. ASTM E783 - Standard Test Method for Field Measurement of Air Leakage Through Installed Exterior Windows and Doors 2002 (Reapproved 2018).

N. ASTM E1105 - Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Skylights, Doors, and Curtain Walls, by Uniform or Cyclic Static Air Pressure Difference 2015.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordinate with installation of other components that comprise the exterior enclosure.

B. Preinstallation Meeting: Conduct a preinstallation meeting one week before starting work of this section; require attendance by all affected installers.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide component dimensions, describe components within assembly, anchorage and fasteners, glass and infill, door hardware, and internal drainage details.

C. Shop Drawings: Indicate system dimensions, framed opening requirements and tolerances, affected related work, expansion and contraction joint location and details, and field welding required.

1. Include design engineer's stamp or seal on shop drawings for attachments and anchors.

D. Samples: Submit two samples illustrating finished aluminum surface, glass, infill panels, glazing materials.

E. Manufacturer's Certificate: Certify that the products supplied meet or exceed the specified requirements.

F. LEED Report: Accurately document the use of recycled materials and local/regional materials, as required by Section 01 35 14, Section 01 35 15, Section 01 35 16 and appropriate forms, and Section 01 60 00.

G. LEED Submittals: Provide VOC content documentation for field-applied sealants and primers; comply with VOC content limits of Section 01 61 16.

H. Design Data: Provide framing member structural and physical characteristics, engineering calculations, and dimensional limitations.

I. Hardware Schedule: Complete itemization of each item of hardware to be provided for each door, cross-referenced to door identification numbers in Contract Documents.

J. Field Quality Control Submittals: Report of field testing for water penetration and air leakage.

K. Designer's Qualification Statement.

L. Manufacturer's Qualification Statement.

M. Installer's Qualification Statement.

N. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner 's name and registered with manufacturer.

1.06 QUALITY ASSURANCE

A. Designer Qualifications: Design structural support framing components under direct supervision of a Professional Structural Engineer experienced in design of this Work and licensed in Maryland.

B. Manufacturer Qualifications: Company specializing in performing work of type specified and with at least five years of documented experience.

C. Installer Qualifications: Company specializing in performing work of type specified and with at least three years of documented experience.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Handle products of this section in accordance with AAMA CW-10.

B. Protect finished aluminum surfaces with wrapping. Do not use adhesive papers or sprayed coatings that bond to aluminum when exposed to sunlight or weather.

1.08 FIELD CONDITIONS

A. Do not install sealants when ambient temperature is less than 40 degrees F (5 degrees C). Maintain this minimum temperature during and 48 hours after installation.

1.09 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a ten year period after Date of Substantial Completion.

C. Provide ten year manufacturer warranty against failure of glass seal on insulating glass units, including interpane dusting or misting. Include provision for replacement of failed units.

D. Provide ten year manufacturer warranty against excessive degradation of exterior finish. Include provision for replacement of units with excessive fading, chalking, or flaking.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Aluminum-Framed Storefront and Doors:

1. Kawneer North America: www.kawneer.com/#sle.
2. YKK AP America Inc: www.ykkap.com/#sle.
3. Substitutions: See Section 01 6000 - Product Requirements.

2.02 STOREFRONT

A. Aluminum-Framed Storefront: Factory fabricated, factory finished aluminum framing members with infill, and related flashings, anchorage and attachment devices.

1. Glazing Position: Centered (front to back).
2. Finish: Superior performing organic coatings.
    a. Factory finish all surfaces that will be exposed in completed assemblies.
    b. Touch-up surfaces cut during fabrication so that no natural aluminum is visible in completed assemblies, including joint edges.
3. Fabrication: Joints and corners flush, hairline, and weatherproof, accurately fitted and secured; prepared to receive anchors and hardware; fasteners and attachments concealed from view; reinforced as required for imposed loads.
4. Construction: Eliminate noises caused by wind and thermal movement, prevent vibration harmonics, and prevent "stack effect" in internal spaces.
5. System Internal Drainage: Drain to the exterior by means of a weep drainage network any water entering joints, condensation occurring in glazing channel, and migrating moisture occurring within system.
6. Expansion/Contraction: Provide for expansion and contraction within system components caused by cycling temperature range of 170 degrees F (95 degrees C) over a 12 hour period without causing detrimental effect to system components, anchorages, and other building elements.
7. Movement: Allow for movement between storefront and adjacent construction, without damage to components or deterioration of seals.
8. Perimeter Clearance: Minimize space between framing members and adjacent construction while allowing expected movement.
9. Air and Vapor Seal: Maintain continuous air barrier and vapor retarder throughout assembly, primarily in line with inside pane of glazing and inner sheet of infill panel and heel bead of glazing compound.

B. Performance Requirements:

1. Wind Loads: Design and size components to withstand the specified load requirements without damage or permanent set, when tested in accordance with ASTM E330/E330M, using loads 1.5 times the design wind loads and 10 second duration of maximum load.

a. Member Deflection: Limit member deflection to flexure limit of glass in any direction, with full recovery of glazing materials.

2. Water Penetration Resistance on Manufactured Assembly: No uncontrolled water on interior face, when tested in accordance with ASTM E331 at pressure differential of 8 psf (390 Pa).

3. Air Leakage Laboratory Test: Maximum of 0.06 cu ft/min sq ft (0.3 L/sec sq m) of wall area, when tested in accordance with ASTM E283 at 6.27 psf (300 Pa) pressure differential across assembly.

4. Condensation Resistance Factor of Framing: 50, minimum, measured in accordance with AAMA 1503.

2.03 COMPONENTS

A. Aluminum Framing Members: Tubular aluminum sections, thermally broken with interior section insulated from exterior, drainage holes and internal weep drainage system.

1. Glazing Stops: Flush.

B. Glazing: As specified in Section 08 8000.

C. Infill Panels: Insulated, aluminum sheet face and back, with edges formed to fit glazing channel and sealed.

2.04 MATERIALS

A. Extruded Aluminum: ASTM B221 (ASTM B221M).

B. Sheet Aluminum: ASTM B209 (ASTM B209M).

C. Fasteners: Stainless steel.

D. Glazing Gaskets: Type to suit application to achieve weather, moisture, and air infiltration requirements.

2.05 HARDWARE

A. For each door, include weatherstripping, sill sweep strip and threshold.

B. Other Door Hardware: As specified in Section 08 7100.

C. Weatherstripping: Wool pile, continuous and replaceable; provide on all doors.

D. Sill Sweep Strips: Resilient seal type, retracting, of neoprene; provide on all doors.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify dimensions, tolerances, and method of attachment with other work.

B. Verify that wall openings and adjoining air and vapor seal materials are ready to receive work of this section.

3.02 INSTALLATION

A. Install wall system in accordance with manufacturer's instructions.

B. Attach to structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.

C. Provide alignment attachments and shims to permanently fasten system to building structure.

D. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances, aligning with adjacent work.

E. Provide thermal isolation where components penetrate or disrupt building insulation.

F. Install sill flashings. Turn up ends and edges; seal to adjacent work to form water tight dam.

G. Where fasteners penetrate sill flashings, make watertight by seating and sealing fastener heads to sill flashing.

H. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.

I. Set thresholds in bed of sealant and secure.

J. Touch-up minor damage to factory applied finish; replace components that cannot be satisfactorily repaired.

3.03 TOLERANCES

A. Maximum Variation from Plumb: 0.06 inch per 3 feet (1.5 mm per m) non-cumulative or 0.06 inch per 10 feet (1.5 mm per 3 m), whichever is less.

B. Maximum Misalignment of Two Adjoining Members Abutting in Plane: 1/32 inch (0.8 mm).

3.04 FIELD QUALITY CONTROL

A. Provide services of storefront manufacturer's field representative to observe for proper installation of system and submit report.

B. See Section 01 4000 - Quality Requirements, for independent field testing and inspection requirements, and requirements for monitoring quality of specified product installations.

C. Water-Spray Test: Provide water spray quality test of installed storefront components in accordance with AAMA 501.2 during construction process and before installation of interior finishes.

1. Perform a minimum of two tests in each designated area as indicated on drawings.

2. Conduct tests in each area prior to 10 percent and 50 percent completion of this work.

D. Provide field testing of installed storefront system by independent laboratory in accordance with AAMA 503 during construction process and before installation of interior finishes.

1. Perform a minimum of two tests in each designated area as indicated on drawings.

2. Conduct tests in each area prior to 10 percent and 50 percent completion of this work.

3. Field test for water penetration in accordance with ASTM E1105 with uniform static air pressure difference (Procedure A) not less than 4.18 psf (200 Pa).

a. Maximum allowable rate of water penetration in 15-minute test is 0.5 ounce (14 gram) that is not contained in an area with provisions to drain to exterior, or collected on surface of interior horizontal framing member.

4. Field test for air leakage in accordance with ASTM E783 with uniform static air pressure difference of 1.57 psf (75 Pa).

E. Repair or replace storefront components that have failed designated field testing, and retest to verify performance conforms to specified requirements.

3.05 ADJUSTING

A. Adjust operating hardware and sash for smooth operation.

3.06 CLEANING

A. Remove protective material from pre-finished aluminum surfaces.

B. Wash down surfaces with a solution of mild detergent in warm water, applied with soft, clean wiping cloths, and take care to remove dirt from corners and to wipe surfaces clean.

C. Upon completion of installation, thoroughly clean aluminum surfaces in accordance with AAMA 609 & 610.

3.07 PROTECTION

A. Protect installed products from damage until Date of Substantial Completion.

END OF SECTION

SECTION 08 4413
GLAZED ALUMINUM CURTAIN WALLS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Aluminum-framed curtain wall, with vision glazing and infill panels.

B. Aluminum-framed sloped curtain wall, self-supporting, with vision glazing.

C. Firestopping between curtain wall and edge of floor slab.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Weld plates embedded in concrete for attachment of anchors.

B. Section 07 9200 - Joint Sealants: Sealing joints between frames and adjacent construction.

C. Section 08 4313 - Aluminum-Framed Storefronts: Entrance framing and doors.

D. Section 08 8000 - Glazing.

1.03 REFERENCE STANDARDS

A. AAMA CW-10 - Care and Handling of Architectural Aluminum From Shop to Site 2015.

B. AAMA 503 - Voluntary Specification for Field Testing of Newly Installed Storefronts, Curtain Walls and Sloped Glazing Systems 2014.

C. AAMA 609 & 610 - Cleaning and Maintenance Guide for Architecturally Finished Aluminum (Combined Document) 2015.

D. ASTM E283 - Standard Test Method for Determining the Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen 2004 (Reapproved 2012).

E. ASTM E330/E330M - Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference 2014.

F. ASTM E1105 - Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Skylights, Doors, and Curtain Walls, by Uniform or Cyclic Static Air Pressure Difference 2015.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide component dimensions, describe components within assembly, anchorage and fasteners, internal drainage details, glazing, and infill.

C. Shop Drawings: Indicate system dimensions, framed opening requirements and tolerances, affected related Work, expansion and contraction joint location and details, and field welding required.

D. Samples: Submit two samples indicate size illustrating finished aluminum surface, glazing, infill panels, and glazing materials.

E. Manufacturer's Certificate: Certify that the products supplied meet or exceed the specified requirements.

F. Design Data: Provide framing member structural and physical characteristics and engineering calculations, and identify dimensional limitations; include load calculations at points of attachment to building structure.

G. Structural Sealant Glazing (SSG): Submit product data and calculations showing compliance with performance requirements.

H. Test Reports: Submit results of full-size mock-up testing. Reports of tests previously performed on the same design are acceptable.

I. Field Quality Control Submittals: Report of field testing for water penetration and air leakage.

J. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner 's name and registered with manufacturer.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Handle products of this section in accordance with AAMA CW-10.

B. Protect finished aluminum surfaces with wrapping. Do not use adhesive papers or sprayed coatings that bond to aluminum when exposed to sunlight or weather.

1.06 FIELD CONDITIONS

A. Do not install sealants when ambient temperature is less than 40 degrees F (5 degrees C). Maintain this minimum temperature during and 48 hours after installation.

1.07 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a five year period after Date of Substantial Completion.

PART 2 PRODUCTS

2.01 BASIS OF DESIGN

A. Other Manufacturers: Provide either product identified as "Basis of Design" or an equivalent product of one of the manufacturers listed below.

2.02 CURTAIN WALL

A. Aluminum-Framed Curtain Wall: Factory fabricated, factory finished aluminum framing members with infill, and related flashings, anchorage and attachment devices.

1. Finish: Class I natural anodized.

    a. Factory finish surfaces that will be exposed in completed assemblies.

    b. Coat concealed metal surfaces that will be in contact with cementitious materials or dissimilar metals with bituminous paint.

2. Provide flush joints and corners, weathersealed, accurately fitted and secured; prepared to receive anchors; fasteners and attachments concealed from view; reinforced as required for imposed loads.

3. Construction: Eliminate noises caused by wind and thermal movement, prevent vibration harmonics, and prevent "stack effect" in internal spaces.

4. System Internal Drainage: Drain to the exterior by means of a weep drainage network any water entering joints, condensation occurring in glazing channel, and migrating moisture occurring within system.

B. Structural Performance Requirements: Design and size components to withstand the following load requirements without damage or permanent set.

1. Design Wind Loads: Comply with the following:

    a. Measure performance by testing in accordance with ASTM E330/E330M, using test loads equal to 1.5 times the design wind loads and 10 second duration of maximum pressure.

2. Movement: Accommodate the following movement without damage to components or deterioration of seals:

a. Expansion and contraction caused by 180 degrees F (82 degrees C) surface temperature.

b. Expansion and contraction caused by cycling temperature range of 170 degrees F (77 degrees C) over a 12 hour period.

c. Movement of curtain wall relative to perimeter framing.

d. Deflection of structural support framing, under permanent and dynamic loads.

C. Water Penetration Resistance on Manufactured Assembly: No uncontrolled water on indoor face when tested as follows:

1. Test Pressure Differential: 10 psf (480 Pa).

D. Air Leakage Laboratory Test: Maximum of 0.06 cu ft/min sq ft (0.3 L/sec sq m) of wall area, when tested in accordance with ASTM E283 at 6.27 psf (300 Pa) pressure differential across assembly.

2.03 COMPONENTS

A. Aluminum Framing Members: Tubular aluminum sections, thermally broken with interior section insulated from exterior, drainage holes and internal weep drainage system.

B. Glazing: As specified in Section 08 8000.

2.04 MATERIALS

A. Extruded Aluminum: ASTM B221 (ASTM B221M).

B. Glazing Gaskets: Type to suit application to achieve weather, moisture, and air infiltration requirements.

C. Glazing Accessories: As specified in Section 08 8000.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify dimensions, tolerances, and method of attachment with other related work.

B. Verify that curtain wall openings and adjoining air and vapor seal materials are ready to receive work of this section.

C. Verify that anchorage devices have been properly installed and located.

3.02 INSTALLATION

A. Install curtain wall system in accordance with manufacturer's instructions.

B. Attach to structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.

C. Provide alignment attachments and shims to permanently fasten system to building structure.

D. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances, aligning with adjacent work.

E. Provide thermal isolation where components penetrate or disrupt building insulation.

F. Install sill flashings. Turn up ends and edges; seal to adjacent work to form water tight dam.

G. Touch-up minor damage to factory applied finish; replace components that cannot be satisfactorily repaired.

3.03 TOLERANCES

A. Maximum Variation from Plumb: 0.06 inches every 3 ft (1.5 mm/m) non-cumulative or 0.5 inches per 100 ft (12 mm/30 m), whichever is less.

B. Maximum Misalignment of Two Adjoining Members Abutting in Plane: 1/32 inch (0.8 mm).

C. Sealant Space Between Curtain Wall Mullions and Adjacent Construction: Maximum of 3/4 inch (19 mm) and minimum of 1/4 inch (6 mm).

3.04 FIELD QUALITY CONTROL

A. Provide services of curtain wall manufacturer's field representative to observe for proper installation of system and submit report.

B. Provide field testing of installed curtain wall system by independent laboratory in accordance with AAMA 503 during construction process and before installation of interior finishes.

1. Perform a minimum of two tests in each designated area as indicated on drawings.
2. Conduct tests in each area prior to 10 percent and 50 percent completion of this work.
3. Field test for water penetration in accordance with ASTM E1105 with uniform static air pressure difference (Procedure A) not less than 4.18 psf (200 Pa).
    a. Maximum allowable rate of water penetration in 15-minute test is 0.5 ounce (14 gram) that is not contained in an area with provisions to drain to exterior, or collected on surface of interior horizontal framing member.

C. Repair or replace curtain wall components that have failed designated field testing, and retest to verify performance conforms to specified requirements.

3.05 ADJUSTING

A. Adjust operating sash for smooth operation.

3.06 CLEANING

A. Remove protective material from pre-finished aluminum surfaces.

B. Wash down surfaces with a solution of mild detergent in warm water, applied with soft, clean wiping cloths, take care to remove dirt from corners, and wipe surfaces clean.

C. Upon completion of installation, thoroughly clean aluminum surfaces in accordance with AAMA 609 & 610.

3.07 PROTECTION

A. Protect installed products from damage until Date of Substantial Completion.

END OF SECTION

SECTION 08 4418
GLAZED STEEL CURTAIN WALLS

PART 2 PRODUCTS

1.01 CURTAIN WALL

A. Steel-Framed Curtain Wall: Factory fabricated, factory finished steel framing members with infill, and related flashings, anchorage and attachment devices.

1. Finish of Exposed Steel: Superior performing organic coatings.
    a. Factory finish surfaces that will be exposed in completed assemblies.
    b. Coat concealed metal surfaces that will be in contact with cementitious materials or dissimilar metals with bituminous paint.
2. Finish of Exposed Aluminum: Class I natural anodized.
    a. Factory finish surfaces that will be exposed in completed assemblies.
    b. Coat concealed metal surfaces that will be in contact with cementitious materials or dissimilar metals with bituminous paint.
3. Provide flush joints and corners, weathersealed, accurately fitted and secured; prepared to receive anchors; fasteners and attachments concealed from view; reinforced as required for imposed loads.
4. Construction: Eliminate noises caused by wind and thermal movement, prevent vibration harmonics, and prevent "stack effect" in internal spaces.
5. System Internal Drainage: Drain to the exterior by means of a weep drainage network any water entering joints, condensation occurring in glazing channel, and migrating moisture occurring within system.

1.02 PERFORMANCE REQUIREMENTS

A. Structural Performance Requirements: Design and size components to withstand the following load requirements without damage or permanent set.

1. Design Wind Loads: Comply with the applicable code.
2. Movement: Accommodate the following movement without damage to components or deterioration of seals:
    a. Expansion and contraction caused by 180 degrees F (82 degrees C) surface temperature.
    b. Expansion and contraction caused by cycling temperature range of 170 degrees F (77 degrees C) over a 12 hour period.
    c. Movement of curtain wall relative to perimeter framing.
    d. Deflection of structural support framing, under permanent and dynamic loads.

B. Water Penetration Resistance on Manufactured Assembly: No uncontrolled water on indoor face when tested as follows:

1. Test Pressure Differential: 10 lbs per sq ft (480 Pa).

C. Air Leakage Laboratory Test: Maximum of 0.06 cu ft/min/sq ft (0.3 L/s/sq m) of wall area, when tested in accordance with ASTM E283 at 6.27 lbs per sq ft (300 Pa) pressure differential across assembly.

1.03 COMPONENTS

A. Glazing: As specified in Section 08 8000.

1.04 FINISHES

A. Class I Natural Anodized Finish: AAMA 611 AA-M12C22A41 Clear anodic coating not less than 0.7 mils (0.018 mm) thick.

B. Superior Performance Organic Coating System: AAMA 2605 multiple coat, thermally cured polyvinylidene fluoride system.

C. Touch-Up Materials: As recommended by coating manufacturer for field application.

END OF SECTION

SECTION 08 4435
PROTECTIVE FRAMED GLAZING ASSEMBLIES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Exterior protective framed glazing assembly.

B. Interior protective framed glazing assembly.

1.02 RELATED REQUIREMENTS

A. Section 05 1200 - Structural Steel Framing: Steel attachment members.

B. Section 07 8400 - Firestopping: Firestop at exterior wall assembly junction with structure.

C. Section 08 7100 - Door Hardware: Hardware installation requirements.

D. Section 08 7100 - Door Hardware.

1.03 REFERENCE STANDARDS

A. AAMA CW-10 - Care and Handling of Architectural Aluminum From Shop to Site 2015.

B. AAMA 501.2 - Quality Assurance and Diagnostic Water Leakage Field Check of Installed Storefronts, Curtain Walls, and Sloped Glazing Systems 2015.

C. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum 2014 (2015 Errata).

D. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate 2014.

E. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements 2009 (Reapproved 2016).

F. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials 2018c.

G. ASTM E283 - Standard Test Method for Determining the Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen 2004 (Reapproved 2012).

H. ASTM E330/E330M - Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference 2014.

I. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference 2000 (Reapproved 2016).

J. ASTM E413 - Classification for Rating Sound Insulation 2016.

K. ASTM E1300 - Standard Practice for Determining Load Resistance of Glass in Buildings 2016.

L. NFPA 80 - Standard for Fire Doors and Other Opening Protectives 2019.

M. UL 263 - Standard for Fire Tests of Building Construction and Materials Current Edition, Including All Revisions.

N. UL 752 - Standard for Bullet-Resisting Equipment Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordinate with installation of other components that comprise the exterior enclosure.

B. Preinstallation Meeting: Conduct a preinstallation meeting one week before starting work of this section; require attendance by each affected installer.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide evidence of compliance with fire performance criteria and manufacturer's published product data on framing components, glazing, anchorage and fasteners, and doors, if any.

C. Shop Drawings: Indicate system dimensions, framed opening requirements and tolerances, affected related work, expansion and contraction joint location and details, and field welding required.

D. Samples: Submit samples as follows illustrating each exposed metal finish of interior and exterior project-specific applications.

1. For color anodized aluminum, submit minimum of three samples illustrating expected range of color in actual production.

2. For factory-finished steel members, submit minimum of three color selection samples.

E. Design Data: Provide framing member structural and physical characteristics and engineering calculations, and identify dimensional limitations.

F. Design Data: Submit framing member structural and physical characteristics and engineering calculations, and identify dimensional limitations.

G. Test Reports: Submit results of full-size mock-up testing for criteria other than fire performance. Reports of tests previously performed on the same design are acceptable.

H. Hardware Schedule: Complete itemization of each item of hardware to be provided for each door, cross-referenced to door identification numbers in Contract Documents.

I. Field Quality Control Submittals: Submit report of field testing for water leakage.

J. Installer's Qualification Statement.

K. Designer's Qualification Statement.

L. Warranty Documentation: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.06 QUALITY ASSURANCE

A. Designer Qualifications: Perform design under direct supervision of a Professional Structural Engineer experienced in design of this type of work and licensed in Maryland.

B. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with at least ten years documented experience.

C. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years documented experience.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Handle products of this section in accordance with AAMA CW-10.

B. Protect finished surfaces with wrapping. Do not use adhesive papers or sprayed coatings that bond to substrate when exposed to sunlight or weather.

1.08 FIELD CONDITIONS

A. Do not install sealants when ambient temperature is less than 40 degrees F (5 degrees C), and maintain above this minimum temperature during and for 48 hours after installation.

1.09 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a five year period after Date of Substantial Completion.

C. Provide five year manufacturer warranty against failure of glass seal on insulating glass units, including interpane dusting or misting. Include provision for replacement of failed units.

D. Provide five year manufacturer warranty against excessive degradation of exterior finish. Include provision for replacement of units with excessive fading, chalking, or flaking.

PART 2 PRODUCTS

2.01 EXTERIOR PROTECTIVE FRAMED GLAZING ASSEMBLIES

A. Fabricators - Single Story Walls:

B. Provide factory fabricated, factory finished framing members with glazing and related flashings, anchorage and attachment devices.

1. Construction: Eliminate noises caused by wind and thermal movement, prevent vibration harmonics, and prevent "stack effect" within internal spaces.

2. System Internal Drainage: Drain to the exterior by means of a weep drainage network any water entering joints, condensation occurring in glazing channel, and migrating moisture occurring within system.

C. Fire Performance: Provide hourly fire-resistance-rating as indicated; tested as an assembly including glazing in compliance with ASTM E119 or UL 263 and requirements of local authorities having jurisdiction.

1. Acceptable evidence of compliance includes listing by UL (DIR), ITS (DIR) or testing agency acceptable to authorities having jurisdiction.

D. Structural Performance: Design and size components to withstand the following loading without damage or permanent set.

1. Design Live Loads: Comply with requirements of the following:

a. Measure performance by testing in accordance with ASTM E330/E330M, using test loads equal to 1.5 times the design wind loads and 10 second duration of maximum pressure.

2. Comply with ASTM E1300 for design load resistance of glass type, thickness, dimensions, and maximum lateral deflection of supported glass.

3. Provide glass edge support system sufficiently stiff to limit the lateral deflection of supported glass edges to less than 1/175 of their lengths or 3/4 inch (19 mm), whichever is less, under specified design load.

4. Movement: Accommodate the following movement without damage to components or deterioration of seals:

a. Expansion and contraction caused by 180 degrees F (82 degrees C) surface temperature.

b. Expansion and contraction caused by cycling temperature range of 170 degrees F (95 degrees C) over a 12 hour period.

c. Movement of wall relative to perimeter framing.

d. Deflection of structural support framing, under permanent and dynamic loads.

E. Water Penetration: No uncontrolled water on indoor face when tested as follows:

1. Test Pressure Differential: 10 pound-force per square foot (480 Pa).

F. Air Leakage: Maximum of 0.06 cu ft/min/sq ft (0.3 L/s/sq m) of wall area, when tested in accordance with ASTM E283 at 6.27 pounds per square foot (300 Pa) pressure differential across assembly.

2.02 INTERIOR PROTECTIVE FRAMED GLAZING ASSEMBLIES

A. Provide factory fabricated, factory finished framing members with glazing and related flashings, anchorage and attachment devices.
   1. Perimeter Clearance: Minimize space between framing members and adjacent construction while allowing expected movement.
   2. Preparation for Window Treatments: Provide reinforced interior horizontal head rail.

B. Structural Performance: Design to support dead loads and horizontal live loads equivalent to the following; coordinate connection to main structural members.
   1. Design Live Loads: Comply with requirements of the following:
      a. Positive Design Live Load: .
      b. Negative Design Live Load: .
      c. Measure performance by testing in accordance with ASTM E330/E330M, using test loads equal to 1.5 times the design loads and 10 second duration of maximum pressure.
   2. Comply with ASTM E1300 for design load resistance of glass type, thickness, dimensions, and maximum lateral deflection of supported glass.
   3. Provide glass edge support system sufficiently stiff to limit the lateral deflection of supported glass edges to less than 1/175 of their lengths or 3/4 inch (19 mm), whichever is less, under specified design load.

C. Fire Performance: Provide hourly fire-resistance-rating as indicated; tested as an assembly including glazing in compliance with ASTM E119 or UL 263 and requirements of local authorities having jurisdiction.
   1. Acceptable evidence of compliance includes listing by UL (DIR), ITS (DIR) or testing agency acceptable to authorities having jurisdiction.

D. Acoustical Performance: Substantiate acoustical performance using test sample identical to system being specified, including glazing.
   1. Sound Attenuation: STC of 45, minimum, both directions.
   2. Test Method: ASTM E90, with calculation in accordance with ASTM E413.

2.03 DOORS AND HARDWARE

A. Doors: Glazed hollow steel.
   1. Thickness: 1-3/4 inches (44.5 mm).
   2. Top Rail: 4 inches (102 mm) wide.
   3. Vertical Stiles: 4-1/2 inches (114.3 mm) wide.
   4. Bottom Rail: 6 inches (152 mm) wide.
   5. Glazing Stops: Square.
   6. Finish: Same as framing.

B. Door Hardware:
   1. Types: As specified in Section 08 7100.
   2. Finish on Hand-Contacted Items: Polished chrome.

C. Interior Doors:
   1. Hinges: Butt type, swing clear; top and bottom.

2. Closers: .

2.04 FINISHES

A. Finishing: Apply factory finish to surfaces that will be exposed in completed assemblies.

1. Touch-up surfaces cut during fabrication so that no natural metal surfaces are visible in completed assemblies, including joint edges.

B. Aluminum Finish: Class I natural anodized.

1. Apply factory finish to surfaces that will be exposed in completed assemblies.

2. Coat concealed metal surfaces that will be in contact with cementitious materials or dissimilar metals with bituminous paint.

C. Class I Natural Anodized Finish: AAMA 611 AA-M12C22A41 Clear anodic coating not less than 0.7 mils (0.018 mm) thick.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify dimensions, tolerances, and method of attachment with other work.

B. Verify that wall openings and adjoining air and vapor seal materials are ready to receive work of this section.

C. Verify that anchorage devices have been properly installed and located.

3.02 INSTALLATION

A. Install wall system in accordance with limitations of fire rating and with manufacturer's instructions.

B. Install framed glazing assemblies in accordance with NFPA 80 and requirements of local authorities having jurisdiction.

C. Attach to structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.

D. Provide alignment attachments and shims to permanently fasten system to building structure.

E. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances, aligning with adjacent work.

F. Provide thermal isolation where components penetrate or disrupt building insulation.

G. Install sill flashings. Turn up ends and edges; seal to adjacent work to form water tight dam.

H. Where fasteners penetrate sill flashings, make watertight by seating and sealing fastener heads to sill flashing.

I. Install firestopping at each floor slab edge.

J. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.

K. Set door thresholds in bed of mastic and secure.

L. Install door hardware using templates provided.

1. See Section 08 7100 for hardware installation requirements.

M. Touch-up minor damage to factory applied finish; replace components that cannot be satisfactorily repaired.

3.03 TOLERANCES

A. Maximum Variation from Plumb: 1/16 inch every 3 feet (1.6 mm every 0.914 m) non-cumulative or 1/2 inch per 100 ft (12.7 mm per 30.5 m), whichever is less.

B. Maximum Misalignment of Two Adjoining Members Abutting in Plane: 1/32 inch (0.8 mm).

C. Sealant Space Between Mullions and Adjacent Construction: Maximum of 3/4 inch (19 mm) and minimum of 1/4 inch (6.4 mm).

3.04 FIELD QUALITY CONTROL

A. Refer to Section 01 4000 - Quality Requirements, for independent testing and inspection requirements. Inspection will monitor quality of installation and glazing.

B. Exterior Walls: Test installed wall for water leakage in accordance with AAMA 501.2 hose test.

C. Replace components that have failed field testing and retest until performance is satisfactory.

3.05 ADJUSTING

A. Adjust doors for smooth operation.

3.06 CLEANING

A. Remove protective material from pre-finished surfaces.

B. Wash down surfaces with a solution of mild detergent in warm water, applied with soft, clean wiping cloths. Take care to remove dirt from corners. Wipe surfaces clean.

3.07 PROTECTION

A. Protect installed products from damage until Date of Substantial Completion.

END OF SECTION

SECTION 08 4500
TRANSLUCENT WALL AND ROOF ASSEMBLIES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Self supporting aluminum framed vertical glazing system.

B. Sandwich panels of translucent skins separated with an aluminum grid.

C. Insulated metal infill panels.

1.02 RELATED REQUIREMENTS

A. Section 08 5113 - Aluminum Windows.

B. Section 08 8000 - Glazing.

1.03 REFERENCE STANDARDS

A. AAMA CW-DG-1 - Aluminum Curtain Wall Design Guide Manual 1996 (R2005).

B. AAMA CW-10 - Care and Handling of Architectural Aluminum From Shop to Site 2015.

C. AAMA 501.2 - Quality Assurance and Diagnostic Water Leakage Field Check of Installed Storefronts, Curtain Walls, and Sloped Glazing Systems 2015.

D. AAMA 1503 - Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections 2009.

E. ASTM A36/A36M - Standard Specification for Carbon Structural Steel 2014.

F. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process 2017.

G. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate 2014.

H. ASTM B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate (Metric) 2014.

I. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes 2014.

J. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric) 2013.

K. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements 2009 (Reapproved 2016).

L. ASTM E283 - Standard Test Method for Determining the Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen 2004 (Reapproved 2012).

M. ASTM E330/E330M - Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference 2014.

N. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference 2000 (Reapproved 2016).

O. ASTM E413 - Classification for Rating Sound Insulation 2016.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide component dimensions, describe components within assembly, anchorage and fasteners, panel configuration, internal drainage details and [_____].

C. Shop Drawings: Indicate system dimensions, framed opening requirements and tolerances, affected related Work, weep drainage network, expansion and contraction joint location and details, and field welding required.

D. Samples: Submit two samples illustrating prefinished aluminum surface, specified panel with skins, glazing materials illustrating edge and corner.

E. Design Data: Show structural and physical characteristics, engineering calculations, and dimensional limitations.

F. Test Reports: Submit substantiating engineering data, test results of previous tests by independent laboratory which purport to meet performance criteria, and other supportive data.

G. Installation Data: Special installation requirements.

H. Designer's Qualification Statement.

I. Manufacturer's Qualification Statement.

J. Installer's Qualification Statement.

1.05 QUALITY ASSURANCE

A. Perform work in accordance with AAMA CW-DG-1.

1. Maintain one copy on project site.

B. Designer Qualifications: Design structural support framing components under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in Maryland.

C. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years of documented experience.

D. Installer Qualifications: Company specializing in performing the work of this section with at least three years of documented experience.

1.06 MOCK-UP

A. Provide mock-up, include translucent panels, intermediate mullion. Assemble to illustrate component assembly including glazing materials, weep drainage system, attachments, anchors, and perimeter sealant.

B. Mock-up may remain as part of the Work.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Handle work of this section in accordance with AAMA CW-10.

B. Protect prefinished aluminum surfaces with wrapping; do not use adhesive papers or sprayed coatings that bond when exposed to sunlight or weather.

1. Puncture wrappings at ends for ventilation.

1.08 FIELD CONDITIONS

A. Do not install sealants when ambient temperature is less than 40 degrees F (5 degrees C).

B. Maintain this minimum temperature during and after installation of sealants.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Other Acceptable Sandwich Panel Translucent Wall and Roof Assemblies Manufacturers:

1. Enduro Composites, Inc; Tuff Span Translucent Structural Daylighting Panels: www.endurocomposites.com/#sle.
2. Kalwall: www.kalwall.com/#sle.
3. Substitutions: See Section 01 6000 - Product Requirements.

2.02 PERFORMANCE REQUIREMENTS

A. System Design: Design and size components to withstand dead loads and live loads caused by snow, hail, and positive and negative wind loads acting on plane of panel without damage or permanent set.

1. Design Loads: Calculate in accordance with applicable code.
2. Measure performance in accordance with ASTM E330/E330M, using test load of 1.5 times the design wind pressure and 10 second duration of maximum load.

B. Deflection: Limit mullion deflection to 3/4 inch (19 mm) with full recovery of glazing materials.

C. System Assembly: Accommodate without damage to system, components or deterioration of seals; movement within system; movement between system and perimeter framing components; dynamic loading and release of loads; deflection of structural support framing, tolerance of supporting components, shortening of building concrete structural columns.

D. Sound Attenuation Through Wall System (Exterior to Interior): STC of 45, minimum, calculated in accordance with ASTM E413, tested in accordance with ASTM E90.

E. Air Infiltration: Limit air infiltration through assembly to 0.06 cu ft/min sq ft (0.30 L/sec sq m) of sloped glazed area, measured at a reference differential pressure across assembly of 1.57 psf (75 Pa) as measured in accordance with ASTM E283.

F. Static Pressure Vapor Seal: Provide vapor seal that maintains interior static pressure of at least 1 inch (25.4 mm) water column (WC) at 72 degrees F (22 degrees C) and 40 percent relative humidity.

G. Condensation Resistance Factor (CRF): Minimum required in accordance with AAMA 1503.

H. Water Leakage: None, when measured in accordance with ASTM E331 at a test pressure difference of 2.86 lbf/sq ft (140 Pa).

I. Expansion / Contraction: System to provide for expansion and contraction within system components caused by a cycling temperature range of 170 degrees F (95 degrees C) over a 12 hour period without causing detrimental effect to system components.

J. System Internal Drainage: Drain water entering joints, condensation occurring in framing system, or migrating moisture occurring within system, to the exterior by a weep drainage network.

K. Fabricate to prevent vibration harmonics, thermal movement transmitted to other building elements, and loosening, weakening, or fracturing of attachments or components of system.

2.03 MATERIALS

A. Extruded Aluminum: ASTM B221 (ASTM B221M).

B. Sheet Aluminum: ASTM B209 (ASTM B209M).

C. Sheet Steel: Hot-dipped galvanized steel sheet, ASTM A653/A653M, with G90/Z275 coating.

D. Steel Sections: ASTM A36/A36M; shaped to suit mullion sections.

E. Fasteners: Stainless steel.

2.04 COMPONENTS

A. Translucent Wall and Roof System: Structurally reinforced translucent panels, with self supporting framing, shop fabricated, factory prefinished, battens, cap strips, related flashings, anchorage and attachment devices.

B. Panels: Bonded to both sides of structural extruded aluminum grid of pattern as indicated; exposed surfaces of exterior sheet chemically and permanently treated to protect against surface erosion and extreme weather conditions; ; polyvinyl fluoride film coated.

C. Operable Sash: Specified in Section 08 5113.

D. Glazing Materials for Operable Sash: As specified in Section 08 8000.

E. Sealant for Within Translucent Assembly: As required by manufacturer.

F. Sill Flashing Sealant: Elastomeric, silicone or polyurethane, and compatible with flashing material.

2.05 FABRICATION

A. Fabricate system components with minimum clearances and shim spacing around perimeter of assembly, and ensure proper installation and dynamic movement of perimeter seals.

B. Accurately fit and secure joints and corners. Make joints flush, hairline and weatherproof.

C. Prepare components to receive fabricated anchor devices.

D. Locate fasteners and attachments to ensure concealment from view.

E. Reinforce framing members for external imposed loads.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify dimensions, tolerances, and method of attachment with other work.

B. Verify wall openings and adjoining air barrier and vapor retarder materials are ready to receive work of this section.

3.02 INSTALLATION

A. Install translucent panel system with cells vertical in accordance with manufacturer instructions.

B. Attach to structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.

C. Provide alignment attachments and shims to permanently fasten system to building structure.

D. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances and align with adjacent work.

E. Provide thermal isolation where components penetrate or disrupt building insulation.

F. Install sill flashings.

G. Coordinate installation of air stop at edge of construction.

H. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.

I. Install operating sash glass in accordance with Section 08 8000, to glazing method required to achieve performance criteria.

J. Install infill panels in accordance with Section 08 8000, to glazing method required to achieve performance criteria.

3.03 TOLERANCES

A. Maximum Variation from Plumb: 0.06 inches every 3 ft (1.5 mm/m) non-cumulative or 0.5 inches per 100 ft (12 mm/30 m), whichever is less.

B. Maximum Misalignment of Two Adjoining Members Abutting in Plane: 1/32 inch (0.8 mm).

C. Sealant Space Between Panel System Members and Adjacent Construction: Maximum of 3/4 inch (19 mm) and minimum of 1/4 inch (6 mm).

3.04 FIELD QUALITY CONTROL

A. Provide the services of the manufacturer's field representative to observe installation and make report.

B. Inspection will monitor quality of installation and glazing.

C. Test installed curtain wall for water leakage in accordance with AAMA 501.2.

D. Replace curtain wall components that have failed field testing and retest until performance is satisfactory.

3.05 ADJUSTING

A. Adjust operating sash for smooth operation.

3.06 CLEANING

A. Remove protective material from prefinished aluminum surfaces.

B. Wash down surfaces with a solution of mild detergent in warm water, applied with soft, clean wiping cloths; remove dirt from corners and wipe surfaces clean.

3.07 PROTECTION

A. Protect finished work from damage until Date of Substantial Completion.

END OF SECTION

SECTION 08 5113
ALUMINUM WINDOWS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Extruded aluminum windows with fixed sash, operating sash and infill panels.

B. Factory glazing.

C. Operating hardware.

D. Insect screens.

1.02 RELATED REQUIREMENTS

A. Section 05 5000 - Metal Fabrications: Steel lintels.

B. Section 06 1000 - Rough Carpentry: Rough opening framing.

C. Section 07 2500 - Weather Barriers: Sealing frame to weather barrier installed on adjacent construction.

D. Section 07 9200 - Joint Sealants: Sealing joints between window frames and adjacent construction.

1.03 REFERENCE STANDARDS

A. AAMA/WDMA/CSA 101/I.S.2/A440 - North American Fenestration Standard/Specification for windows, doors, and skylights 2017.

B. AAMA CW-10 - Care and Handling of Architectural Aluminum From Shop to Site 2015.

C. AAMA 1503 - Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections 2009.

D. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products 2017.

E. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate 2014.

F. ASTM B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate (Metric) 2014.

G. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes 2014.

H. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric) 2013.

I. ASTM E283 - Standard Test Method for Determining the Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen 2004 (Reapproved 2012).

J. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference 2000 (Reapproved 2016).

K. ASTM E2112 - Standard Practice for Installation of Exterior Windows, Doors and Skylights 2007 (Reapproved 2016).

1.04 SUBMITTALS

A. Product Data: Provide component dimensions, information on glass and glazing, internal drainage details and descriptions of hardware and accessories.

B. Shop Drawings: Indicate opening dimensions, elevations of different types, framed opening tolerances, method for achieving air and vapor barrier seal to adjacent construction, anchorage locations, and installation requirements.

C. Samples: Submit two samples, 12 by 12 inch (300 by 300 mm) in size illustrating typical corner construction, accessories, and finishes.

D. Submit two samples of operating hardware.

E. Product Schedule: For aluminum windows. Use same designations indicated on Drawings.

F. Warranty: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

1.05 QUALITY ASSURANCE

A. Preinstallation Meetings

1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
2. Review and discuss the finishing of aluminum windows that is required to be coordinated with the finishing of other aluminum work for color and finish matching.
3. Review, discuss, and coordinate the interrelationship of aluminum windows with other exterior wall components. Include provisions for anchorage, flashing, sealing perimeters, and protecting finishes.
4. Review and discuss the sequence of work required to construct a watertight and weathertight exterior building envelope.
5. Inspect and discuss the condition of substrate and other preparatory work performed by other trades.

B. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum three years of documented experience.

C. Installer Qualifications: Company specializing in performing work of type specified and with at least three years of documented experience.

1.06 MOCK-UPS

A. General

1. Mock up of the window configurations, colours & finishes, as well as samples of the associated hardwares and accessories should be made available in the factory for reference.
2. Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
4. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
5. Conduct performance test of mockup after approval of visual aspects has been obtained. Testing is to be performed on mockup according to requirements in “Field Quality Control” Article.

B. Mock-up Construction

1. Standard windows:
    a. Construct mock-up showing each typical window type (including emergency windows) section installed in wall opening. Accepted mock-up may form part of complete work.
    b. Allow two (2) working days for inspection of mock-up by Owner’s Representative before proceeding with window work.

c. When accepted, mock-up will demonstrate minimum standard for this work. Mock-up may remain as part of finished work.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Comply with requirements of AAMA CW-10.

B. Protect finished surfaces with wrapping paper or strippable coating during installation. Do not use adhesive papers or sprayed coatings that bond to substrate when exposed to sunlight or weather.

1.08 WARRANTY

A. Correct defective Work within a ten year period after Date of Substantial Completion.

B. Provide ten year manufacturer warranty against failure of glass seal on insulating glass units, including interpane dusting or misting. Include provision for replacement of failed units.

C. Provide ten year manufacturer warranty against excessive degradation of exterior finish. Include provision for replacement of units with excessive fading, chalking, or flaking.

PART 2 PRODUCTS

2.01 BASIS OF DESIGN - AW PERFORMANCE CLASS WINDOWS

A. Grade: AAMA/WDMA/CSA 101/I.S.2/A440 having Performance Class of AW, and Performance Grade at least as high as specified design pressure.

2.02 BASIS OF DESIGN - CW PERFORMANCE CLASS WINDOWS

A. Grade: AAMA/WDMA/CSA 101/I.S.2/A440 having Performance Class of CW, and Performance Grade at least as high as specified design pressure.

2.03 MANUFACTURERS

A. Basis of Design: Subject to compliance with requirements, provide the following or approved equal product..

1. Fixed, Hopper, Casement Window: Traco NX-Series Thermal
2. Storefront Window: Kawneer Trifab VG
3. Curtain Wall Window: Kawneer 1600 Wall System 1

B. Source Limitations: Obtain aluminum windows from single source manufacturer.

C. Acceptable Manufacturers:

1. EFCO, a Pella Company: www.efcocorp.com/#sle.
2. Kawneer, an Arconic Company; www.kawneer.com
3. YKK AP America Inc: www.ykkap.com/#sle.

2.04 WINDOWS

A. Aluminum Windows:

1. Operating Types:
   a. Fixed
   b. Hopper
   c. Casement
   d. Storefront
   e. Curtain Wall

2. Frames and Sashes: Aluminum extrusions complying with AAMA/WDMA/CSA 101/I.S.2/A440.
    a. Thermally Improved Construction: Fabricate frames, and sashes with an integral, concealed, low-conductance thermal barrier located between exterior materials and window members exposed on interior side in a manner that eliminates direct metal-to-metal contact.
3. Insulating-Glass Units: ASTM E 2190, certified through IGCC as complying with requirements of IGCC.
    a. Glazing Basis of Design: 1⁄4” PPG Solarban 60 clear glass / 1⁄2” Argon Gas 95%, Air 5% / 1⁄4” clear glass
    b. Glass: ASTM C 1036, Type 1, Class 1, q3.
        1) Tint: Clear.
        2) Lites: See Drawings.
        3) Low-E Coating: Pyrolytic on second surface.
4. Glazing System: Manufacturer's standard factory-glazing system that produces weathertight seal.
5. Hardware, General: Provide manufacturer's standard hardware fabricated from aluminum, stainless steel, carbon steel complying with AAMA 907, or other corrosion- resistant material compatible with adjacent materials; designed to smoothly operate, tightly close, and securely lock windows, and sized to accommodate sash weight and dimensions.
    a. Exposed Hardware Color and Finish: As selected by Architect from manufacturer's full range.
6. Fasteners: Noncorrosive and compatible with window members, trim, hardware, anchors, and other components.
    a. Exposed Fasteners: Do not use exposed fasteners to the greatest extent possible. For application of hardware, use fasteners that match finish hardware being fastened.

2.05 PERFORMANCE REQUIREMENTS

A. Grade: AAMA/WDMA/CSA 101/I.S.2/A440 requirements for specific window type:
    1. Performance Class (PC): R.
    2. Performance Grade (PG): 15, with minimum design pressure (DP) of 15.04 psf (720 Pa).

B. Water Leakage: No uncontrolled leakage on interior face when tested in accordance with ASTM E331 at differential pressure of 12.11 psf (580 Pa).

C. Air Leakage: Maximum of 0.1 cu ft/min sq ft (0.5 L/sec sq m) per unit area of outside frame dimension, with 6.27 psf (300 Pa) differential pressure when tested in accordance with ASTM E283.

D. Condensation Resistance Factor of Frame: 50, measured in accordance with AAMA 1503.

E. Overall Thermal Transmittance (U-value): .35, maximum, including glazing, measured on window sizes required for this project.

F. Solar Heat-Gain Coefficient (SHGC): NFRC 200 maximum whole-window SHGC of 0.55.

2.06 ACCESSORIES

A. Sub sills: Thermally broken, extruded-aluminum sub sills.

B. Interior Trim: Extruded-aluminum profiles in sizes and configurations indicated on Drawings.

2.07 MATERIALS

A. Extruded Aluminum: ASTM B221 (ASTM B221M), 6063 alloy, T6 temper.

B. Sheet Aluminum: ASTM B209 (ASTM B209M), 5005 alloy, H12 or H14 temper.

C. Concealed Steel Items: Profiled to suit mullion sections; galvanized in accordance with ASTM A123/A123M.

2.08 FINISHES

A. Comply with NAAMM's "Metal Finishes Manual" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

D. Aluminum Finishes: Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes. Color: Clear Anodized Aluminum.

2.09 FABRICATION

A. Fabricate aluminum windows in sizes indicated. Include a complete system for assembling components and anchoring windows.

B. Glaze aluminum windows in the factory.

C. Weather strip each operable sash to provide weathertight installation.

D. Weep Holes: Provide weep holes and internal passages to conduct infiltrating water to exterior.

E. Provide water-shed members above side-hinged sashes and similar lines of natural water penetration.

F. Mullions: Provide mullions and cover plates, matching window units, complete with anchors for support to structure and installation of window units. Allow for erection tolerances and provide for movement of window units due to thermal expansion and building deflections, per manufacturer’s requirements. Provide mullions and cover plates capable of withstanding design wind loads of window units.

G. Complete fabrication, assembly, finishing, hardware application, and other work in the factory to greatest extent possible. Disassemble components only as necessary for shipment and installation.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine openings, substrates, structural support, anchorage, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Verify rough opening dimensions, levelness of sill plate, and operational clearances.

C. Examine wall flashings, vapor retarders, water and weather barriers, and other built-in components to ensure weathertight window installation.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install windows, hardware and other components in accordance with manufacturer's instructions.

B. Install windows in accordance with ASTM E2112.

C. Install windows and components to drain condensation, water penetrating joints, and moisture migrating within windows to the exterior.

D. Attach window frame and shims to perimeter opening to accommodate construction tolerances and other irregularities.

E. Align window plumb and level, free of warp or twist. Maintain dimensional tolerances and alignment with adjacent work.

F. Provide thermal isolation where components penetrate or disrupt building insulation. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.

3.03 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

1. Testing and inspecting agency will interpret tests and state in each report whether tested work complies with or deviates from requirements.

B. Testing Services: Testing and inspecting of installed windows shall take place as follows:

1. Testing Methodology: Testing of windows for air infiltration and water resistance shall be performed according to AAMA 502.

2. Air-Infiltration Testing:

a. Test Pressure: That required to determine compliance with AAMA/WDMA/CSA 101/I.S.2/A440 performance class indicated.

b. Allowable Air-Leakage Rate: 1.5 times the applicable AAMA/WDMA/CSA 101/I.S.2/A440 rate for product type and performance class rounded down to one decimal place.

3. Water-Resistance Testing:

a. Test Pressure: Two-thirds times test pressure required to determine compliance with AAMA/WDMA/CSA 101/I.S.2/A440 performance grade indicated.

b. Allowable Water Infiltration: No water penetration.

4. Testing Extent: Three windows of each type as selected by Architect and a qualified independent testing and inspecting agency. Windows shall be tested after perimeter sealants have cured. 5. Test Reports: Prepared according to AAMA 502.

C. Remove and replace noncomplying windows and retest as specified above.

D. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

E. Prepare test and inspection reports.

3.04 ADJUSTING, CLEANING AND PROTECTION

A. Clean exposed surfaces immediately after installing windows. Avoid damaging protective coatings and finishes. Remove excess sealants, glazing materials, dirt, and other substances.

1. Keep protective films and coverings in place until final cleaning.

B. Remove and replace glass that has been broken, chipped, cracked, abraded, or damaged during construction period.

C. Protect window surfaces from contact with contaminating substances resulting from construction operations. If contaminating substances do contact window surfaces, remove contaminants immediately according to manufacturer's written instructions.

END OF SECTION

SECTION 08 5313
VINYL WINDOWS

PART 2 PRODUCTS

1.01 DESCRIPTION

A. Vinyl Windows: Factory fabricated frame and sash members of extruded, hollow, ultra-violet-resistant, polyvinyl chloride (PVC) with integral color; with factory-installed glazing, hardware, related flashings, anchorage and attachment devices.

1. Configuration: As indicated on drawings.

a. Product Type: AP - Awning projected window, C - Casement window, DW - Dual windows, FW - Fixed window, H - Hung window, vertically sliding, HS - Horizontal sliding window and [_____] in accordance with AAMA/WDMA/CSA 101/I.S.2/A440.

2. Color: Tan.

3. Size to fit openings with minimum clearance around perimeter of assembly providing necessary space for perimeter seals.

4. Framing Members: Fusion welded corners and joints, with internal reinforcement where required for structural rigidity; concealed fasteners.

5. System Internal Drainage: Drain to exterior side by means of weep drainage network any water entering joints, condensation within glazing channel, or other migrating moisture within system.

6. Glazing Stops, Trim, Flashings, and Accessory Pieces: Formed of rigid PVC, fitting tightly into frame assembly.

1.02 COMPONENTS

A. Glazing: Insulated double pane, annealed glass, clear, low-E coated, argon filled, with glass thicknesses as recommended by manufacturer for specified wind conditions and acoustic rating indicated.

B. Frame Depth: 2-11/16 inch (68.3 mm).

END OF SECTION

SECTION 08 6223
TUBULAR SKYLIGHTS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Tubular skylights, consisting of skylight dome, reflective tube, and diffuser assembly.

1.02 RELATED REQUIREMENTS

A. Section 26 0583 - Wiring Connections: Electrical connections.

1.03 REFERENCE STANDARDS

A. AAMA/WDMA/CSA 101/I.S.2/A440 - North American Fenestration Standard/Specification for windows, doors, and skylights 2017.

B. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate 2014.

C. ASTM B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate (Metric) 2014.

D. ASTM E283 - Standard Test Method for Determining the Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen 2004 (Reapproved 2012).

E. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference 2000 (Reapproved 2016).

F. UL (DIR) - Online Certifications Directory Current Edition.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.
4. ICC-ES evaluation report.

C. Shop Drawings: Indicate configurations, dimensions, locations, fastening methods, and installation details.

D. Grade Substantiation: Prior to submitting shop drawings or starting fabrication, submit one of the following showing compliance with specified grade:

1. Evidence of AAMA Certification.
2. Evidence of WDMA Certification.
3. Evidence of CSA Certification.
4. Test report(s) by independent testing agency itemizing compliance and acceptable to authorities having jurisdiction.

E. Test Reports: Prior to submitting shop drawings or starting fabrication, submit test report(s) by independent testing agency showing compliance with performance requirements in excess of those prescribed by specified grade.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with not less than ten years documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years documented experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.

1.07 FIELD CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.08 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Skylights: Manufacturer's standard warranty for 10 years.

C. Electrical Parts: Manufacturer's standard warranty for three years, unless otherwise indicated.

PART 2 PRODUCTS

2.01 TUBULAR SKYLIGHTS

A. Tubular Skylights: Transparent roof-mounted skylight dome and curb, reflective tube, and ceiling level diffuser assembly, transferring sunlight to interior spaces.

1. Fabrication and assembly of components is by single manufacturer.
2. Non-Metal Parts: Flammability less than the following.
    a. Roof-Top Components: Class B when tested in accordance with ASTM E108 or UL 790.
    b. Combustibility - Light Transmitting Parts: Minimum 2.5 inches/min (64 mm/min) (ICC Class CC-2), when tested in accordance with ASTM D635.
3. Thermal Movement: Fabricate to allow for thermal movement resulting from temperature differential from minus 30 to 180 degrees F (minus 34 to 82 degrees C) without damage to components, fasteners, or substrates.

B. Roof Assemblies: Transparent, UV and impact resistant dome with flashing base supporting dome and top of tube.

1. Glazing: Acrylic plastic, 1/8 inch (3.2 mm) minimum thickness.
2. Dome Ring: Attached to top of base section; 0.090 inch (2.3 mm) nominal thickness injection molded high impact ABS; to prevent thermal bridging between base flashing and tubing and channel condensed moisture out of tubing; weather seal of medium density pile weather stripping.

C. Reflective Tube: ASTM B209 (ASTM B209M) aluminum sheet, thickness between 0.015 inch (0.4 mm) and 0.020 inch (0.5 mm).

1. Interior Finish: Exposed interior surfaces of high reflectance specular finish; specular reflectance of 92, total reflectance 95 percent.
2. Tube Configuration and Length: As indicated on the drawings.

D. Diffuser Assemblies: Supporting light transmitting surface at bottom termination of tube, with compression seal to minimize condensation and bug or dirt infiltration.
   1. Ceiling Ring: Edge trim for ceiling opening; injection molded high impact ABS.
   2. Diffuser Trim: Edge and attachment trim for diffuser lens; injection molded high impact ABS.
   3. Diffuser Shape at Solid Ceilings: Round, same diameter as tube.
   4. Lens: Flush frosted lens.
   5. Lens Material: Acrylic plastic.
   6. Visible Light Transmission (VLT): 90 percent, minimum.
   7. Seal: Closed cell EPDM foam rubber.

2.02 PERFORMANCE REQUIREMENTS

A. Grade: AAMA/WDMA/CSA 101/I.S.2/A440 requirements for specific tubular skylight:
   1. Product Type: Tubular Daylighting Device, Closed Ceiling (TDDCC).

B. Design Pressure (DP): In accordance with applicable codes.

C. No permanent deflection in excess of 0.2 percent of span.

D. Air Infiltration: Maximum 0.10 cu ft/min sq ft (0.5 L/sec sq m) per unit area of outside frame dimension at 6.27 psf (300 Pa) pressure differential when tested in accordance with ASTM E283.

E. Water Resistance: No uncontrolled water leakage at 6.27 psf (300 Pa) pressure differential with water rate of 5 gallons/h/sf (206 L/h/sq m), when tested in accordance with ASTM E331; design to ensure that water will not accumulate inside assembly.

2.03 ACCESSORIES

A. Fasteners: Same material as metals being fastened, non-magnetic steel, non-corrosive metal of type recommended by manufacturer, or injection molded nylon.

B. Sealant: Elastomeric, silicone or polyurethane; compatible with materials being sealed.

C. Lighting Fixtures: Bracket mounted inside skylight tube just above diffuser; UL (DIR) listed.
   1. Type: Compact fluorescent fixture, for 26 W lamps, 1 lamp per tube.
   2. Electrical Requirements: 110 V, 15 amp GFCI circuit.
   3. Contractor to furnish lamps.

PART 3 EXECUTION

3.01 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.02 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.03 INSTALLATION

A. Install in accordance with manufacturer's written instructions.

B. Set roof assembly flashing in continuous bead of sealant.

C. Seal joints exposed to weather in accordance with sealant manufacturer's written instructions.

D. Conduct field test for water tightness; conduct water test in presence of Architect . Correct defective work and re-test until satisfactory.

3.04 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Date of Substantial Completion.

END OF SECTION

SECTION 08 6300
METAL-FRAMED SKYLIGHTS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Aluminum skylight framing system.

B. Skylight glazing.

C. Fasteners, anchors, reinforcement, and flashings.

1.02 RELATED REQUIREMENTS

A. Section 05 1200 - Structural Steel Framing: Structural support framing for system.

B. Section 05 5000 - Metal Fabrications: Fabricated steel attachment devices.

C. Section 06 1000 - Rough Carpentry: Wood support curbs.

D. Section 07 6200 - Sheet Metal Flashing and Trim: Skylight counterflashing.

E. Section 07 9200 - Joint Sealants: Sealing joints between skylight frames and adjacent construction.

F. Section 08 8000 - Glazing.

1.03 REFERENCE STANDARDS

A. AAMA 503 - Voluntary Specification for Field Testing of Newly Installed Storefronts, Curtain Walls and Sloped Glazing Systems 2014.

B. AAMA 609 & 610 - Cleaning and Maintenance Guide for Architecturally Finished Aluminum (Combined Document) 2015.

C. ASTM D4479/D4479M - Standard Specification for Asphalt Roof Coatings - Asbestos-Free 2007, with Editorial Revision (2012).

D. ASTM E283 - Standard Test Method for Determining the Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen 2004 (Reapproved 2012).

E. ASTM E330/E330M - Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference 2014.

F. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference 2000 (Reapproved 2016).

G. ASTM E1105 - Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Skylights, Doors, and Curtain Walls, by Uniform or Cyclic Static Air Pressure Difference 2015.

H. ICC (IBC) - International Building Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's specifications, standard details, and installation requirements.

C. Shop Drawings: Indicate framed opening requirements and tolerances, spacing of members, anticipated deflection under load, affected related work, expansion and contraction joint locations and details, and sizes and locations for field welding.

1. Show field measurements on shop drawings.

D. Shop Drawings: Provide details of proposed structural sealant glazing (SSG) and weather sealant joints indicating dimensions, materials, bite, thicknesses, profile, and support framing.

E. Selection Samples: Submit full range of aluminum finish samples for Architect 's color selection.

F. Samples: Submit two samples, not less than 12 by 12 inch (300 by 300 mm) in size illustrating appearance of prefinished aluminum and specified glazing system, including glazed edge and corner.

G. Manufacturer's Certificate: Certify that the products supplied meet or exceed the specified requirements.

H. Design Data: Provide framing member structural and physical characteristics and engineering calculations, and identify dimensional limitations.

I. Structural Glazing Adhesive: Submit product data and calculations showing compliance with performance requirements.

J. Test Reports: Submit results of full-size mock-up testing. Reports of tests previously performed on the same design are acceptable.

K. Manufacturer's Installation Instructions: Indicate special procedures, safety precautions, and perimeter conditions requiring special attention.

L. Field Quality Control Submittals: Report of field testing for water penetration and air leakage.

M. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

N. Designer's Qualification Statement.

O. Manufacturer's Qualification Statement.

P. Installer's Qualification Statement.

1.05 QUALITY ASSURANCE

A. Designer Qualifications: Design skylight system under direct supervision of a professional engineer experienced in design of system type specified and licensed in Maryland.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with not fewer than three years of documented experience.

C. Full-Size Mock-up Testing: Have a specimen representative of project conditions tested by an independent testing agency for compliance with specified structural, air infiltration, water penetration and thermal criteria.

D. Verify that each component is appropriate for use in structural sealant glazing (SSG) application in regards to at least the following properties; size, shape, dimensions, material, shelf-life, storage conditions, and color.

E. Installer Qualifications: Company specializing in performing the type of work specified in this section with at least three years of documented experience.

1.06 MOCK-UP

A. See Section 01 4000 - Quality Requirements, for general requirements for mock-ups.

B. Construct mock-up that includes examples of materials and conditions required in finished skylight installation.

C. Locate where directed by Architect.

D. Mock-up may remain as part of the Work.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Provide wrapping to protect prefinished aluminum surfaces. Do not use adhesive papers or spray coatings that bond when exposed to sunlight or weather.

1.08 FIELD CONDITIONS

A. Do not install sealants when ambient temperature is less than 40 degrees F (5 degrees C). Maintain this minimum temperature during and 48 hours after installation.

1.09 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective work, including leaks, discoloration, failure of seal at insulated glazing units, and excessive thermal or structural movement, within a five year period after Date of Substantial Completion.

C. Provide five year manufacturer warranty for insulated glass units from seal failure, interpane dusting or misting, and replacement of same. Include coverage for degradation of color finish.

PART 2 PRODUCTS

2.01 METAL-FRAMED SKYLIGHTS

A. Metal Framed Skylights: Factory-fabricated, and glazed.

1. Frame: Extruded aluminum structural members with integral condensation collection and guttering system thermally separated from exterior pressure bar.
2. Glazing System: Pressure glazing bar system for sloped joints and two (2)-sided structural sealant glazing (SSG) for horizontal joints.
3. Glazing: Insulating glass.
4. Aluminum Finish: High performance organic coatings.
5. Fabricate to prevent vibration harmonics, thermal movement transmitted to other building elements, and loosening, weakening, or fracturing of attachments or components of system.

2.02 PERFORMANCE REQUIREMENTS

A. Provide metal-framed skylights that comply with the following:

1. Structural Design: Design and size components to withstand dead loads and specified live loads without damage or permanent set.
2. Wind Loads: Test in accordance with ASTM E330/E330M, using loads 1.5 times the specified design pressures and 10 second duration of maximum load.
3. Design Pressure (DP): In accordance with applicable codes.
4. Concentrated Load: Design to withstand 250 lb (114 kg) concentrated load at any location on framing members without permanent set.
5. Glazing Support Member Deflection Under Wind Load: 1/180 of span, maximum.
6. Structural Glazing Adhesive: Design system to limit stress on structural glazing adhesive to 20 percent of tested tensile adhesion and maximum compression or elongation to 25 percent of neutral dimension.
7. Thermal Movement: Design system to accommodate thermal expansion and contraction over ambient temperature range of 100 degrees F (38 degrees C), dynamic loading and release of loads, creep of concrete structural members and deflection of structural support framing without damage to skylight system components or loss of weathertightness.
8. Energy Code Compliance: Comply with ICC (IBC), ASHRAE Std 90.1 I-P or the authorities having jurisdiction as required for metal-framed skylights.

9. Air Leakage Laboratory Test: Limit air infiltration through assembly to 0.06 cu ft/min/sq ft (0.3 L/s/sq m) for glazed area, measured at a reference differential pressure across assembly of 1.57 psf (75 Pa) in accordance with ASTM E283.
10. Structural Sealant Glazing (SSG) System: For individual glass lites, design framing members to not exceed a deflection normal to the wall of L/175 between supports with 3/4 inch (19 mm) maximum, and a deflection parallel to the wall of L/360 with 1/8 inch (3.2 mm) maximum, whichever is less.
11. Water Penetration: None, when measured in accordance with ASTM E331 at a test pressure difference of 2.86 lbs per sq ft (140 Pa).

2.03 MATERIALS

A. Aluminum Extrusions: Alloy and temper 6063-T5, 6063-T6, or 6061-T6 members complying with ASTM B221 (ASTM B221M), with minimum thickness 1/8 inch (3.2 mm) for structural members and 1/16 inch (1.6 mm) for non-structural members.

B. Formed Aluminum: Sheet material of alloy 5052, 5005, or 6061-T651 members complying with ASTM B209 (ASTM B209M), with minimum thickness 1/8 inch (3.2 mm) for structural members and 1/16 inch (1.6 mm) for non-structural members.

C. Internal Reinforcement: ASTM A36/A36M Steel shapes as required for strength and mullion size limitations, hot-dip galvanized after fabrication in accordance with ASTM A123/A123M.

D. Glass: Type specified in Section 08 8000.

E. Weatherseal Sealant: Silicone, with adhesion in compliance with ASTM C794; compatible with glazing accessories.

F. Protective Back Coating: Asphaltic mastic, ASTM D4479/D4479M Type I.

G. Fasteners: Stainless steel.

H. Flashing: Matching finish of skylight frame system components; secure using un-concealed fastening method, and seal with weather-tight sealant.

2.04 FABRICATION

A. Rigidly fit and secure joints and corners with screw and spline; fabricate rigid joints with connections that are flush, hairline, and weatherproof.

B. Fabricate components to allow for expansion and contraction with minimum clearance and shim spacing around perimeter of assembly.

C. Drain to exterior any water entering exterior joints, condensation occurring in glazing channels, or migrating moisture occurring within system.

D. Prepare components to receive concealed anchorage devices, and ensure that fasteners will be concealed upon completion of installation.

E. Adhere glass to glazing frames with structural adhesive and cure under controlled conditions in shop. Field glazing of frames to glass is not acceptable.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that structural curb is ready to receive skylight system. Coordinate installation of roofing and other adjacent work to ensure weathertight construction.

3.02 PREPARATION

A. Apply 1 coat of protective coating to concealed aluminum and steel surfaces in contact with dissimilar materials.

3.03 INSTALLATION

A. Install metal-framed skylights in accordance with manufacturer's instructions.

B. Set skylight structure plumb, level, and true to line, without warp or rack of frames or glazing panels. Anchor securely in place in accordance with approved shop drawings.

C. Maintain assembly dimensional tolerances, aligning with adjacent work.

D. Install base flashings in accordance with Section 07 6200.

E. Install glazing in accordance with Section 08 8000.

F. Structural Sealant Glazing (SSG) Adhesive: Install structural sealant glazing adhesive and weather-tight sealant in accordance with manufacturer's instructions.

G. Touch up damaged finishes so repair is imperceptible from 6 feet (1.8 m) distance, and remove and replace components that cannot be acceptably touched up.

3.04 TOLERANCES

A. Maximum Variation from Plumb, Level, or Line: 1/8 inch per 10 feet (1 mm per 1 m), or 3/8 inch (9.5 mm) total in overall dimension.

B. Alignment of Two Adjoining Members Abutting in Plane: Within 1/16 inches (1.6 mm).

3.05 FIELD QUALITY CONTROL

A. Provide services of metal-framed skylight manufacturer's field representative to observe for proper installation of system and submit report.

B. See Section 01 4000 - Quality Requirements, for independent field testing and inspection requirements, and requirements for monitoring quality of specified product installations.

C. Provide field testing of installed metal-framed skylights by independent laboratory in accordance with AAMA 503 during construction process and before installation of interior finishes.

1. Perform a minimum of two tests in each designated area as indicated on drawings.
2. Conduct tests in each area prior to 10 percent and 50 percent completion of this work.
3. Field test for water penetration in accordance with ASTM E1105 with uniform static air pressure difference (Procedure A) not less than 4.18 psf (200 Pa).
    a. Maximum allowable rate of water penetration in 15-minute test is 0.5 ounce (14 gram) that is not contained in an area with provisions to drain to exterior, or collected on surface of interior horizontal framing member.

D. Repair or replace metal-framed skylight components that have failed designated field testing, and retest to verify performance complies with specified requirements.

3.06 CLEANING

A. Upon completion of installation, thoroughly clean skylight aluminum surfaces in accordance with AAMA 609 & 610.

B. Remove protective material from prefinished aluminum surfaces.

C. Wash down exposed surfaces; wipe surfaces clean.

D. Remove excess sealant by methods recommended by skylight manufacturer.

END OF SECTION

SECTION 08 7100
DOOR HARDWARE

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Hardware for wood, aluminum, hollow metal and [_____] doors.

B. Hardware for fire-rated doors.

C. Electrically operated and controlled hardware.

D. Lock cylinders for doors that hardware is specified in other sections.

E. Thresholds.

F. Weatherstripping and gasketing.

G. Gate locks.

1.02 RELATED REQUIREMENTS

A. Section 06 2000 - Finish Carpentry: Wood door frames.

B. Section 06 4100 - Architectural Wood Casework: Cabinet hardware.

C. Section 07 9200 - Joint Sealants: Sealants for setting exterior door thresholds.

D. Section 08 0671 - Door Hardware Schedule: Schedule of door hardware sets.

E. Section 08 1113 - Hollow Metal Doors and Frames.

F. Section 08 1116 - Aluminum Doors and Frames.

G. Section 08 1416 - Flush Wood Doors.

H. Section 08 1423 - Clad Wood Doors.

I. Section 08 1433 - Stile and Rail Wood Doors.

J. Section 08 1613 - Fiberglass Doors.

K. Section 08 1700 - Integrated Door Opening Assemblies.

L. Section 08 1753 - Integrated Glass Door Opening Assemblies.

M. Section 08 3223 - Sliding and Folding Glazed Walls and Doors: Door hardware, except cylinders.

N. Section 08 3323 - Overhead Coiling Doors: Door hardware, except cylinders.

O. Section 08 3326 - Overhead Coiling Grilles: Door hardware, except cylinders.

P. Section 08 3613 - Sectional Doors: Door hardware, except cylinders.

Q. Section 08 4313 - Aluminum-Framed Storefronts: Door hardware, except as noted in section.

R. Section 08 4413 - Glazed Aluminum Curtain Walls: Door hardware, except cylinders.

S. Section 08 4426 - Structural Glass Curtain Walls: Door hardware, except cylinders.

T. Section 10 1400 - Signage: Additional signage requirements.

U. Section [_____]: Power supply to electric hardware devices.

V. Section 10 2600 - Wall and Door Protection: Door and frame protection.

W. Section 28 1000 - Access Control: Electronic access control devices.

X. Section 28 4600 - Fire Detection and Alarm: Electrical connection to activate door closers.

Y. Section [_____]: Building monitoring system.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordinate the manufacture, fabrication, and installation of products that door hardware is installed on.

B. Sequence installation to ensure utility connections are achieved in an orderly and expeditious manner.

C. Preinstallation Meeting: Convene a preinstallation meeting one week prior to commencing work of this section; attendance is required by affected installers and the following:

1. Architect.
2. Installer's Architectural Hardware Consultant (AHC).
3. Hardware Installer.
4. Owner's Security Consultant.

D. Furnish templates for door and frame preparation to manufacturers and fabricators of products requiring internal reinforcement for door hardware.

E. Keying Requirements Meeting:

1. Owner will schedule meeting at project site prior to Contractor occupancy.
2. Attendance Required:
    a. Contractor.
    b. Owner.
    c. Architect.

d. Installer's Architectural Hardware Consultant (AHC).

e. Hardware Installer.

f. Owner's Security Consultant.

3. Agenda:

a. Establish keying requirements.

b. Verify locksets and locking hardware are functionally correct for project requirements.

c. Verify that keying and programming complies with project requirements.

d. Establish keying submittal schedule and update requirements.

4. Incorporate "Keying Requirements Meeting" decisions into keying submittal upon review of door hardware keying system including, but not limited to, the following:

a. Access control requirements.

b. Key control system requirements.

c. Schematic diagram of preliminary key system.

d. Flow of traffic and extent of security required.

5. Record minutes and distribute copies within two days after meeting to participants, with two copies to Architect, Owner, participants, and those affected by decisions made.

6. Deliver established keying requirements to manufacturers.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's catalog literature for each type of hardware, marked to clearly show products to be furnished for this project, and includes construction details, material descriptions, finishes, and dimensions and profiles of individual components.

C. Shop Drawings - Door Hardware Schedule: Submit detailed listing that includes each item of hardware to be installed on each door. Use door numbering scheme as included in Contract Documents.

1. Prepared by or under supervision of Architectural Hardware Consultant (AHC).

2. Comply with DHI (H&S) using door numbers and hardware set numbers as indicated in construction documents.

a. Submit in vertical format, refer to Section 08 0671.

3. List groups and suffixes in proper sequence.

4. Provide complete description for each door listed.

5. Provide manufacturer's and product names, and catalog numbers; include functions, types, styles, sizes and finishes of each item.

6. Include account of abbreviations and symbols used in schedule.

D. Shop Drawings - Electrified Door Hardware: Submit diagrams for power, signal, and control wiring for electrified door hardware that include details of interface with building safety and security systems. Provide elevations and diagrams for each electrified door opening as follows:

1. Prepared by or under supervision of Architectural Hardware Consultant (AHC) and Electrified Hardware Consultant (EHC).

2. Elevations: Submit front and back elevations of each door opening showing electrified devices with connections installed and an operations narrative describing how opening operates from either side at any given time.
3. Diagrams: Submit point-to-point wiring diagram that shows each device in door opening system with related colored wire connections to each device.

E. Samples for Verification:

1. Submit minimum size of 2 by 4 inch (51 by 102 mm) for sheet samples, and minimum length of 4 inch (102 mm) for other products.
2. Submit one (1) sample of hinge, latchset, lockset, closer and [_____] illustrating style, color, and finish.
3. Return full-size samples to Contractor.
4. Submit product description with samples.

F. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

G. Maintenance Data: Include data on operating hardware, lubrication requirements, and inspection procedures related to preventative maintenance.

1. Submit manufacturer's parts lists and templates.
2. Bitting List: List of combinations as furnished.

H. Keying Schedule:

1. Submit three (3) copies of Keying Schedule in compliance with requirements established during Keying Requirements Meeting unless otherwise indicated.

I. Manufacturer's Qualification Statement.

J. Installer's Qualification Statement.

K. Supplier's Qualification Statement.

L. Warranty: Submit manufacturer's warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

M. Project Record Documents: Record actual locations of concealed equipment, services, and conduit.

N. Maintenance Materials and Tools: Furnish the following for Owner's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Lock Cylinders: Ten for each master keyed group.
3. Tools: One set of each special wrench or tool applicable for each different or special hardware component, whether supplied by hardware component manufacturer or not.

1.06 QUALITY ASSURANCE

A. Standards for Fire-Rated Doors: Maintain one copy of each referenced standard on site, for use by Architect and Contractor.

B. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum three years of documented experience.

C. Installer Qualifications: Company specializing in performing work of the type specified for commercial door hardware with at least three years of documented experience.

D. Supplier Qualifications: Company with certified Architectural Hardware Consultant (AHC) and Electrified Hardware Consultant (EHC) to assist in work of this section.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Package hardware items individually; label and identify each package with door opening code to match door hardware schedule.

1.08 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Warranty against defects in material and workmanship for period indicated, from Date of Substantial Completion.

1. Closers: Five years, minimum.
2. Exit Devices: Three years, minimum.
3. Locksets and Cylinders: Three years, minimum.
4. Other Hardware: Two years, minimum.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Provide specified door hardware as required to make doors fully functional, compliant with applicable codes, and secure to extent indicated.

B. Provide individual items of single type, of same model, and by same manufacturer.

C. Provide door hardware products that comply with the following requirements:

1. Applicable provisions of federal, state and local codes.
2. Fire-Rated Doors: NFPA 80, listed and labeled by qualified testing agency for fire protection ratings indicated, based on testing at positive pressure in accordance with NFPA 252 or UL 10C.
3. Hardware on Fire-Rated Doors: Listed and classified by UL (DIR), ITS (DIR), testing firm acceptable to authorities having jurisdiction or [_____] as suitable for application indicated.
4. Hardware for Smoke and Draft Control Doors (Indicated as "S" on Drawings): Provide door hardware that complies with local codes, and requirements of assemblies tested in accordance with UL 1784.
    a. Air Leakage Rate: Tested in accordance with UL 1784, with air leakage rate not to exceed 3.0 cfm/sf (0.01524 cu m/sec/sq m) of door opening at 0.10 inch (24.9 Pa) of water for both ambient and elevated temperature tests.
5. Listed and certified compliant with specified standards by BHMA (CPD).
6. Auxiliary Hardware: BHMA A156.16.
7. Hardware Preparation for Steel Doors and Steel Frames: BHMA A156.115.
8. Hardware Preparation for Wood Doors with Wood or Steel Frames: BHMA A156.115W.
9. Products Requiring Electrical Connection: Listed and classified by UL (DIR) as suitable for the purpose specified.

D. Lock Function: Provide lock and latch function numbers and descriptions of manufacturer's series. Refer to Section 08 0671 for listing of hardware sets.

E. Fasteners:

1. Provide fasteners of proper type, size, quantity, and finish that comply with commercially recognized standards for proposed applications.
    a. Aluminum fasteners are not permitted.
    b. Provide phillips flat-head screws with heads finished to match door surface hardware unless otherwise indicated.
2. Provide machine screws for attachment to reinforced hollow metal and aluminum frames.
    a. Self-drilling (Tek) type screws are not permitted.
3. Provide wall grip inserts for hollow wall construction.
4. Provide spacers or sex bolts with sleeves for through bolting of hollow metal doors and frames.
5. Fire-Rated Applications: Comply with NFPA 80.
    a. Provide wood or machine screws for hinges mortised to doors or frames, strike plates to frames, and closers to doors and frames.
    b. Provide steel through bolts for attachment of surface mounted closers, hinges, or exit devices to door panels unless proper door blocking is provided.

2.02 HINGES

A. Manufacturers:
    1. Hager Companies; [_____]: www.hagerco.com/#sle.
B. Hinges: Comply with BHMA A156.1, Grade 1.
    1. Provide hinges on every swinging door.
    2. Provide following quantity of butt hinges for each door:

2.03 FINISHES

END OF SECTION

SECTION 08 7100
FINISH HARDWARE

PART I - GENERAL

1.01 BID INFORMATION

A. Drawings and general provisions of the contract, including General and Supplementary Conditions and Division-1 Specification sections, apply to the work specified in this section.

B. Products of finish hardware supplied shall only be selected from manufacturers mentioned in this document. Hardware specified herein shall be considered precedent, and no substitutions will be entertained. The Owner, however, reserves the right to make changes at any time.

1.02 DESCRIPTION OF WORK:

A. Refer to drawings, schedules and details for items requiring finish hardware. It is the intention of this section to include all finishing hardware required for the project, except for items which are specifically noted as being furnished elsewhere. Items not specifically mentioned, but necessary/required or consistent with other like conditions, must be furnished and shall be the same as like items of hardware specified.

B. Furnish all labor, materials, tools, equipment and services necessary to complete the hardware work, as indicated on the drawings, specified, and as necessary or required to satisfactorily complete the project.

C. Work includes furnishing of all finish hardware items necessary to complete the work shown on the drawings, except for those items specified to be provided under other sections of this specification. Work includes, but is not limited to, the following:

1. Lock cylinders and keying.
2. Locks and latches.
3. Padlocks for roof hatches and mechanical/electrical gates.
4. Push/Pull plates.
5. Exit devices and panic hardware.
6. Flush bolts.
7. Floor closers and pivots.
8. Surface closers.
9. Hinges and butts/spring hinges.
10. Stops.
11. Protective plates.
12. Thresholds.
13. Weather-stripping, gasketing and silencers.
14. Fasteners.
15. Grills and screens.
16. Saddles at joints in building and doors.
17. Sliding door hardware.
18. Bifold door hardware.
19. Hold open hardware.

20. Automatic door seal (door bottom).
21. Astragels/Meeting seals.
22. Electrical security hardware.
23. Smoke detectors.
24. Continuous gear hinge.
25. Removable mullions.
26. Miscellaneous control devices
27. Sound stripping

D. Work Specified Elsewhere: Work specified to be provided under other sections include the following:

1. Hardware for metal windows.
2. Hardware for toilet partitions.
3. Toilet accessories.
4. Hardware for operable walls and accordion partitions.
5. Venetian blind hardware.
6. Graphics (name plates).
7. Stair treads.
8. Handrail hardware.
9. Corner guards.
10. Access door hardware.
11. Electrical system wiring.
12. Hardware for lockers.
13. Hardware for factory built cabinets and casework.
14. Hardware for unit kitchen.
15. Hardware for elevators.
    a. Miscellaneous hardware

1.03 QUALITY ASSURANCE:

A. The hardware supplier/installer shall, in the opinion of the Owner, have sufficient comparable experience (not less than five years) and an organization consisting of experienced members of The Door and Hardware Institute with Architectural Hardware Consultant status to property handle, detail and service the hardware in a satisfactory manner. The supplier shall have in stock at all times sufficient material to take care of shortages and minor extras without delay. The supplier shall maintain a warehouse and office in the Washington Metropolitan area (75 mile radius) and be readily available to attend job meetings that may be required by the architect, Owner or general contractor. The definition of the Washington Metropolitan area is at the discretion of the Owner, and he reserves the right to exclude any supplier who, he feels, is too far away to provide proper service.

B. The hardware supplier shall examine all drawings, schedules, details and relevant shop drawings, and furnish all hardware to suit. The supplier shall obtain all information required as to details, sizes, shapes, bevel thickness, etc. of doors and other items requiring hardware and make all hardware suitable for and of perfect fit as to type, style, size, thickness, hand, function, finish, etc. for each particular case. Where

practical applications cannot be made with the exact types of hardware specified, obtain the Owner's and Architect's permission to furnish suitable types having the same operative and functional features. Hardware for application on metal doors and frames and premortised wood doors shall be made for standard templates and necessary template information furnished as required. Inform contractor promptly of estimated time and dates that will be required to process submittals, to furnish templates, to deliver hardware, and to perform other work associated with furnishing door hardware for purposes of including this date in construction schedule. Comply with this schedule.

1.04 ALL ITEMS TO BE NEW & IN GOOD CONDITION, FREE OF DEFECTS.

1.05 SUBMITTALS:

A. Submit five copies of a complete "Hardware Schedule" and product data showing all hardware to be furnished and the location for which it is intended to the Architect for review. A cover sheet shall be made part of the hardware schedule and shall list manufacturer of each item of hardware, hardware mounting heights, explanation of abbreviations, symbols, codes, etc. The schedule shall include all items required for the entire project and shall cover details as to proper type of strike plates, length of spindle, hand, backset and bevel of locks, hand and degree of opening for closers, length of kickplates, length of rods and flush bolts, type of door stop and other necessary information. The contractor shall assume sole responsibility for the provisions, proper coordination and function of the finish hardware required for all openings, whether or not hereinafter listed in the detail schedule. The Architect's and Owner's review of the hardware schedule shall not be construed as a complete check, nor shall it relieve the Contractor from responsibility for any errors, deviations or omissions from the requirements needed to satisfactorily complete the project.

B. Submit schedule at earliest possible date, particularly where acceptance of hardware schedule must precede fabrication of other work that is critical in the project construction schedule. Allow three weeks for review after the Owner receives the schedule. Include with schedule the product data, samples, shop drawings of other work affected by door hardware, and other information essential to the coordinated review of schedule.

C. Upon review and return of the finish hardware schedule, the hardware supplier will make corrections within two weeks and furnish necessary copies of detailed schedules and location of items to all parties concerned. Hardware supplier will also furnish product technical data sheets for each item of hardware, necessary template information and such other detailed information relative to the installation and maintenance of operating parts of this hardware to all who need them. List the hardware set number as well as the manufacturer's set number. Organize final hardware schedule into "hardware sets" indicating complete designations of every item required for each door or opening. Include the following information:

1. Type, style, function, size, and finish of each hardware item.
2. Name and manufacturer of each item.
3. Fastening and other pertinent information.
4. Location of each hardware set cross-referenced to indications on drawings, both on floor plans and in door and frame schedule.
5. Explanation of all abbreviations, symbols, and codes contained in schedule.
6. Mounting locations for hardware.
7. Door and frame sizes and materials.
8. Keying information.
    a. Samples of the specified hardware shall be submitted for approval to the Owner.

1.06 COORDINATION:

A. The hardware supplier shall consult the project drawing and details and otherwise familiarize themselves with the work to the end that all items of hardware furnished shall conform to units to which it is applied. He/she shall coordinate the hardware with other conflicting trades such as millwork metal doors and frames, etc. All doors, door hardware, and door frames are to be coordinated by ONE supplier. Any problem with delivery, interfacing or installation is the sole responsibility of the general contractor and their supplier.

B. Immediately after the award of the hardware purchase order, it shall be the duty of the Contractor to request approved shop drawings from such trades with which the hardware must be coordinated.

C. After receiving approved shop drawings, the Contractor shall promptly supply all template information, template drawings, approved hardware schedules, etc., as may be required to facilitate the progress of the job.

1.07 CONTRACTOR IS RESPONSIBLE FOR ALL MEANS, METHODS, COORDINATION AND SEQUENCING FOR THE PROJECT.

1.08 CODE CONFORMANCE:

A. Finish hardware shall conform with all applicable codes and regulations, including requirements of:

1. ANSI 4.139
2. NFPA 80 - Fire Doors and Windows
3. NFPA 101 - Life Safety Code
4. Local and State Building Codes
5. UL Labeled for Rated Doors
6. DHI - Door and Hardware Institute
7. SDI - Steel Door Institute
8. AWI - Architectural Woodwork Institute
9. 9. IBC - International Building Code (Amended 2003)

1.09 FIRE-RATED OPENINGS:

A. Where doors are indicated as labeled assemblies, provide only hardware which has been tested and listed by UL for the type, sizes, functions and labels of doors and frames shown or otherwise required by local code, in compliance with the BOCA-National Building Code (Amended), American Insurance Association, Pamphlet No. 80 and NFPA, Standard No. 80, current editions. This requirement takes precedence over other requirements for such hardware specified.

PART 2 - PRODUCTS

2.01 HINGES

A. Template: Provide template produced units only that are manufactured in accordance with ANSI/BHMA A156.1-1988 Standards.

B. Continuous Gear Hinge: All exterior doors shall have continuous gear hinges except to boiler rooms and outside storage rooms. Also provide continuous gear hinges on interior doors to multipurpose rooms, gymnasiums, auditoriums and media centers. Continuous gear hinges must be listed for use on 90-minute fire doors and frames as a minimum. Provide products from the following list of manufacturers:

Roton (Hager) #780-224HD

McKinney #MCK-24HD

Marka Products, Inc., ~~#HG-315~~ (DELETED & REPLACE BY #FM 2011)

C. Full Mortise Hinge: All remaining doors shall have heavyweight (minimum.190 ga.) hinges: five knuckle, four ball bearing, dull chrome (26D), full mortise type hinges.

D. Size: Provide 4 1/2" x 4-1/2" hinges on doors to closets. Provide 4 1/2" x 4-1/2" hinges on all other doors also.

E. Number of Hinges: Provide a minimum of three hinges for doors 90" or less in height and one additional hinge for each 30" of additional height.

F. Screws: Provide manufacturer's standard screws. Use self-drilling structural fasteners (Drill Flex) to secure continuous hinges to grout-filled metal frames.

G. Half Surface Hinge: Provide half-surface hinges on all fire-rated wood, mineral core doors. Use sleeve nuts and machine bolts (sex bolts) and 3" x 5" x .097 stainless steel protection plates to prevent crushing of the core materials and finished surface of the door, such as Hager No. 418.

H. Quality: Provide top commercial grade products from the following list.

1. Hager Hinge Co.
2. McKinney Products Co.
3. Stanley Hardware, Division Stanley Works.
4. Bommer Industries, Inc.

2.02 LOCKS, CYLINDERS AND KEYING:

A. LOCKS AND LATCHES:

B. Locks: All locks shall be heavy-duty, ANSI A156.13 1000 Series certified for operational Grade 1 and Security Grade 2 and UL-labeled for use on fire doors up to and including three hours. All "Primary" locksets must be lever action and be able to accept small format I/C core 6 cylinders. All keys and cylinders shall be grade one high security. Primary locksets shall be keyed to Owner's specified keyway. All "Emergency" access locksets shall be "Best" lever handle to safeguard against accidental entry into unsafe areas such as mechanical, electrical, storage spaces etc. Provide locksets less manufacturer's cylinders. Contractor to provide and install all small format I/C cylinders, cores and keys that have been keyed to the Owner's specification. Use six-lobe Torx security screws with center pin at all exposed connections. Provide strike plates with curved face edges and metal strike boxes behind strike plates. Provide locksets from the following list:

1. PRIMARY - INTERIOR LOCKSETS:
2. Provide one of the following locksets for all interior doors (except doors to emergency access areas - Mechanical and Electrical Rooms).

SSI Guardian QAL Mortise Lock

Model - E

Function - M1

26D = Satin chrome finish

2.03 EMERGENCY ACCESS:

A. Provide locksets as listed below for all mechanical, electrical rooms, computer and telephone wiring hubs, Boiler Room doors and all other maintenance related doors.

B. **BEST 9K CYLINDRICAL LEVER LOCK**

9K = Heavy duty cylindrical lever lock

7 = 7 pin core

D = Storeroom function

14D = Curved lever handle with curved return

26D = Satin chrome finish

AL = Abrasive lever (not on front door)

C. ALL EXTERIOR DOORS to have one 3-1/2” x 15” stainless steel pull plate with finger pull at the bottom of the plate, installed on the outside and exit devices on the inside.

1. Exceptions:

a. Provide one “primary” lockset with cylinder, core and AC keying in one of the main Entrance doors. Provide a primary lockset for one door of all main entrance lobbies to gymnasiums, auditoriums, etc., where singular use of those spaces will be accessed during hours when the school is closed. **Locksets and keying is to be determined by the Owner in tandem with any applicable MNCPP requirements.**

b. Provide one “primary” lockset with cylinder, core and AC keying in the exterior door to the food service (kitchen) suite.

c. Provide one “emergency access” lockset with “Best” cylinder, core and keying at the exterior entrance to the boiler room.

2.04 REST ROOMS LOCKSETS: MORTISE DEADBOLTS

A. Multi-Person Toilets (All Persons):

Push-Pull Plates: Ives No. 8302 3 ½ x 15

Ives No. 8200 3 ½ x 15

1. Deadbolt Above Latch: Classroom Function

Sargent No. 470

Schlage B Series

Corbin Russwin No. DL3100

B. Single Person Toilets (All Persons):

1. All single person toilets will have a Bathroom function lockset installed with an emergency access cylinder. A secondary lockset with double cylinders and a thumbturn is necessary to provide privacy and security.

a. Privacy Bathroom Lever Lockset: Bathroom Function

Sargent 11-Line

Schlage ND-Series

Corbin Russwin CL-3300 Series

b. Deadbolt Above Lockset: Double Deadbolt Public Toilet Function

Sargent No. 470

Shclage B Series

Corbin Russwin No. DL3100

2.05 KEYING

A. **General: Contractor’s hardware supplier will meet with the Architect and Owner’s representative to ensure that all hardware instructions are understood and to mark up two (2) sets of**

architectural floor plans to record the proposed keying assignments. Any deviation from the instructions in this Specification must be made during this meeting and approved in writing by the Owner.

B. All newly constructed schools and all total renovations will have small format I/C cylinders to accept a 7 pin core installed into “primary” locksets. All keying will be set up on a three-submaster key system as outlined below (in Middle Schools and High Schools, **additional sub-masters may be added at the discretion of the Owner. No Grand Master keys are to be made or used.** The hardware supplier/installer will be notified of any additions at the Keyset meeting per #1 above.). Replace all existing lockset cylinders with small format I/C cylinders and cores and provide specified number of keys and new key cabinet(s).

C. At existing schools where small additions or small renovations are being constructed, it will be necessary to match the existing keying system in all new doors and provide a key cabinet for the new keys.

D. **AA Master Key:** Cleaning Master - Used to access **most interior spaces**. The following spaces are to be keyed to the “A-A” Master:

1. All classrooms - All hall doors to a classroom (or common space) are to be keyed alike.
2. Between Classrooms (Lockset in doors between adjoining classrooms to be double-keyed and keyed different. Cylinder in adjoining classroom keyed to adjoining classroom’s corridor cylinder, this does not apply to shared: science prep rooms.)
3. Multipurpose Room
4. Library
5. Main Office - Hall door(s) only (except as noted in Best Keying, B-7)
6. All Administrative Offices (except Principal’s Office)
7. Health Room
8. Gymnasium (except as noted in B-2)
9. Toilet Rooms (single and multi-person)
10. Kitchen Serving Line
11. Kitchen Office
12. Custodial Closets (Also see AC Keying B-6 & Best Keying B-7)
13. Courtyards

E. AB Master Key - Used to access large storage rooms. Used to access storage rooms and closets which contain low or medium value items. This key will access the Principal’s closet; classroom closets and all other closets. Refer to AC for exceptions.

F. AC Master Key - Used to access small storage rooms. Used to access storage rooms housing high value items located both inside and outside the building. Refer to Best for exceptions. Used to access the following:

1. Front Door to Main Lobby
2. A.V. Equipment from interior
3. Science Prep Rooms
4. Custodian Main Supply Room from interior
5. Physical Education Equipment - Inside plus outside keyed differently
6. Entrance to Kitchen from outside

7. Kitchen Food Storage Room from interior
8. Outside Storage Rooms
9. Music Storage
10. School Storage
11. Main Office Vault and Guidance Records Vault
12. Health Room Medicine Storage Closet
13. Principal's Office

G. Best Keying System - Emergency access master. Used to open and lock-up the facility and for emergency access by maintenance crews after hours. Provide Best lockset with Best 7 pin core. See 2.2A-2. Used to access the following:

1. Boiler Room Interior Hall and Exterior Doors
2. Security and Fire Alarm Rooms
3. Electrical and Generator Rooms (with or without storage capacity)
4. Padlocks for roof hatches, generator and air conditioning unit gates
5. All Interior Corridors
6. All Mechanical Rooms and Roof
7. Telephone and Computer Wiring Hubs and P.A. Equipment Rooms
8. Gate to Generator and Propane Compound
9. Backflow preventers
10. Main Entrance - see below*
11. Main Office - see below*
12. *One main entrance door is to be added to the Best keying section.

H. one main office door, closest to the P.A. room will be added to the best keying section. in addition, one main office door, closet to the p.a room will be keyed with a best core and cylinder.

1. Note: No. 7 may not be applicable if the above rooms/spaces are not provided within small additions and/or classroom additions.

I. Exterior doors shall NOT be keyed (no cylinders) on the exterior side, except as previously mentioned (Section 2.03 C-1), including the exterior kitchen entrance, exterior boiler room entrance, and the main front door entrance). All non-keyed doors to the exterior shall have code approved push bar hardware on the inside and vandal proof pull handles on exterior (except as noted in section 2.03 C-1).

J. Equip all locksets with construction cores for temporary use during construction. Key construction cores as directed by the contractor. Hardware supplier to return all temporary construction cores to lockset manufacturer if requested or required by manufacturer.

K. Permanent Keys and Cylinders. Pin all small format I/C cores and cut all keys at the factory only. Five change keys will be provided for each lockset supplied. Permanently emboss one side of the key bows with DO NOT DUPLICATE and the other side with the key control numbers (AA-1; AC-10; etc.). All permanent cylinder parts shall be stainless steel and nickel silver. All cylinders and keys are to be shipped directly to the Contractor, who is responsible for the security and installation of these items into the door locksets. Installation work will be performed by a certified locksmith. It will include the cylinder

installation per the Keyset information and inspection of the completed lockset and cylinder for proper function per the manufacture.

L. **Permanent “Best” Keys and Cylinders. Prior to acceptance of the building, the Contractor will pay for and arrange to have the Best Access Systems supply the Owner with the quantities of “Best” pinned cylinders and cut keys that will be needed to fulfill the requirements of Section 2.2 B-7. In addition, the Contractor will pay for and arrange to have the Best Access Systems supply the Owner with the quantities of “Best” pinned cylinders and cut keys over and above what is needed for Section 2.2 B-7 as stated below:**

1. **Elementary Schools - 20 cylinders and 10 keys**
2. **Middle Schools - 30 cylinders and 15 keys**
3. **High Schools - 40 cylinders and 20 keys**

M. These cylinders and keys shall be prepared in accordance with the Owner’s existing system. Instruct the Best Access Systems to ship this part of the hardware directly to the Owner’s locksmith at:

Prince George’s County Public Schools

Facilities Service Base

4801 Brown Station Road

Upper Marlboro, Maryland 20772

Attention: Carpentry Shop Locksmith

Indicate the project name on the package.

N. The Owner’s locksmith will install the Best cylinders into the new locksets as indicated on the key meeting floor plan drawing. A construction core control key will be provided to the Owner’s locksmith by the Contractor.

The General Contractor must make the request for the installation of the Best system by calling 301-952-6500.

O. Key Management. The Contractor will provide and install a complete key management and storage system to house all of the door keys, all of the built-in casework keys (all casework keys are to be mastered and keyed differently) and all of the mechanical equipment keys. The Contractor will organize, label, record and install all of the keys into the key cabinet(s) before delivery to the construction site. The Contractor must implement a key management system to manage all casework keys. Organize key cabinet(s) and cross-index by room numbers, codes, and hook. The Contractor is solely responsible for the security of the keys and the key cabinet(s) until the site is turned over to the Owner. He will record the final permanent room numbers, the architectural door number, the key hook number, the Keyset number and the key bitting in the cross-index loan register book. Provide three (3) complete hard copies of the register book and the bitting chart.

Provide a two collar key tag system: one red with “MUST NOT BE LOANED” with one key permanently attached and one white with the remaining four keys attached on a removable snap hook, both to have consecutive hook numbers stamped into them. No plastic tags will be accepted.

Provide two (2) sets of hook numbers: one for the red-tagged keys and one for the white-tagged keys. All door keys are to be tagged, with the final room number on one side and the hook number on the other side. Place the four (4) white-tagged keys on hooks in the upper section of the cabinet(s). Place the red-tagged keys on hooks in the lower section of the cabinets(s), leaving the last drawer(s) empty for lock and key storage.

Provide grade “A” type file drawer key cabinet(s) with individual drawer locks keyed different and mastered keyed (only three master keys to the cabinet are to be supplied and delivered to the Owner) with full extension drawers, standard base and all necessary components. Provide removable slide-out panels with single row numbering and key hooks. Provide products from the following list:

	Elementary Provide one Cab. No.	Middle Provide one Cab. No.	High Provide two Cab. No.
Key Control Systems:	6L2205	8L3003	8L3003
Telkee Inc.:			
Lund Inc.:			

P. Mobile key cabinet Security: The grade “A” type file cabinet(s) for keys must be mobile and a permanent anchoring system for the cabinet is to be established in the main office vault. A permanent masonry wall or floor mounted anchor capable of accepting a length of 5/0 chain must be incorporated into the construction of the vault. The anchor must be located near the vault entrance while still maintaining unimpeded access to the vault. The mobile key cabinet must have a similar hard point welded or otherwise permanently attached to the rear of the cabinet that will accept a section of 5/0 chain. The wall/floor mount and the cabinet mount must withstand a pulling force of 500 PSI. At the time of delivery of the cabinet to the building, the Contractor will schedule a meeting with the Owner to secure the cabinet in the vault. The Owner’s will supply the padlock to secure the chain to the wall and cabinet. At this meeting the Contractor will hand deliver the cabinet’s master keys to the Owner.

Q. Key Control for Additions and Renovations. Key control shall be provided for additions and renovations of 15 classrooms or less by supplying a complete key storage and management system. Five factory cut “change” keys will be provided for each lockset. Each key shall be fully indexed, tagged and installed on cabinet hooks before the cabinet is delivered to the building by the Contractor and installed in the building as directed by the Owner. The cabinet shall be a heavy-duty metal wall mounted box with a capacity of 200% over the number of locksets and cabinet/casework keys. The key box is to be mounted in the main office vault by the Contractor only. Provide a 3-way cross index system referencing the permanent room number, key symbol and bitting number set up by key control manufacturer and place keys on markers and hooks in the cabinet as determined by the final key schedule. Provide one red tag for each key and mark as “DO NOT REMOVE.” Attach red tag to one of the five keys and place it first in the essential cabinet. The remaining four keys will then be placed on the white clip tags and placed on the same numbered hook. No plastic tags will be accepted. Provide three copies of the key chart showing hook number, keyset number, and location of the room the key opens, the key bittings and three bitting charts. Two charts are to be a permanent part of the key cabinet. Turn over the other key chart and the three bitting charts to the Owner (telephone 301-952-7834). A set of marked blueprints will also be provided showing door numbers and keysets to be placed in the keybox. Provide the key cabinet from one of the following: Key Control Systems, Inc. or Telkee, Inc. This policy will apply to all keying of small additions and/or renovations.

R. Acceptance of the Building and Permanent Keys. The Contractor shall deliver all remaining contract hardware items to the school no later than ten (10) working days before the General Contractor makes his request to activate the Owner’s security system (No. 11 above). All of the following items must be complete before the security system can be turned on.

1. All doors and hardware items delivered and installed.
2. Key cabinets(s) set up, delivered and installed.
3. All contract keys correctly arranged and filed in cabinet(s).
4. All “Best” keys and cylinders delivered to Owner’s locksmith.

5. All keys, cylinders, tools, equipment and supplies have been delivered to the school and securely stored in the key cabinet(s). In addition to the scheduled door hardware, provide the following items:
    a. 5 “change” keys for each door lockset.
    b. Following number of master key sets, AA, AB, AC, per school to be provided - 10 for Elementary Schools, 20 for Middle Schools and 30 for High Schools (any keys for additional master sub-sets will also be provided as required per Section 2.2 B-2).
    c. 100 extra key blanks.
    d. 3 Factory Bitting Charts.
    e. 3 Key Loan Register books, correctly filled in.
    f. 3 copies of architectural floor plans showing door numbers, permanent room names, room numbers and keyset information.
    g. 3 copies of all service manuals with complete parts catalogs listing part numbers and pictures of all parts for all locks provided. .
    h. All control keys.
    i. 6 copies of a transmittal letter listing the above-items and received by space.
    j. Specified number of key cabinets - See No. 12 above.
6. Replace all construction cores or cylinders with specified permanent cylinders as directed elsewhere.
7. General Contractor shall arrange a meeting at the school with the hardware contractor, Architect and Owner when all of the above items are ready for acceptance by calling the Department of Planning and Architectural Services at (301) 952-6548. Request a final hardware inspection and acceptance meeting.

2.06 PUSH/PULL PLATES:

A. Push Plates: Provide push plates on all interior doors. Push plates shall be stainless steel with 4 beveled edges. Plates shall be 1/8” x 3-1/2" x 15" and be cut for cylinder or thumb turn as needed. Provide products from the following list:
    1. Lindstrom 110
    2. Hiawatha, Inc. 200D
    3. Rockwood 70
    4. Trimco 1807-4

B. Pull Plates: Where identified on the hardware schedule, provide pull plates on exterior side of exterior doors. Pull plates shall be stainless steel with four beveled edges, be 1/8” x 3-1/2" x 15" and cut for cylinder as needed. Provide products from the following list:

    Exterior Doors:

    1. Lindstrom 110VA
    2. Hiawatha 1456
    3. Rockwood 91
    4. Trimco 1820

    Interior door pulls will be as described in lockset and exit device specifications listed in Sections 2.2 and 2.4.

2.07 EXIT DEVICES:

A. All code approved exit devices are to be grade one touch-bar type and made of stainless steel construction. Devices shall have rim actuated, single point latching, that is preferred at all locations. Vertical rod, two-point latching, is not preferred for maintenance reasons and shall be avoided wherever possible, Provide pull plates on the exterior side (see 2.3B).

1. Provide products from the following approved list of manufacturers:

Exterior Doors

Von Duprin 98

Sargent 80 Series

Corbin Russwin ED 5000s

Interior Doors

Von Duprin 994L-17

Sargent 80 Series

Corbin Russwin PR 955

B. Classroom Trim. Provide exit device hardware on classroom exterior doors.

C. Attachments: All devices are to be supplied and installed with sleeve nuts and machine bolts. Devices are to be through-bolted to the escutcheon trim for added strength and security.

D. Finish: All devices and trim shall be 32D, Satin Stainless Steel - or Architect approved manufacturer's standard "mostly stainless steel product" listed above.

E. Strike: Provide manufacturer's standard curved face strike or as detailed in the hardware sets. All strike plates must have curved face. Provide metal keeper boxes behind all striker plates.

F. Removable Mullions: Provide Hex Key operated removable mullions at all double doors. Provide weather-stripping on all exterior doors mullions. All mullions to be steel only. Aluminum will not be accepted. Use UL rated mullions where required. All mullions to be furnished with mullion stabilizers. Provide products from the following list:

Sargent 12-L980

Von Duprin #KR9954

Corbin/Russwin #KRM 710

G. Latching Devices:

1. Provide single point latching on interior and exterior single doors and double doors with removable mullions, wherever possible and allowed by code.

2. Provide two point latching with surface-mounted vertical rods on pairs of interior doors, only, where removable mullions are not permitted by code or conditions warrant. Do not provide vertical rod latching on any exterior door assembly.

3. Where vertical rods are warranted, provide vertical rod and latch guard protection over all (above and below) surface-mounted vertical rods. Guards to cover full height of all exposed rods and latching devices. See 2.10 E for approved list.

H. Coordinators: Avoid the use of automatic coordinating device for sequential closing of paired doors to prevent active leaf from closing ahead of inactive leaf. Where automatic flush bolts or self-latching flush bolts must be installed, use one of the following:

Approved List

600 Series

H. B. Ives 900 Series

Glynn-Johnson COR Series

I. Intumescent meeting styles protection is approved where conditions exclude the installation of the above-specified hardware.

Approved List

Zero #328FSA

#328FSD

J. Dust Proof Strikes: Provide dust proof strikes with each bottom surface bolt.

Rockwood 572

2.08 SURFACE BOLTS

As codes and conditions permit, provide surface bolts on the inactive door of pairs at top and bottom of the doors. Provide all necessary strikes, shims and guides to insure proper installation. All bolts shall be zinc-plated or dull chrome finish. Provide surface bolts on top section of dutch doors. Do not use automatic or self-latching flush bolts and do not use mortised type extension flush bolts. Use only surface applied bolts.

Approved List

DCI #780F

H. B. Ives #458

Glynn Johnson Corp., #FB6

Lindstrom Corp. #265

Rockwood #580

2.09 SURFACE CLOSERS:

Provide closers on all interior and exterior doors except on connecting rooms within administration suits.

1. All surface closers shall meet grade 1 or the highest level of cycle test requirements of the applicable ANSI standards. Closers shall be fully hydraulic, rack and pinion action, be constructed of hardened, high-strength cast aluminum or cast iron shell. Cylinders shall be one piece forged steel piston with a minimum diameter of 1 1/16”. Hydraulic fluid shall be non-gumming, non-freezing and not necessitate seasonal adjustments for temperatures from 120° F to -30° F. Provide hydraulic regulation controlled by temper-proof, non-critical screw valves, adjustable with a hex wrench to independently regulate backcheck cushioning and backcheck positions. Provide multi-size spring power adjustment to permit setting of power from 2 - 6. Include high efficiency, low friction pinion bearings. Closers to have delayed action and be designed to resist vandalism and tampering. Closers to be a combination closer/shock absorber stop.
2. Provide heavy-duty, non-adjustable arms with built-in heavy-duty spring to smoothly decelerate door to a stop. Provide the manufacturer’s heaviest/high security arm.
3. All closers are to be supplied and installed with sleeve nuts, Torx screws and machine bolts. Through bolt and use Torx fasteners with center pins at all exposed connections.
4. Provide heavy-duty gauge full metal covers with a minimum of 2 Torx mounting screws. Covers to have closed tops and bottoms. All closer adjustments shall be shielded by the cover. Provide a powder coat painted aluminum finish.

5. Options: As dictated by codes or indicated in the drawings or hardware sets, provide arm and feature options such as adjustable delayed action, barrier free, positive stop and/or hold open arms, low profile arms, and special mounting brackets and plates. Furnish barrier free closers on all interior doors that are not UL listed.
6. All closers and accessories shall be the top of the line and carry a manufacturer's ten- year warranty against workmanship and materials.
7. Provide hold-open models on closers for all exterior doors.
8. Provide support plates for all doors to protect the wood veneer from being crushed by the through door closer fasteners. Locate the plates so one plate supports all of the surface closer fasteners. The plates shall be 1" larger in all directions than the layout of the fastener pattern and made from .050 thick stainless steel, holes to be shop-drilled and countersunk.

Provide closers from the following list:

SARGENT: 350 - MC / 351 - MC SERIES

SARGENT: 9 - 2477 x 24VDC

NORTON: UNI 7500M - AL

NORTON: UNI 7500MBF - AL

L.C.N.: 4040 - 3077SC or 3049SC

L.C.N.: 4041 - 3077SC or 3049SC

Corbin Russwin: DC2200 x A11 (or A12)

2.10 FLOOR CLOSERS AND PIVOTS

A. Provide floor closers and pivots on doors only as required by the architect in hardware schedule.

B. Floor closers shall be cast iron with a spring power adjustable helical spring which rotates and does not move from side to side. Closers shall have separate and independent valves for adjusting closing speed, latch speed, backcheck, hold-open, and delayed action features.

C. Floor closers shall have permanent, non-removable spindles to assure security and total door control.

D. Floor closers shall have a built-in dead stop and shall be installed with intermediate pivots to provide complete door control and a top and bottom simultaneous cushion and dead stop. The pivots and stops are to be supplied by the floor closer manufacturer to assure proper templating and door coordination. In addition, stops must prevent wall or door impacts to door hardware or locksets. Coordinate with Section 2.8 if necessary.

E. Provide floor closers with cold weather fluid, sealed closer feature, rust proof cycolac cement case, threshold and other options as indicated in the drawings or hardware sets.

Approved Manufacturer:

1. Rixon PHQ27-S-105 floor closer, Rixon M19-Pivot.

2.11 DOOR STOPS:

A. Floor Stops: Floor stops are to be the primary door stops, every door leaf is to have either a floor, wall or overhead stop and/or a combination of stops that will prevent the locksets, hardware or door(s) from impacting with walls, cabinets or other objects. Install floor stops on floor surface, vertically plumb, below the center of the door lockset.

Furnish from the following list:

Glynn-Johnson #FB 18S

Rockwood #463

Trimco #1209

B. Wall Stops: Supply wall stops only in such situations where a floor stop cannot be installed, one 3” down from the top of the door and one 3” up from the bottom of the door. An overhead stop may be required in addition to any other specified wall hardware. Wall stops (and/or overhead stops) must prevent a lockset, door hardware or exit device from impacting a wall or other hazard. Walls consisting of open frame and drywall must be re-enforced behind wall stops to prevent wall damage. Supply US26D or US32D finish. Furnish from the following list:

Glynn-Johnson #WB 11X

IVES #443

Hiawatha #1320 E

Rockwood #475

Trimco #1296

C. Overhead Stops: Provide heavy-duty surface-mounted (only) overhead stops where required to prevent doors and/or closer covers from being damaged by coming in contact with cabinetry, corners of walls, etc. All stops will have a no hold-open feature, unless specified elsewhere. Stops shall incorporate a heavy-duty channel and slide arm and offset jamb brackets have tempered steel shock absorber springs that provide 5° - 7° compression before coming to a dead stop. There shall be a nylatron slide block and shock block, designed for high traffic, heavy abuse installations on interior and exterior doors. They shall be non-handed, steel channel arm and bracket, surface mounted, single action, stainless steel.

Provide products from the following list:

Rixson: H.D. 9 Series

Glynn-Johnson: 90 Series

Sargent: 590 or 1540 Series - Non-Friction Type

2.12 ELECTROMAGNET HOLDERS:

A. Electromagnet Holders: All fire labeled cross corridor, multipurpose room, auditorium and stair tower doors shall be held open by narrow projection wall mounted electro-magnet door holders, surface closers and ceiling mounted smoke detectors. The wall magnets shall have concealed wiring and through-bolted armature. Magnet holding power shall be 300 pounds and be protected against transients and surges up to 600 volts. Magnets shall be fail-safe with a positive release button to initiate a closing motion when released by a smoke detector or fire alarm. Furnish from the following list:

Rixson 2-FM993 x 2-9734 - AL

B. NOTE: Securely anchor all electrical boxes to walls with heavy-duty toggle bolts capable of providing a horizontal holding power of 500 pounds of pressure. No plastic anchors will be accepted.

1. Special Openings: Where fire labeled cross corridor openings are fully recessed in a wall pocket, furnish from the following list:

C. Pocket Hinges

1. 6 each Rixson #519
2. 6 each McKinney PH3

D. Wall Magnets

1. 2 each Rixson FM993 Series

E. Smoke Detectors

1. 2 each Rixson #9734

F. Floor Closers

1. 2 each Rixson #50 Series
2. By special layout #2790

G. Vertical Rod Fire Exit Devices

1. 2 each Corbin/Russwin ED5400A -M55 x M910 x 630
2. 2 each Sargent 8715-LBR-ETP
3. 2 each Von Duprin 9827F-LBR x 994L-BE x 630
4. 2 each Yale 7110F-LBR x AU628F x 630

2.13 PROTECTIVE PLATES:

A. Kick and Mop Plates: Provide two kick plates on all interior doors 10" by 1" less than door width. Plates shall be .050 stainless steel and beveled on four sides. All plates shall be prepared for and furnished with stainless steel sheet metal screws.

1. Install on both sides of door
2. 10” high
3. 1” LDW (less than door width) at paired openings and 1 ½” LDW at single doors.
4. Mount plates 1/8” from the bottom of the door.

B. Stretcher Plates: All stretcher plates shall be 6" by 1" less than door width. Plates shall be .050 stainless steel and beveled on three sides.

1. Install on push side of door
2. 6” high
3. 1” LDW (less than door width) at paired openings and 1 ½” LDW at single doors.
4. Install at height to best protect doors from cart damage. Consult with Owner to confirm required height.
5. Bevel edges at top, bottom and sides.

C. Armor Plates: Armor plates shall be 30" by 1" less than door width. On labeled doors, the armor plates shall be a maximum of 16" in height. Plates shall be .050 stainless steel and beveled on three sides. Provide for hardware cutouts as needed. Locations where armor plates are required; A.V. storage, loading docks and any doors where carts will be used.

1. Install on push side of door
2. 30” high, 16” high on labeled doors
3. 1” LDW (less than door width) at paired openings and 1 ½” LDW at single doors.
4. Mount plates 1/8” from bottom of door.
5. Provide hardware cutouts as necessary.

D. Lock Guards: Provide lock guards on doors to gymnasiums, multipurpose rooms, food service, art/shop classrooms, exercise rooms, weight lifting rooms, all storage rooms and the three keyed exterior doors.

1. Heavy gauge, satin finished stainless steel.

2. Offset design to permit clearance for lip of lock strike.
3. Through-bolted with concealed fasteners.
4. Do not provide alignment pins that penetrate the hollow metal doorframe.

   Acceptable products for A, B, C and D are:

   a. Ives 180
   b. Ives 8400 Series
   c. Glynn-Johnson LP10 or LP11
   d. Rockwood
   e. Trimco

E. Vertical Rod Covers and Latch Guards: Provide vertical rod covers from .050 stainless steel that completely fills the space between the latch guards and the exit device's lock stile covers. Provide latch guards from .062 stainless steel, 10" high at the top and bottom exit device's latches. Provide products from the following list:

1. Rockwood #BFRC + BFLG
2. Von Duprin #RF-27

F. Edge Guards: Provide edge guards on all wood doors to storage rooms. Provide products from the following list:

1. Rockwood #306B
2. Hiawatha #DES-5C

2.14 THRESHOLDS:

A. Supply thresholds as indicated in the drawings or in the hardware sets. All thresholds shall conform to state and local building and handicap codes. Set all exterior thresholds in a full bed of joint sealant. Thresholds for floor closers shall be supplied by the floor closer manufacturer. Provide products from the following list:

1. National Guard Product No. 896 or No. 950
2. Pemko No. 2005 or No. 2001
3. Reese No. S483 or No. S256
4. Zero No. 566 or No. 565

2.15 WEATHER-STRIPPING, GASKETING AND SILENCERS:

A. All exterior openings shall be provided with tight fitting weather stripping with UL labeled gasketing. Apply gasketing to head, hinge jamb, and lock jamb. For other applications, refer to drawings and hardware sets.

1. Pemko 315 DR
2. N/G 130 NDKB
3. Reese 373 SSD

B. Door Sweeps: Provide tight fitting door sweeps on the outside of all exterior doors, all kitchen doors and as indicated in the drawings and hardware sets. Supply from the following list:

1. National Guard Products E609 DKB
2. Pemko 18100 DP

3. Reese 965 D
4. Zero 96 A

C. Door Bottoms: Provide tight fitting automatic door seal, mounted on the inside bottom of all exterior doors.

1. National Guard Products 320N
2. Pemko 420AS
3. Ultra DB044

D. Astragels:

Weather-stripping Astragels: Provide tight fitting split astragel meeting stile on exterior sides of all exterior doors. Overlap ends of weather-stripping. Provide products from the following list:

Pemko 18041 DP

1. National Guard 600 DKB
2. Reese 967 D
3. Zero 98 D

E. Silencers: Provide silencers for all hollow metal frames, three at each single door and at each pair of doors. Not required to be listed in hardware schedule, but all door frames are required to have specified number of silencers. Provide 30 extra silencers to owner for replacements. Provide products from the following list:

1. Rockwood 608
2. Glenn Johnson GJ64
3. Ives 20

F. Sound Proofing: As approved by architect.

2.16 FASTENERS:

A. Fasteners shall be suitable size, quantity and of the same material and finishes as the hardware being secured. All fasteners exposed to weather shall be corrosion-resisting steel. Use Torx head screws/bolts with center pin when possible.

1. Machine screws and tampin shields shall be furnished for attaching hardware to concrete, stone or masonry.
2. Machine or sheetmetal screws shall be furnished for attaching hardware to metal.
3. Self-tapping screws shall be furnished for attaching kickplates to mineral core doors and continuous hinges to steel frames.
4. Full thread screws shall be furnished for attaching butt hinges to wood core doors.
5. Sleeve nuts and machine bolts (sex bolts) shall be provided for attaching surface type closers or closer arm and interior pull handles to wood doors, all exit devices, and O.H. holders.
6. Use only machine screw expansion shields when fastening into masonry. Do not use plastic anchors.
7. Use six-lobe Torx security screws with center pin at all exposed connections in all locksets.

PART 3 - EXECUTION

3.01 PRODUCT HANDLING

A. Contractor shall provide adequate locked storage space with shelving and be responsible for scheduled quantities of hardware when delivered to the job, and payment of invoices covering such material, when and as delivered.

B. Tag each item or package separately, with identification related to hardware set number and door number.

C. Inventory hardware jointly with representatives of hardware supplier and hardware installer until each is satisfied that count is correct.

D. Deliver individually packaged and properly tagged finish hardware at the proper time and location to avoid any delays in construction or installation.

E. Control handling and installation of hardware items which are not immediately replaceable, so that completion of the work will not be delayed by hardware losses, both before and after installation.

3.02 HARDWARE INSTALLATION:

A. General: Prior to installing any hardware or locksets, the architect shall arrange a meeting with the general contractor, the hardware/door/frame supplier, the owner, the lockset manufacturer's representatives and the hardware installer to review installers' qualifications, installation, any special

requirements, etc. Installer must have five years minimum comparable experience in commercial/institutional hardware installations. Contractor must provide an ASSA certified locksmith to install ASSA cylinders and inspect for proper function of locksets. Install each hardware item in compliance with manufacturer's instructions and recommendations. Wherever cutting and fitting is required to install hardware onto or into surfaces which are later to be painted or finished in another way, install each item completely and then remove and store in a secure place during the finish application. After completion of the finishes, reinstall each item. Do not install surface mounted items until finishes and painting have been completed. Protect hardware from damage until Final Acceptance.

B. Hardware mounting heights shall comply with DHI or MAMNI "Recommended Locations for Builders Hardware" or as scheduled. If no locations are indicated on the drawings, the following location can be used to install the hardware. The contractor is fully responsible for coordinating the entire installation.

Center of Door Lever: 38" above finished floor, A.F.F. (36" elementary schools)

Center of Cylinder Deadlocks: 48" above finished floor

Center of Panic Bars: 36" A.F.F.

Center of Push Plates: 45" A.F.F. (35" elementary schools)

Upper Edge of Top Hinge: 5" below door head

Lower Edge of Bottom Hinge: 10" A.F.F.

Center Hinge: Midway between top and bottom hinge

Floor Stops: Plumb from center of lockset

C. Adjust and check each operating item of hardware and each door to ensure proper operation of functions of every unit. Lubricate moving parts with type lubrication recommended by manufacturer (graphite-type if no other is recommended). Replace units which cannot be adjusted, per manufacturer's instructions and lubricate to operate freely and smoothly as intended for the application made. Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

D. Thresholds shall be full width of openings, notch at stops and center mullions, etc., as required, and set in full bed or butyl rubber or polyisobutylene mastic sealant or in accordance with manufacturer's

instructions such as to prevent seepage of water or vapor.

E. Installation by Other Trades: All electrical equipment is to be coordinated with responsible trade, with proper wire and wiring furnished and connections made under that section per NFPA & NEC.

F. Final Adjustment: Wherever hardware installation is made more than two weeks prior to final acceptance of the building for occupancy, the contractor and hardware installer shall make a final check and adjustment of all hardware items. Clean and relubricate operating items as necessary to restore proper function and finish of hardware and doors. Adjust door control devices to compensate for final operation of heating and ventilating equipment. Replace all defective damaged, missing or stolen hardware.

G. Set units level, plumb and true to line and location. Adjust and reinforce the attachment substrate as necessary for proper installation and operation.

H. Drill and countersink units which are not factory-prepared for anchorage fasteners. Space fasteners and anchors in accordance with industry standards.

I. Clean adjacent surfaces soiled by hardware installation.

3.03 MATERIALS AND WORKMANSHIP:

A. Provide all hardware, unless otherwise specified, of the best grade, entirely free of imperfections in manufacturer and finish and guaranteed by the manufacturer to satisfactorily perform the various functions required of it for a long life under normal usage but for a period not less than five years from the date of acceptance. Metal finishes will be as specified.

B. Defective Work:

Hardware found defective in materials, fabrication, coordination or installation upon acceptance of the building will be replaced, reworked or otherwise made good as required to the Owner’s specifications at the contractors expense. All replacements and repairs to be completed before the six month inspection as in item (3.3.C) below.

The following shall also be considered as defective or unacceptable materials (But not limited to):

1. Unauthorized substitutes.
2. Items delivered with missing, broken, damaged or defective parts.
3. Items of incorrect hand or function.
4. Improper installation.

C. Six-Month Reinspection: Approximately six months after the final acceptance of the building, the Contractor and the qualified ASSA certified locksmith representatives from the installer shall return to the project to test, adjust, tighten and/or replace all hardware items required to ensure the proper function and to

determine that all hardware punch-list items have been corrected. The Contractor shall replace all items that have failed due to faulty manufacturing, faulty design, poor quality materials and/or improper installation or coordination at no cost to the Owner. After the Contractor is completely satisfied that all hardware items are installed and functioning as intended for its application, he/she shall arrange a meeting with the Owner, ASSA technical personnel, the architect, the installer, the supplier and the lockset manufacturer. A walk-through of the building shall be made to ensure that all hardware items have been installed and functioning correctly.

3.04 PART 4 - HARDWARE SCHEDULE

A. Provide one complete hardware set with appurtenances for each opening, as indicated on the door and frame schedule, and the hardware schedule. All product selections shall only be made from the contract documents without exception.

B. HARDWARE SCHEDULE: PREPARE HARDWARE SET FOR EACH TYPE OF PROJECT APPLICATION

HARDWARE SET NO. 1 SAMPLE

CLASSROOM DOOR FROM CORRIDOR

EACH LIKE DOOR TO HAVE:

FULL MORTISE HINGES 4 1/2X4 1/2X.097 2.1

PRIMARY LOCKSETS-CLASSROOM FUNCTION 2.2

SURFACE CLOSER

WALL/FLOOR STOPS 2.8

KICK PLATES 2.10

SILENCERS 2.12

3.05 LIMITATION OF HARDWARE SCHEDULE:

Schedule is furnished for whatever assistance it may afford the contractor; do not consider it as entirely inclusive. Examine drawings, specifications; determine extent, hardware, quality required. Should any particular door or items be omitted in any schedule hardware group, provide such door or item with hardware, same as required for similar purposes. The contractor is responsible for complying with all regulatory requirements, management of the means, methods, sequencing, coordination and providing complete assemblies for all hardware items.

END OF SECTION 08710

SECTION 08 8000
GLAZING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Insulating glass units.

B. Glazing units.

C. Plastic sheet glazing units.

D. Plastic films.

E. Glazing compounds and accessories.

1.02 RELATED REQUIREMENTS

A. Section 06 4100 - Architectural Wood Casework: Cabinets with requirements for glass shelves.

B. Section 07 2500 - Weather Barriers.

C. Section 07 9200 - Joint Sealants: Sealants for other than glazing purposes.

D. Section 08 1113 - Hollow Metal Doors and Frames: Glazed lites in doors and borrowed lites.

E. Section 08 1433 - Stile and Rail Wood Doors: Glazed lites in doors.

F. Section 08 3200 - Sliding Glass Doors: Glazing furnished by door manufacturer.

G. Section 08 3613 - Sectional Doors: Glazed lites in doors.

H. Section 08 4126 - All-Glass Entrances and Storefronts: Glazing furnished as part of entrance assembly.

I. Section 08 4313 - Aluminum-Framed Storefronts: Glazing furnished as part of storefront assembly.

J. Section 08 4413 - Glazed Aluminum Curtain Walls: Glazing furnished as part of wall assembly.

K. Section 08 4500 - Translucent Wall and Roof Assemblies.

L. Section 08 5113 - Aluminum Windows: Glazing furnished by window manufacturer.

M. Section 08 5200 - Wood Windows: Glazing furnished by window manufacturer.

N. Section 08 5313 - Vinyl Windows: Glazing furnished by window manufacturer.

O. Section 08 8300 - Mirrors.

P. Section 10 2800 - Toilet, Bath, and Laundry Accessories: Mirrors.

1.03 REFERENCE STANDARDS

A. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials current edition.

B. ANSI Z97.1 - American National Standard for Safety Glazing Materials Used in Buildings - Safety Performance Specifications and Methods of Test 2015.

C. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures Most Recent Edition Cited by Referring Code or Reference Standard.

D. ASTM C864 - Standard Specification for Dense Elastomeric Compression Seal Gaskets, Setting Blocks, and Spacers 2005 (Reapproved 2015).

E. ASTM C920 - Standard Specification for Elastomeric Joint Sealants 2018.

F. ASTM C1036 - Standard Specification for Flat Glass 2016.

G. ASTM C1048 - Standard Specification for Heat-Strengthened and Fully Tempered Flat Glass 2018.

H. ASTM C1172 - Standard Specification for Laminated Architectural Flat Glass 2014.

I. GANA (GM) - GANA Glazing Manual 2008.

J. GANA (SM) - GANA Sealant Manual 2008.

K. GANA (LGRM) - Laminated Glazing Reference Manual 2009.

L. IGMA TM-3000 - North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial & Residential Use 1990 (2016).

M. NFRC 100 - Procedure for Determining Fenestration Product U-factors 2017.

N. NFRC 200 - Procedure for Determining Fenestration Product Solar Heat Gain Coefficient and Visible Transmittance at Normal Incidence 2014, with Errata (2017).

O. NFRC 300 - Test Method for Determining the Solar Optical Properties of Glazing Materials and Systems 2017.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data on Glazing Types: Provide structural, physical and environmental characteristics, size limitations, special handling and installation requirements.

C. Product Data on Glazing Compounds and Accessories: Provide chemical, functional, and environmental characteristics, limitations, special application requirements, and identify available colors.

D. Samples: Submit two samples of glass units.

E. Samples: Submit long bead of glazing sealant, color as selected.

F. Certificate: Certify that products of this section meet or exceed specified requirements.

G. Manufacturer's Qualification Statement.

H. Installer's Qualification Statement.

I. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

J. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.

2. Extra Insulating Glass Units: One of each glass size and each glass type.

1.05 QUALITY ASSURANCE

A. Perform Work in accordance with for glazing installation methods. Maintain one copy on site.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years of documented experience.

C. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years documented experience.

D. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of the type specified in this section.

1.06 MOCK-UPS

A. See Section 01 4000 - Quality Requirements, for additional mock-up requirements.

B. Provide mock-up of framing assembly including glass and air barrier and vapor retarder seal.

C. Provide on-site glazing mock-up with the specified glazing components.

D. Locate where directed.

E. Mock-ups may remain as part of the Work.

1.07 FIELD CONDITIONS

A. Do not install glazing when ambient temperature is less than .

B. Maintain minimum ambient temperature before, during and 24 hours after installation of glazing compounds.

1.08 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Insulating Glass Units: Provide a three year manufacturer warranty to include coverage for seal failure, interpane dusting or misting, including providing products to replace failed units.

C. Laminated Glass: Provide a three year manufacturer warranty to include coverage for delamination, including providing products to replace failed units.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Glass Fabricators:

1. GGI - General Glass International: www.generalglass.com/#sle.
2. JE Berkowitz, LP: www.jeberkowitz.com/#sle.
3. Standard Bent Glass Corp: www.standardbent.com/#sle.

   Trulite Glass & Aluminum Solutions, LLC: www.trulite.com/#sle.
4. Viracon, Inc: www.viracon.com/#sle.
5. Substitutions: Refer to Section 01 6000 - Product Requirements.

B. Float Glass Manufacturers:

1. AGC Glass North America, Inc: www.agcglass.com/#sle.
2. Cardinal Glass Industries: www.cardinalcorp.com/#sle.
3. Guardian Glass, LLC: www.guardianglass.com/#sle.
4. Pilkington North America Inc: www.pilkington.com/na/#sle.
5. Vitro Architectural Glass (formerly PPG Glass): www.vitroglazings.com/#sle.

C. Laminated Glass Manufacturers:

1. Cardinal Glass Industries: www.cardinalcorp.com/#sle.
2. Viracon, Architectural Glass segment of Apogee Enterprises, Inc: www.viracon.com/#sle.
3. Substitutions: Refer to Section 01 6000 - Product Requirements.

D. Anti-Reflective Glass Manufacturers:

1. GGI - General Glass International; GroGlass: www.generalglass.com/#sle.
2. GlasTroesch Holding AG; LUXAR Anti-Reflective Glass: www.mcgrory.com/#sle.
3. Pilkington North America Inc; Pilkington OptiView Anti-Reflective Glass: www.pilkington.com/na/#sle.
4. SCHOTT North America Inc; Amiran: www.us.schott.com/#sle.

5. Substitutions: Refer to Section 01 6000 - Product Requirements.

E. Fire-Resistance-Rated Glass: Provide products as required to achieve indicated fire-rating period.

F. Fire-Protection-Rated Glass: Provide products as required to achieve indicated fire-rating period.

1. Fabricators:
2. Manufacturers:
3. SCHOTT North America Inc; PYRAN Platinum 20: www.us.schott.com/#sle.
4. Vetrotech North America; Contraflam 45: www.vetrotechusa.com/#sle.
5. Substitutions: Refer to Section 01 6000 - Product Requirements.

G. Patterned Glass Manufacturers:

1. GGI - General Glass International; Patterned Glass: www.generalglass.com/#sle.
2. Oldcastle Building Envelope: www.obe.com/#sle.
3. Substitutions: Refer to Section 01 6000 - Product Requirements.

H. Etched Glass Manufacturers:

1. AGC Glass North America, Inc; Matelux: www.agcglass.com/#sle.
2. GGI - General Glass International; Satin Etched: www.generalglass.com/#sle.
3. Substitutions: Refer to Section 01 6000 - Product Requirements.

I. Wired Glass Manufacturers:

1. GGI - General Glass International; Wire Glass: www.generalglass.com/#sle.

J. Mirrored Glass Manufacturers:

1. Pilkington North America Inc; Pilkington Mirropane Transparent Mirror: www.pilkington.com/na/#sle.
2. Substitutions: Refer to Section 01 6000 - Product Requirements.

K. Plastic Films Manufacturers:

1. 3M Window Film: solutions.3m.com/wps/portal/3M/en_US/Window_Film/Solutions/#sle.
2. Flexvue Films: www.flexvuefilms.com/#sle.
3. Llumar, an Eastman Chemical Company; Llumar or Vista: www.llumar.com/#sle.

L. Source Limitations for Glass: Obtain from single source from single manufacturer for each glass type

2.02 PERFORMANCE REQUIREMENTS - EXTERIOR GLAZING ASSEMBLIES

A. Source Limitations for Glazing Accessories: Obtain from single source from single manufacturer for each product and installation method.

B. Provide type and thickness of exterior glazing assemblies to support assembly dead loads, and to withstand live loads caused by positive and negative wind pressure acting normal to plane of glass.

1. Design Pressure: Calculated in accordance with ASCE 7.
2. Maximum Lateral Deflection: For glass supported on all four edges, limit center-of-glass deflection at design wind pressure to not more than 1/50 times the short-side length or 1 inch, whichever is less.
3. Differential Shading: Design glass to resist thermal stresses induced by differential shading within individual glass lites

C. Safety Glazing: Where safety glazing is indicated, provide glazing that complies with 16 CFR 1201, Category II

D. Structural Performance: Glazing shall withstand the following design loads within limits and under conditions indicated determined according to the IBC and ASTM E 1300.

1. Comply with ASTM E1300 for design load resistance of glass type, thickness, dimensions, and maximum lateral deflection of supported glass.

2. Provide glass edge support system sufficiently stiff to limit the lateral deflection of supported glass edges to less than 1/175 of their lengths under specified design load.

3. Glass thicknesses listed are minimum.

E. Vapor Retarder and Air Barrier Seals: Provide completed assemblies that maintain continuity of building enclosure vapor retarder and air barrier.

1. In conjunction with vapor retarder and joint sealer materials described in other sections.

F. Thermal and Optical Performance: Provide exterior glazing products with performance properties as indicated. Performance properties are in accordance with manufacturer's published data as determined with the following procedures and/or test methods:

1. Center of Glass U-Value: Comply with NFRC 100 using Lawrence Berkeley National Laboratory (LBNL) WINDOW 6.3 computer program.

2. Center of Glass Solar Heat Gain Coefficient (SHGC): Comply with NFRC 200 using Lawrence Berkeley National Laboratory (LBNL) WINDOW 6.3 computer program.

3. Solar Optical Properties: Comply with NFRC 300 test method.

2.03 GLASS MATERIALS

A. Float Glass: Provide float glass based glazing unless otherwise indicated.

1. Annealed Type: ASTM C1036, Type I - Transparent Flat, Class 1 - Clear, Quality - Q3.

2. Kind HS - Heat-Strengthened Type: Complies with ASTM C1048.

3. Fully Tempered Safety Glass: Complies with ANSI Z97.1 or 16 CFR 1201 criteria for safety glazing used in hazardous locations.

4. Impact Resistant Safety Glass: Complies with ANSI Z97.1 - Class B, or 16 CFR 1201 - Category I criteria.

5. Tinted Type: ASTM C1036, Class 2 - Tinted, Quality - Q3, with color and performance characteristics as indicated.

6. Patterned Glass Type: ASTM C1036, Type II - Patterned Flat Glass, Quality - Q5, Form 3 - Patterned glass, with color and performance characteristics as indicated.

7. Thicknesses: As indicated; provide greater thickness as required for exterior glazing wind load design.

B. Laminated Glass: Float glass laminated in accordance with ASTM C1172.

1. Laminated Safety Glass: Complies with ANSI Z97.1 - Class B or 16 CFR 1201 - Category I impact test requirements.

2.04 INSULATING GLASS UNITS

A. Insulating Glass Units: Types as indicated.

1. Durability: Certified by an independent testing agency to comply with ASTM E2190.

2. Coated Glass: Comply with requirements of ASTM C1376 for pyrolytic (hard-coat) or magnetic sputter vapor deposition (soft-coat) type coatings on flat glass; coated vision glass, Kind CV; coated overhead glass, Kind CO; or coated spandrel glass, Kind CS.
3. Metal Edge Spacers: Aluminum, bent and soldered corners.
4. Spacer Color: Black.
5. Edge Seal:
    a. Single-Sealed System: Provide silicone, polysulfide or polyurethane sealant as seal applied around perimeter.
6. Color: Black.
7. Purge interpane space with dry air, hermetically sealed.
8. Capillary Tubes: Provide tubes from air space for insulating glass units without inert type gas that have a change of altitude greater than 2500 feet (762 m) between point of fabrication and point of installation to permit pressure equalization of air space.
    a. Capillary Tubes: Tubes to remain open and be of length and material type in accordance with insulating glass fabricator's requirements.

B. Type IG-1 - Insulating Glass Units: Vision glass, double glazed.
1. Applications: Exterior glazing unless otherwise indicated.
2. Space between lites filled with air.
3. Outboard Lite: Annealed float glass, 1/4 inch (6.4 mm) thick, minimum.
    a. Tint: Clear.
4. Inboard Lite: Annealed float glass, 1/4 inch (6.4 mm) thick, minimum.
    a. Tint: Clear.
5. Total Thickness: 1 inch (25.4 mm).

C. Type IG-2 - Insulating Glass Units: Vision glass, triple glazed.
1. Applications: Exterior glazing as indicated on drawings.
2. Space between lites filled with air.
3. Outboard Lite: Annealed float glass, 1/4 inch (6.4 mm) thick, minimum.
    a. Tint: Bronze.
4. Middle Lite: Heat-strengthened float glass, 1/4 inch (6.4 mm) thick, minimum.
5. Inboard Lite: Heat-strengthened float glass, 1/4 inch (6.4 mm) thick, minimum.
    a. Tint: Clear.
6. Total Thickness: 1 inch (25.4 mm).

D. Type IG-5 - Insulating Glass Units: Safety glazing.
1. Applications:
    a. Other locations required by applicable federal, state, and local codes and regulations.
2. Space between lites filled with air.
3. Glass Type: Same as except use fully tempered float glass for both outboard and inboard lites.
4. Total Thickness: 1 inch (25.4 mm).

5. Thermal Transmittance (U-Value), Summer - Center of Glass: , nominal.

2.05 BASIS OF DESIGN - INSULATING GLASS UNITS

A. Basis of Design - Insulating Glass Units: Vision glazing, with Low-E coating.

1. Applications: Exterior insulating glass glazing unless otherwise indicated.
2. Space between lites filled with air.
3. Total Thickness: 1 inch (25.4 mm).
4. Thermal Transmittance (U-Value), Summer - Center of Glass: , nominal.
5. Spacer Color: Black.
6. Edge Seal:
7. Color: Black.
8. Purge interpane space with dry air, hermetically sealed.

2.06 GLAZING UNITS

A. Type G-1 - Monolithic Exterior Vision Glazing:

1. Applications: Exterior glazing unless otherwise indicated.
2. Glass Type: Annealed float glass.
3. Tint: Clear.
4. Thickness: 1/4 inch (6.4 mm), nominal.
5. Glazing Method: Dry glazing method, gasket glazing.

B. Type G-2 - Monolithic Interior Vision Glazing:

1. Applications: Interior glazing unless otherwise indicated.
2. Glass Type: Annealed float glass.
3. Tint: Clear.
4. Thickness: 1/4 inch (6.4 mm), nominal.
5. Glazing Method: Dry glazing method, gasket glazing.

C. Type G-3 - Fire-Resistance-Rated Glazing: Type, thickness, and configuration of glazing that contains flame, smoke, and blocks radiant heat, as required to achieve indicated fire-rating period exceeding 45 minutes.

1. Applications:
2. Glass Type: Multi-laminate annealed glass with intumescent fire retardant interlayers.
3. Provide products listed by ITS (DIR) or UL (DIR) and approved by authorities having jurisdiction.
4. Safety Glazing Certification: 16 CFR 1201 Category II.
5. Fire-Rating Period: 60 minutes.

2.07 PLASTIC FILMS

A. Type F-1 - Solar Control Plastic Film: Mylar type.

1. Application: Locations as indicated on drawings.
2. Color: Blue.
3. Thickness Without Liner: 0.00236 inch (0.06 mm).

B. Type F-2 - Safety and Security Plastic Film: Polyester type.

1. Application: Locations as indicated on drawings.
2. Color: Clear.
3. Thickness Without Liner: 0.002 inch (0.051 mm).

2.08 GLAZING COMPOUNDS

A. Type GC-1 - Glazing Putty: Polymer modified latex recommended by manufacturer for outdoor use, knife grade consistency; gray color.

B. Type GC-2 - Butyl Sealant: Single component; ASTM C920 Grade NS, Class 12-1/2, Uses M and A, Shore A hardness of 10 to 20; black color.

C. Type GC-3 - Polysulfide Sealant: Two component; chemical curing, non-sagging type; ASTM C920 Type M, Grade NS, Class 25, Uses M, A, and G; with cured Shore A hardness range of 15 to 25; color as selected.

D. Type GC-5 - Silicone Sealant: Single component; neutral curing; capable of water immersion without loss of properties; non-bleeding, non-staining; ASTM C920 Type S, Grade NS, Class 25, Uses M, A, and G; with cured Shore A hardness range of 15 to 25; [_____] color.

2.09 ACCESSORIES

A. Setting Blocks: Silicone, with 80 to 90 Shore A durometer hardness; ASTM C864 Option II. Length of 0.1 inch for each square foot (25 mm for each square meter) of glazing or minimum 4 inch (100 mm) by width of glazing rabbet space minus 1/16 inch (1.5 mm) by height to suit glazing method and pane weight and area.

B. Spacer Shims: Neoprene, 50 to 60 Shore A durometer hardness; ASTM C864 Option II. Minimum 3 inch (75 mm) long by one half the height of the glazing stop by thickness to suit application, self adhesive on one face.

C. Glazing Tape, Back Bedding Mastic Type: Preformed, butyl-based, 100 percent solids compound with integral resilient spacer rod applicable to application indicated; 5 to 30 cured Shore A durometer hardness; coiled on release paper; black color.

D. Glazing Splines: Resilient silicone extruded shape to suit glazing channel retaining slot; ASTM C864 Option II; color black.

E. Glazing Clips: Manufacturer's standard type.

2.10 SOURCE QUALITY CONTROL

A. Provide shop inspection and testing for glass.

PART 3 EXECUTION

3.01 VERIFICATION OF CONDITIONS

A. Verify that openings for glazing are correctly sized and within tolerances, including those for size, squareness, and offsets at corners.

B. Verify that the minimum required face and edge clearances are being provided.

C. Verify that surfaces of glazing channels or recesses are clean, free of obstructions that may impede moisture movement, weeps are clear, and support framing is ready to receive glazing system.

D. Verify that sealing between joints of glass framing members has been completed effectively.

E. Proceed with glazing system installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Clean contact surfaces with appropriate solvent and wipe dry within maximum of 24 hours before glazing. Remove coatings that are not tightly bonded to substrates.

B. Seal porous glazing channels or recesses with substrate compatible primer or sealer.

C. Prime surfaces scheduled to receive sealant where required for proper sealant adhesion.

3.03 INSTALLATION, GENERAL

A. Install glazing in compliance with written instructions of glass, gaskets, and other glazing material manufacturers, unless more stringent requirements are indicated, including those in glazing referenced standards.

B. Install glazing sealants in accordance with ASTM C1193, GANA (SM), and manufacturer's instructions.

C. Do not exceed edge pressures around perimeter of glass lites as stipulated by glass manufacturer.

D. Set glass lites of system with uniform pattern, draw, bow, and similar characteristics.

E. Set glass lites in proper orientation so that coatings face exterior or interior as indicated.

F. Prevent glass from contact with any contaminating substances that may be the result of construction operations such as, and not limited to the following; weld splatter, fire-safing, plastering, mortar droppings, etc.

3.04 INSTALLATION - DRY GLAZING METHOD (GASKET GLAZING)

A. Application - Exterior and/or Interior Glazed: Set glazing infills from either the exterior or the interior of the building.

B. Place setting blocks at 1/4 points with edge block no more than 6 inch (152 mm) from corners.

C. Rest glazing on setting blocks and push against fixed stop with sufficient pressure on gasket to attain full contact.

D. Install removable stops without displacing glazing gasket; exert pressure for full continuous contact.

3.05 INSTALLATION - DRY GLAZING METHOD (TAPE AND GASKET SPLINE GLAZING)

A. Application - Exterior Glazed: Set glazing infills from the exterior of the building.

B. Cut glazing tape to length; install on glazing pane. Seal corners by butting tape and sealing junctions with butyl sealant.

C. Place setting blocks at 1/4 points with edge block no more than 6 inch (152 mm) from corners.

D. Rest glazing on setting blocks and push against fixed stop with sufficient pressure to attain full contact.

E. Install removable stops without displacing glazing spline. Exert pressure for full continuous contact.

F. Carefully trim protruding tape with knife.

3.06 INSTALLATION - DRY GLAZING METHOD (TAPE AND TAPE)

A. Application - Interior Glazed: Set glazing infills from the interior of the building.

B. Cut glazing tape to length and set against permanent stops, projecting 1/16 inch (1.6 mm) above sight line.

C. Place setting blocks at 1/4 points with edge block no more than 6 inch (152 mm) from corners.

D. Rest glazing on setting blocks and push against tape for full contact at perimeter of pane or unit.

E. Place glazing tape on free perimeter of glazing in same manner described above.

F. Install removable stop without displacement of tape. Exert pressure on tape for full continuous contact.

G. Carefully trim protruding tape with knife.

3.07 INSTALLATION - WET GLAZING METHOD (COMPOUND AND COMPOUND)

A. Application - Interior Glazed: Set glazing infills from the interior of the building.

B. Install glazing resting on setting blocks. Install applied stop and center pane by use of spacer shims at 24 inch (610 mm) centers, kept 1/4 inch (6 mm) below sight line.

C. Locate and secure glazing pane using glazers' clips.

D. Fill gaps between glazing and stops with glazing compound until flush with sight line. Tool surface to straight line.

3.08 INSTALLATION - WET/DRY GLAZING METHOD (PREFORMED TAPE AND SEALANT)

A. Application - Exterior Glazed: Set glazing infills from the exterior of the building.

B. Cut glazing tape to length and set against permanent stops, 3/16 inch (5 mm) below sight line. Seal corners by butting tape and dabbing with butyl sealant.

C. Apply heel bead of butyl sealant along intersection of permanent stop with frame ensuring full perimeter seal between glass and frame to complete the continuity of the air and vapor seal.

D. Place setting blocks at 1/4 points with edge block no more than 6 inch (152 mm) from corners.

E. Rest glazing on setting blocks and push against tape and heel bead of sealant with sufficient pressure to attain full contact at perimeter of pane or glass unit.

F. Install removable stops, with spacer strips inserted between glazing and applied stops 1/4 inch (6.4 mm) below sight lines.

1. Place glazing tape on glazing pane of unit with tape flush with sight line.

G. Fill gap between glazing and stop with sealant to depth equal to bite of frame on glazing, but not more than 3/8 inch (9 mm) below sight line.

H. Apply cap bead of sealant along void between the stop and the glazing, to uniform line, flush with sight line. Tool or wipe sealant surface smooth.

3.09 INSTALLATION - STRUCTURAL SILICONE GLAZING

A. Application - Factory (Shop) Glazed: Follow basic guidelines of structural silicone glazing for glazing application.

B. Provide design review of the glazing system and project details, adhesion testing, proper surface preparation, training and a quality service program.

C. Provide only structural silicone sealant, tested and manufactured for structural glazing.

3.10 INSTALLATION - PLASTIC FILM

A. Install plastic film with adhesive, applied in accordance with film manufacturer's instructions.

B. Place without air bubbles, creases or visible distortion.

C. Install film tight to perimeter of glass and carefully trim film with razor sharp knife. Provide 1/16 inch (1.6 mm) to 1/8 inch (3.2 mm) gap at perimeter of glazed panel unless otherwise required. Do not score the glass.

3.11 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for additional requirements.

B. Glass and Glazing product manufacturers to provide field surveillance of the installation of their products.

C. Monitor and report installation procedures and unacceptable conditions.

3.12 CLEANING

A. Remove excess glazing materials from finish surfaces immediately after application using solvents or cleaners recommended by manufacturers.

B. Remove non-permanent labels immediately after glazing installation is complete.

C. Clean glass and adjacent surfaces after sealants are fully cured.

D. Clean glass on both exposed surfaces not more than 4 days prior to Date of Substantial Completion in accordance with glass manufacturer's written recommendations.

3.13 PROTECTION

A. After installation, mark pane with an 'X' by using removable plastic tape or paste; do not mark heat absorbing or reflective glass units.

B. Remove and replace glass that is damaged during construction period prior to Date of Substantial Completion.

END OF SECTION

SECTION 08 8300
MIRRORS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Glass mirrors.

1. Annealed float glass.

1.02 RELATED REQUIREMENTS

A. Section 06 2000 - Finish Carpentry: Wood mirror frames.

B. Section 10 2800 - Toilet, Bath, and Laundry Accessories: Metal mirror frames.

1.03 REFERENCE STANDARDS

A. ASTM C1036 - Standard Specification for Flat Glass 2016.

B. ASTM C1193 - Standard Guide for Use of Joint Sealants 2016.

C. GANA (GM) - GANA Glazing Manual 2008.

D. GANA (SM) - GANA Sealant Manual 2008.

E. GANA (TIPS) - Mirrors: Handle with Extreme Care (Tips for the Professional on the Care and Handling of Mirrors) 2011.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data on Mirror Types: Submit structural, physical and environmental characteristics, size limitations, special handling and installation requirements.

C. Manufacturer's Certificate: Certify that mirrors, meets or exceeds specified requirements.

D. Warranty: Submit manufacturer warranty and ensure that forms have been completed in Owner 's name and registered with manufacturer.

E. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.

1.05 QUALITY ASSURANCE

A. Perform Work in accordance with for glazing installation methods.

B. Fabricate, store, transport, receive, install, and clean mirrors in accordance with recommendations of GANA (TIPS).

1.06 FIELD CONDITIONS

A. Do not install mirrors when ambient temperature is less than 50 degrees F (10 degrees C).

B. Maintain minimum ambient temperature before, during and 24 hours after installation of glazing compounds.

1.07 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Provide five year manufacturer warranty for reflective coating on mirrors and replacement of same.

PART 2 PRODUCTS

2.01 MATERIALS

A. Mirror Design Criteria: Select materials and/or provide supports as required to limit mirror material deflection to 1/200, or to the flexure limit of glass, with full recovery of glazing materials, whichever is less.

B. Mirror Glass: Clear, annealed float glass; ASTM C1036, with copper and silver coatings, and protective overcoating.

1. Thickness: 1/4 inch (6.4 mm).
2. Edges: Arrised.
3. Size: As noted on drawings.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that openings for mirrored glazing are correctly sized and within tolerance.

B. Verify that surfaces of mirror frames or recesses are clean, free of obstructions, and ready for installation of mirrors.

3.02 PREPARATION

A. Clean contact surfaces with solvent and wipe dry.

B. Seal porous mirror frames or recesses with substrate compatible primer or sealer. Prime surfaces scheduled to receive sealant.

C. Prepare installation in accordance with ASTM C1193 for solvent release sealants, and install sealant in accordance with manufacturer's instructions.

3.03 INSTALLATION

A. Install mirrors in accordance with GANA (TIPS) and manufacturers recommendations.

B. Set mirrors plumb and level, and free of optical distortion.

C. Set mirrors with edge clearance free of surrounding construction including countertops or backsplashes.

D. Frameless Mirrors: Set mirrors in proper place with adhesive, applied in accordance with adhesive manufacturer's instructions.

3.04 CLEANING

A. Remove wet glazing materials from finish surfaces.

B. Remove labels after work is complete.

C. Clean mirrors and adjacent surfaces.

D. Do not permit edges of mirrors to be exposed to standing water.

E. Maintain environmental conditions that will prevent mirrors from being exposed to moisture from condensation or other sources for continuous periods of time.

F. Wash exposed surface of mirrors not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash mirrors as recommended in writing by mirror manufacturer.

END OF SECTION

SECTION 08 8700
SECURITY GLAZING FILMS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provision of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

1.03 SECTION INCLUDES:

A. Security Glazing film applied to existing glazing assemblies.

1.04 CODES AND REFERENCES:

A. WEY-SA-C1 – Standard for shooter/attack certification and forced entry.

B. GSA Level C – General Services Administration Standard Test Method for Glazing and Window Systems Subject to Dynamic Overpressure Loadings.

C. ASTM F1642 – Standard Test Method for Glazing and Glazing Systems Subject to Air blast Loadings.

D. UL972 – Standard for Burglary Resisting Glazing.

E. EN356 P4 – Testing and Classification of Resistance Against Manual Attack.

F. ASTM E330 – Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.

G. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials; Consumer Products Safety Commission; current edition.

H. ANSI Z97.1 - American National Standard for Safety Glazing Materials Used in Buildings, Safety Performance Specifications and Methods of Test; 2010.

I. ASTM E84 – Standard Test Method for Surface Burning Characteristics of Building Materials; 2013a.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Glazing film manufacturer specializing in manufacture of security glazing films with minimum 10 years successful experience.

B. SUBMITTALS

C. Submit under provisions of Division 1.

D. Test Reports: Detailed reports of full-scale chamber tests to specified criteria, using assemblies identical to those required for this project.

E. Product Data: Manufacturer's data sheets on each product to be used, including:

F. Record of product certification for safety requirements.

G. Preparation instructions and recommendations.

H. Storage and handling requirements and recommendations.

1.06 INSTALLATION METHODS.

A. Samples: For each film product to be used, minimum size 4 inches by 6 inches, representing actual product, color, and patterns.

B. Specimen warranty.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufactures unopened packaging until ready for installation.

B. Store and dispose of solvent-based materials, and materials used with solvent—based materials, in accordance with requirements of authorities having jurisdiction.

1.08 FIELD CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.09 WARRANTY

A. Provide 15 Year manufacturers replacement warranty to cover film against peeling, cracking, discoloration, and deterioration.

PART 2 PRODUCTS

2.01 MANUFACTURER'S

A. Acceptable Manufacturer: Armoured One, LLC., Which is located at: 386 North Midler Ave. Syracuse, NY 13206. Tel: 315-720-4186; Email:info@armouredone.com; Web: www.armouredone.com.

B. Substitutions: Not Permitted

C. Requests for substitutions will be considered in accordance with provisions in Division 1.

D. MATERIALS

E. Security Glazing Film:

F. Transparent polyester film for permanent bonding to glass.

G. Final installed product must be a minimum of 0.023 inches (23 Mil) thick.

H. Installing multiple layers of thinner film to accomplish the required thickness is not allowed.

1. Adhesive Type: Pressure sensitive.
2. Tensile Strength: ASTM D-882, 32,000 psi minimum.
3. Breaking Strength: ASTM D-882, 640 lbs. / inch.
4. Elongation at Break: ASTM D-882, 230%
5. Haze: ASTM D1003, <4%
6. Color b: ASTM D2244, 4.2
7. Visible Light Transmission: 87%
8. Visible Light Reflected (Int): 12%
9. Visible Light Reflected (Ext): 12%
10. UV Block:>99%
11. Total Solar Energy Reflected: 11%
12. Total Solar Energy Transmitted: 77%
13. Total Solar Energy Absorbed: 12%
14. Shading Coefficient: 0.93
15. Total Solar Energy Rejected: 19%
16. Solar Heat Gain Coefficient: 0.81

17. U-Value Winter: 1.03
18. K-Value Winter: 5.85
19. Glare Reduction: 3%

I. Surface Burning Characteristics: Flame spread index of 25, maximum, and smoke developed index of 450, maximum, when tested in accordance with ASTM E84 (Class A).

J. Retrofit existing glazing assemblies to provide impact resistance and forced/attack resistance complying with WEY-SA-C1, ANSI Z97. I and CPSC 16 CFR 1201 Category II, ASTM E330, UL972, EN356 P4A, and GSA Level C as specified:

K. Provide supplemental anchoring system as required to meet forced entry resistance requirements.

L. Light Transmission of Film Applied on 1/4-inch-Thick Clear Annealed Glass:

M. Visible light Transmittance: 86 percent.

N. Anchoring System: DOW 995 or GE SCS2000 SilPruf Structural Sealant with high impact styrene trim.

PART 3 EXECUTION

3.01 EXAMINATION

A. Field -Applied Film: Verify that existing conditions are adequate for proper application and performance of film.

B. Examine glass and frames, insure that existing conditions are adequate for proper application and

C. Performance of film.

D. Verify glass is not cracked, chipped, broken, or damaged.

E. Verify that frames are securely anchored and free of defects.

3.02 PREPARATION

A. Clean glass of dust, dirt, paint, oil, grease, mildew, mold, and other contaminants that would inhibit adhesion.

B. Immediately prior to applying film, thoroughly wash glass with neutral cleaning solution.

C. Protect adjacent surfaces.

D. Do not begin installation until substrates have been properly prepared.

3.03 INSTALLATION

A. Install in accordance with manufacturer's instructions, without air bubbles, wrinkles, streaks, bands, thin spots, pinholes, or gaps, as required to achieve specified performance.

B. Accurately cut film with straight edges to required sizes allowing 1/16-inch to 1/8-inch gap at perimeter of glazed panel unless otherwise required by anchorage method.

C. Seams. Seam film only as required to accommodate material sizes; seam without overlaps.

D. Clean glass prior to film installation with neutral cleaning solution.

E. Peel back release liner and apply film to glass. Using squeegees, push out solution between film and glass.

F. Once film is installed, anchor the edges of the film by applying approved structural sealant and high impact styrene to the edges of the frames and film.

G. Clean glass and excess structural sealants from finished surfaces

H. Remove any labels or protective covers.

3.04 FILM VERIFICATION

A. Awarded contractor will be required to verify that film installed meets the requirements highlighted in this bid. By submitting a bid, you as the contractor understand that three pieces of glass, chosen at random will be removed and film applied will be measured to verify that film installed meets specifications as requested. Film may need to be removed as part of the verification process.

3.05 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION

SECTION 08 8853
SECURITY GLAZING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

1.02 DRAWINGS AND GENERAL PROVISION OF THE CONTRACT, INCLUDING GENERAL AND SUPPLEMENTARY CONDITIONS AND DIVISION 01 SPECIFICATION SECTIONS, APPLY TO THIS SECTION.

1.03 SUMMARY

A. Section Includes

B. Shooter/Attack Resistant Security Glazing

C. Shooter/Attack Resistant Fire Rated Security Glazing

D. Shooter/Attack Resistant Insulating Security Glazing

1.04 CODES AND REFERENCES:

A. WEY-SA – Standard for shooter/attack certification and Forced Entry

B. GSA Level C – General Services Administration Standard Test Method for Glazing and Window Systems Subject to Dynamic Overpressure Loadings.

C. ASTM F1642 – Standard Test Method for Glazing and Glazing Systems Subject to Airblast Loadings

D. UL972 – Standard for Burglary Resistant Glazing

E. EN356 P4 – Testing Classification of Resistance Against Manual Attack

F. ASTM E330 – Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.

G. 16 CFR 1201 – Safety Standard for Architectural Glazing Materials; Consumer Products Commission; current edition.

H. ANSI Z97.1 – American National Standard for Safety Glazing Materials Used in Building, Safety Performance Specifications and Methods of Test; 2010.

I. NFPA 80 – Fire Doors and Windows.

J. ICC/BC – International Building Code.

K. NFPA 252 Standard Methods of Fire Tests of Door Assemblies.

L. Tested in accordance with Underwriters Laboratory Standard for Positive Pressure Fire Tests of Door Assemblies UL9, UL10B and UL10C.

M. State Building Codes, Local Amendments.

1.05 QUALITY ASSURANCE

A. Manufacturers Qualifications: Provide glazing systems produced by a manufacturer with not less than 5-years successful experience in the fabrication of assemblies of the type and quality required.

B. Installer’s Qualifications: Glazed systems shall be installed by a firm that has not less than 5-years successful experience in the installation of systems like those required.

C. Source Limitations for Glass: Obtain all glass products from a single manufacturer.

D. Glass Product Testing: Obtain glass test results for product test reports in “Submittals” Article from a qualified independent agency.

1.06 SUBMITTALS

A. Submit under provisions of Division 1

B. Product Data: Manufacturers data sheets of each product to be used, including:

C. Preparation instructions and recommendation

D. Storage and handling requirements and recommendations

E. Installation methods.

F. Glazing Schedule:

G. Use same designations indicated on Drawings.

H. Listing types and thicknesses for each size, opening and location.

1.07 SAMPLES:

A. Submit one 12” x 12” sample of each glass type specified

B. Submit one sample of each glazing sealant and/or glazing tape for color review.

1.08 WARRANTY: WARRANTY DOCUMENTS SPECIFIED HEREIN.

1.09 CERTIFICATIONS:

A. Certification that all sealants are fully compatible with the surfaces and finishes with which they are in applied.

B. Certification that all products comply with the test methods listed under Paragraph 1.3 Codes and References.

1.10 DELIVERY, STORAGE AND HANDLING

A. Deliver materials in manufacturer’s unopened and undamaged packaging, with manufacturer’s labels intact.

B. Protect glass and glazing materials from damage in ordinance with manufacturer’s recommendations.

1.11 WARRANTIES

A. Non-Rated Glass Units: Warrant for 10 years from date of Delivery to be free from delamination and failure of seals and not to develop material obstruction of vision, as a result of dust, moisture or film formation on internal glass surfaces.

B. Low-E Glass: Warrant for 10 years from date of Delivery to be free of peeling or other deterioration of the Low-E coating.

C. Fire Rated Glass: Warrant for 5 years from date of Delivery to be free from delamination and discoloration.

D. Glazing Sealants: Warrant for 10 years per sealant manufacturer's standard warranty of merchantable quality. Warranty shall certify that cured sealants:

E. Will perform as a watertight weather-seal.

F. Will not become brittle or crack due to weathering or normal expansion and contraction of adjacent surfaces.

G. Will not harden beyond a Shore A durometer of 50, nor soften below a durometer of 10.

H. Will not change color when used with compatible back-up materials.

I. Will not bleed.

1.12 PART 2 – PRODUCTS

MANUFACTURER'S

A. Acceptable Manufacturer: Armoured One, LLC., Which is located at: 386 North Midler Ave. Syracuse, NY 13206. Tel: 315-720-4186; Email:info@armouredone.com; Web: www.armouredone.com.

B. Substitutions: Not Permitted

C. Requests for substitutions will be considered in accordance with provisions in Division 1.

MATERIALS

D. Shooter/Attack Resistant Security Glass, Non-Rated: AOTSG516

1. Thickness: 5/16"
2. WEY-SA-C2 – Standard for shooter/attack certification and forced entry Class 2.
3. GSA Level C – General Services Administration Standard Test Method for Glazing and Window Systems Subject to Dynamic Overpressure Loadings.
4. ASTM F1642 – Standard Test Method for Glazing and Glazing Systems Subject to Air blast Loadings.
5. UL972 – Standard for Burglary Resisting Glazing.
6. EN356 P4 – Testing and Classification of Resistance against manual attack.
7. ASTM E330 – Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.
8. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials; Consumer Products Safety Commission; current edition.
9. ANSI Z97.1 - American National Standard for Safety Glazing Materials Used in Buildings, Safety Performance Specifications and Methods of Test; 2010.

E. Shooter/Attack Resistant Security Glass, Non-Rated: AOTSG616

1. Thickness: 3/8"
2. WEY-SA-C2 – Standard for shooter/attack certification and forced entry Class 2.
3. GSA Level C – General Services Administration Standard Test Method for Glazing and Window Systems Subject to Dynamic Overpressure Loadings.
4. ASTM F1642 – Standard Test Method for Glazing and Glazing Systems Subject to Air blast Loadings.
5. UL972 – Standard for Burglary Resisting Glazing.
6. EN356 P4 – Testing and Classification of Resistance against manual attack.
7. ASTM E330 – Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.
8. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials; Consumer Products Safety Commission; current edition.
9. ANSI Z97.1 - American National Standard for Safety Glazing Materials Used in Buildings, Safety Performance Specifications and Methods of Test; 2010.

F. Shooter/Attack Resistant Security Glass, Non-Rated Insulated: AOTSG1

1. Thickness: 1"
2. WEY-SA-C2 – Standard for shooter/attack certification and forced entry Class 2.

3. GSA Level C – General Services Administration Standard Test Method for Glazing and Window Systems Subject to Dynamic Overpressure Loadings.
4. ASTM F1642 – Standard Test Method for Glazing and Glazing Systems Subject to Air blast Loadings.
5. UL972 – Standard for Burglary Resisting Glazing.
6. EN356 P4 – Testing and Classification of Resistance against manual attack.
7. ASTM E330 – Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.
8. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials; Consumer Products Safety Commission; current edition.
9. ANSI Z97.1 - American National Standard for Safety Glazing Materials Used in Buildings, Safety Performance Specifications and Methods of Test; 2010.

G. Shooter/Attack Resistant Security Glass, 20-Minute Rated: AOTSG516FR-20

1. Thickness: 5/16”
2. Tested in accordance with NFPA 80, NFPA 252, UL 9, UL 10B, UL 10C
3. WEY-SA-C2 – Standard for shooter/attack certification and forced entry Class 2.
4. GSA Level C – General Services Administration Standard Test Method for Glazing and Window Systems Subject to Dynamic Overpressure Loadings.
5. ASTM F1642 – Standard Test Method for Glazing and Glazing Systems Subject to Air blast Loadings.
6. UL972 – Standard for Burglary Resisting Glazing.
7. EN356 P4 – Testing and Classification of Resistance against manual attack.
8. ASTM E330 – Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.
9. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials; Consumer Products Safety Commission; current edition.
10. ANSI Z97.1 - American National Standard for Safety Glazing Materials Used in Buildings, Safety Performance Specifications and Methods of Test; 2010.

H. Shooter/Attack Resistant Security Glass, 45-Minute Rated: AOTSG1016FR-45

1. Thickness: 5/8”
2. Tested in accordance with NFPA 80, NFPA 252, UL 9, UL 10B, UL 10C
3. WEY-SA-C2 – Standard for shooter/attack certification and forced entry Class 2.
4. GSA Level C – General Services Administration Standard Test Method for Glazing and Window Systems Subject to Dynamic Overpressure Loadings.
5. ASTM F1642 – Standard Test Method for Glazing and Glazing Systems Subject to Air blast Loadings.
6. UL972 – Standard for Burglary Resisting Glazing.
7. EN356 P4 – Testing and Classification of Resistance against manual attack.
8. ASTM E330 – Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.

9. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials; Consumer Products Safety Commission; current edition.
10. ANSI Z97.1 - American National Standard for Safety Glazing Materials Used in Buildings, Safety Performance Specifications and Methods of Test; 2010.

I. Shooter/Attack Resistant Security Glass, 60-Minute Rated: AOTSG1616FR-60

1. Thickness: 1”
2. Tested in accordance with NFPA 80, NFPA 252, UL 9, UL 10B, UL 10C
3. WEY-SA-C2 – Standard for shooter/attack certification and forced entry Class 2.
4. GSA Level C – General Services Administration Standard Test Method for Glazing and Window Systems Subject to Dynamic Overpressure Loadings.
5. ASTM F1642 – Standard Test Method for Glazing and Glazing Systems Subject to Air blast Loadings.
6. UL972 – Standard for Burglary Resisting Glazing.
7. EN356 P4 – Testing and Classification of Resistance against manual attack.
8. ASTM E330 – Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.
9. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials; Consumer Products Safety Commission; current edition.
10. ANSI Z97.1 - American National Standard for Safety Glazing Materials Used in Buildings, Safety Performance Specifications and Methods of Test; 2010.

J. Shooter/Attack Resistant Security Glass, 90-Minute Rated: AOTSG616FR-90

1. Thickness: 3/8”
2. Tested in accordance with NFPA 80, NFPA 252, UL 9, UL 10B, UL 10C
3. WEY-SA-C2 – Standard for shooter/attack certification and forced entry Class 2.
4. GSA Level C – General Services Administration Standard Test Method for Glazing and Window Systems Subject to Dynamic Overpressure Loadings.
5. ASTM F1642 – Standard Test Method for Glazing and Glazing Systems Subject to Air blast Loadings.
6. UL972 – Standard for Burglary Resisting Glazing.
7. EN356 P4 – Testing and Classification of Resistance against manual attack.
8. ASTM E330 – Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.
9. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials; Consumer Products Safety Commission; current edition.
10. ANSI Z97.1 - American National Standard for Safety Glazing Materials Used in Buildings, Safety Performance Specifications and Methods of Test; 2010.

GLAZING MATERIAL

11. General: Provide standard color of glazing materials as selected by Architect. Comply with manufacturer's recommendations for applications and conditions at time of installation.
12. 3M VHB 5952 – 3M (Anchoring tape applied on vision kits to adhere glazing to vision kit.)

13. Cleaners, Primers and Sealers: Type recommended by sealant or gasket manufacturer.
14. Setting Blocks: Neoprene, silicone or EPDM, 70-90 durometer hardness, with proven compatibility with glazing materials used.
15. Spacers: Neoprene, silicone or EPDM, 40-50 durometer hardness with proven compatibility with glazing materials used.
16. Compressible Fillers: Closed-cell or waterproof-jacketed rod stock of synthetic rubber or plastic foam, proven to be compatible with sealants used, flexible and resilient, with 5-10 psi compression strength for 25% deflection.

FABRICATION

17. Cut glass to full fit and play, consistent with glass and glazing material manufacturers' recommendations and the requirements of the Drawings and References, Codes and Standards Article.
18. Follow code requirements and glass manufacturer's recommendations for minimum bite and edge and face clearances.
19. Cut lights to smooth straight edges, clean, free of nicks and flares; nipping not permitted. Follow glass manufacturer's directions exactly for tinted and Low-E glass
20. Glass Identification:
    a. Glazing in fire rated doors and fire rated windows shall bear UL classification marking in accordance with UL 9.
    b. Manufacturer's and UL identifications for glazing shall be permanently etched to be visible after glass has been set in place and glazed.

1.13 PART 3 EXECUTION

A. gENERAL

1. Each glazing installation must withstand normal temperature changes, and impact loading without failure of glass, failure of sealants or gaskets, deterioration of glazing materials and other defects in the work.
2. Protect glass from damage during handling and installation, and subsequent operation of glazed components of the work. Discard units with edge damage or other imperfections.
3. Glazing channel dimensions are intended to provide for necessary bite on glass, minimum edge clearance, and adequate tape or sealant thicknesses, with reasonable tolerances.
4. Comply with recommendations by manufacturers of glass and glazing products, except where more stringent requirements are indicated, including those of referenced glazing standards.

B. pREPARATION

1. Clean glazing channel and other framing members to receive glass, immediately before glazing. Remove coatings which are not firmly bonded to substrate.
2. Where sealants are used, apply primer or sealant to joint surfaces where recommended by sealant manufacturer.

C. INSTALLATION

1. Set units of glass in each series with uniformity of pattern, draw, bow and similar characteristics.
2. Where sealants are used at butt joints, apply sealant in thin continuous clear bead. Tool sealant to a uniform, continuous, even profile.

3. Apply glazing stops and clean up any excess structural sealants from finished surfaces.
4. Conform to recommendations of glass manufacturer where such covers points not shown on Drawings or specified herein.
5. Remove "loose" stops furnished with the units and reinstall as a part of the glazing operation.
6. Handle glass so as to prevent nicks and flares on glass edges.
7. Install glass exceeding 1/8" thickness on identical setting blocks permanently mounted and centered at 1/4 points. If necessary to reduce deflection of horizontal supporting member, blocks may be placed at 1/8 points or with the nearest end 6" (whichever is greater) from edge of glass unit. Ensure that blocks are equidistant from centerline of glass. Do not obstruct weep holes.
8. Provide permanently mounted edge blocks at head and jambs of dry-glazed lights to prevent damage to glass edges during installation and lateral shifting of glass due to thermal and seismic loads and vibrations. Follow recommendations of Flat Glass Marketing Assn. Glazing Manual.
9. Set glass to maintain bite, edge and face clearance stipulated by code and the glass manufacturer.
10. Take special precautions to protect laminated glass edges from deterioration of vinyl interlayer by moisture.
11. Glaze dry-glazed aluminum doors and frames as per manufacturer's directions using glazing gaskets and seals furnished with the units.
12. Miter gaskets at corners and install so as to prevent pulling away at corners. Gaskets with gaps or other visible irregularities on door and window units shall be corrected by manufacturer or fabricator at no additional cost to University.

1.14 PROTECTION AND CLEANING

A. Remove and replace glass which is broken, chipped, cracked, abraded or damaged in other ways during construction period, including natural causes, accidents and vandalism.

B. Wash and polish glass on both faces not more than 4 days prior to date scheduled for inspections intended to establish Date of Substantial Completion in each area of project. Comply with glass manufacturer's recommendations for final cleaning.

END OF SECTION

SECTION 08 9100
LOUVERS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Louvers, frames, and accessories.

1.02 RELATED REQUIREMENTS

A. Section 07 2500 - Weather Barriers: Sealing frames to weather barrier installed on adjacent construction.

B. Section 07 6200 - Sheet Metal Flashing and Trim.

C. Section 07 9200 - Joint Sealants: Sealing joints between frames and adjacent construction.

D. Section 09 9113 - Exterior Painting: Field painting.

E. Section 23 0913 - Instrumentation and Control Devices for HVAC: Actuators for operable louvers.

F. Section 23 0923 - Direct-Digital Control System for HVAC: Actuators for operable louvers.

G. Section 23 3100 - HVAC Ducts and Casings: Ductwork attachment to louvers.

H. Section 23 3300 - Air Duct Accessories: Fire/smoke dampers associated with exterior wall louvers.

I. Section 28 4600 - Fire Detection and Alarm: Smoke control connection.

1.03 REFERENCE STANDARDS

A. AMCA 500-L - Laboratory Methods of Testing Louvers for Rating 2015.

B. AMCA 511 - Certified Ratings Program for Air Control Devices 2010.

C. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process 2017.

D. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar 2015.

E. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes 2014.

F. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric) 2013.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data describing design characteristics, maximum recommended air velocity, design free area, materials and finishes.

C. Shop Drawings: Indicate louver layout plan and elevations, opening and clearance dimensions, tolerances; head, jamb and sill details; blade configuration, screens, blankout areas required, and frames.

D. Samples: Submit two samples 2 by 2 inches (50 by 50 mm) in size illustrating finish and color of exterior and interior surfaces.

E. Test Reports: Independent agency reports showing compliance with specified performance criteria.

F. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

G. Maintenance Data: Include lubrication schedules, adjustment requirements.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section, with minimum three years of documented experience.

1.06 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Provide five year manufacturer's warranty against distortion, metal degradation, and connection failures of louver components.

1. Finish: Include twenty year coverage against degradation of exterior finish.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Louvers:

1. Greenheck; www.greeheck.com
2. Ruskin; www.ruskin.com
3. Substitutions: See Section 01 6000 - Product Requirements.

2.02 LOUVERS

A. Louvers: Factory fabricated and assembled, complete with frame, mullions, and accessories; AMCA Certified in accordance with AMCA 511.

1. Wind Load Resistance: Design to resist positive and negative wind load of 25 psf (of 1.2 kPa) without damage or permanent deformation.
2. Intake Louvers: Design to allow maximum of 0.01 oz/sq ft (3.1 g/sq m) water penetration at calculated intake design velocity based on design air flow and actual free area, when tested in accordance with AMCA 500-L.
3. Screens: Provide insect screens at intake louvers and bird screens at exhaust louvers.

B. Stationary Louvers: Horizontal blade, formed galvanized steel sheet construction, with intermediate mullions matching frame.

1. Blades: Straight.
2. Frame: 4 inches deep (100 mm deep), channel profile; corner joints mitered and , with continuous recessed caulking channel each side.
3. Steel Thickness, Galvanized: Frame 16 gage, 0.0598 inch (1.52 mm) minimum base metal; blades 16 gage, 0.0598 inch (1.52 mm) minimum base metal.
4. Steel Finish: Superior performing organic coatings, finished after fabrication.

C. Facade Ventilator Louvers: Thermally broken, with extruded aluminum framework and rubber seals, air or smoke ventilator; awning type window, top hinged.

1. Aluminum Frame: 3 inch (76 mm) deep, 3-7/8 inch (99 mm) wide, extruded aluminum of alloy 6063 and T6 temper.
2. Aluminum Finish: Class II natural anodized; finished after fabrication.
3. Frame Mounting: As indicated on drawings.
4. Frame Size: As indicated on drawings.
5. Glazing In-Fill Panel: Tempered glass, 1/4 inch (6.4 mm) thick.

2.03 MATERIALS

A. Extruded Aluminum: ASTM B221 (ASTM B221M).

B. Steel Sheet: Hot-dipped galvanized steel sheet, ASTM A653/A653M, with G90/Z275 coating.

C. Stainless Steel: ASTM A666, Type 304, soft temper, smooth surface, No. 4 brushed finish.

2.04 ACCESSORIES

A. Blank-Off Panels: Aluminum face and back sheets, polyisocyanurate foam core, 1-1/2 inch (38 mm) thick, coordinate paint color with owner; provide where duct connected to louver is smaller than louver frame, sealing off louver area outside duct.

B. Screens: Frame of same material as louver, with reinforced corners; removable, screw attached; installed on inside face of louver frame.

C. Bird Screen: Interwoven wire mesh of steel, 14 gage, 0.0641 inch (1.63 mm) diameter wire, 1/2 inch (13 mm) open weave, diagonal design.

D. Insect Screen: 18 x 16 size aluminum mesh.

E. Fasteners and Anchors: Galvanized steel.

F. Flashings: Of same material as louver frame, formed to required shape, single length in one piece per location.

G. Sealant for Setting Sills and Sill Flashing: Non-curing butyl type.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that prepared openings and flashings are ready to receive this work and opening dimensions are as indicated on shop drawings.

B. Verify that field measurements are as indicated.

3.02 INSTALLATION

A. Install louver assembly in accordance with manufacturer's instructions.

B. Coordinate with installation of flashings by others.

C. Install louvers level and plumb.

D. Set sill members and sill flashing in continuous bead of sealant.

E. Align louver assembly to ensure moisture shed from flashings and diversion of moisture to exterior.

F. Secure louver frames in openings with concealed fasteners.

G. Coordinate with installation of mechanical ductwork, if required.

H. Coordinate with installation of louver actuators, if required.

3.03 ADJUSTING

A. Adjust operable louvers for freedom of movement of control mechanism. Lubricate operating joints.

3.04 CLEANING

A. After installation, all exposed prefinished and plated items and all items fabricated from stainless steel and aluminum are to be cleaned as recommended by the manufacturer and protected from damage until completion of the project.

B. All movable parts, including hardware, are to be cleaned and adjusted to operate as designed without binding or deformation of the members, so as to be centered in the opening of frame, and where applicable, to have all contact surfaces fit tight and even without forcing or warping the components.

C. Restore louvers and vents damaged during installation and construction so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by Contracting Officer Representative (COR) damaged units and replace with new units.

END OF SECTION

SECTION 08 9200
LOUVERED EQUIPMENT ENCLOSURES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Louvered aluminum screens for concealing rooftop equipment.

B. Slatted aluminum screens for concealing rooftop equipment.

1.02 RELATED REQUIREMENTS

A. Section 05 5000 - Metal Fabrications: Superstructure support and bracing of rooftop screens and grilles.

B. Section 07 5100 - Built-Up Bituminous Roofing: Treating penetrations for support of rooftop screens.

C. Section 08 9100 - Louvers.

1.03 REFERENCE STANDARDS

A. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate 2014.

B. ASTM B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate (Metric) 2014.

C. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes 2014.

D. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric) 2013.

E. ASTM C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation 2018.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Storage and handling requirements and recommendations.

2. Installation methods.

C. Shop Drawings: Include plans, sections, and details of connections and bracing.

1. Include structural calculations indicating compliance with wind loading requirements.

2. Show field measurements of roof openings on shop drawings.

D. Manufacturer's Qualification Statement.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section, with not less than ten years of documented experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Comply with manufacturer's instructions for handling of grille and screen products.

1.07 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Submit manufacturer's standard ten-year finish warranty.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Wind Resistance: Design grilles and screens, including superstructure support system, to withstand positive and negative wind loading in accordance with applicable building code.

2.02 LIGHTWEIGHT LOUVERED ALUMINUM SCREEN PANELS

A. Construction: Panels comprising interlocking aluminum box beam frames packed with polystyrene insulation and reinforced as necessary with aluminum I-beams, with fixed horizontal aluminum louvers inserted into vertical frame members.

1. Box Beam Frames and Louvers: Roll-formed aluminum sheet, alloy 3005-H25 temper, or equivalent in accordance with ASTM B209 (ASTM B209M), 0.025 inch (0.635 mm) thick.
2. I-Beam Inserts: Extruded aluminum, alloy 6063-T6 temper, or equivalent in accordance with ASTM B221 (ASTM B221M), 0.052 inch (1.32 mm) typical wall thickness.
3. Insulation: Expanded polystyrene complying with ASTM C578.
4. Fasteners: Self-tapping stainless steel screws or aluminum pop rivets.
5. Accessories and Installation Hardware: High quality stainless steel or other non-corrosive materials.

B. Box Beam Frames: Face width of 2-1/2 inch (63.5 mm) and depth of 1-5/8 inch (41.3 mm).

C. Louver Blades: Roll-formed into beveled-edge design, 1-3/4 inch (44.5 mm) wide, and spaced at 1-1/4 inch (32 mm) on center.

D. Aluminum Finish: Low gloss polyester enamel paint, roller coated over pretreated aluminum and baked at 400 degrees F (204 degrees C).

1. Color: As selected from manufacturer's standard colors.

E. Overall Screen Configuration: Dimensions, details, and layout as indicated on drawings.

2.03 LIGHTWEIGHT PITCHED LOUVERED SCREENS

A. Construction: Individual roll-formed aluminum blades snapped onto reinforced aluminum stringers spaced at 24 inch (610 mm) on center, that are supported by customized support structure.

1. Louver Blades: Alloy 3005-H25 temper, or equivalent in accordance with ASTM B209 (ASTM B209M), 3-3/8 inch (85.7 mm) aluminum slats roll-formed into shallow channel shape and designed to snap onto vertical stringers.

B. Aluminum Finish: Low gloss polyester enamel paint, roller coated over pretreated aluminum and baked at 400 degrees F (204 degrees C).

1. Color: As selected from manufacturer's standard colors. Coordinate final selection with Owner.

C. Overall Screen Configuration: Dimensions, details, and layout as indicated on drawings.

2.04 EXTRUDED HORIZONTAL LOUVERS

A. Construction: Individual extruded aluminum louvers in inverted overlapping configuration, with blade supports attached to and supported by customized support structure.

B. Louver Blades: Alloy 6063-T5 or T6 temper, or equivalent in accordance with ASTM B221 (ASTM B221M), 0.081 inch (2.06 mm) thick, 4 inch (102 mm) deep, spaced at 5 inch (127 mm) on center, and configured to totally block sightlines from grade.

C. Overall Screen Configuration: Dimensions, details, and layout as indicated on drawings.

2.05 LIGHTWEIGHT VERTICAL SLAT SCREENS

A. Construction: Individual roll-formed aluminum slats snapped onto extruded horizontal aluminum stringers spaced at 24 inch (610 mm) on center, that are supported by customized support structure.

B. Overall Screen Configuration: Dimensions, details, and layout as indicated on drawings.

2.06 EXTRUDED VERTICAL SLAT SCREENS

A. Construction: Individual extruded aluminum slats in spaced configuration for partial sight restriction, with aluminum supports that are supported by customized support structure.

B. Slats: Alloy 6063-T5 or T6 temper, or equivalent in accordance with ASTM B221 (ASTM B221M), 0.05 inch (1.3 mm) thick, nominal 3-1/2 inch (89 mm) wide and 5/8 inch (15.9 mm) deep, spaced at nominal 1/2 inch (12.7 mm)

C. Overall Screen Configuration: Dimensions, details, and layout as indicated on drawings.

2.07 ACCESSORIES

A. Miscellaneous Trim: Aluminum sheet, alloy 3005-H25 temper, or equivalent in accordance with ASTM B209 (ASTM B209M), formed to shapes indicated and finished to match other components.

B. Support Structure: As specified in Section 05 5000.

C. Fasteners: Self-tapping stainless steel screws, as approved by manufacturer of rooftop equipment screens.

PART 3 EXECUTION

3.01 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.02 PREPARATION

A. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.03 INSTALLATION

A. Install rooftop equipment screens in accordance with manufacturer's printed instructions and as indicated on shop drawings.

B. Form tight joints and fit exposed connections accurately.

C. Provide necessary fastenings and anchors required for a complete installation, and install units plumb, level, and in proper alignment with adjacent work.

3.04 PROTECTION

A. Protect installed products until completion of project.

B. Protect metal surfaces from corrosion or galvanic action by application of a heavy coating of bituminous paint on surfaces that will be in contact with concrete, masonry or dissimilar metals.

C. Touch-up, repair or replace damaged products before Date of Substantial Completion.

END OF SECTION

SECTION 08 9200
LOUVERED EQUIPMENT ENCLOSURES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Louvered aluminum screens for concealing rooftop equipment.

B. Slatted aluminum screens for concealing rooftop equipment.

1.02 RELATED REQUIREMENTS

A. Section 05 5000 - Metal Fabrications: Superstructure support and bracing of rooftop screens and grilles.

B. Section 07 5100 - Built-Up Bituminous Roofing: Treating penetrations for support of rooftop screens.

C. Section 08 9100 - Louvers.

1.03 REFERENCE STANDARDS

A. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate 2014.

B. ASTM B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate (Metric) 2014.

C. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes 2014.

D. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric) 2013.

E. ASTM C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation 2018.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Storage and handling requirements and recommendations.

2. Installation methods.

C. Shop Drawings: Include plans, sections, and details of connections and bracing.

1. Include structural calculations indicating compliance with wind loading requirements.

2. Show field measurements of roof openings on shop drawings.

D. Manufacturer's Qualification Statement.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section, with not less than ten years of documented experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Comply with manufacturer's instructions for handling of grille and screen products.

1.07 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Submit manufacturer's standard ten-year finish warranty.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Wind Resistance: Design grilles and screens, including superstructure support system, to withstand positive and negative wind loading in accordance with applicable building code.

2.02 LIGHTWEIGHT LOUVERED ALUMINUM SCREEN PANELS

A. Construction: Panels comprising interlocking aluminum box beam frames packed with polystyrene insulation and reinforced as necessary with aluminum I-beams, with fixed horizontal aluminum louvers inserted into vertical frame members.

1. Box Beam Frames and Louvers: Roll-formed aluminum sheet, alloy 3005-H25 temper, or equivalent in accordance with ASTM B209 (ASTM B209M), 0.025 inch (0.635 mm) thick.
2. I-Beam Inserts: Extruded aluminum, alloy 6063-T6 temper, or equivalent in accordance with ASTM B221 (ASTM B221M), 0.052 inch (1.32 mm) typical wall thickness.
3. Insulation: Expanded polystyrene complying with ASTM C578.
4. Fasteners: Self-tapping stainless steel screws or aluminum pop rivets.
5. Accessories and Installation Hardware: High quality stainless steel or other non-corrosive materials.

B. Box Beam Frames: Face width of 2-1/2 inch (63.5 mm) and depth of 1-5/8 inch (41.3 mm).

C. Louver Blades: Roll-formed into beveled-edge design, 1-3/4 inch (44.5 mm) wide, and spaced at 1-1/4 inch (32 mm) on center.

D. Aluminum Finish: Low gloss polyester enamel paint, roller coated over pretreated aluminum and baked at 400 degrees F (204 degrees C).

1. Color: As selected from manufacturer's standard colors.

E. Overall Screen Configuration: Dimensions, details, and layout as indicated on drawings.

2.03 LIGHTWEIGHT PITCHED LOUVERED SCREENS

A. Construction: Individual roll-formed aluminum blades snapped onto reinforced aluminum stringers spaced at 24 inch (610 mm) on center, that are supported by customized support structure.

1. Louver Blades: Alloy 3005-H25 temper, or equivalent in accordance with ASTM B209 (ASTM B209M), 3-3/8 inch (85.7 mm) aluminum slats roll-formed into shallow channel shape and designed to snap onto vertical stringers.

B. Aluminum Finish: Low gloss polyester enamel paint, roller coated over pretreated aluminum and baked at 400 degrees F (204 degrees C).

1. Color: As selected from manufacturer's standard colors. Coordinate final selection with Owner.

C. Overall Screen Configuration: Dimensions, details, and layout as indicated on drawings.

2.04 EXTRUDED HORIZONTAL LOUVERS

A. Construction: Individual extruded aluminum louvers in inverted overlapping configuration, with blade supports attached to and supported by customized support structure.

B. Louver Blades: Alloy 6063-T5 or T6 temper, or equivalent in accordance with ASTM B221 (ASTM B221M), 0.081 inch (2.06 mm) thick, 4 inch (102 mm) deep, spaced at 5 inch (127 mm) on center, and configured to totally block sightlines from grade.

C. Overall Screen Configuration: Dimensions, details, and layout as indicated on drawings.

2.05 LIGHTWEIGHT VERTICAL SLAT SCREENS

A. Construction: Individual roll-formed aluminum slats snapped onto extruded horizontal aluminum stringers spaced at 24 inch (610 mm) on center, that are supported by customized support structure.

B. Overall Screen Configuration: Dimensions, details, and layout as indicated on drawings.

2.06 EXTRUDED VERTICAL SLAT SCREENS

A. Construction: Individual extruded aluminum slats in spaced configuration for partial sight restriction, with aluminum supports that are supported by customized support structure.

B. Slats: Alloy 6063-T5 or T6 temper, or equivalent in accordance with ASTM B221 (ASTM B221M), 0.05 inch (1.3 mm) thick, nominal 3-1/2 inch (89 mm) wide and 5/8 inch (15.9 mm) deep, spaced at nominal 1/2 inch (12.7 mm)

C. Overall Screen Configuration: Dimensions, details, and layout as indicated on drawings.

2.07 ACCESSORIES

A. Miscellaneous Trim: Aluminum sheet, alloy 3005-H25 temper, or equivalent in accordance with ASTM B209 (ASTM B209M), formed to shapes indicated and finished to match other components.

B. Support Structure: As specified in Section 05 5000.

C. Fasteners: Self-tapping stainless steel screws, as approved by manufacturer of rooftop equipment screens.

PART 3 EXECUTION

3.01 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.02 PREPARATION

A. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.03 INSTALLATION

A. Install rooftop equipment screens in accordance with manufacturer's printed instructions and as indicated on shop drawings.

B. Form tight joints and fit exposed connections accurately.

C. Provide necessary fastenings and anchors required for a complete installation, and install units plumb, level, and in proper alignment with adjacent work.

3.04 PROTECTION

A. Protect installed products until completion of project.

B. Protect metal surfaces from corrosion or galvanic action by application of a heavy coating of bituminous paint on surfaces that will be in contact with concrete, masonry or dissimilar metals.

C. Touch-up, repair or replace damaged products before Date of Substantial Completion.

END OF SECTION

SECTION 09 0561
COMMON WORK RESULTS FOR FLOORING PREPARATION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. This section applies to floors identified in contract documents that are receiving the following types of floor coverings:
   1. Resilient tile and sheet.
   2. Carpet tile.
   3. Thin-set ceramic tile and stone tile.
   4. Rubber Flooring.
   5. Vinyl Ceramic Tile (VCT).
   6. Terrazzo Flooring

B. Removal of existing floor coverings.

C. Preparation of new concrete floor slabs for installation of floor coverings.

D. Testing of concrete floor slabs for moisture and alkalinity (pH).

E. Remediation of concrete floor slabs due to unsatisfactory moisture or alkalinity (pH) conditions.
   1. Contractor shall perform all specified remediation of concrete floor slabs. If such remediation is indicated by testing agency's report and is due to a condition not under Contractor's control or could not have been predicted by examination prior to entering into the contract, a contract modification will be issued.

F. Patching compound or Ardex should be used for leveling or sloping floor to meet Owner's requirements

G. Remedial floor coatings.

H. Remedial floor sheet membrane.

I. Preparation of new and existing wood-based floors and subfloors for installation of new floor coverings.

1.02 RELATED REQUIREMENTS

A. Section 01 4000 - Quality Requirements: Additional requirements relating to testing agencies and testing.

B. Section 01 7419 - Construction Waste Management and Disposal: Handling of existing floor coverings removed.

C. Section 03 3000 - Cast-in-Place Concrete: Moisture emission reducing curing and sealing compound for slabs to receive adhered flooring, to prevent moisture content-related flooring failures; to remain in place, not to be removed.

D. Section 03 3000 - Cast-in-Place Concrete: Concrete admixture for slabs to receive adhered flooring, to prevent moisture content-related flooring failures.

E. Section 03 5400 - Cast Underlayment: Self-leveling underlayment applied as remediation treatment.

1.03 REFERENCE STANDARDS

A. ASTM C109/C109M - Standard Test Method for Compressive Strength of Hydraulic Cement Mortars (Using 2-in. or (50-mm) Cube Specimens) 2016a.

B. ASTM C472 - Standard Test Methods for Physical Testing of Gypsum, Gypsum Plasters and Gypsum Concrete 1999 (Reapproved 2014).

C. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring 2017.

D. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes 2017.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordinate scheduling of cleaning and testing, so that preliminary cleaning has been completed for at least 24 hours prior to testing.

1.05 SUBMITTALS

A. Visual Observation Report: For existing floor coverings to be removed.

B. Floor Covering and Adhesive Manufacturers' Product Literature: For each specific combination of substrate, floor covering, and adhesive to be used; showing:

1. Moisture and alkalinity (pH) limits and test methods.
2. Manufacturer's required bond/compatibility test procedure.

C. Testing Agency's Report:

1. Description of areas tested; include floor plans and photographs if helpful.
2. Summary of conditions encountered.
3. Moisture and alkalinity (pH) test reports.
4. Copies of specified test methods.
5. Recommendations for remediation of unsatisfactory surfaces.
6. Product data for recommended remedial coating.
7. Include certification of accuracy by authorized official of testing agency.
8. Submit report to Architect.
9. Submit report not more than two business days after conclusion of testing.

1.06 QUALITY ASSURANCE

A. Moisture and alkalinity (pH) testing shall be performed by an independent testing agency employed and paid by Contractor.

B. Testing Agency Qualifications: Independent testing agency experienced in the types of testing specified.

1. Submit evidence of experience consisting of at least 3 test reports of the type required, with project Owner's project contact information.

C. Contractor's Responsibility Relating to Independent Agency Testing:

1. Provide access for and cooperate with testing agency.
2. Confirm date of start of testing at least 10 days prior to actual start.
3. Allow at least 4 business days on site for testing agency activities.
4. Achieve and maintain specified ambient conditions.
5. Notify Architect when specified ambient conditions have been achieved and when testing will start.

D. Remedial Coating Installer Qualifications: Company specializing in performing work of the type specified in this section, trained by or employed by coating manufacturer, and able to provide at least 3 project references showing at least 3 years' experience installing moisture emission coatings.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, handle, and protect products in accordance with manufacturer’s instructions and recommendations.

B. Deliver materials in manufacturer’s packaging; include installation instructions.

C. Keep materials from freezing.

1.08 FIELD CONDITIONS

A. Maintain ambient temperature in spaces where concrete testing is being performed, and for at least 48 hours prior to testing, at not less than 65 degrees F (18 degrees C) or more than 85 degrees F (30 degrees C).

B. Maintain relative humidity in spaces where concrete testing is being performed, and for at least 48 hours prior to testing, at not less than 40 percent and not more than 60 percent.

PART 2 PRODUCTS

2.01 MATERIALS

A. Patching Compound: Floor covering manufacturer's recommended product, suitable for conditions, and compatible with adhesive and floor covering. In the absence of any recommendation from flooring manufacturer, provide a product with the following characteristics:

1. Cementitious moisture-, mildew-, and alkali-resistant compound, compatible with floor, floor covering, and floor covering adhesive, and capable of being feathered to nothing at edges.

2. Compressive Strength: 3000 psi, minimum, after 28 days, when tested in accordance with ASTM C109/C109M or ASTM C472, whichever is appropriate.

3. Products:

a. ARDEX Engineered Cements; ARDEX Feather Finish: www.ardexamericas.com/#sle.

B. Alternate Flooring Adhesive: Floor covering manufacturer's recommended product, suitable for the moisture and pH conditions present; low-VOC. In the absence of any recommendation from flooring manufacturer, provide a product recommended by adhesive manufacturer as suitable for substrate and floor covering and for conditions present.

C. Remedial Floor Coating: Single- or multi-layer coating or coating/overlay combination intended by its manufacturer to resist water vapor transmission to degree sufficient to meet flooring manufacturer's emission limits, resistant to the level of alkalinity (pH) found, and suitable for adhesion of flooring without further treatment.

1. Thickness: As required for application and in accordance with manufacturer's installation instructions.

D. Remedial Floor Sheet Membrane: Pre-formed multi-ply sheet membrane installed over concrete subfloor and intended by its manufacturer to resist water vapor transmission to degree sufficient to meet flooring manufacturer's emission limits, resistant to the level of alkalinity (pH) found, and suitable for adhesion of flooring without further treatment.

1. Thickness: 28 mil (0.028 inch) (0.711 mm).

2. Tape: Types recommended by underlayment manufacturer to install membrane and cover seams.

PART 3 EXECUTION

3.01 CONCRETE SLAB PREPARATION

A. Perform following operations in the order indicated:

1. Preliminary cleaning.

2. Moisture vapor emission tests; 3 tests in the first 1000 square feet (100 square meters) and one test in each additional 1000 square feet (100 square meters), unless otherwise indicated or required by flooring manufacturer.
3. Internal relative humidity tests; in same locations as moisture vapor emission tests, unless otherwise indicated.
4. Alkalinity (pH) tests; in same locations as moisture vapor emission tests, unless otherwise indicated.
5. Specified remediation, if required.
6. Patching, smoothing, and leveling, as required.
7. Other preparation specified.
8. Adhesive bond and compatibility test.
9. Protection.

B. Remediations:

1. Active Water Leaks or Continuing Moisture Migration to Surface of Slab: Correct this condition before doing any other remediation; re-test after correction.
2. Excessive Moisture Emission or Relative Humidity: If an adhesive that is resistant to the level of moisture present is available and acceptable to flooring manufacturer, use that adhesive for installation of the flooring; if not, apply remedial floor coating or remedial sheet membrane over entire suspect floor area.
3. Excessive Alkalinity (pH): If remedial floor coating is necessary to address excessive moisture, no additional remediation is required; if not, if an adhesive that is resistant to the level present is available and acceptable to the flooring manufacturer, use that adhesive for installation of the flooring; otherwise, apply a skim coat of specified patching compound over entire suspect floor area.

3.02 REMOVAL OF EXISTING FLOOR COVERINGS

A. Comply with local, State, and federal regulations and recommendations of RFCI Recommended Work Practices for Removal of Resilient Floor Coverings, as applicable to floor covering being removed.

B. Dispose of removed materials in accordance with local, State, and federal regulations and as specified.

3.03 PRELIMINARY CLEANING

A. Clean floors of dust, solvents, paint, wax, oil, grease, asphalt, residual adhesive, adhesive removers, film-forming curing compounds, sealing compounds, alkaline salts, excessive laitance, mold, mildew, and other materials that might prevent adhesive bond.

B. Do not use solvents or other chemicals for cleaning.

3.04 MOISTURE VAPOR EMISSION TESTING

A. Where the floor covering manufacturer's requirements conflict with either the referenced test method or this specification, comply with the manufacturer's requirements.

B. Where this specification conflicts with the referenced test method, comply with the requirements of this section.

C. Test in accordance with ASTM F1869 and as follows.

D. Plastic sheet test and mat bond test may not be substituted for the specified ASTM test method, as those methods do not quantify the moisture content sufficiently.

E. In the event that test values exceed floor covering manufacturer's limits, perform remediation as indicated. In the absence of manufacturer limits, perform remediation if test values exceed 3 pounds per

1000 square feet (1.4 kg per 93 square meters) per 24 hours.

F. Report: Report the information required by the test method.

3.05 INTERNAL RELATIVE HUMIDITY TESTING

A. Where the floor covering manufacturer's requirements conflict with either the referenced test method or this specification, comply with the manufacturer's requirements.

B. Where this specification conflicts with the referenced test method, comply with the requirements of this section.

C. Test in accordance with ASTM F2170 Procedure A and as follows.

D. Testing with electrical impedance or resistance apparatus may not be substituted for the specified ASTM test method, as the values determined are not comparable to the ASTM test values and do not quantify the moisture content sufficiently.

E. In the event that test values exceed floor covering manufacturer's limits, perform remediation as indicated. In the absence of manufacturer limits, perform remediation if any test value exceeds 75 percent relative humidity.

F. Report: Report the information required by the test method.

3.06 ALKALINITY TESTING

A. Where the floor covering manufacturer's requirements conflict with either the referenced test method or this specification, comply with the manufacturer's requirements.

B. The following procedure is the equivalent of that described in ASTM F710, repeated here for the Contractor's convenience.

C. Use a wide range alkalinity (pH) test paper, its associated chart, and distilled or deionized water.

D. Place several drops of water on a clean surface of concrete, forming a puddle approximately 1 inch (25 mm) in diameter. Allow the puddle to set for approximately 60 seconds, then dip the alkalinity (pH) test paper into the water, remove it, and compare immediately to chart to determine alkalinity (pH) reading.

E. In the event that test values exceed floor covering manufacturer's limits, perform remediation as indicated. In the absence of manufacturer limits, perform remediation if alkalinity (pH) test value is over 10.

3.07 PREPARATION

A. See individual floor covering section(s) for additional requirements.

B. Comply with requirements and recommendations of floor covering manufacturer.

C. Fill and smooth surface cracks, grooves, depressions, control joints and other non-moving joints, and other irregularities with patching compound.

D. Do not fill expansion joints, isolation joints, or other moving joints.

3.08 ADHESIVE BOND AND COMPATIBILITY TESTING

A. Comply with requirements and recommendations of floor covering manufacturer.

3.09 APPLICATION OF REMEDIAL FLOOR COATING

A. Comply with requirements and recommendations of coating manufacturer.

3.10 INSTALLATION OF REMEDIAL FLOOR SHEET MEMBRANE

A. Install in accordance with sheet membrane manufacturer's instructions.

3.11 PROTECTION

A. Cover prepared floors with building paper or other durable covering.

END OF SECTION

SECTION 09 0561
COMMON WORK RESULTS FOR FLOORING PREPARATION

OPTIONAL CHECKLIST

1.01 SELECT TYPES OF SUBFLOORS TO BE PREPARED:

A. Concrete, either on-grade or elevated.

B. Wood-based.

1.02 CONCRETE FLOORS: TESTING IS USUALLY REQUIRED FOR ADHESIVELY APPLIED FLOORING.

A. The Contractor will hire the testing agency (all new and existing floor slabs, as applicable).

PART 1 GENERAL

4.01 SECTION INCLUDES

A. This section applies to floors identified in contract documents that are receiving the following types of floor coverings:

1. Resilient tile and sheet.
2. Carpet tile.
3. Thin-set ceramic tile and stone tile.
4. Rubber Flooring.
5. Vinyl Ceramic Tile (VCT).
6. Terrazzo Flooring

B. Removal of existing floor coverings.

C. Preparation of new concrete floor slabs for installation of floor coverings.

D. Testing of concrete floor slabs for moisture and alkalinity (pH).

E. Remediation of concrete floor slabs due to unsatisfactory moisture or alkalinity (pH) conditions.

1. Contractor shall perform all specified remediation of concrete floor slabs. If such remediation is indicated by testing agency's report and is due to a condition not under Contractor's control or could not have been predicted by examination prior to entering into the contract, a contract modification will be issued.

F. Patching compound or Ardex should be used for leveling or sloping floor to meet Owner's requirements

G. Remedial floor coatings.

H. Remedial floor sheet membrane.

I. Preparation of new and existing wood-based floors and subfloors for installation of new floor coverings.

4.02 RELATED REQUIREMENTS

A. Section 01 4000 - Quality Requirements: Additional requirements relating to testing agencies and testing.

B. Section 01 7419 - Construction Waste Management and Disposal: Handling of existing floor coverings removed.

C. Section 03 3000 - Cast-in-Place Concrete: Moisture emission reducing curing and sealing compound for slabs to receive adhered flooring, to prevent moisture content-related flooring failures; to remain in place,

not to be removed.

D. Section 03 3000 - Cast-in-Place Concrete: Concrete admixture for slabs to receive adhered flooring, to prevent moisture content-related flooring failures.

E. Section 03 5400 - Cast Underlayment: Self-leveling underlayment applied as remediation treatment.

4.03 REFERENCE STANDARDS

A. ASTM C109/C109M - Standard Test Method for Compressive Strength of Hydraulic Cement Mortars (Using 2-in. or (50-mm) Cube Specimens) 2016a.

B. ASTM C472 - Standard Test Methods for Physical Testing of Gypsum, Gypsum Plasters and Gypsum Concrete 1999 (Reapproved 2014).

C. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring 2017.

D. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes 2017.

4.04 ADMINISTRATIVE REQUIREMENTS

A. Coordinate scheduling of cleaning and testing, so that preliminary cleaning has been completed for at least 24 hours prior to testing.

4.05 SUBMITTALS

A. Visual Observation Report: For existing floor coverings to be removed.

B. Floor Covering and Adhesive Manufacturers' Product Literature: For each specific combination of substrate, floor covering, and adhesive to be used; showing:

1. Moisture and alkalinity (pH) limits and test methods.
2. Manufacturer's required bond/compatibility test procedure.

C. Testing Agency's Report:

1. Description of areas tested; include floor plans and photographs if helpful.
2. Summary of conditions encountered.
3. Moisture and alkalinity (pH) test reports.
4. Copies of specified test methods.
5. Recommendations for remediation of unsatisfactory surfaces.
6. Product data for recommended remedial coating.
7. Include certification of accuracy by authorized official of testing agency.
8. Submit report to Architect.
9. Submit report not more than two business days after conclusion of testing.

4.06 QUALITY ASSURANCE

A. Moisture and alkalinity (pH) testing shall be performed by an independent testing agency employed and paid by Contractor.

B. Testing Agency Qualifications: Independent testing agency experienced in the types of testing specified.

1. Submit evidence of experience consisting of at least 3 test reports of the type required, with project Owner's project contact information.

C. Contractor's Responsibility Relating to Independent Agency Testing:

1. Provide access for and cooperate with testing agency.
2. Confirm date of start of testing at least 10 days prior to actual start.
3. Allow at least 4 business days on site for testing agency activities.
4. Achieve and maintain specified ambient conditions.
5. Notify Architect when specified ambient conditions have been achieved and when testing will start.

D. Remedial Coating Installer Qualifications: Company specializing in performing work of the type specified in this section, trained by or employed by coating manufacturer, and able to provide at least 3 project references showing at least 3 years' experience installing moisture emission coatings.

4.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, handle, and protect products in accordance with manufacturer’s instructions and recommendations.

B. Deliver materials in manufacturer’s packaging; include installation instructions.

C. Keep materials from freezing.

4.08 FIELD CONDITIONS

A. Maintain ambient temperature in spaces where concrete testing is being performed, and for at least 48 hours prior to testing, at not less than 65 degrees F (18 degrees C) or more than 85 degrees F (30 degrees C).

B. Maintain relative humidity in spaces where concrete testing is being performed, and for at least 48 hours prior to testing, at not less than 40 percent and not more than 60 percent.

PART 2 PRODUCTS

5.01 MATERIALS

A. Patching Compound: Floor covering manufacturer's recommended product, suitable for conditions, and compatible with adhesive and floor covering. In the absence of any recommendation from flooring manufacturer, provide a product with the following characteristics:

1. Cementitious moisture-, mildew-, and alkali-resistant compound, compatible with floor, floor covering, and floor covering adhesive, and capable of being feathered to nothing at edges.
2. Compressive Strength: 3000 psi, minimum, after 28 days, when tested in accordance with ASTM C109/C109M or ASTM C472, whichever is appropriate.
3. Products:
    a. ARDEX Engineered Cements; ARDEX Feather Finish: www.ardexamericas.com/#sle.

B. Alternate Flooring Adhesive: Floor covering manufacturer's recommended product, suitable for the moisture and pH conditions present; low-VOC. In the absence of any recommendation from flooring manufacturer, provide a product recommended by adhesive manufacturer as suitable for substrate and floor covering and for conditions present.

C. Remedial Floor Coating: Single- or multi-layer coating or coating/overlay combination intended by its manufacturer to resist water vapor transmission to degree sufficient to meet flooring manufacturer's emission limits, resistant to the level of alkalinity (pH) found, and suitable for adhesion of flooring without further treatment.

1. Thickness: As required for application and in accordance with manufacturer's installation instructions.

D. Remedial Floor Sheet Membrane: Pre-formed multi-ply sheet membrane installed over concrete subfloor and intended by its manufacturer to resist water vapor transmission to degree sufficient to meet flooring manufacturer's emission limits, resistant to the level of alkalinity (pH) found, and suitable for adhesion of flooring without further treatment.

1. Thickness: 28 mil (0.028 inch) (0.711 mm).
2. Tape: Types recommended by underlayment manufacturer to install membrane and cover seams.

PART 3 EXECUTION

6.01 CONCRETE SLAB PREPARATION

A. Perform following operations in the order indicated:

1. Preliminary cleaning.
2. Moisture vapor emission tests; 3 tests in the first 1000 square feet (100 square meters) and one test in each additional 1000 square feet (100 square meters), unless otherwise indicated or required by flooring manufacturer.
3. Internal relative humidity tests; in same locations as moisture vapor emission tests, unless otherwise indicated.
4. Alkalinity (pH) tests; in same locations as moisture vapor emission tests, unless otherwise indicated.
5. Specified remediation, if required.
6. Patching, smoothing, and leveling, as required.
7. Other preparation specified.
8. Adhesive bond and compatibility test.
9. Protection.

B. Remediations:

1. Active Water Leaks or Continuing Moisture Migration to Surface of Slab: Correct this condition before doing any other remediation; re-test after correction.
2. Excessive Moisture Emission or Relative Humidity: If an adhesive that is resistant to the level of moisture present is available and acceptable to flooring manufacturer, use that adhesive for installation of the flooring; if not, apply remedial floor coating or remedial sheet membrane over entire suspect floor area.
3. Excessive Alkalinity (pH): If remedial floor coating is necessary to address excessive moisture, no additional remediation is required; if not, if an adhesive that is resistant to the level present is available and acceptable to the flooring manufacturer, use that adhesive for installation of the flooring; otherwise, apply a skim coat of specified patching compound over entire suspect floor area.

6.02 REMOVAL OF EXISTING FLOOR COVERINGS

A. Comply with local, State, and federal regulations and recommendations of RFCI Recommended Work Practices for Removal of Resilient Floor Coverings, as applicable to floor covering being removed.

B. Dispose of removed materials in accordance with local, State, and federal regulations and as specified.

6.03 PRELIMINARY CLEANING

A. Clean floors of dust, solvents, paint, wax, oil, grease, asphalt, residual adhesive, adhesive removers, film-forming curing compounds, sealing compounds, alkaline salts, excessive laitance, mold, mildew, and other materials that might prevent adhesive bond.

B. Do not use solvents or other chemicals for cleaning.

6.04 MOISTURE VAPOR EMISSION TESTING

A. Where the floor covering manufacturer's requirements conflict with either the referenced test method or this specification, comply with the manufacturer's requirements.

B. Where this specification conflicts with the referenced test method, comply with the requirements of this section.

C. Test in accordance with ASTM F1869 and as follows.

D. Plastic sheet test and mat bond test may not be substituted for the specified ASTM test method, as those methods do not quantify the moisture content sufficiently.

E. In the event that test values exceed floor covering manufacturer's limits, perform remediation as indicated. In the absence of manufacturer limits, perform remediation if test values exceed 3 pounds per 1000 square feet (1.4 kg per 93 square meters) per 24 hours.

F. Report: Report the information required by the test method.

6.05 INTERNAL RELATIVE HUMIDITY TESTING

A. Where the floor covering manufacturer's requirements conflict with either the referenced test method or this specification, comply with the manufacturer's requirements.

B. Where this specification conflicts with the referenced test method, comply with the requirements of this section.

C. Test in accordance with ASTM F2170 Procedure A and as follows.

D. Testing with electrical impedance or resistance apparatus may not be substituted for the specified ASTM test method, as the values determined are not comparable to the ASTM test values and do not quantify the moisture content sufficiently.

E. In the event that test values exceed floor covering manufacturer's limits, perform remediation as indicated. In the absence of manufacturer limits, perform remediation if any test value exceeds 75 percent relative humidity.

F. Report: Report the information required by the test method.

6.06 ALKALINITY TESTING

A. Where the floor covering manufacturer's requirements conflict with either the referenced test method or this specification, comply with the manufacturer's requirements.

B. The following procedure is the equivalent of that described in ASTM F710, repeated here for the Contractor's convenience.

C. Use a wide range alkalinity (pH) test paper, its associated chart, and distilled or deionized water.

D. Place several drops of water on a clean surface of concrete, forming a puddle approximately 1 inch (25 mm) in diameter. Allow the puddle to set for approximately 60 seconds, then dip the alkalinity (pH) test paper into the water, remove it, and compare immediately to chart to determine alkalinity (pH) reading.

E. In the event that test values exceed floor covering manufacturer's limits, perform remediation as indicated. In the absence of manufacturer limits, perform remediation if alkalinity (pH) test value is over 10.

6.07 PREPARATION

A. See individual floor covering section(s) for additional requirements.

B. Comply with requirements and recommendations of floor covering manufacturer.

C. Fill and smooth surface cracks, grooves, depressions, control joints and other non-moving joints, and other irregularities with patching compound.

D. Do not fill expansion joints, isolation joints, or other moving joints.

6.08 APPLICATION OF REMEDIAL FLOOR COATING

A. Comply with requirements and recommendations of coating manufacturer.

6.09 INSTALLATION OF REMEDIAL FLOOR SHEET MEMBRANE

A. Install in accordance with sheet membrane manufacturer's instructions.

6.10 PROTECTION

A. Cover prepared floors with building paper or other durable covering.

END OF SECTION

SECTION 09 2116
GYPSUM BOARD ASSEMBLIES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Performance criteria for gypsum board assemblies.

B. Metal stud wall framing.

C. Metal channel ceiling framing.

D. Acoustic insulation.

E. Gypsum sheathing.

F. Cementitious backing board.

G. Gypsum wallboard.

H. Joint treatment and accessories.

I. Textured finish system.

J. Water-resistive barrier over exterior wall sheathing.

K. Acoustic (sound-dampening) wall and ceiling board.

L. Bullet resistant sheathing and wallboard.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 06 1000 - Rough Carpentry: Wood blocking product and execution requirements.

C. Section 07 2100 - Thermal Insulation: Acoustic insulation.

D. Section 07 9200 - Joint Sealants: Sealing acoustical gaps in construction other than gypsum board or plaster work.

E. Section 09 2216 - Non-Structural Metal Framing.

F. Section 31 3116 - Termite Control: Field-applied termiticide and mildewcide for metal framing.

1.03 REFERENCE STANDARDS

A. ANSI A118.9 - American National Standard Specifications for Test Methods and Specifications for Cementitious Backer Units 1999 (Reaffirmed 2016).

B. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes 2014.

C. ASTM C475/C475M - Standard Specification for Joint Compound and Joint Tape for Finishing Gypsum Board 2015.

D. ASTM C514 - Standard Specification for Nails for the Application of Gypsum Board 2004 (Reapproved 2014).

E. ASTM C557 - Standard Specification for Adhesives for Fastening Gypsum Wallboard to Wood Framing 2003 (Reapproved 2017).

F. ASTM C645 - Standard Specification for Nonstructural Steel Framing Members 2014, with Editorial Revision (2015).

G. ASTM C665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing 2017.

H. ASTM C754 - Standard Specification for Installation of Steel Framing Members to Receive Screw-Attached Gypsum Panel Products 2017.

I. ASTM C840 - Standard Specification for Application and Finishing of Gypsum Board 2018a.

J. ASTM C954 - Standard Specification for Steel Drill Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Steel Studs From 0.033 in. (0.84 mm) to 0.112 in. (2.84 mm) in Thickness 2015.

K. ASTM C1002 - Standard Specification for Steel Self-Piercing Tapping Screws for Application of Gypsum Panel Products or Metal Plaster Bases to Wood Studs or Steel Studs 2016.

L. ASTM C1047 - Standard Specification for Accessories For Gypsum Wallboard and Gypsum Veneer Base 2014a.

M. ASTM C1280 - Standard Specification for Application of Exterior Gypsum Panel Products for Use as Sheathing 2013a.

N. ASTM C1288 - Standard Specification for Discrete Non-Asbestos Fiber-Cement Interior Substrate Sheets 2017.

O. ASTM C1325 - Standard Specification for Non-Asbestos Fiber-Mat Reinforced Cementitious Backer Units 2017a.

P. ASTM C1396/C1396M - Standard Specification for Gypsum Board 2017.

Q. ASTM C1629/C1629M - Standard Classification for Abuse-Resistant Nondecorated Interior Gypsum Panel Products and Fiber-Reinforced Cement Panels 2018a.

R. ASTM C1658/C1658M - Standard Specification for Glass Mat Gypsum Panels 2018.

S. ASTM D3273 - Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber 2016.

T. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements 2009 (Reapproved 2016).

U. ASTM E413 - Classification for Rating Sound Insulation 2016.

V. GA-216 - Application and Finishing of Gypsum Panel Products 2016.

W. GA-600 - Fire Resistance Design Manual 2015.

X. ICC (IBC) - International Building Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate special details associated with fireproofing and acoustic seals.

C. Product Data: Provide data on metal framing, gypsum board, accessories and joint finishing system.

D. Product Data: Provide manufacturer's data on partition head to structure connectors, showing compliance with requirements.

E. Samples: Submit two samples of gypsum board finished with proposed texture application, 12 by 12 inches (300 by 300 mm) in size, illustrating finish color and texture.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing gypsum board installation and finishing, with minimum 5 years of experience.

B. Copies of Documents at Site: Maintain at the project site a copy of each referenced document that prescribes execution requirements.

PART 2 PRODUCTS

2.01 GYPSUM BOARD ASSEMBLIES

A. Provide completed assemblies complying with ASTM C840 and GA-216.

1. See PART 3 for finishing requirements.

B. Interior Partitions, Indicated as Acoustic: Provide completed assemblies with the following characteristics:

1. Acoustic Attenuation: STC of 50-54 calculated in accordance with ASTM E413, based on tests conducted in accordance with ASTM E90.

C. Shaft Walls at HVAC Shafts: Provide completed assemblies with the following characteristics:

1. Air Pressure Within Shaft: Sustained loads of 5 lbf/sq ft (0.24 kPa) with maximum mid-span deflection of L/240.
2. Acoustic Attenuation: STC of 35-39 calculated in accordance with ASTM E413, based on tests conducted in accordance with ASTM E90.

D. Shaft Walls at Elevator Shafts: Provide completed assemblies with the following characteristics:

1. Air Pressure Within Shaft: Intermittent loads of 5 lbf/sq ft (0.24 kPa) with maximum mid-span deflection of L/240.
2. Acoustic Attenuation: STC of 35-39 calculated in accordance with ASTM E413, based on tests conducted in accordance with ASTM E90.

E. Fire Rated Assemblies: Provide completed assemblies with the following characteristics:

1. Fire Rated Partitions: UL Listed assembly with hour rating as designated by architect.
2. Head of Fire Rated Partitions: UL Listed assembly with hour rating as designated by architect.
3. Fire Rated Ceilings and Soffits: One (1) hour fire rating.
4. Fire Rated Structural Column Framing: UL Listed assembly with hour rating as designated by architect.
5. Fire Rated Structural Beam Framing: UL Listed assembly with hour rating as designated by architect.
6. Fire Rated Shaft Walls: UL Listed assembly with hour rating as designated by architect.
7. Fire Rated Area Separation Walls: UL Listed assembly with hour rating as designated by architect.
8. ICC IBC Item Numbers: Comply with applicable requirements of ICC IBC for the particular assembly.

2.02 METAL FRAMING MATERIALS

A. Manufacturers - Metal Framing, Connectors, and Accessories:

1. Clarkwestern Dietrich Building Systems LLC: www.clarkdietrich.com/#sle.
2. Jaimes Industries: www.jaimesind.com/#sle.
3. Marino: www.marinoware.com/#sle.
4. Substitutions: See Section 01 6000 - Product Requirements.

B. Non-Loadbearing Framing System Components: ASTM C645; galvanized sheet steel, of size and properties necessary to comply with ASTM C754 for the spacing indicated, with maximum deflection of

wall framing of L/120 at 5 psf (L/120 at 240 Pa).

1. Studs: "C" shaped with flat or formed webs with knurled faces.
2. Runners: U shaped, sized to match studs.
3. Ceiling Channels: C-shaped.
4. Furring: Hat-shaped sections, minimum depth of 7/8 inch (22 mm).
5. Resilient Furring Channels: Single or double leg configuration; 1/2 inch (12 mm) channel depth.
    a. Products:
        1) Same manufacturer as other framing materials.
        2) Substitutions: See Section 01 6000 - Product Requirements.

C. Shaft Wall Studs and Accessories: ASTM C645; galvanized sheet steel, of size and properties necessary to comply with ASTM C754 and specified performance requirements.

1. Products:
    a. Same manufacturer as other framing materials.
    b. Substitutions: See Section 01 6000 - Product Requirements.

D. Area Separation Wall Studs and Accessories: ASTM C645; galvanized sheet steel, of size and properties necessary to comply with specified performance requirements.

1. Products:
    a. Phillips Manufacturing Co; Hemmed H-Stud: www.phillipsmfg.com/#sle.
    b. Substitutions: See Section 01 6000 - Product Requirements.

E. Partition Head To Structure Connections: Provide track fastened to structure with legs of sufficient length to accommodate deflection, for friction fit of studs cut short and fastened as indicated on drawings.

F. Preformed Top Track Firestop Seal:

1. Provide components UL-listed for use in UL-listed fire-rated head of partition joint systems indicated on drawings.
2. Products:
    a. Hilti, Inc; Top Track Seal CFS TTS: www.us.hilti.com/#sle.

2.03 BOARD MATERIALS

A. Manufacturers - Gypsum-Based Board:

1. American Gypsum Company: www.americangypsum.com/#sle.

B. Gypsum Wallboard: Paper-faced gypsum panels as defined in ASTM C1396/C1396M; sizes to minimize joints in place; ends square cut.

1. Application: Use for vertical surfaces and ceilings, unless otherwise indicated.
2. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.
    a. Mold-resistant board is required whenever board is being installed before the building is enclosed and conditioned.
3. At Assemblies Indicated with Fire-Rating: Use type required by indicated tested assembly; if no tested assembly is indicated, use Type X board, UL or WH listed.
4. Thickness:

a. Multi-Layer Assemblies: Thicknesses as indicated on drawings.

b. All other assemblies: Thicknesses as indicated on drawings.

5. Mold Resistant Paper Faced Products:

a. American Gypsum Company; M-Bloc.

b. CertainTeed Corporation; M2Tech 1/2" Moisture & Mold Resistant Drywall.

c. Continental Building Products; Mold Defense.

d. Substitutions: See Section 01 6000 - Product Requirements.

C. Abuse Resistant Wallboard:

1. Application: High-traffic areas indicated.

2. Surface Abrasion: Level 2, minimum, when tested in accordance with ASTM C1629/C1629M.

3. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.

4. Paper-Faced Type: Gypsum wallboard as defined in ASTM C1396/C1396M.

5. Type: Fire resistance rated Type X, UL or WH listed.

6. Thickness: 5/8 inch (16 mm).

7. Edges: Tapered.

8. Paper-Faced Products:

a. American Gypsum Company; M-Bloc AR Type X.

b. CertainTeed Corporation; Extreme Abuse Resistant Drywall with M2Tech.

c. Continental Building Products; Protecta AR 100 Type X with Mold Defense.

d. Substitutions: See Section 01 6000 - Product Requirements.

D. Impact Resistant Wallboard:

1. Application: High-traffic areas indicated.

2. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.

3. Type: Fire resistance rated Type X, UL or WH listed.

4. Thickness: as designated on plans.

5. Edges: Tapered.

6. Paper-Faced Products:

a. American Gypsum Company; M-Bloc IR Type X.

b. CertainTeed Corporation; Extreme Impact Resistant Drywall with M2Tech.

c. Continental Building Products; Protecta HIR 300 Type X with Mold Defense.

E. Backing Board For Wet Areas: One of the following products:

1. Application: Surfaces behind tile in wet areas including tub and shower surrounds and shower ceilings.

2. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.

3. ANSI Cement-Based Board: Non-gypsum-based; aggregated Portland cement panels with glass fiber mesh embedded in front and back surfaces complying with ANSI A118.9 or ASTM C1325.

a. Thickness: 1/2 inch (12.7 mm).

4. ASTM Cement-Based Board: Non-gypsum-based, cementitious board complying with ASTM C1288.
    a. Thickness: 1/2 inch (12.7 mm).

F. Ceiling Board: Special sag resistant gypsum ceiling board as defined in ASTM C1396/C1396M; sizes to minimize joints in place; ends square cut.
1. Application: Ceilings, unless otherwise indicated.
2. Thickness: 1/2 inch (13 mm).
3. Edges: as indicated on drawings.

G. Acoustical Sound Dampening Wall and Ceiling Board: Two layers of heavy paper faced, high density gypsum board separated by a viscoelastic polymer layer and capable of achieving STC rating of 50 or more in typical stud wall assemblies as calculated in accordance with ASTM E413 and when tested in accordance with ASTM E90.
1. Thickness: 1/2 inch (13 mm).
2. Long Edges: Tapered.
3. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.

H. Exterior Sheathing Board: Sizes to minimize joints in place; ends square cut.
1. Application: Exterior sheathing, unless otherwise indicated.
2. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.
3. Core Type: Regular.
4. Regular Board Thickness: 1/2 inch (13 mm).
5. Edges: Square.

I. Exterior Soffit Board: Exterior gypsum soffit board as defined in ASTM C1396/C1396M; sizes to minimize joints in place; ends square cut.
1. Application: Ceilings and soffits in protected exterior areas, unless otherwise indicated.
2. At Assemblies Indicated with Fire-Rating: Use type required by indicated tested assembly; if no tested assembly is indicated, use Type X.
3. Types: Regular and Type X, in locations indicated.
4. Type X Thickness: 5/8 inch (16 mm).
5. Regular Type Thickness: 1/2 inch (13 mm).
6. Edges: Tapered.

J. Shaftwall and Coreboard: Type X; 1 inch (25 mm) thick by 24 inches (610 mm) wide, beveled long edges, ends square cut.
1. Glass Mat Faced Type: Glass mat shaftliner gypsum panel or glass mat coreboard gypsum panel as defined in ASTM C1658/C1658M.
2. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.

2.04 GYPSUM WALLBOARD ACCESSORIES

A. Acoustic Insulation: ASTM C665; preformed glass fiber, friction fit type, unfaced. Thickness: as indicated on plans.

B. Acoustic Sealant: Acrylic emulsion latex or water-based elastomeric sealant; do not use solvent-based non-curing butyl sealant.

C. Water-Resistive Barrier: As specified in Section 07 2500.

D. Finishing Accessories: ASTM C1047, galvanized steel or rolled zinc, unless noted otherwise.

1. Types: As detailed or required for finished appearance.

2. Special Shapes: In addition to conventional corner bead and control joints, provide U-bead at exposed panel edges.

3. Products:

a. Same manufacturer as framing materials.

E. Beads, Joint Accessories and Other Trim: ASTM C1047, rigid plastic, galvanized steel or rolled zinc, unless noted otherwise.

1. Corner Beads: Low profile, for 90 degree outside corners.

a. Products:

1) CertainTeed Corporation; No-Coat Drywall Corner: www.certainteed.com/#sle.

2) Phillips Manufacturing Co; Everlast Corner Bead: www.phillipsmfg.com/#sle.

3) Substitutions: See Section 01 6000 - Product Requirements.

2. Splayed Corner Beads with Paper Face: .

a. Products:

1) Substitutions: See Section 01 6000 - Product Requirements.

3. Bullnose Corner Beads with Paper Face: radius as defined on plans.

a. Products:

4. Architectural Reveal Beads:

a. Reveal Depth: as indicated on drawings.

b. Reveal Width: as indicated on drawings.

c. Shapes: As indicated on drawings.

d. Products:

1) Phillips Manufacturing Co; J-400 Reveal Trim: www.phillipsmfg.com/#sle.

2) Trim-Tex, Inc: www.trim-tex.com/#sle.

5. Expansion Joints:

a. Type: V-shaped PVC with tear away fins.

b. Type: V-shaped metal with factory-installed protective tape.

c. Type: Accordian profile with factory-installed protective tape.

d. Type: Off-angle inside corner expansion.

e. Products:

1) Phillips Manufacturing Co; 093 Expansion Control Joint: www.phillipsmfg.com/#sle.

2) Trim-Tex, Inc: www.trim-tex.com/#sle.

F. Decorative Metal Trim:

1. Material: Extruded aluminum alloy 6063-T5 temper.
2. Finish: Anodized, clear.
3. Type: Profile as selected from manufacturer's standard range.
4. Reveal Trim:
    a. Products:
        1) Tamlyn; XtremeInterior Reveal Trim: www.xtremeias.com/#sle.
        2) Substitutions: See Section 01 6000 - Product Requirements.
5. Molding:
    a. Products:
        1) Substitutions: See Section 01 6000 - Product Requirements.

G. Moisture Guard Trim: ASTM C1047, rigid plastic, 48 inch (1219.2 mm) length, applied to bottom edge of gypsum board.
    1. Height: as indicated on drawings.
    2. Depth: as indicated on drawings.
    3. Products:
        a. Waterguard USA; Waterguard: www.waterguard-usa.com/#sle.
        b. Substitutions: See Section 01 6000 - Product Requirements.

H. Joint Materials: ASTM C475/C475M and as recommended by gypsum board manufacturer for project conditions.

I. Finishing Compound: Surface coat and primer, takes the place of skim coating.
    1. Products:
        a. CertainTeed Corporation; Quick Prep Plus Interior Prep Coat: www.certainteed.com/#sle.
        b. Substitutions: See Section 01 6000 - Product Requirements.

J. Textured Finish Materials: Latex-based compound; plain.

K. Abuse Resistant Finishes:
    1. Acrylic, water-based, non-textured, high build, tintable primer and surfacer.
    2. Acrylic, integrally colored textured coating.

L. Screws for Fastening of Gypsum Panel Products to Cold-Formed Steel Studs Less than 0.033 inch (0.84 mm) in Thickness and Wood Members: ASTM C1002; self-piercing tapping screws, corrosion resistant.

M. Screws for Fastening of Gypsum Panel Products to Steel Members from 0.033 to 0.112 inch (0.84 to 2.84 mm) in Thickness: ASTM C954; steel drill screws, corrosion resistant.

N. Nails for Attachment to Wood Members: ASTM C514.

O. Staples For Attachment of Base Ply of Two-Ply Assembly to Wood Members: Flattened galvanized wire type as specified in ASTM C840.

P. Anchorage to Substrate: Tie wire, nails, screws, and other metal supports, of type and size to suit application; to rigidly secure materials in place.

Q. Adhesive for Attachment to Wood, ASTM C557 and Metal:
    1. Products:

a. Franklin International, Inc; Titebond PROvantage Professional Drywall Adhesive: www.titebond.com/#sle.

b. Liquid Nails, a brand of PPG Architectural Coatings; DWP-24 Drywall Construction Adhesive: www.liquidnails.com/#sle.

c. Substitutions: See Section 01 6000 - Product Requirements.

R. Exterior Soffit Vents: One piece, perforated, ASTM B221 6063 T5 alloy aluminum, with edge suitable for direct application to gypsum board and manufactured especially for soffit application. Provide continuous vent.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that project conditions are appropriate for work of this section to commence.

3.02 SHAFT WALL INSTALLATION

A. Shaft Wall Framing: Install in accordance with manufacturer's installation instructions.

1. Install studs at spacing required to meet performance requirements.

B. Shaft Wall Liner: Cut panels to accurate dimension and install sequentially between special friction studs.

3.03 FRAMING INSTALLATION

A. Metal Framing: Install in accordance with ASTM C754 and manufacturer's instructions.

B. Suspended Ceilings and Soffits: Space framing and furring members as indicated.

C. Studs: Space studs at 16 inches on center (at 406 mm on center).

1. Extend partition framing to structure where indicated and to ceiling in other locations.

2. Partitions Terminating at Ceiling: Attach ceiling runner securely to ceiling track in accordance with manufacturer's instructions.

D. Furring for Fire Ratings: Install as required for fire resistance ratings indicated and to GA-600 requirements.

3.04 ACOUSTIC ACCESSORIES INSTALLATION

A. Acoustic Insulation: Place tightly within spaces, around cut openings, behind and around electrical and mechanical items within partitions, and tight to items passing through partitions.

B. Acoustic Sealant: Install in accordance with manufacturer's instructions.

1. Seal around all penetrations by conduit, pipe, ducts and rough-in boxes, except where firestopping is provided.

C. Acoustical Shielding: Install in accordance with manufacturer's instructions for application between studs and gypsum board.

3.05 BOARD INSTALLATION

A. Comply with ASTM C840, GA-216 and manufacturer's instructions. Install to minimize butt end joints, especially in highly visible locations.

B. Fire-Rated Construction: Install gypsum board in strict compliance with requirements of assembly listing.

C. Exterior Sheathing: Comply with ASTM C1280. Install sheathing vertically, with edges butted tight and ends occurring over firm bearing.

1. Seal joints, cut edges, and holes with water-resistant sealant.

2. Paper-Faced Sheathing: Immediately after installation, protect from weather by application of water-resistive barrier.

D. Exterior Soffits: Install exterior soffit board perpendicular to framing, with staggered end joints over framing members or other solid backing.

1. Seal joints, cut edges, and holes with water resistant sealant.

E. Cementitious Backing Board: Install over steel framing members and plywood substrate where indicated, in accordance with ANSI A108.11 and manufacturer's instructions.

F. Installation on Wood Framing: For rated assemblies, comply with requirements of listing authority. For non-rated assemblies, install as follows:

1. Single-Layer Applications: Adhesive application.

G. Bullet Resistant Sheathing and Wallboard:

1. Install bullet resistant sheathing according to manufacturer's written recommendations and with manufacturer approved fasteners.

2. Cover all joints between boards with a 4 inch (102 mm) strip of the same thickness material as the boards, centered on the joint.

3.06 INSTALLATION OF TRIM AND ACCESSORIES

A. Control Joints: Place control joints consistent with lines of building spaces and as indicated.

B. Corner Beads: Install at external corners, using longest practical lengths.

C. Edge Trim: Install at locations where gypsum board abuts dissimilar materials.

D. Decorative Trim: Install at locations shown on drawings and in accordance with manufacturer's instructions.

E. Moisture Guard Trim: Install on bottom edge of gypsum board according to manufacturer's instructions and in locations indicated on drawings.

F. Exterior Soffit Vents: Install according to manufacturer's written instructions and in locations indicated on drawings. Provide vent area specified.

3.07 JOINT TREATMENT

A. Finish gypsum board in accordance with levels defined in ASTM C840, as follows:

1. Level 5: Walls and ceilings to receive semi-gloss or gloss paint finish and other areas specifically indicated.

2. Level 4: Walls and ceilings to receive paint finish or wall coverings, unless otherwise indicated.

3. Level 3: Walls to receive textured wall finish.

4. Level 2: In utility areas, behind cabinetry, and on backing board to receive tile finish.

5. Level 1: Fire rated wall areas above finished ceilings, whether or not accessible in the completed construction.

6. Level 0: Temporary partitions.

7. Level 0: Surfaces indicated to be finished in later stage of project.

B. Tape, fill, and sand exposed joints, edges, and corners to produce smooth surface ready to receive finishes.

1. Feather coats of joint compound so that camber is maximum 1/32 inch (0.8 mm).

C. Where Level 5 finish is indicated, spray apply high build drywall surfacer over entire surface after joints have been properly treated; achieve a flat and tool mark-free finish.

D. Fill and finish joints and corners of cementitious backing board as recommended by manufacturer.

3.08 TEXTURE FINISH

A. Apply finish texture coating by means of spraying apparatus in accordance with manufacturer's instructions and to match approved sample.

3.09 TOLERANCES

A. Maximum Variation of Finished Gypsum Board Surface from True Flatness: 1/8 inch in 10 feet (3 mm in 3 m) in any direction.

END OF SECTION

SECTION 09 2116
GYPSUM BOARD ASSEMBLIES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Performance criteria for gypsum board assemblies.

B. Metal stud wall framing.

C. Metal channel ceiling framing.

D. Acoustic insulation.

E. Gypsum sheathing.

F. Cementitious backing board.

G. Gypsum wallboard.

H. Joint treatment and accessories.

I. Textured finish system.

J. Water-resistive barrier over exterior wall sheathing.

K. Acoustic (sound-dampening) wall and ceiling board.

L. Bullet resistant sheathing and wallboard.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 06 1000 - Rough Carpentry: Wood blocking product and execution requirements.

C. Section 07 2100 - Thermal Insulation: Acoustic insulation.

D. Section 07 9200 - Joint Sealants: Sealing acoustical gaps in construction other than gypsum board or plaster work.

E. Section 09 2216 - Non-Structural Metal Framing.

1.03 REFERENCE STANDARDS

A. ANSI A118.9 - American National Standard Specifications for Test Methods and Specifications for Cementitious Backer Units 1999 (Reaffirmed 2016).

B. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes 2014.

C. ASTM C475/C475M - Standard Specification for Joint Compound and Joint Tape for Finishing Gypsum Board 2015.

D. ASTM C514 - Standard Specification for Nails for the Application of Gypsum Board 2004 (Reapproved 2014).

E. ASTM C557 - Standard Specification for Adhesives for Fastening Gypsum Wallboard to Wood Framing 2003 (Reapproved 2017).

F. ASTM C645 - Standard Specification for Nonstructural Steel Framing Members 2014, with Editorial Revision (2015).

G. ASTM C665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing 2017.

H. ASTM C754 - Standard Specification for Installation of Steel Framing Members to Receive Screw-Attached Gypsum Panel Products 2017.

I. ASTM C840 - Standard Specification for Application and Finishing of Gypsum Board 2018a.

J. ASTM C954 - Standard Specification for Steel Drill Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Steel Studs From 0.033 in. (0.84 mm) to 0.112 in. (2.84 mm) in Thickness 2015.

K. ASTM C1002 - Standard Specification for Steel Self-Piercing Tapping Screws for Application of Gypsum Panel Products or Metal Plaster Bases to Wood Studs or Steel Studs 2016.

L. ASTM C1047 - Standard Specification for Accessories For Gypsum Wallboard and Gypsum Veneer Base 2014a.

M. ASTM C1280 - Standard Specification for Application of Exterior Gypsum Panel Products for Use as Sheathing 2013a.

N. ASTM C1288 - Standard Specification for Discrete Non-Asbestos Fiber-Cement Interior Substrate Sheets 2017.

O. ASTM C1325 - Standard Specification for Non-Asbestos Fiber-Mat Reinforced Cementitious Backer Units 2017a.

P. ASTM C1396/C1396M - Standard Specification for Gypsum Board 2017.

Q. ASTM C1629/C1629M - Standard Classification for Abuse-Resistant Nondecorated Interior Gypsum Panel Products and Fiber-Reinforced Cement Panels 2018a.

R. ASTM C1658/C1658M - Standard Specification for Glass Mat Gypsum Panels 2018.

S. ASTM D3273 - Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber 2016.

T. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements 2009 (Reapproved 2016).

U. ASTM E413 - Classification for Rating Sound Insulation 2016.

V. GA-216 - Application and Finishing of Gypsum Panel Products 2016.

W. GA-600 - Fire Resistance Design Manual 2015.

X. ICC (IBC) - International Building Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

Y. UL (FRD) - Fire Resistance Directory Current Edition.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate special details associated with fireproofing and acoustic seals.

C. Product Data: Provide data on metal framing, gypsum board, accessories and joint finishing system.

D. Product Data: Provide manufacturer's data on partition head to structure connectors, showing compliance with requirements.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing gypsum board installation and finishing, with minimum [__] years of experience.

PART 2 PRODUCTS

2.01 GYPSUM BOARD ASSEMBLIES

A. Provide completed assemblies complying with ASTM C840 and GA-216.

1. See PART 3 for finishing requirements.

B. Interior Partitions, Indicated as Acoustic: Provide completed assemblies with the following characteristics:

1. Acoustic Attenuation: STC of 50-54 calculated in accordance with ASTM E413, based on tests conducted in accordance with ASTM E90.

C. Shaft Walls at HVAC Shafts: Provide completed assemblies with the following characteristics:

1. Air Pressure Within Shaft: Sustained loads of 5 lbf/sq ft (0.24 kPa) with maximum mid-span deflection of L/240.
2. Acoustic Attenuation: STC of 35-39 calculated in accordance with ASTM E413, based on tests conducted in accordance with ASTM E90.

D. Shaft Walls at Elevator Shafts: Provide completed assemblies with the following characteristics:

1. Air Pressure Within Shaft: Intermittent loads of 5 lbf/sq ft (0.24 kPa) with maximum mid-span deflection of L/240.
2. Acoustic Attenuation: STC of 35-39 calculated in accordance with ASTM E413, based on tests conducted in accordance with ASTM E90.

E. Fire Rated Assemblies: Provide completed assemblies with the following characteristics:

1. Fire Rated Partitions: UL listed assembly No. [_____]; [___] hour rating.
2. Head of Fire Rated Partitions: UL listed assembly No. [_____]; [___] hour rating.
3. Fire Rated Ceilings and Soffits: One (1) hour fire rating.
4. Fire Rated Structural Column Framing: UL listed assembly No. [_____]; [___] hour rating.
5. Fire Rated Structural Beam Framing: UL listed assembly No. [_____]; [___] hour rating.
6. Fire Rated Shaft Walls: UL listed assembly No. [_____]; [___] hour rating.
7. Fire Rated Area Separation Walls: UL listed assembly No. [_____]; [___] hour rating.
8. ICC IBC Item Numbers: Comply with applicable requirements of ICC IBC for the particular assembly.
9. UL Assembly Numbers: Provide construction equivalent to that listed for the particular assembly in the current UL (FRD).

2.02 METAL FRAMING MATERIALS

A. Manufacturers - Metal Framing, Connectors, and Accessories:

1. Clarkwestern Dietrich Building Systems LLC; [____]: www.clarkdietrich.com/#sle.
2. Jaimes Industries; [____]: www.jaimesind.com/#sle.
3. Marino; [____]: www.marinoware.com/#sle.
4. [_____].
5. [_____].
6. Substitutions: See Section 01 6000 - Product Requirements.

B. Non-Loadbearing Framing System Components: ASTM C645; galvanized sheet steel, of size and properties necessary to comply with ASTM C754 for the spacing indicated, with maximum deflection of wall framing of L/120 at 5 psf (L/120 at 240 Pa).

1. Studs: "C" shaped with flat or formed webs with knurled faces.
2. Runners: U shaped, sized to match studs.
3. Ceiling Channels: C-shaped.
4. Furring: Hat-shaped sections, minimum depth of 7/8 inch (22 mm).
5. Resilient Furring Channels: Single or double leg configuration; 1/2 inch (12 mm) channel depth.
    a. Products:
        1) Same manufacturer as other framing materials.
        2) [_____].
        3) Substitutions: See Section 01 6000 - Product Requirements.

C. Shaft Wall Studs and Accessories: ASTM C645; galvanized sheet steel, of size and properties necessary to comply with ASTM C754 and specified performance requirements.
    1. Products:
        a. Same manufacturer as other framing materials.
        b. [_____].
        c. [_____].
        d. Substitutions: See Section 01 6000 - Product Requirements.

D. Area Separation Wall Studs and Accessories: ASTM C645; galvanized sheet steel, of size and properties necessary to comply with specified performance requirements.
    1. Products:
        a. Phillips Manufacturing Co; Hemmed H-Stud: www.phillipsmfg.com/#sle.
        b. [_____].
        c. [_____].
        d. Substitutions: See Section 01 6000 - Product Requirements.

E. Partition Head To Structure Connections: Provide track fastened to structure with legs of sufficient length to accommodate deflection, for friction fit of studs cut short and fastened as indicated on drawings.

F. Preformed Top Track Firestop Seal:
    1. Provide components UL-listed for use in UL-listed fire-rated head of partition joint systems indicated on drawings.
    2. Products:
        a. Hilti, Inc; Top Track Seal CFS TTS: www.us.hilti.com/#sle.

2.03 BOARD MATERIALS

A. Manufacturers - Gypsum-Based Board:
    1. American Gypsum Company; [____]: www.americangypsum.com/#sle.

B. Gypsum Wallboard: Paper-faced gypsum panels as defined in ASTM C1396/C1396M; sizes to minimize joints in place; ends square cut.
    1. Application: Use for vertical surfaces and ceilings, unless otherwise indicated.
    2. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.

a. Mold-resistant board is required whenever board is being installed before the building is enclosed and conditioned.

3. At Assemblies Indicated with Fire-Rating: Use type required by indicated tested assembly; if no tested assembly is indicated, use Type X board, UL or WH listed.
4. Thickness:
   a. Vertical Surfaces: [_____] inch ([_____] mm).
   b. Ceilings: [_____] inch ([_____] mm).
   c. [_____]: 1/4 inch (6 mm).
   d. Multi-Layer Assemblies: Thicknesses as indicated on drawings.
5. Mold Resistant Paper Faced Products:
   a. American Gypsum Company; M-Bloc.
   b. CertainTeed Corporation; M2Tech 1/2" Moisture & Mold Resistant Drywall.
   c. Continental Building Products; Mold Defense.
   d. [_____].
   e. [_____].
   f. Substitutions: See Section 01 6000 - Product Requirements.

C. Abuse Resistant Wallboard:
1. Application: High-traffic areas indicated.
2. Surface Abrasion: Level 2, minimum, when tested in accordance with ASTM C1629/C1629M.
3. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.
4. Paper-Faced Type: Gypsum wallboard as defined in ASTM C1396/C1396M.
5. Type: Fire resistance rated Type X, UL or WH listed.
6. Thickness: 5/8 inch (16 mm).
7. Edges: Tapered.
8. Paper-Faced Products:
   a. American Gypsum Company; M-Bloc AR Type X.
   b. CertainTeed Corporation; Extreme Abuse Resistant Drywall with M2Tech.
   c. Continental Building Products; Protecta AR 100 Type X with Mold Defense.
   d. [_____].
   e. Substitutions: See Section 01 6000 - Product Requirements.

D. Impact Resistant Wallboard:
1. Application: High-traffic areas indicated.
2. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.
3. Type: Fire resistance rated Type X, UL or WH listed.
4. Thickness: [___] inch ([___] mm).
5. Edges: Tapered.
6. Paper-Faced Products:

a. American Gypsum Company; M-Bloc IR Type X.

b. CertainTeed Corporation; Extreme Impact Resistant Drywall with M2Tech.

c. Continental Building Products; Protecta HIR 300 Type X with Mold Defense.

E. Backing Board For Wet Areas: One of the following products:

1. Application: Surfaces behind tile in wet areas including tub and shower surrounds, shower ceilings and [_____].

2. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.

3. ANSI Cement-Based Board: Non-gypsum-based; aggregated Portland cement panels with glass fiber mesh embedded in front and back surfaces complying with ANSI A118.9 or ASTM C1325.

a. Thickness: 1/2 inch (12.7 mm).

4. ASTM Cement-Based Board: Non-gypsum-based, cementitious board complying with ASTM C1288.

a. Thickness: 1/2 inch (12.7 mm).

F. Ceiling Board: Special sag resistant gypsum ceiling board as defined in ASTM C1396/C1396M; sizes to minimize joints in place; ends square cut.

1. Application: Ceilings, unless otherwise indicated.

2. Thickness: [___] inch ([___] mm).

3. Edges: [_____].

G. Acoustical Sound Dampening Wall and Ceiling Board: Two layers of heavy paper faced, high density gypsum board separated by a viscoelastic polymer layer and capable of achieving STC rating of 50 or more in typical stud wall assemblies as calculated in accordance with ASTM E413 and when tested in accordance with ASTM E90.

1. Thickness: 1/2 inch (13 mm).

2. Long Edges: Tapered.

3. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.

H. Exterior Sheathing Board: Sizes to minimize joints in place; ends square cut.

1. Application: Exterior sheathing, unless otherwise indicated.

2. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.

3. Core Type: Regular.

4. Regular Board Thickness: 1/2 inch (13 mm).

5. Edges: Square.

I. Exterior Soffit Board: Exterior gypsum soffit board as defined in ASTM C1396/C1396M; sizes to minimize joints in place; ends square cut.

1. Application: Ceilings and soffits in protected exterior areas, unless otherwise indicated.

2. At Assemblies Indicated with Fire-Rating: Use type required by indicated tested assembly; if no tested assembly is indicated, use Type X.

3. Types: Regular and Type X, in locations indicated.

4. Type X Thickness: 5/8 inch (16 mm).

5. Regular Type Thickness: 1/2 inch (13 mm).

6. Edges: Tapered.

J. Shaftwall and Coreboard: Type X; 1 inch (25 mm) thick by 24 inches (610 mm) wide, beveled long edges, ends square cut.

1. Glass Mat Faced Type: Glass mat shaftliner gypsum panel or glass mat coreboard gypsum panel as defined in ASTM C1658/C1658M.

2. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.

2.04 GYPSUM WALLBOARD ACCESSORIES

A. Acoustic Insulation: ASTM C665; preformed glass fiber, friction fit type, unfaced. Thickness: [_____] inch ([_____] mm).

B. Acoustic Sealant: Acrylic emulsion latex or water-based elastomeric sealant; do not use solvent-based non-curing butyl sealant.

C. Water-Resistive Barrier: As specified in Section 07 2500.

D. Finishing Accessories: ASTM C1047, galvanized steel or rolled zinc, unless noted otherwise.

1. Types: As detailed or required for finished appearance.

2. Special Shapes: In addition to conventional corner bead and control joints, provide U-bead at exposed panel edges.

3. Products:

a. Same manufacturer as framing materials.

E. Beads, Joint Accessories and Other Trim: ASTM C1047, rigid plastic, galvanized steel or rolled zinc, unless noted otherwise.

1. Corner Beads: Low profile, for 90 degree outside corners.

a. Products:

1) CertainTeed Corporation; No-Coat Drywall Corner: www.certainteed.com/#sle.

2) Phillips Manufacturing Co; Everlast Corner Bead: www.phillipsmfg.com/#sle.

3) [_____].

4) Substitutions: See Section 01 6000 - Product Requirements.

2. Splayed Corner Beads with Paper Face: [____] degree outside corner.

a. Products:

1) [_____].

2) Substitutions: See Section 01 6000 - Product Requirements.

3. Bullnose Corner Beads with Paper Face: [_____] inch ([_____] mm) radius.

a. Products:

4. Architectural Reveal Beads:

a. Reveal Depth: [_____] inch ([_____] mm).

b. Reveal Width: [_____] inch ([_____] mm).

c. Shapes: As indicated on drawings.

d. Products:

1) Phillips Manufacturing Co; J-400 Reveal Trim: www.phillipsmfg.com/#sle.

2) Trim-Tex, Inc; [_____]: www.trim-tex.com/#sle.

5. Expansion Joints:
   a. Type: V-shaped PVC with tear away fins.
   b. Type: V-shaped metal with factory-installed protective tape.
   c. Type: Accordian profile with factory-installed protective tape.
   d. Type: Off-angle inside corner expansion.
   e. Products:
      1) Phillips Manufacturing Co; 093 Expansion Control Joint: www.phillipsmfg.com/#sle.
      2) Trim-Tex, Inc; [_____]: www.trim-tex.com/#sle.

F. Decorative Metal Trim:
   1. Material: Extruded aluminum alloy 6063-T5 temper.
   2. Finish: Anodized, clear.
   3. Type: Profile as selected from manufacturer's standard range.
   4. Reveal Trim:
      a. Products:
         1) Tamlyn; XtremeInterior Reveal Trim: www.xtremeias.com/#sle.
         2) Substitutions: See Section 01 6000 - Product Requirements.
   5. Molding:
      a. Products:
         1) Substitutions: See Section 01 6000 - Product Requirements.

G. Moisture Guard Trim: ASTM C1047, rigid plastic, 48 inch (1219.2 mm) length, applied to bottom edge of gypsum board.
   1. Height: [_____] inch ([_____] mm).
   2. Depth: [_____] inch ([_____] mm).
   3. Products:
      a. Waterguard USA; Waterguard: www.waterguard-usa.com/#sle.
      b. Substitutions: See Section 01 6000 - Product Requirements.

H. Joint Materials: ASTM C475/C475M and as recommended by gypsum board manufacturer for project conditions.

I. Finishing Compound: Surface coat and primer, takes the place of skim coating.
   1. Products:
      a. CertainTeed Corporation; Quick Prep Plus Interior Prep Coat: www.certainteed.com/#sle.
      b. [_____].
      c. Substitutions: See Section 01 6000 - Product Requirements.

J. Textured Finish Materials: Latex-based compound; plain.

K. Abuse Resistant Finishes:
   1. Acrylic, water-based, non-textured, high build, tintable primer and surfacer.

2. Acrylic, integrally colored textured coating.

L. Screws for Fastening of Gypsum Panel Products to Cold-Formed Steel Studs Less than 0.033 inch (0.84 mm) in Thickness and Wood Members: ASTM C1002; self-piercing tapping screws, corrosion resistant.

M. Screws for Fastening of Gypsum Panel Products to Steel Members from 0.033 to 0.112 inch (0.84 to 2.84 mm) in Thickness: ASTM C954; steel drill screws, corrosion resistant.

N. Nails for Attachment to Wood Members: ASTM C514.

O. Staples For Attachment of Base Ply of Two-Ply Assembly to Wood Members: Flattened galvanized wire type as specified in ASTM C840.

P. Anchorage to Substrate: Tie wire, nails, screws, and other metal supports, of type and size to suit application; to rigidly secure materials in place.

Q. Adhesive for Attachment to Wood, ASTM C557 and Metal:

1. Products:

a. Franklin International, Inc; Titebond PROvantage Professional Drywall Adhesive: www.titebond.com/#sle.

b. Liquid Nails, a brand of PPG Architectural Coatings; DWP-24 Drywall Construction Adhesive: www.liquidnails.com/#sle.

c. Substitutions: See Section 01 6000 - Product Requirements.

R. Exterior Soffit Vents: One piece, perforated, ASTM B221 6063 T5 alloy aluminum, with edge suitable for direct application to gypsum board and manufactured especially for soffit application. Provide continuous vent.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that project conditions are appropriate for work of this section to commence.

3.02 SHAFT WALL INSTALLATION

A. Shaft Wall Framing: Install in accordance with manufacturer's installation instructions.

1. Install studs at spacing required to meet performance requirements.

B. Shaft Wall Liner: Cut panels to accurate dimension and install sequentially between special friction studs.

3.03 FRAMING INSTALLATION

A. Metal Framing: Install in accordance with ASTM C754 and manufacturer's instructions.

B. Suspended Ceilings and Soffits: Space framing and furring members as indicated.

C. Studs: Space studs at 16 inches on center (at 406 mm on center).

1. Extend partition framing to structure where indicated and to ceiling in other locations.

2. Partitions Terminating at Ceiling: Attach ceiling runner securely to ceiling track in accordance with manufacturer's instructions.

D. Furring for Fire Ratings: Install as required for fire resistance ratings indicated and to GA-600 requirements.

3.04 ACOUSTIC ACCESSORIES INSTALLATION

A. Acoustic Insulation: Place tightly within spaces, around cut openings, behind and around electrical and mechanical items within partitions, and tight to items passing through partitions.

B. Acoustic Sealant: Install in accordance with manufacturer's instructions.

3.05 BOARD INSTALLATION

A. Comply with ASTM C840, GA-216 and manufacturer's instructions. Install to minimize butt end joints, especially in highly visible locations.

B. Fire-Rated Construction: Install gypsum board in strict compliance with requirements of assembly listing.

C. Exterior Sheathing: Comply with ASTM C1280. Install sheathing vertically, with edges butted tight and ends occurring over firm bearing.

1. Paper-Faced Sheathing: Immediately after installation, protect from weather by application of water-resistive barrier.

D. Exterior Soffits: Install exterior soffit board perpendicular to framing, with staggered end joints over framing members or other solid backing.

E. Cementitious Backing Board: Install over steel framing members and plywood substrate where indicated, in accordance with ANSI A108.11 and manufacturer's instructions.

F. Installation on Wood Framing: For rated assemblies, comply with requirements of listing authority. For non-rated assemblies, install as follows:

1. Single-Layer Applications: Adhesive application.

G. Bullet Resistant Sheathing and Wallboard:

1. Install bullet resistant sheathing according to manufacturer's written recommendations and with manufacturer approved fasteners.

2. Cover all joints between boards with a 4 inch (102 mm) strip of the same thickness material as the boards, centered on the joint.

3.06 INSTALLATION OF TRIM AND ACCESSORIES

A. Control Joints: Place control joints consistent with lines of building spaces and as indicated.

B. Corner Beads: Install at external corners, using longest practical lengths.

C. Edge Trim: Install at locations where gypsum board abuts dissimilar materials.

D. Decorative Trim: Install at locations shown on drawings and in accordance with manufacturer's instructions.

E. Moisture Guard Trim: Install on bottom edge of gypsum board according to manufacturer's instructions and in locations indicated on drawings.

F. Exterior Soffit Vents: Install according to manufacturer's written instructions and in locations indicated on drawings. Provide vent area specified.

3.07 JOINT TREATMENT

A. Finish gypsum board in accordance with levels defined in ASTM C840, as follows:

1. Level 5: Walls and ceilings to receive semi-gloss or gloss paint finish and other areas specifically indicated.

2. Level 4: Walls and ceilings to receive paint finish or wall coverings, unless otherwise indicated.

3. Level 3: Walls to receive textured wall finish.

4. Level 2: In utility areas, behind cabinetry, and on backing board to receive tile finish.

5. Level 1: Fire rated wall areas above finished ceilings, whether or not accessible in the completed construction.

6. Level 0: Temporary partitions.
7. Level 0: Surfaces indicated to be finished in later stage of project.

B. Tape, fill, and sand exposed joints, edges, and corners to produce smooth surface ready to receive finishes.
   1. Feather coats of joint compound so that camber is maximum 1/32 inch (0.8 mm).

C. Where Level 5 finish is indicated, spray apply high build drywall surfacer over entire surface after joints have been properly treated; achieve a flat and tool mark-free finish.

D. Fill and finish joints and corners of cementitious backing board as recommended by manufacturer.

3.08 TEXTURE FINISH

A. Apply finish texture coating by means of spraying apparatus in accordance with manufacturer's instructions and to match approved sample.

3.09 TOLERANCES

A. Maximum Variation of Finished Gypsum Board Surface from True Flatness: 1/8 inch in 10 feet (3 mm in 3 m) in any direction.

END OF SECTION

SECTION 09 2216
NON-STRUCTURAL METAL FRAMING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Metal partition, ceiling and soffit framing.

B. Framing accessories.

1.02 RELATED REQUIREMENTS

A. Section 05 2100 - Steel Joists: Execution requirements for anchors for attaching work of this section.

B. Section 05 4000 - Cold-Formed Metal Framing: Structural load bearing metal stud framing and Exterior wall stud framing.

C. Section 05 4000 - Cold-Formed Metal Framing: Execution requirements for anchors for attaching work of this section.

D. Section 05 5000 - Metal Fabrications: Metal fabrications attached to stud framing.

E. Section 07 2100 - Thermal Insulation: Acoustic insulation.

F. Section 07 6200 - Sheet Metal Flashing and Trim: Head and sill flashings

G. Section 08 3100 - Access Doors and Panels.

H. Section 08 5113 - Aluminum Windows: Product requirements for window anchors.

I. Section 09 2116 - Gypsum Board Assemblies: Metal studs for gypsum board partition framing.

1.03 REFERENCE STANDARDS

A. ASTM C645 - Standard Specification for Nonstructural Steel Framing Members 2014, with Editorial Revision (2015).

B. ASTM C754 - Standard Specification for Installation of Steel Framing Members to Receive Screw-Attached Gypsum Panel Products 2017.

C. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements 2009 (Reapproved 2016).

D. ASTM E413 - Classification for Rating Sound Insulation 2016.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings:

1. Indicate prefabricated work, component details, stud layout, framed openings, anchorage to structure, acoustic details, type and location of fasteners, accessories and items of other related work.

2. Describe method for securing studs to tracks, splicing, and for blocking and reinforcement of framing connections.

C. Product Data: Provide data describing framing member materials and finish, product criteria, load charts and limitations.

D. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

E. Sustainable Design Submittal: Documentation of recycled content and location of manufacture.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing the work of this section with minimum five years documented experience and approved by manufacturer.

1.06 MOCK-UP

A. Provide mock-up of stud wall, ceiling and soffit framing including insulation, sheathing, window frame and door frame and finish specified in other sections. Coordinate with installation of associated work specified in other sections.

1. Mock-up may remain as part of the Work.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Metal Framing, Connectors, and Accessories:

1. CEMCO; [____]: www.cemcosteel.com/#sle.
2. ClarkDietrich Building Systems; [_____]: www.clarkdietrich.com/#sle.
3. Jaimes Industries; [____]: www.jaimesind.com/#sle.
4. [_____].
5. [_____].
6. Substitutions: See Section 01 6000 - Product Requirements.

2.02 FRAMING MATERIALS

A. Fire Rated Assemblies: Comply with applicable code and as follows:

1. Fire Rated Partitions: Listed assembly by UL, No. [____] ; [___] hour rating.
2. Top of Fire Rated Partitions: Listed assembly by UL, No. [____] ; [___] hour rating.
3. Fire Rated Ceiling and Soffits: Listed assembly by UL, No. [____] ; [___] hour rating.
4. Fire Rated Structural Column Framing: Listed assembly by UL, No. [____] ; [___] hour rating.
5. Fire Rated Structural Beam Framing: Listed assembly by UL, No. [____] ; [___] hour rating.
6. Fire Rated Shaft Wall Requirements: Listed assembly by UL, No. [___] ; [___] hour rating.

B. Non-Loadbearing Framing System Components: ASTM C645; galvanized sheet steel, of size and properties necessary to comply with ASTM C754 for the spacing indicated, with maximum deflection of wall framing of L/240 at 5 psf (L/240 at 240 Pa).

1. Studs: C shaped with flat or formed webs with knurled faces.
2. Runners: U shaped, sized to match studs.
3. Ceiling Channels: C shaped.
4. Furring: Hat-shaped sections, minimum depth of 7/8 inch (22 mm).

C. Partition Head to Structure Connections: Provide track fastened to structure with legs of sufficient length to accommodate deflection, for friction fit of studs cut short and braced with continuous bridging on both sides.

D. Deflection and Firestop Track: Intumescent strip factory-applied to track flanges expands when exposed to heat or flames to provide a perimeter joint seal.

E. Preformed Top Track Firestop Seal:

1. Provide components UL-listed for use in UL-listed fire-rated head of partition joint systems indicated on drawings.
2. Products:
    a. Hilti, Inc; Top Track Seal CFS TTS: www.us.hilti.com/#sle.
    b. [_____].
    c. Substitutions: See Section 01 6000 - Product Requirements.

2.03 FABRICATION

A. Fabricate assemblies of framed sections to sizes and profiles required.

B. Fit, reinforce, and brace framing members to suit design requirements.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

3.02 INSTALLATION OF STUD FRAMING

A. Extend partition framing to structure where indicated and to ceiling in other locations.

B. Partitions Terminating at Ceiling: Attach ceiling runner securely to ceiling track in accordance with manufacturer's instructions.

C. Partitions Terminating at Structure: Attach top runner to structure, maintain clearance between top of studs and structure, and connect studs to track using specified mechanical devices in accordance with manufacturer's instructions; verify free movement of top of stud connections; do not leave studs unattached to track.

D. Align and secure top and bottom runners at 24 inches (600 mm) on center.

E. At partitions indicated with an acoustic rating:

1. Provide components and install as required to produce STC rating of [____], based on published tests by manufacturer conducted in accordance with ASTM E90 with STC rating calculated in accordance with ASTM E413.

F. Fit runners under and above openings; secure intermediate studs to same spacing as wall studs.

G. Align stud web openings horizontally.

H. Secure studs to tracks using crimping method. Do not weld.

I. Fabricate corners using a minimum of three studs.

J. Double stud at wall openings, door and window jambs, not more than 2 inches (50 mm) from each side of openings.

K. Coordinate installation of bucks, anchors, and blocking with electrical, mechanical, and other work to be placed within or behind stud framing.

L. Furring: Install at spacing and locations shown on drawings. Lap splices a minimum of 6 inches (150 mm).

3.03 CEILING AND SOFFIT FRAMING

A. Install furring after work above ceiling or soffit is complete. Coordinate the location of hangers with other work.

B. Install furring independent of walls, columns, and above-ceiling work.

C. Securely anchor hangers to structural members or embed in structural slab. Space hangers as required to limit deflection to criteria indicated. Use rigid hangers at exterior soffits.

D. Space main carrying channels at maximum 72 inch (1 800 mm) on center, and not more than 6 inches (150 mm) from wall surfaces. Lap splice securely.

E. Securely fix carrying channels to hangers to prevent turning or twisting and to transmit full load to hangers.

F. Place furring channels perpendicular to carrying channels, not more than 2 inches (50 mm) from perimeter walls, and rigidly secure. Lap splices securely.

G. Reinforce openings in suspension system that interrupt main carrying channels or furring channels with lateral channel bracing. Extend bracing minimum 24 inches (600 mm) past each opening.

3.04 TOLERANCES

A. Maximum Variation From True Position: 1/8 inch in 10 feet (3 mm in 3 m).

B. Maximum Variation From Plumb: 1/8 inch in 10 feet (3 mm in 3 m).

END OF SECTION

SECTION 09 2216
NON-STRUCTURAL METAL FRAMING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Metal partition, ceiling and soffit framing.

B. Framing accessories.

1.02 RELATED REQUIREMENTS

A. Section 05 2100 - Steel Joists: Execution requirements for anchors for attaching work of this section.

B. Section 05 4000 - Cold-Formed Metal Framing: Structural load bearing metal stud framing and Exterior wall stud framing.

C. Section 05 4000 - Cold-Formed Metal Framing: Execution requirements for anchors for attaching work of this section.

D. Section 05 5000 - Metal Fabrications: Metal fabrications attached to stud framing.

E. Section 07 2100 - Thermal Insulation: Acoustic insulation.

F. Section 07 6200 - Sheet Metal Flashing and Trim: Head and sill flashings

G. Section 08 3100 - Access Doors and Panels.

H. Section 08 5113 - Aluminum Windows: Product requirements for window anchors.

I. Section 09 2116 - Gypsum Board Assemblies: Metal studs for gypsum board partition framing.

1.03 REFERENCE STANDARDS

A. ASTM C645 - Standard Specification for Nonstructural Steel Framing Members 2014, with Editorial Revision (2015).

B. ASTM C754 - Standard Specification for Installation of Steel Framing Members to Receive Screw-Attached Gypsum Panel Products 2017.

C. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements 2009 (Reapproved 2016).

D. ASTM E413 - Classification for Rating Sound Insulation 2016.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings:

1. Indicate prefabricated work, component details, stud layout, framed openings, anchorage to structure, acoustic details, type and location of fasteners, accessories and items of other related work.

2. Describe method for securing studs to tracks, splicing, and for blocking and reinforcement of framing connections.

C. Product Data: Provide data describing framing member materials and finish, product criteria, load charts and limitations.

D. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

E. Sustainable Design Submittal: Documentation of recycled content and location of manufacture.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing the work of this section with minimum five years documented experience and approved by manufacturer.

1.06 MOCK-UP

A. Provide mock-up of stud wall, ceiling and soffit framing including insulation, sheathing, window frame and door frame and finish specified in other sections. Coordinate with installation of associated work specified in other sections.

1. Mock-up may remain as part of the Work.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Metal Framing, Connectors, and Accessories:

1. CEMCO: www.cemcosteel.com/#sle.
2. ClarkDietrich Building Systems: www.clarkdietrich.com/#sle.
3. Jaimes Industries: www.jaimesind.com/#sle.
4. Substitutions: See Section 01 6000 - Product Requirements.

2.02 FRAMING MATERIALS

A. Fire Rated Assemblies: Comply with applicable code and as follows:

1. Fire Rated Partitions: UL Listed assembly with hour rating as designated by architect.
2. Top of Fire Rated Partitions: UL Listed assembly with hour rating as designated by architect.
3. Fire Rated Ceiling and Soffits: UL Listed assembly with hour rating as designated by architect.
4. Fire Rated Structural Column Framing: UL Listed assembly with hour rating as designated by architect.
5. Fire Rated Structural Beam Framing: UL Listed assembly with hour rating as designated by architect.
6. Fire Rated Shaft Wall Requirements: UL Listed assembly with hour rating as designated by architect.

B. Non-Loadbearing Framing System Components: ASTM C645; galvanized sheet steel, of size and properties necessary to comply with ASTM C754 for the spacing indicated, with maximum deflection of wall framing of L/240 at 5 psf (L/240 at 240 Pa).

1. Studs: C shaped with flat or formed webs with knurled faces.
2. Runners: U shaped, sized to match studs.
3. Ceiling Channels: C shaped.
4. Furring: Hat-shaped sections, minimum depth of 7/8 inch (22 mm).

C. Partition Head to Structure Connections: Provide track fastened to structure with legs of sufficient length to accommodate deflection, for friction fit of studs cut short and braced with continuous bridging on both sides.

D. Deflection and Firestop Track: Intumescent strip factory-applied to track flanges expands when exposed to heat or flames to provide a perimeter joint seal.

E. Preformed Top Track Firestop Seal:

1. Provide components UL-listed for use in UL-listed fire-rated head of partition joint systems indicated on drawings.
2. Products:
    a. Hilti, Inc; Top Track Seal CFS TTS: www.us.hilti.com/#sle.
    b. Substitutions: See Section 01 6000 - Product Requirements.

2.03 FABRICATION

A. Fabricate assemblies of framed sections to sizes and profiles required.

B. Fit, reinforce, and brace framing members to suit design requirements.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

3.02 INSTALLATION OF STUD FRAMING

A. Extend partition framing to structure where indicated and to ceiling in other locations.

B. Partitions Terminating at Ceiling: Attach ceiling runner securely to ceiling track in accordance with manufacturer's instructions.

C. Partitions Terminating at Structure: Attach top runner to structure, maintain clearance between top of studs and structure, and connect studs to track using specified mechanical devices in accordance with manufacturer's instructions; verify free movement of top of stud connections; do not leave studs unattached to track.

D. Align and secure top and bottom runners at 24 inches (600 mm) on center.

E. At partitions indicated with an acoustic rating:

1. Provide components and install as required to produce STC ratings as indicated, based on published tests by manufacturer conducted in accordance with ASTM E90 with STC rating calculated in accordance with ASTM E413.

F. Fit runners under and above openings; secure intermediate studs to same spacing as wall studs.

G. Align stud web openings horizontally.

H. Secure studs to tracks using crimping method. Do not weld.

I. Fabricate corners using a minimum of three studs.

J. Double stud at wall openings, door and window jambs, not more than 2 inches (50 mm) from each side of openings.

K. Coordinate installation of bucks, anchors, and blocking with electrical, mechanical, and other work to be placed within or behind stud framing.

L. Furring: Install at spacing and locations shown on drawings. Lap splices a minimum of 6 inches (150 mm).

3.03 CEILING AND SOFFIT FRAMING

A. Install furring after work above ceiling or soffit is complete. Coordinate the location of hangers with other work.

B. Install furring independent of walls, columns, and above-ceiling work.

C. Securely anchor hangers to structural members or embed in structural slab. Space hangers as required to limit deflection to criteria indicated. Use rigid hangers at exterior soffits.

D. Space main carrying channels at maximum 72 inch (1 800 mm) on center, and not more than 6 inches (150 mm) from wall surfaces. Lap splice securely.

E. Securely fix carrying channels to hangers to prevent turning or twisting and to transmit full load to hangers.

F. Place furring channels perpendicular to carrying channels, not more than 2 inches (50 mm) from perimeter walls, and rigidly secure. Lap splices securely.

G. Reinforce openings in suspension system that interrupt main carrying channels or furring channels with lateral channel bracing. Extend bracing minimum 24 inches (600 mm) past each opening.

3.04 TOLERANCES

A. Maximum Variation From True Position: 1/8 inch in 10 feet (3 mm in 3 m).

B. Maximum Variation From Plumb: 1/8 inch in 10 feet (3 mm in 3 m).

END OF SECTION

SECTION 09 2983
GYPSUM BOARD SOFFITS

PART 1 - GENERAL

1.01 DESCRIPTION:

A. Furnish all labor, materials, tools, equipment and services necessary for and reasonably incidental to complete the gypsum board s0ffit work as indicated on the drawings or specified, including, but not limited to, the following:

1. Gypsum Board
2. Metal Studs
3. Taping and Joint Treatment
4. Soffit Suspension System
5. Trim

1.02 RELATED SECTIONS:

A. Section 06100: Rough Carpentry

1.03 QUALITY ASSURANCE:

A. Perform gypsum board systems work in accordance with recommendations of ASTM C754 and GA 216, unless otherwise specified in this section.

1.04 SUBMITTALS:

A. Material submittals will include manufacturer’s cut sheets for all materials to be used indicating suitability in exterior soffit installations.

1. Gypsum Board (must be moisture resistant and suitable for exterior use).
2. Joint Tape
3. Joint Compound (must be setting type suitable for exterior use).
4. Galvanized metal trims

PART 2 - PRODUCTS

2.01 METAL FRAMING:

A. Provide metal framing materials in accordance with GA 216.

B. Studs: Screw-type C-shaped, as manufactured by U.S.G. ST Series, or approved equal, of the following type:

C. Runners or Track: Match stud gauge.

D. Furring Members: Screw-type hat-shaped and Screw-type C-shaped; 20 gauge.

E. Channels, Hager Wire, Fasteners and anchorages: GA 216.

2.02 METAL FRAMING ACCESSORIES:

A. Blocking: Fire-retardant 2 x wood or 1-1/2" steel channels.

B. Screws: ASTM C1002, Type S, bugle head, chromate or factory painted, 1" long for single ply, 1-1/2" long for double layer board.

2.03 GYPSUM BOARD:

A. Provide Fire-Rated Gypsum Board ASTM C36 5/8" thick, maximum permissible length, ends square cut, tapered edges. Fire-rated gypsum board shall be used.

B. USG SHEETROCK brand Exterior Gypsum Ceiling Board 5/8” type X core Exterior Soffit Wallboard or pre-approved equal, screwed and attached to existing wood or metal framing or new 20 gauge framing or hat channels spaced 16” o.c with 1-1/4” long Type S screw spaced 8” o.c. along edges and 12” o.c. in the field of the board. All gypsum wallboard used must be factory marked Exterior Soffit or exterior ceiling.

2.04 GYPSUM BOARD ACCESSORIES:

A. Provide gypsum board accessories in accordance with GA 216.

B. Corner Beads: USG Dur-A-Bead, or approved equal.

C. Metal Edge Trim: Galvanized, USG No. 200B and 200A.

D. Reinforcing Tape: USG Fiberglass Tape, or approved equal.

E. Joint Compound: USG SHETROCK brand DURABOND setting-type joint compound or approved equal.

F. Soffit Vents : Provide round aluminum soffit vents matching size of soffit vents in existing areas of gypsum soffit. Install vents per gypsum wallboard manufacturer’s ventilation requirements. All gypsum board ceiling areas must be vented.

G. Control Joints. Provide control joints at corners and every 25 ‘ consisting of two pieces of J-Trim back to back.

PART 3 - EXECUTION

3.01 METAL FRAMING ERECTION - GENERAL:

A. Install metal framing in accordance with ASTM C754.

B. Install members true to lines and levels to provide surface flatness with maximum variation of 1/8" in 10' in any direction.

C. Install gypsum board in accordance with Gypsum Association Document GA-216-85.

3.02 GYPSUM BOARD INSTALLATION:

A. Install gypsum soffit board in accordance with manufacturer’s recommendations. Gypsum board must be marked by the manufacturer as ‘Exterior Soffit or Exterior Ceiling’.

B. Erect single layer standard gypsum board across framing members with ends and edges occurring over framing.

C. Use Type S chromate or painted screws specifically designed for exterior use when fastening gypsum board to metal furring or framing.

D. Place galvanized edge trim where gypsum board abuts dissimilar materials.

E. Tape, fill and sand exposed joints, edges, corners, openings and fixings, to produce a surface ready to receive surface finishes. Feather coats onto adjoining surfaces so that camber is maximum 1/16". Use only setting type joint mix suitable for exterior applications.

F. Remove and re-do defective work. Finishers must be experienced with fast setting joint compound. Do not paint poorly finished surfaces until restored to acceptable smoothness.

3.03 GYPSUM SOFFIT BOARD PAINTING:

A. Number of coats:

1. 1st Coat -Exterior Alkyd/Oil House Paint Primer – Killz or Equal

2. 2nd Coat – Premium Acrylic Exterior Latex House Paint by Sherwin Williams or equal.

3. 3rd Coat – Premium Acrylic Exterior Latex House Paint by Sherwin Williams or equal.

B. Gloss: - Match gloss of adjacent gypsum ceiling areas. Avoid high gloss and gloss finishes.

C. Color: - Match color and shade of adjacent gypsum ceiling areas (white).

3.04 INSULATION:

A. Replace any disrupted insulation in kind.

B. Replace any damaged insulation with new insulation of the same type.

3. 3rd Coat – Premium Acrylic Exterior Latex House Paint by Sherwin Williams or equal.

B. Gloss: - Match gloss of adjacent gypsum ceiling areas. Avoid high gloss and gloss finishes.

C. Color: - Match color and shade of adjacent gypsum ceiling areas (white).

3.04 INSULATION:

A. Replace any disrupted insulation in kind.

B. Replace any damaged insulation with new insulation of the same type.

END OF SECTION

SECTION 09 3000
TILING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Tile for floor applications.

B. Tile for wall applications.

C. Tile for counters.

D. Tile for shower receptors.

E. Cementitious backer board as tile substrate.

F. Stone thresholds.

G. Ceramic accessories.

H. Ceramic trim.

I. Non-ceramic trim.

1.02 RELATED REQUIREMENTS

1.03 REFERENCE STANDARDS

A. ANSI A108/A118/A136 - American National Standard Specifications for the Installation of Ceramic Tile (Compendium). 2017.

B. ANSI A118.3 - American National Standard Specifications for Chemical Resistant, Water Cleanable Tile-Setting and -Grouting Epoxy and Water Cleanable Tile-Setting Epoxy Adhesive 2013 (Revised).

C. ANSI A118.4 - American National Standard Specifications for Modified Dry-Set Cement Mortar 2012 (Revised).

D. ANSI A118.6 - American National Standard Specifications for Standard Cement Grouts for Tile Installation 2010 (Reaffirmed 2016).

E. ANSI A118.9 - American National Standard Specifications for Test Methods and Specifications for Cementitious Backer Units 1999 (Reaffirmed 2016).

F. ANSI A118.10 - American National Standard Specifications for Load Bearing, Bonded, Waterproof Membranes For Thin-Set Ceramic Tile And Dimension Stone Installation 2014.

G. ANSI A118.12 - American National Standard Specifications for Crack Isolation Membranes for Thin-Set Ceramic Tile and Dimension Stone Installation 2014.

H. ANSI A118.15 - American National Standard Specifications for Improved Modified Dry-Set Cement Mortar 2012.

I. ANSI A137.1 - American National Standard Specifications for Ceramic Tile 2012.

J. ANSI A137.2 - American National Standard Specifications for Glass Tile 2013.

K. ASTM C150/C150M - Standard Specification for Portland Cement 2018.

L. ASTM C33/C33M - Standard Specification for Concrete Aggregates 2016, with Editorial Revision (2016).

M. ASTM C373 - Standard Test Methods for Determination of Water Absorption and Associated Properties by Vacuum Method for Pressed Ceramic Tiles and Glass Tiles and Boil Method for Extruded Ceramic Tiles and Non-tile Fired Ceramic Whiteware Products 2017.

N. ASTM D4068 - Standard Specification for Chlorinated Polyethylene (CPE) Sheeting for Concealed Water-Containment Membrane 2017.

O. TCNA (HB) - Handbook for Ceramic, Glass, and Stone Tile Installation 2017.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate tile layout, patterns, color arrangement, perimeter conditions, junctions with dissimilar materials, control and expansion joints, thresholds, ceramic accessories and setting details.

C. Samples: Mount tile and apply grout on two plywood panels, minimum 18 by 18 inches (457 by 457 mm) in size illustrating pattern, color variations, and grout joint size variations.

1.05 QUALITY ASSURANCE

A. Maintain one copy of and ANSI A108/A118/A136 and TCNA (HB) on site.

B. Manufacturer Qualifications: Company specializing in manufacturing the types of products specified in this section, with minimum five years of documented experience.

C. Installer Qualifications: Company specializing in performing tile installation, with minimum of five years of documented experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Protect adhesives from freezing or overheating in accordance with manufacturer's instructions.

1.07 FIELD CONDITIONS

A. Do not install solvent-based products in an unventilated environment.

B. Maintain ambient and substrate temperature of 50 degrees F (10 degrees C) during installation of mortar materials.

PART 2 PRODUCTS

2.01 TILE

A. Manufacturers: All products by the same manufacturer.

1. Dal-Tile Corporation: www.daltile.com/#sle.
2. Terrazzo & Marble Supply Companies: www.tmsupply.com/#sle.
3. [_____].
4. [_____].
5. Substitutions: See Section 01 6000 - Product Requirements.

B. Ceramic Mosaic Tile, Type [__]: ANSI A137.1 standard grade.

1. Moisture Absorption: 0 to 0.5 percent as tested in accordance with ASTM C373.
2. Products:
    a. [_____].
    b. [_____].
    c. Substitutions: See Section 01 6000 - Product Requirements.

C. Glazed Wall Tile, Type [__]: ANSI A137.1 standard grade.

1. Moisture Absorption: 7.0 to 20.0 percent as tested in accordance with ASTM C373.
2. Trim Units: Matching bead, bullnose, cove and base shapes in sizes coordinated with field tile.

3. Products:
    a. [_____].
    b. [_____].
    c. Substitutions: See Section 01 6000 - Product Requirements.

D. Quarry Tile, Type [__]: ANSI A137.1 standard grade.
1. Moisture Absorption: 0.5 to 3.0 percent as tested in accordance with ASTM C373.
2. Trim Units: Matching bullnose, cove, cove base and window sill or step nosing shapes in sizes coordinated with field tile.
3. Products:
    a. Metropolitan Ceramics: www.metroceramics.com/#sle.
    b. Summitville Tiles, Inc: www.summitville.com/#sle.
    c. [_____].
    d. [_____].
    e. Substitutions: See Section 01 6000 - Product Requirements.

E. Porcelain Tile, Type [_____]: ANSI A137.1 standard grade.
1. Moisture Absorption: 0 to 0.5 percent as tested in accordance with ASTM C373.
2. Trim Units: Matching bullnose, double bullnose, cove base and cove shapes in sizes coordinated with field tile.
3. Products:
    a. [_____].
    b. [_____].
    c. Substitutions: See Section 01 6000 - Product Requirements.

F. Natural Stone Tile, Type [__]:
1. Composition: [_____].
2. Products:
    a. Diamond Tech Tiles; [_____]: www.dttiles.com/#sle.
    b. [_____].
    c. [_____].

G. Artificial Stone Tile, Type [__]:
1. Composition: 93 percent aggregate, quartz and recycled glass.
2. Products:
    a. Terrazzo & Marble Supply Companies; DIFINITI Quartz: www.tmsupply.com/#sle.
    b. Substitutions: See Section 01 6000 - Product Requirements.

H. Glass Tile, Type [__]: ANSI A137.2 standard grade.

I. Terrazzo Tile, Type [__]:
1. Composition: Portland cement, ASTM C150/C150M; aggregate complying with ASTM C33/C33M.
2. Products:

a. Tectura Designs, a division of Wausau Tile Inc; Terrazzo Tile: www.tecturadesigns.com/#sle.

b. [_____].

c. [_____].

d. Substitutions: See Section 01 6000 - Product Requirements.

2.02 TRIM AND ACCESSORIES

A. Ceramic Accessories: Glazed finish, same color and finish as adjacent field tile; same manufacturer as tile.

1. Soap Dish: With handle, clam shell design, recess mounted; cast strength sufficient to resist lateral pull force of 75 lbs (34 Kg).

2. Toilet Tissue Holder: Recessed, for single roll, with spring loaded holder.

3. Towel Bars: Standard design, surface mounted with extensions for casting into small wall openings; cast strength sufficient to resist lateral pull force of 30 lbs (14 Kg).

B. Ceramic Trim: Matching bullnose, double bullnose, cove base and cove ceramic shapes in sizes coordinated with field tile.

1. Applications:

a. Open Edges: Bullnose.

b. Inside Corners: Jointed.

c. Floor to Wall Joints: Cove base.

2. Manufacturers: Same as for tile.

C. Non-Ceramic Trim: Satin brass anodized extruded aluminum, style and dimensions to suit application, for setting using tile mortar or adhesive.

1. Applications:

a. Open edges of wall tile.

b. Open edges of floor tile.

c. Wall corners, outside and inside.

d. Transition between floor finishes of different heights.

e. Thresholds at door openings.

f. Expansion and control joints, floor and wall.

g. Floor to wall joints.

h. Borders and other trim as indicated on drawings.

i. Balcony and terrace edge trim and fascia.

2. Manufacturers:

a. Schluter-Systems: www.schluter.com/#sle.

b. Genesis APS International: www.genesis-aps.com/#sle.

c. [_____].

d. Substitutions: See Section 01 6000 - Product Requirements.

D. Thresholds: Marble, white or gray, honed finish; 2 inches (51 mm) wide by full width of wall or frame opening; 1/2 inch thick (12.7 mm thick); beveled one long edge with radiused corners on top side; without

holes, cracks, or open seams.

1. Applications:
    a. At doorways where tile terminates.

2.03 SETTING MATERIALS

A. Manufacturers:
    1. ARDEX Engineered Cements; [_____]: www.ardexamericas.com/#sle.
    2. Bostik Inc; [_____]: www.bostik-us.com/#sle.
    3. Custom Building Products; [_____]: www.custombuildingproducts.com/#sle.
    4. [_____].
    5. [_____].
    6. Substitutions: See Section 01 6000 - Product Requirements.

B. Latex-Portland Cement Mortar Bond Coat: ANSI A118.4.
    1. Applications: Use this type of bond coat where indicated and where no other type of bond coat is indicated.
    2. Products:
        a. ARDEX Engineered Cements; ARDEX N 23 MICROTEC: www.ardexamericas.com/#sle.

C. Improved Latex-Portland Cement Mortar Bond Coat: ANSI A118.15.
    1. Applications: Use this type of bond coat where indicated and where no other type of bond coat is indicated.
    2. Products:
        a. ARDEX Engineered Cements; S 28: www.ardexamericas.com/#sle.
        b. Substitutions: See Section 01 6000 - Product Requirements.

D. Epoxy Adhesive and Mortar Bond Coat: ANSI A118.3.
    1. Applications: Where indicated on drawings.
    2. Products:
        a. Custom Building Products; EBM-Lite Epoxy Bonding Mortar: www.custombuildingproducts.com/#sle.
        b. LATICRETE International, Inc; LATICRETE LATAPOXY 300 Adhesive: www.laticrete.com/#sle.
        c. [_____].
        d. Substitutions: See Section 01 6000 - Product Requirements.

E. Water Based Adhesive: Multi-purpose type mastic.
    1. Applications: [_____].
    2. Products:
        a. Stauf USA, LLC; M420 Spot Tack: www.staufusa.com/#sle.
        b. [_____].
        c. [_____].
        d. Substitutions: See Section 01 6000 - Product Requirements.

F. Mortar Bed Materials: Pre-packaged mix of Portland cement, sand, latex additive, and water.

1. Products:

a. LATICRETE International, Inc; LATICRETE 3701 Fortified Mortar Bed: www.laticrete.com/#sle.

b. [_____].

c. [_____].

d. Substitutions: See Section 01 6000 - Product Requirements.

2.04 GROUTS

A. Manufacturers:

1. LATICRETE International, Inc; LATICRETE PERMACOLOR Grout: www.laticrete.com/#sle.

2. [_____].

3. [_____].

B. Standard Grout: ANSI A118.6 standard cement grout.

1. Applications: Use this type of grout where indicated and where no other type of grout is indicated.

2. Use sanded grout for joints 1/8 inch wide and larger; use unsanded grout for joints less than 1/8 inch wide.

3. Color(s): As selected by Architect from manufacturer's full line.

4. Products:

a. Custom Building Products; Polyblend Non-Sanded Grout: www.custombuildingproducts.com/#sle.

b. LATICRETE International, Inc; LATICRETE 1500 Sanded Grout: www.laticrete.com/#sle.

c. [_____].

d. Substitutions: See Section 01 6000 - Product Requirements.

C. Stain Resistant Grout Additive: Liquid admixture for sanded and unsanded cement-based grouts; mix with dry grout material in place of water.

1. Applications: Where indicated.

2.05 MAINTENANCE MATERIALS

A. Tile Sealant: Gunnable, silicone, siliconized acrylic, or urethane sealant; moisture and mildew resistant type.

1. Applications: Between tile and plumbing fixtures.

2. Color(s): As indicated on drawings.

3. Products:

a. ARDEX Engineered Cements; ARDEX SX: www.ardexamericas.com/#sle.

b. LATICRETE International, Inc; LATICRETE LATASIL: www.laticrete.com/#sle.

c. [_____].

d. [_____].

e. Substitutions: See Section 01 6000 - Product Requirements.

B. Grout Sealer: Liquid-applied, moisture and stain protection for existing or new Portland cement grout.

1. Composition: Water-based colorless silicone.
2. Products:
    a. Merkrete, by Parex USA, Inc; Merkrete Grout Sealer: www.merkrete.com/#sle.
    b. [_____].
    c. [_____].
    d. Substitutions: See Section 01 6000 - Product Requirements.

C. Tile Sealer: Stain protection for natural stone.
1. Products:
    a. Custom Building Products; Aqua Mix Enrich 'N' Seal: www.custombuildingproducts.com/#sle.
    b. STONETECH, a division of LATICRETE international, Inc; STONETECH Heavy Duty Stone Sealer: www.laticrete.com/#sle.
    c. [_____].
    d. Substitutions: See Section 01 6000 - Product Requirements.

D. Grout Release: Temporary, water-soluble pre-grout coating.
1. Products:
    a. Custom Building Products; Aqua Mix Grout Release: www.custombuildingproducts.com/#sle.

2.06 ACCESSORY MATERIALS

A. Concrete Floor Slab Crack Isolation Membrane: Material complying with ANSI A118.12; not intended as waterproofing.
1. Thickness: [____] mils ([____] mm), maximum.
2. Crack Resistance: No failure at 1/16 inch (1.6 mm) gap, minimum.

B. Waterproofing Membrane at Floors: Specifically designed for bonding to cementitious substrate under thick mortar bed or thin-set tile; complying with ANSI A118.10.
1. Crack Resistance: No failure at 1/16 inch (1.6 mm) gap, minimum; comply with ANSI A118.12.
2. Fluid or Trowel Applied Type:
    a. Products:
        1) ARDEX Engineered Cements; ARDEX 8+9: www.ardexamericas.com/#sle.
        2) LATICRETE International, Inc; LATICRETE HYDRO BAN: www.laticrete.com/#sle.
        3) [_____].

C. Waterproofing Membrane at Showers and Tiled Tubs: Specifically designed for bonding to cementitious substrate under thick mortar bed or thin-set tile; complying with ANSI A118.10.
1. Fluid or Trowel Applied Type:
    a. Material: Acrylic.
    b. Products:
        1) ARDEX Engineered Cements; ARDEX 8+9: www.ardexamericas.com/#sle.
        2) [_____].
        3) [_____].

4) Substitutions: See Section 01 6000 - Product Requirements.

2. Peel-and-Stick Sheet Type:

D. Waterproofing Membrane Under Thick Mortar Bed at Showers and Tiled Tubs:

1. Material: Chlorinated polyethylene sheet, 40 mils (1.0 mm) thick, minimum; complying with ASTM D4068.

2. Products:

a. Noble Company; Chloraloy Shower Pan Liner: www.noblecompany.com/#sle.

b. [_____].

c. [_____].

E. Backer Board: Cementitious type complying with ANSI A118.9; high density, glass fiber reinforced, 1/2 inch (12.7 mm) thick; 2 inch (51 mm) wide coated glass fiber tape for joints and corners.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that sub-floor surfaces are smooth and flat within the tolerances specified for that type of work and are ready to receive tile.

B. Verify that wall surfaces are smooth and flat within the tolerances specified for that type of work, are dust-free, and are ready to receive tile.

C. Verify that sub-floor surfaces are dust-free and free of substances that could impair bonding of setting materials to sub-floor surfaces.

3.02 PREPARATION

A. Protect surrounding work from damage.

B. Vacuum clean surfaces and damp clean.

C. Seal substrate surface cracks with filler. Level existing substrate surfaces to acceptable flatness tolerances.

D. Install backer board in accordance with ANSI A108.11 and board manufacturer's instructions. Tape joints and corners, cover with skim coat of setting material to a feather edge.

E. Prepare substrate surfaces for adhesive installation in accordance with adhesive manufacturer's instructions.

3.03 INSTALLATION - GENERAL

A. Install tile, thresholds and stair treads and grout in accordance with applicable requirements of ANSI A108.1a through ANSI A108.13, manufacturer's instructions, and TCNA (HB) recommendations.

B. Lay tile to pattern indicated. Do not interrupt tile pattern through openings.

C. Cut and fit tile to penetrations through tile, leaving sealant joint space. Form corners and bases neatly. Align floor joints.

D. Place tile joints uniform in width, subject to variance in tolerance allowed in tile size. Make grout joints without voids, cracks, excess mortar or excess grout, or too little grout.

E. Form internal angles square and external angles bullnosed.

F. Install ceramic accessories rigidly in prepared openings.

G. Install non-ceramic trim in accordance with manufacturer's instructions.

H. Install thresholds where indicated.

I. Sound tile after setting. Replace hollow sounding units.

J. Keep control and expansion joints free of mortar, grout, and adhesive.

K. Prior to grouting, allow installation to completely cure; minimum of 48 hours.

L. Grout tile joints unless otherwise indicated. Use standard grout unless otherwise indicated.

M. At changes in plane and tile-to-tile control joints, use tile sealant instead of grout, with either bond breaker tape or backer rod as appropriate to prevent three-sided bonding.

3.04 INSTALLATION - FLOORS - THIN-SET METHODS

A. Over interior concrete substrates, install in accordance with TCNA (HB) Method F113, dry-set or latex-Portland cement bond coat, with standard grout, unless otherwise indicated.

1. Use uncoupling membrane under all tile unless other underlayment is indicated.
2. Where waterproofing membrane is indicated, install in accordance with TCNA (HB) Method F122, with latex-Portland cement grout.
3. Where epoxy bond coat and grout are indicated, install in accordance with TCNA (HB) Method F131.

3.05 INSTALLATION - FLOORS - MORTAR BED METHODS

A. Over exterior concrete substrates, install in accordance with TCNA (HB) Method F101, bonded, with standard grout.

B. Over interior concrete substrates, install in accordance with TCNA (HB) Method F111, with cleavage membrane, unless otherwise indicated.

1. Where waterproofing membrane is indicated, with standard grout or no mention of grout type, install in accordance with TCNA (HB) Method F121.
2. Where epoxy bond coat and grout are indicated, install in accordance with TCNA (HB) Method F132, bonded.

C. Waterproofing Membrane: Install as recommended by manufacturer and as specified in the section in which the product is specified.

D. Mortar Bed Thickness: 5/8 inch (15.9 mm), unless otherwise indicated.

3.06 INSTALLATION - SHOWERS AND BATHTUB WALLS

A. At tiled shower receptors install in accordance with TCNA (HB) Method B415, mortar bed floor, and W244, thin-set over cementitious backer unit walls.

B. At bathtub walls install in accordance with TCNA (HB) Method B412, over cementitious backer units with waterproofing membrane.

C. Grout with standard grout as specified above.

3.07 INSTALLATION - WALL TILE

A. On exterior walls install in accordance with TCNA (HB) Method W244, thin-set over cementitious backer units, with waterproofing membrane.

B. Over cementitious backer units on studs, install in accordance with TCNA (HB) Method W244, using membrane at toilet rooms.

C. Over gypsum wallboard on wood or metal studs install in accordance with TCNA (HB) Method W243, thin-set with dry-set or latex-Portland cement bond coat, unless otherwise indicated.

1. Where mortar bed is indicated, install in accordance with TCNA (HB) Method W222, one coat method.
2. Where waterproofing membrane is indicated other than at showers and bathtub walls, install in accordance with TCNA (HB) Method W222, one coat method.

D. Over interior concrete and masonry install in accordance with TCNA (HB) Method W202, thin-set with dry-set or latex-Portland cement bond coat.

E. Over wood studs without backer install in accordance with TCNA (HB) Method W231, mortar bed, with membrane where indicated.

F. Over metal studs without backer install in accordance with TCNA (HB) Method W241, mortar bed, with membrane where indicated.

3.08 CLEANING

A. Clean tile and grout surfaces.

3.09 PROTECTION

A. Do not permit traffic over finished floor surface for 4 days after installation.

END OF SECTION

SECTION 09 3000
TILING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Tile for floor applications.

B. Tile for wall applications.

C. Tile for counters.

D. Tile for shower receptors.

E. Cementitious backer board as tile substrate.

F. Stone thresholds.

G. Ceramic accessories.

H. Ceramic trim.

I. Non-ceramic trim.

1.02 RELATED REQUIREMENTS

1.03 REFERENCE STANDARDS

A. ANSI A108/A118/A136 - American National Standard Specifications for the Installation of Ceramic Tile (Compendium). 2017.

B. ANSI A118.3 - American National Standard Specifications for Chemical Resistant, Water Cleanable Tile-Setting and -Grouting Epoxy and Water Cleanable Tile-Setting Epoxy Adhesive 2013 (Revised).

C. ANSI A118.4 - American National Standard Specifications for Modified Dry-Set Cement Mortar 2012 (Revised).

D. ANSI A118.6 - American National Standard Specifications for Standard Cement Grouts for Tile Installation 2010 (Reaffirmed 2016).

E. ANSI A118.9 - American National Standard Specifications for Test Methods and Specifications for Cementitious Backer Units 1999 (Reaffirmed 2016).

F. ANSI A118.10 - American National Standard Specifications for Load Bearing, Bonded, Waterproof Membranes For Thin-Set Ceramic Tile And Dimension Stone Installation 2014.

G. ANSI A118.12 - American National Standard Specifications for Crack Isolation Membranes for Thin-Set Ceramic Tile and Dimension Stone Installation 2014.

H. ANSI A118.15 - American National Standard Specifications for Improved Modified Dry-Set Cement Mortar 2012.

I. ANSI A137.1 - American National Standard Specifications for Ceramic Tile 2012.

J. ANSI A137.2 - American National Standard Specifications for Glass Tile 2013.

K. ASTM C150/C150M - Standard Specification for Portland Cement 2018.

L. ASTM C33/C33M - Standard Specification for Concrete Aggregates 2016, with Editorial Revision (2016).

M. ASTM C373 - Standard Test Methods for Determination of Water Absorption and Associated Properties by Vacuum Method for Pressed Ceramic Tiles and Glass Tiles and Boil Method for Extruded Ceramic Tiles and Non-tile Fired Ceramic Whiteware Products 2017.

N. ASTM D4068 - Standard Specification for Chlorinated Polyethylene (CPE) Sheeting for Concealed Water-Containment Membrane 2017.

O. TCNA (HB) - Handbook for Ceramic, Glass, and Stone Tile Installation 2017.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate tile layout, patterns, color arrangement, perimeter conditions, junctions with dissimilar materials, control and expansion joints, thresholds, ceramic accessories and setting details.

C. Samples: Mount tile and apply grout on two plywood panels, minimum 18 by 18 inches (457 by 457 mm) in size illustrating pattern, color variations, and grout joint size variations.

1.05 QUALITY ASSURANCE

A. Maintain one copy of and ANSI A108/A118/A136 and TCNA (HB) on site.

B. Manufacturer Qualifications: Company specializing in manufacturing the types of products specified in this section, with minimum five years of documented experience.

C. Installer Qualifications: Company specializing in performing tile installation, with minimum of five years of documented experience.

1.06 MOCK-UP

A. See Section 01 4000 - Quality Requirements, for general requirements for mock-up.

B. Construct tile mock-up where indicated on drawings, incorporating all components specified for the location.

1. Minimum size of mock-up is indicated on drawings.
2. Approved mock-up may remain as part of the Work.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Protect adhesives from freezing or overheating in accordance with manufacturer's instructions.

1.08 FIELD CONDITIONS

A. Do not install solvent-based products in an unventilated environment.

B. Maintain ambient and substrate temperature of 50 degrees F (10 degrees C) during installation of mortar materials.

PART 2 PRODUCTS

2.01 TILE

A. Manufacturers: All products by the same manufacturer.

1. Dal-Tile Corporation: www.daltile.com/#sle.
2. Terrazzo & Marble Supply Companies: www.tmsupply.com/#sle.
3. Substitutions: See Section 01 6000 - Product Requirements.

B. Ceramic Mosaic Tile: ANSI A137.1 standard grade.

1. Moisture Absorption: 0 to 0.5 percent as tested in accordance with ASTM C373.
2. Color(s): As indicated on drawings.
3. Trim Units: Matching bead, cove and surface bullnose shapes in sizes coordinated with field tile.

C. Glazed Wall Tile: ANSI A137.1 standard grade.

1. Moisture Absorption: 7.0 to 20.0 percent as tested in accordance with ASTM C373.
2. Color(s): To be selected by Architect from manufacturer's standard range.
3. Trim Units: Matching bead, bullnose, cove and base shapes in sizes coordinated with field tile.
4. Products:
    a. Substitutions: See Section 01 6000 - Product Requirements.

D. Quarry Tile: ANSI A137.1 standard grade.
1. Moisture Absorption: 0.5 to 3.0 percent as tested in accordance with ASTM C373.
2. Color(s): To be selected by Architect from manufacturer's standard range.
3. Trim Units: Matching bullnose, cove, cove base and window sill or step nosing shapes in sizes coordinated with field tile.
4. Products:
    a. Metropolitan Ceramics: www.metroceramics.com/#sle.
    b. Summitville Tiles, Inc: www.summitville.com/#sle.
    c. Substitutions: See Section 01 6000 - Product Requirements.

E. Porcelain Tile: ANSI A137.1 standard grade.
1. Moisture Absorption: 0 to 0.5 percent as tested in accordance with ASTM C373.
2. Trim Units: Matching bullnose, double bullnose, cove base and cove shapes in sizes coordinated with field tile.
3. Products:
    a. Substitutions: See Section 01 6000 - Product Requirements.

F. Natural Stone Tile:
1. Products:
    a. Diamond Tech Tiles: www.dttiles.com/#sle.

G. Artificial Stone Tile:
1. Composition: 93 percent aggregate, quartz and recycled glass.
2. Products:
    a. Terrazzo & Marble Supply Companies; DIFINITI Quartz: www.tmsupply.com/#sle.
    b. Substitutions: See Section 01 6000 - Product Requirements.

H. Glass Tile: ANSI A137.2 standard grade.

I. Terrazzo Tile:
1. Composition: Portland cement, ASTM C150/C150M; aggregate complying with ASTM C33/C33M.
2. Products:
    a. Tectura Designs, a division of Wausau Tile Inc; Terrazzo Tile: www.tecturadesigns.com/#sle.
    b. Substitutions: See Section 01 6000 - Product Requirements.

2.02 TRIM AND ACCESSORIES

A. Ceramic Accessories: Glazed finish, same color and finish as adjacent field tile; same manufacturer as tile.

1. Soap Dish: With handle, clam shell design, recess mounted; cast strength sufficient to resist lateral pull force of 75 lbs (34 Kg).
2. Toilet Tissue Holder: Recessed, for single roll, with spring loaded holder.
3. Towel Bars: Standard design, surface mounted with extensions for casting into small wall openings; cast strength sufficient to resist lateral pull force of 30 lbs (14 Kg).

B. Ceramic Trim: Matching bullnose, double bullnose, cove base and cove ceramic shapes in sizes coordinated with field tile.
   1. Applications:
      a. Open Edges: Bullnose.
      b. Inside Corners: Jointed.
      c. Floor to Wall Joints: Cove base.
   2. Manufacturers: Same as for tile.

C. Non-Ceramic Trim: Satin brass anodized extruded aluminum, style and dimensions to suit application, for setting using tile mortar or adhesive.
   1. Applications:
      a. Open edges of wall tile.
      b. Open edges of floor tile.
      c. Wall corners, outside and inside.
      d. Transition between floor finishes of different heights.
      e. Thresholds at door openings.
      f. Expansion and control joints, floor and wall.
      g. Floor to wall joints.
      h. Borders and other trim as indicated on drawings.
      i. Balcony and terrace edge trim and fascia.
   2. Manufacturers:
      a. Schluter-Systems: www.schluter.com/#sle.
      b. Genesis APS International: www.genesis-aps.com/#sle.
      c. Substitutions: See Section 01 6000 - Product Requirements.

D. Thresholds: Marble, white or gray, honed finish; 2 inches (51 mm) wide by full width of wall or frame opening; 1/2 inch thick (12.7 mm thick); beveled one long edge with radiused corners on top side; without holes, cracks, or open seams.
   1. Applications:
      a. At doorways where tile terminates.

2.03 SETTING MATERIALS

A. Manufacturers:
   1. ARDEX Engineered Cements: www.ardexamericas.com/#sle.
   2. Bostik Inc: www.bostik-us.com/#sle.
   3. Custom Building Products: www.custombuildingproducts.com/#sle.

4. Substitutions: See Section 01 6000 - Product Requirements.

B. Latex-Portland Cement Mortar Bond Coat: ANSI A118.4.

1. Applications: Use this type of bond coat where indicated and where no other type of bond coat is indicated.

2. Products:

a. ARDEX Engineered Cements; ARDEX N 23 MICROTEC: www.ardexamericas.com/#sle.

C. Improved Latex-Portland Cement Mortar Bond Coat: ANSI A118.15.

1. Applications: Use this type of bond coat where indicated and where no other type of bond coat is indicated.

2. Products:

a. ARDEX Engineered Cements; S 28: www.ardexamericas.com/#sle.

b. Substitutions: See Section 01 6000 - Product Requirements.

D. Epoxy Adhesive and Mortar Bond Coat: ANSI A118.3.

1. Applications: Where indicated on drawings.

2. Products:

a. Custom Building Products; EBM-Lite Epoxy Bonding Mortar: www.custombuildingproducts.com/#sle.

b. LATICRETE International, Inc; LATICRETE LATAPOXY 300 Adhesive: www.laticrete.com/#sle.

c. Substitutions: See Section 01 6000 - Product Requirements.

E. Water Based Adhesive: Multi-purpose type mastic.

1. Products:

a. Stauf USA, LLC; M420 Spot Tack: www.staufusa.com/#sle.

b. Substitutions: See Section 01 6000 - Product Requirements.

F. Mortar Bed Materials: Pre-packaged mix of Portland cement, sand, latex additive, and water.

1. Products:

a. LATICRETE International, Inc; LATICRETE 3701 Fortified Mortar Bed: www.laticrete.com/#sle.

b. Substitutions: See Section 01 6000 - Product Requirements.

2.04 GROUTS

A. Manufacturers:

1. LATICRETE International, Inc; LATICRETE PERMACOLOR Grout: www.laticrete.com/#sle.

B. Standard Grout: ANSI A118.6 standard cement grout.

1. Applications: Use this type of grout where indicated and where no other type of grout is indicated.

2. Use sanded grout for joints 1/8 inch wide and larger; use unsanded grout for joints less than 1/8 inch wide.

3. Color(s): As selected by Architect from manufacturer's full line.

4. Products:

a. Custom Building Products; Polyblend Non-Sanded Grout: www.custombuildingproducts.com/#sle.

b. LATICRETE International, Inc; LATICRETE 1500 Sanded Grout: www.laticrete.com/#sle.

c. Substitutions: See Section 01 6000 - Product Requirements.

C. Stain Resistant Grout Additive: Liquid admixture for sanded and unsanded cement-based grouts; mix with dry grout material in place of water.

1. Applications: Where indicated.

2.05 MAINTENANCE MATERIALS

A. Tile Sealant: Gunnable, silicone, siliconized acrylic, or urethane sealant; moisture and mildew resistant type.

1. Applications: Between tile and plumbing fixtures.

2. Color(s): As indicated on drawings.

3. Products:

a. ARDEX Engineered Cements; ARDEX SX: www.ardexamericas.com/#sle.

b. LATICRETE International, Inc; LATICRETE LATASIL: www.laticrete.com/#sle.

c. Substitutions: See Section 01 6000 - Product Requirements.

B. Grout Sealer: Liquid-applied, moisture and stain protection for existing or new Portland cement grout.

1. Composition: Water-based colorless silicone.

2. Products:

a. Merkrete, by Parex USA, Inc; Merkrete Grout Sealer: www.merkrete.com/#sle.

b. Substitutions: See Section 01 6000 - Product Requirements.

C. Tile Sealer: Stain protection for natural stone.

1. Products:

a. Custom Building Products; Aqua Mix Enrich 'N' Seal: www.custombuildingproducts.com/#sle.

b. STONETECH, a division of LATICRETE international, Inc; STONETECH Heavy Duty Stone Sealer: www.laticrete.com/#sle.

c. Substitutions: See Section 01 6000 - Product Requirements.

D. Grout Release: Temporary, water-soluble pre-grout coating.

1. Products:

a. Custom Building Products; Aqua Mix Grout Release: www.custombuildingproducts.com/#sle.

2.06 ACCESSORY MATERIALS

A. Concrete Floor Slab Crack Isolation Membrane: Material complying with ANSI A118.12; not intended as waterproofing.

1. Thickness: as designated on drawing.

2. Crack Resistance: No failure at 1/16 inch (1.6 mm) gap, minimum.

B. Waterproofing Membrane at Floors: Specifically designed for bonding to cementitious substrate under thick mortar bed or thin-set tile; complying with ANSI A118.10.

1. Crack Resistance: No failure at 1/16 inch (1.6 mm) gap, minimum; comply with ANSI A118.12.

2. Fluid or Trowel Applied Type:
    a. Products:
        1) ARDEX Engineered Cements; ARDEX 8+9: www.ardexamericas.com/#sle.
        2) LATICRETE International, Inc; LATICRETE HYDRO BAN: www.laticrete.com/#sle.
        3) Substitutions: See Section 01 6000 - Product Requirements.

C. Waterproofing Membrane at Showers and Tiled Tubs: Specifically designed for bonding to cementitious substrate under thick mortar bed or thin-set tile; complying with ANSI A118.10.
    1. Fluid or Trowel Applied Type:
        a. Material: Acrylic.
        b. Products:
            1) ARDEX Engineered Cements; ARDEX 8+9: www.ardexamericas.com/#sle.
            2) Substitutions: See Section 01 6000 - Product Requirements.
    2. Peel-and-Stick Sheet Type:

D. Waterproofing Membrane Under Thick Mortar Bed at Showers and Tiled Tubs:
    1. Material: Chlorinated polyethylene sheet, 40 mils (1.0 mm) thick, minimum; complying with ASTM D4068.
    2. Products:
        a. Noble Company; Chloraloy Shower Pan Liner: www.noblecompany.com/#sle.

E. Backer Board: Cementitious type complying with ANSI A118.9; high density, glass fiber reinforced, 1/2 inch (12.7 mm) thick; 2 inch (51 mm) wide coated glass fiber tape for joints and corners.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that sub-floor surfaces are smooth and flat within the tolerances specified for that type of work and are ready to receive tile.

B. Verify that wall surfaces are smooth and flat within the tolerances specified for that type of work, are dust-free, and are ready to receive tile.

C. Verify that sub-floor surfaces are dust-free and free of substances that could impair bonding of setting materials to sub-floor surfaces.

3.02 PREPARATION

A. Protect surrounding work from damage.

B. Vacuum clean surfaces and damp clean.

C. Seal substrate surface cracks with filler. Level existing substrate surfaces to acceptable flatness tolerances.

D. Install backer board in accordance with ANSI A108.11 and board manufacturer's instructions. Tape joints and corners, cover with skim coat of setting material to a feather edge.

E. Prepare substrate surfaces for adhesive installation in accordance with adhesive manufacturer's instructions.

3.03 INSTALLATION - GENERAL

A. Install tile, thresholds and stair treads and grout in accordance with applicable requirements of ANSI A108.1a through ANSI A108.13, manufacturer's instructions, and TCNA (HB) recommendations.

B. Lay tile to pattern indicated. Do not interrupt tile pattern through openings.

C. Cut and fit tile to penetrations through tile, leaving sealant joint space. Form corners and bases neatly. Align floor joints.

D. Place tile joints uniform in width, subject to variance in tolerance allowed in tile size. Make grout joints without voids, cracks, excess mortar or excess grout, or too little grout.

E. Form internal angles square and external angles bullnosed.

F. Install ceramic accessories rigidly in prepared openings.

G. Install non-ceramic trim in accordance with manufacturer's instructions.

H. Install thresholds where indicated.

I. Sound tile after setting. Replace hollow sounding units.

J. Keep control and expansion joints free of mortar, grout, and adhesive.

K. Prior to grouting, allow installation to completely cure; minimum of 48 hours.

L. Grout tile joints unless otherwise indicated. Use standard grout unless otherwise indicated.

M. At changes in plane and tile-to-tile control joints, use tile sealant instead of grout, with either bond breaker tape or backer rod as appropriate to prevent three-sided bonding.

3.04 INSTALLATION - FLOORS - THIN-SET METHODS

A. Over interior concrete substrates, install in accordance with TCNA (HB) Method F113, dry-set or latex-Portland cement bond coat, with standard grout, unless otherwise indicated.

1. Use uncoupling membrane under all tile unless other underlayment is indicated.
2. Where waterproofing membrane is indicated, install in accordance with TCNA (HB) Method F122, with latex-Portland cement grout.
3. Where epoxy bond coat and grout are indicated, install in accordance with TCNA (HB) Method F131.

3.05 INSTALLATION - FLOORS - MORTAR BED METHODS

A. Over exterior concrete substrates, install in accordance with TCNA (HB) Method F101, bonded, with standard grout.

B. Over interior concrete substrates, install in accordance with TCNA (HB) Method F111, with cleavage membrane, unless otherwise indicated.

1. Where waterproofing membrane is indicated, with standard grout or no mention of grout type, install in accordance with TCNA (HB) Method F121.
2. Where epoxy bond coat and grout are indicated, install in accordance with TCNA (HB) Method F132, bonded.

C. Waterproofing Membrane: Install as recommended by manufacturer and as specified in the section in which the product is specified.

D. Mortar Bed Thickness: 5/8 inch (15.9 mm), unless otherwise indicated.

3.06 INSTALLATION - SHOWERS AND BATHTUB WALLS

A. At tiled shower receptors install in accordance with TCNA (HB) Method B415, mortar bed floor, and W244, thin-set over cementitious backer unit walls.

B. At bathtub walls install in accordance with TCNA (HB) Method B412, over cementitious backer units with waterproofing membrane.

C. Grout with standard grout as specified above.

3.07 INSTALLATION - WALL TILE

A. On exterior walls install in accordance with TCNA (HB) Method W244, thin-set over cementitious backer units, with waterproofing membrane.

B. Over cementitious backer units on studs, install in accordance with TCNA (HB) Method W244, using membrane at toilet rooms.

C. Over gypsum wallboard on wood or metal studs install in accordance with TCNA (HB) Method W243, thin-set with dry-set or latex-Portland cement bond coat, unless otherwise indicated.

1. Where mortar bed is indicated, install in accordance with TCNA (HB) Method W222, one coat method.

2. Where waterproofing membrane is indicated other than at showers and bathtub walls, install in accordance with TCNA (HB) Method W222, one coat method.

D. Over interior concrete and masonry install in accordance with TCNA (HB) Method W202, thin-set with dry-set or latex-Portland cement bond coat.

E. Over wood studs without backer install in accordance with TCNA (HB) Method W231, mortar bed, with membrane where indicated.

F. Over metal studs without backer install in accordance with TCNA (HB) Method W241, mortar bed, with membrane where indicated.

3.08 CLEANING

A. Clean tile and grout surfaces.

3.09 PROTECTION

A. Do not permit traffic over finished floor surface for 4 days after installation.

END OF SECTION

SECTION 09 5100
ACOUSTICAL CEILINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Suspended metal grid ceiling system.

B. Acoustical units.

C. Supplementary acoustical insulation above ceiling.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

1.03 REFERENCE STANDARDS

A. ASTM C635/C635M - Standard Specification for the Manufacture, Performance, and Testing of Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings 2017.

B. ASTM C636/C636M - Standard Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels 2013.

C. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

D. ASTM E580/E580M - Standard Practice for Installation of Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels in Areas Subject to Earthquake Ground Motions 2017.

E. ASTM E1264 - Standard Classification for Acoustical Ceiling Products 2014.

F. UL (FRD) - Fire Resistance Directory Current Edition.

1.04 SUBMITTALS

A. Product Data: Provide data on suspension system components.

B. Samples: Submit two full size samples illustrating material and finish of acoustical units.

1.05 QUALITY ASSURANCE

A. Fire-Resistive Assemblies: Complete assembly listed and classified by UL (FRD) for the fire resistance indicated.

B. Suspension System Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

C. Acoustical Unit Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

1.06 DELIVERY, STORAGE AND HANDLING

A. Deliver acoustical tiles, suspension-system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.

B. Before installing acoustical tiles, permit them to reach room temperature and stabilized moisture content.

C. Handle acoustical tiles carefully to avoid chipping edges or damaging units in any way.

1.07 FIELD CONDITIONS

A. Maintain uniform temperature of minimum 60 degrees F (16 degrees C), and maximum humidity of 40 percent prior to, during, and after acoustical unit installation.

B. Environmental Limitations: Do not install acoustical tile ceilings until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

C. Pressurized Plenums: Operate ventilation system for not less than 48 hours before beginning acoustical tile ceiling installation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Acoustic Tiles/Panels:

1. Substitutions: See Section 01 6000 - Product Requirements.

B. Suspension Systems:

1. Same as for acoustical units.

2.02 ACOUSTICAL UNITS

A. General

1. Source Limitations: Obtain each type of acoustical ceiling tile and supporting suspension system from single source from single manufacturer.
2. Mounting Method for Measuring NRC: Type E-400; plenum mounting in which face of test specimen is 15-3/4 inches (400 mm) away from test surface according to ASTM E 795.
3. Acoustical Tile Colors and Patterns: Match appearance characteristics indicated for each product type.
4. Manufacturers:
   a. USG, model 1830

B. Acoustical Units - General: ASTM E1264, Class A.

1. Units for Installation in Fire-Rated Suspension System: Listed and classified for the fire-resistive assembly as part of suspension system.
2. VOC Content: As specified in Section 01 6116.

2.03 SUSPENSION SYSTEM(S)

A. Metal Suspension Systems:

1. General:
   a. Complying with ASTM C635/C635M; die cut and interlocking components, with stabilizer bars, clips, splices, perimeter moldings and hold down clips as required.
2. Attachment Devices
   a. Size for five times the design load indicated in ASTM C 635/C 635M, Table 1, "Direct Hung," unless otherwise indicated. Comply with seismic design requirements.
   b. Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to five times that imposed by ceiling construction, as determined by testing according to ASTM E 488 or ASTM E 1512 as applicable, conducted by a qualified testing and inspecting agency.
      1) Type: Postinstalled bonded anchors. b. Corrosion Protection: Carbon-steel components zinc plated to comply with ASTM B 633, Class Fe/Zn 5 (0.005 mm) for Class SC 1 service

condition.

2) Corrosion Protection: Stainless-steel components complying with ASTM F 593 and ASTM F 594, Group 1 Alloy 304 or 316 for bolts; Alloy 304 or 316 for anchors.

c. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated, and with capability to sustain, without failure, a load equal to 10 times that imposed by ceiling construction, as determined by testing according to ASTM E 1190, conducted by a qualified testing and inspecting agency.

3. Wire Hangers, Braces, and Ties: Provide wires complying with the following requirements:

a. Zinc-Coated, Carbon-Steel Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper.

b. Size: Select wire diameter so its stress at three times hanger design load (ASTM C 635/C 635M, Table 1, "Direct Hung") will be less than yield stress of wire, but provide not less than 0.106-inch- (2.69-mm-) diameter wire.

4. Hanger Rods: Mild steel, zinc coated or protected with rust-inhibitive paint.

5. Angle Hangers: Angles with legs not less than 7/8 inch (22 mm) wide; formed with 0.04-inch- (1-mm-) thick, galvanized-steel sheet complying with ASTM A 653/A 653M, G90 (Z275) coating designation; with bolted connections and 5/16-inch- (8-mm-) diameter bolts.

6. Seismic Struts: Manufacturer's standard compression struts designed to accommodate lateral forces.

7. Seismic Clips: Manufacturer's standard seismic clips designed and spaced to secure acoustical tiles in-place.

2.04 ACCESSORIES

A. Support Channels and Hangers: Galvanized steel; size and type to suit application, seismic requirements, and ceiling system flatness requirement specified.

B. Perimeter Moldings: Same material and finish as grid.

1. At Exposed Grid: Provide L-shaped molding for mounting at same elevation as face of grid.

C. Acoustical Insulation: Specified in Section 07 2100.

1. Thickness: 2 inch (50 mm).

2. Size: To fit acoustical suspension system.

D. Gypsum Board: Fire rated type; 5/8 inch (15 mm) thick, ends and edges square, paper faced.

E. Acoustical Sealant For Perimeter Moldings: Non-hardening, non-skinning, for use in conjunction with suspended ceiling system.

2.05 PERFORMANCE REQUIREMENTS

A. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: Comply with ASTM E 1264 for Class A materials. 2. Smoke-Developed Index: 50 or less.

B. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that layout of hangers will not interfere with other work.

C. Examine substrates, areas, and conditions, including structural framing and substrates to which acoustical tile ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

D. Examine acoustical tiles before installation. Reject acoustical tiles that are wet, moisture damaged, or mold damaged.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Measure each ceiling area and establish layout of acoustical tiles to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width tiles at borders, and comply with layout shown on reflected ceiling plans.

3.03 INSTALLATION - SUSPENSION SYSTEM

A. Install suspension system in accordance with ASTM C636/C636M, ASTM E580/E580M and manufacturer's instructions and as supplemented in this section.

B. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.

C. Splay hangers only where required and, if permitted with fire-resistance-rated ceilings, to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.

D. Rigidly secure system, including integral mechanical and electrical components, for maximum deflection of 1:360.

E. Locate system on room axis according to reflected plan.

F. Install after major above-ceiling work is complete. Coordinate the location of hangers with other work.

G. Provide hanger clips during steel deck erection. Provide additional hangers and inserts as required.

H. Hang suspension system independent of walls, columns, ducts, pipes and conduit. Where carrying members are spliced, avoid visible displacement of face plane of adjacent members.

I. Do not attach hangers to steel deck tabs.

J. Do not attach hangers to steel roof deck. Attach hangers to structural members.

K. Space hangers not more than 48 inches (1200 mm) o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches (200 mm) from ends of each member.

L. Where ducts or other equipment prevent the regular spacing of hangers, reinforce the nearest affected hangers and related carrying channels to span the extra distance.

M. Secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.

N. Do not support components on main runners or cross runners if weight causes total dead load to exceed deflection capability.

O. Support fixture loads using supplementary hangers located within 6 inches (150 mm) of each corner, or support components independently.

P. Do not eccentrically load system or induce rotation of runners.

Q. Perimeter Molding: Install at intersection of ceiling and vertical surfaces and at junctions with other interruptions.

1. Use longest practical lengths.
2. Overlap and rivet corners.
3. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
4. Screw attach moldings to substrate at intervals not more than 16 inches (400 mm) o.c. and not more than 3 inches (75 mm) from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet (3.2 mm in 3.6 m). Miter corners accurately and connect securely.
5. Do not use exposed fasteners, including pop rivets, on moldings and trim.

R. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both the structure to which hangers are attached and the type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.

S. Install acoustical tiles in coordination with suspension system and exposed moldings and trim. Place splines or suspension-system flanges into kerfed edges so tile-to-tile joints are closed by double lap of material.

1. Fit adjoining tile to form flush, tight joints. Scribe and cut tile for accurate fit at borders and around penetrations through tile.
2. Hold tile field in compression by inserting leaf-type, spring-steel spacers between tile and moldings, spaced 12 inches (305 mm) o.c.
3. Protect lighting fixtures and air ducts to comply with requirements indicated for fire-resistance-rated assembly.

3.04 INSTALLATION - ACOUSTICAL UNITS

A. Install acoustical units in accordance with manufacturer's instructions.

B. Fit acoustical units in place, free from damaged edges or other defects detrimental to appearance and function.

C. Fit border trim neatly against abutting surfaces.

D. Install units after above-ceiling work is complete.

E. Install acoustical units level, in uniform plane, and free from twist, warp, and dents.

F. Cutting Acoustical Units:

1. Cut to fit irregular grid and perimeter edge trim.
2. Make field cut edges of same profile as factory edges.

G. Where round obstructions occur, provide preformed closures to match perimeter molding.

H. Lay acoustical insulation for a distance of 48 inches (1200 mm) either side of acoustical partitions as indicated.

I. Install hold-down clips on each panel to retain panels tight to grid system; comply with fire rating requirements.

J. Install hold-down clips on panels within 20 ft (6 m) of an exterior door.

3.05 TOLERANCES

A. Maximum Variation from Flat and Level Surface: 1/8 inch in 10 feet (3 mm in 3 m).

B. Maximum Variation from Plumb of Grid Members Caused by Eccentric Loads: 2 degrees.

3.06 CLEANING

A. Clean exposed surfaces of acoustical tile ceilings, including trim and edge moldings. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage. Remove and replace tiles and other ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION

SECTION 09 5100
ACOUSTICAL CEILINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Suspended metal grid ceiling system.

B. Acoustical units.

C. Supplementary acoustical insulation above ceiling.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

1.03 REFERENCE STANDARDS

A. ASTM C635/C635M - Standard Specification for the Manufacture, Performance, and Testing of Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings 2017.

B. ASTM C636/C636M - Standard Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels 2013.

C. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

D. ASTM E580/E580M - Standard Practice for Installation of Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels in Areas Subject to Earthquake Ground Motions 2017.

E. ASTM E1264 - Standard Classification for Acoustical Ceiling Products 2014.

F. UL (FRD) - Fire Resistance Directory Current Edition.

1.04 SUBMITTALS

A. Product Data: Provide data on suspension system components.

B. Samples: Submit two full size samples illustrating material and finish of acoustical units.

1.05 QUALITY ASSURANCE

A. Fire-Resistive Assemblies: Complete assembly listed and classified by UL (FRD) for the fire resistance indicated.

B. Suspension System Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

C. Acoustical Unit Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

1.06 DELIVERY, STORAGE AND HANDLING

A. Deliver acoustical tiles, suspension-system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.

B. Before installing acoustical tiles, permit them to reach room temperature and stabilized moisture content.

C. Handle acoustical tiles carefully to avoid chipping edges or damaging units in any way.

1.07 FIELD CONDITIONS

A. Maintain uniform temperature of minimum 60 degrees F (16 degrees C), and maximum humidity of 40 percent prior to, during, and after acoustical unit installation.

B. Environmental Limitations: Do not install acoustical tile ceilings until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

C. Pressurized Plenums: Operate ventilation system for not less than 48 hours before beginning acoustical tile ceiling installation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Acoustic Tiles/Panels:

1. Substitutions: See Section 01 6000 - Product Requirements.

B. Suspension Systems:

1. Same as for acoustical units.

2.02 ACOUSTICAL UNITS

A. General

1. Source Limitations: Obtain each type of acoustical ceiling tile and supporting suspension system from single source from single manufacturer.
2. Mounting Method for Measuring NRC: Type E-400; plenum mounting in which face of test specimen is 15-3/4 inches (400 mm) away from test surface according to ASTM E 795.
3. Acoustical Tile Colors and Patterns: Match appearance characteristics indicated for each product type.
4. Manufacturers:
   a. USG, model 1830

B. Acoustical Units - General: ASTM E1264, Class A.

1. Units for Installation in Fire-Rated Suspension System: Listed and classified for the fire-resistive assembly as part of suspension system.
2. VOC Content: As specified in Section 01 6116.

2.03 SUSPENSION SYSTEM(S)

A. Metal Suspension Systems:

1. General:
   a. Complying with ASTM C635/C635M; die cut and interlocking components, with stabilizer bars, clips, splices, perimeter moldings and hold down clips as required.
2. Attachment Devices
   a. Size for five times the design load indicated in ASTM C 635/C 635M, Table 1, "Direct Hung," unless otherwise indicated. Comply with seismic design requirements.
   b. Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to five times that imposed by ceiling construction, as determined by testing according to ASTM E 488 or ASTM E 1512 as applicable, conducted by a qualified testing and inspecting agency.
      1) Type: Postinstalled bonded anchors. b. Corrosion Protection: Carbon-steel components zinc plated to comply with ASTM B 633, Class Fe/Zn 5 (0.005 mm) for Class SC 1 service

condition.

2) Corrosion Protection: Stainless-steel components complying with ASTM F 593 and ASTM F 594, Group 1 Alloy 304 or 316 for bolts; Alloy 304 or 316 for anchors.

c. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated, and with capability to sustain, without failure, a load equal to 10 times that imposed by ceiling construction, as determined by testing according to ASTM E 1190, conducted by a qualified testing and inspecting agency.

3. Wire Hangers, Braces, and Ties: Provide wires complying with the following requirements:

a. Zinc-Coated, Carbon-Steel Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper.

b. Size: Select wire diameter so its stress at three times hanger design load (ASTM C 635/C 635M, Table 1, "Direct Hung") will be less than yield stress of wire, but provide not less than 0.106-inch- (2.69-mm-) diameter wire.

4. Hanger Rods: Mild steel, zinc coated or protected with rust-inhibitive paint.

5. Angle Hangers: Angles with legs not less than 7/8 inch (22 mm) wide; formed with 0.04-inch- (1-mm-) thick, galvanized-steel sheet complying with ASTM A 653/A 653M, G90 (Z275) coating designation; with bolted connections and 5/16-inch- (8-mm-) diameter bolts.

6. Seismic Struts: Manufacturer's standard compression struts designed to accommodate lateral forces.

7. Seismic Clips: Manufacturer's standard seismic clips designed and spaced to secure acoustical tiles in-place.

2.04 ACCESSORIES

A. Support Channels and Hangers: Galvanized steel; size and type to suit application, seismic requirements, and ceiling system flatness requirement specified.

B. Perimeter Moldings: Same material and finish as grid.

1. At Exposed Grid: Provide L-shaped molding for mounting at same elevation as face of grid.

C. Acoustical Insulation: Specified in Section 07 2100.

1. Thickness: 2 inch (50 mm).

2. Size: To fit acoustical suspension system.

D. Gypsum Board: Fire rated type; 5/8 inch (15 mm) thick, ends and edges square, paper faced.

E. Acoustical Sealant For Perimeter Moldings: Non-hardening, non-skinning, for use in conjunction with suspended ceiling system.

2.05 PERFORMANCE REQUIREMENTS

A. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: Comply with ASTM E 1264 for Class A materials. 2. Smoke-Developed Index: 50 or less.

B. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that layout of hangers will not interfere with other work.

C. Examine substrates, areas, and conditions, including structural framing and substrates to which acoustical tile ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

D. Examine acoustical tiles before installation. Reject acoustical tiles that are wet, moisture damaged, or mold damaged.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Measure each ceiling area and establish layout of acoustical tiles to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width tiles at borders, and comply with layout shown on reflected ceiling plans.

3.03 INSTALLATION - SUSPENSION SYSTEM

A. Install suspension system in accordance with ASTM C636/C636M, ASTM E580/E580M and manufacturer's instructions and as supplemented in this section.

B. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.

C. Splay hangers only where required and, if permitted with fire-resistance-rated ceilings, to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.

D. Rigidly secure system, including integral mechanical and electrical components, for maximum deflection of 1:360.

E. Locate system on room axis according to reflected plan.

F. Install after major above-ceiling work is complete. Coordinate the location of hangers with other work.

G. Provide hanger clips during steel deck erection. Provide additional hangers and inserts as required.

H. Hang suspension system independent of walls, columns, ducts, pipes and conduit. Where carrying members are spliced, avoid visible displacement of face plane of adjacent members.

I. Do not attach hangers to steel deck tabs.

J. Do not attach hangers to steel roof deck. Attach hangers to structural members.

K. Space hangers not more than 48 inches (1200 mm) o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches (200 mm) from ends of each member.

L. Where ducts or other equipment prevent the regular spacing of hangers, reinforce the nearest affected hangers and related carrying channels to span the extra distance.

M. Secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.

N. Do not support components on main runners or cross runners if weight causes total dead load to exceed deflection capability.

O. Support fixture loads using supplementary hangers located within 6 inches (150 mm) of each corner, or support components independently.

P. Do not eccentrically load system or induce rotation of runners.

Q. Perimeter Molding: Install at intersection of ceiling and vertical surfaces and at junctions with other interruptions.

1. Use longest practical lengths.
2. Overlap and rivet corners.
3. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
4. Screw attach moldings to substrate at intervals not more than 16 inches (400 mm) o.c. and not more than 3 inches (75 mm) from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet (3.2 mm in 3.6 m). Miter corners accurately and connect securely.
5. Do not use exposed fasteners, including pop rivets, on moldings and trim.

R. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both the structure to which hangers are attached and the type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.

S. Install acoustical tiles in coordination with suspension system and exposed moldings and trim. Place splines or suspension-system flanges into kerfed edges so tile-to-tile joints are closed by double lap of material.

1. Fit adjoining tile to form flush, tight joints. Scribe and cut tile for accurate fit at borders and around penetrations through tile.
2. Hold tile field in compression by inserting leaf-type, spring-steel spacers between tile and moldings, spaced 12 inches (305 mm) o.c.
3. Protect lighting fixtures and air ducts to comply with requirements indicated for fire-resistance-rated assembly.

3.04 INSTALLATION - ACOUSTICAL UNITS

A. Install acoustical units in accordance with manufacturer's instructions.

B. Fit acoustical units in place, free from damaged edges or other defects detrimental to appearance and function.

C. Fit border trim neatly against abutting surfaces.

D. Install units after above-ceiling work is complete.

E. Install acoustical units level, in uniform plane, and free from twist, warp, and dents.

F. Cutting Acoustical Units:

1. Cut to fit irregular grid and perimeter edge trim.
2. Make field cut edges of same profile as factory edges.

G. Where round obstructions occur, provide preformed closures to match perimeter molding.

H. Lay acoustical insulation for a distance of 48 inches (1200 mm) either side of acoustical partitions as indicated.

I. Install hold-down clips on each panel to retain panels tight to grid system; comply with fire rating requirements.

J. Install hold-down clips on panels within 20 ft (6 m) of an exterior door.

3.05 TOLERANCES

A. Maximum Variation from Flat and Level Surface: 1/8 inch in 10 feet (3 mm in 3 m).

B. Maximum Variation from Plumb of Grid Members Caused by Eccentric Loads: 2 degrees.

3.06 CLEANING

A. Clean exposed surfaces of acoustical tile ceilings, including trim and edge moldings. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage. Remove and replace tiles and other ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION

SECTION 09 5114
ACOUSTICAL FABRIC-FACED PANEL CEILINGS

***{FONT-FAMILY:ARIAL;FONT-SIZE:10PT;}**

PART 1 GENERAL

2.01 SECTION INCLUDES

A. Fabric-faced, fiberglass core acoustical panels.

B. Suspended metal grid ceiling system.

C. Trim and miscellaneous accessories.

2.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 03 1000 - Concrete Forms and Accessories: Placement of special anchors or inserts for suspension system.

C. Section 03 3000 - Cast-in-Place Concrete: Placement of special anchors or inserts for suspension system.

D. Section 05 3100 - Steel Decking: Placement of special anchors or inserts for suspension system.

E. Section 09 5100 - Acoustical Ceilings: Suspension system for acoustical panels specified in this section.

2.03 REFERENCE STANDARDS

A. ASTM C423 - Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method 2017.

B. ASTM C635/C635M - Standard Specification for the Manufacture, Performance, and Testing of Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings 2017.

C. ASTM C636/C636M - Standard Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels 2013.

D. CISCA (AC) - Acoustical Ceilings: Use and Practice 1999.

2.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.

C. Fabric Selection Samples: Manufacturer's full range of fabric samples illustrating available colors and textures.

D. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Extra Acoustical Panels: 1,000 square feet (100 square meters) of each type and size.

2.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver products in manufacturer's unopened packaging and store unopened in fully enclosed space until ready for installation. Protect products from exposure to sunlight, moisture, and mechanical damage.

B. Handle acoustical panels carefully to avoid soiling exposed surfaces or damaging surfaces and edges.

2.06 FIELD CONDITIONS

A. Maintain temperature within 15 degrees Fahrenheit (8 degrees C) and relative humidity within 10 percent of design conditions for spaces of installation not less than 48 hours before installation begins and thereafter.

PART 2 PRODUCTS

3.01 ACOUSTICAL PANELS

A. Manufacturers:

1. CertainTeed Corporation; [_____]: www.certainteed.com/#sle.
2. Conwed Designscape/Wall Technology, an Owens Corning company; [_____]: www.conweddesignscape.com/#sle.
3. Hunter Douglas Contract; [_____]: www.hunterdouglascontract.com/#sle.
4. Substitutions: See Section 01 6000 - Product Requirements.

B. Provide panels comprising a compressible structural fiberglass core with non-woven polyester textile surface wrapped on edges; with properties as follows:

1. Panel Thickness: [___] inch ([___] mm).
2. Edge Condition: One of the following:
3. Noise Reduction Coefficient (NRC): Minimum [____], measured in accordance with ASTM C423.
    a. Provide equal or better absorption coefficient reading at the following specified frequencies:
        1) Frequency, 125 Hz; absorption coefficient, 0.54.
        2) Frequency, 250 Hz; absorption coefficient, 0.87.
        3) Frequency, 500 Hz, absorption coefficient, 0.71.
        4) Frequency, 1000 Hz, absorption coefficient, 0.82.
        5) Frequency, 2000 Hz, absorption coefficient, 0.95.
4. Sound Absorption Average: (SAA) 0.89, measured in accordance with ASTM C423.
5. Surface Burning Characteristics: Flame spread index less than 25, smoke developed index less than 100; Class A, per ASTM E84 and ASTM E1264.
6. Light Reflectance: LR-1 (0.75), measured in accordance with ASTM E1477.
7. Moisture Resistance: Resistant to relative humidity up to 95 percent at 104 degrees F (40 degrees C) for 30 days.
8. Mold and Mildew Resistance: In accordance with requirements of ASTM C665.

3.02 SUSPENSION SYSTEM

A. General: Provide system complying with ASTM C635/C635M, die cut and interlocking components, with matching perimeter moldings and other accessories as required for project conditions.

1. Materials: Formed galvanized steel, commercial quality cold rolled, intermediate duty.
2. Profile: Standard 15/16 inch (24 mm) tee shape.
3. Finish: Painted white.

B. Manufacturers:

1. Armstrong World Industries, Inc; [____]: www.armstrong.com/#sle.
2. CertainTeed Corporation; [____]: www.certainteed.com/#sle.
3. Rockfon, LLC; [____]: www.rockfon.com/#sle.
4. USG; [____]: www.usg.com/#sle.
5. Substitutions: See Section 01 6000 - Product Requirements.

C. Trim: Provide matching trim by acoustical suspension system manufacturer for conditions as follows:

1. Perimeter Trim: "L" Channel, 15/16 inch (24 mm).
2. Reveal Trim: "C" Channel, 1/8 inch (3 mm) reveal to wall.
3. Transition Trim, Straight: From drywall to acoustical panel ceiling.
4. Floating Edge Trim: Straight edge, 2-7/8 inches (73 mm) high.

D. Support Channels and Hangers: Galvanized steel, size and type to suit application.

PART 3 EXECUTION

4.01 EXAMINATION

A. Verify that layout of hangers will not interfere with other work; make adjustments in layout as necessary.

B. Do not begin ceiling installation until services above ceiling are complete except for final trim.

C. Notify Architect of unsatisfactory conditions before proceeding.

4.02 PREPARATION

A. Lay out system to a balanced grid design, with edge units not less than 50 percent of acoustical unit size.

B. Locate system on room axis according to reflected floor plan.

4.03 INSTALLATION OF SUSPENSION SYSTEM

A. Comply with requirements of CISCA (AC) - Acoustical Ceilings: Use and Practice.

B. Install in accordance with manufacturer's instructions and ASTM C636/C636M.

C. Space hangers not more than 48 inches (1220 mm) on center.

D. Hang suspension system independent of walls, columns, ducts, pipes and conduit. Where carrying members are spliced, avoid visible displacement of face plane of adjacent members.

E. Where ducts or other equipment prevent the regular spacing of hangers, reinforce the nearest affected hangers and related carrying channels to span the extra distance.

F. Support fixture loads using supplementary hangers located within 6 inches (150 mm) of each corner, or support components independently. Do not eccentrically load system or induce rotation of runners.

G. Perimeter Trim: Install at intersection of ceiling and vertical surfaces and at junctions with other interruptions.

4.04 INSTALLATION OF ACOUSTICAL PANELS

A. Install acoustical panels in accordance with manufacturer's written instructions.

B. Scribe and cut panels for accurate fit at perimeter and around penetrations.

C. Hold tile field in compression when cutting. Match field cut edges with factory edges in accordance with manufacturer's instructions.

D. Install acoustical panels after above-ceiling work is complete. Install panels level, in uniform plane, and free from warp, twist, and dents.

E. Installation Tolerance: Maximum variation from flat and level surface is 1:1000.

4.05 CLEANING

A. Clean exposed surfaces of acoustical panel ceilings, including suspension system and edge trim, complying with manufacturer's written instructions for cleaning of minor finish damage. Replace acoustical panels that cannot be cleaned to an appearance matching unmarred panels.

4.06 PROTECTION

A. Protect installed acoustical panel ceilings until Date of Substantial Completion.

END OF SECTION

SECTION 09 5114
ACOUSTICAL FABRIC-FACED PANEL CEILINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Fabric-faced, fiberglass core acoustical panels.

B. Suspended metal grid ceiling system.

C. Trim and miscellaneous accessories.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 03 1000 - Concrete Forms and Accessories: Placement of special anchors or inserts for suspension system.

C. Section 03 3000 - Cast-in-Place Concrete: Placement of special anchors or inserts for suspension system.

D. Section 05 3100 - Steel Decking: Placement of special anchors or inserts for suspension system.

E. Section 09 5100 - Acoustical Ceilings: Suspension system for acoustical panels specified in this section.

1.03 REFERENCE STANDARDS

A. ASTM C423 - Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method 2017.

B. ASTM C635/C635M - Standard Specification for the Manufacture, Performance, and Testing of Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings 2017.

C. ASTM C636/C636M - Standard Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels 2013.

D. CISCA (AC) - Acoustical Ceilings: Use and Practice 1999.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.

C. Fabric Selection Samples: Manufacturer's full range of fabric samples illustrating available colors and textures.

D. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Extra Acoustical Panels: 1,000 square feet (100 square meters) of each type and size.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver products in manufacturer's unopened packaging and store unopened in fully enclosed space until ready for installation. Protect products from exposure to sunlight, moisture, and mechanical damage.

B. Handle acoustical panels carefully to avoid soiling exposed surfaces or damaging surfaces and edges.

1.06 FIELD CONDITIONS

A. Maintain temperature within 15 degrees Fahrenheit (8 degrees C) and relative humidity within 10 percent of design conditions for spaces of installation not less than 48 hours before installation begins and thereafter.

PART 2 PRODUCTS

2.01 ACOUSTICAL PANELS

A. Manufacturers:

1. CertainTeed Corporation: www.certainteed.com/#sle.
2. Conwed Designscape/Wall Technology, an Owens Corning company: www.conweddesignscape.com/#sle.
3. Hunter Douglas Contract: www.hunterdouglascontract.com/#sle.
4. Substitutions: See Section 01 6000 - Product Requirements.

B. Provide panels comprising a compressible structural fiberglass core with non-woven polyester textile surface wrapped on edges; with properties as follows:

1. Panel Thickness: as indicated on drawings.
2. Edge Condition: One of the following:
3. Noise Reduction Coefficient (NRC): Minimum as measured in accordance with ASTM C423.
    a. Provide equal or better absorption coefficient reading at the following specified frequencies:
        1) Frequency, 125 Hz; absorption coefficient, 0.54.
        2) Frequency, 250 Hz; absorption coefficient, 0.87.
        3) Frequency, 500 Hz, absorption coefficient, 0.71.
        4) Frequency, 1000 Hz, absorption coefficient, 0.82.
        5) Frequency, 2000 Hz, absorption coefficient, 0.95.
4. Sound Absorption Average: (SAA) 0.89, measured in accordance with ASTM C423.
5. Surface Burning Characteristics: Flame spread index less than 25, smoke developed index less than 100; Class A, per ASTM E84 and ASTM E1264.
6. Light Reflectance: LR-1 (0.75), measured in accordance with ASTM E1477.
7. Moisture Resistance: Resistant to relative humidity up to 95 percent at 104 degrees F (40 degrees C) for 30 days.
8. Mold and Mildew Resistance: In accordance with requirements of ASTM C665.

2.02 SUSPENSION SYSTEM

A. General: Provide system complying with ASTM C635/C635M, die cut and interlocking components, with matching perimeter moldings and other accessories as required for project conditions.

1. Materials: Formed galvanized steel, commercial quality cold rolled, intermediate duty.
2. Profile: Standard 15/16 inch (24 mm) tee shape.
3. Finish: Painted white.

B. Manufacturers:

1. Armstrong World Industries, Inc: www.armstrong.com/#sle.

4. USG: www.usg.com/#sle.
5. Substitutions: See Section 01 6000 - Product Requirements.

C. Trim: Provide matching trim by acoustical suspension system manufacturer for conditions as follows:
1. Perimeter Trim: "L" Channel, 15/16 inch (24 mm).
2. Reveal Trim: "C" Channel, 1/8 inch (3 mm) reveal to wall.
3. Transition Trim, Straight: From drywall to acoustical panel ceiling.
4. Floating Edge Trim: Straight edge, 2-7/8 inches (73 mm) high.

D. Support Channels and Hangers: Galvanized steel, size and type to suit application.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that layout of hangers will not interfere with other work; make adjustments in layout as necessary.

B. Do not begin ceiling installation until services above ceiling are complete except for final trim.

C. Notify Architect of unsatisfactory conditions before proceeding.

3.02 PREPARATION

A. Lay out system to a balanced grid design, with edge units not less than 50 percent of acoustical unit size.

B. Locate system on room axis according to reflected floor plan.

3.03 INSTALLATION OF SUSPENSION SYSTEM

A. Comply with requirements of CISCA (AC) - Acoustical Ceilings: Use and Practice.

B. Install in accordance with manufacturer's instructions and ASTM C636/C636M.

C. Space hangers not more than 48 inches (1220 mm) on center.

D. Hang suspension system independent of walls, columns, ducts, pipes and conduit. Where carrying members are spliced, avoid visible displacement of face plane of adjacent members.

E. Where ducts or other equipment prevent the regular spacing of hangers, reinforce the nearest affected hangers and related carrying channels to span the extra distance.

F. Support fixture loads using supplementary hangers located within 6 inches (150 mm) of each corner, or support components independently. Do not eccentrically load system or induce rotation of runners.

G. Perimeter Trim: Install at intersection of ceiling and vertical surfaces and at junctions with other interruptions.

3.04 INSTALLATION OF ACOUSTICAL PANELS

A. Install acoustical panels in accordance with manufacturer's written instructions.

B. Scribe and cut panels for accurate fit at perimeter and around penetrations.

C. Hold tile field in compression when cutting. Match field cut edges with factory edges in accordance with manufacturer's instructions.

D. Install acoustical panels after above-ceiling work is complete. Install panels level, in uniform plane, and free from warp, twist, and dents.

E. Installation Tolerance: Maximum variation from flat and level surface is 1:1000.

3.05 CLEANING

A. Clean exposed surfaces of acoustical panel ceilings, including suspension system and edge trim, complying with manufacturer's written instructions for cleaning of minor finish damage. Replace acoustical panels that cannot be cleaned to an appearance matching unmarred panels.

3.06 PROTECTION

A. Protect installed acoustical panel ceilings until Date of Substantial Completion.

END OF SECTION

SECTION 09 5153
DIRECT-APPLIED ACOUSTICAL CEILINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Acoustic units.

B. Perimeter trim.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

1.03 REFERENCE STANDARDS

A. ASTM E1264 - Standard Classification for Acoustical Ceiling Products 2014.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on acoustic units.

C. Shop Drawings: Indicate tile layout and related junctions with other work or ceiling finishes, interrelation of mechanical and electrical items related to system.

D. Samples: Submit two samples, in size, illustrating material and finish of acoustic units.

E. Manufacturer's Installation Instructions: Indicate special procedures, perimeter conditions requiring special attention.

F. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years of documented experience.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Direct Applied Acoustical Ceilings:

1. Armstrong World Industries, Inc: www.armstrong.com/#sle.
2. CertainTeed Corporation: www.certainteed.com/#sle.
3. USG: www.usg.com/#sle.
4. Substitutions: See Section 01 6000 - Product Requirements.

2.02 MATERIALS

A. Acoustic Tile: Mineral fiber, ASTM E1264 Type [_____].

B. Acoustic Tile: Open-cell melamine-based foam.

C. Adhesive: Waterproof, gun grade; type recommended by tile manufacturer.

D. Perimeter Moldings: Rolled steel profile, white color.

E. Acoustic Sealant for Perimeter Moldings: Acrylic emulsion latex or water-based elastomeric sealant; do not use solvent-based non-curing butyl sealant.

F. Gasket For Perimeter Moldings: Closed cell rubber sponge tape.

G. Gypsum Board: UL fire rated type; 5/8 inch (15 mm) thick, ends and edges square, paper faced.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions and substrate flatness before starting work.

3.02 INSTALLATION

A. Install system in accordance with manufacturer's instructions.

B. Perimeter Molding:

1. Install concealed edge molding at intersection of ceiling and vertical surfaces with continuous gasket.
2. Provide concealed molding at junctions with other interruptions.
3. Where curved obstructions occur, provide preformed closures to match perimeter molding.

C. Center tile on room axis leaving equal border units.

D. Fit acoustic units in place, free from damaged edges or other defects detrimental to appearance and function.

E. Install acoustic units level in uniform plane.

3.03 TOLERANCES

A. Maximum Variation from Flat and Level Surface: 1/8 inch in 10 feet (3 mm in 3 m).

END OF SECTION

SECTION 09 5153
DIRECT-APPLIED ACOUSTICAL CEILINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Acoustic units.

B. Perimeter trim.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

1.03 REFERENCE STANDARDS

A. ASTM E1264 - Standard Classification for Acoustical Ceiling Products 2014.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Sequence work to ensure acoustic ceilings are not installed until building is enclosed, sufficient heat is provided, dust generating activities have terminated, and overhead work is completed, tested, and approved.

B. Install acoustic units after interior wet work is dry.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on acoustic units.

C. Shop Drawings: Indicate tile layout and related junctions with other work or ceiling finishes, interrelation of mechanical and electrical items related to system.

D. Samples: Submit two samples, in size, illustrating material and finish of acoustic units.

E. Manufacturer's Installation Instructions: Indicate special procedures, perimeter conditions requiring special attention.

F. Manufacturer's Qualification Statement.

G. Installer's Qualification Statement.

H. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.

1.06 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years of documented experience.

B. Installer Qualifications: Company specializing in performing the type of work specified in this section with minimum 5 years of documented experience.

1.07 FIELD CONDITIONS

A. Maintain uniform temperature of minimum 60 degrees F (16 degrees C), and maximum humidity of 40 percent prior to, during, and after installation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Direct Applied Acoustical Ceilings:

1. Armstrong World Industries, Inc: www.armstrong.com/#sle.

END OF SECTION

SECTION 09 5416
LUMINOUS CEILINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Ceiling elements and supports.

B. Luminaires and accessories.

1.02 RELATED REQUIREMENTS

A. Section 09 5100 - Acoustical Ceilings.

B. Section 09 9123 - Interior Painting.

C. Section 26 0529 - Hangers and Supports for Electrical Systems.

D. Section 26 5100 - Interior Lighting.

1.03 REFERENCE STANDARDS

A. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate layout of luminaires, support locations and details for ceiling suspension.

C. Product Data: Provide data showing ceiling component construction and finishes.

D. Ceiling Support Samples: Submit two samples of exposed ceiling support members, 12 inches (305 mm) in length, illustrating material and finish.

E. Luminous Element Samples: Submit two samples, 12 by 12 inches (305 by 305 mm) in size, illustrating material, finish, and support details.

F. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency specified under Quality Assurance. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

1.05 QUALITY ASSURANCE

A. Electrical Work: Comply with requirements of NFPA 70.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

C. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc. as suitable for the purpose specified and indicated.

1.06 MOCK-UP

A. Provide mock-up of each type of luminous ceiling system, including at least one of each component.

B. Analyze mock-up to determine illumination level and comfort achieved.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Luminous Ceilings:

1. Ceilings Plus: www.ceilingsplus.com/#sle.

2. USG: www.usg.com/#sle.
3. Substitutions: See Section 01 6000 - Product Requirements.

2.02 LUMINOUS CEILING COMPONENTS

A. Support Grid: Concealed heavy duty, double wall steel.

B. Luminous Panels: Flat acrylic panel, 0.125 inch (3.2 mm) thick, clear, with square prismatic finish.

C. Luminous Panels: Acrylic plastic eggcrate louver, 1/2 inch (13 mm) thick with 1/2 inch (13 mm), square, straight sided cells, white finish.

D. Perimeter Treatment: Slip joint using L-shaped support member to match ceiling grid.

E. Luminaires: Specified in Section 26 5100.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that mechanical work above luminous ceiling has been completed and does not interfere with ceiling installation or performance.

3.02 PREPARATION

A. Paint surfaces and mechanical installations in cavity above luminous elements. Use 90 percent reflectance white paint applied as specified in Section 09 9123.

B. Lay out system on room axis as indicated.

C. Lay out system to a balanced grid design with edge units no less than 50 percent of acoustical unit size.

3.03 INSTALLATION

A. Locate luminaires to achieve even luminance of the ceiling luminous elements or as indicated.

B. Support luminaires independently of ceiling grid in accordance with provisions of Section 26 0529.

C. Install suspension system in accordance with ASTM C636/C636M and manufacturer's instructions and as supplemented in this section.

D. Hang suspension system independent of walls, columns, ducts, pipes and conduit. Where carrying members are spliced, avoid visible displacement of face plane of adjacent members.

E. Where ducts or other equipment prevent the regular spacing of hangers, reinforce the nearest affected hangers and related carrying channels to span the extra distance.

F. Do not eccentrically load system, or produce rotation of runners.

G. Coordinate installation of ceiling elements and supports with other Work in the vicinity.

H. Install edge molding at intersection of ceiling and vertical surfaces, using longest practical lengths. Miter corners. Provide edge moldings at junctions with other interruptions.

3.04 TOLERANCES

A. Maximum Deflection: 1/360 of span, maximum.

B. Maximum Variation from Flat and Level Surface: 1/8 inch in 10 feet (3 mm in 3 m).

C. Maximum Variation from Plumb of Grid Members Caused by Eccentric Loads: 2 degrees.

3.05 CLEANING

A. Clean luminous ceiling elements in accordance with manufacturer's instructions.

H. Install edge molding at intersection of ceiling and vertical surfaces, using longest practical lengths. Miter corners. Provide edge moldings at junctions with other interruptions.

3.04 TOLERANCES

A. Maximum Deflection: 1/360 of span, maximum.

B. Maximum Variation from Flat and Level Surface: 1/8 inch in 10 feet (3 mm in 3 m).

C. Maximum Variation from Plumb of Grid Members Caused by Eccentric Loads: 2 degrees.

3.05 CLEANING

A. Clean luminous ceiling elements in accordance with manufacturer's instructions.

END OF SECTION

SECTION 09 5423
LINEAR METAL CEILINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Linear metal ceilings.

B. Suspended metal support system and perimeter trim.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Execution requirements for placement of attachment anchors to structure above.

B. Section 07 2100 - Thermal Insulation.

C. Section 09 2116 - Gypsum Board Assemblies: Suspension system as a substrate for this section.

1.03 REFERENCE STANDARDS

A. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar 2015.

B. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate 2014.

C. ASTM B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate (Metric) 2014.

D. ASTM C423 - Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method 2017.

E. ASTM C636/C636M - Standard Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels 2013.

F. ASTM E580/E580M - Standard Practice for Installation of Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels in Areas Subject to Earthquake Ground Motions 2017.

1.04 DESIGN REQUIREMENTS

A. Design components to ensure light fixtures will not induce eccentric loads. Where components may induce rotation of ceiling system components, provide stabilizing reinforcement.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Furnish for component profiles.

C. Shop Drawings: Indicate reflected ceiling plan.

D. Samples: Submit two samples identifying size illustrating color and finish of exposed to view components.

1.06 QUALITY ASSURANCE

A. Designer Qualifications for Seismic Design: Perform under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed at Maryland.

B. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with minimum three years documented experience.

1.07 MOCK-UP

A. Construct one mock-up,; include suspension system, panels, closures in mock-up.

B. Locate mock-up where directed.

C. Mock-up may remain as part of the Work.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Accept factory-finished products on site in manufacturer's unopened factory packaging only; reject opened packages.

B. Protect factory-finished products from damage to appearance by storing products in manufacturer's unopened factory packaging in dry storage area.

1.09 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Provide five year manufacturer warranty; include coverage for corrosion resistance and discoloration of surface finish.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Linear Metal Ceilings:

1. ATAS International, Inc: www.atas.com/#sle.
2. USG: www.usg.com/#sle.
3. Substitutions: See Section 01 6000 - Product Requirements.

2.02 LINEAR METAL CEILINGS

A. Linear Metal Ceiling System: Panels and baffles, suspension members, trim, and accessories as required to provide a complete system.

B. Performance Requirements:

1. Design to support imposed loads of indicated items without eccentric loading of supports.
2. Design for maximum deflection of 1/360 of span.
3. Noise Reduction Coefficient (NRC): [_____], measured in accordance with ASTM C423 with insulation installed.
4. Systems Located Outside Building Envelope:
    a. Thermal Resistance Value: Total R-value of [____] (RSI-value of [____]) with insulation installed.

2.03 COMPONENTS

A. Linear Metal Panels:

1. Type: Torsion spring panel; downward accessible flat panels.
    a. Size and Configuration: As indicated on drawings.
2. Type: Linear panel with reveals; snap-in installation.
    a. Size and Configuration: As indicated on drawings.
    b. Panel Profile: Channel shaped with square edges.
    c. Spacing: [1/2"] inch ([12.7] mm) reveal between panels.
3. Type: Linear panel, butt jointed; snap-in installation.
    a. Size and Configuration: As indicated on drawings.
    b. Panel Profile: Plank shaped with beveled edges.
4. Material: Stainless steel sheet, ASTM A666, Type 304.

5. Material: Aluminum sheet, ASTM B209 (ASTM B209M).

B. Linear Metal Baffles: Suspended vertically from suspension members.

C. Acoustical Backer: Manufacturer's standard non-woven fabric; as required to achieve specified acoustic performance.

D. Edge Molding, Expansion Joints, and Splices: Same material, thickness, and finish as linear panels.

E. End Caps: Formed metal; same color and finish as sight-exposed surfaces of linear panels.

F. Accessories: Stabilizer bars as required for suspended grid system; sight-exposed surfaces same color and finish as sight-exposed surfaces of linear panels.

G. Suspension Members: Formed steel sections, with integral attachment points; galvanized finish; size and type to suit application, seismic requirements, and ceiling system flatness requirement specified.

H. Suspension Wire: Size and type as required for application, seismic requirements, and ceiling system flatness requirement specified.

I. Insulation: Specified in Section 07 2100.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that layout of hangers will not interfere with other work.

C. Verify that required utilities are available, in proper location, and ready for use.

D. Verify that field measurements are as indicated.

3.02 INSTALLATION

A. Suspension Components:

1. Install after above-ceiling work is complete in accordance with manufacturer's instructions, ASTM C636/C636M and ASTM E580/E580M.

2. Hang carrying members independent of walls, columns, ducts, light fixtures, pipe, and conduit; where carrying members are spliced, avoid visible displacement of face panels with adjacent panels.

3. Where ducts or other equipment prevent regular spacing of hangers, reinforce nearest adjacent hangers to span the required distance.

B. Linear Metal Ceiling:

1. Install linear panels, baffles, and other system components in accordance with manufacturer's instructions.

2. Align end joints.

3. Butt interior end joints tight.

4. Set exterior end joints with 1/16 inch (2 mm) gap for expansion and contraction.

5. Provide expansion joints to accommodate plus or minus 1 inch (25 mm) movement and maintain visual closure.

6. Field miter corners at changes in panel direction.

7. Exercise care when site cutting sight-exposed finished components to ensure surface finish is not defaced.

C. Insulation: Install above panel members; fit tight between grid members ; place insulation with facing side down.

3.03 TOLERANCES

A. Maximum Variation from Flat and Level Surface: 1/8 inch in 10 feet (3 mm in 3 m).

3.04 CLEANING

A. Clean polished surfaces.

B. Replace damaged or abraded components.

END OF SECTION

SECTION 09 5423
LINEAR METAL CEILINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Linear metal ceilings.

B. Suspended metal support system and perimeter trim.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Execution requirements for placement of attachment anchors to structure above.

B. Section 07 2100 - Thermal Insulation.

C. Section 09 2116 - Gypsum Board Assemblies: Suspension system as a substrate for this section.

1.03 REFERENCE STANDARDS

A. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar 2015.

B. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate 2014.

C. ASTM B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate (Metric) 2014.

D. ASTM C423 - Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method 2017.

E. ASTM C636/C636M - Standard Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels 2013.

F. ASTM E580/E580M - Standard Practice for Installation of Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels in Areas Subject to Earthquake Ground Motions 2017.

1.04 DESIGN REQUIREMENTS

A. Design components to ensure light fixtures will not induce eccentric loads. Where components may induce rotation of ceiling system components, provide stabilizing reinforcement.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate work of this section with installation of mechanical and electrical components and with other construction activities affected by work of this section.

B. Preinstallation Meeting: Convene one week before starting work of this section.

C. Sequencing: Supply hanger clips during steel deck erection. Supply additional hangers and inserts as required.

1.06 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Furnish for component profiles.

C. Shop Drawings: Indicate reflected ceiling plan.

D. Samples: Submit two samples identifying size illustrating color and finish of exposed to view components.

E. Manufacturer's Qualification Statement.

F. Installer's Qualification Statement.

G. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Extra Linear Panels: One, standard length.

1.07 QUALITY ASSURANCE

A. Designer Qualifications for Seismic Design: Perform under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed at Maryland.

B. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with minimum three years documented experience.

C. Installer Qualifications: Company specializing in performing the work of this section.

1. Minimum 5 years documented experience.
2. Approved by metal ceiling manufacturer.

D. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc.

1.08 MOCK-UP

A. Construct one mock-up,; include suspension system, panels, closures in mock-up.

B. Locate mock-up where directed.

C. Mock-up may remain as part of the Work.

1.09 DELIVERY, STORAGE, AND HANDLING

A. Accept factory-finished products on site in manufacturer's unopened factory packaging only; reject opened packages.

B. Protect factory-finished products from damage to appearance by storing products in manufacturer's unopened factory packaging in dry storage area.

1.10 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Provide five year manufacturer warranty; include coverage for corrosion resistance and discoloration of surface finish.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Linear Metal Ceilings:

1. ATAS International, Inc: www.atas.com/#sle.
2. USG: www.usg.com/#sle.
3. Substitutions: See Section 01 6000 - Product Requirements.

2.02 LINEAR METAL CEILINGS

A. Linear Metal Ceiling System: Panels and baffles, suspension members, trim, and accessories as required to provide a complete system.

B. Performance Requirements:

1. Design to support imposed loads of indicated items without eccentric loading of supports.
2. Design for maximum deflection of 1/360 of span.
3. Noise Reduction Coefficient (NRC): measured in accordance with ASTM C423 with insulation installed.

4. Systems Located Outside Building Envelope:
    a. Thermal Resistance Value: as indicated on plans.

2.03 COMPONENTS

A. Linear Metal Panels:
    1. Type: Torsion spring panel; downward accessible flat panels.
        a. Size and Configuration: As indicated on drawings.
    2. Type: Linear panel with reveals; snap-in installation.
        a. Size and Configuration: As indicated on drawings.
        b. Panel Profile: Channel shaped with square edges.
        c. Spacing: [1/2"] inch ([12.7] mm) reveal between panels.
    3. Type: Linear panel, butt jointed; snap-in installation.
        a. Size and Configuration: As indicated on drawings.
        b. Panel Profile: Plank shaped with beveled edges.
    4. Material: Stainless steel sheet, ASTM A666, Type 304.
    5. Material: Aluminum sheet, ASTM B209 (ASTM B209M).

B. Linear Metal Baffles: Suspended vertically from suspension members.

C. Acoustical Backer: Manufacturer's standard non-woven fabric; as required to achieve specified acoustic performance.

D. Edge Molding, Expansion Joints, and Splices: Same material, thickness, and finish as linear panels.

E. End Caps: Formed metal; same color and finish as sight-exposed surfaces of linear panels.

F. Accessories: Stabilizer bars as required for suspended grid system; sight-exposed surfaces same color and finish as sight-exposed surfaces of linear panels.

G. Suspension Members: Formed steel sections, with integral attachment points; galvanized finish; size and type to suit application, seismic requirements, and ceiling system flatness requirement specified.

H. Suspension Wire: Size and type as required for application, seismic requirements, and ceiling system flatness requirement specified.

I. Insulation: Specified in Section 07 2100.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that layout of hangers will not interfere with other work.

C. Verify that required utilities are available, in proper location, and ready for use.

D. Verify that field measurements are as indicated.

3.02 INSTALLATION

A. Suspension Components:
    1. Install after above-ceiling work is complete in accordance with manufacturer's instructions, ASTM C636/C636M and ASTM E580/E580M.

2. Hang carrying members independent of walls, columns, ducts, light fixtures, pipe, and conduit; where carrying members are spliced, avoid visible displacement of face panels with adjacent panels.
3. Where ducts or other equipment prevent regular spacing of hangers, reinforce nearest adjacent hangers to span the required distance.

B. Linear Metal Ceiling:

1. Install linear panels, baffles, and other system components in accordance with manufacturer's instructions.
2. Align end joints.
3. Butt interior end joints tight.
4. Set exterior end joints with 1/16 inch (2 mm) gap for expansion and contraction.
5. Provide expansion joints to accommodate plus or minus 1 inch (25 mm) movement and maintain visual closure.
6. Field miter corners at changes in panel direction.
7. Install filler strips between linear panels at interior locations.
8. Install end caps at sight-exposed ends of linear panels.
9. Exercise care when site cutting sight-exposed finished components to ensure surface finish is not defaced.

C. Insulation: Install above panel members; fit tight between grid members ; place insulation with facing side down.

3.03 TOLERANCES

A. Maximum Variation from Flat and Level Surface: 1/8 inch in 10 feet (3 mm in 3 m).

3.04 CLEANING

A. Clean polished surfaces.

B. Replace damaged or abraded components.

END OF SECTION

SECTION 09 5426
SUSPENDED WOOD CEILINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Wood ceiling panels.

1.02 RELATED REQUIREMENTS

A. Section 09 9123 - Interior Painting: Site finishing.

1.03 REFERENCE STANDARDS

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate grid layout and related dimensioning, junctions with other ceiling finishes and mechanical and electrical items installed in the ceiling.

C. Product Data: Provide data on suspension system components and ceiling panels.

D. Test Reports: Submit substantiating engineering data, test results of previous tests by independent laboratory which purport to meet performance criteria, and other supportive data.

E. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

F. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.

1.05 FIELD CONDITIONS

A. Maintain uniform temperature of minimum 40 degrees F (5 degrees C) during and after installation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Suspended Wood Ceilings:

1. Acoustic Ceiling Products; Evoba Modular Wood Ceiling System: www.acpideas.com/#sle.

2. Substitutions: See Section 01 6000 - Product Requirements.

2.02 SUSPENDED WOOD CEILING SYSTEM

A. Suspension System: Solid wood construction framing with stabilizer bars, clips, splices, perimeter moldings and hold down clips as required.

1. Species: Red oak.

B. Lay-In Panels: Pre-assembled wood veneer panels, species to match suspension system.

1. Size: 24 by 24 inches (600 by 600 mm), nominal.

2. Overall Thickness: 2 inches (50 mm).

C. Trim and Corner Medallions: Solid wood construction, species to match suspension system.

D. Support Channels and Hangers: Galvanized steel; size and type to suit application, seismic requirements, and ceiling system flatness requirement specified.

E. Finish: Stained, color .

F. Performance Requirements:

1. Surface Burning Characteristics: Maximum flame spread index of 70, smoke developed index of 160, when tested in accordance with ASTM E84.

2.03 FABRICATION

A. Shop fabricate components.

B. Prepare components for mechanical and electrical openings as required and as shown on shop drawings.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that layout of hangers will not interfere with other work.

3.02 INSTALLATION

A. Install wall trim and corner medallions in accordance with manufacturer's installation instructions.

B. Install suspension system in accordance with ASTM C636/C636M, ASTM E580/E580M and manufacturer's instructions and as supplemented in this section.

C. Rigidly secure system, including integral mechanical and electrical components, for maximum deflection of 1:360.

D. Support ceiling grid using clips and hanger wires spaced at maximum 48 inches (1200 mm) on center.

E. Cutting Panels and Grid Components: Using a sharp, small blade saw and straight edge, mark the finish side and cut as required. Miter cut corners.

F. Install border and edge panels, then full panels working across the room.

END OF SECTION

SECTION 09 5426
SUSPENDED WOOD CEILINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Wood ceiling panels.

1.02 RELATED REQUIREMENTS

A. Section 09 9123 - Interior Painting: Site finishing.

1.03 REFERENCE STANDARDS

A. ASTM C635/C635M - Standard Specification for the Manufacture, Performance, and Testing of Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings 2017.

B. ASTM C636/C636M - Standard Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels 2013.

C. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Sequence work to ensure ceilings are not installed until building is enclosed, sufficient heat is provided, dust generating activities have terminated, and overhead work is completed.

B. Do not install ceiling until after interior wet work is dry.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate grid layout and related dimensioning, junctions with other ceiling finishes and mechanical and electrical items installed in the ceiling.

C. Product Data: Provide data on suspension system components and ceiling panels.

D. Samples: Submit two full size samples illustrating material and finish of ceiling panels.

E. Test Reports: Submit substantiating engineering data, test results of previous tests by independent laboratory which purport to meet performance criteria, and other supportive data.

F. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

G. Designer's Qualification Statement.

H. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.

1.06 QUALITY ASSURANCE

A. Designer Qualifications for Seismic Design: Under direct supervision of a Professional Structural Engineer experienced in design of this Work and licensed at Maryland .

1.07 MOCK-UP

A. Provide mock-up including suspension members, ceiling grid trim, and ceiling panels.

B. See Section 01 4000 - Quality Requirements for additional requirements.

C. Mock-up may remain as part of the Work.

1.08 FIELD CONDITIONS

A. Maintain uniform temperature of minimum 40 degrees F (5 degrees C) during and after installation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Suspended Wood Ceilings:

1. Acoustic Ceiling Products; Evoba Modular Wood Ceiling System: www.acpideas.com/#sle.
2. Substitutions: See Section 01 6000 - Product Requirements.

2.02 SUSPENDED WOOD CEILING SYSTEM

A. Suspension System: Solid wood construction framing with stabilizer bars, clips, splices, perimeter moldings and hold down clips as required.

1. Species: Red oak.

B. Lay-In Panels: Pre-assembled wood veneer panels, species to match suspension system.

1. Size: 24 by 24 inches (600 by 600 mm), nominal.
2. Overall Thickness: 2 inches (50 mm).

C. Trim and Corner Medallions: Solid wood construction, species to match suspension system.

D. Support Channels and Hangers: Galvanized steel; size and type to suit application, seismic requirements, and ceiling system flatness requirement specified.

E. Finish: Stained, color .

F. Performance Requirements:

1. Surface Burning Characteristics: Maximum flame spread index of 70, smoke developed index of 160, when tested in accordance with ASTM E84.

2.03 FABRICATION

A. Shop fabricate components.

B. Prepare components for mechanical and electrical openings as required and as shown on shop drawings.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that layout of hangers will not interfere with other work.

3.02 INSTALLATION

A. Install wall trim and corner medallions in accordance with manufacturer's installation instructions.

B. Install suspension system in accordance with ASTM C636/C636M, ASTM E580/E580M and manufacturer's instructions and as supplemented in this section.

C. Rigidly secure system, including integral mechanical and electrical components, for maximum deflection of 1:360.

D. Locate system on room axis according to reflected ceiling plan.

E. Support ceiling grid using clips and hanger wires spaced at maximum 48 inches (1200 mm) on center.

F. Cutting Panels and Grid Components: Using a sharp, small blade saw and straight edge, mark the finish side and cut as required. Miter cut corners.

G. Install border and edge panels, then full panels working across the room.

END OF SECTION

SECTION 09 5800
INTEGRATED CEILING ASSEMBLIES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Suspended, modular, non-fire-rated grid system.

B. Flat acoustic boards.

C. Lighting fixtures ballasts and lamps.

D. Supply air outlets.

E. Sprinkler heads.

F. Audio speakers.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 07 2100 - Thermal Insulation.

C. Section 21 1300 - Fire-Suppression Sprinkler Systems.

D. Section 23 3300 - Air Duct Accessories.

E. Section 23 3700 - Air Outlets and Inlets.

F. Section 26 0583 - Wiring Connections.

G. Section 26 5100 - Interior Lighting.

1.03 REFERENCE STANDARDS

A. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements 2009 (Reapproved 2016).

B. ASTM E413 - Classification for Rating Sound Insulation 2016.

C. IES RP-1 - Recommended Practice for Office Lighting 2012.

D. NFPA 13 - Standard for the Installation of Sprinkler Systems Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

E. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

F. UL (FRD) - Fire Resistance Directory Current Edition.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide descriptions and characteristics of components, finishes, product limitations.

C. Shop Drawings: Indicate grid layout and dimensions, junctions with other work, relationship of mechanical and electrical items related to ceiling system, other components in the ceiling assembly.

D. Samples: Submit one acoustical board; one, 24" x48 " long piece of metal main grid, cross tee, and perimeter trim; one light fixture with ballast, lens and lamps; one each of supply devices.

1.05 QUALITY ASSURANCE

A. Grid Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

B. Acoustical Unit Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

1.06 FIELD CONDITIONS

A. Do not install system until building is enclosed, above ceiling work is completed, tested, and approved, and dust generating activities have terminated.

B. Do not install acoustical units until after wet work has dried.

C. Maintain minimum temperature of 60 degrees F (16 degrees C) and maximum relative humidity of 50 percent, 24 hours prior to, during, and after installation.

PART 2 PRODUCTS

2.01 MANUFACTURERS - ACOUSTIC PANELS

A. Substitutions: See Section 01 6000 - Product Requirements.

2.02 MANUFACTURERS - LIGHT FIXTURES

2.03 MANUFACTURERS - LAMPS

2.04 MANUFACTURERS - AIR OUTLETS

2.05 MANUFACTURERS - FIRE SPRINKLERS

2.06 MANUFACTURERS - AUDIO SPEAKERS

2.07 REGULATORY REQUIREMENTS

2.08 INTEGRATED CEILING ASSEMBLIES

A. Integrated Ceiling Assemblies: Suspension system, panels, trim, and accessories, as indicated and as required for a complete system.

1. Provide suspension system that rigidly secures ceiling system including integral mechanical and electrical components with maximum deflection of 1/360 of span.

B. Performance Requirements:

1. Fire Rated Ceiling Assembly: UL (FRD) Assembly No. for ceiling and floor assembly, providing one hour rating.
2. System Sound Transmission Coefficient (STC): , calculated in accordance with ASTM E413, based on tests conducted in accordance with ASTM E90.
3. Acoustic Board Light Reflectance:
4. Illumination Levels: IES RP 1.
5. Air Supply: Unit capable of distributing air at maximum pressure drop and a maximum NC value of 30.
6. Return Air: Unit capable of returning air at maximum pressure drop and a maximum NC value of 30.
7. Exhaust Air: Unit capable of returning air at maximum pressure drop and a maximum NC value of 30.
8. Fire Sprinkler Design: Comply with NFPA 13.
9. Sound Masking: .

2.09 MATERIALS

A. Acoustical Panels: Complying with the following, and ASTM E1264:

1. Composition: Mineral.

2. Density: .
3. Light Reflectance:
4. NRC Range:
5. STC Range:
6. Edge: Square.
7. Surface Color: White.
8. Surface Finish: Perforated, plastic wrapped.

2.10 COMPONENTS

A. Grid Design: Modular, flat.

B. Grid Materials: Commercial quality cold rolled steel with galvanized coating.

C. Grid System: Exposed tee, ASTM C635/C635M intermediate-duty; rolled metal profiles for main and cross runners, die cut and interlocking.

D. Light Ballasts: UL 935.

E. Lamps: Manufacturers standard.

2.11 ACCESSORIES

A. Hangers: Galvanized steel wire.

B. Accessories: Structural main and cross beams, stabilizer bars, hanger clips for two, three, and four way intersections, size and type to suit application, seismic requirements.

C. Partition Support Brackets: Formed steel, designed to transfer lateral partition load to support framing above .

D. Acoustical Batt Insulation: Specified in Section 07 2100, unfaced ; 2 inch thick (; 50 mm thick).

E. Gypsum Board: Fire rated type; 5/8 inch (15 mm) thick, ends and edges square, paper faced.

F. Touch-up Paint: Type and color to match acoustical and grid units.

2.12 FINISHES

A. Grid Members: .

B. Metal Coffer Ends: .

C. Acoustic Boards: surface design, washable white surface finish.

D. Supply Air Outlets: .

E. Partition Support Brackets: Same finish as ceiling grid.

2.13 ELECTRICAL CHARACTERISTICS AND COMPONENTS

A. Electrical Characteristics:

1. Refer to Section 26 0583.

B. Wiring Terminations: Provide terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated. Enclose terminal lugs in terminal box sized to NFPA 70.

PART 3 EXECUTION

3.01 INSTALLATION - GRID SYSTEM

A. Install ceiling system in accordance with manufacturers' instructions.

B. Install hangers and inserts coordinated with overhead work. Provide additional hangers and supports as required.

C. Install after major above-ceiling work is complete. Coordinate the location of hangers with other work.

D. Coordinate position of hangers and carrying channels to accommodate fittings and components placed after installation of grid.

E. Where ducts or other equipment prevent regular spacing of hangers, reinforce adjacent hangers and related support members required to span the distance.

F. Install grid in accordance with reflected ceiling layout.

G. Suspend grid independently of walls, columns, ducts, pipes, and conduit. Where grid members are spliced, avoid visible displacement of face plane of adjoining members.

H. Support light fixture, supply and return air device loads with supplementary hangers located within 6 inches (150 mm) of each component corner when weight of component exceeds the system deflection limits.

I. Where component installation produces rotation or distortion of runners, provide stabilizer bars or additional support.

J. Form expansion joints to accommodate 1 inch (25 mm) movement and to maintain visual closure.

K. Install edge moldings at intersection of ceiling and vertical surfaces and penetrations, using components of maximum length, set level. Provide edge moldings at junction with other ceiling finishes. Miter corners. Provide preformed edge closures to match bullnosed cornered partitions.

3.02 INSTALLATION - COMPONENTS

A. Install air outlets with gasketed boots and collars.

B. Install light fixtures with ballasts and lamps for connection by Division 26. Install acoustic insulation over light fixtures to form an effective acoustic barrier.

C. Knock out pre-punched holes for fire sprinkler heads and install grommets.

D. Install Acoustic Units:

1. Free from damaged edges or other defects detrimental to appearance and function.
2. After above-ceiling work is complete.
3. In uniform plane, and free from twist, warp and dents.
4. Cut panels to fit irregular grid and perimeter edge trim. Field rabbet tile edge.

E. Finished Ceiling: Uniform plane, free of soiled or damaged components that are detrimental to appearance or function of system.

F. Install light fixture boxes constructed of gypsum board above light fixtures in accordance with UL assembly requirements.

G. Lay acoustical insulation for a distance of 48 inches (1,200 mm) either side of acoustical partitions as indicated.

3.03 TOLERANCES

A. Maximum Variation From Flat Plane: 1/8 inch in 10 feet (3 mm in 3 m), non-cumulative.

3.04 FIELD QUALITY CONTROL

A. An independent testing agency, as specified in Section 01 4000 - Quality Requirements, will conduct field inspection and testing.

3.05 ADJUSTING

A. Remove sags or twists in ceiling system assembly.

3.06 CLEANING

A. Clean system components after adjustment and balancing of system has been completed.

3.07 PROTECTION

A. Do not permit construction traffic through finished areas.

END OF SECTION

SECTION 09 5800
INTEGRATED CEILING ASSEMBLIES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Suspended, modular, non-fire-rated grid system.

B. Flat acoustic boards.

C. Lighting fixtures ballasts and lamps.

D. Supply air outlets.

E. Sprinkler heads.

F. Audio speakers.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 07 2100 - Thermal Insulation.

C. Section 21 1300 - Fire-Suppression Sprinkler Systems.

D. Section 23 3300 - Air Duct Accessories.

E. Section 23 3700 - Air Outlets and Inlets.

F. Section 26 0583 - Wiring Connections.

G. Section 26 5100 - Interior Lighting.

1.03 REFERENCE STANDARDS

A. AABC (NSTSB) - AABC National Standards for Total System Balance, 7th Edition 2016.

B. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements 2009 (Reapproved 2016).

C. ASTM E413 - Classification for Rating Sound Insulation 2016.

D. IES RP-1 - Recommended Practice for Office Lighting 2012.

E. NFPA 13 - Standard for the Installation of Sprinkler Systems Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

F. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

G. UL (FRD) - Fire Resistance Directory Current Edition.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide descriptions and characteristics of components, finishes, product limitations.

C. Shop Drawings: Indicate grid layout and dimensions, junctions with other work, relationship of mechanical and electrical items related to ceiling system, other components in the ceiling assembly.

D. Samples: Submit one acoustical board; one, 24" x48 " long piece of metal main grid, cross tee, and perimeter trim; one light fixture with ballast, lens and lamps; one each of supply devices.

E. Manufacturer's Certificate: Certify that light fixtures, meet or exceed specified requirements.

F. Manufacturer's Installation Instructions: Indicate installation sequence and special cautions.

G. Installer's Qualification Statement.

H. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Extra Acoustic Panels: Ten.
3. Extra Sprinkler Heads: Six of each type.
4. Extra Supply Air Grilles: One.
5. Extra Return Air Grilles: One.

1.05 QUALITY ASSURANCE

A. Grid Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

B. Acoustical Unit Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

C. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience and approved by manufacturer.

D. Fire Sprinkler Work: Comply with requirements of Division 21 .

1.06 MOCK-UP

A. Construct mock-up of one grid module; include at least one instance of each component of the integrated ceiling system assembly.

B. Mock-up may remain as part of the Work.

1.07 FIELD CONDITIONS

A. Do not install system until building is enclosed, above ceiling work is completed, tested, and approved, and dust generating activities have terminated.

B. Do not install acoustical units until after wet work has dried.

C. Maintain minimum temperature of 60 degrees F (16 degrees C) and maximum relative humidity of 50 percent, 24 hours prior to, during, and after installation.

PART 2 PRODUCTS

2.01 REGULATORY REQUIREMENTS

A. Provide certificate of compliance from authorities having jurisdiction for approval of light fixtures.

2.02 INTEGRATED CEILING ASSEMBLIES

A. Integrated Ceiling Assemblies: Suspension system, panels, trim, and accessories, as indicated and as required for a complete system.

1. Provide suspension system that rigidly secures ceiling system including integral mechanical and electrical components with maximum deflection of 1/360 of span.

B. Performance Requirements:

1. Fire Rated Ceiling Assembly: UL (FRD) Assembly No. for ceiling and floor assembly, providing one hour rating.
2. System Sound Transmission Coefficient (STC): , calculated in accordance with ASTM E413, based on tests conducted in accordance with ASTM E90.
3. Acoustic Board Light Reflectance:

4. Illumination Levels: IES RP 1.
5. Air Supply: Unit capable of distributing air at maximum pressure drop and a maximum NC value of 30.
6. Return Air: Unit capable of returning air at maximum pressure drop and a maximum NC value of 30.
7. Exhaust Air: Unit capable of returning air at maximum pressure drop and a maximum NC value of 30.
8. Fire Sprinkler Design: Comply with NFPA 13.
9. Sound Masking: .

2.03 MATERIALS

A. Acoustical Panels: Complying with the following, and ASTM E1264:
   1. Composition: Mineral.
   2. Density: .
   3. Light Reflectance:
   4. NRC Range:
   5. STC Range:
   6. Edge: Square.
   7. Surface Color: White.
   8. Surface Finish: Perforated, plastic wrapped.

2.04 COMPONENTS

A. Grid Design: Modular, flat.

B. Grid Materials: Commercial quality cold rolled steel with galvanized coating.

C. Grid System: Exposed tee, ASTM C635/C635M intermediate-duty; rolled metal profiles for main and cross runners, die cut and interlocking.

D. Light Ballasts: UL 935.

E. Lamps: Manufacturers standard.

F. Supply Air Outlets: Specified in Division 23.

2.05 ACCESSORIES

A. Hangers: Galvanized steel wire.

B. Accessories: Structural main and cross beams, stabilizer bars, hanger clips for two, three, and four way intersections, size and type to suit application, seismic requirements.

C. Partition Support Brackets: Formed steel, designed to transfer lateral partition load to support framing above .

D. Acoustical Batt Insulation: Specified in Section 07 2100, unfaced ; 2 inch thick (; 50 mm thick).

E. Gypsum Board: Fire rated type; 5/8 inch (15 mm) thick, ends and edges square, paper faced.

F. Touch-up Paint: Type and color to match acoustical and grid units.

2.06 FINISHES

A. Grid Members: .

B. Metal Coffer Ends: .

C. Acoustic Boards: surface design, washable white surface finish.

D. Supply Air Outlets: .

E. Partition Support Brackets: Same finish as ceiling grid.

2.07 ELECTRICAL CHARACTERISTICS AND COMPONENTS

A. Electrical Characteristics:

1. Refer to Section 26 0583.

B. Wiring Terminations: Provide terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated. Enclose terminal lugs in terminal box sized to NFPA 70.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that layout of hangers will not interfere with other work.

C. Verify that required utilities are available, in proper location, and ready for use.

3.02 INSTALLATION - GRID SYSTEM

A. Install ceiling system in accordance with manufacturers' instructions.

B. Install hangers and inserts coordinated with overhead work. Provide additional hangers and supports as required.

C. Provide hanger clips during steel deck erection. Provide additional hangers and inserts as required.

D. Install after major above-ceiling work is complete. Coordinate the location of hangers with other work.

E. Coordinate position of hangers and carrying channels to accommodate fittings and components placed after installation of grid.

F. Where ducts or other equipment prevent regular spacing of hangers, reinforce adjacent hangers and related support members required to span the distance.

G. Install grid in accordance with reflected ceiling layout.

H. Suspend grid independently of walls, columns, ducts, pipes, and conduit. Where grid members are spliced, avoid visible displacement of face plane of adjoining members.

I. Support light fixture, supply and return air device loads with supplementary hangers located within 6 inches (150 mm) of each component corner when weight of component exceeds the system deflection limits.

J. Where component installation produces rotation or distortion of runners, provide stabilizer bars or additional support.

K. Form expansion joints to accommodate 1 inch (25 mm) movement and to maintain visual closure.

L. Install edge moldings at intersection of ceiling and vertical surfaces and penetrations, using components of maximum length, set level. Provide edge moldings at junction with other ceiling finishes. Miter corners. Provide preformed edge closures to match bullnosed cornered partitions.

3.03 INSTALLATION - COMPONENTS

A. Install air outlets with gasketed boots and collars.

B. Install light fixtures with ballasts and lamps for connection by Division 26. Install acoustic insulation over light fixtures to form an effective acoustic barrier.

C. Knock out pre-punched holes for fire sprinkler heads and install grommets.

D. Install Acoustic Units:

1. Free from damaged edges or other defects detrimental to appearance and function.
2. After above-ceiling work is complete.
3. In uniform plane, and free from twist, warp and dents.
4. Cut panels to fit irregular grid and perimeter edge trim. Field rabbet tile edge.

E. Finished Ceiling: Uniform plane, free of soiled or damaged components that are detrimental to appearance or function of system.

F. Install light fixture boxes constructed of gypsum board above light fixtures in accordance with UL assembly requirements.

G. Lay acoustical insulation for a distance of 48 inches (1,200 mm) either side of acoustical partitions as indicated.

3.04 TOLERANCES

A. Maximum Variation From Flat Plane: 1/8 inch in 10 feet (3 mm in 3 m), non-cumulative.

B. Maximum Offset From True Alignment or Position: 1/8 inch (3 mm).

3.05 FIELD QUALITY CONTROL

A. An independent testing agency, as specified in Section 01 4000 - Quality Requirements, will conduct field inspection and testing.

B. Test, adjust, and balance air system in accordance with AABC (NSTSB).

3.06 ADJUSTING

A. Remove sags or twists in ceiling system assembly.

B. Replace damaged or faulty components.

3.07 CLEANING

A. Clean system components after adjustment and balancing of system has been completed.

3.08 PROTECTION

A. Do not permit construction traffic through finished areas.

END OF SECTION

SECTION 09 6340
STONE FLOORING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Stone on floors, bases, stair treads and risers.

B. Thresholds.

C. Stone setting and grouting.

1.02 RELATED REQUIREMENTS

A. Section 07 1200 - Built-Up Bituminous Waterproofing: Waterproofing membrane under mortar bed.

B. Section 07 1300 - Sheet Waterproofing: Waterproofing membrane under mortar bed.

C. Section 07 1400 - Fluid-Applied Waterproofing: Waterproofing membrane under mortar bed.

D. Section 07 9200 - Joint Sealants: Sealing joints between stone flooring work and adjacent construction and fixtures.

1.03 REFERENCE STANDARDS

A. ANSI A108/A118/A136 - American National Standard Specifications for the Installation of Ceramic Tile (Compendium). 2017.

B. ANSI A118.3 - American National Standard Specifications for Chemical Resistant, Water Cleanable Tile-Setting and -Grouting Epoxy and Water Cleanable Tile-Setting Epoxy Adhesive 2013 (Revised).

C. ANSI A118.4 - American National Standard Specifications for Modified Dry-Set Cement Mortar 2012 (Revised).

D. ANSI A118.7 - American National Standard Specifications for High Performance Cement Grouts for Tile Installation 2010 (Reaffirmed 2016).

E. ANSI A118.10 - American National Standard Specifications for Load Bearing, Bonded, Waterproof Membranes For Thin-Set Ceramic Tile And Dimension Stone Installation 2014.

F. ANSI A118.12 - American National Standard Specifications for Crack Isolation Membranes for Thin-Set Ceramic Tile and Dimension Stone Installation 2014.

G. ANSI A118.13 - American National Standard Specifications for Bonded Sound Reduction Membranes for Thin-Set Ceramic Tile Installation 2014.

H. ASTM C503/C503M - Standard Specification for Marble Dimension Stone 2015.

I. ASTM C568/C568M - Standard Specification for Limestone Dimension Stone 2015.

J. ASTM C615/C615M - Standard Specification for Granite Dimension Stone 2018e1.

K. ASTM C616/C616M - Standard Specification for Quartz-Based Dimension Stone 2015.

L. ASTM C629/C629M - Standard Specification for Slate Dimension Stone 2015.

M. ASTM E492 - Standard Test Method for Laboratory Measurement of Impact Sound Transmission Through Floor-Ceiling Assemblies Using the Tapping Machine 2009, with Editorial Revision (2016).

N. TCNA (HB) - Handbook for Ceramic, Glass, and Stone Tile Installation 2017.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide instructions for using grout.

C. Shop Drawings: Indicate stone layout.

D. Samples: Mount stone and apply grout on two plywood panels, 24" x 24" in size illustrating pattern, color variations, and grout joint size variations.

E. Maintenance Data: Include recommended cleaning methods, cleaning materials, stain removal methods, and polishes and waxes.

1.05 QUALITY ASSURANCE

A. Perform work in accordance with TCNA (HB) instructions for methods specified.

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience.

1.06 MOCK-UP

A. Locate where directed.

1.07 FIELD CONDITIONS

A. Maintain at least 50 degrees F (10 degrees C) ambient temperature during installation of flooring materials.

PART 2 PRODUCTS

2.01 STONE

A. Marble: Free of defects detrimental to appearance or durability; ASTM C503/C503M Classification I - Calcite:

1. Quarry: [_____]; Variety: [_____].

B. Granite: Free of defects detrimental to appearance or durability; ASTM C615/C615M.

C. Limestone: Free of defects detrimental to appearance or durability; ASTM C568/C568M Classification I - Low Density:

D. Slate: Free of defects detrimental to appearance or durability; ASTM C62 Classification II - Interior:

E. Sandstone: Free of defects detrimental to appearance or durability; ASTM C616/C616M Classification I Sandstone:

F. Base: Match flooring for surface finish and color:

G. Stair Treads and Risers: Match flooring for surface finish and color; free of defects detrimental to appearance or durability:

2.02 SETTING AND GROUTING MATERIALS

A. Provide setting and grout materials from same manufacturer.

B. Manufacturers:

1. LATICRETE International, Inc: www.laticrete.com/#sle.
2. Mapei Corporation: www.mapei.com/#sle.
3. Substitutions: See Section 01 6000 - Product Requirements.

C. Mortar Bed Materials: Portland cement, sand, latex additive, and water.

1. Products:
   a. LATICRETE International, Inc; LATICRETE 3701 Fortified Mortar: www.laticrete.com/#sle.
   b. [_____].

c. Substitutions: See Section 01 6000 - Product Requirements.

D. Latex-Portland Cement Mortar Bond Coat: ANSI A118.4.

E. Epoxy Adhesive and Mortar Bond Coat: ANSI A118.3.

F. Polymer Modified Grout: ANSI A118.7 polymer modified cement grout.

1. Applications: Use this type of grout where indicated and where no other type of grout is indicated.

2. Use sanded grout for joints 1/8 inch (3 mm) wide and larger; use unsanded grout for joints less than 1/8 inch (3 mm) wide.

G. Epoxy Grout: ANSI A118.3 chemical resistant and water-cleanable epoxy grout.

1. Applications: Where indicated.

H. Stain Resistant Grout Additive: Liquid admixture for sanded and unsanded cement-based grouts; mix with dry grout material in place of water.

1. Applications: Where indicated.

2.03 ACCESSORIES

A. Cleavage Membrane: No.15 asphalt saturated felt (6.9 kg asphalt saturated felt).

B. Waterproofing Membrane at Floors: As specified in Section 07 1200.

C. Underlayment at Floors: Specifically designed for bonding to thin-set setting mortar; having the following characteristics:

1. Sound Reduction: Comply with ANSI A118.13, bonded membrane.

2. Crack Isolation: Comply with ANSI A118.12.

3. Water Resistance: Comply with ANSI A118.10, bonded waterproofing.

D. Sound Control Underlayment at Floors: Recycled rubber type, fully-adhered.

1. Sound Reduction: Comply with ASTM E492.

2. Thickness: 1/8 inch (3.2 mm), nominal.

E. Reinforcing Mesh: 2 by 2 inch (50 by 50 mm) size weave of 16/16 wire size; welded fabric, galvanized.

F. Thresholds: Same stone type as flooring, color to match, honed finish, width as indicated on drawings by full width of wall or frame opening, beveled one side, rabbeted for door stop, eased edges.

G. Cleaner: Type not harmful to stone, joint materials, or adjacent surfaces; recommended by stone producer and grout manufacturer.

H. Sealer: Colorless, slip and stain resistant type that will not detrimentally affect stone and adjacent work.

2.04 MORTAR AND GROUT MIX

A. Mix and proportion cementitious materials for site made slurry coat and mortar bed.

2.05 FABRICATION

A. Cut stone into sizes and thickness required.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that surfaces are ready to receive this work.

3.02 PREPARATION

A. Vacuum clean substrate surfaces; damp clean stone.

B. Clean stone prior to installation, with edges and surfaces free of dirt or foreign material.

C. Do not use wire brushes or implements that mark or damage exposed surfaces.

3.03 INSTALLATION - GENERAL

A. Lay stone units to pattern indicated, and do not interrupt pattern through openings.

B. Place thresholds at door frame openings.

C. Cut and fit stone units tightly to penetrations, leaving sealant joint space. Ensure finish trim will cover cut edges. Form corners and bases neatly. Align floor and base joints.

D. Maintain uniform joint width subject to variance in tolerance allowed in stone unit size. Make joints watertight, without voids, cracks, excess mortar or excess grout.

E. Maintain joint width of 1/4 inch (6 mm) where abutting vertical surfaces or protrusions.

F. Sound test the units after setting. Replace hollow sounding units.

G. Keep expansion and control joints free of mortar or grout. Apply sealant to joints.

H. Grout joints. Pack and work grout into voids. Neatly tool to flush surface.

3.04 MORTAR BED METHOD

A. Install in accordance with TCNA (HB) Method F111, over cleavage membrane.

B. Set stone in full mortar bed to support stone over full bearing surface.

C. Allow units to set for a minimum of 48 hours prior to grouting.

D. To accommodate joint grout, rake out joints 1/4 to 3/8 inch (6 to 10 mm).

3.05 CLEANING

A. Clean stone and grout surfaces with cleaner; seal with sealer.

END OF SECTION

SECTION 09 6340
STONE FLOORING

1.04 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene one week prior to commencing work of this section.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide instructions for using grout.

C. Shop Drawings: Indicate stone layout.

1. Submit stone supplier's installation instructions and field erection drawings.

D. Samples: Mount stone and apply grout on two plywood panels, 24" x 24" in size illustrating pattern, color variations, and grout joint size variations.

E. Samples: Submit sample of colored grout.

F. Samples: Submit stone samples for sealant compatibility testing.

G. Maintenance Data: Include recommended cleaning methods, cleaning materials, stain removal methods, and polishes and waxes.

1. Include list of liquids detrimental to appearance of stone finish.

H. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.

1.06 QUALITY ASSURANCE

A. Perform work in accordance with TCNA (HB) instructions for methods specified.

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience.

1.07 MOCK-UP

A. Construct mock-up, illustrating stone, finish grout, and specified accessories.

B. Locate where directed.

C. Mock-up may remain as part of the Work.

1.08 FIELD CONDITIONS

A. Maintain at least 50 degrees F (10 degrees C) ambient temperature during installation of flooring materials.

PART 2 PRODUCTS

2.01 STONE

A. Marble: Free of defects detrimental to appearance or durability; ASTM C503/C503M Classification I - Calcite:

B. Granite: Free of defects detrimental to appearance or durability; ASTM C615/C615M.

C. Limestone: Free of defects detrimental to appearance or durability; ASTM C568/C568M Classification I - Low Density:

2. Crack Isolation: Comply with ANSI A118.12.

3. Water Resistance: Comply with ANSI A118.10, bonded waterproofing.

D. Sound Control Underlayment at Floors: Recycled rubber type, fully-adhered.

1. Sound Reduction: Comply with ASTM E492.

2. Thickness: 1/8 inch (3.2 mm), nominal.

E. Reinforcing Mesh: 2 by 2 inch (50 by 50 mm) size weave of 16/16 wire size; welded fabric, galvanized.

F. Thresholds: Same stone type as flooring, color to match, honed finish, width as indicated on drawings by full width of wall or frame opening, beveled one side, rabbeted for door stop, eased edges.

G. Cleaner: Type not harmful to stone, joint materials, or adjacent surfaces; recommended by stone producer and grout manufacturer.

H. Sealer: Colorless, slip and stain resistant type that will not detrimentally affect stone and adjacent work.

2.04 MORTAR AND GROUT MIX

A. Mix and proportion cementitious materials for site made slurry coat and mortar bed.

2.05 FABRICATION

A. Cut stone into sizes and thickness required.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that surfaces are ready to receive this work.

3.02 PREPARATION

A. Vacuum clean substrate surfaces; damp clean stone.

B. Clean stone prior to installation, with edges and surfaces free of dirt or foreign material.

C. Do not use wire brushes or implements that mark or damage exposed surfaces.

3.03 INSTALLATION - GENERAL

A. Lay stone units to pattern indicated, and do not interrupt pattern through openings.

B. Place thresholds at door frame openings.

C. Cut and fit stone units tightly to penetrations, leaving sealant joint space. Ensure finish trim will cover cut edges. Form corners and bases neatly. Align floor and base joints.

D. Maintain uniform joint width subject to variance in tolerance allowed in stone unit size. Make joints watertight, without voids, cracks, excess mortar or excess grout.

E. Maintain joint width of 1/4 inch (6 mm) where abutting vertical surfaces or protrusions.

F. Sound test the units after setting. Replace hollow sounding units.

G. Keep expansion and control joints free of mortar or grout. Apply sealant to joints.

H. Grout joints. Pack and work grout into voids. Neatly tool to flush surface.

3.04 MORTAR BED METHOD

A. Install in accordance with TCNA (HB) Method F111, over cleavage membrane.

B. Set stone in full mortar bed to support stone over full bearing surface.

C. Allow units to set for a minimum of 48 hours prior to grouting.

D. To accommodate joint grout, rake out joints 1/4 to 3/8 inch (6 to 10 mm).

3.05 CLEANING

A. Clean stone and grout surfaces with cleaner; seal with sealer.

END OF SECTION

SECTION 09 6433
LAMINATED WOOD FLOORING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Laminated wood flooring.

B. Installation accessories.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 06 1000 - Rough Carpentry: Wood subfloor surface.

1.03 REFERENCE STANDARDS

A. ASTM E492 - Standard Test Method for Laboratory Measurement of Impact Sound Transmission Through Floor-Ceiling Assemblies Using the Tapping Machine 2009, with Editorial Revision (2016).

B. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring 2017.

C. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride 2016a.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

PART 2 PRODUCTS

2.01 MATERIALS

A. Laminated Wood Flooring:

1. Construction: Tongue and groove, self-locking, 5-ply laminated wood planks.
2. Installation Method: Glued down.
3. Finish: Factory applied, UV cured urethane.

B. Vapor Retarder: Polyethylene sheet, 6 mil (0.152 mm) thick; 2 inch (50 mm) wide polyethylene tape for sealing joints.

C. Underlayment: 1/8 inch (3.175 mm) thick polyurethane foam.

2.02 ACCESSORIES

A. Sound Control Underlayment: Recycled rubber type.

1. Sound Reduction: Comply with ASTM E492 and ASTM E2179.
2. Products:
   a. U.S. Rubber Recycling; Quietsound Acoustical Underlayment: www.usrubber.com/#sle.
   b. Substitutions: .

B. Sound Control Underlayment: Cork and recycled rubber composite type, fully-adhered.

1. \plain\rtlch\af1\afs20\alang0\ltrch\f1\fs20\lang0\langnp0\langfe0\langfenp0 Sound Reduction: Comply with ASTM E492.
2. Thickness: 13/64 inch (5 mm), nominal.
3. Products:

a. Amorim Cork Composites S.A; RCLT500 Rubber Cork Composite Underlayment: www.amorimcorkcomposites.com/#sle.

C. Adhesives: Water-resistant; types recommended by flooring manufacturer for project substrates.

D. Divider and Edge Strip: Angle mill finish aluminum.

E. Transition Strip: Same species and finish as flooring material; profiles indicated.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that sub-floor surfaces are smooth and flat within the tolerances required for type of substrate and ready to receive laminated wood flooring.

B. Verify that sub-floor surfaces are dust-free and free of substances that could impair bonding of materials to substrate surface.

C. Verify that concrete sub-floor surfaces are ready for wood flooring installation by testing for moisture emission rate and alkalinity; obtain instructions if test results are outside the following limits:

1. Moisture emission rate: Not greater than 3 lb per 1000 sq ft per 24 hours (7.1 kg per 100 sq m per 24 hours), tested according to ASTM F1869.

2. Alkalinity: pH range of 5 to 9, tested according to ASTM F710.

D. Verify that required floor-mounted utilities are in correct location.

3.02 PREPARATION

A. Prepare sub-floor in accordance with flooring manufacturer's installation instructions.

B. Remove sub-floor ridges and bumps. Fill minor or local low spots, cracks, joints, holes, and other defects with sub-floor filler to achieve smooth, flat, hard surface.

C. Prohibit traffic until filler is fully cured.

D. Vacuum clean substrate.

E. Apply primer to all laminated surfaces.

3.03 INSTALLATION

A. Vapor Retarder: Install loose laid, seams overlapped 4 inches (101.6 mm) and sealed with polyethylene tape. Run material 2 inches (50.8 mm) up the wall and trim after flooring is installed.

B. Underlayment: Install in accordance with manufacturer's installation instructions.

1. Install the underlayment in the same direction the flooring is to be installed.

C. Adhesives: Install in accordance with adhesive manufacturer's installation instructions.

1. Remove excess adhesive extruded through floor surface as work progresses.

D. Wood Flooring:

1. Install flooring in accordance with manufacturer's installation instructions.

2. Lay flooring in patterns indicated on drawings. Verify alignment as work progresses.

3. Arrange flooring with end matched grain set flush and tight.

4. Terminate flooring at centerline of door openings where adjacent floor finish is dissimilar; provide divider strips and transition strips in accordance with flooring manufacturer's recommendations and as indicated.

5. Install edge strips at unprotected or exposed edges, and where flooring terminates.

6. Secure edge strips before installation of flooring with stainless steel screws.
7. Install flooring under movable partitions without interrupting floor pattern.
8. Provide 1/2 inch (12.7 mm) expansion space at fixed walls and other interruptions.
9. Within two (2) hours of adhesive applied flooring installation, roll work thoroughly in both directions with 100 lb (45 kg) roller.

3.04 CLEANING

A. Remove excess adhesive from floor, base, and wall surfaces without damaging surfaces.

B. Clean floor surfaces in accordance with the flooring manufacturer's instructions.

3.05 PROTECTION

A. Prohibit traffic on finished floor for 24 hours after installation.

B. Place protective coverings over finished floors; do not remove coverings until after Date of Substantial Completion.

END OF SECTION

SECTION 09 6433
LAMINATED WOOD FLOORING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Laminated wood flooring.

B. Installation accessories.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 06 1000 - Rough Carpentry: Wood subfloor surface.

1.03 REFERENCE STANDARDS

A. ASTM E492 - Standard Test Method for Laboratory Measurement of Impact Sound Transmission Through Floor-Ceiling Assemblies Using the Tapping Machine 2009, with Editorial Revision (2016).

B. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring 2017.

C. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride 2016a.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on specified products, describing physical and performance characteristics; including sizes, wood species and colors available; and installation instructions.

C. Shop Drawings: Indicate floor joint pattern and termination details.

D. Samples: Submit two samples illustrating floor finish, color, and sheen.

E. Maintenance Data: Include maintenance procedures, recommended maintenance materials, and suggested schedule for cleaning.

F. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Extra Flooring Material: 10 square yards (9 sq m) matching installed flooring.
3. Extra Adhesive: Quantity necessary for installation of extra flooring material.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

B. Installer Qualifications: Company specializing in performing the type of work specified in this section.

1. Minimum three years of documented experience.
2. Approved by manufacturer.

1.06 FIELD CONDITIONS

A. Do not install wood flooring until wet construction work is complete and ambient air at installation space has moisture content stabilized at maximum moisture content of 40 percent.

B. Provide heat, light, and ventilation prior to installation.

C. Store materials in area of installation for minimum period of 24 hours prior to installation.

D. Maintain minimum room temperature of 65 degrees F (18 degrees C) and relative humidity in accordance with adhesive manufacturer's instructions for a minimum period of 48 hours prior to delivery of materials to installation space, during installation, and after installation.

PART 2 PRODUCTS

2.01 MATERIALS

A. Laminated Wood Flooring:

1. Construction: Tongue and groove, self-locking, 5-ply laminated wood planks.
2. Installation Method: Glued down.
3. Finish: Factory applied, UV cured urethane.

B. Vapor Retarder: Polyethylene sheet, 6 mil (0.152 mm) thick; 2 inch (50 mm) wide polyethylene tape for sealing joints.

C. Underlayment: 1/8 inch (3.175 mm) thick polyurethane foam.

2.02 ACCESSORIES

A. Sound Control Underlayment: Recycled rubber type.

1. Sound Reduction: Comply with ASTM E492 and ASTM E2179.
2. Products:
   a. U.S. Rubber Recycling; Quietsound Acoustical Underlayment: www.usrubber.com/#sle.
   b. Substitutions: .

B. Sound Control Underlayment: Cork and recycled rubber composite type, fully-adhered.

1. \plain\rtlch\af1\afs20\alang0\ltrch\f1\fs20\lang0\langnp0\langfe0\langfenp0 Sound Reduction: Comply with ASTM E492.
2. Thickness: 13/64 inch (5 mm), nominal.
3. Products:
   a. Amorim Cork Composites S.A; RCLT500 Rubber Cork Composite Underlayment: www.amorimcorkcomposites.com/#sle.

C. Adhesives: Water-resistant; types recommended by flooring manufacturer for project substrates.

D. Divider and Edge Strip: Angle mill finish aluminum.

E. Transition Strip: Same species and finish as flooring material; profiles indicated.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that sub-floor surfaces are smooth and flat within the tolerances required for type of substrate and ready to receive laminated wood flooring.

B. Verify that sub-floor surfaces are dust-free and free of substances that could impair bonding of materials to substrate surface.

C. Verify that wood sub-floors have 12 percent or less moisture content.

D. Verify that concrete sub-floor surfaces are ready for wood flooring installation by testing for moisture emission rate and alkalinity; obtain instructions if test results are outside the following limits:

1. Moisture emission rate: Not greater than 3 lb per 1000 sq ft per 24 hours (7.1 kg per 100 sq m per 24 hours), tested according to ASTM F1869.

2. Alkalinity: pH range of 5 to 9, tested according to ASTM F710.

E. Verify that required floor-mounted utilities are in correct location.

3.02 PREPARATION

A. Prepare sub-floor in accordance with flooring manufacturer's installation instructions.

B. Remove sub-floor ridges and bumps. Fill minor or local low spots, cracks, joints, holes, and other defects with sub-floor filler to achieve smooth, flat, hard surface.

C. Prohibit traffic until filler is fully cured.

D. Vacuum clean substrate.

E. Apply primer to all laminated surfaces.

3.03 INSTALLATION

A. Vapor Retarder: Install loose laid, seams overlapped 4 inches (101.6 mm) and sealed with polyethylene tape. Run material 2 inches (50.8 mm) up the wall and trim after flooring is installed.

B. Underlayment: Install in accordance with manufacturer's installation instructions.

1. Install the underlayment in the same direction the flooring is to be installed.

C. Adhesives: Install in accordance with adhesive manufacturer's installation instructions.

1. Remove excess adhesive extruded through floor surface as work progresses.

D. Wood Flooring:

1. Install flooring in accordance with manufacturer's installation instructions.
2. Lay flooring in patterns indicated on drawings. Verify alignment as work progresses.
3. Arrange flooring with end matched grain set flush and tight.
4. Terminate flooring at centerline of door openings where adjacent floor finish is dissimilar; provide divider strips and transition strips in accordance with flooring manufacturer's recommendations and as indicated.
5. Install edge strips at unprotected or exposed edges, and where flooring terminates.
6. Secure edge strips before installation of flooring with stainless steel screws.
7. Install flooring tight to floor access covers.
8. Install flooring under movable partitions without interrupting floor pattern.
9. Provide 1/2 inch (12.7 mm) expansion space at fixed walls and other interruptions.
10. Within two (2) hours of adhesive applied flooring installation, roll work thoroughly in both directions with 100 lb (45 kg) roller.

3.04 CLEANING

A. Remove excess adhesive from floor, base, and wall surfaces without damaging surfaces.

B. Clean floor surfaces in accordance with the flooring manufacturer's instructions.

3.05 PROTECTION

A. Prohibit traffic on finished floor for 24 hours after installation.

B. Place protective coverings over finished floors; do not remove coverings until after Date of Substantial Completion.

END OF SECTION

SECTION 09 6466
WOOD ATHLETIC FLOORING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Wood athletic flooring.

B. Subflooring.

C. Sleepers.

D. Resilient cushioning.

E. Sheet vapor retarder.

F. Floor finishes.

G. Surface finishing and game markings.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 03 3000 - Cast-in-Place Concrete: Concrete subfloor surface; recessed.

1.03 REFERENCE STANDARDS

A. MFMA (PUR) - Performance and Uniformity Rating Sport Specific Standards current edition.

B. MFMA (SPEC) - Guide Specifications for Maple Flooring Systems current edition.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data for flooring, floor finish materials and resilient cushion.

C. Shop Drawings: Indicate floor joint pattern and termination details.

1. Indicate provisions for expansion and contraction, wall base and game insert or socket devices.

D. Maintenance Data: Include maintenance procedures and recommended maintenance materials.

E. Manufacturer's Qualification Statement.

F. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.

1.05 QUALITY ASSURANCE

A. Perform work of this section in accordance with MFMA (SPEC).

B. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section.

1. Minimum three years of documented experience.

C. Installer Qualifications: Company specializing in installing products specified in this section.

1. Minimum three years of documented experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials and store off the floor in a well-ventilated, weather-tight space.

1.07 FIELD CONDITIONS

A. Do not install wood flooring until wet construction work is complete and permanent heat and air conditioning is installed and operating.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Wood Athletic Flooring:

1. Action Floor Systems; Action Anchor Flex: www.actionfloors.com/#sle.
2. Connor Sports Flooring: www.connorfloor.com/#sle.
3. Robbins Sports Surfaces: www.robbinsfloor.com/#sle.
4. Substitutions: Section 01 6000 - Product Requirements.

2.02 WOOD ATHLETIC FLOORING

A. General: Wood strip flooring, MFMA (PUR) compliant for application indicated; system components provided by single manufacturer.

B. System Description:

1. Fixed, pre-engineered subfloor anchored using channels, retainers and clips, wood strip flooring.

2.03 COMPONENTS

A. Wood Strip Flooring:

1. Species: Northern hard maple, kiln dried; tongue and groove edges, end matched.
2. Grade: First.
3. Thickness: 25/32 inch (20 mm).
4. Width: 2-1/4 inches (57 mm).

B. Sleepers:

C. Subflooring: One layer of thick plywood, APA rated, exposure 1, minimum span rating of 48/24.

D. Subflooring: Manufacturer's standard pre-engineered subfloor suitable for system indicated.

E. Resilient Cushioning: Manufacturer's standard rubber pads, factory-applied to bottom side of sleepers.

F. Vapor Retarder: Polyethylene sheet, 6 mil (0.15 mm) thick; 2 inch (50 mm) wide tape for sealing sheet seams.

G. Fasteners and Anchors: Manufacturer's standard type and size to suit application.

2.04 FINISHES

A. Floor Finishes: Types recommended by flooring manufacturer and complying with MFMA specifications.

1. Sealer: Oil based urethane.
2. Finish Coats: Oil based urethane; high gloss.

2.05 ACCESSORIES

A. Ventilating Base: Molded rubber, with a toe, pre-molded outside corners; black color.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting this work.

B. Cementitious Subfloor Surfaces: Verify that substrates are dry enough and ready for flooring installation by testing for moisture and alkalinity (pH).

1. Obtain instructions if test results are not within limits recommended by flooring material manufacturer and adhesive materials manufacturer.

C. Verify that required floor-mounted utilities are in correct location.

3.02 PREPARATION

A. Prepare substrate to receive wood flooring in accordance with manufacturer's and MFMA instructions.

B. Vacuum clean substrate.

3.03 INSTALLATION

A. Place vapor retarder over concrete surface, overlap seams a minimum of 6 inches (150 mm) and seal with tape.

B. Resilient Underlayment: Install in accordance with manufacturer's instructions.

C. Sleepers with Plywood Subfloor:

1. Place sleepers at 90 degree angle to direction of finished floor; space 12 inches (300 mm) on center. Stagger end joints a minimum of 24 inches (610 mm).

2. Fasten plywood subfloor over sleepers at 45 degree angle to direction of finished floor. Allow minimum 1/4 inch (6 mm) between plywood subfloor edges.

D. Install solid blocking at doorways, under stacked bleachers, under locations of heavy equipment and as shown on drawings, in accordance with flooring manufacturer's recommendations.

E. Wood Flooring:

1. Install in accordance with manufacturer's and MFMA instructions.

2. Lay flooring parallel to length of main playing area. Blind nail or staple to subfloor.

3. Install edge strips at unprotected or exposed edges, and where flooring terminates.

4. Provide 2 inch (24 mm) expansion space at walls and other interruptions.

F. Finishing:

1. Mask off adjacent surfaces before beginning sanding.

2. Sand flooring to smooth even finish with no evidence of sander marks. Remove dust by vacuum.

3. Apply finishes in accordance with floor finish manufacturer's and MFMA instructions.

4. Apply first coat, allow to dry, then buff lightly with recommended pad to remove irregularities. Vacuum clean and wipe with damp, lint-free cloth before applying succeeding coats.

5. Apply last coat of finish.

3.04 CLEANING

A. Clean floor surfaces in accordance with floor finish manufacturer's instructions.

3.05 PROTECTION

A. Prohibit traffic on finished floor for 72 hours after installation.

B. Place protective coverings over finished floors; do not remove coverings until Date of Substantial Completion.

END OF SECTION

SECTION 09 6466
WOOD ATHLETIC FLOORING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Wood athletic flooring.

B. Subflooring.

C. Sleepers.

D. Resilient cushioning.

E. Sheet vapor retarder.

F. Floor finishes.

G. Surface finishing and game markings.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 03 3000 - Cast-in-Place Concrete: Concrete subfloor surface; recessed.

C. Section 06 1000 - Rough Carpentry: Subfloor blocking.

1.03 REFERENCE STANDARDS

A. MFMA (PUR) - Performance and Uniformity Rating Sport Specific Standards current edition.

B. MFMA (SPEC) - Guide Specifications for Maple Flooring Systems current edition.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data for flooring, floor finish materials and resilient cushion.

C. Shop Drawings: Indicate floor joint pattern and termination details.

1. Indicate provisions for expansion and contraction, wall base and game insert or socket devices.
2. Indicate location, size, design, and color of game markings.

D. Samples: Submit two samples illustrating floor finish, color, and sheen.

E. Installation Instructions: Indicate standard and special installation procedures.

F. Maintenance Data: Include maintenance procedures and recommended maintenance materials.

G. Manufacturer's Qualification Statement.

H. Installer's Qualification Statement.

I. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Extra Flooring Material: 10 square yards (9 sq m) matching installed flooring.

1.05 QUALITY ASSURANCE

A. Perform work of this section in accordance with MFMA (SPEC).

B. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section.

1. Minimum three years of documented experience.

C. Installer Qualifications: Company specializing in installing products specified in this section.

1. Minimum three years of documented experience.

1.06 MOCK-UP

A. Construct mock-up of wood athletic flooring including subflooring, resilient cushioning and wood flooring. Illustrate final finish and include example of painted game lines.

B. See Section 01 4000 - Quality Requirements for additional requirements.

C. Mock-up may remain as part of the work.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials and store off the floor in a well-ventilated, weather-tight space.

1.08 FIELD CONDITIONS

A. Do not install wood flooring until wet construction work is complete and permanent heat and air conditioning is installed and operating.

B. Maintain room temperature between 55 degrees F (13 degrees C) and 75 degrees F (24 degrees C) and relative humidity between 35 to 50 percent for a period of seven days prior to delivery of materials to installation space, during installation, and after installation.

C. Acclimate wood flooring materials to installation space a minimum of 48 hours prior to installation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Wood Athletic Flooring:

1. Action Floor Systems; Action Anchor Flex: www.actionfloors.com/#sle.
2. Connor Sports Flooring: www.connorfloor.com/#sle.

B. Adhesives: Types recommended by flooring manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting this work.

B. Cementitious Subfloor Surfaces: Verify that substrates are dry enough and ready for flooring installation by testing for moisture and alkalinity (pH).

1. Obtain instructions if test results are not within limits recommended by flooring material manufacturer and adhesive materials manufacturer.

C. Verify that required floor-mounted utilities are in correct location.

3.02 PREPARATION

A. Prepare substrate to receive wood flooring in accordance with manufacturer's and MFMA instructions.

B. Vacuum clean substrate.

3.03 INSTALLATION

A. Place vapor retarder over concrete surface, overlap seams a minimum of 6 inches (150 mm) and seal with tape.

B. Resilient Underlayment: Install in accordance with manufacturer's instructions.

C. Sleepers with Plywood Subfloor:

1. Place sleepers at 90 degree angle to direction of finished floor; space 12 inches (300 mm) on center. Stagger end joints a minimum of 24 inches (610 mm).

2. Fasten plywood subfloor over sleepers at 45 degree angle to direction of finished floor. Allow minimum 1/4 inch (6 mm) between plywood subfloor edges.

D. Install solid blocking at doorways, under stacked bleachers, under locations of heavy equipment and as shown on drawings, in accordance with flooring manufacturer's recommendations.

E. Wood Flooring:

1. Install in accordance with manufacturer's and MFMA instructions.

2. Lay flooring parallel to length of main playing area. Blind nail or staple to subfloor.

3. Install edge strips at unprotected or exposed edges, and where flooring terminates.

4. Provide 2 inch (24 mm) expansion space at walls and other interruptions.

F. Finishing:

1. Mask off adjacent surfaces before beginning sanding.
2. Sand flooring to smooth even finish with no evidence of sander marks. Remove dust by vacuum.
3. Apply finishes in accordance with floor finish manufacturer's and MFMA instructions.
4. Apply first coat, allow to dry, then buff lightly with recommended pad to remove irregularities. Vacuum clean and wipe with damp, lint-free cloth before applying succeeding coats.
5. Apply last coat of finish.

3.04 CLEANING

A. Clean floor surfaces in accordance with floor finish manufacturer's instructions.

3.05 PROTECTION

A. Prohibit traffic on finished floor for 72 hours after installation.

B. Place protective coverings over finished floors; do not remove coverings until Date of Substantial Completion.

END OF SECTION

SECTION 09 6519
RESILIENT TILE FLOORING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Resilient tile flooring.

B. Installation accessories:

1. Adhesives.
2. Finishes and cleaners.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions: SCS FloorScore certification documentation.

B. Section 01 7419 - Construction Waste Management and Disposal.

C. Section 07 9200 - Joint Sealants.

D. Section 07 9513 - Expansion Joint Cover Assemblies.

1.03 REFERENCE STANDARDS

A. ASTM C109/C109M - Standard Test Method for Compressive Strength of Hydraulic Cement Mortars (Using 2-in. or (50-mm) Cube Specimens) 2016a.

B. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring 2017.

C. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride 2016a.

D. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes 2017.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings.

C. Manufacturer's documentation for flooring and accessories:

1. Technical Data.
2. Installation and Maintenance.
3. Warranty.
4. Reclamation Program.
5. Safety Data Sheets (SDS) for accessories.

D. Selection Samples: Submit manufacturer's complete set of color samples for Architect's initial selection.

E. Verification Samples: Submit two samples, 4 by 4 inch (100 by 100 mm) in size illustrating color and pattern for each resilient flooring product specified.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Upon receipt, immediately remove any shrink-wrap and check materials for damage and that the material is of the correct style, color, quantity and run number(s).

B. Store all materials flat and off of the floor in an acclimatized, weather-tight space between 65 to 85 degrees F (18 to 29 degrees C).

C. Do not double stack pallets.

1.06 FIELD CONDITIONS

A. Acclimate material at jobsite between 65 to 85 degrees F (18 to 29 degrees C) and 35 percent to 85 percent relative humidity for 48 hours prior to installation. Temperature and relative humidity should also be maintained at the same levels during installation, and after installation.

B. Spread unopened cartons no more than 6 cartons high and at least 4 inches (101 mm) apart.

C. Keep away from heating and cooling ducts and direct sunlight.

1.07 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than ten years of documented experience.

B. Installer Qualifications: Aspecta® Five should only be installed by professional flooring contractors that have demonstrated successful installations of jobs in similar size and scope.

1.08 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Aspecta® Five Warranty - 25-Year Limited Non-Prorated Commercial Material Warranty. Coverage includes:

1. 100 percent cost of material for the entire duration of warranty (25 Years).
2. Pro-rated cost of labor (fair-market value) for the first 10 Years.
3. One-time transferability of warranty.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Basis of Design: Metroflor Corporation; Aspecta Five LVT: www.aspectaflooring.com/#sle.

2.02 RESILIENT TILE FLOORING

A. Luxury Vinyl Plank and Tile:

1. Physical Properties:
    a. Construction: Phthalate-free solid plank and tile made from 100 percent virgin vinyl.
2. Manufacturing, Performance, and Safety Standards:
    a. VOC Content Limits: As specified in Section 01 6116.

2.03 ACCESSORIES

A. Moldings, Transition and Edge Strips: Same material as flooring.

B. Adhesives:

1. VOC Content Limits: As specified in Section 01 6116.
2. Products:
    a. Metroflor Corporation; Prevail® 3100 Acrylic Spray Adhesive.
    b. Substitutions: See Section 01 6000 - Product Requirements.

C. Finishes and Cleaners:

1. VOC Content Limits: As specified in Section 01 6116.
2. Products:
    a. Metroflor Corporation; Prevail® Matte Finish.
    b. Substitutions: See Section 01 6000 - Product Requirements.

PART 3 EXECUTION

3.01 EXAMINATION - SEE ALSO SECTION 01 7000.

A. Install flooring and accessories after other operations (including painting) have been completed.

B. Acceptance of Conditions: Carefully examine all installation areas with installer/applicator present, for compliance with requirements affecting work performance.

1. Verify that field measurements, product, adhesives, substrates, surfaces, structural support, tolerances, levelness, temperature, humidity, moisture content level, pH, cleanliness and other conditions are as required by the manufacturer, and ready to receive work.

C. Verify that substrate is contaminant-free, including old adhesives and abatement chemicals.

D. Test substrates as required by manufacturer to verify proper conditions exist.

1. Concrete:
    a. Check for concrete additives such as fly ash, curing compounds, hardeners, or other surface treatments that may prevent proper bonding of floor coverings.
    b. Moisture testing: Perform either the In-Situ Relative Humidity (RH) test (ASTM F2170) or Moisture Vapor Emission Rate (MVER) test (ASTM F1869). Refer to the Manufacturer's Installation Guide/Manual for the maximum allowable substrate moisture content. Substrates above the maximum allowable moisture content will require a moisture mitigation system.
    c. Perform alkalinity testing per ASTM F710 to verify pH level is between 7 to 10.
    d. Check substrate for absorbency per manufacturer's recommendations.
    e. Perform bond testing per ASTM F710 to determine compatibility of adhesive to concrete substrate.
2. Wood:
    a. Shall be dry, clean, structurally sound and installed per underlayment manufacturer’s installation instructions.
    b. Test wood subfloors and underlayment panels using a suitable wood moisture pin-meter. Readings between the subfloor and underlayment panels should be within 3 percent prior to installing the underlayment panels.
    c. The maximum moisture content is 14 percent.
    d. Proceed with installation only after satisfactory conditions have been met.

E. Verify that required floor-mounted utilities are in correct location.

3.02 PREPARATION

A. Prior to installation, the flooring installer should plan and attend an on-site construction meeting with the General Contractor, Architect and Property Owner to review all requirements and inspect site conditions as outlined in the manufacturer's installation document, as well as to review the requirements of ASTM F710 and any relevant building codes, or local, state, or national regulations.

B. Flooring installation should not begin until all site conditions have been assessed, testing has been completed and subfloor conditions have been approved.

C. Prepare per manufacturer's written instructions, Section 01 7000, and as follows:

1. Prepare substrates to ensure proper adhesion of Luxury Vinyl Plank & Tile.

2. Concrete Substrates: Prepare substrate per ASTM F710.

a. Verify that subfloor is clean, flat, smooth, free of dirt, rust, paint, oil, wax or any contaminant that will interfere with adhesive bonding.

b. Mechanically remove substrate coatings that are not compatible with adhesives, such as sealers, curing, hardening or parting compounds, soap, wax, oil, etc.

1) Do not use solvents or adhesive removers.

c. Expansion joints, isolation joints, or other moving joints must be honored and must not be filled with underlayment products or other materials, and floor coverings must not be laid over them. Expansion joint covering systems should be detailed by the architect or engineer, and based upon intended usage and aesthetic considerations.

d. Surface cracks, grooves, depressions, control joints or other non-moving joints, and other irregularities shall be filled or smoothed with high-quality Portland cement or calcium aluminate based patching or underlayment compound for filling or smoothing, or both.

1) Do not skim-coat large areas with patching compound, especially slick power-troweled surfaces.

2) Sand smooth per manufacturer's instructions.

e. Slick surfaces such as power-troweled concrete shall be profiled as needed to allow for a mechanical bond between the adhesive and subfloor.

f. Do not use gypsum-based underlayment products and do not skim coat concrete subfloors.

g. Self-Leveling Underlayments: Provide a dry and smoothly-sanded underlayment substrate ready for installation of Luxury Vinyl Plank & Tile. Underlayment compound shall be moisture-resistant, mildew-resistant, and alkali-resistant and must have a minimum of 3,000 psi compressive strength per ASTM C109/C109M.

h. Lightweight concrete shall have a compressive strength greater than 90 pounds per cubic foot with minimum compression strength of 2,500 psi or greater.

3. Wood Substrates or Panel Type Underlayment:

a. Wood subfloors require an underlayment (double layer construction) with a minimum total thickness of 1 inch (25 mm) and minimum of 18 inches (457 mm) of well ventilated space beneath.

1) Crawl spaces shall be insulated and protected by a vapor barrier.

b. Use minimum 0.25 inch (6 mm) thick APA-rated underlayment grade plywood with a fully sanded face or other underlayment panel that is appropriate for the intended usage. Install and prepare panels and seams according to the manufacturer's instructions.

4. Existing and Other Substrates:

a. Refer to manufacturer's professional installation guide and/or contact manufacturer, as special conditions may exist.

3.03 INSTALLATION

A. Installation per manufacturer's written instructions, Section 01 7000, and as follows:
   1. Layout shall be specified by Architect, Designer or End User.
   2. Follow layout and ensure installation reference lines are square.
   3. Field tiles shall be installed with directional arrows on back aligned in the same direction, or may be installed in quarter-turned fashion.
   4. Check cartons for and do not mix dye lots.
   5. Expansion Joints: Locate expansion, isolation, and other moving joints prior to installation.
      a. Do not fill expansion, isolation, and other moving joints with patching compound nor cover with resilient flooring.
      b. Install movement joint systems per manufacturer's instructions and per Section 07 9200 and Section 07 9513.
   6. Adhesives: Adhere flooring to substrate using the full spread method resulting in a completed installation without gaps, voids, raised edges, bubbles or any other surface imperfections.
      a. Select appropriate adhesive, trowel and follow manufacturer's instructions.
      b. Periodically spot-check transfer of adhesive to back of tile during installation.
      c. Roll floor with a 100 pound roller to ensure proper transfer of adhesive and bonding.
      d. Protect floor from traffic per manufacturer's instructions.
      e. Do not wet mop floor until the adhesive has properly set per written instructions.

3.04 FIELD QUALTITY CONTROL

A. Site tests and inspections per Section 01 4000 and as follows:
   1. Inspect flooring installation for non-conforming work including (but not limited to) the following:
      a. Lack of adhesion.
      b. Bubbles, loose tiles or raised edges.
      c. Dirt and debris underneath flooring.
      d. Excessive gaps.
      e. Improper substrate preparation (as indicated by telegraphing).
      f. Damage to tiles, including: dents/indentations, cuts, cracks, burns or punctures.

B. Non-conforming work per General Conditions and as follows:
   1. Repair or replace damaged material if not acceptable to the Architect.

3.05 CLEANING

A. Waste Management per Section 01 7000 and Section 01 7419, and as follows:
   1. Coordinate material reclamation program with manufacturer, if applicable.
      a. Store and return cartons and pallets to manufacturer or recycler for reuse or recycling.

B. Provide progress cleaning per manufacturer's written instructions, Section 01 7000, and as follows:
   1. Work Areas: Clean areas where work is in progress to the level of cleanliness necessary for proper execution of the work.
      a. Clean and protect completed construction until Date of Substantial Completion.

b. During installation, remove wet adhesive from surface of flooring per manufacturer's instructions.

2. Site: Maintain project site free of waste materials and debris.

C. Provide final cleaning immediately prior to Date of Substantial Completion inspection per manufacturer's written instructions and Section 01 7000.

1. Protection: Remove manufacturer's and other installed protection immediately prior to Date of Substantial Completion inspection, unless required otherwise.

2. Clean floor with a neutral 6-8 pH cleaner.

3.06 MAINTENANCE

A. Initial maintenance per flooring manufacturer’s written instructions and as follows:

1. Allow the adhesive to cure for at least 48 hours prior to wet cleaning the floor.

2. Sweep, dust mop or vacuum the floor thoroughly to remove all loose dirt, dust, grit and debris. Do not use vacuums with a beater bar assembly.

3. Remove any dried adhesive residue from the surface with mineral spirits applied to a clean, lint-free cloth.

4. Damp mop the floor using a cleaner recommended by the flooring manufacturer.

5. If necessary, scrub the floor using an auto scrubber or rotary machine (300 rpm or less) with a cleaner recommended by the flooring manufacturer. Maintain the proper dilution ratio and use the appropriate scrubbing brush or pad.

6. Thoroughly rinse the entire floor with fresh, clean water. Remove the dirty residue with a wet-vacuum or clean mop and allow the floor to dry completely.

3.07 PROTECTION

A. Protect materials from construction operations until Date of Substantial Completion or Owner occupancy, whichever occurs first.

1. Protect finished floor from abuse and damage by using heavy non-staining kraft paper, drop cloths or equivalent. Use additional, non-damaging protective materials as needed.

2. Light foot traffic on a newly installed floor can be permitted after 24 hours.

3. Keep heavy traffic and rolling loads off the newly installed LVT flooring for 48 hours.

4. Protect the floor from rolling loads by covering with protective boards.

END OF SECTION

SECTION 09 6519
RESILIENT TILE FLOORING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Resilient tile flooring.

B. Installation accessories:

1. Adhesives.
2. Finishes and cleaners.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions: SCS FloorScore certification documentation.

B. Section 01 7419 - Construction Waste Management and Disposal.

C. Section 07 9200 - Joint Sealants.

D. Section 07 9513 - Expansion Joint Cover Assemblies.

1.03 REFERENCE STANDARDS

A. ASTM C109/C109M - Standard Test Method for Compressive Strength of Hydraulic Cement Mortars (Using 2-in. or (50-mm) Cube Specimens) 2016a.

B. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring 2017.

C. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride 2016a.

D. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes 2017.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings.

C. Manufacturer's documentation for flooring and accessories:

1. Technical Data.
2. Installation and Maintenance.
3. Warranty.
4. Reclamation Program.
5. Safety Data Sheets (SDS) for accessories.

D. Selection Samples: Submit manufacturer's complete set of color samples for Architect's initial selection.

E. Verification Samples: Submit two samples, 4 by 4 inch (100 by 100 mm) in size illustrating color and pattern for each resilient flooring product specified.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Upon receipt, immediately remove any shrink-wrap and check materials for damage and that the material is of the correct style, color, quantity and run number(s).

B. Store all materials flat and off of the floor in an acclimatized, weather-tight space between 65 to 85 degrees F (18 to 29 degrees C).

C. Do not double stack pallets.

1.06 FIELD CONDITIONS

A. Acclimate material at jobsite between 65 to 85 degrees F (18 to 29 degrees C) and 35 percent to 85 percent relative humidity for 48 hours prior to installation. Temperature and relative humidity should also be maintained at the same levels during installation, and after installation.

B. Spread unopened cartons no more than 6 cartons high and at least 4 inches (101 mm) apart.

C. Keep away from heating and cooling ducts and direct sunlight.

D. If permanent HVAC is not operational, temporary means should be used to maintain the recommended temperature and relative humidity levels.

E. Close areas to traffic during installation of flooring and accessories.

1.07 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than ten years of documented experience.

B. Installer Qualifications: Aspecta® Five should only be installed by professional flooring contractors that have demonstrated successful installations of jobs in similar size and scope.

1.08 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Aspecta® Five Warranty - 25-Year Limited Non-Prorated Commercial Material Warranty. Coverage includes:

1. 100 percent cost of material for the entire duration of warranty (25 Years).
2. Pro-rated cost of labor (fair-market value) for the first 10 Years.
3. One-time transferability of warranty.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Basis of Design: Metroflor Corporation; Aspecta Five LVT: www.aspectaflooring.com/#sle.

B. Substitutions: See Section 01 6000 - Product Requirements.

2.02 RESILIENT TILE FLOORING

A. Luxury Vinyl Plank and Tile:

1. Physical Properties:
    a. Construction: Phthalate-free solid plank and tile made from 100 percent virgin vinyl.
2. Manufacturing, Performance, and Safety Standards:
    a. VOC Content Limits: As specified in Section 01 6116.

2.03 ACCESSORIES

A. Moldings, Transition and Edge Strips: Same material as flooring.

B. Adhesives:

1. VOC Content Limits: As specified in Section 01 6116.

2. Products:
    a. Metroflor Corporation; Prevail® 3100 Acrylic Spray Adhesive.
    b. Substitutions: See Section 01 6000 - Product Requirements.

C. Finishes and Cleaners:
1. VOC Content Limits: As specified in Section 01 6116.
2. Products:
    a. Metroflor Corporation; Prevail® Matte Finish.
    b. Substitutions: See Section 01 6000 - Product Requirements.

PART 3 EXECUTION

3.01 EXAMINATION - SEE ALSO SECTION 01 7000.

A. Install flooring and accessories after other operations (including painting) have been completed.

B. Acceptance of Conditions: Carefully examine all installation areas with installer/applicator present, for compliance with requirements affecting work performance.
1. Verify that field measurements, product, adhesives, substrates, surfaces, structural support, tolerances, levelness, temperature, humidity, moisture content level, pH, cleanliness and other conditions are as required by the manufacturer, and ready to receive work.

C. Verify that substrate is contaminant-free, including old adhesives and abatement chemicals.

D. Test substrates as required by manufacturer to verify proper conditions exist.
1. Concrete:
    a. Check for concrete additives such as fly ash, curing compounds, hardeners, or other surface treatments that may prevent proper bonding of floor coverings.
    b. Moisture testing: Perform either the In-Situ Relative Humidity (RH) test (ASTM F2170) or Moisture Vapor Emission Rate (MVER) test (ASTM F1869). Refer to the Manufacturer's Installation Guide/Manual for the maximum allowable substrate moisture content. Substrates above the maximum allowable moisture content will require a moisture mitigation system.
    c. Perform alkalinity testing per ASTM F710 to verify pH level is between 7 to 10.
    d. Check substrate for absorbency per manufacturer's recommendations.
    e. Perform bond testing per ASTM F710 to determine compatibility of adhesive to concrete substrate.
2. Wood:
    a. Shall be dry, clean, structurally sound and installed per underlayment manufacturer’s installation instructions.
    b. Test wood subfloors and underlayment panels using a suitable wood moisture pin-meter. Readings between the subfloor and underlayment panels should be within 3 percent prior to installing the underlayment panels.
    c. The maximum moisture content is 14 percent.
    d. Proceed with installation only after satisfactory conditions have been met.

E. Verify that required floor-mounted utilities are in correct location.

3.02 PREPARATION

A. Prior to installation, the flooring installer should plan and attend an on-site construction meeting with the General Contractor, Architect and Property Owner to review all requirements and inspect site conditions as outlined in the manufacturer's installation document, as well as to review the requirements of ASTM F710 and any relevant building codes, or local, state, or national regulations.

B. Flooring installation should not begin until all site conditions have been assessed, testing has been completed and subfloor conditions have been approved.

C. Prepare per manufacturer's written instructions, Section 01 7000, and as follows:

1. Prepare substrates to ensure proper adhesion of Luxury Vinyl Plank & Tile.
2. Concrete Substrates: Prepare substrate per ASTM F710.
    a. Verify that subfloor is clean, flat, smooth, free of dirt, rust, paint, oil, wax or any contaminant that will interfere with adhesive bonding.
    b. Mechanically remove substrate coatings that are not compatible with adhesives, such as sealers, curing, hardening or parting compounds, soap, wax, oil, etc.
        1) Do not use solvents or adhesive removers.
    c. Expansion joints, isolation joints, or other moving joints must be honored and must not be filled with underlayment products or other materials, and floor coverings must not be laid over them. Expansion joint covering systems should be detailed by the architect or engineer, and based upon intended usage and aesthetic considerations.
    d. Surface cracks, grooves, depressions, control joints or other non-moving joints, and other irregularities shall be filled or smoothed with high-quality Portland cement or calcium aluminate based patching or underlayment compound for filling or smoothing, or both.
        1) Do not skim-coat large areas with patching compound, especially slick power-troweled surfaces.
        2) Sand smooth per manufacturer's instructions.
    e. Slick surfaces such as power-troweled concrete shall be profiled as needed to allow for a mechanical bond between the adhesive and subfloor.
    f. Do not use gypsum-based underlayment products and do not skim coat concrete subfloors.
    g. Self-Leveling Underlayments: Provide a dry and smoothly-sanded underlayment substrate ready for installation of Luxury Vinyl Plank & Tile. Underlayment compound shall be moisture-resistant, mildew-resistant, and alkali-resistant and must have a minimum of 3,000 psi compressive strength per ASTM C109/C109M.
    h. Lightweight concrete shall have a compressive strength greater than 90 pounds per cubic foot with minimum compression strength of 2,500 psi or greater.
3. Wood Substrates or Panel Type Underlayment:
    a. Wood subfloors require an underlayment (double layer construction) with a minimum total thickness of 1 inch (25 mm) and minimum of 18 inches (457 mm) of well ventilated space beneath.
        1) Crawl spaces shall be insulated and protected by a vapor barrier.
    b. Use minimum 0.25 inch (6 mm) thick APA-rated underlayment grade plywood with a fully sanded face or other underlayment panel that is appropriate for the intended usage. Install and prepare panels and seams according to the manufacturer's instructions.
4. Existing and Other Substrates:

a. Refer to manufacturer's professional installation guide and/or contact manufacturer, as special conditions may exist.

3.03 INSTALLATION

A. Installation per manufacturer's written instructions, Section 01 7000, and as follows:

1. Layout shall be specified by Architect, Designer or End User.
2. Follow layout and ensure installation reference lines are square.
3. Field tiles shall be installed with directional arrows on back aligned in the same direction, or may be installed in quarter-turned fashion.
4. Check cartons for and do not mix dye lots.
5. Expansion Joints: Locate expansion, isolation, and other moving joints prior to installation.
   a. Do not fill expansion, isolation, and other moving joints with patching compound nor cover with resilient flooring.
   b. Install movement joint systems per manufacturer's instructions and per Section 07 9200 and Section 07 9513.
6. Adhesives: Adhere flooring to substrate using the full spread method resulting in a completed installation without gaps, voids, raised edges, bubbles or any other surface imperfections.
   a. Select appropriate adhesive, trowel and follow manufacturer's instructions.
   b. Periodically spot-check transfer of adhesive to back of tile during installation.
   c. Roll floor with a 100 pound roller to ensure proper transfer of adhesive and bonding.
   d. Protect floor from traffic per manufacturer's instructions.
   e. Do not wet mop floor until the adhesive has properly set per written instructions.

3.04 FIELD QUALTITY CONTROL

A. Site tests and inspections per Section 01 4000 and as follows:

1. Inspect flooring installation for non-conforming work including (but not limited to) the following:
   a. Lack of adhesion.
   b. Bubbles, loose tiles or raised edges.
   c. Dirt and debris underneath flooring.
   d. Excessive gaps.
   e. Improper substrate preparation (as indicated by telegraphing).
   f. Damage to tiles, including: dents/indentations, cuts, cracks, burns or punctures.

B. Non-conforming work per General Conditions and as follows:

1. Repair or replace damaged material if not acceptable to the Architect.

3.05 CLEANING

A. Waste Management per Section 01 7000 and Section 01 7419, and as follows:

1. Coordinate material reclamation program with manufacturer, if applicable.
   a. Store and return cartons and pallets to manufacturer or recycler for reuse or recycling.

B. Provide progress cleaning per manufacturer's written instructions, Section 01 7000, and as follows:

1. Work Areas: Clean areas where work is in progress to the level of cleanliness necessary for proper execution of the work.
    a. Clean and protect completed construction until Date of Substantial Completion.
    b. During installation, remove wet adhesive from surface of flooring per manufacturer's instructions.
2. Site: Maintain project site free of waste materials and debris.

C. Provide final cleaning immediately prior to Date of Substantial Completion inspection per manufacturer's written instructions and Section 01 7000.
1. Protection: Remove manufacturer's and other installed protection immediately prior to Date of Substantial Completion inspection, unless required otherwise.
2. Clean floor with a neutral 6-8 pH cleaner.

3.06 MAINTENANCE

A. Initial maintenance per flooring manufacturer’s written instructions and as follows:
1. Allow the adhesive to cure for at least 48 hours prior to wet cleaning the floor.
2. Sweep, dust mop or vacuum the floor thoroughly to remove all loose dirt, dust, grit and debris. Do not use vacuums with a beater bar assembly.
3. Remove any dried adhesive residue from the surface with mineral spirits applied to a clean, lint-free cloth.
4. Damp mop the floor using a cleaner recommended by the flooring manufacturer.
5. If necessary, scrub the floor using an auto scrubber or rotary machine (300 rpm or less) with a cleaner recommended by the flooring manufacturer. Maintain the proper dilution ratio and use the appropriate scrubbing brush or pad.
6. Thoroughly rinse the entire floor with fresh, clean water. Remove the dirty residue with a wet-vacuum or clean mop and allow the floor to dry completely.

3.07 PROTECTION

A. Protect materials from construction operations until Date of Substantial Completion or Owner occupancy, whichever occurs first.
1. Protect finished floor from abuse and damage by using heavy non-staining kraft paper, drop cloths or equivalent. Use additional, non-damaging protective materials as needed.
2. Light foot traffic on a newly installed floor can be permitted after 24 hours.
3. Keep heavy traffic and rolling loads off the newly installed LVT flooring for 48 hours.
4. Protect the floor from rolling loads by covering with protective boards.

END OF SECTION

SECTION 09 6566
RESILIENT ATHLETIC FLOORING

*{FONT-FAMILY:ARIAL;FONT-SIZE:10PT;}

PART 1 GENERAL

2.01 SECTION INCLUDES

A. Rubber sheet flooring, adhesively installed.

B. Vinyl sheet flooring, adhesively installed.

C. Interlocking, loose-laid rubber tile.

D. Painted game lines.

E. Accessories.

2.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 03 3000 - Cast-in-Place Concrete: Restrictions on curing compounds for concrete slabs and floors.

C. Section 03 5400 - Cast Underlayment.

D. Section 09 0561 - Common Work Results for Flooring Preparation: Independent agency testing of concrete slabs, removal of existing floor coverings, cleaning, and preparation.

E. Section 09 6500 - Resilient Flooring.

2.03 REFERENCE STANDARDS

A. DIN EN 14904 - Surfaces for Sports Areas – Indoor Surfaces for Multi-Sports Use – Specification 2006.

2.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's printed data sheets for products specified.

C. Shop Drawings: Fabrication and installation details, and layout, colors, and widths of game lines and equipment locations.

D. Selection Samples: Manufacturer's color charts for flooring materials specified and game line paints, indicating full range of colors and textures available.

E. Test Reports: Submit test reports showing compliance with DIN EN 14904.

F. Sustainable Design Submittal: Submit VOC content documentation for flooring and adhesives.

2.05 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer certified in writing by the flooring manufacturer to be qualified for installation of specified flooring system.

B. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of the type specified in this section.

2.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to project site in unopened containers clearly labeled with manufacturer's name and identification of contents.

B. Store materials in dry and clean location until needed for installation. During installation, handle in a manner that will prevent marring and soiling of finished surfaces.

2.07 FIELD CONDITIONS

A. Maintain temperature in spaces to receive adhesively installed resilient flooring within range of 70 to 95 degrees F (21 to 35 degrees C) for not less than 48 hours before the beginning of installation and for not less than 48 hours after installation has been completed. Subsequently, do not allow temperature in installed spaces to drop below 50 degrees F (10 degrees C) or to go above 100 degrees F (38 degrees C).

PART 2 PRODUCTS

3.01 PREFORMED ATHLETIC FLOORING

A. Manufacturers: All products by the same manufacturer.

1. Burke Flooring; [____]: www.burkeflooring.com/#sle.
2. [_____].
3. Substitutions: See Section 01 6000 - Product Requirements.

B. Rubber Sheet Flooring: Recycled SBR (styrene butadiene rubber) and colored EPDM granules with urethane binder, lengths to avoid transverse seams.

1. Thickness: Minimum 1/4 inch (6.35 mm).
2. Sheet Width: Minimum 48 inches (1220 mm).
3. Tensile Strength: Minimum 150 psi (1.0 MPa), per ASTM D412.
4. Color: Black.

C. Vinyl Sheet Flooring:

1. Wearing Surface: Pure polyvinyl chloride, mechanically extruded and uniformly resilient material with uniform color throughout thickness.
2. Backing: None.
3. Sheet Thickness: Minimum 5/32 inch (4.0 mm).
4. Sheet Width: Minimum 48 inches (1220 mm).
5. Sheet Lengths: As necessary to minimize transverse seams.
6. Tensile Strength: Minimum 1000 psi (6.9 MPa), per ASTM D412.
7. Durometer Hardness, Type A: Minimum of 65, when tested in accordance with ASTM D2240.
8. Seaming Method: Welding with heat or chemical.
9. Surface Texture: Smooth.
10. Color: As selected from manufacturer's standards.

D. Rubber Tile Flooring: Recycled SBR (styrene butadiene rubber) and colored EPDM granules with urethane binder.

1. Thickness: Minimum 5/16 inch (8.0 mm).
2. Size: Nominal [__] inch ([___] mm) square.
3. Tensile Strength: Minimum 150 psi (1.0 MPa), per ASTM D412.
4. Surface Texture: Smooth.

5. Color: As selected from manufacturer's standards.
6. Products:
    a. Burke Flooring; Ecofitness Athletic Rubber Flooring: www.burkeflooring.com/#sle.
    b. Dinoflex Group; Next Step High Impact: www.dinoflex.com/#sle.
    c. [_____].

E. Rubber Mat: Recycled SBR (styrene butadiene rubber) and colored EPDM granules.
1. Products:
    a. U.S. Rubber Recycling, Inc; Survivor Crossfit Mats: www.usrubber.com/#sle.
    b. [_____].
    c. [_____].
    d. Substitutions: See Section 01 6000 - Product Requirements.

3.02 ACCESSORIES

A. Leveling Compound: Latex-modified cement formulation as recommended by flooring manufacturer for substrate conditions.

B. Flooring Adhesive: Waterproof; types recommended by flooring manufacturer.

PART 3 EXECUTION

4.01 EXAMINATION

A. Examine substrates for conditions detrimental to installation of athletic flooring. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Verify that surfaces are flat to tolerances acceptable to flooring manufacturer, free of cracks that might telegraph through flooring, clean, dry, and free of curing compounds, surface hardeners, and other chemicals that might interfere with bonding of athletic flooring to substrate.

C. Cementitious Sub-floor Surfaces: Verify that substrates are dry enough and ready for resilient flooring installation by testing for moisture and pH.
1. Conduct tests by an independent testing agency acceptable to Owner.
    a. Acceptable Testing Agencies:
        1) Independent Floor Testing and Inspection, Inc. (IFTI): www.ifti.com/#sle.
        2) Other testing agency approved by Owner.
2. Obtain instructions if test results are not within limits recommended by resilient flooring manufacturer and adhesive materials manufacturer.

4.02 PREPARATION

A. Prepare floor substrates for installation of flooring in accordance with Section 09 0561.

4.03 INSTALLATION

A. Starting installation constitutes acceptance of sub-floor conditions.

B. Install in accordance with manufacturer's written instructions.

C. Resilient Sheet Flooring:
1. Unroll flooring and allow to relax before beginning installation.

2. Mix adhesive thoroughly and apply to substrate with notched trowel. Roll flooring into fresh adhesive, overlapping end seams and double cutting, butting factory edges and compression fitting.
3. Roll entire flooring surface with steel roller to assure adhesion to substrate and eliminate air bubbles.
4. Immediately remove any adhesive from flooring surface, using chemical recommended by flooring manufacturer.
5. Weld seams using techniques and equipment recommended by manufacturer.
6. Lay out game lines using tape and taping machine approved by flooring manufacturer. Apply game line paint with roller, and allow to dry before removing tape.
7. Apply transparent top coat over flooring if recommended by manufacturer, to achieve a uniform finished appearance.

D. Rubber Tile Flooring:

1. Lay out center lines in spaces to receive tile flooring, based on location of principal walls. Start tile installation from center, and adjust as necessary to avoid tiles less than one-half width at perimeter.
2. Lay tiles square with room axis, matching for color and pattern by selecting from cartons and mixing as recommended by manufacturer.
3. Spread only enough adhesive to permit installation of materials before initial set.
4. Fit joints and butt seams tightly; press with heavy roller to attain full adhesion.
5. Install loose-laid tile in a staggered pattern, fit interlocking edges tightly.

4.04 CLEANING

A. Clean flooring using methods recommended by manufacturer.

4.05 PROTECTION

A. Protect finished athletic flooring from construction traffic to ensure that it is without damage upon Date of Substantial Completion.

E. Section 09 6500 - Resilient Flooring.

1.03 REFERENCE STANDARDS

A. DIN EN 14904 - Surfaces for Sports Areas – Indoor Surfaces for Multi-Sports Use – Specification 2006.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's printed data sheets for products specified.

C. Shop Drawings: Fabrication and installation details, and layout, colors, and widths of game lines and equipment locations.

D. Selection Samples: Manufacturer's color charts for flooring materials specified and game line paints, indicating full range of colors and textures available.

E. Verification Samples: Actual flooring material specified, not less than 12 inch (305 mm) square, mounted on solid backing.

1. Include samples of game lines, illustrating colors selected.

F. Test Reports: Submit test reports showing compliance with DIN EN 14904.

G. Sustainable Design Submittal: Submit VOC content documentation for flooring and adhesives.

H. Concrete Sub-floor Test Report: Submit a copy of the moisture and alkalinity (pH) test reports.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer certified in writing by the flooring manufacturer to be qualified for installation of specified flooring system.

B. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of the type specified in this section.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to project site in unopened containers clearly labeled with manufacturer's name and identification of contents.

B. Store materials in dry and clean location until needed for installation. During installation, handle in a manner that will prevent marring and soiling of finished surfaces.

1.07 FIELD CONDITIONS

A. Maintain temperature in spaces to receive adhesively installed resilient flooring within range of 70 to 95 degrees F (21 to 35 degrees C) for not less than 48 hours before the beginning of installation and for not less than 48 hours after installation has been completed. Subsequently, do not allow temperature in installed spaces to drop below 50 degrees F (10 degrees C) or to go above 100 degrees F (38 degrees C).

PART 2 PRODUCTS

2.01 PREFORMED ATHLETIC FLOORING

A. Manufacturers: All products by the same manufacturer.

1. Burke Flooring: www.burkeflooring.com/#sle.
2. Substitutions: See Section 01 6000 - Product Requirements.

B. Rubber Sheet Flooring: Recycled SBR (styrene butadiene rubber) and colored EPDM granules with urethane binder, lengths to avoid transverse seams.

1. Thickness: Minimum 1/4 inch (6.35 mm).
2. Sheet Width: Minimum 48 inches (1220 mm).
3. Tensile Strength: Minimum 150 psi (1.0 MPa), per ASTM D412.
4. Color: Black.

C. Vinyl Sheet Flooring:

1. Wearing Surface: Pure polyvinyl chloride, mechanically extruded and uniformly resilient material with uniform color throughout thickness.
2. Backing: None.
3. Sheet Thickness: Minimum 5/32 inch (4.0 mm).
4. Sheet Width: Minimum 48 inches (1220 mm).
5. Sheet Lengths: As necessary to minimize transverse seams.
6. Tensile Strength: Minimum 1000 psi (6.9 MPa), per ASTM D412.
7. Durometer Hardness, Type A: Minimum of 65, when tested in accordance with ASTM D2240.
8. Seaming Method: Welding with heat or chemical.
9. Surface Texture: Smooth.
10. Color: As selected from manufacturer's standards.

D. Rubber Tile Flooring: Recycled SBR (styrene butadiene rubber) and colored EPDM granules with urethane binder.

1. Thickness: Minimum 5/16 inch (8.0 mm).
2. Tensile Strength: Minimum 150 psi (1.0 MPa), per ASTM D412.
3. Surface Texture: Smooth.
4. Color: As selected from manufacturer's standards.

5. Products:
    a. Burke Flooring; Ecofitness Athletic Rubber Flooring: www.burkeflooring.com/#sle.
    b. Dinoflex Group; Next Step High Impact: www.dinoflex.com/#sle.

E. Rubber Mat: Recycled SBR (styrene butadiene rubber) and colored EPDM granules.
1. Products:
    a. U.S. Rubber Recycling, Inc; Survivor Crossfit Mats: www.usrubber.com/#sle.
    b. Substitutions: See Section 01 6000 - Product Requirements.

2.02 ACCESSORIES

A. Leveling Compound: Latex-modified cement formulation as recommended by flooring manufacturer for substrate conditions.

B. Flooring Adhesive: Waterproof; types recommended by flooring manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates for conditions detrimental to installation of athletic flooring. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Verify that surfaces are flat to tolerances acceptable to flooring manufacturer, free of cracks that might telegraph through flooring, clean, dry, and free of curing compounds, surface hardeners, and other chemicals that might interfere with bonding of athletic flooring to substrate.

C. Cementitious Sub-floor Surfaces: Verify that substrates are dry enough and ready for resilient flooring installation by testing for moisture and pH.
1. Conduct tests by an independent testing agency acceptable to Owner.
    a. Acceptable Testing Agencies:
        1) Independent Floor Testing and Inspection, Inc. (IFTI): www.ifti.com/#sle.
        2) Other testing agency approved by Owner.
2. Obtain instructions if test results are not within limits recommended by resilient flooring manufacturer and adhesive materials manufacturer.

3.02 PREPARATION

A. Prepare floor substrates for installation of flooring in accordance with Section 09 0561.

3.03 INSTALLATION

A. Starting installation constitutes acceptance of sub-floor conditions.

B. Install in accordance with manufacturer's written instructions.

C. Resilient Sheet Flooring:
1. Unroll flooring and allow to relax before beginning installation.
2. Mix adhesive thoroughly and apply to substrate with notched trowel. Roll flooring into fresh adhesive, overlapping end seams and double cutting, butting factory edges and compression fitting.
3. Roll entire flooring surface with steel roller to assure adhesion to substrate and eliminate air bubbles.
4. Immediately remove any adhesive from flooring surface, using chemical recommended by flooring manufacturer.

5. Weld seams using techniques and equipment recommended by manufacturer.
6. Lay out game lines using tape and taping machine approved by flooring manufacturer. Apply game line paint with roller, and allow to dry before removing tape.
7. Apply transparent top coat over flooring if recommended by manufacturer, to achieve a uniform finished appearance.

D. Rubber Tile Flooring:

1. Lay out center lines in spaces to receive tile flooring, based on location of principal walls. Start tile installation from center, and adjust as necessary to avoid tiles less than one-half width at perimeter.
2. Lay tiles square with room axis, matching for color and pattern by selecting from cartons and mixing as recommended by manufacturer.
3. Spread only enough adhesive to permit installation of materials before initial set.
4. Fit joints and butt seams tightly; press with heavy roller to attain full adhesion.
5. Install loose-laid tile in a staggered pattern, fit interlocking edges tightly.

3.04 CLEANING

A. Clean flooring using methods recommended by manufacturer.

3.05 PROTECTION

A. Protect finished athletic flooring from construction traffic to ensure that it is without damage upon Date of Substantial Completion.

END OF SECTION

SECTION 09 6623
RESINOUS MATRIX TERRAZZO FLOORING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Epoxy matrix terrazzo with ground and polished finish.

B. Divider strips.

C. Recessed mat frames within terrazzo field.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Restrictions.

B. Section 03 3000 - Cast-in-Place Concrete: Concrete subfloor with steel trowel finish.

C. Section 05 5100 - Metal Stairs: Formed steel stair pans.

D. Section 07 9200 - Joint Sealants: Sealing joints between terrazzo work and adjacent construction and fixtures.

E. Section 07 9513 - Expansion Joint Cover Assemblies: Building expansion joint covers.

F. Section 09 6700 - Fluid-Applied Flooring: Epoxy matrix flooring that is not ground.

1.03 REFERENCE STANDARDS

A. ICRI 310.2R - Selecting and Specifying Concrete Surface Preparation for Sealers, Coatings, Polymer Overlays, and Concrete Repair 2013.

B. NTMA (GRAD) - Aggregate Gradation Standards Current Edition.

C. NTMA (EPOXY) - Epoxy Terrazzo Specifications Current Edition.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data for divider strips, control joint strips, expansion joints and sealer; include printed copy of current NTMA recommendations for type of terrazzo specified.

C. Shop Drawings: Indicate divider strip and control and expansion joint layout, and details of adjacent components. For precast units, detail profile and anchorage requirements.

D. Samples: Submit two samples, by [8" x 8"] inch ([203 x 203] mm) in size illustrating color, chip size and variation, chip gradation, matrix color, and typical divider strip.

E. Manufacturer's Qualification Statement.

F. Installer's Qualification Statement.

1.05 QUALITY ASSURANCE

A. Perform work in accordance with NTMA recommendations as posted at their web site at www.ntma.com.

B. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section.

1. Associate member firm of the National Terrazzo and Mosaic Association, Inc.

C. Installer Qualifications: Company specializing in performing the type of work specified in this section.

1. Contractor member of the National Terrazzo and Mosaic Association, Inc.

1.06 MOCK-UP

A. Construct mock-up of terrazzo illustrating appearance of finished work in each configuration required. Size mock-up to be not less than 3 by 3 feet (1 by 1 m).

B. Locate where directed.

C. Mock-up may remain as part of the work.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Store terrazzo materials in a dry, secure area.

B. Maintain minimum temperature of 60 degrees F (16 degrees C).

C. Keep products away from fire or open flame.

1.08 FIELD CONDITIONS

A. Do not install terrazzo when temperature is below 50 degrees F (10 degrees C) or above 90 degrees F (32 degrees C).

B. Maintain temperature within specified range 24 hours before, during, and 72 hours after installation of flooring.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Basis of Design - Resinous Matrix Terrazzo Flooring: Key Resin; Key Epoxy Terrazzo System: www.keyresin.com/#sle.

B. Other Acceptable Manufacturers - Resinous Matrix Terrazzo Flooring:

1. Sherwin-Williams Company: General Polymers Brand: www.generalpolymers.com/#sle.
2. Sika Corporation; Sikafloor Terrazzo: www.sikafloorusa.com/#sle.
3. Terrazzco; TERRAZZCO Epoxy Terrazzo System, a brand of Concord Terrazzo Company, Inc: www.terrazzco.com/#sle.
4. Substitutions: See Section 01 6000 - Product Requirements.

2.02 EPOXY MATRIX TERRAZZO APPLICATIONS

A. Floors:

1. Thickness: 3/8 inch (9 mm), nominal.
2. Aggregate Type: Marble chips.

B. Wall Base:

1. Thickness: Same as floors.
2. Aggregate Type and Size: Same as floors.

C. Stairs - :

1. Thickness: Same as floors.
2. Aggregate Type and Size: Same as floors.

2.03 MATERIALS

A. Epoxy Matrix Terrazzo: Aggregate and matrix mix applied to substrate, troweled flat, and ground smooth.

1. Mix Proportions: As required to achieve appearance specified.
2. Mix Proportions: Three parts aggregate chip; one part aggregate dust; one part matrix.

B. Matrix: Two component resin and epoxy hardener with mineral filler and color pigment, non-volatile, thermo-setting.

1. Products:

a. Terrazzco; EZpour Epoxy #158 a brand of Concord Terrazzo Company, Inc: www.terrazzco.com/#sle.

b. Terrazzo & Marble Supply Companies; Terroxy Epoxy Matrix: www.tmsupply.com/#sle.

c. Substitutions: See Section 01 6000 - Product Requirements.

C. Aggregate: Type as indicated; sized in accordance with NTMA aggregate gradation standards; color(s) as indicated, uniform in color.

1. Products - Glass Chips:

a. American Specialty Glass: www.americanspecialtyglass.com/#sle.

b. [_____].

c. [_____].

D. Finishing Grout: Epoxy, color to match terrazzo matrix.

2.04 ACCESSORIES

A. Divider Strips: 1/8 inch (3 mm) thick zinc exposed top strip, zinc coated steel concealed bottom strip, with anchoring features.

B. Control Joint Strips: 1/8 inch (3 mm) nominal width zinc exposed top strips, zinc coated steel concealed bottom strips, 1/8 inch (3 mm) wide neoprene filler strip between vertical strips, with anchoring features.

C. Divider and Control Joint Strip Height: To suit thickness of terrazzo topping, with allowance for grinding.

D. Base Cap, Base Divider Strip, and Separator Strip: Match divider strips.

E. Non-Slip Inserts: Provide channel-shaped inserts filled with a mixture of resin and fine, abrasive aggregate.

F. Sealer: Colorless, non-yellowing, penetrating liquid type to completely seal matrix surface; not detrimental to terrazzo components.

1. Products:

a. Terrazzo & Marble Supply Companies; T-Rx: www.tmsupply.com/#sle.

b. Substitutions: See Section 01 6000 - Product Requirements.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that sub-floor surfaces are smooth and flat within the tolerances specified for that type of work and are ready to receive terrazzo.

B. Verify that wall surfaces are smooth and flat within the tolerances specified for that type of work, are dust-free, and are ready to receive terrazzo.

C. Verify that sub-floor surfaces are dust-free and free of substances that could impair bonding of materials to sub-floor surfaces.

D. Verify that wood sub-floors have 12 percent maximum moisture content.

E. Verify that concrete sub-floor surfaces are ready for terrazzo installation by testing for moisture vapor emission, internal relative humidity and alkalinity; obtain instructions if test results are not within limits

recommended by terrazzo materials manufacturer.

F. Verify that required floor-mounted utilities are in correct location.

3.02 PREPARATION

A. Clean substrate of foreign matter.

B. Prepare concrete subfloor by mechanically abrading surface in accordance with manufacturer's instructions.

C. Prepare concrete surfaces according to ICRI 310.2R.

D. Apply primer in accordance with manufacturer's instructions.

3.03 INSTALLATION

A. Saw cut substrate to install divider and control joint strips.

B. Install control joint strips straight and flat to locations indicated.

C. Install divider strips according to pattern approved on shop drawings.

D. Install non-slip inserts in floors and stair treads where indicated.

E. Install base and border divider and control joint strips to match floor pattern.

F. Install terminating cap strip at top of base; attach securely to wall substrate.

G. Place terrazzo mix over substrate to thickness indicated.

H. Anchor precast units as indicated on drawings.

I. Install precast units using specified setting material.

3.04 FINISHING

A. Finish terrazzo to NTMA requirements.

B. Grind terrazzo surfaces with power disc machine; sequence with coarse to fine grit abrasive, using a wet method or using a dry grinder with vacuum to control dust.

C. Apply grout to fill voids exposed from grinding.

D. Remove grout coat by grinding, using a fine grit abrasive.

3.05 TOLERANCES

A. Maximum Variation from Flat Surface: 1/4 inch in 10 feet (6 mm in one m).

3.06 CLEANING

A. Immediately after terrazzo has dried, apply sealer in accordance with manufacturer's instructions.

B. Polish surfaces in accordance with manufacturer's instructions.

3.07 PROTECTION

A. Protect finished terrazzo from damage due to subsequent construction until Date of Substantial Completion.

END OF SECTION

SECTION 09 6623
RESINOUS MATRIX TERRAZZO FLOORING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Epoxy matrix terrazzo with ground and polished finish.

B. Divider strips.

C. Recessed mat frames within terrazzo field.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Restrictions.

    1. Products - Glass Chips:
        a. American Specialty Glass: www.americanspecialtyglass.com/#sle.

D. Finishing Grout: Epoxy, color to match terrazzo matrix.

2.04 ACCESSORIES

A. Divider Strips: 1/8 inch (3 mm) thick zinc exposed top strip, zinc coated steel concealed bottom strip, with anchoring features.

B. Control Joint Strips: 1/8 inch (3 mm) nominal width zinc exposed top strips, zinc coated steel concealed bottom strips, 1/8 inch (3 mm) wide neoprene filler strip between vertical strips, with anchoring features.

C. Divider and Control Joint Strip Height: To suit thickness of terrazzo topping, with allowance for grinding.

D. Base Cap, Base Divider Strip, and Separator Strip: Match divider strips.

E. Non-Slip Inserts: Provide channel-shaped inserts filled with a mixture of resin and fine, abrasive aggregate.

F. Anchors and Reinforcement for Precast Units: As recommended by manufacturer for type of installation.

G. Sealer: Colorless, non-yellowing, penetrating liquid type to completely seal matrix surface; not detrimental to terrazzo components.
    1. Products:
        a. Terrazzo & Marble Supply Companies; T-Rx: www.tmsupply.com/#sle.
        b. Substitutions: See Section 01 6000 - Product Requirements.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that sub-floor surfaces are smooth and flat within the tolerances specified for that type of work and are ready to receive terrazzo.

B. Verify that wall surfaces are smooth and flat within the tolerances specified for that type of work, are dust-free, and are ready to receive terrazzo.

C. Verify that sub-floor surfaces are dust-free and free of substances that could impair bonding of materials to sub-floor surfaces.

D. Verify that wood sub-floors have 12 percent maximum moisture content.

E. Verify that concrete sub-floor surfaces are ready for terrazzo installation by testing for moisture vapor emission, internal relative humidity and alkalinity; obtain instructions if test results are not within limits recommended by terrazzo materials manufacturer.

F. Verify that required floor-mounted utilities are in correct location.

3.02 PREPARATION

A. Clean substrate of foreign matter.

B. Prepare concrete subfloor by mechanically abrading surface in accordance with manufacturer's instructions.

C. Prepare concrete surfaces according to ICRI 310.2R.

D. Apply primer in accordance with manufacturer's instructions.

3.03 INSTALLATION

A. Saw cut substrate to install divider and control joint strips.

B. Install control joint strips straight and flat to locations indicated.

C. Install divider strips according to pattern approved on shop drawings.

D. Install non-slip inserts in floors and stair treads where indicated.

E. Install base and border divider and control joint strips to match floor pattern.

F. Install terminating cap strip at top of base; attach securely to wall substrate.

G. Place terrazzo mix over substrate to thickness indicated.

H. Anchor precast units as indicated on drawings.

I. Install precast units using specified setting material.

3.04 FINISHING

A. Finish terrazzo to NTMA requirements.

B. Produce terrazzo finish surface to match approved mock-up, with 70 percent chip exposed.

C. Grind terrazzo surfaces with power disc machine; sequence with coarse to fine grit abrasive, using a wet method or using a dry grinder with vacuum to control dust.

D. Apply grout to fill voids exposed from grinding.

E. Remove grout coat by grinding, using a fine grit abrasive.

F. Hand grind vertical and curved surfaces similarly.

3.05 TOLERANCES

A. Maximum Variation from Flat Surface: 1/4 inch in 10 feet (6 mm in one m).

B. Maximum Variation from Level (Except Surfaces Sloping to Drain): 1/8 inch (3 mm).

3.06 CLEANING

A. Scrub and clean terrazzo surfaces with neutral pH cleaner in accordance with manufacturer's instructions. Let dry.

B. Immediately after terrazzo has dried, apply sealer in accordance with manufacturer's instructions.

C. Polish surfaces in accordance with manufacturer's instructions.

3.07 PROTECTION

A. Protect finished terrazzo from damage due to subsequent construction until Date of Substantial Completion.

END OF SECTION

SECTION 09 6813
TILE CARPETING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Carpet tile, fully adhered.

B. Removal of existing carpet tile.

C. Matching roll carpet for direct glue installation on .

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 01 7419 - Construction Waste Management and Disposal: Reclamation/Recycling of .

C. Section 09 0561 - Common Work Results for Flooring Preparation: Independent agency testing of concrete slabs, removal of existing floor coverings, cleaning, and preparation.

D. Section 09 6816 - Sheet Carpeting: Broadloom carpet.

E. Section 22 1006 - Plumbing Piping Specialties: Plumbing floor cover plate with recess for carpet.

F. Section 26 0519.13 - Undercarpet Electrical Power Cables: Undercarpet flat wiring.

1.03 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on specified products, describing physical and performance characteristics; sizes, patterns, colors available, and method of installation.

C. Shop Drawings: Indicate layout of joints.

D. Samples: Submit two carpet tiles illustrating color and pattern design for each carpet color selected.

E. Sustainable Design Submittal: Submit VOC content documentation for adhesives.

F. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

G. Maintenance Data: Include maintenance procedures, recommended maintenance materials, and suggested schedule for cleaning.

H. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.

2. Extra Carpet Tiles: Quantity equal to 5 percent of total installed of each color and pattern installed.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing specified carpet tile with minimum three years documented experience.

B. Installer Qualifications: Company specializing in installing carpet tile with minimum three years documented experience and approved by carpet tile manufacturer.

1.05 FIELD CONDITIONS

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Tile Carpeting:

1. Milliken & Company: www.milliken.com/#sle.
2. Tandus: www.tandus.com/#sle.
3. Substitutions: See Section 01 6000 - Product Requirements.

2.02 MATERIALS

A. Tile Carpeting: Tufted, manufactured in one color dye lot.

B. Roll Carpet: Same manufacturer, type, color and pattern, and face fiber characteristics as carpet tile, manufactured in same color dye lot as tile.

2.03 ACCESSORIES

A. Sub-Floor Filler: White premix latex; type recommended by flooring material manufacturer.

B. Base Cap: type, finish, .

C. Stair Nosing: Rubber type, square nose, ribbed top surface, one piece per stair tread width.

D. Adhesives:

1. Compatible with materials being adhered; maximum VOC content as specified in Section 01 6116.

E. Carpet Tile Adhesive:

1. Products:
   a. Stauf USA, LLC; D737 High-Tack: www.staufusa.com/#sle.
   b. TEC, an H.B. Fuller Construction Products Brand; TEC 749 Releasable Pressure Sensitive Adhesive: www.tecspecialty.com/#sle.
   c. Substitutions: Section 01 6000 - Product Requirements.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that sub-floor surfaces are smooth and flat within tolerances specified for that type of work and are ready to receive carpet tile.

B. Verify that wall surfaces are smooth and flat within the tolerances specified for that type of work, are dust-free, and are ready to receive carpet tile.

C. Verify that sub-floor surfaces are dust-free and free of substances that could impair bonding of adhesive materials to sub-floor surfaces.

D. Cementitious Sub-floor Surfaces: Verify that substrates are dry enough and ready for flooring installation by testing for moisture and pH.

1. Test in accordance with Section 09 0561.
2. Obtain instructions if test results are not within limits recommended by flooring material manufacturer and adhesive materials manufacturer.

E. Verify that required floor-mounted utilities are in correct location.

3.02 PREPARATION

A. Remove existing carpet tile.

B. Prepare floor substrates for installation of flooring in accordance with Section 09 0561.

3.03 INSTALLATION

A. Starting installation constitutes acceptance of sub-floor conditions.

B. Install carpet tile in accordance with manufacturer's instructions.

C. Blend carpet from different cartons to ensure minimal variation in color match.

D. Cut carpet tile clean. Fit carpet tight to intersection with vertical surfaces without gaps.

E. Lay carpet tile in square pattern, with pile direction parallel to next unit, set parallel to building lines.

F. Locate change of color or pattern between rooms under door centerline.

G. Fully adhere carpet tile to substrate.

H. Adhere carpet tile as base finish up vertical surfaces to form base. Terminate top of base with cap strip.

I. Trim carpet tile neatly at walls and around interruptions.

J. Complete installation of edge strips, concealing exposed edges.

3.04 INSTALLATION ON STAIRS

A. Use one piece of carpet for each tread and the riser below. Apply seam adhesive to all cut edges.

B. Lay carpet with pile direction in the length of the stair.

C. Adhere carpet tight to stair treads and risers.

3.05 CLEANING

A. Remove excess adhesive without damage, from floor, base, and wall surfaces.

B. Clean and vacuum carpet surfaces.

B. Product Data: Provide data on specified products, describing physical and performance characteristics; sizes, patterns, colors available, and method of installation.

C. Shop Drawings: Indicate layout of joints.

D. Samples: Submit two carpet tiles illustrating color and pattern design for each carpet color selected.

E. Sustainable Design Submittal: Submit VOC content documentation for adhesives.

F. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

G. Maintenance Data: Include maintenance procedures, recommended maintenance materials, and suggested schedule for cleaning.

H. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Extra Carpet Tiles: Quantity equal to 5 percent of total installed of each color and pattern installed.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing specified carpet tile with minimum three years documented experience.

B. Installer Qualifications: Company specializing in installing carpet tile with minimum three years documented experience and approved by carpet tile manufacturer.

C. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of the type specified in this section.

1.05 FIELD CONDITIONS

A. Store materials in area of installation for minimum period of 24 hours prior to installation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Tile Carpeting:

1. Milliken & Company: www.milliken.com/#sle.
2. Tandus: www.tandus.com/#sle.
3. Substitutions: See Section 01 6000 - Product Requirements.

2.02 MATERIALS

A. Tile Carpeting: Tufted, manufactured in one color dye lot.

B. Roll Carpet: Same manufacturer, type, color and pattern, and face fiber characteristics as carpet tile, manufactured in same color dye lot as tile.

2.03 ACCESSORIES

A. Sub-Floor Filler: White premix latex; type recommended by flooring material manufacturer.

B. Base Cap: type, finish, .

C. Stair Nosing: Rubber type, square nose, ribbed top surface, one piece per stair tread width.

D. Adhesives:

1. Compatible with materials being adhered; maximum VOC content as specified in Section 01 6116.

E. Carpet Tile Adhesive:

1. Products:
   a. Stauf USA, LLC; D737 High-Tack: www.staufusa.com/#sle.
   b. TEC, an H.B. Fuller Construction Products Brand; TEC 749 Releasable Pressure Sensitive Adhesive: www.tecspecialty.com/#sle.
   c. Substitutions: Section 01 6000 - Product Requirements.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that sub-floor surfaces are smooth and flat within tolerances specified for that type of work and are ready to receive carpet tile.

B. Verify that wall surfaces are smooth and flat within the tolerances specified for that type of work, are dust-free, and are ready to receive carpet tile.

C. Verify that sub-floor surfaces are dust-free and free of substances that could impair bonding of adhesive materials to sub-floor surfaces.

D. Cementitious Sub-floor Surfaces: Verify that substrates are dry enough and ready for flooring installation by testing for moisture and pH.

1. Test in accordance with Section 09 0561.
2. Obtain instructions if test results are not within limits recommended by flooring material manufacturer and adhesive materials manufacturer.

E. Verify that required floor-mounted utilities are in correct location.

3.02 PREPARATION

A. Remove existing carpet tile.

B. Prepare floor substrates for installation of flooring in accordance with Section 09 0561.

3.03 INSTALLATION

A. Starting installation constitutes acceptance of sub-floor conditions.

B. Install carpet tile in accordance with manufacturer's instructions.

C. Blend carpet from different cartons to ensure minimal variation in color match.

D. Cut carpet tile clean. Fit carpet tight to intersection with vertical surfaces without gaps.

E. Lay carpet tile in square pattern, with pile direction parallel to next unit, set parallel to building lines.

F. Locate change of color or pattern between rooms under door centerline.

G. Fully adhere carpet tile to substrate.

H. Adhere carpet tile as base finish up vertical surfaces to form base. Terminate top of base with cap strip.

I. Trim carpet tile neatly at walls and around interruptions.

J. Complete installation of edge strips, concealing exposed edges.

3.04 INSTALLATION ON STAIRS

A. Use one piece of carpet for each tread and the riser below. Apply seam adhesive to all cut edges.

B. Lay carpet with pile direction in the length of the stair.

C. Adhere carpet tight to stair treads and risers.

3.05 CLEANING

A. Remove excess adhesive without damage, from floor, base, and wall surfaces.

B. Clean and vacuum carpet surfaces.

END OF SECTION

SECTION 09 6816
SHEET CARPETING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Carpet, stretch-in with cushion underlay and direct glued.

B. Removal of existing carpet.

C. Accessories.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 01 7419 - Construction Waste Management and Disposal: Reclamation/Recycling of new carpet scrap, new cushion scrap, removed carpet and removed carpet cushion.

C. Section 03 3000 - Cast-in-Place Concrete: Restrictions on curing compounds for concrete slabs and floors to receive adhesive-applied carpet.

D. Section 03 5400 - Cast Underlayment.

E. Section 09 0561 - Common Work Results for Flooring Preparation: Independent agency testing of concrete slabs, removal of existing floor coverings, cleaning, and preparation.

F. Section 09 6813 - Tile Carpeting.

1.03 REFERENCE STANDARDS

A. ASTM D2859 - Standard Test Method for Ignition Characteristics of Finished Textile Floor Covering Materials 2016.

B. ASTM E648 - Standard Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source 2017.

C. NFPA 253 - Standard Method of Test for Critical Radiant Flux of Floor Covering Systems Using a Radiant Heat Energy Source 2015.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on specified products, describing physical and performance characteristics; sizes, patterns, colors available, and method of installation.

C. Shop Drawings: Indicate seaming plan, method of joining seams, direction of carpet pile and pattern, location of edge moldings and edge bindings, layout of flat wire system.

D. Samples: Submit two samples 8" by 8" in size illustrating color and pattern for each carpet and cushion material specified.

E. Submit two, 4" x 8" long samples of edge strip for each color specified.

F. Sustainable Design Submittal: Submit VOC content documentation for adhesives.

G. Maintenance Data: Include maintenance procedures, recommended maintenance materials, and suggested schedule for cleaning.

H. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional requirements.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing specified carpet with minimum three years documented experience.

B. Installer Qualifications: Company specializing in installing carpet with minimum three years documented experience.

C. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of the type specified in this section.

1.06 FIELD CONDITIONS

A. Store materials in area of installation for minimum period of 24 hours prior to installation.

B. Maintain minimum 70 degrees F (21 degrees C) ambient temperature 24 hours prior to, during and 24 hours after installation.

C. Ventilate installation area during installation and for 72 hours after installation.

PART 2 PRODUCTS

2.01 CARPET

A. Carpet:

1. Roll Width: .
2. Color: .
3. Pattern: .
4. Critical Radiant Flux: Minimum of 0.22 watts/sq cm, when tested in accordance with ASTM E648 or NFPA 253.
5. Surface Flammability Ignition: Pass ASTM D2859 (the "pill test").
6. VOC Content: Comply with Section 01 6116.
7. Substitutions: See Section 01 6000 - Product Requirements.

B. Carpet: Tufted, nylon.

1. Critical Radiant Flux: Minimum of 0.22 watts/sq cm, when tested in accordance with ASTM E648 or NFPA 253.
2. Surface Flammability Ignition: Pass ASTM D2859 (the "pill test").
3. VOC Content: Comply with Section 01 6116.
4. Color:
5. Pattern:
6. Roll Width: .
7. Static Control Fiber: .
8. Maximum Electrostatic Charge: 3 Kv. at 20 percent relative humidity (RH).
9. Rows:
10. Gage:
11. Stitche:
12. Yarn Size:

C. Carpet: Woven, wilton weave, wool.

1. Surface Flammability Ignition: Pass ASTM D2859 (the "pill test").

2. VOC Content: Comply with Section 01 6116.
3. Color: .
4. Pattern: .
5. Roll Width:
6. Static Control Fiber: [_____].
7. Rows: .
8. Pitch: .
9. Wire Height: .
10. Yarn Size: .
11. Pile Weight: .
12. Density Factor:
13. Light Fastness:
14. Primary Backing:
    a. Material:
    b. Weight: .
15. Laminate:
    a. Material:
    b. Weight:
16. Secondary Backing:
    a. Material:
    b. Weight:
17. Total Weight:

2.02 CUSHION

A. Cushion: Cellular rubber.
   1. VOC Content: Comply with Section 01 6116.
   2. Nominal Thickness: .
   3. Roll Width:
   4. Weight:
   5. Density:

B. Cushion: Rubber coated hair felt.
   1. Nominal Thickness: .
   2. Roll Width:
   3. Weight:
   4. Density:

2.03 ACCESSORIES

A. Sub-Floor Filler: Type recommended by carpet manufacturer.

B. Tackless Strip: Carpet gripper, of type recommended by carpet manufacturer to suit application, with attachment devices.

C. Base Gripper: {CH#10014750} type, with special lipped edge, finish, and color..

1. Base Cap: type, finish, and color.

D. Moldings and Edge Strips: Embossed aluminum, [_____] color.

E. Adhesives:

1. Compatible with materials being adhered; maximum VOC content as specified in Section 01 6116.

F. Seam Adhesive: Recommended by carpet manufacturer.

G. Carpet Adhesive: Recommended by carpet manufacturer; releasable type.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that sub-floor surfaces are smooth and flat within the tolerances specified for that type of work and are ready to receive carpet.

B. Verify that wall surfaces are smooth and flat within the tolerances specified for that type of work, are dust-free, and are ready to receive carpet.

C. Verify that sub-floor surfaces are dust-free and free of substances that could impair bonding of adhesives to sub floor surfaces.

D. Cementitious Sub-floor Surfaces: Verify that substrates are dry enough and ready for flooring installation by testing for moisture and alkalinity (pH).

1. Test in accordance with Section 09 0561.

2. Obtain instructions if test results are not within limits recommended by flooring material manufacturer and adhesive materials manufacturer.

3.02 PREPARATION

A. Remove existing carpet and carpet cushion.

B. Prepare floor substrates for installation of flooring in accordance with Section 09 0561.

3.03 INSTALLATION - GENERAL

A. Starting installation constitutes acceptance of sub-floor conditions.

B. Install carpet and cushion in accordance with manufacturer's instructions and CRI 104 (Commercial).

C. Verify carpet match before cutting to ensure minimal variation between dye lots.

D. Lay out carpet and locate seams in accordance with shop drawings.

1. Locate seams in area of least traffic, out of areas of pivoting traffic, and parallel to main traffic.

2. Do not locate seams perpendicular through door openings.

3. Align run of pile in same direction as anticipated traffic and in same direction on adjacent pieces.

4. Locate change of color or pattern between rooms under door centerline.

5. Provide monolithic color, pattern, and texture match within any one area.

E. Install carpet tight and flat on subfloor, well fastened at edges, with a uniform appearance.

3.04 STRETCHED-IN CARPET

A. Install tackless strips with pins facing the wall around entire perimeter, except across door openings. Use edge strip where carpet terminates at other floor coverings.

B. Space tackless strips slightly less than carpet thickness away from vertical surfaces, but not more than 3/8 inch (9 mm).

C. Install cushion in maximum size pieces using spot adhesive to adhere to sub-floor.

D. Lay out cushion so that seams will be perpendicular to, or offset from, minimum 6 inches (150 mm) from carpet seams.

E. Butt cushion edges together and tape seams.

F. Trim cushion tight to edge of tackless strip and around projections and contours.

G. Double cut carpet seams, with accurate pattern match. Make cuts straight, true, and unfrayed. Apply seam adhesive to all cut edges immediately.

H. Join seams by hand sewing. Form seams straight, not overlapped or peaked, and free of gaps.

I. Following seaming, hook carpet onto tackless strip at one edge, power stretch, and hook firmly at other edges. Follow manufacturer's recommendations for method and amount of stretch.

J. Trim carpet neatly at walls and around interruptions. Tuck edges into space between tackless strip and wall.

3.05 DIRECT-GLUED CARPET

A. Double cut carpet seams, with accurate pattern match. Make cuts straight, true, and unfrayed. Apply seam adhesive to cut edges of woven carpet immediately.

B. Apply contact adhesive to floor uniformly at rate recommended by manufacturer. After sufficient open time, press carpet into adhesive.

C. Apply seam adhesive to the base of the edge glued down. Lay adjoining piece with seam straight, not overlapped or peaked, and free of gaps.

D. Roll with appropriate roller for complete contact of adhesive to carpet backing.

E. Trim carpet neatly at walls and around interruptions.

F. If specificed by the architect, Extend carpet as base finish up vertical surfaces to form base. Terminate top of base with cap strip.

G. Complete installation of edge strips, concealing exposed edges. Bind cut edges where not concealed by edge strips.

3.06 INSTALLATION ON STAIRS

A. Install tackless strips at back of treads, with pins facing riser, and at bottom of riser, with pins facing tread.

B. Install cushion on stair treads butt tight to applied nosing.

C. Install carpet on stairs with the run of the pile in opposite direction of anticipated traffic to avoid peaking of backing at nosings.

D. Stretch carpet over stair treads, full width in one piece. Fold carpet under 1-1/2 inches (40 mm) on each side.

3.07 CLEANING

A. Remove excess adhesive from floor and wall surfaces without damage.

B. Clean and vacuum carpet surfaces.

B. Install cushion on stair treads butt tight to applied nosing.

C. Install carpet on stairs with the run of the pile in opposite direction of anticipated traffic to avoid peaking of backing at nosings.

D. Stretch carpet over stair treads, full width in one piece. Fold carpet under 1-1/2 inches (40 mm) on each side.

3.07 CLEANING

A. Remove excess adhesive from floor and wall surfaces without damage.

B. Clean and vacuum carpet surfaces.

END OF SECTION

SECTION 09 7200
WALL COVERINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Surface preparation and prime painting.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

1.03 REFERENCE STANDARDS

A. ASTM D1308 - Standard Test Method for Effect of Household Chemicals on Clear and Pigmented Organic Finishes 2002 (Reapproved 2013).

B. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on wall covering and adhesive.

C. Shop Drawings: Indicate wall elevations with seaming layout.

D. Samples: Submit two samples of wall covering, illustrating color, finish, and texture.

E. Test Reports: Indicate verification of flame and smoke ratings, when tested by UL.

F. Manufacturer's Installation Instructions: Indicate special procedures.

G. Maintenance Data: Submit data on cleaning, touch-up, and repair of covered surfaces.

H. Manufacturer's Qualification Statement.

I. Installer's Qualification Statement.

J. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Extra Wall Covering Materials: 25 linear feet (8 linear m) of each color and pattern of wall covering; store where directed.
3. Package and label each roll by manufacturer, color and pattern, and destination room number.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum three years of documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience.

1.06 MOCK-UP

A. Provide panel, full height, illustrating installed wall covering and joint seaming technique.

B. Locate where directed.

C. Mock-up may remain as part of the Work.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Inspect roll materials at arrival on site, to verify acceptability.

B. Protect packaged adhesive from temperature cycling and cold temperatures.

C. Do not store roll goods on end.

1.08 FIELD CONDITIONS

A. Do not apply materials when surface and ambient temperatures are outside the temperature ranges required by the adhesive or wall covering product manufacturer.

B. Maintain these conditions 24 hours before, during, and after installation of adhesive and wall covering.

PART 2 PRODUCTS

2.01 WALL COVERINGS

A. General Requirements:

1. Surface Burning Characteristics: Flame spread/Smoke developed index of 25/50, maximum, when tested in accordance with ASTM E84.

2. Chemical and Stain Resistance: No visible staining or discoloration and no damage to surface texture when tested in accordance with ASTM D1308.

B. Wall Covering: Fabric-backed vinyl roll stock.

C. Wall Covering: Rigid vinyl panel.

1. Manufacturers:

a. Acoustic Ceiling Products; Fasade Wall Panels: www.acpideas.com/#sle.

b. ATI Decorative Laminates: www.atilaminates.com/#sle.

c. Substitutions: See Section 01 6000 - Product Requirements.

D. Wall Covering: , complying with the following:

1. Total Thickness: .

2. Total Weight: .

3. Roll Width: .

E. Adhesive: Type recommended by wall covering manufacturer to suit application to substrate.

F. Termination Trim: Extruded plastic, clear.

G. Substrate Filler: As recommended by adhesive and wall covering manufacturers; compatible with substrate.

H. Substrate Primer and Sealer: Alkyd enamel type.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that substrate surfaces are prime painted and ready to receive work, and comply with requirements of wall covering manufacturer.

B. Measure moisture content of surfaces using an electronic moisture meter. Do not apply wall coverings if moisture content of substrate exceeds level recommended by wall covering manufacturer.

C. Verify flatness tolerance of surfaces does not vary more than 1/8 inch in 10 feet (3 mm in 3 m) nor vary at a rate greater than 1/16 inch/ft (1.5 mm/300 mm).

3.02 PREPARATION

A. Fill cracks in substrate and smooth irregularities with filler; sand smooth.

B. Wash impervious surfaces with tetra-sodium phosphate, rinse and neutralize; wipe dry.

C. Surface Appurtenances: Remove or mask electrical plates, hardware, light fixture trim, escutcheons, and fittings prior to preparing surfaces or finishing.

D. Surfaces: Correct defects and clean surfaces that affect work of this section. Remove existing coatings that exhibit loose surface defects.

E. Marks: Seal with shellac those that may bleed through surface finishes.

F. Apply one coat of primer sealer to substrate surfaces. Allow to dry. Lightly sand smooth.

G. Vacuum clean surfaces free of loose particles.

3.03 INSTALLATION

A. Apply adhesive and wall covering in accordance with manufacturer's instructions.

B. Apply adhesive to wall surface immediately prior to application of wall covering.

C. Apply wall covering smooth, without wrinkles, gaps or overlaps. Eliminate air pockets and ensure full bond to substrate surface.

D. Butt edges tightly.

E. Overlap adjacent panels as recommended by manufacturer.

F. Horizontal seams are not acceptable.

G. Do not seam within 2 inches (50 mm) of internal corners or within 6 inches (150 mm) of external corners.

H. Install wall covering before installation of bases and items attached to or spaced slightly from wall surface.

I. Do not install wall covering more than 1/4 inch (6 mm) below top of resilient base.

J. Cover spaces above and below windows, above doors, in pattern sequence from roll.

K. Apply wall covering to electrical wall plates prior to replacing.

L. Wall covering is required behind fin tube cabinets.

M. Install termination trim.

N. Remove excess adhesive while wet from seam before proceeding to next wall covering sheet. Wipe clean with dry cloth.

3.04 CLEANING

A. Clean wall coverings of excess adhesive, dust, dirt, and other contaminants.

B. Reinstall wall plates and accessories removed prior to work of this section.

3.05 PROTECTION

A. Do not permit construction activities at or near finished wall covering areas.

END OF SECTION

SECTION 09 7200
WALL COVERINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Surface preparation and prime painting.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

1.03 REFERENCE STANDARDS

A. ASTM D1308 - Standard Test Method for Effect of Household Chemicals on Clear and Pigmented Organic Finishes 2002 (Reapproved 2013).

B. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on wall covering and adhesive.

C. Shop Drawings: Indicate wall elevations with seaming layout.

D. Test Reports: Indicate verification of flame and smoke ratings, when tested by UL.

E. Manufacturer's Installation Instructions: Indicate special procedures.

F. Maintenance Data: Submit data on cleaning, touch-up, and repair of covered surfaces.

G. Installer's Qualification Statement.

H. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Extra Wall Covering Materials: 25 linear feet (8 linear m) of each color and pattern of wall covering; store where directed.
3. Package and label each roll by manufacturer, color and pattern, and destination room number.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum three years of documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience.

1.06 MOCK-UP

A. Locate where directed.

B. Mock-up may remain as part of the Work.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Inspect roll materials at arrival on site, to verify acceptability.

B. Protect packaged adhesive from temperature cycling and cold temperatures.

C. Do not store roll goods on end.

1.08 FIELD CONDITIONS

A. Do not apply materials when surface and ambient temperatures are outside the temperature ranges required by the adhesive or wall covering product manufacturer.

B. Maintain these conditions 24 hours before, during, and after installation of adhesive and wall covering.

PART 2 PRODUCTS

2.01 WALL COVERINGS

A. General Requirements:

1. Surface Burning Characteristics: Flame spread/Smoke developed index of 25/50, maximum, when tested in accordance with ASTM E84.

2. Chemical and Stain Resistance: No visible staining or discoloration and no damage to surface texture when tested in accordance with ASTM D1308.

B. Wall Covering: Fabric-backed vinyl roll stock.

C. Wall Covering: Rigid vinyl panel.

1. Manufacturers:

a. Acoustic Ceiling Products; Fasade Wall Panels: www.acpideas.com/#sle.

b. ATI Decorative Laminates: www.atilaminates.com/#sle.

c. Substitutions: See Section 01 6000 - Product Requirements.

D. Wall Covering: , complying with the following:

1. Total Thickness: .

2. Total Weight: .

3. Roll Width: .

E. Adhesive: Type recommended by wall covering manufacturer to suit application to substrate.

F. Termination Trim: Extruded plastic, clear.

G. Substrate Filler: As recommended by adhesive and wall covering manufacturers; compatible with substrate.

H. Substrate Primer and Sealer: Alkyd enamel type.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that substrate surfaces are prime painted and ready to receive work, and comply with requirements of wall covering manufacturer.

B. Measure moisture content of surfaces using an electronic moisture meter. Do not apply wall coverings if moisture content of substrate exceeds level recommended by wall covering manufacturer.

C. Verify flatness tolerance of surfaces does not vary more than 1/8 inch in 10 feet (3 mm in 3 m) nor vary at a rate greater than 1/16 inch/ft (1.5 mm/300 mm).

3.02 PREPARATION

A. Fill cracks in substrate and smooth irregularities with filler; sand smooth.

B. Wash impervious surfaces with tetra-sodium phosphate, rinse and neutralize; wipe dry.

C. Surface Appurtenances: Remove or mask electrical plates, hardware, light fixture trim, escutcheons, and fittings prior to preparing surfaces or finishing.

D. Surfaces: Correct defects and clean surfaces that affect work of this section. Remove existing coatings that exhibit loose surface defects.

E. Marks: Seal with shellac those that may bleed through surface finishes.

F. Apply one coat of primer sealer to substrate surfaces. Allow to dry. Lightly sand smooth.

G. Vacuum clean surfaces free of loose particles.

3.03 INSTALLATION

A. Apply adhesive and wall covering in accordance with manufacturer's instructions.

B. Apply adhesive to wall surface immediately prior to application of wall covering.

C. Apply wall covering smooth, without wrinkles, gaps or overlaps. Eliminate air pockets and ensure full bond to substrate surface.

D. Butt edges tightly.

E. Overlap adjacent panels as recommended by manufacturer.

F. Horizontal seams are not acceptable.

G. Do not seam within 2 inches (50 mm) of internal corners or within 6 inches (150 mm) of external corners.

H. Install wall covering before installation of bases and items attached to or spaced slightly from wall surface.

I. Do not install wall covering more than 1/4 inch (6 mm) below top of resilient base.

J. Cover spaces above and below windows, above doors, in pattern sequence from roll.

K. Apply wall covering to electrical wall plates prior to replacing.

L. Wall covering is required behind fin tube cabinets.

M. Install termination trim.

N. Remove excess adhesive while wet from seam before proceeding to next wall covering sheet. Wipe clean with dry cloth.

3.04 CLEANING

A. Clean wall coverings of excess adhesive, dust, dirt, and other contaminants.

B. Reinstall wall plates and accessories removed prior to work of this section.

3.05 PROTECTION

A. Do not permit construction activities at or near finished wall covering areas.

END OF SECTION

SECTION 09 8414
ACOUSTIC STRETCHED-FABRIC WALL AND CEILING SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Acoustic stretched-fabric wall system.

B. Acoustic stretched-fabric ceiling system.

C. Accessories as required for complete installation.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 09 7200 - Wall Coverings: Fabric wall coverings for adhesive application to solid wall surfaces.

C. Section 09 8430 - Sound-Absorbing Wall and Ceiling Units: Prefabricated, fabric-covered wall panels and ceiling baffles.

D. Section 10 1101 - Visual Display Boards: Prefabricated, framed tackboards and markerboards.

E. Section 10 1124 - Tackable Wall Systems: Site-fabricated, fabric-covered display walls.

1.03 REFERENCE STANDARDS

A. ANSI A208.2 - American National Standard for Medium Density Fiberboard for Interior Use 2009.

B. ASTM C423 - Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method 2017.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.
4. Specimen warranty.

C. Shop Drawings: Details indicating typical transitions to other finish surfaces.

D. Selection Samples: Fabric swatches representing manufacturer's full range of available colors, textures, and patterns.

E. Verification Samples:

1. For each fabric specified, minimum size 12 inch (305 mm) square, representing actual product in color, texture, and pattern.
2. Actual samples of each frame profile to be used, including transitions between dissimilar profiles.
3. Acoustic material, minimum size 12 inch (305 mm) square.
4. Accessory package.

F. Test Reports: Certified test data from an independent test agency verifying that wall and ceiling systems meet specified requirements for acoustical and fire performance.

G. Manufacturer's Qualification Statement.

H. Installer's Qualification Statement.

I. Maintenance Contract.

J. Warranty Documentation: Submit manufacturer's warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

K. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.

2. Supply an additional 10 (ten) percent of accessories installed for Owner's use in maintenance of project.

3. Supply an additional 5 (five) percent of fabric installed for Owner's use in maintenance of project.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with at least three years of documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience and approved by manufacturer.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Protect fabric, acoustical backing, and track from excessive moisture in shipment, storage, and handling.

B. Do not deliver materials to project until wet work such as concrete and plaster has been completed.

C. Store products in manufacturer's unopened packaging until ready for installation.

D. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.

1.07 MOCK-UP

A. See Section 01 4000 - Quality Requirements for additional mock-up requirements.

B. Construct mock-up of acoustic stretched-fabric wall system at location indicated by Architect.

1. Minimum mock-up dimensions; 96 by 96 inches (2440 by 2440 mm).

2. Approved mock-up may remain as part of the Work.

1.08 FIELD CONDITIONS

A. Do not begin installation until interior conditions have reached temperature and humidity that will be maintained during occupancy.

B. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.09 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective work within five year period after Date of Substantial Completion.

C. Provide five year manufacturer warranty for material and workmanship.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Acoustic Stretched-Fabric Wall Systems:

1. Fabric Wall: www.fabric-wall.com/#sle.

2. Fabricmate Systems: www.fabricmate.com/#sle.

3. Substitutions: See Section 01 6000 - Product Requirements.

B. Acoustic Stretched-Fabric Ceiling Systems:

1. FabriTRAK Systems, Inc: www.fabritrak.com/#sle.
2. Novawall Systems, Inc: www.novawall.com/#sle.
3. Substitutions: See Section 01 6000 - Product Requirements.

2.02 ACOUSTIC STRETCHED-FABRIC SYSTEM

A. Acoustic Stretched-Fabric System: Field installed, fabric is stretched and set into framework and laid over acoustic material anchored to substrate. Framework consists of continuous perimeter and intermediate mounting frames anchored to substrate, and designed to permit removal and replacement of fabric within framed areas without affecting adjacent areas.

1. Surface Burning Characteristics: Flame Spread Index of 25, maximum; Smoke Developed Index of 450, maximum; when whole system is tested in accordance with ASTM E84 using mounting specified in ASTM E2573 for stretched systems.
2. Noise Reduction Coefficient (NRC): 0.80, minimum, when tested in accordance with ASTM C423, Type A mounting per ASTM E795.
3. Prefabricated, fabric covered and individually framed panels are not permitted.
4. Install fabric over acoustic material and into framework without use of adhesives, tapes, or fasteners.
5. Seams in fabric are not permitted; base the frame layout dimensions on fabric at least 72 inch (1.83 m) wide.

B. Provide materials and systems made of recycled content, at least 90 percent post-consumer or pre-consumer (post-industrial).

C. Verify that adhesives and sealants used in installation of acoustic stretched-fabric system have acceptable low VOC emission ratings.

2.03 MATERIALS

A. Frame: Extruded polymer framing system with serrated jaws of sufficient strength to hold fabric in place after repeated applications.

1. Wall Frame Size: 1/2 inch (12.7 mm) height from wall substrate with minimum 1 inch (25.4 mm) wide base.
   a. Wall Frame Shape: Square at perimeter, and square at intermediate abutting joints.
   b. Application: Apply acoustic material to wall locations as indicated on drawings.
2. Ceiling Frame Size: 1-3/8 inch (31.75 mm) height from ceiling substrate with minimum 1 inch (25.4 mm) wide base.
   a. Ceiling Frame Shape: Square at perimeter, and square at intermediate abutting joints.
   b. Application: Apply acoustic material to ceiling locations as indicated on drawings.

B. Acoustic Material:

1. Provide type of acoustic material in thickness required to achieve Noise Reduction Coefficient (NRC) indicated.
2. Ensure that thickness of acoustic material fills depth of frame as necessary for application without use of support blocking.
3. Multi-Density Fiberglass Board: Consisting of 1/8 inch (3.2 mm) thick facing sheet laminated over compressed fiberglass board, Class A fire rated in accordance with ASTM E84.

a. Overall Thickness: 1 inch (25.4 mm).

C. Rigid Blocking: Fire-retardant treated medium density fiberboard complying with ANSI A208.2, in thickness to meet project requirements.

D. Fabric: Heavy-duty fire-retardant commercial fabric, as provided by manufacturer of acoustic stretched-fabric system; color, pattern, and texture as selected from system manufacturer's fabric supplier's standard line of fabric.

E. Fasteners: As recommended by manufacturer of acoustic stretched-fabric system in accordance with project requirements.

F. Adhesives: Low VOC or water-based, approved by acoustic stretched-fabric system manufacturer, and complying with requirements of Section 01 6116.

PART 3 EXECUTION

3.01 EXAMINATION

A. Begin installation only after substrates have been properly prepared.

B. Verify that casework, markerboards, door and window jambs, finished ceiling, and other finished items adjacent or abutting the acoustic stretched-fabric system have been properly installed.

C. When preparation of substrate is the responsibility of another installer, notify Architect of unsatisfactory preparation prior to proceeding with this work.

3.02 PREPARATION

A. Clean surfaces thoroughly prior to installation of this work.

B. Prepare substrate surfaces using methods as recommended by the manufacturer for achieving acceptable result as required for this work.

C. Remove wall plates and other obstacles, and properly prepare substrates to receive frames and acoustic material in accordance with manufacturer's instructions.

3.03 INSTALLATION

A. Install acoustic stretched-fabric system at locations indicated in accordance with approved shop drawings and manufacturer's instructions.

B. Frames: Install perimeter and intermediate frames using appropriate fasteners for prepared substrate, firmly secured to ensure frames do not separate from substrate.

1. For tile or masonry substrates, apply continuous bead of adhesive along base of framing in addition to spacing of conical anchors and/or fasteners at 6 to 8 inches (152 to 203 mm) on center.
2. Follow contours of wall and scribe to adjoining work at borders, penetrations, and imperfections.
3. Install framing around openings and penetrations.
4. At outside corners, miter framing to allow installation of acoustic material and secure placement of fabric around corner without intermediate framework.
5. Allow for spacing of framework to accommodate insertion of installation tool.

C. Acoustic Material: Cut and trim acoustic material to fit snugly within perimeter and intermediate framework.

1. Apply adhesive and press acoustic material into place, maintaining constant plane.
2. Staple acoustic material as necessary to prevent air gaps and to maintain secure contact for full adhesion to substrate.

3. At fixtures mounted within areas of acoustic stretched-fabric system, install rigid blocking for backing and maintain plane of fixture surface flush with face of acoustic stretched-fabric system.

D. Fabric: Stretch fabric over acoustic material, locking edges of fabric into frame's serrated jaws using manufacturer's recommended tool. Maintain fabric weave plumb, level and true, in proper relation to building lines, without ripples, waviness, hourglass, or other deleterious effects.

1. Upon fabric installation, do not employ adhesives or mechanical fasteners of any type, and ensure fabric is free-floating and in contact with acoustic material as necessary.
2. Stapling or gluing of fabric to cores or channel framework is not permitted.
3. Provide tension in fabric sufficient to prevent sagging under anticipated changes in temperature and humidity.
4. At ceiling applications, surface of fabric shall not deviate from established ceiling plane more than 1 inch in 20 feet (1:240).

3.04 CLEANING

A. Clean exposed surfaces of acoustic stretched-fabric system in compliance with manufacturers instructions for cleaning and repair of minor damage to exposed surfaces.

B. Remove and replace work that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage to system.

3.05 PROTECTION

A. Protect installed materials upon completion of this work, using methods that will ensure that the finished work is without damage or deterioration upon Date of Substantial Completion.

3.06 MAINTENANCE

A. See Section 01 7000 - Execution and Closeout Requirements, for additional requirements relating to maintenance service.

B. Provide a separate maintenance contract for specified maintenance service.

END OF SECTION

SECTION 09 8414
ACOUSTIC STRETCHED-FABRIC WALL AND CEILING SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Acoustic stretched-fabric wall system.

END OF SECTION

SECTION 09 8430
SOUND-ABSORBING WALL AND CEILING UNITS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Sound-absorbing panels.

B. Sound-absorbing ceiling baffles.

C. Mounting accessories.

1.02 RELATED REQUIREMENTS

A. Section 06 4100 - Architectural Wood Casework.

B. Section 09 5100 - Acoustical Ceilings: Ceiling suspension system.

C. Section 09 5153 - Direct-Applied Acoustical Ceilings.

1.03 REFERENCE STANDARDS

A. ASTM C423 - Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method 2017.

B. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

C. ASTM E795 - Standard Practices for Mounting Test Specimens During Sound Absorption Tests 2016.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's printed data sheets for products specified.

C. Shop Drawings: Fabrication and installation details, panel layout, and fabric orientation.

D. Selection Samples: Manufacturer's color charts for fabric covering, indicating full range of fabrics, colors, and patterns available.

E. Verification Samples: Fabricated samples of each type of panel specified; 12 by 12 inch (305 by 305 mm), showing construction, edge details, and fabric covering.

F. Test Reports: Certified test data from an independent test agency verifying that panels meet specified requirements for acoustical and fire performance.

G. Manufacturer's Qualification Statement.

H. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.

2. Extra Panels: Quantity equal to 5 percent of total installed, but not less than one of each type.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company with not less than five years of experience in manufacturing acoustical products similar to those specified.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Protect acoustical units from moisture during shipment, storage, and handling. Deliver in factory-wrapped bundles; do not open bundles until units are needed for installation.

B. Store units flat, in dry, well-ventilated space; do not stand on end.

C. Protect edges from damage.

1.07 MOCK-UP

A. See Section 01 4000 - Quality Requirements, for additional mock-up requirements.

B. Construct mock-up of acoustical units at location as indicated by Architect.

1. Minimum mock-up dimensions; 96 by 96 inches (2440 by 2440 mm).
2. Approved mock-up may remain as part of the Work.

PART 2 PRODUCTS

2.01 FABRIC-COVERED SOUND-ABSORBING UNITS

A. Manufacturers:

1. Essi Acoustical Products Company: www.essiacoustical.com/#sle.
2. Owens Corning Conwed Designscape: www.conweddesignscape.com/#sle.
3. Substitutions: See Section 01 6000 - Product Requirements.

B. Sound Absorbing Units: Prefinished, factory assembled fabric-covered panels.

1. Surface Burning Characteristics: Flame spread index of 25 or less and smoke developed index of 450 or less, when tested in accordance with ASTM E84.

C. Fabric-Covered Acoustical Panels for Walls and Ceilings:

1. Panel Core: Manufacturer's standard rigid or semi-rigid fiberglass core.
2. Noise Reduction Coefficient (NRC): when tested in accordance with ASTM C423 for mounting, per ASTM E795.
3. Panel Size: As required to meet required acoustical performance.
4. Panel Thickness: As required to meet required acoustical performance.
5. Edges: Perimeter edges reinforced by a formulated resin hardener.
6. Fabric:
7. Color: As indicated.

D. Fabric-Covered Acoustical Ceiling Baffles:

1. Baffle Core: Manufacturer's standard rigid or semi-rigid fiberglass core.

2.02 WOOD VENEER SOUND-ABSORBING UNITS

A. Manufacturers:

1. Murano Acoustics USA, by Bartley Group, Inc: www.muranoacoustics.us/#sle.
2. RPG Diffusor Systems, Inc: www.rpginc.com/#sle.
3. Substitutions: See Section 01 6000 - Product Requirements.

B. Wood Veneer Acoustical Panels for Walls and Ceilings: Medium Density Fiberboard (MDF) core panels with prime grade finished face veneer and non-woven acoustic material adhered to back of panel.

1. Surface Burning Characteristics: Flame spread index of 25 or less and smoke developed index of 450 or less, when tested in accordance with ASTM E84.
2. Noise Reduction Coefficient (NRC): 0.70 to 0.80 when tested in accordance with ASTM C423 for Type A mounting, per ASTM E795.
3. Acoustic Back-Up Material: Compressed fiberglass board, 1.5 lbs/cu ft (24 kgs/cu m) density, in sizes to fit furring applications.

a. Thickness: As required to comply with NRC requirements indicated.

4. Panel Thickness: 3/4 inch (19 mm), fire rated MDF substrate.
5. Provide MDF with no added urea formaldehyde (NAUF).
6. Mounting: Use fixing clips to attach to panels anchored to .
    a. Edge Profile:

2.03 MELAMINE FOAM SOUND-ARBORBING UNITS

A. Manufacturers:
    1. Pinta Acoustic Inc: www.pinta-acoustic.com/#sle.
    2. TECHLITE; Pyramid Panels: www.techlite.com/#sle.
    3. Substitutions: See Section 01 6000 - Product Requirements.
B. Melamine Foam Acoustical Panels for Walls and Ceilings: Open cell melamine-based foam.
    1. Surface Burning Characteristics: Flame spread index of 25 or less and smoke developed index of 450 or less, when tested in accordance with ASTM E84.
    2. Vinyl Composite Layer: Manufacturers standard mass loaded vinyl bonded to melamine foam core.
    3. Panel Thickness: As required to meet required acoustical performance.
    4. Mounting: Direct applied with adhesive.
    5. Mounting: Lay-in panel for suspended ceiling system, exposed grid.
        a. Suspension System: Specified in Section 09 5100.

2.04 FABRICATION

A. Fabric Wrapped, General: Fabricate panels to sizes and configurations as indicated, with fabric facing installed without sagging, wrinkles, blisters, or visible seams.
    1. Where radiused or mitered corners are indicated, install fabric to avoid seams or gathering of material.
    2. For panels suspended from ceiling, provide fabric covering both sides, with seams only at panel edges.
B. Tolerances: Fabricate to finished tolerance of plus or minus 1/16 inch (1.6 mm) for thickness, overall length and width, and squareness from corner to corner.
C. Factory-applied finishes on wood veneer panels to be uniform, smooth, and without blemishes.

2.05 ACCESSORIES

A. Spline-Mounting Accessories: Manufacturer's standard concealed connecting splines of extruded aluminum designed for screw attachment to walls, with coordinating moldings and trim for interior and exterior corners and miscellaneous conditions.
    1. Color of Exposed Trim: As selected from manufacturer's standards.
B. Back-Mounting Accessories: Manufacturer's standard accessories for concealed support, designed to allow panel removal, and as follows:
    1. Two-part clip and base-support bracket system; brackets designed to support full weight of panels and clips designed for lateral support, with one part mechanically attached to back of panel and the other attached to substrate.

2. Metal impaling clips designed to support full weight of panels, mechanically attached to substrate and adhesively bonded to back of panels.
3. Hook and loop strips adhered to substrate and to back of panels.
4. Z-clip hanger and magnet system with magnets recessed into panel frame and designed to engage steel mounting plates secured to substrate with screws.
5. Mechanically Mounted Metal-Framed Panels: Metal panel-clip system designed to engage metal framing of panels.

C. Ceiling-Suspended Accessories: Manufacturer's standard accessories at locations as indicated on each acoustical unit, sized appropriately for weight of acoustical unit.
1. Through-threaded eyelets bolted through concealed perimeter frame.
2. Stainless steel spiral hangers screwed into top edge of baffle.
3. S-hook attached through grommets.
4. Provide support for suspension from ceiling at heights as indicated.

D. Fixing Clips: Manufacturers standard for application as indicated.

E. Furring Strips: 1 by 2 inch wood furring (25 by 50 mm).

F. Panel Adhesive: Acceptable to acoustical panel manufacturer for application as indicated.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates for conditions detrimental to installation of acoustical units. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install acoustical units in locations as indicated, following manufacturer's installation instructions.

B. Align panels accurately, with edges plumb and top edges level. Scribe to fit accurately at adjoining work and penetrations.

C. Suspend ceiling baffles at locations and heights as indicated.

D. Furring Mounted Wood Veneer Panels:
1. Install furring strip along meeting edges of adjacent panels to ensure they are attached to same furring strip along abutted edge; 24 inch (610 mm) on center, maximum.
2. Install acoustic back-up material between furring as required for application.
3. Adhere first panel from edge to furring strip, and attach subsequent panels using fixing clips.

E. Install acoustical units to construction tolerances of plus or minus 1/16 inch (1.6 mm) for the following:
1. Plumb and level.
2. Flatness.

3.03 CLEANING

A. Clean fabric facing upon completion of installation from dust and other foreign materials, following manufacturer's instructions.

3.04 PROTECTION

A. Provide protection of installed acoustical panels until Date of Substantial Completion.

B. Replace panels that cannot be cleaned and repaired to satisfaction of the Architect.

END OF SECTION

SECTION 09 9000
PAINTING AND COATING - COMMERCIAL GUIDE SPEC

***{FONT-FAMILY:ARIAL;FONT-SIZE:10PT;}**

PART 1 GENERAL

2.01 SECTION INCLUDES

A. Surface preparation and field painting of exposed interior items and surfaces.

B. Surface preparation and field painting of exposed exterior items and surfaces.

C. Surface preparation and field application of interior high-performance coating systems to items and surfaces scheduled.

D. Surface preparation and field application of exterior high-performance coating systems to items and surfaces scheduled.

E. Painting of exposed bare and covered pipes and ducts, hangers, exposed steel and iron supports, and surfaces of mechanical and electrical equipment that do not have a factory-applied final finish.

2.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete.

B. Section 05 1200 - Structural Steel Framing.

C. Section 05 5000 - Metal Fabrications.

D. Section 06 2000 - Finish Carpentry: Shop priming architectural woodwork.

E. Section 08 1113 - Hollow Metal Doors and Frames.

F. Section 09 2116 - Gypsum Board Assemblies.

2.03 DEFINITIONS

A. General: Standard coating terms defined in ASTM D16.

1. Flat refers to a lusterless or matte finish with a gloss range below 15 when measured at an 85 degree meter.

2. Eggshell refers to low-sheen finish with a gloss range between 20 and 35 when measured at a 60 degree meter.

3. Semi-Gloss refers to medium-sheen finish with a gloss range between 35 and 70 when measured at a 60 degree meter.

4. Full gloss refers to high-sheen finish with a gloss range more than 70 when measured at a 60 degree meter.

B. Environments: The following terms distinguish between different corrosive exposures:

1. "Severe environments" are highly corrosive industrial atmospheres with sustained exposure to high humidity and condensation and with frequent cleaning using strong chemicals. Environments with heavy concentrations of strong chemical fumes and frequent splashing and spilling of harsh chemical products are severe environments.

2. "Moderate environments" are corrosive industrial atmospheres with intermittent exposure to high humidity and condensation, occasional mold and mildew development, and regular cleaning with strong chemicals. Environments with exposure to heavy concentrations of chemical fumes and occasional splashing and spilling of chemical products are moderate environments.

3. "Mild environments" are industrial atmospheres with normal exposure to moderate humidity and condensation, occasional mold and mildew development, and infrequent cleaning with strong chemicals. Environments with low levels of mild chemical fumes and occasional splashing and spilling of chemical products are mild environments. Normal outdoor weathering is also considered a mild environment.

2.04 REFERENCE STANDARDS

A. ASTM D16 - Standard Terminology for Paint, Related Coatings, Materials, and Applications 2016.

B. SSPC-SP 6 - Commercial Blast Cleaning 2007.

2.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: For each paint system indicated, including:

1. Material List: An inclusive list of required coating materials. Indicate each material and cross reference specific coating, finish system, and application. Identify each material by manufacturer's catalog number and general classification.

2. Preparation instructions and recommendations.

3. Manufacturer's Information: Manufacturer's technical information, including label analysis and instructions for handling, storing, and applying each coating material.

2.06 QUALITY ASSURANCE

A. Installer Qualifications: A firm or individual experienced in applying paints and coatings similar in material, design, and extent to those indicated for this project, whose work has resulted in applications with a record of successful in-service performance.

B. Obtain block fillers and primers for each coating system from the same manufacturer as the finish coats.

C. Paint exposed surfaces. If an item or a surface is not specifically mentioned, paint the item or surface the same as similar adjacent materials or surfaces. If a color of finish is not indicated, Architect will select from standard colors and finishes available.

D. Do not paint prefinished items, concealed surfaces, finished metal surfaces, operating parts, and labels.

E. Mock-Up: Provide a mock-up for evaluation of surface preparation techniques and application workmanship.

1. See Section 01 4000 - Quality Requirements, for general requirements for mock-up.

2. Finish areas designated by Architect.

3. Do not proceed with remaining work until workmanship, color, and sheen are approved by Architect.

4. Refinish mock-up area as required to produce acceptable work.

2.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to project site in manufacturer's original, unopened packages and containers bearing manufacturer's name and label.

B. Store materials not in use in tightly covered containers in a well-ventilated area at a minimum ambient temperature of 45 degrees F (7 degrees C). Maintain storage containers in a clean condition, free of foreign materials and residue.

2.08 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside

manufacturer's absolute limits.

B. Apply waterborne paints only when temperatures of surfaces to be painted and surrounding air are between 50 degrees F (10 degrees C) and 90 degrees F (32 degrees C).

C. Apply solvent-thinned paints only when temperatures of surfaces to be painted and surrounding air are between 45 degrees F (7 degrees C) and 95 degrees F (35 degrees C).

D. Do not apply paint in snow, rain, fog, or mist; or when relative humidity exceeds 85 percent; or at temperatures less than 5 degrees F (3 degrees C) above the dew point; or to damp or wet surfaces.

1. Painting may continue during inclement weather if surfaces and areas to be painted are enclosed and heated within temperature limits specified by manufacturer during application and drying periods.

2.09 EXTRA MATERIALS

A. Furnish extra paint materials from the same production run as the materials applied and in the quantities described below. Package with protective covering for storage and identify with labels describing contents. Deliver extra materials to Owner.

B. Quantity: Furnish Owner with an additional three percent, but not less than 1 gallon (3.8 l) or 1 case, as appropriate, of each material and color applied.

PART 2 PRODUCTS

3.01 MANUFACTURERS

A. Basis of Design Manufacturer: PPG Paints, 400 Bertha Lamme Drive Cranberry, PA 16066. Toll Free Tel: 888-PPG-IDEA. Web: www.ppgpaints.com/#sle.

B. Other Acceptable Manufacturers:

1. [_____] .

2. [_____].

3. Substitutions: See Section 01 6000 - Product Requirements.

3.02 PAINT MATERIALS - GENERAL

A. Material Compatibility: Provide block fillers, primers, and finish-coat materials that are compatible with one another and with the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.

B. VOC Classification: Provide high-performance coating materials, including primers, undercoats, and finish-coat materials, that meet the applicable local, state or federal VOC requirements.

C. Color: Refer to Finish Schedule and Paint Legend for paint colors.

PART 3 EXECUTION

4.01 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

C. Coordination of Work: Review other sections in which primers are provided to ensure compatibility of the total system for various substrates. On request, furnish information on characteristics of finish materials to ensure use of compatible primers.

1. Notify Architect about anticipated problems when using the materials specified over substrates primed by others.

2. If a potential incompatibility of primers applied by others exists, obtain the following from the primer applicator before proceeding:
    a. Confirmation of primer's suitability for expected service conditions.
    b. Confirmation of primer's ability to be top coated with materials specified.

4.02 PREPARATION

A. General: Remove hardware and hardware accessories, plates, machined surfaces, lighting fixtures, and similar items already installed that are not to be painted. If removal is impractical or impossible because of size or weight of the item, provide surface-applied protection before surface preparation and painting.
    1. After completing painting operations in each space or area, reinstall items removed using workers skilled in the trades involved.

B. Cleaning: Before applying paint or other surface treatments, clean substrates of substances that could impair bond of the various coatings. Remove oil and grease before cleaning.

C. Surface Preparation: Clean and prepare surfaces to be painted according to manufacturer's written instructions for each substrate condition and as specified.
    1. Provide barrier coats over incompatible primers or remove and reprime.
    2. Cementitious Substrates: Prepare concrete, brick, concrete masonry block, and cement plaster surfaces to be coated. Remove efflorescence, chalk, dust, dirt, grease, oils, and release agents. Roughen as required to remove glaze. If hardeners or sealers have been used to improve curing, use mechanical methods to prepare surfaces.
        a. Use abrasive blast-cleaning methods if recommended by coating manufacturer.
        b. Determine alkalinity and moisture content of surfaces by performing appropriate tests. If surfaces are sufficiently alkaline to cause the finish paint to blister and burn, correct this condition before application. Do not coat surfaces if moisture content exceeds that permitted in manufacturer's written instructions.
    3. Wood Substrates: Clean surfaces of dirt, oil, and other foreign substances with scrapers, mineral spirits, and sandpaper, as required. Smoothly sand surfaces exposed to view and dust off.
        a. Scrape and clean small, dry, seasoned knots, and apply a thin coat of white shellac or other recommended knot sealer, before applying primer.
        b. Immediately on delivery, prime edges, ends, faces, undersides, and backsides of wood to be coated.
        c. After priming, fill holes and imperfections in the finish surfaces with putty or plastic wood filler. Sand smooth when dried.
    4. Ferrous Metal Substrates: Clean ungalvanized ferrous metal surfaces that have not been shop coated; remove oil, grease, dirt, loose mill scale, and other foreign substances. Use solvent or mechanical cleaning methods that comply with SSPC recommendations.
        a. Blast-clean steel surfaces as recommended by coating manufacturer and according to SSPC-SP 6.
        b. Treat bare and sandblasted or pickled clean metal with a metal treatment wash coat before priming.
        c. Touch up bare areas and shop-applied prime coats that have been damaged. Wire brush, solvent clean, and touch up with same primer as the shop coat.

5. Non-Ferrous Metal Substrates: Clean non-ferrous and galvanized surfaces according to manufacturer's written instructions for the type of service, metal substrate, and application required.
    a. Remove pretreatment from galvanized sheet metal fabricated from coil stock by mechanical methods.

D. Material Preparation: Carefully mix and prepare coating materials according to manufacturer's written instructions.

1. Maintain containers used in mixing and applying coatings in a clean condition, free of foreign materials and residue.
2. Stir materials before applying to produce a mixture of uniform density. Stir as required during application. Do not stir surface film into the material. Remove film and, if necessary, strain coating material before using.
3. Use only the type of thinners approved by manufacturer and only within recommended limits.
4. Tinting: Tint each undercoat a lighter shade to simplify identification of each coat when multiple coats of same material are applied. Tint undercoats to match the color of the finish coat, but provide sufficient differences in shade of undercoats to distinguish each separate coat.

4.03 APPLICATION

A. General: Apply paint according to manufacturer's written instructions. Use applicators and techniques best suited for substrate and type of material being applied.

B. General: Apply high-performance coatings according to manufacturer's written instructions.

1. Use applicators and techniques best suited for the material being applied.
2. Do not apply high-performance coatings over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to forming a durable coating film.
3. Coating surface treatments and finishes are indicated in the coating system descriptions.
4. Provide finish coats compatible with primers used.
5. The term "exposed surfaces" includes areas visible when permanent or built-in fixtures, convector covers, grilles, covers for finned-tube radiation, and similar components are in place. Extend coatings in these areas, as required, to maintain system integrity and provide desired protection.

C. Application Procedures: Apply coatings by brush, roller, spray, or other applicators according to manufacturer's written instructions.

1. The number of coats and film thickness required is the same regardless of application method.
2. Completed Work: Match approved samples for color, texture, and coverage. Remove, refinish, or recoat work that does not comply with specified requirements.

4.04 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for general requirements for field inspection and testing.

B. Owner reserves the right to invoke the following test procedure at any time and as often as Owner deems necessary during the period when paint is being applied:

1. Owner will engage a qualified independent testing agency to sample paint material being used. Samples of material delivered to project will be taken, identified, sealed, and certified in the presence of Contractor.
2. Owner may direct Contractor to stop painting if test results show material being used does not comply with specified requirements. Contractor shall remove noncomplying paint from project site,

pay for testing, and repaint surfaces previously coated with the noncomplying paint. If necessary, Contractor may be required to remove noncomplying paint from previously painted surfaces if, on repainting with specified paint, the two coatings are incompatible.

4.05 CLEANING

A. After completing painting, clean glass and paint spattered surfaces. Remove spattered paint by washing and scraping without scratching or damaging adjacent finished surfaces.

4.06 PROTECTION

A. Protect work of other trades, whether being painted or not, against damage from painting. Correct damage by cleaning, repairing or replacing, and repainting, as approved by Architect.

B. Provide "Wet Paint" signs to protect newly painted finishes. After completing painting operations, remove temporary protective wrappings provided by others to protect their work.

C. After work of other trades is complete, touch up and restore damaged or defaced painted surfaces.

END OF SECTION

SECTION 09 9000
PAINTING AND COATING - LEED V4/GREEN PRODUCT GUIDE SPEC

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Surface preparation and field painting of exposed interior items and surfaces.

B. Surface preparation and field painting of exposed exterior items and surfaces.

C. Surface preparation and field application of interior high-performance coating systems to items and surfaces scheduled.

D. Surface preparation and field application of exterior high-performance coating systems to items and surfaces scheduled.

E. Painting of exposed bare and covered pipes and ducts, hangers, exposed steel and iron supports, and surfaces of mechanical and electrical equipment that do not have a factory-applied final finish.

1.02 DEFINITIONS

A. General: Standard coating terms defined in ASTM D16.

1. Flat refers to a lusterless or matte finish with a gloss range below 15 when measured at an 85 degree meter.

2. Eggshell refers to low-sheen finish with a gloss range between 20 and 35 when measured at a 60 degree meter.

3. Semi-Gloss refers to medium-sheen finish with a gloss range between 35 and 70 when measured at a 60 degree meter.

4. Full gloss refers to high-sheen finish with a gloss range more than 70 when measured at a 60 degree meter.

B. Environments: The following terms distinguish between different corrosive exposures:

1. "Severe environments" are highly corrosive industrial atmospheres with sustained exposure to high humidity and condensation and with frequent cleaning using strong chemicals. Environments with heavy concentrations of strong chemical fumes and frequent splashing and spilling of harsh chemical products are severe environments.

2. "Moderate environments" are corrosive industrial atmospheres with intermittent exposure to high humidity and condensation, occasional mold and mildew development, and regular cleaning with strong chemicals. Environments with exposure to heavy concentrations of chemical fumes and occasional splashing and spilling of chemical products are moderate environments.

3. "Mild environments" are industrial atmospheres with normal exposure to moderate humidity and condensation, occasional mold and mildew development, and infrequent cleaning with strong chemicals. Environments with low levels of mild chemical fumes and occasional splashing and spilling of chemical products are mild environments. Normal outdoor weathering is also considered a mild environment.

1.03 REFERENCE STANDARDS

A. ASTM D16 - Standard Terminology for Paint, Related Coatings, Materials, and Applications 2016.

B. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions From Indoor Sources Using Environmental Chambers 2017, v1.2.

C. EN 15804 - Sustainability of construction works - Environmental product declarations - Core rules for the product category of construction products 2013.

D. ISO 14025 - Environmental labels and declarations -- Type III environmental declarations -- Principles and procedures 2006.

E. ISO 14040 - Environmental management -- Life cycle assessment -- Principles and framework 2006.

F. ISO 14044 - Environmental management -- Life cycle assessment -- Requirements and guidelines 2006.

G. ISO 21930 - Sustainability in buildings and civil engineering works -- Core rules for environmental product declarations of construction products and services 2017.

H. SSPC-SP 6 - Commercial Blast Cleaning 2007.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: For each paint system indicated, including:

1. Material List: An inclusive list of required coating materials. Indicate each material and cross reference specific coating, finish system, and application. Identify each material by manufacturer's catalog number and general classification.

2. Preparation instructions and recommendations.

3. Manufacturer's Information: Manufacturer's technical information, including label analysis and instructions for handling, storing, and applying each coating material.

C. Selection Samples: For each finish product specified, two complete sets of color chips representing manufacturer's full range of available colors and patterns.

D. Verification Samples: For each finish product specified, two samples, minimum size 6 inch (150 mm) square, representing actual product, color, and patterns.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: A firm or individual experienced in applying paints and coatings similar in material, design, and extent to those indicated for this project, whose work has resulted in applications with a record of successful in-service performance.

B. Obtain block fillers and primers for each coating system from the same manufacturer as the finish coats.

C. Paint exposed surfaces. If an item or a surface is not specifically mentioned, paint the item or surface the same as similar adjacent materials or surfaces. If a color of finish is not indicated, Architect will select from standard colors and finishes available.

D. Do not paint prefinished items, concealed surfaces, finished metal surfaces, operating parts, and labels.

E. Mock-Up: Provide a mock-up for evaluation of surface preparation techniques and application workmanship.

1. See Section 01 4000 - Quality Requirements, for general requirements for mock-up.

2. Finish areas designated by Architect.

3. Do not proceed with remaining work until workmanship, color, and sheen are approved by Architect.

4. Refinish mock-up area as required to produce acceptable work.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to project site in manufacturer's original, unopened packages and containers bearing manufacturer's name and label.

B. Store materials not in use in tightly covered containers in a well-ventilated area at a minimum ambient temperature of 45 degrees F (7 degrees C). Maintain storage containers in a clean condition, free of

foreign materials and residue.

1.07 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

B. Apply waterborne paints only when temperatures of surfaces to be painted and surrounding air are between 50 degrees F (10 degrees C) and 90 degrees F (32 degrees C).

C. Apply solvent-thinned paints only when temperatures of surfaces to be painted and surrounding air are between 45 degrees F (7 degrees C) and 95 degrees F (35 degrees C).

D. Do not apply paint in snow, rain, fog, or mist; or when relative humidity exceeds 85 percent; or at temperatures less than 5 degrees F (3 degrees C) above the dew point; or to damp or wet surfaces.

1. Painting may continue during inclement weather if surfaces and areas to be painted are enclosed and heated within temperature limits specified by manufacturer during application and drying periods.

1.08 EXTRA MATERIALS

A. Furnish extra paint materials from the same production run as the materials applied and in the quantities described below. Package with protective covering for storage and identify with labels describing contents. Deliver extra materials to Owner.

B. Quantity: Furnish Owner with an additional three percent, but not less than 1 gallon (3.8 l) or 1 case, as appropriate, of each material and color applied.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Basis of Design Manufacturer: PPG Paints, 400 Bertha Lamme Drive Cranberry, PA 16066. Toll Free Tel: 888-PPG-IDEA. Web: www.ppgpaints.com/#sle.

2.02 PAINT MATERIALS - GENERAL

A. Material Compatibility: Provide block fillers, primers, and finish-coat materials that are compatible with one another and with the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.

B. VOC Classification: Provide high-performance coating materials, including primers, undercoats, and finish-coat materials, that meet the applicable local, state or federal VOC requirements.

C. LEED v4 EQ Credit: Low Emitting Materials, VOC Limits:

1. Interior Applications: For LEED v4 Compliance, 100 percent of paint and coatings products by volume applied to the interior must comply with the wet applied VOC content limits.

2. Exterior Applications (Schools and Healthcare Only): For LEED v4 Compliance, 90 percent of paint and coatings products by volume applied to the exterior must comply with the wet applied VOC content limits.

Table of Commonly Used Coatings VOC Limits		
Coating Category	CARB 2007 SCM VOC Limit	SCAQMD R1113, 6/3/11 VOC Limit
Flats	50 g/L	50 g/L
Non-Flats	100 g/L	50 g/L
Non-Flat, high Gloss	150 g/L	50 g/L

Primers, Sealers & Undercoaters	100 g/L	100 g/L
Floor Coatings	100 g/L	50 g/L
Industrial Maintenance Coatings	250 g/L	100 g/L
Rust Preventive Coatings	250 g/L	100 g/L
Stains, Exterior	250 g/L	100 g/L

D. LEED v4 EQ Credit: Low Emitting Materials, Emissions Requirement:

1. Interior Applications: For LEED v4 compliance, 90 percent of paint and coatings products by volume applied to the interior must comply with emissions requirements.

2. To demonstrate compliance, a product or layer containing paint must meet the following requirement, as applicable, with regard to emissions:

a. General Emissions Evaluation: Building products must be tested and determined compliant in accordance with CAL (CDPH SM) , using the applicable exposure scenario. The default scenario is the private office scenario. The manufacturers or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area.

b. Manufacturers' claims of compliance with the above requirements must also state the range of total VOCs after 14 days (336 hours), measured as specified in CAL (CDPH SM):

1) 0.5 mg/m3 or less.

2) Between 0.5 and 5.0 mg/m3.

3) 5.0 mg/m3 or more.

E. LEED v4 MR Credit: Building Product Disclosure and Optimization—Environmental Product Declarations.

1. Option 1. Environmental Product Declaration (EPD) (1 point): Use at least 20 different permanently installed products sourced from at least five different manufacturers that meet one of the disclosure criteria below.

a. Environmental Product Declarations which conform to ISO 14025, ISO 14040, ISO 14044 and EN 15804 or ISO 21930 and have at least a cradle to gate scope.

b. Product Specific Type III EPD -- Products with third-party certification (Type III), including external verification in which the manufacturer is explicitly recognized as the participant by the program operator are valued as one whole product for purposes of credit achievement calculation.

c. For credit achievement calculation, products sourced (extracted, manufactured, purchased) within 100 miles (160 km) of the project site are valued at 200 percent of their base contributing cost.

F. LEED v4 MR Credit: Building Product Disclosure and Optimization--Material Ingredients

1. Option 1. Material Ingredient Reporting (1 point): Use at east 20 different permanently installed products from at least five different manufacturers that use any of the following programs to demonstrate the chemical inventory of the product to at least 0.1 percent (1000 ppm).

a. Health Product Declaration (HPD). The end use product has a published, complete Health Product Declaration with full disclosure of known hazards in compliance with the Health Product Declaration open Standard.

G. Color: Refer to Finish Schedule and Paint Legend for paint colors.

2.03 CONCRETE MASONRY UNIT BLOCK FILLER

A. Basis of design - PPG Paints select seal grip types for the appropriate surfaces.

B. Concrete Masonry Unit Block Filler: Factory formulated high-performance latex block fillers.

2.04 INTERIOR PRIMERS

A. Basis of design - PPG Paints select seal grip types for the appropriate surfaces.

B. Interior Concrete and Masonry Primer: Factory-formulated alkali-resistant acrylic-latex interior primer for interior application.

C. Interior Gypsum Board Primer: Factory-formulated latex-based primer for interior application.

D. Interior Wood Primer: Factory-formulated acrylic-latex-based interior wood primer.

E. Interior Ferrous, Non-Ferrous, Galvanized Metal, and Aluminum Primer: Factory-formulated acrylic water-based rust-inhibitive metal primer.

2.05 EXTERIOR PRIMERS

A. Basis of design - PPG Paints select seal grip types for the appropriate surfaces.

B. Exterior Concrete and Masonry Primer: Factory-formulated alkali-resistant acrylic-latex primer for exterior application.

C. Exterior Gypsum Soffit Board Primer: Factory-formulated latex-based primer for exterior application.

D. Exterior Wood Primer for Acrylic Enamels: Factory-formulated latex wood primer for exterior application.

2.06 INTERIOR FINISH COATS

A. Basis of design - PPG Paints select seal grip types for the appropriate surfaces.

B. Interior Flat Latex: Factory-formulated flat acrylic latex-based interior paint.

C. Interior Eggshell Acrylic Enamel: Factory-formulated eggshell acrylic-latex interior enamel.

D. Interior Satin Acrylic Enamel: Factory-formulated satin acrylic-latex interior enamel.

E. Interior Semi-Gloss Acrylic Enamel: Factory-formulated semi-gloss acrylic-latex enamel.

F. Interior Full-Gloss Acrylic Enamel: Factory-formulated full-gloss acrylic-latex interior enamel.

G. Interior Eggshell Water Borne Acrylic Epoxy:

H. Interior Semi-Gloss Water Borne Acrylic Epoxy:

I. Interior Flat Waterborne Acrylic Dry Fog:

J. Interior Semi-Gloss Waterborne Acrylic Dry Fog:

K. Interior/Exterior High Performance Satin Polysiloxane:

2.07 EXTERIOR FINISH COATS

A. Basis of design - PPG Paints select seal grip types for the appropriate surfaces.

B. Exterior Flat Acrylic Paint: Factory-formulated flat acrylic-emulsion latex paint for exterior application.

C. Exterior Satin Acrylic Paint: Factory-formulated satin acrylic-latex paint for exterior application.

D. Exterior Semi-Gloss Acrylic Paint: Factory-formulated semi-gloss waterborne acrylic-latex enamel for exterior application.

E. Exterior Full-Gloss Acrylic Enamel: Factory-formulated full-gloss waterborne acrylic-latex enamel for exterior application.

F. Exterior High Performance Satin Polysiloxane:

PART 3 EXECUTION

3.01 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

C. Coordination of Work: Review other sections in which primers are provided to ensure compatibility of the total system for various substrates. On request, furnish information on characteristics of finish materials to ensure use of compatible primers.

1. Notify Architect about anticipated problems when using the materials specified over substrates primed by others.

2. If a potential incompatibility of primers applied by others exists, obtain the following from the primer applicator before proceeding:

a. Confirmation of primer's suitability for expected service conditions.

b. Confirmation of primer's ability to be top coated with materials specified.

3.02 PREPARATION

A. General: Remove hardware and hardware accessories, plates, machined surfaces, lighting fixtures, and similar items already installed that are not to be painted. If removal is impractical or impossible because of size or weight of the item, provide surface-applied protection before surface preparation and painting.

1. After completing painting operations in each space or area, reinstall items removed using workers skilled in the trades involved.

B. Cleaning: Before applying paint or other surface treatments, clean substrates of substances that could impair bond of the various coatings. Remove oil and grease before cleaning.

1. Schedule cleaning and painting so dust and other contaminants from the cleaning process will not fall on wet, newly painted surfaces.

C. Surface Preparation: Clean and prepare surfaces to be painted according to manufacturer's written instructions for each substrate condition and as specified.

1. Provide barrier coats over incompatible primers or remove and reprime.

2. Cementitious Substrates: Prepare concrete, brick, concrete masonry block, and cement plaster surfaces to be coated. Remove efflorescence, chalk, dust, dirt, grease, oils, and release agents. Roughen as required to remove glaze. If hardeners or sealers have been used to improve curing, use mechanical methods to prepare surfaces.

a. Use abrasive blast-cleaning methods if recommended by coating manufacturer.

b. Determine alkalinity and moisture content of surfaces by performing appropriate tests. If surfaces are sufficiently alkaline to cause the finish paint to blister and burn, correct this condition before application. Do not coat surfaces if moisture content exceeds that permitted in manufacturer's written instructions.

3. Wood Substrates: Clean surfaces of dirt, oil, and other foreign substances with scrapers, mineral spirits, and sandpaper, as required. Smoothly sand surfaces exposed to view and dust off.

a. Scrape and clean small, dry, seasoned knots, and apply a thin coat of white shellac or other recommended knot sealer, before applying primer.

b. Immediately on delivery, prime edges, ends, faces, undersides, and backsides of wood to be coated.

c. After priming, fill holes and imperfections in the finish surfaces with putty or plastic wood filler. Sand smooth when dried.

4. Ferrous Metal Substrates: Clean ungalvanized ferrous metal surfaces that have not been shop coated; remove oil, grease, dirt, loose mill scale, and other foreign substances. Use solvent or mechanical cleaning methods that comply with SSPC recommendations.

   a. Blast-clean steel surfaces as recommended by coating manufacturer and according to SSPC-SP 6.

   b. Treat bare and sandblasted or pickled clean metal with a metal treatment wash coat before priming.

   c. Touch up bare areas and shop-applied prime coats that have been damaged. Wire brush, solvent clean, and touch up with same primer as the shop coat.

5. Non-Ferrous Metal Substrates: Clean non-ferrous and galvanized surfaces according to manufacturer's written instructions for the type of service, metal substrate, and application required.

   a. Remove pretreatment from galvanized sheet metal fabricated from coil stock by mechanical methods.

D. Material Preparation: Carefully mix and prepare coating materials according to manufacturer's written instructions.

1. Maintain containers used in mixing and applying coatings in a clean condition, free of foreign materials and residue.

2. Stir materials before applying to produce a mixture of uniform density. Stir as required during application. Do not stir surface film into the material. Remove film and, if necessary, strain coating material before using.

3. Use only the type of thinners approved by manufacturer and only within recommended limits.

4. Tinting: Tint each undercoat a lighter shade to simplify identification of each coat when multiple coats of same material are applied. Tint undercoats to match the color of the finish coat, but provide sufficient differences in shade of undercoats to distinguish each separate coat.

3.03 APPLICATION

A. General: Apply paint according to manufacturer's written instructions. Use applicators and techniques best suited for substrate and type of material being applied.

B. General: Apply high-performance coatings according to manufacturer's written instructions.

1. Use applicators and techniques best suited for the material being applied.

2. Do not apply high-performance coatings over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to forming a durable coating film.

3. Coating surface treatments and finishes are indicated in the coating system descriptions.

4. Provide finish coats compatible with primers used.

5. The term "exposed surfaces" includes areas visible when permanent or built-in fixtures, convector covers, grilles, covers for finned-tube radiation, and similar components are in place. Extend coatings in these areas, as required, to maintain system integrity and provide desired protection.

C. Application Procedures: Apply coatings by brush, roller, spray, or other applicators according to manufacturer's written instructions.

1. The number of coats and film thickness required is the same regardless of application method.

2. Completed Work: Match approved samples for color, texture, and coverage. Remove, refinish, or recoat work that does not comply with specified requirements.

3.04 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for general requirements for field inspection and testing.

B. Owner reserves the right to invoke the following test procedure at any time and as often as Owner deems necessary during the period when paint is being applied:

3.05 CLEANING

A. After completing painting, clean glass and paint spattered surfaces. Remove spattered paint by washing and scraping without scratching or damaging adjacent finished surfaces.

3.06 PROTECTION

A. Protect work of other trades, whether being painted or not, against damage from painting. Correct damage by cleaning, repairing or replacing, and repainting, as approved by Architect.

B. Provide "Wet Paint" signs to protect newly painted finishes. After completing painting operations, remove temporary protective wrappings provided by others to protect their work.

C. After work of other trades is complete, touch up and restore damaged or defaced painted surfaces.

END OF SECTION

SECTION 09 9000
PAINTING AND COATING - LEED V4/GREEN PRODUCT GUIDE SPEC

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Surface preparation and field painting of exposed interior items and surfaces.

B. Surface preparation and field painting of exposed exterior items and surfaces.

C. Surface preparation and field application of interior high-performance coating systems to items and surfaces scheduled.

D. Surface preparation and field application of exterior high-performance coating systems to items and surfaces scheduled.

E. Painting of exposed bare and covered pipes and ducts, hangers, exposed steel and iron supports, and surfaces of mechanical and electrical equipment that do not have a factory-applied final finish.

1.02 DEFINITIONS

A. General: Standard coating terms defined in ASTM D16.

1. Flat refers to a lusterless or matte finish with a gloss range below 15 when measured at an 85 degree meter.

2. Eggshell refers to low-sheen finish with a gloss range between 20 and 35 when measured at a 60 degree meter.

3. Semi-Gloss refers to medium-sheen finish with a gloss range between 35 and 70 when measured at a 60 degree meter.

4. Full gloss refers to high-sheen finish with a gloss range more than 70 when measured at a 60 degree meter.

B. Environments: The following terms distinguish between different corrosive exposures:

1. "Severe environments" are highly corrosive industrial atmospheres with sustained exposure to high humidity and condensation and with frequent cleaning using strong chemicals. Environments with heavy concentrations of strong chemical fumes and frequent splashing and spilling of harsh chemical products are severe environments.

2. "Moderate environments" are corrosive industrial atmospheres with intermittent exposure to high humidity and condensation, occasional mold and mildew development, and regular cleaning with strong chemicals. Environments with exposure to heavy concentrations of chemical fumes and occasional splashing and spilling of chemical products are moderate environments.

3. "Mild environments" are industrial atmospheres with normal exposure to moderate humidity and condensation, occasional mold and mildew development, and infrequent cleaning with strong chemicals. Environments with low levels of mild chemical fumes and occasional splashing and spilling of chemical products are mild environments. Normal outdoor weathering is also considered a mild environment.

1.03 REFERENCE STANDARDS

A. ASTM D16 - Standard Terminology for Paint, Related Coatings, Materials, and Applications 2016.

B. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions From Indoor Sources Using Environmental Chambers 2017, v1.2.

C. EN 15804 - Sustainability of construction works - Environmental product declarations - Core rules for the product category of construction products 2013.

D. ISO 14025 - Environmental labels and declarations -- Type III environmental declarations -- Principles and procedures 2006.

E. ISO 14040 - Environmental management -- Life cycle assessment -- Principles and framework 2006.

F. ISO 14044 - Environmental management -- Life cycle assessment -- Requirements and guidelines 2006.

G. ISO 21930 - Sustainability in buildings and civil engineering works -- Core rules for environmental product declarations of construction products and services 2017.

H. SSPC-SP 6 - Commercial Blast Cleaning 2007.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: For each paint system indicated, including:

1. Material List: An inclusive list of required coating materials. Indicate each material and cross reference specific coating, finish system, and application. Identify each material by manufacturer's catalog number and general classification.

2. Preparation instructions and recommendations.

3. Manufacturer's Information: Manufacturer's technical information, including label analysis and instructions for handling, storing, and applying each coating material.

C. Selection Samples: For each finish product specified, two complete sets of color chips representing manufacturer's full range of available colors and patterns.

D. Verification Samples: For each finish product specified, two samples, minimum size 6 inch (150 mm) square, representing actual product, color, and patterns.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: A firm or individual experienced in applying paints and coatings similar in material, design, and extent to those indicated for this project, whose work has resulted in applications with a record of successful in-service performance.

B. Obtain block fillers and primers for each coating system from the same manufacturer as the finish coats.

C. Paint exposed surfaces. If an item or a surface is not specifically mentioned, paint the item or surface the same as similar adjacent materials or surfaces. If a color of finish is not indicated, Architect will select from standard colors and finishes available.

D. Do not paint prefinished items, concealed surfaces, finished metal surfaces, operating parts, and labels.

E. Mock-Up: Provide a mock-up for evaluation of surface preparation techniques and application workmanship.

1. See Section 01 4000 - Quality Requirements, for general requirements for mock-up.

2. Finish areas designated by Architect.

3. Do not proceed with remaining work until workmanship, color, and sheen are approved by Architect.

4. Refinish mock-up area as required to produce acceptable work.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to project site in manufacturer's original, unopened packages and containers bearing manufacturer's name and label.

B. Store materials not in use in tightly covered containers in a well-ventilated area at a minimum ambient temperature of 45 degrees F (7 degrees C). Maintain storage containers in a clean condition, free of

foreign materials and residue.

1.07 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

B. Apply waterborne paints only when temperatures of surfaces to be painted and surrounding air are between 50 degrees F (10 degrees C) and 90 degrees F (32 degrees C).

C. Apply solvent-thinned paints only when temperatures of surfaces to be painted and surrounding air are between 45 degrees F (7 degrees C) and 95 degrees F (35 degrees C).

D. Do not apply paint in snow, rain, fog, or mist; or when relative humidity exceeds 85 percent; or at temperatures less than 5 degrees F (3 degrees C) above the dew point; or to damp or wet surfaces.

1. Painting may continue during inclement weather if surfaces and areas to be painted are enclosed and heated within temperature limits specified by manufacturer during application and drying periods.

1.08 EXTRA MATERIALS

A. Furnish extra paint materials from the same production run as the materials applied and in the quantities described below. Package with protective covering for storage and identify with labels describing contents. Deliver extra materials to Owner.

B. Quantity: Furnish Owner with an additional three percent, but not less than 1 gallon (3.8 l) or 1 case, as appropriate, of each material and color applied.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Basis of Design Manufacturer: PPG Paints, 400 Bertha Lamme Drive Cranberry, PA 16066. Toll Free Tel: 888-PPG-IDEA. Web: www.ppgpaints.com/#sle.

2.02 PAINT MATERIALS - GENERAL

A. Material Compatibility: Provide block fillers, primers, and finish-coat materials that are compatible with one another and with the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.

B. VOC Classification: Provide high-performance coating materials, including primers, undercoats, and finish-coat materials, that meet the applicable local, state or federal VOC requirements.

C. LEED v4 EQ Credit: Low Emitting Materials, VOC Limits:

1. Interior Applications: For LEED v4 Compliance, 100 percent of paint and coatings products by volume applied to the interior must comply with the wet applied VOC content limits.

2. Exterior Applications (Schools and Healthcare Only): For LEED v4 Compliance, 90 percent of paint and coatings products by volume applied to the exterior must comply with the wet applied VOC content limits.

Table of Commonly Used Coatings VOC Limits		
Coating Category	CARB 2007 SCM VOC Limit	SCAQMD R1113, 6/3/11 VOC Limit
Flats	50 g/L	50 g/L
Non-Flats	100 g/L	50 g/L
Non-Flat, high Gloss	150 g/L	50 g/L

Primers, Sealers & Undercoaters	100 g/L	100 g/L
Floor Coatings	100 g/L	50 g/L
Industrial Maintenance Coatings	250 g/L	100 g/L
Rust Preventive Coatings	250 g/L	100 g/L
Stains, Exterior	250 g/L	100 g/L

D. LEED v4 EQ Credit: Low Emitting Materials, Emissions Requirement:

1. Interior Applications: For LEED v4 compliance, 90 percent of paint and coatings products by volume applied to the interior must comply with emissions requirements.

2. To demonstrate compliance, a product or layer containing paint must meet the following requirement, as applicable, with regard to emissions:

a. General Emissions Evaluation: Building products must be tested and determined compliant in accordance with CAL (CDPH SM) , using the applicable exposure scenario. The default scenario is the private office scenario. The manufacturers or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area.

b. Manufacturers' claims of compliance with the above requirements must also state the range of total VOCs after 14 days (336 hours), measured as specified in CAL (CDPH SM):

1) 0.5 mg/m3 or less.

2) Between 0.5 and 5.0 mg/m3.

3) 5.0 mg/m3 or more.

E. LEED v4 MR Credit: Building Product Disclosure and Optimization—Environmental Product Declarations.

1. Option 1. Environmental Product Declaration (EPD) (1 point): Use at least 20 different permanently installed products sourced from at least five different manufacturers that meet one of the disclosure criteria below.

a. Environmental Product Declarations which conform to ISO 14025, ISO 14040, ISO 14044 and EN 15804 or ISO 21930 and have at least a cradle to gate scope.

b. Product Specific Type III EPD -- Products with third-party certification (Type III), including external verification in which the manufacturer is explicitly recognized as the participant by the program operator are valued as one whole product for purposes of credit achievement calculation.

c. For credit achievement calculation, products sourced (extracted, manufactured, purchased) within 100 miles (160 km) of the project site are valued at 200 percent of their base contributing cost.

F. LEED v4 MR Credit: Building Product Disclosure and Optimization--Material Ingredients

1. Option 1. Material Ingredient Reporting (1 point): Use at east 20 different permanently installed products from at least five different manufacturers that use any of the following programs to demonstrate the chemical inventory of the product to at least 0.1 percent (1000 ppm).

a. Health Product Declaration (HPD). The end use product has a published, complete Health Product Declaration with full disclosure of known hazards in compliance with the Health Product Declaration open Standard.

G. Color: Refer to Finish Schedule and Paint Legend for paint colors.

2.03 CONCRETE MASONRY UNIT BLOCK FILLER

A. Basis of design - PPG Paints select seal grip types for the appropriate surfaces.

B. Concrete Masonry Unit Block Filler: Factory formulated high-performance latex block fillers.

2.04 INTERIOR PRIMERS

A. Basis of design - PPG Paints select seal grip types for the appropriate surfaces.

B. Interior Concrete and Masonry Primer: Factory-formulated alkali-resistant acrylic-latex interior primer for interior application.

C. Interior Gypsum Board Primer: Factory-formulated latex-based primer for interior application.

D. Interior Wood Primer: Factory-formulated acrylic-latex-based interior wood primer.

E. Interior Ferrous, Non-Ferrous, Galvanized Metal, and Aluminum Primer: Factory-formulated acrylic water-based rust-inhibitive metal primer.

2.05 EXTERIOR PRIMERS

A. Basis of design - PPG Paints select seal grip types for the appropriate surfaces.

B. Exterior Concrete and Masonry Primer: Factory-formulated alkali-resistant acrylic-latex primer for exterior application.

C. Exterior Gypsum Soffit Board Primer: Factory-formulated latex-based primer for exterior application.

D. Exterior Wood Primer for Acrylic Enamels: Factory-formulated latex wood primer for exterior application.

2.06 INTERIOR FINISH COATS

A. Basis of design - PPG Paints select seal grip types for the appropriate surfaces.

B. Interior Flat Latex: Factory-formulated flat acrylic latex-based interior paint.

C. Interior Eggshell Acrylic Enamel: Factory-formulated eggshell acrylic-latex interior enamel.

D. Interior Satin Acrylic Enamel: Factory-formulated satin acrylic-latex interior enamel.

E. Interior Semi-Gloss Acrylic Enamel: Factory-formulated semi-gloss acrylic-latex enamel.

F. Interior Full-Gloss Acrylic Enamel: Factory-formulated full-gloss acrylic-latex interior enamel.

G. Interior Eggshell Water Borne Acrylic Epoxy:

H. Interior Semi-Gloss Water Borne Acrylic Epoxy:

I. Interior Flat Waterborne Acrylic Dry Fog:

J. Interior Semi-Gloss Waterborne Acrylic Dry Fog:

K. Interior/Exterior High Performance Satin Polysiloxane:

2.07 EXTERIOR FINISH COATS

A. Basis of design - PPG Paints select seal grip types for the appropriate surfaces.

B. Exterior Flat Acrylic Paint: Factory-formulated flat acrylic-emulsion latex paint for exterior application.

C. Exterior Satin Acrylic Paint: Factory-formulated satin acrylic-latex paint for exterior application.

D. Exterior Semi-Gloss Acrylic Paint: Factory-formulated semi-gloss waterborne acrylic-latex enamel for exterior application.

E. Exterior Full-Gloss Acrylic Enamel: Factory-formulated full-gloss waterborne acrylic-latex enamel for exterior application.

F. Exterior High Performance Satin Polysiloxane:

PART 3 EXECUTION

3.01 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

C. Coordination of Work: Review other sections in which primers are provided to ensure compatibility of the total system for various substrates. On request, furnish information on characteristics of finish materials to ensure use of compatible primers.

1. Notify Architect about anticipated problems when using the materials specified over substrates primed by others.

2. If a potential incompatibility of primers applied by others exists, obtain the following from the primer applicator before proceeding:

a. Confirmation of primer's suitability for expected service conditions.

b. Confirmation of primer's ability to be top coated with materials specified.

3.02 PREPARATION

A. General: Remove hardware and hardware accessories, plates, machined surfaces, lighting fixtures, and similar items already installed that are not to be painted. If removal is impractical or impossible because of size or weight of the item, provide surface-applied protection before surface preparation and painting.

1. After completing painting operations in each space or area, reinstall items removed using workers skilled in the trades involved.

B. Cleaning: Before applying paint or other surface treatments, clean substrates of substances that could impair bond of the various coatings. Remove oil and grease before cleaning.

1. Schedule cleaning and painting so dust and other contaminants from the cleaning process will not fall on wet, newly painted surfaces.

C. Surface Preparation: Clean and prepare surfaces to be painted according to manufacturer's written instructions for each substrate condition and as specified.

1. Provide barrier coats over incompatible primers or remove and reprime.

2. Cementitious Substrates: Prepare concrete, brick, concrete masonry block, and cement plaster surfaces to be coated. Remove efflorescence, chalk, dust, dirt, grease, oils, and release agents. Roughen as required to remove glaze. If hardeners or sealers have been used to improve curing, use mechanical methods to prepare surfaces.

a. Use abrasive blast-cleaning methods if recommended by coating manufacturer.

b. Determine alkalinity and moisture content of surfaces by performing appropriate tests. If surfaces are sufficiently alkaline to cause the finish paint to blister and burn, correct this condition before application. Do not coat surfaces if moisture content exceeds that permitted in manufacturer's written instructions.

3. Wood Substrates: Clean surfaces of dirt, oil, and other foreign substances with scrapers, mineral spirits, and sandpaper, as required. Smoothly sand surfaces exposed to view and dust off.

a. Scrape and clean small, dry, seasoned knots, and apply a thin coat of white shellac or other recommended knot sealer, before applying primer.

b. Immediately on delivery, prime edges, ends, faces, undersides, and backsides of wood to be coated.

c. After priming, fill holes and imperfections in the finish surfaces with putty or plastic wood filler. Sand smooth when dried.

4. Ferrous Metal Substrates: Clean ungalvanized ferrous metal surfaces that have not been shop coated; remove oil, grease, dirt, loose mill scale, and other foreign substances. Use solvent or mechanical cleaning methods that comply with SSPC recommendations.

   a. Blast-clean steel surfaces as recommended by coating manufacturer and according to SSPC-SP 6.

   b. Treat bare and sandblasted or pickled clean metal with a metal treatment wash coat before priming.

   c. Touch up bare areas and shop-applied prime coats that have been damaged. Wire brush, solvent clean, and touch up with same primer as the shop coat.

5. Non-Ferrous Metal Substrates: Clean non-ferrous and galvanized surfaces according to manufacturer's written instructions for the type of service, metal substrate, and application required.

   a. Remove pretreatment from galvanized sheet metal fabricated from coil stock by mechanical methods.

D. Material Preparation: Carefully mix and prepare coating materials according to manufacturer's written instructions.

1. Maintain containers used in mixing and applying coatings in a clean condition, free of foreign materials and residue.

2. Stir materials before applying to produce a mixture of uniform density. Stir as required during application. Do not stir surface film into the material. Remove film and, if necessary, strain coating material before using.

3. Use only the type of thinners approved by manufacturer and only within recommended limits.

4. Tinting: Tint each undercoat a lighter shade to simplify identification of each coat when multiple coats of same material are applied. Tint undercoats to match the color of the finish coat, but provide sufficient differences in shade of undercoats to distinguish each separate coat.

3.03 APPLICATION

A. General: Apply paint according to manufacturer's written instructions. Use applicators and techniques best suited for substrate and type of material being applied.

B. General: Apply high-performance coatings according to manufacturer's written instructions.

1. Use applicators and techniques best suited for the material being applied.

2. Do not apply high-performance coatings over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to forming a durable coating film.

3. Coating surface treatments and finishes are indicated in the coating system descriptions.

4. Provide finish coats compatible with primers used.

5. The term "exposed surfaces" includes areas visible when permanent or built-in fixtures, convector covers, grilles, covers for finned-tube radiation, and similar components are in place. Extend coatings in these areas, as required, to maintain system integrity and provide desired protection.

C. Application Procedures: Apply coatings by brush, roller, spray, or other applicators according to manufacturer's written instructions.

1. The number of coats and film thickness required is the same regardless of application method.

2. Completed Work: Match approved samples for color, texture, and coverage. Remove, refinish, or recoat work that does not comply with specified requirements.

3.04 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for general requirements for field inspection and testing.

B. Owner reserves the right to invoke the following test procedure at any time and as often as Owner deems necessary during the period when paint is being applied:

1. Owner will engage a qualified independent testing agency to sample paint material being used. Samples of material delivered to project will be taken, identified, sealed, and certified in the presence of Contractor.

2. Owner may direct Contractor to stop painting if test results show material being used does not comply with specified requirements. Contractor shall remove noncomplying paint from project site, pay for testing, and repaint surfaces previously coated with the noncomplying paint. If necessary, Contractor may be required to remove noncomplying paint from previously painted surfaces if, on repainting with specified paint, the two coatings are incompatible.

3.05 CLEANING

A. After completing painting, clean glass and paint spattered surfaces. Remove spattered paint by washing and scraping without scratching or damaging adjacent finished surfaces.

3.06 PROTECTION

A. Protect work of other trades, whether being painted or not, against damage from painting. Correct damage by cleaning, repairing or replacing, and repainting, as approved by Architect.

B. Provide "Wet Paint" signs to protect newly painted finishes. After completing painting operations, remove temporary protective wrappings provided by others to protect their work.

C. After work of other trades is complete, touch up and restore damaged or defaced painted surfaces.

END OF SECTION

SECTION 09 9000
PAINTING AND COATING - COMMERCIAL GUIDE SPEC

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Surface preparation and field painting of exposed interior items and surfaces.

B. Surface preparation and field painting of exposed exterior items and surfaces.

C. Surface preparation and field application of interior high-performance coating systems to items and surfaces scheduled.

D. Surface preparation and field application of exterior high-performance coating systems to items and surfaces scheduled.

E. Painting of exposed bare and covered pipes and ducts, hangers, exposed steel and iron supports, and surfaces of mechanical and electrical equipment that do not have a factory-applied final finish.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete.

B. Section 05 1200 - Structural Steel Framing.

C. Section 05 5000 - Metal Fabrications.

D. Section 06 2000 - Finish Carpentry: Shop priming architectural woodwork.

E. Section 08 1113 - Hollow Metal Doors and Frames.

F. Section 09 2116 - Gypsum Board Assemblies.

1.03 DEFINITIONS

A. General: Standard coating terms defined in ASTM D16.

1. Flat refers to a lusterless or matte finish with a gloss range below 15 when measured at an 85 degree meter.

2. Eggshell refers to low-sheen finish with a gloss range between 20 and 35 when measured at a 60 degree meter.

3. Semi-Gloss refers to medium-sheen finish with a gloss range between 35 and 70 when measured at a 60 degree meter.

4. Full gloss refers to high-sheen finish with a gloss range more than 70 when measured at a 60 degree meter.

B. Environments: The following terms distinguish between different corrosive exposures:

1. "Severe environments" are highly corrosive industrial atmospheres with sustained exposure to high humidity and condensation and with frequent cleaning using strong chemicals. Environments with heavy concentrations of strong chemical fumes and frequent splashing and spilling of harsh chemical products are severe environments.

2. "Moderate environments" are corrosive industrial atmospheres with intermittent exposure to high humidity and condensation, occasional mold and mildew development, and regular cleaning with strong chemicals. Environments with exposure to heavy concentrations of chemical fumes and occasional splashing and spilling of chemical products are moderate environments.

3. "Mild environments" are industrial atmospheres with normal exposure to moderate humidity and condensation, occasional mold and mildew development, and infrequent cleaning with strong chemicals. Environments with low levels of mild chemical fumes and occasional splashing and

spilling of chemical products are mild environments. Normal outdoor weathering is also considered a mild environment.

1.04 REFERENCE STANDARDS

A. ASTM D16 - Standard Terminology for Paint, Related Coatings, Materials, and Applications 2016.

B. SSPC-SP 6 - Commercial Blast Cleaning 2007.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: For each paint system indicated, including:

1. Material List: An inclusive list of required coating materials. Indicate each material and cross reference specific coating, finish system, and application. Identify each material by manufacturer's catalog number and general classification.
2. Preparation instructions and recommendations.
3. Manufacturer's Information: Manufacturer's technical information, including label analysis and instructions for handling, storing, and applying each coating material.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: A firm or individual experienced in applying paints and coatings similar in material, design, and extent to those indicated for this project, whose work has resulted in applications with a record of successful in-service performance.

B. Obtain block fillers and primers for each coating system from the same manufacturer as the finish coats.

C. Paint exposed surfaces. If an item or a surface is not specifically mentioned, paint the item or surface the same as similar adjacent materials or surfaces. If a color of finish is not indicated, Architect will select from standard colors and finishes available.

D. Do not paint prefinished items, concealed surfaces, finished metal surfaces, operating parts, and labels.

E. Mock-Up: Provide a mock-up for evaluation of surface preparation techniques and application workmanship.

1. See Section 01 4000 - Quality Requirements, for general requirements for mock-up.
2. Finish areas designated by Architect.
3. Do not proceed with remaining work until workmanship, color, and sheen are approved by Architect.
4. Refinish mock-up area as required to produce acceptable work.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to project site in manufacturer's original, unopened packages and containers bearing manufacturer's name and label.

B. Store materials not in use in tightly covered containers in a well-ventilated area at a minimum ambient temperature of 45 degrees F (7 degrees C). Maintain storage containers in a clean condition, free of foreign materials and residue.

1.08 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

B. Apply waterborne paints only when temperatures of surfaces to be painted and surrounding air are between 50 degrees F (10 degrees C) and 90 degrees F (32 degrees C).

C. Apply solvent-thinned paints only when temperatures of surfaces to be painted and surrounding air are between 45 degrees F (7 degrees C) and 95 degrees F (35 degrees C).

D. Do not apply paint in snow, rain, fog, or mist; or when relative humidity exceeds 85 percent; or at temperatures less than 5 degrees F (3 degrees C) above the dew point; or to damp or wet surfaces.

1. Painting may continue during inclement weather if surfaces and areas to be painted are enclosed and heated within temperature limits specified by manufacturer during application and drying periods.

1.09 EXTRA MATERIALS

A. Furnish extra paint materials from the same production run as the materials applied and in the quantities described below. Package with protective covering for storage and identify with labels describing contents. Deliver extra materials to Owner.

B. Quantity: Furnish Owner with an additional three percent, but not less than 1 gallon (3.8 l) or 1 case, as appropriate, of each material and color applied.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Basis of Design Manufacturer: PPG Paints, 400 Bertha Lamme Drive Cranberry, PA 16066. Toll Free Tel: 888-PPG-IDEA. Web: www.ppgpaints.com/#sle.

B. Other Acceptable Manufacturers:

1. Substitutions: See Section 01 6000 - Product Requirements.

2.02 PAINT MATERIALS - GENERAL

A. Material Compatibility: Provide block fillers, primers, and finish-coat materials that are compatible with one another and with the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.

B. VOC Classification: Provide high-performance coating materials, including primers, undercoats, and finish-coat materials, that meet the applicable local, state or federal VOC requirements.

C. Color: Refer to Finish Schedule and Paint Legend for paint colors.

PART 3 EXECUTION

3.01 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

C. Coordination of Work: Review other sections in which primers are provided to ensure compatibility of the total system for various substrates. On request, furnish information on characteristics of finish materials to ensure use of compatible primers.

1. Notify Architect about anticipated problems when using the materials specified over substrates primed by others.

2. If a potential incompatibility of primers applied by others exists, obtain the following from the primer applicator before proceeding:

a. Confirmation of primer's suitability for expected service conditions.

b. Confirmation of primer's ability to be top coated with materials specified.

3.02 PREPARATION

A. General: Remove hardware and hardware accessories, plates, machined surfaces, lighting fixtures, and similar items already installed that are not to be painted. If removal is impractical or impossible because of size or weight of the item, provide surface-applied protection before surface preparation and painting.

1. After completing painting operations in each space or area, reinstall items removed using workers skilled in the trades involved.

B. Cleaning: Before applying paint or other surface treatments, clean substrates of substances that could impair bond of the various coatings. Remove oil and grease before cleaning.

1. Schedule cleaning and painting so dust and other contaminants from the cleaning process will not fall on wet, newly painted surfaces.

C. Surface Preparation: Clean and prepare surfaces to be painted according to manufacturer's written instructions for each substrate condition and as specified.

1. Provide barrier coats over incompatible primers or remove and reprime.
2. Cementitious Substrates: Prepare concrete, brick, concrete masonry block, and cement plaster surfaces to be coated. Remove efflorescence, chalk, dust, dirt, grease, oils, and release agents. Roughen as required to remove glaze. If hardeners or sealers have been used to improve curing, use mechanical methods to prepare surfaces.
    a. Use abrasive blast-cleaning methods if recommended by coating manufacturer.
    b. Determine alkalinity and moisture content of surfaces by performing appropriate tests. If surfaces are sufficiently alkaline to cause the finish paint to blister and burn, correct this condition before application. Do not coat surfaces if moisture content exceeds that permitted in manufacturer's written instructions.
3. Wood Substrates: Clean surfaces of dirt, oil, and other foreign substances with scrapers, mineral spirits, and sandpaper, as required. Smoothly sand surfaces exposed to view and dust off.
    a. Scrape and clean small, dry, seasoned knots, and apply a thin coat of white shellac or other recommended knot sealer, before applying primer.
    b. Immediately on delivery, prime edges, ends, faces, undersides, and backsides of wood to be coated.
    c. After priming, fill holes and imperfections in the finish surfaces with putty or plastic wood filler. Sand smooth when dried.
4. Ferrous Metal Substrates: Clean ungalvanized ferrous metal surfaces that have not been shop coated; remove oil, grease, dirt, loose mill scale, and other foreign substances. Use solvent or mechanical cleaning methods that comply with SSPC recommendations.
    a. Blast-clean steel surfaces as recommended by coating manufacturer and according to SSPC-SP 6.
    b. Treat bare and sandblasted or pickled clean metal with a metal treatment wash coat before priming.
    c. Touch up bare areas and shop-applied prime coats that have been damaged. Wire brush, solvent clean, and touch up with same primer as the shop coat.
5. Non-Ferrous Metal Substrates: Clean non-ferrous and galvanized surfaces according to manufacturer's written instructions for the type of service, metal substrate, and application required.

a. Remove pretreatment from galvanized sheet metal fabricated from coil stock by mechanical methods.

D. Material Preparation: Carefully mix and prepare coating materials according to manufacturer's written instructions.

1. Maintain containers used in mixing and applying coatings in a clean condition, free of foreign materials and residue.

2. Stir materials before applying to produce a mixture of uniform density. Stir as required during application. Do not stir surface film into the material. Remove film and, if necessary, strain coating material before using.

3. Use only the type of thinners approved by manufacturer and only within recommended limits.

4. Tinting: Tint each undercoat a lighter shade to simplify identification of each coat when multiple coats of same material are applied. Tint undercoats to match the color of the finish coat, but provide sufficient differences in shade of undercoats to distinguish each separate coat.

3.03 APPLICATION

A. General: Apply paint according to manufacturer's written instructions. Use applicators and techniques best suited for substrate and type of material being applied.

B. General: Apply high-performance coatings according to manufacturer's written instructions.

1. Use applicators and techniques best suited for the material being applied.

2. Do not apply high-performance coatings over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to forming a durable coating film.

3. Coating surface treatments and finishes are indicated in the coating system descriptions.

4. Provide finish coats compatible with primers used.

5. The term "exposed surfaces" includes areas visible when permanent or built-in fixtures, convector covers, grilles, covers for finned-tube radiation, and similar components are in place. Extend coatings in these areas, as required, to maintain system integrity and provide desired protection.

C. Application Procedures: Apply coatings by brush, roller, spray, or other applicators according to manufacturer's written instructions.

1. The number of coats and film thickness required is the same regardless of application method.

2. Completed Work: Match approved samples for color, texture, and coverage. Remove, refinish, or recoat work that does not comply with specified requirements.

3.04 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for general requirements for field inspection and testing.

B. Owner reserves the right to invoke the following test procedure at any time and as often as Owner deems necessary during the period when paint is being applied:

1. Owner will engage a qualified independent testing agency to sample paint material being used. Samples of material delivered to project will be taken, identified, sealed, and certified in the presence of Contractor.

2. Owner may direct Contractor to stop painting if test results show material being used does not comply with specified requirements. Contractor shall remove noncomplying paint from project site, pay for testing, and repaint surfaces previously coated with the noncomplying paint. If necessary, Contractor may be required to remove noncomplying paint from previously painted surfaces if, on repainting with specified paint, the two coatings are incompatible.

3.05 CLEANING

A. After completing painting, clean glass and paint spattered surfaces. Remove spattered paint by washing and scraping without scratching or damaging adjacent finished surfaces.

3.06 PROTECTION

A. Protect work of other trades, whether being painted or not, against damage from painting. Correct damage by cleaning, repairing or replacing, and repainting, as approved by Architect.

B. Provide "Wet Paint" signs to protect newly painted finishes. After completing painting operations, remove temporary protective wrappings provided by others to protect their work.

C. After work of other trades is complete, touch up and restore damaged or defaced painted surfaces.

END OF SECTION

SECTION 09 9113
EXTERIOR PAINTING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Surface preparation.

B. Field application of paints.

C. Materials for backpriming woodwork.

D. Scope: Finish exterior surfaces exposed to view, unless fully factory-finished and unless otherwise indicated, including the following:

1. Both sides and edges of plywood backboards for electrical and telecom equipment before installing equipment.
2. Exposed surfaces of steel lintels and ledge angles.

E. Do Not Paint or Finish the Following Items:

1. Items factory-finished unless otherwise indicated; materials and products having factory-applied primers are not considered factory finished.
2. Items indicated to receive other finishes.
3. Items indicated to remain unfinished.
4. Fire rating labels, equipment serial number and capacity labels, and operating parts of equipment.
5. Non-metallic roofing and flashing.
6. Stainless steel, anodized aluminum, bronze, terne coated stainless steel, zinc, and lead.
7. Marble, granite, slate, and other natural stones.
8. Floors, unless specifically indicated.
9. Ceramic and other types of tiles.
10. Brick, glass unit masonry, architectural concrete, cast stone, integrally colored plaster and stucco as specified to be finished surfaces.
11. Exterior insulation and finish system (EIFS).
12. Glass.
13. Concealed pipes, ducts, and conduits.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 09 9123 - Interior Painting.

1.03 DEFINITIONS

A. Comply with ASTM D16 for interpretation of terms used in this section.

1.04 REFERENCE STANDARDS

A. ASTM D16 - Standard Terminology for Paint, Related Coatings, Materials, and Applications 2016.

B. ASTM D4258 - Standard Practice for Surface Cleaning Concrete for Coating 2005 (Reapproved 2017).

C. MPI (APL) - Master Painters Institute Approved Products List; Master Painters and Decorators Association Current Edition.

D. MPI (APSM) - Master Painters Institute Architectural Painting Specification Manual Current Edition.

E. SSPC-SP 1 - Solvent Cleaning 2015, with Editorial Revision (2016).

F. SSPC-SP 6 - Commercial Blast Cleaning 2007.

G. SSPC-SP 13 - Surface Preparation of Concrete 1997 (Reaffirmed 2003).

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide complete list of products to be used, with the following information for each:

1. Manufacturer's name, product name and/or catalog number, and general product category (e.g. "alkyd enamel").

2. MPI product number (e.g. MPI #47).

3. Cross-reference to specified paint system(s) product is to be used in; include description of each system.

4. Manufacturer's installation instructions.

5. If proposal of substitutions is allowed under submittal procedures, explanation of substitutions proposed.

C. Samples: Submit two paper chip samples 1.5" x 2" in size illustrating range of colors and textures available for each surface finishing product scheduled.

D. Certification: By manufacturer that paints and finishes comply with VOC limits specified.

E. Manufacturer's Instructions: Indicate special surface preparation procedures.

1.06 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified, with minimum three years documented experience.

B. Applicator Qualifications: Company specializing in performing the type of work specified with minimum three years experience and approved by manufacturer.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to site in sealed and labeled containers; inspect to verify acceptability.

B. Container Label: Include manufacturer's name, type of paint, brand name, lot number, brand code, coverage, surface preparation, drying time, cleanup requirements, color designation, and instructions for mixing and reducing.

C. Paint Materials: Store at minimum ambient temperature of 45 degrees F (7 degrees C) and a maximum of 90 degrees F (32 degrees C), in ventilated area, and as required by manufacturer's instructions.

1.08 FIELD CONDITIONS

A. Do not apply materials when surface and ambient temperatures are outside the temperature ranges required by the paint product manufacturer.

B. Follow manufacturer's recommended procedures for producing best results, including testing of substrates, moisture in substrates, and humidity and temperature limitations.

C. Do not apply exterior paint and finishes during rain or snow, or when relative humidity is outside the humidity ranges required by the paint product manufacturer.

D. Minimum Application Temperatures for Latex Paints: 50 degrees F (10 degrees C) for exterior; unless required otherwise by manufacturer's instructions.

E. Provide lighting level of 80 ft candles (860 lx) measured mid-height at substrate surface.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Provide paints and finishes from the same manufacturer to the greatest extent possible.

1. In the event that a single manufacturer cannot provide specified products, minor exceptions will be permitted provided approval by Architect is obtained using the specified procedures for substitutions.
2. Substitution of MPI-approved products by a different manufacturer is preferred over substitution of unapproved products by the same manufacturer.
3. Substitution of a different paint system using MPI-approved products by the same manufacturer will be considered.

B. Paints:

1. Base Manufacturer:
2. Behr Process Corporation: www.behr.com/#sle.
3. Cloverdale Paint, Brand Products of Rodda Paint Company: www.cloverdalepaint.com/#sle.
4. PPG Paints: www.ppgpaints.com/#sle.
5. Sherwin-Williams Company: www.sherwin-williams.com/#sle.

C. Primer Sealers: Same manufacturer as top coats.

D. Substitutions: See Section 01 6000 - Product Requirements.

2.02 PAINTS AND FINISHES - GENERAL

A. Paints and Finishes: Ready mixed, unless required to be a field-catalyzed paint.

1. Where MPI paint numbers are specified, provide products listed in Master Painters Institute Approved Product List, current edition available at www.paintinfo.com, for specified MPI categories, except as otherwise indicated.
2. Provide paints and finishes of a soft paste consistency, capable of being readily and uniformly dispersed to a homogeneous coating, with good flow and brushing properties, and capable of drying or curing free of streaks or sags.
3. Provide materials that are compatible with one another and the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.
4. For opaque finishes, tint each coat including primer coat and intermediate coats, one-half shade lighter than succeeding coat, with final finish coat as base color.
5. Supply each paint material in quantity required to complete entire project's work from a single production run.
6. Do not reduce, thin, or dilute paint or finishes or add materials unless such procedure is specifically described in manufacturer's product instructions.

B. Volatile Organic Compound (VOC) Content: Comply with Section 01 6116.

C. Flammability: Comply with applicable code for surface burning characteristics.

D. Sheens: Provide the sheens specified; where sheen is not specified, sheen will be selected later by Architect from the manufacturer's full line.

E. Colors: To be selected from manufacturer's full range of available colors.
   1. Selection to be made by Architect after award of contract.

2.03 PAINT SYSTEMS - EXTERIOR

A. Paint E-OP - Exterior Surfaces to be Painted, Unless Otherwise Indicated: Including concrete, concrete masonry units, brick, fiber cement siding, primed wood and primed metal.
   1. Two top coats and one coat primer.
   2. Top Coat Sheen:
      a. Flat: MPI gloss level 1; use this sheen for overhead surfaces.
      b. Velvet: MPI gloss level 2; use this sheen at all locations.
      c. Eggshell: MPI gloss level 3; use this sheen at all locations.
      d. Satin: MPI gloss level 4; use this sheen at all locations.
      e. Semi-Gloss: MPI gloss level 5; use this sheen at all locations.
      f. Gloss: MPI gloss level 6; use this sheen at all locations.
      g. High Gloss: MPI gloss level 7; use this sheen at all locations.
   3. Primer: As recommended by top coat manufacturer for specific substrate.

B. Paint E-OP-FL - Concrete Floors and Wood Decks to be Painted.
   1. Two top coats and one coat primer.
   2. Top Coat Sheen:
      a. Flat: MPI gloss level 1; use this sheen for overhead surfaces.
      b. Velvet: MPI gloss level 2; use this sheen at all locations.
      c. Eggshell: MPI gloss level 3; use this sheen at all locations.
      d. Gloss: MPI gloss level 6; use this sheen at all locations.
      e. High Gloss: MPI gloss level 7; use this sheen at all locations.
   3. Primer: As recommended by top coat manufacturer for specific substrate.

C. Paint E-TR-C - Transparent Finish on Concrete Floors:
   1. 1 coat stain.
   2. Stain: Semi-Transparent Stain for Concrete Floors; MPI #58.
      a. Products:
         1) Behr Premium Semi-Transparent Concrete Stain [No. 850]. (MPI #58)
         2) PPG Paints Porter Color Seal Acrylic Waterproofing Sealer, PP3249 Series. (MPI #58)
         3) [_____].
         4) [_____].
         5) Substitutions: Section 01 6000 - Product Requirements.
   3. Sealer: Water Based Sealer for Concrete Floors; MPI #99.
      a. Products:
         1) Behr Premium Wet-Look Sealer High Gloss [No.985]. (MPI #99)

2) PPG Paints Perma-Crete Plex-Seal WB Interior/Exterior Clear Sealer Stain, 4-6200. (MPI #99)

3) Substitutions: Section 01 6000 - Product Requirements.

2.04 PRIMERS

A. Primers: Provide the following unless other primer is required or recommended by manufacturer of top coats.

1. Alkali Resistant Water Based Primer; MPI #3.
   a. Products:
      1) Behr Concrete and Masonry Bonding Primer [No. 880].
      2) PPG Paints Seal Grip Acrylic Primer, 17-921 Series. (MPI #3)
      3) Substitutions: Section 01 6000 - Product Requirements.
2. Interior/Exterior Latex Block Filler; MPI #4.
   a. Products:
      1) Kilz Pro-X p50 Block Filler Primer.
      2) PPG Paints Speedhide Masonry Hi Fill Latex Block Filler, 6-15. (MPI #4)
      3) Substitutions: Section 01 6000 - Product Requirements.
3. Anti-Corrosive Alkyd Primer for Metal; MPI #79.
   a. Products:
      1) PPG Paints Speedhide Interior/Exterior Rust Inhibitive Steel Primer, 6-212 Series. (MPI #79)
      2) Rodda Barrier III HS Metal Primer, 708295. (MPI #79)
      3) Substitutions: Section 01 6000 - Product Requirements.
4. Interior/Exterior Quick Dry Alkyd Primer for Metal; MPI #76.
   a. Products:
      1) PPG Devguard Multi-Purpose Primer, 4160 Series. (MPI #76)
      2) Sumter Coatings, Inc. Universal Inhibitive Primer.
      3) Substitutions: Section 01 6000 - Product Requirements.
5. Water Based Primer for Galvanized Metal; MPI #134.
6. Rust-Inhibitive Water Based Primer; MPI #107.
7. Interior/Exterior Quick Dry Primer for Aluminum; MPI #95.
8. Stain Blocking Primer; MPI #136.
9. Latex Primer for Exterior Wood; MPI #6.
10. Alkyd/Oil Primer for Exterior Wood; MPI #5.

2.05 ACCESSORY MATERIALS

A. Accessory Materials: Provide primers, sealers, cleaning agents, cleaning cloths, sanding materials, and clean-up materials as required for final completion of painted surfaces.

B. Patching Material: Latex filler.

C. Fastener Head Cover Material: Latex filler.

PART 3 EXECUTION

3.01 EXAMINATION

A. Do not begin application of paints and finishes until substrates have been properly prepared.

B. Verify that surfaces are ready to receive work as instructed by the product manufacturer.

C. Examine surfaces scheduled to be finished prior to commencement of work. Report any condition that may potentially effect proper application.

D. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

E. Test shop-applied primer for compatibility with subsequent cover materials.

F. Measure moisture content of surfaces using an electronic moisture meter. Do not apply finishes unless moisture content of surfaces are below the following maximums:

1. Exterior Plaster and Stucco: 12 percent.
2. Fiber Cement Siding: 12 percent.
3. Masonry, Concrete, and Concrete Masonry Units: 12 percent.
4. Exterior Wood: 15 percent, measured in accordance with ASTM D4442.
5. Concrete Floors and Traffic Surfaces: 8 percent.

3.02 PREPARATION

A. Clean surfaces thoroughly and correct defects prior to application.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

C. Remove or mask surface appurtenances, including electrical plates, hardware, light fixture trim, escutcheons, and fittings, prior to preparing surfaces for finishing.

D. Seal surfaces that might cause bleed through or staining of topcoat.

E. Remove mildew from impervious surfaces by scrubbing with solution of tetra-sodium phosphate and bleach. Rinse with clean water and allow surface to dry.

F. Concrete:

1. Remove release agents, curing compounds, efflorescence, and chalk. Do not coat surfaces if moisture content or alkalinity of surfaces to be coated exceeds that permitted in manufacturer's written instructions.
2. Clean surfaces with pressurized water. Use pressure range of 1,500 to 4,000 psi (10,350 to 27,580 kPa) at 6 to 12 inches (150 to 300 mm). Allow to dry.
3. Clean concrete according to ASTM D4258. Allow to dry.
4. Prepare surface as recommended by top coat manufacturer and according to SSPC-SP 13.

G. Masonry:

1. Remove efflorescence and chalk. Do not coat surfaces if moisture content or alkalinity of surfaces or if alkalinity of mortar joints exceed that permitted in manufacturer's written instructions. Allow to dry.
2. Prepare surface as recommended by top coat manufacturer.

3. Clean surfaces with pressurized water. Use pressure range of 600 to 1,500 psi (4,140 to 10,350 kPa) at 6 to 12 inches (150 to 300 mm). Allow to dry.

H. Fiber Cement Siding: Remove dirt, dust and other foreign matter with a stiff fiber brush. Do not coat surfaces if moisture content or alkalinity of surfaces to be coated exceeds that permitted in manufacturer's written instructions.

I. Exterior Gypsum Board: Fill minor defects with exterior filler compound. Spot prime defects after repair.

J. Exterior Plaster: Fill hairline cracks, small holes, and imperfections with exterior patching plaster. Make smooth and flush with adjacent surfaces. Wash and neutralize high alkali surfaces.

K. Asphalt, Creosote, or Bituminous Surfaces: Remove foreign particles to permit adhesion of finishing materials. Apply latex based sealer or primer.

L. Insulated Coverings: Remove dirt, grease, and oil from canvas and cotton.

M. Concrete Floors and Traffic Surfaces: Remove contamination, acid etch, and rinse floors with clear water. Verify required acid-alkali balance is achieved. Allow to dry.

N. Aluminum: Remove surface contamination and oils and wash with solvent according to SSPC-SP 1.

O. Galvanized Surfaces:

P. Ferrous Metal:

1. Solvent clean according to SSPC-SP 1.

2. Shop-Primed Surfaces: Sand and scrape to remove loose primer and rust. Feather edges to make touch-up patches inconspicuous. Clean surfaces with solvent. Prime bare steel surfaces. Re-prime entire shop-primed item.

3. Remove rust, loose mill scale, and other foreign substances using using methods recommended in writing by paint manufacturer and blast cleaning according to SSPC-SP 6 "Commercial Blast Cleaning". Protect from corrosion until coated.

Q. Exterior Wood Surfaces to Receive Opaque Finish: Remove dust, grit, and foreign matter. Seal knots, pitch streaks, and sappy sections. Fill nail holes with tinted exterior calking compound after prime coat has been applied. Back prime concealed surfaces before installation.

R. Glue-Laminated Beams: Prior to finishing, wash surfaces with solvent, remove grease and dirt.

S. Wood Doors to be Field-Finished: Seal wood door top and bottom edge surfaces with tinted primer.

T. Metal Doors to be Painted: Prime metal door top and bottom edge surfaces.

3.03 APPLICATION

A. Remove unfinished louvers, grilles, covers, and access panels on mechanical and electrical components and paint separately.

B. Exterior Wood to Receive Opaque Finish: If final painting must be delayed more than 2 weeks after installation of woodwork, apply primer within 2 weeks and final coating within 4 weeks.

C. Apply products in accordance with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual".

D. Do not apply finishes to surfaces that are not dry. Allow applied coats to dry before next coat is applied.

E. Apply each coat to uniform appearance.

F. Vacuum clean surfaces of loose particles. Use tack cloth to remove dust and particles just prior to applying next coat.

G. Reinstall electrical cover plates, hardware, light fixture trim, escutcheons, and fittings removed prior to finishing.

3.04 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for general requirements for field inspection.

B. Owner will provide field inspection.

C. Inspect and test questionable coated areas in accordance with industry standards and requirements.

3.05 CLEANING

A. Collect waste material that could constitute a fire hazard, place in closed metal containers, and remove daily from site.

3.06 PROTECTION

A. Protect finishes until completion of project.

B. Touch-up damaged finishes after Substantial Completion.

END OF SECTION

SECTION 09 9113
EXTERIOR PAINTING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Surface preparation.

B. Field application of paints.

C. Materials for backpriming woodwork.

D. Scope: Finish exterior surfaces exposed to view, unless fully factory-finished and unless otherwise indicated, including the following:

1. Both sides and edges of plywood backboards for electrical and telecom equipment before installing equipment.
2. Exposed surfaces of steel lintels and ledge angles.

E. Do Not Paint or Finish the Following Items:

1. Items factory-finished unless otherwise indicated; materials and products having factory-applied primers are not considered factory finished.
2. Items indicated to receive other finishes.
3. Items indicated to remain unfinished.
4. Fire rating labels, equipment serial number and capacity labels, and operating parts of equipment.
5. Non-metallic roofing and flashing.
6. Stainless steel, anodized aluminum, bronze, terne coated stainless steel, zinc, and lead.
7. Marble, granite, slate, and other natural stones.
8. Floors, unless specifically indicated.
9. Ceramic and other types of tiles.
10. Brick, glass unit masonry, architectural concrete, cast stone, integrally colored plaster and stucco as specified to be finished surfaces.
11. Exterior insulation and finish system (EIFS).
12. Glass.
13. Concealed pipes, ducts, and conduits.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 09 9123 - Interior Painting.

1.03 DEFINITIONS

A. Comply with ASTM D16 for interpretation of terms used in this section.

1.04 REFERENCE STANDARDS

A. ASTM D16 - Standard Terminology for Paint, Related Coatings, Materials, and Applications 2016.

B. ASTM D4258 - Standard Practice for Surface Cleaning Concrete for Coating 2005 (Reapproved 2017).

C. MPI (APL) - Master Painters Institute Approved Products List; Master Painters and Decorators Association Current Edition.

D. MPI (APSM) - Master Painters Institute Architectural Painting Specification Manual Current Edition.

E. SSPC-SP 1 - Solvent Cleaning 2015, with Editorial Revision (2016).

F. SSPC-SP 6 - Commercial Blast Cleaning 2007.

G. SSPC-SP 13 - Surface Preparation of Concrete 1997 (Reaffirmed 2003).

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide complete list of products to be used, with the following information for each:

1. Manufacturer's name, product name and/or catalog number, and general product category (e.g. "alkyd enamel").
2. MPI product number (e.g. MPI #47).
3. Cross-reference to specified paint system(s) product is to be used in; include description of each system.
4. Manufacturer's installation instructions.
5. If proposal of substitutions is allowed under submittal procedures, explanation of substitutions proposed.

C. Samples: Submit three paper "draw down" samples, 8-1/2 by 11 inches (216 by 279 mm) in size, illustrating range of colors available for each finishing product specified.

1. Where sheen is specified, submit samples in only that sheen.
2. Where sheen is not specified, discuss sheen options with Architect before preparing samples, to eliminate sheens definitely not required.
3. Allow 30 days for approval process, after receipt of complete samples by Architect.
4. Paint color submittals will not be considered until color submittals for major materials not to be painted, such as masonry, have been approved.

D. Samples: Submit two paper chip samples 1.5" x 2" in size illustrating range of colors and textures available for each surface finishing product scheduled.

E. Samples: Submit two painted samples, illustrating selected colors and textures for each color and system selected with specified coats cascaded. Submit on aluminum sheet.

F. Certification: By manufacturer that paints and finishes comply with VOC limits specified.

G. Manufacturer's Instructions: Indicate special surface preparation procedures.

H. Maintenance Data: Submit data including finish schedule showing where each product/color/finish was used, product technical data sheets, material safety data sheets (MSDS), care and cleaning instructions, touch-up procedures, repair of painted and finished surfaces and color samples of each color and finish used.

I. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Extra Paint and Finish Materials: 1 gallon (4 L) of each color; from the same product run, store where directed.
3. Label each container with color in addition to the manufacturer's label.

1.06 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified, with minimum three years documented experience.

B. Applicator Qualifications: Company specializing in performing the type of work specified with minimum three years experience and approved by manufacturer.

1.07 MOCK-UP

A. See Section 01 4000 - Quality Requirements, for general requirements for mock-up.

B. Provide panel illustrating paint color, texture, and finish.

C. Provide door and frame assembly illustrating paint color, texture, and finish.

D. Locate where directed by Architect.

E. Mock-up may remain as part of the work.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to site in sealed and labeled containers; inspect to verify acceptability.

B. Container Label: Include manufacturer's name, type of paint, brand name, lot number, brand code, coverage, surface preparation, drying time, cleanup requirements, color designation, and instructions for mixing and reducing.

C. Paint Materials: Store at minimum ambient temperature of 45 degrees F (7 degrees C) and a maximum of 90 degrees F (32 degrees C), in ventilated area, and as required by manufacturer's instructions.

1.09 FIELD CONDITIONS

A. Do not apply materials when surface and ambient temperatures are outside the temperature ranges required by the paint product manufacturer.

B. Follow manufacturer's recommended procedures for producing best results, including testing of substrates, moisture in substrates, and humidity and temperature limitations.

C. Do not apply exterior paint and finishes during rain or snow, or when relative humidity is outside the humidity ranges required by the paint product manufacturer.

D. Minimum Application Temperatures for Latex Paints: 50 degrees F (10 degrees C) for exterior; unless required otherwise by manufacturer's instructions.

E. Provide lighting level of 80 ft candles (860 lx) measured mid-height at substrate surface.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Provide paints and finishes from the same manufacturer to the greatest extent possible.

1. In the event that a single manufacturer cannot provide specified products, minor exceptions will be permitted provided approval by Architect is obtained using the specified procedures for substitutions.

2. Substitution of MPI-approved products by a different manufacturer is preferred over substitution of unapproved products by the same manufacturer.

3. Substitution of a different paint system using MPI-approved products by the same manufacturer will be considered.

B. Paints:

1. Base Manufacturer:

2. Behr Process Corporation: www.behr.com/#sle.

3. Cloverdale Paint, Brand Products of Rodda Paint Company: www.cloverdalepaint.com/#sle.
4. PPG Paints: www.ppgpaints.com/#sle.
5. Sherwin-Williams Company: www.sherwin-williams.com/#sle.

C. Primer Sealers: Same manufacturer as top coats.

D. Substitutions: See Section 01 6000 - Product Requirements.

2.02 PAINTS AND FINISHES - GENERAL

A. Paints and Finishes: Ready mixed, unless required to be a field-catalyzed paint.

1. Where MPI paint numbers are specified, provide products listed in Master Painters Institute Approved Product List, current edition available at www.paintinfo.com, for specified MPI categories, except as otherwise indicated.
2. Provide paints and finishes of a soft paste consistency, capable of being readily and uniformly dispersed to a homogeneous coating, with good flow and brushing properties, and capable of drying or curing free of streaks or sags.
3. Provide materials that are compatible with one another and the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.
4. For opaque finishes, tint each coat including primer coat and intermediate coats, one-half shade lighter than succeeding coat, with final finish coat as base color.
5. Supply each paint material in quantity required to complete entire project's work from a single production run.
6. Do not reduce, thin, or dilute paint or finishes or add materials unless such procedure is specifically described in manufacturer's product instructions.

B. Volatile Organic Compound (VOC) Content: Comply with Section 01 6116.

C. Flammability: Comply with applicable code for surface burning characteristics.

D. Sheens: Provide the sheens specified; where sheen is not specified, sheen will be selected later by Architect from the manufacturer's full line.

E. Colors: To be selected from manufacturer's full range of available colors.

1. Selection to be made by Architect after award of contract.
2. Allow for minimum of three colors for each system, unless otherwise indicated, without additional cost to Owner.
3. Extend colors to surface edges; colors may change at any edge as directed by Architect.

2.03 PAINT SYSTEMS - EXTERIOR

A. Paint E-OP - Exterior Surfaces to be Painted, Unless Otherwise Indicated: Including concrete, concrete masonry units, brick, fiber cement siding, primed wood and primed metal.

1. Two top coats and one coat primer.
2. Top Coat Sheen:
   a. Flat: MPI gloss level 1; use this sheen for overhead surfaces.
   b. Velvet: MPI gloss level 2; use this sheen at all locations.
   c. Eggshell: MPI gloss level 3; use this sheen at all locations.

d. Satin: MPI gloss level 4; use this sheen at all locations.

e. Semi-Gloss: MPI gloss level 5; use this sheen at all locations.

f. Gloss: MPI gloss level 6; use this sheen at all locations.

g. High Gloss: MPI gloss level 7; use this sheen at all locations.

3. Primer: As recommended by top coat manufacturer for specific substrate.

B. Paint E-OP-FL - Concrete Floors and Wood Decks to be Painted.

1. Two top coats and one coat primer.

2. Top Coat Sheen:

a. Flat: MPI gloss level 1; use this sheen for overhead surfaces.

b. Velvet: MPI gloss level 2; use this sheen at all locations.

c. Eggshell: MPI gloss level 3; use this sheen at all locations.

d. Gloss: MPI gloss level 6; use this sheen at all locations.

e. High Gloss: MPI gloss level 7; use this sheen at all locations.

3. Primer: As recommended by top coat manufacturer for specific substrate.

C. Paint E-TR-C - Transparent Finish on Concrete Floors:

1. 1 coat stain.

2. Stain: Semi-Transparent Stain for Concrete Floors; MPI #58.

a. Products:

1) Behr Premium Semi-Transparent Concrete Stain [No. 850]. (MPI #58)

2) PPG Paints Porter Color Seal Acrylic Waterproofing Sealer, PP3249 Series. (MPI #58)

3) Substitutions: Section 01 6000 - Product Requirements.

3. Sealer: Water Based Sealer for Concrete Floors; MPI #99.

a. Products:

1) Behr Premium Wet-Look Sealer High Gloss [No.985]. (MPI #99)

2) PPG Paints Perma-Crete Plex-Seal WB Interior/Exterior Clear Sealer Stain, 4-6200. (MPI #99)

3) Substitutions: Section 01 6000 - Product Requirements.

2.04 PRIMERS

A. Primers: Provide the following unless other primer is required or recommended by manufacturer of top coats.

1. Alkali Resistant Water Based Primer; MPI #3.

a. Products:

1) Behr Concrete and Masonry Bonding Primer [No. 880].

2) PPG Paints Seal Grip Acrylic Primer, 17-921 Series. (MPI #3)

3) Substitutions: Section 01 6000 - Product Requirements.

2. Interior/Exterior Latex Block Filler; MPI #4.

a. Products:

1) Kilz Pro-X p50 Block Filler Primer.
2) PPG Paints Speedhide Masonry Hi Fill Latex Block Filler, 6-15. (MPI #4)
3) Substitutions: Section 01 6000 - Product Requirements.

3. Anti-Corrosive Alkyd Primer for Metal; MPI #79.
   a. Products:
      1) PPG Paints Speedhide Interior/Exterior Rust Inhibitive Steel Primer, 6-212 Series. (MPI #79)
      2) Rodda Barrier III HS Metal Primer, 708295. (MPI #79)
      3) Substitutions: Section 01 6000 - Product Requirements.
4. Interior/Exterior Quick Dry Alkyd Primer for Metal; MPI #76.
   a. Products:
      1) PPG Devguard Multi-Purpose Primer, 4160 Series. (MPI #76)
      2) Sumter Coatings, Inc. Universal Inhibitive Primer.
      3) Substitutions: Section 01 6000 - Product Requirements.
5. Water Based Primer for Galvanized Metal; MPI #134.
6. Rust-Inhibitive Water Based Primer; MPI #107.
7. Interior/Exterior Quick Dry Primer for Aluminum; MPI #95.
8. Stain Blocking Primer; MPI #136.
9. Latex Primer for Exterior Wood; MPI #6.
10. Alkyd/Oil Primer for Exterior Wood; MPI #5.

2.05 ACCESSORY MATERIALS

A. Accessory Materials: Provide primers, sealers, cleaning agents, cleaning cloths, sanding materials, and clean-up materials as required for final completion of painted surfaces.

B. Patching Material: Latex filler.

C. Fastener Head Cover Material: Latex filler.

PART 3 EXECUTION

3.01 EXAMINATION

A. Do not begin application of paints and finishes until substrates have been properly prepared.

B. Verify that surfaces are ready to receive work as instructed by the product manufacturer.

C. Examine surfaces scheduled to be finished prior to commencement of work. Report any condition that may potentially effect proper application.

D. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

E. Test shop-applied primer for compatibility with subsequent cover materials.

F. Measure moisture content of surfaces using an electronic moisture meter. Do not apply finishes unless moisture content of surfaces are below the following maximums:

1. Exterior Plaster and Stucco: 12 percent.

2. Fiber Cement Siding: 12 percent.
3. Masonry, Concrete, and Concrete Masonry Units: 12 percent.
4. Exterior Wood: 15 percent, measured in accordance with ASTM D4442.
5. Concrete Floors and Traffic Surfaces: 8 percent.

3.02 PREPARATION

A. Clean surfaces thoroughly and correct defects prior to application.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

C. Remove or mask surface appurtenances, including electrical plates, hardware, light fixture trim, escutcheons, and fittings, prior to preparing surfaces for finishing.

D. Seal surfaces that might cause bleed through or staining of topcoat.

E. Remove mildew from impervious surfaces by scrubbing with solution of tetra-sodium phosphate and bleach. Rinse with clean water and allow surface to dry.

F. Concrete:

1. Remove release agents, curing compounds, efflorescence, and chalk. Do not coat surfaces if moisture content or alkalinity of surfaces to be coated exceeds that permitted in manufacturer's written instructions.
2. Clean surfaces with pressurized water. Use pressure range of 1,500 to 4,000 psi (10,350 to 27,580 kPa) at 6 to 12 inches (150 to 300 mm). Allow to dry.
3. Clean concrete according to ASTM D4258. Allow to dry.
4. Prepare surface as recommended by top coat manufacturer and according to SSPC-SP 13.

G. Masonry:

1. Remove efflorescence and chalk. Do not coat surfaces if moisture content or alkalinity of surfaces or if alkalinity of mortar joints exceed that permitted in manufacturer's written instructions. Allow to dry.
2. Prepare surface as recommended by top coat manufacturer.
3. Clean surfaces with pressurized water. Use pressure range of 600 to 1,500 psi (4,140 to 10,350 kPa) at 6 to 12 inches (150 to 300 mm). Allow to dry.

H. Fiber Cement Siding: Remove dirt, dust and other foreign matter with a stiff fiber brush. Do not coat surfaces if moisture content or alkalinity of surfaces to be coated exceeds that permitted in manufacturer's written instructions.

I. Exterior Gypsum Board: Fill minor defects with exterior filler compound. Spot prime defects after repair.

J. Exterior Plaster: Fill hairline cracks, small holes, and imperfections with exterior patching plaster. Make smooth and flush with adjacent surfaces. Wash and neutralize high alkali surfaces.

K. Asphalt, Creosote, or Bituminous Surfaces: Remove foreign particles to permit adhesion of finishing materials. Apply latex based sealer or primer.

L. Insulated Coverings: Remove dirt, grease, and oil from canvas and cotton.

M. Concrete Floors and Traffic Surfaces: Remove contamination, acid etch, and rinse floors with clear water. Verify required acid-alkali balance is achieved. Allow to dry.

N. Aluminum: Remove surface contamination and oils and wash with solvent according to SSPC-SP 1.

O. Galvanized Surfaces:

P. Ferrous Metal:

1. Solvent clean according to SSPC-SP 1.
2. Shop-Primed Surfaces: Sand and scrape to remove loose primer and rust. Feather edges to make touch-up patches inconspicuous. Clean surfaces with solvent. Prime bare steel surfaces. Re-prime entire shop-primed item.
3. Remove rust, loose mill scale, and other foreign substances using using methods recommended in writing by paint manufacturer and blast cleaning according to SSPC-SP 6 "Commercial Blast Cleaning". Protect from corrosion until coated.

Q. Exterior Wood Surfaces to Receive Opaque Finish: Remove dust, grit, and foreign matter. Seal knots, pitch streaks, and sappy sections. Fill nail holes with tinted exterior calking compound after prime coat has been applied. Back prime concealed surfaces before installation.

R. Glue-Laminated Beams: Prior to finishing, wash surfaces with solvent, remove grease and dirt.

S. Wood Doors to be Field-Finished: Seal wood door top and bottom edge surfaces with tinted primer.

T. Metal Doors to be Painted: Prime metal door top and bottom edge surfaces.

3.03 APPLICATION

A. Remove unfinished louvers, grilles, covers, and access panels on mechanical and electrical components and paint separately.

B. Exterior Wood to Receive Opaque Finish: If final painting must be delayed more than 2 weeks after installation of woodwork, apply primer within 2 weeks and final coating within 4 weeks.

C. Apply products in accordance with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual".

D. Do not apply finishes to surfaces that are not dry. Allow applied coats to dry before next coat is applied.

E. Apply each coat to uniform appearance.

F. Vacuum clean surfaces of loose particles. Use tack cloth to remove dust and particles just prior to applying next coat.

G. Reinstall electrical cover plates, hardware, light fixture trim, escutcheons, and fittings removed prior to finishing.

3.04 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for general requirements for field inspection.

B. Owner will provide field inspection.

C. Inspect and test questionable coated areas in accordance with industry standards and requirements.

3.05 CLEANING

A. Collect waste material that could constitute a fire hazard, place in closed metal containers, and remove daily from site.

3.06 PROTECTION

A. Protect finishes until completion of project.

B. Touch-up damaged finishes after Substantial Completion.

END OF SECTION

SECTION 09 9123
INTERIOR PAINTING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Surface preparation.

B. Materials for backpriming woodwork.

C. Scope: Finish interior surfaces exposed to view, unless fully factory-finished and unless otherwise indicated.

1. Both sides and edges of plywood backboards for electrical and telecom equipment before installing equipment.
2. Elevator pit ladders.
3. Surfaces inside cabinets.
4. Prime surfaces to receive wall coverings.
5. Mechanical and Electrical:
    a. In finished areas, paint insulated and exposed pipes, conduit, boxes, insulated and exposed ducts, hangers, brackets, collars and supports, mechanical equipment and electrical equipment, unless otherwise indicated.
    b. Paint interior surfaces of air ducts and convector and baseboard heating cabinets that are visible through grilles and louvers with one coat of flat black paint to visible surfaces.
    c. Paint dampers exposed behind louvers, grilles, and convector and baseboard cabinets to match face panels.

D. Do Not Paint or Finish the Following Items:

1. Items factory-finished unless otherwise indicated; materials and products having factory-applied primers are not considered factory finished.
2. Items indicated to receive other finishes.
3. Items indicated to remain unfinished.
4. Fire rating labels, equipment serial number and capacity labels, bar code labels, and operating parts of equipment.
5. Stainless steel, anodized aluminum, bronze, terne coated stainless steel, and lead items.
6. Marble, granite, slate, and other natural stones.
7. Floors, unless specifically indicated.
8. Ceramic and other tiles.
9. Brick, architectural concrete, cast stone, integrally colored plaster and stucco.
10. Glass.
11. Concrete masonry units in utility, mechanical, and electrical spaces.
12. Acoustical materials, unless specifically indicated.
13. Concealed pipes, ducts, and conduits.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 09 9113 - Exterior Painting.

C. Section 09 9600 - High-Performance Coatings.

D. Section 09 9725 - Mineral-Based Coatings.

E. Section 32 1723.13 - Painted Pavement Markings: Painted pavement markings.

F. Section 33 1600 - Water Utility Storage Tanks: Painting inside and outside of tanks.

1.03 DEFINITIONS

A. Comply with ASTM D16 for interpretation of terms used in this section.

1.04 REFERENCE STANDARDS

A. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings; U.S. Environmental Protection Agency current edition.

B. ASTM D16 - Standard Terminology for Paint, Related Coatings, Materials, and Applications 2016.

C. ASTM D4258 - Standard Practice for Surface Cleaning Concrete for Coating 2005 (Reapproved 2017).

D. ASTM D4442 - Standard Test Methods for Direct Moisture Content Measurement of Wood and Wood-Based Materials 2016.

E. MPI (APL) - Master Painters Institute Approved Products List; Master Painters and Decorators Association Current Edition.

F. MPI (APSM) - Master Painters Institute Architectural Painting Specification Manual Current Edition.

G. SSPC-SP 1 - Solvent Cleaning 2015, with Editorial Revision (2016).

H. SSPC-SP 13 - Surface Preparation of Concrete 1997 (Reaffirmed 2003).

1.05 SUBMITTALS

A. Product Data: Provide complete list of products to be used, with the following information for each:

1. Manufacturer's name, product name and/or catalog number, and general product category (e.g. "alkyd enamel").
2. MPI product number (e.g. MPI #47).
3. Cross-reference to specified paint system(s) product is to be used in; include description of each system.

B. Samples for Verification: For each type of paint system and in each color and gloss of topcoat.

1. Submit Samples on rigid backing, 8 inches (200 mm) square.
2. Step coats on Samples to show each coat required for system.
3. Label each coat of each Sample.
4. Label each Sample for location and application area.

C. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Extra Paint and Finish Materials: 1 gallon (4 L) of each color; from the same product run, store where directed.
3. Label each container with color in addition to the manufacturer's label.

1.06 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified, with minimum three years documented experience.

B. Applicator Qualifications: Company specializing in performing the type of work specified with minimum five years experience and approved by manufacturer.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to site in sealed and labeled containers; inspect to verify acceptability.

B. Container Label: Include manufacturer's name, type of paint, brand name, lot number, brand code, coverage, surface preparation, drying time, cleanup requirements, color designation, and instructions for mixing and reducing.

C. Paint Materials: Store at minimum ambient temperature of 45 degrees F (7 degrees C) and a maximum of 90 degrees F (32 degrees C), in ventilated area, and as required by manufacturer's instructions.

D. Maintain containers in clean condition, free of foreign materials and residue.

E. Remove rags and waste from storage areas daily.

1.08 FIELD CONDITIONS

A. Do not apply materials when surface and ambient temperatures are outside the temperature ranges required by the paint product manufacturer.

B. Follow manufacturer's recommended procedures for producing best results, including testing of substrates, moisture in substrates, and humidity and temperature limitations.

C. Minimum Application Temperatures for Paints: 50 degrees F (10 degrees C) for interiors unless required otherwise by manufacturer's instructions.

D. Maximum Application Temperatures for Paints: 95 degrees F (35 degrees C) for interiors unless required otherwise by manufacturer's instructions. `

E. Provide lighting level of 80 ft candles (860 lx) measured mid-height at substrate surface.

F. Do not apply paints when relative humidity exceeds 85 percent; at temperatures less than 5 deg F (3 deg C) above the dew point; or to damp or wet surfaces.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. MPI Standards: Provide products that comply with MPI standards indicated and that are listed in its "MPI Approved Products List."

B. Provide paints and finishes used in any individual system from the same manufacturer; no exceptions.

C. Paints:

1. Base Manufacturer: .
2. Behr Process Corporation: www.behr.com/#sle.
3. Cloverdale Paint, Brand Products of Rodda Paint Company: www.cloverdalepaint.com/#sle.
4. PPG Paints: www.ppgpaints.com/#sle.
5. Rodda Paint Co: www.roddapaint.com/#sle.
6. Sherwin-Williams Company: www.sherwin-williams.com/#sle.

D. Primer Sealers: Same manufacturer as top coats.

E. Substitutions: See Section 01 6000 - Product Requirements.

2.02 PAINTS AND FINISHES - GENERAL

A. Paints and Finishes: Ready mixed, unless intended to be a field-catalyzed paint.

1. Where MPI paint numbers are specified, provide products listed in Master Painters Institute Approved Product List, current edition available at www.paintinfo.com, for specified MPI categories, except as otherwise indicated.
2. Provide paints and finishes of a soft paste consistency, capable of being readily and uniformly dispersed to a homogeneous coating, with good flow and brushing properties, and capable of drying or curing free of streaks or sags.
3. Provide materials that are compatible with one another and the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.
4. Supply each paint material in quantity required to complete entire project's work from a single production run.
5. Do not reduce, thin, or dilute paint or finishes or add materials unless such procedure is specifically described in manufacturer's product instructions.
6. Material Compatibility:
    a. Provide materials for use within each paint system that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
    b. For each coat in a paint system, provide products recommended in writing by manufacturers of topcoat for use in paint system and on substrate indicated.

B. Volatile Organic Compound (VOC) Content: Comply with Section 01 6116.

C. Volatile Organic Compound (VOC) Content:

1. Provide paints and finishes that comply with the most stringent requirements specified in the following:
    a. 40 CFR 59, Subpart D--National Volatile Organic Compound Emission Standards for Architectural Coatings.
    b. Ozone Transport Commission (OTC) Model Rule, Architectural, Industrial, and Maintenance Coatings; www.otcair.org; specifically:
        1) Opaque, Flat: 50 g/L, maximum.
        2) Opaque, Nonflat: 150 g/L, maximum.
        3) Primers, Sealers, and Undercoaters: 200 g/L.
        4) Opaque, High Gloss: 250 g/L, maximum.
    c. Architectural coatings VOC limits of Maryland.
    d. USGBC LEED Rating System; for interior wall and ceiling finish (all coats), anti-corrosive paints on interior ferrous metal, sanding sealers, other sealers, and floor coatings.
2. Determination of VOC Content: Testing and calculation in accordance with 40 CFR 59, Subpart D (EPA Method 24), exclusive of colorants added to a tint base and water added at project site; or other method acceptable to authorities having jurisdiction.

D. Flammability: Comply with applicable code for surface burning characteristics.

E. Sheens: Provide the sheens specified; where sheen is not specified, sheen will be selected later by Architect from the manufacturer's full line.

2.03 PAINT SYSTEMS - INTERIOR

A. Paint I-OP - Interior Surfaces to be Painted, Unless Otherwise Indicated: Including gypsum board, concrete, concrete masonry units, brick, wood, plaster, uncoated steel, shop primed steel, galvanized steel and aluminum.

1. Two top coats and one coat primer.
2. Top Coat(s): Interior Latex; MPI #43, 44, 52, 53, 54, or 114.
    a. Products: Basis of Design
        1) Sherwin-Williams Harmony Interior Acrylic Latex, Flat. (MPI #53)
        2) Sherwin-Williams Harmony Interior Acrylic Latex, Semi-Gloss. (MPI #54)
        3) Sherwin-Williams Harmony Interior Acrylic Latex, Eg-Shel. (MPI #44)
        4) Sherwin-Williams ProMar 200 Zero VOC Interior Latex, Flat.
        5) Sherwin-Williams ProMar 200 Zero VOC Interior Latex, Semi-Gloss. (MPI #43)
        6) Sherwin-Williams ProMar 200 Zero VOC Interior Latex, Low Sheen. (MPI #44)
        7) Sherwin-Williams ProMar 200 Zero VOC Interior Latex, Eg-Shel. (MPI #52)
        8) Substitutions: Section 01 6000 - Product Requirements.
3. Top Coat Sheen:
    a. Flat: MPI gloss level 1; use this sheen for ceilings and other overhead surfaces.
    b. Velvet: MPI gloss level 2; use this sheen at all locations.
    c. Eggshell: MPI gloss level 3; use this sheen at all locations.
    d. Satin: MPI gloss level 4; use this sheen for items subject to frequent touching by occupants, including door frames and railings.
    e. Semi-Gloss: MPI gloss level 5; use this sheen at all locations.
    f. Gloss: MPI gloss level 6; use this sheen at all locations.
4. Primer: As recommended by top coat manufacturer for specific substrate.

B. Paint I-OP-FL - Concrete and Wood Floors to be Painted.

1. Two top coats and one coat primer.

2.04 PRIMERS

A. Primers: Provide the following unless other primer is required or recommended by manufacturer of top coats.

1. Alkali Resistant Water Based Primer; [_____].
    a. Products: Basisof Design
        1) Behr Concrete and Masonry Bonding Primer [No. 880].
        2) Behr Premium Plus Interior/Exterior Multi-Surface Primer and Sealer [No. 436]. (MPI #3)
        3) PPG Paints Perma-Crete Interior/Exterior Alkali Resistant Primer, 4-603 Series. (MPI #3)
        4) PPG Paints Seal Grip Acrylic Primer, 17-921 Series. (MPI #3)

5) Rodda First Coat Interior Exterior Latex Primer, 501601. (MPI #3)

6) Rodda pHlex-Tite Elastomeric Coating, 512301. (MPI #3)

7) Substitutions: Section 01 6000 - Product Requirements.

2.05 ACCESSORY MATERIALS

A. Accessory Materials: Provide primers, sealers, cleaning agents, cleaning cloths, sanding materials, and clean-up materials as required for final completion of painted surfaces.

B. Patching Material: Latex filler.

C. Fastener Head Cover Material: Latex filler.

PART 3 EXECUTION

3.01 INSTALLERS

A. Acceptable Applicators:

3.02 EXAMINATION

A. Do not begin application of paints and finishes until substrates have been properly prepared.

B. Verify that surfaces are ready to receive work as instructed by the product manufacturer.

C. Examine surfaces scheduled to be finished prior to commencement of work. Report any condition that may potentially effect proper application.

D. Test shop-applied primer for compatibility with subsequent cover materials.

E. Measure moisture content of surfaces using an electronic moisture meter. Do not apply finishes unless moisture content of surfaces are below the following maximums:

1. Gypsum Wallboard: 12 percent.
2. Plaster and Stucco: 12 percent.
3. Masonry, Concrete, and Concrete Masonry Units: 12 percent.
4. Interior Wood: 15 percent, measured in accordance with ASTM D4442.
5. Concrete Floors and Traffic Surfaces: 8 percent.

3.03 PREPARATION

A. Clean surfaces thoroughly and correct defects prior to application.

B. Comply with manufacturer's written instructions and recommendations in "MPI Manual" applicable to substrates indicated.

C. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

D. Remove or repair existing paints or finishes that exhibit surface defects.

E. Remove or mask surface appurtenances, including electrical plates, hardware, light fixture trim, escutcheons, and fittings, prior to preparing surfaces or finishing.

F. Seal surfaces that might cause bleed through or staining of topcoat.

G. Remove mildew from impervious surfaces by scrubbing with solution of tetra-sodium phosphate and bleach. Rinse with clean water and allow surface to dry.

H. Concrete:

1. Remove release agents, curing compounds, efflorescence, and chalk. Do not coat surfaces if moisture content or alkalinity of surfaces to be coated exceeds that permitted in manufacturer's written instructions.
2. Clean surfaces with pressurized water. Use pressure range of 1,500 to 4,000 psi (10,350 to 27,580 kPa) at 6 to 12 inches (150 to 300 mm). Allow to dry.
3. Clean concrete according to ASTM D4258. Allow to dry.
4. Prepare surface as recommended by top coat manufacturer and according to SSPC-SP 13.

I. Masonry:

1. Remove efflorescence and chalk. Do not coat surfaces if moisture content or alkalinity of surfaces or if alkalinity of mortar joints exceed that permitted in manufacturer's written instructions. Allow to dry.
2. Prepare surface as recommended by top coat manufacturer.
3. Clean surfaces with pressurized water. Use pressure range of 600 to 1,500 psi (4,140 to 10,350 kPa) at 6 to 12 inches (150 to 300 mm). Allow to dry.

J. Concrete Floors and Traffic Surfaces: Remove contamination, acid etch, and rinse floors with clear water. Verify required acid-alkali balance is achieved. Allow to dry.

K. Gypsum Board: Fill minor defects with filler compound. Spot prime defects after repair.

L. Plaster: Fill hairline cracks, small holes, and imperfections with latex patching plaster. Make smooth and flush with adjacent surfaces. Wash and neutralize high alkali surfaces.

M. Aluminum: Remove surface contamination and oils and wash with solvent according to SSPC-SP 1.

N. Galvanized Surfaces:

O. Ferrous Metal:

1. Solvent clean according to SSPC-SP 1.
2. Shop-Primed Surfaces: Sand and scrape to remove loose primer and rust. Feather edges to make touch-up patches inconspicuous. Clean surfaces with solvent. Prime bare steel surfaces. Re-prime entire shop-primed item.
3. Remove rust, loose mill scale, and other foreign substances using using methods recommended in writing by paint manufacturer and blast cleaning according to SSPC-SP 6 "Commercial Blast Cleaning". Protect from corrosion until coated.

P. Wood Surfaces to Receive Opaque Finish: Wipe off dust and grit prior to priming. Seal knots, pitch streaks, and sappy sections with sealer. Fill nail holes and cracks after primer has dried; sand between coats. Back prime concealed surfaces before installation.

3.04 APPLICATION

A. Remove unfinished louvers, grilles, covers, and access panels on mechanical and electrical components and paint separately.

B. Apply products in accordance with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual".

1. Use applicators and techniques suited for paint and substrate indicated.
2. Paint surfaces behind movable equipment and furniture same as similar exposed surfaces. Before final installation, paint surfaces behind permanently fixed equipment or furniture with prime coat only.

3. Paint front and backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
4. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
5. Primers specified in painting schedules may be omitted on items that are factory primed or factory finished if acceptable to topcoat manufacturers.

C. Do not apply finishes to surfaces that are not dry. Allow applied coats to dry before next coat is applied.

D. Apply each coat to uniform appearance in thicknesses specified by manufacturer.

E. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of same material are to be applied. Tint undercoats to match color of topcoat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.

F. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.

G. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.

H. Painting Fire Suppression, Plumbing, HVAC, Electrical, Communication, and Electronic Safety and Security Work:

1. Paint the following work where exposed in equipment rooms:
    a. Items as directed by Architect.
2. Paint the following work where exposed in occupied spaces:
    a. Items as directed by Architect.
3. Paint portions of internal surfaces of metal ducts, without liner, behind air inlets and outlets that are visible from occupied spaces.

I. Sand wood and metal surfaces lightly between coats to achieve required finish.

J. Vacuum clean surfaces of loose particles. Use tack cloth to remove dust and particles just prior to applying next coat.

K. Wood to Receive Transparent Finishes: Tint fillers to match wood. Work fillers into the grain before set. Wipe excess from surface.

L. Reinstall electrical cover plates, hardware, light fixture trim, escutcheons, and fittings removed prior to finishing.

3.05 FIELD QUALITY CONTROL

A. Owner will provide field inspection.

B. Dry Film Thickness Testing: Engage the services of a qualified testing and inspecting agency to inspect and test paint for dry film thickness.

C. Contractor shall touch up and restore painted surfaces damaged by testing.

D. If test results show that dry film thickness of applied paint does not comply with paint manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with paint manufacturer's written recommendations.

3.06 CLEANING

A. Collect waste material that could constitute a fire hazard, place in closed metal containers, and remove daily from site.

B. After completing paint application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.

C. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.

D. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.07 PROTECTION

A. Protect finishes until completion of project.

B. Touch-up damaged finishes after Substantial Completion.

3.08 COLOR SCHEDULE

A. Classroom 201: EXAMPLE: AS SCHEDULED ON THE "FINISH SCHEDULE"

1. North, west, and east walls - #3184 blue.
2. South accent wall - #4467 yellow.
3. Paint access panels same as walls.
4. Paint convector cover - #2237 pink.

B. Principal's Office:

1. Walls - #1234 green.
2. Trim - #5512 gray.

END OF SECTION

SECTION 09 9123
INTERIOR PAINTING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Surface preparation.

B. Materials for backpriming woodwork.

C. Scope: Finish interior surfaces exposed to view, unless fully factory-finished and unless otherwise indicated.

1. Both sides and edges of plywood backboards for electrical and telecom equipment before installing equipment.
2. Elevator pit ladders.
3. Surfaces inside cabinets.
4. Prime surfaces to receive wall coverings.
5. Mechanical and Electrical:
    a. In finished areas, paint insulated and exposed pipes, conduit, boxes, insulated and exposed ducts, hangers, brackets, collars and supports, mechanical equipment and electrical equipment, unless otherwise indicated.
    b. Paint interior surfaces of air ducts and convector and baseboard heating cabinets that are visible through grilles and louvers with one coat of flat black paint to visible surfaces.
    c. Paint dampers exposed behind louvers, grilles, and convector and baseboard cabinets to match face panels.

D. Do Not Paint or Finish the Following Items:

1. Items factory-finished unless otherwise indicated; materials and products having factory-applied primers are not considered factory finished.
2. Items indicated to receive other finishes.
3. Items indicated to remain unfinished.
4. Fire rating labels, equipment serial number and capacity labels, bar code labels, and operating parts of equipment.
5. Stainless steel, anodized aluminum, bronze, terne coated stainless steel, and lead items.
6. Marble, granite, slate, and other natural stones.
7. Floors, unless specifically indicated.
8. Ceramic and other tiles.
9. Brick, architectural concrete, cast stone, integrally colored plaster and stucco.
10. Glass.
11. Concrete masonry units in utility, mechanical, and electrical spaces.
12. Acoustical materials, unless specifically indicated.
13. Concealed pipes, ducts, and conduits.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 09 9113 - Exterior Painting.

C. Section 09 9600 - High-Performance Coatings.

D. Section 09 9725 - Mineral-Based Coatings.

E. Section 32 1723.13 - Painted Pavement Markings: Painted pavement markings.

F. Section 33 1600 - Water Utility Storage Tanks: Painting inside and outside of tanks.

1.03 DEFINITIONS

A. Comply with ASTM D16 for interpretation of terms used in this section.

1.04 REFERENCE STANDARDS

A. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings; U.S. Environmental Protection Agency current edition.

B. ASTM D16 - Standard Terminology for Paint, Related Coatings, Materials, and Applications 2016.

C. ASTM D4258 - Standard Practice for Surface Cleaning Concrete for Coating 2005 (Reapproved 2017).

D. ASTM D4442 - Standard Test Methods for Direct Moisture Content Measurement of Wood and Wood-Based Materials 2016.

E. MPI (APL) - Master Painters Institute Approved Products List; Master Painters and Decorators Association Current Edition.

F. MPI (APSM) - Master Painters Institute Architectural Painting Specification Manual Current Edition.

G. SSPC-SP 1 - Solvent Cleaning 2015, with Editorial Revision (2016).

H. SSPC-SP 2 - Hand Tool Cleaning 1982, with Editorial Revision (2004).

I. SSPC-SP 13 - Surface Preparation of Concrete 1997 (Reaffirmed 2003).

1.05 SUBMITTALS

A. Product Data: Provide complete list of products to be used, with the following information for each:

1. Manufacturer's name, product name and/or catalog number, and general product category (e.g. "alkyd enamel").

2. MPI product number (e.g. MPI #47).

3. Cross-reference to specified paint system(s) product is to be used in; include description of each system.

B. Samples for Verification: For each type of paint system and in each color and gloss of topcoat.

1. Submit Samples on rigid backing, 8 inches (200 mm) square.

2. Step coats on Samples to show each coat required for system.

3. Label each coat of each Sample.

4. Label each Sample for location and application area.

C. Samples: Submit three paper "draw down" samples, 8-1/2 by 11 inches (216 by 279 mm) in size, illustrating range of colors available for each finishing product specified.

1. Where sheen is specified, submit samples in only that sheen.

2. Where sheen is not specified, discuss sheen options with Architect before preparing samples, to eliminate sheens definitely not required.

3. Allow 30 days for approval process, after receipt of complete samples by Architect.

4. Paint color submittals will not be considered until color submittals for major materials not to be painted, such as masonry, have been approved.

D. Samples: Submit two paper chip samples illustrating range of colors and textures available for each surface finishing product scheduled.

E. Certification: By manufacturer that paints and finishes comply with VOC limits specified.

F. Manufacturer's Instructions: Indicate special surface preparation procedures.

G. Maintenance Data: Submit data including finish schedule showing where each product/color/finish was used, product technical data sheets, material safety data sheets (MSDS), care and cleaning instructions, touch-up procedures, repair of painted and finished surfaces and color samples of each color and finish used.

H. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.

2. Extra Paint and Finish Materials: 1 gallon (4 L) of each color; from the same product run, store where directed.

3. Label each container with color in addition to the manufacturer's label.

1.06 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified, with minimum three years documented experience.

B. Applicator Qualifications: Company specializing in performing the type of work specified with minimum five years experience and approved by manufacturer.

1.07 MOCK-UP

A. See Section 01 4000 - Quality Requirements, for general requirements for mock-up.

B. Provide panel illustrating paint color, texture, and finish.

C. Provide door and frame assembly illustrating paint color, texture, and finish.

D. Locate where directed by Architect.

E. Mock-up may remain as part of the work.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to site in sealed and labeled containers; inspect to verify acceptability.

B. Container Label: Include manufacturer's name, type of paint, brand name, lot number, brand code, coverage, surface preparation, drying time, cleanup requirements, color designation, and instructions for mixing and reducing.

C. Paint Materials: Store at minimum ambient temperature of 45 degrees F (7 degrees C) and a maximum of 90 degrees F (32 degrees C), in ventilated area, and as required by manufacturer's instructions.

D. Maintain containers in clean condition, free of foreign materials and residue.

E. Remove rags and waste from storage areas daily.

1.09 FIELD CONDITIONS

A. Do not apply materials when surface and ambient temperatures are outside the temperature ranges required by the paint product manufacturer.

B. Follow manufacturer's recommended procedures for producing best results, including testing of substrates, moisture in substrates, and humidity and temperature limitations.

C. Do not apply materials when relative humidity exceeds 85 percent; at temperatures less than 5 degrees F (3 degrees C) above the dew point; or to damp or wet surfaces.

D. Minimum Application Temperatures for Paints: 50 degrees F (10 degrees C) for interiors unless required otherwise by manufacturer's instructions.

E. Maximum Application Temperatures for Paints: 95 degrees F (35 degrees C) for interiors unless required otherwise by manufacturer's instructions. `

F. Provide lighting level of 80 ft candles (860 lx) measured mid-height at substrate surface.

G. Do not apply paints when relative humidity exceeds 85 percent; at temperatures less than 5 deg F (3 deg C) above the dew point; or to damp or wet surfaces.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. MPI Standards: Provide products that comply with MPI standards indicated and that are listed in its "MPI Approved Products List."

B. Provide paints and finishes used in any individual system from the same manufacturer; no exceptions.

C. Paints:

1. Base Manufacturer: .
2. Behr Process Corporation: www.behr.com/#sle.
3. Cloverdale Paint, Brand Products of Rodda Paint Company: www.cloverdalepaint.com/#sle.
4. PPG Paints: www.ppgpaints.com/#sle.
5. Rodda Paint Co: www.roddapaint.com/#sle.
6. Sherwin-Williams Company: www.sherwin-williams.com/#sle.

D. Primer Sealers: Same manufacturer as top coats.

E. Substitutions: See Section 01 6000 - Product Requirements.

2.02 PAINTS AND FINISHES - GENERAL

A. Paints and Finishes: Ready mixed, unless intended to be a field-catalyzed paint.

1. Where MPI paint numbers are specified, provide products listed in Master Painters Institute Approved Product List, current edition available at www.paintinfo.com, for specified MPI categories, except as otherwise indicated.
2. Provide paints and finishes of a soft paste consistency, capable of being readily and uniformly dispersed to a homogeneous coating, with good flow and brushing properties, and capable of drying or curing free of streaks or sags.
3. Provide materials that are compatible with one another and the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.
4. Supply each paint material in quantity required to complete entire project's work from a single production run.
5. Do not reduce, thin, or dilute paint or finishes or add materials unless such procedure is specifically described in manufacturer's product instructions.
6. Material Compatibility:

a. Provide materials for use within each paint system that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.

b. For each coat in a paint system, provide products recommended in writing by manufacturers of topcoat for use in paint system and on substrate indicated.

B. Volatile Organic Compound (VOC) Content: Comply with Section 01 6116.

C. Volatile Organic Compound (VOC) Content:

1. Provide paints and finishes that comply with the most stringent requirements specified in the following:

a. 40 CFR 59, Subpart D--National Volatile Organic Compound Emission Standards for Architectural Coatings.

b. Ozone Transport Commission (OTC) Model Rule, Architectural, Industrial, and Maintenance Coatings; www.otcair.org; specifically:

1) Opaque, Flat: 50 g/L, maximum.

2) Opaque, Nonflat: 150 g/L, maximum.

3) Primers, Sealers, and Undercoaters: 200 g/L.

4) Opaque, High Gloss: 250 g/L, maximum.

c. Architectural coatings VOC limits of Maryland.

d. USGBC LEED Rating System; for interior wall and ceiling finish (all coats), anti-corrosive paints on interior ferrous metal, sanding sealers, other sealers, and floor coatings.

2. Determination of VOC Content: Testing and calculation in accordance with 40 CFR 59, Subpart D (EPA Method 24), exclusive of colorants added to a tint base and water added at project site; or other method acceptable to authorities having jurisdiction.

D. Flammability: Comply with applicable code for surface burning characteristics.

E. Sheens: Provide the sheens specified; where sheen is not specified, sheen will be selected later by Architect from the manufacturer's full line.

2.03 PAINT SYSTEMS - INTERIOR

A. Paint I-OP - Interior Surfaces to be Painted, Unless Otherwise Indicated: Including gypsum board, concrete, concrete masonry units, brick, wood, plaster, uncoated steel, shop primed steel, galvanized steel and aluminum.

1. Two top coats and one coat primer.

2. Top Coat(s): Interior Latex; MPI #43, 44, 52, 53, 54, or 114.

a. Products: Basis of Design

1) Sherwin-Williams Harmony Interior Acrylic Latex, Flat. (MPI #53)

2) Sherwin-Williams Harmony Interior Acrylic Latex, Semi-Gloss. (MPI #54)

3) Sherwin-Williams Harmony Interior Acrylic Latex, Eg-Shel. (MPI #44)

4) Sherwin-Williams ProMar 200 Zero VOC Interior Latex, Flat.

5) Sherwin-Williams ProMar 200 Zero VOC Interior Latex, Semi-Gloss. (MPI #43)

6) Sherwin-Williams ProMar 200 Zero VOC Interior Latex, Low Sheen. (MPI #44)

7) Sherwin-Williams ProMar 200 Zero VOC Interior Latex, Eg-Shel. (MPI #52)

8) Substitutions: Section 01 6000 - Product Requirements.

3. Top Coat Sheen:

a. Flat: MPI gloss level 1; use this sheen for ceilings and other overhead surfaces.

b. Velvet: MPI gloss level 2; use this sheen at all locations.

c. Eggshell: MPI gloss level 3; use this sheen at all locations.

d. Satin: MPI gloss level 4; use this sheen for items subject to frequent touching by occupants, including door frames and railings.

e. Semi-Gloss: MPI gloss level 5; use this sheen at all locations.

f. Gloss: MPI gloss level 6; use this sheen at all locations.

4. Primer: As recommended by top coat manufacturer for specific substrate.

B. Paint I-OP-FL - Concrete and Wood Floors to be Painted.

1. Two top coats and one coat primer.

2.04 PRIMERS

A. Primers: Provide the following unless other primer is required or recommended by manufacturer of top coats.

1. Alkali Resistant Water Based Primer; [_____].

a. Products: Basisof Design

1) Behr Concrete and Masonry Bonding Primer [No. 880].

2) Behr Premium Plus Interior/Exterior Multi-Surface Primer and Sealer [No. 436]. (MPI #3)

3) PPG Paints Perma-Crete Interior/Exterior Alkali Resistant Primer, 4-603 Series. (MPI #3)

4) PPG Paints Seal Grip Acrylic Primer, 17-921 Series. (MPI #3)

5) Rodda First Coat Interior Exterior Latex Primer, 501601. (MPI #3)

6) Rodda pHlex-Tite Elastomeric Coating, 512301. (MPI #3)

7) Substitutions: Section 01 6000 - Product Requirements.

2.05 ACCESSORY MATERIALS

A. Accessory Materials: Provide primers, sealers, cleaning agents, cleaning cloths, sanding materials, and clean-up materials as required for final completion of painted surfaces.

B. Patching Material: Latex filler.

C. Fastener Head Cover Material: Latex filler.

PART 3 EXECUTION

3.01 INSTALLERS

A. Acceptable Applicators:

3.02 EXAMINATION

A. Do not begin application of paints and finishes until substrates have been properly prepared.

B. Verify that surfaces are ready to receive work as instructed by the product manufacturer.

C. Examine surfaces scheduled to be finished prior to commencement of work. Report any condition that may potentially effect proper application.

D. Test shop-applied primer for compatibility with subsequent cover materials.

E. Measure moisture content of surfaces using an electronic moisture meter. Do not apply finishes unless moisture content of surfaces are below the following maximums:

1. Gypsum Wallboard: 12 percent.
2. Plaster and Stucco: 12 percent.
3. Masonry, Concrete, and Concrete Masonry Units: 12 percent.
4. Interior Wood: 15 percent, measured in accordance with ASTM D4442.
5. Concrete Floors and Traffic Surfaces: 8 percent.

3.03 PREPARATION

A. Clean surfaces thoroughly and correct defects prior to application.

B. Comply with manufacturer's written instructions and recommendations in "MPI Manual" applicable to substrates indicated.

C. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

D. Remove or repair existing paints or finishes that exhibit surface defects.

E. Remove or mask surface appurtenances, including electrical plates, hardware, light fixture trim, escutcheons, and fittings, prior to preparing surfaces or finishing.

F. Seal surfaces that might cause bleed through or staining of topcoat.

G. Remove mildew from impervious surfaces by scrubbing with solution of tetra-sodium phosphate and bleach. Rinse with clean water and allow surface to dry.

H. Concrete:

1. Remove release agents, curing compounds, efflorescence, and chalk. Do not coat surfaces if moisture content or alkalinity of surfaces to be coated exceeds that permitted in manufacturer's written instructions.
2. Clean surfaces with pressurized water. Use pressure range of 1,500 to 4,000 psi (10,350 to 27,580 kPa) at 6 to 12 inches (150 to 300 mm). Allow to dry.
3. Clean concrete according to ASTM D4258. Allow to dry.
4. Prepare surface as recommended by top coat manufacturer and according to SSPC-SP 13.

I. Masonry:

1. Remove efflorescence and chalk. Do not coat surfaces if moisture content or alkalinity of surfaces or if alkalinity of mortar joints exceed that permitted in manufacturer's written instructions. Allow to dry.
2. Prepare surface as recommended by top coat manufacturer.
3. Clean surfaces with pressurized water. Use pressure range of 600 to 1,500 psi (4,140 to 10,350 kPa) at 6 to 12 inches (150 to 300 mm). Allow to dry.

J. Concrete Floors and Traffic Surfaces: Remove contamination, acid etch, and rinse floors with clear water. Verify required acid-alkali balance is achieved. Allow to dry.

K. Gypsum Board: Fill minor defects with filler compound. Spot prime defects after repair.

L. Plaster: Fill hairline cracks, small holes, and imperfections with latex patching plaster. Make smooth and flush with adjacent surfaces. Wash and neutralize high alkali surfaces.

M. Insulated Coverings: Remove dirt, grease, and oil from canvas and cotton.

N. Aluminum: Remove surface contamination and oils and wash with solvent according to SSPC-SP 1.

O. Copper: Remove contamination by steam, high pressure water, or solvent washing.

P. Galvanized Surfaces:

1. Remove surface contamination and oils and wash with solvent according to SSPC-SP 1.
2. Prepare surface according to SSPC-SP 2.

Q. Ferrous Metal:

1. Solvent clean according to SSPC-SP 1.
2. Shop-Primed Surfaces: Sand and scrape to remove loose primer and rust. Feather edges to make touch-up patches inconspicuous. Clean surfaces with solvent. Prime bare steel surfaces. Re-prime entire shop-primed item.
3. Remove rust, loose mill scale, and other foreign substances using using methods recommended in writing by paint manufacturer and blast cleaning according to SSPC-SP 6 "Commercial Blast Cleaning". Protect from corrosion until coated.

R. Wood Surfaces to Receive Opaque Finish: Wipe off dust and grit prior to priming. Seal knots, pitch streaks, and sappy sections with sealer. Fill nail holes and cracks after primer has dried; sand between coats. Back prime concealed surfaces before installation.

S. Glue-Laminated Beams: Prior to finishing, wash surfaces with solvent, remove grease and dirt.

T. Wood Doors to be Field-Finished: Seal wood door top and bottom edge surfaces with clear sealer.

U. Metal Doors to be Painted: Prime metal door top and bottom edge surfaces.

3.04 APPLICATION

A. Remove unfinished louvers, grilles, covers, and access panels on mechanical and electrical components and paint separately.

B. Apply products in accordance with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual".

1. Use applicators and techniques suited for paint and substrate indicated.
2. Paint surfaces behind movable equipment and furniture same as similar exposed surfaces. Before final installation, paint surfaces behind permanently fixed equipment or furniture with prime coat only.
3. Paint front and backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
4. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
5. Primers specified in painting schedules may be omitted on items that are factory primed or factory finished if acceptable to topcoat manufacturers.

C. Where adjacent sealant is to be painted, do not apply finish coats until sealant is applied.

D. Do not apply finishes to surfaces that are not dry. Allow applied coats to dry before next coat is applied.

E. Apply each coat to uniform appearance in thicknesses specified by manufacturer.

F. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of same material are to be applied. Tint undercoats to match color of topcoat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.

G. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.

H. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.

I. Painting Fire Suppression, Plumbing, HVAC, Electrical, Communication, and Electronic Safety and Security Work:

1. Paint the following work where exposed in equipment rooms:

a. Items as directed by Architect.

2. Paint the following work where exposed in occupied spaces:

a. Items as directed by Architect.

3. Paint portions of internal surfaces of metal ducts, without liner, behind air inlets and outlets that are visible from occupied spaces.

J. Dark Colors and Deep Clear Colors: Regardless of number of coats specified, apply as many coats as necessary for complete hide.

K. Sand wood and metal surfaces lightly between coats to achieve required finish.

L. Vacuum clean surfaces of loose particles. Use tack cloth to remove dust and particles just prior to applying next coat.

M. Wood to Receive Transparent Finishes: Tint fillers to match wood. Work fillers into the grain before set. Wipe excess from surface.

N. Reinstall electrical cover plates, hardware, light fixture trim, escutcheons, and fittings removed prior to finishing.

3.05 FIELD QUALITY CONTROL

A. Owner will provide field inspection.

B. Dry Film Thickness Testing: Engage the services of a qualified testing and inspecting agency to inspect and test paint for dry film thickness.

C. Contractor shall touch up and restore painted surfaces damaged by testing.

D. If test results show that dry film thickness of applied paint does not comply with paint manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with paint manufacturer's written recommendations.

3.06 CLEANING

A. Collect waste material that could constitute a fire hazard, place in closed metal containers, and remove daily from site.

B. After completing paint application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.

C. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.

D. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.07 PROTECTION

A. Protect finishes until completion of project.

B. Touch-up damaged finishes after Substantial Completion.

3.08 COLOR SCHEDULE

A. Classroom 201: EXAMPLE: AS SCHEDULED ON THE "FINISH SCHEDULE"

1. North, west, and east walls - #3184 blue.
2. South accent wall - #4467 yellow.
3. Paint access panels same as walls.
4. Paint convector cover - #2237 pink.

B. Principal's Office:

1. Walls - #1234 green.
2. Trim - #5512 gray.

END OF SECTION

SECTION 09 9300
STAINING AND TRANSPARENT FINISHING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Surface preparation.

B. Field application of stains and transparent finishes.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 09 9113 - Exterior Painting: Stains and transparent finishes for concrete substrates.

C. Section 09 9123 - Interior Painting: Stains and transparent finishes for concrete substrates.

1.03 DEFINITIONS

A. Comply with ASTM D16 for interpretation of terms used in this section.

1.04 REFERENCE STANDARDS

A. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings; U.S. Environmental Protection Agency current edition.

B. ASTM D16 - Standard Terminology for Paint, Related Coatings, Materials, and Applications 2016.

C. ASTM D4442 - Standard Test Methods for Direct Moisture Content Measurement of Wood and Wood-Based Materials 2016.

D. MPI (APSM) - Master Painters Institute Architectural Painting Specification Manual Current Edition.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide complete list of products to be used, with the following information for each:

1. Manufacturer's name, product name and/or catalog number, and general product category.

C. Samples: Submit two samples, illustrating selected colors and sheens for each system with specified coats cascaded. Submit on actual wood substrate to be finished, [8" x 8"] inch ([203 x 203] mm) in size.

D. Certification: By manufacturer that stains and transparent finishes comply with VOC limits specified.

E. Applicator's Qualification Statement.

F. Maintenance Data: Submit data including finish schedule showing where each product/color/finish was used, product technical data sheets, safety data sheets (SDS), care and cleaning instructions, touch-up procedures and color samples of each color and finish used.

1.06 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified, with minimum three years documented experience.

B. Applicator Qualifications: Company specializing in performing the type of work specified with minimum three years experience and approved by manufacturer.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to site in sealed and labeled containers; inspect to verify acceptability.

B. Container Label: Include manufacturer's name, type of stain or transparent finish, brand name, lot number, brand code, coverage, surface preparation, drying time, cleanup requirements, color

designation, and instructions for mixing and reducing.

C. Stain and Transparent Finish Materials: Store at minimum ambient temperature of 45 degrees F (7 degrees C) and a maximum of 90 degrees F (32 degrees C), in ventilated area, and as required by manufacturer's instructions.

1.08 FIELD CONDITIONS

A. Do not apply materials when surface and ambient temperatures are outside the temperature ranges required by manufacturer of stains and transparent finishes.

B. Follow manufacturer's recommended procedures for producing best results, including testing of substrates, moisture in substrates, and humidity and temperature limitations.

C. Do not apply materials when relative humidity exceeds 85 percent; at temperatures less than 5 degrees F (3 degrees C) above the dew point; or to damp or wet surfaces.

D. Minimum Application Temperature: 50 degrees F (10 degrees C) unless required otherwise by manufacturer's instructions.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Provide finishes from the same manufacturer to the greatest extent possible.

1. In the event that a single manufacturer cannot provide specified products, minor exceptions will be permitted provided approval by Architect is obtained using the specified procedures for substitutions.
2. Substitution of other products by the same manufacturer is preferred over substitution of products by a different manufacturer.
3. Substitution of a different system using MPI-approved products by the same manufacturer will be considered.

B. Transparent Finishes:

1. Base Manufacturer: .
2. PPG Paints Deft Interior Clears/Polyurethanes: www.ppgpaints.com/#sle.
3. PPG Paints ProLuxe Transparent Finishes: www.perfectwoodstains.com/#sle.

C. Stains:

1. Base Manufacturer:
2. PPG Paints Deft Interior Stains: www.ppgpaints.com/#sle.
3. PPG Paints ProLuxe Stains: www.perfectwoodstains.com/#sle.

D. Substitutions: See Section 01 6000 - Product Requirements.

2.02 STAINS AND TRANSPARENT FINISHES - GENERAL

A. Finishes:

1. Provide finishes capable of being readily and uniformly dispersed to a homogeneous coating, with good flow and brushing properties, and capable of drying or curing free of streaks or sags.
2. Provide materials that are compatible with one another and the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.

3. Supply each finish material in quantity required to complete entire project's work from a single production run.
4. Do not reduce, thin, or dilute finishes or add materials unless such procedure is specifically described in manufacturer's product instructions.

B. Volatile Organic Compound (VOC) Content:
1. Provide stains and transparent finishes that comply with the most stringent requirements specified in the following:
a. 40 CFR 59, Subpart D--National Volatile Organic Compound Emission Standards for Architectural Coatings.
b. Ozone Transport Commission (OTC) Model Rule, Architectural, Industrial, and Maintenance Coatings; www.otcair.org; specifically:
1) Opaque, Flat: 50 g/L, maximum.
2) Opaque, Nonflat: 150 g/L, maximum.
3) Opaque, High Gloss: 250 g/L, maximum.
4) Varnishes: 350 g/L, maximum.
c. Architectural coatings VOC limits of Maryland.
d. USGBC LEED Rating System; for interior wall and ceiling finish (all coats), clear wood stains and finishes, sanding sealers, other sealers, shellac, and floor coatings.
2. Determination of VOC Content: Testing and calculation in accordance with 40 CFR 59, Subpart D (EPA Method 24), exclusive of colorants added to a tint base and water added at project site; or other method acceptable to authorities having jurisdiction.

C. Flammability: Comply with applicable code for surface burning characteristics.

D. Sheens: Provide the sheens specified; where sheen is not specified, sheen will be selected later by Architect from the manufacturer's full line.

E. Colors: To be selected from manufacturer's full range of available colors.
1. Selection to be made by Architect after award of contract.
2. Extend colors to surface edges; colors may change at any edge as directed by Architect.

2.03 EXTERIOR STAIN AND TRANSPARENT FINISH SYSTEMS

A. Finish on Wood:
1. Stain: Exterior Solid Stain for Wood, Water Based; MPI #16.
2. Stain: Exterior Semi-Transparent Stain for Wood, Water Based; MPI #156.
3. Stain: Exterior Semi-Transparent Stain for Wood, Solvent Based; MPI #13.
4. Stain: Exterior Semi-Transparent Stain for Wood Decks, Solvent Based or Water Based; MPI #33.
5. Top Coat(s): Exterior Clear Water Based Varnish with UV Inhibitor.
6. Top Coat(s): Exterior Clear Alkyd Varnish with UV Inhibitor.
7. Top Coat Sheen:
a. Flat: MPI gloss level 1; use this sheen at all locations.
b. Eggshell: MPI gloss level 3; use this sheen at all locations.
c. Satin: MPI gloss level 4; use this sheen at all locations.

d. Semi-Gloss: MPI gloss level 5; use this sheen at all locations.

e. Gloss: MPI gloss level 6; use this sheen at all locations.

f. High Gloss: MPI gloss level 7; use this sheen at all locations.

2.04 INTERIOR STAIN AND TRANSPARENT FINISH SYSTEMS

A. Finish on Wood - Vertical Surfaces:

1. 2 coat(s) stain.
2. 2 coat(s) sealer.
3. 2 coat(s) varnish.
4. 2 coat(s) varnish over 1 coat(s) stain.
5. Stain: Semi-Transparent Stain for Wood, Solvent Based; MPI #90.
6. Stain: Semi-Transparent Stain for Wood, Water Based; MPI #186.
7. Sealer: Alkyd, Sanding Sealer, Clear; MPI #102.
8. Sealer: Lacquer, Sanding Sealer, White; MPI #24.
9. Top Coat(s): Polyurethane Varnish, Oil Modified; MPI #56 or 57.
10. Top Coat(s): Alkyd Varnish; MPI #73 or 75.
11. Top Coat(s): Clear Water Based Varnish; MPI #128, 129, or 130.
12. Top Coat(s): Clear Lacquer; MPI #85, 86, or 87.
13. Top Coat Sheen:
    a. Flat: MPI gloss level 1; use this sheen at all locations.
    b. Eggshell: MPI gloss level 3; use this sheen at all locations.
    c. Satin: MPI gloss level 4; use this sheen at all locations.
    d. Semi-Gloss: MPI gloss level 5; use this sheen at all locations.
    e. Gloss: MPI gloss level 6; use this sheen at all locations.
    f. High Gloss: MPI gloss level 7; use this sheen at all locations.

B. Finish on Wood - Floors.

1. Stain: Semi-Transparent Stain for Wood; MPI #90.
2. Top Coat(s): Polyurethane Varnish, Oil Modified; MPI #56 or 57.
3. Top Coat Sheen:
    a. Eggshell: MPI gloss level 3; use this sheen at all locations.
    b. Semi-Gloss: MPI gloss level 5; use this sheen at all locations.
    c. Gloss: MPI gloss level 6; use this sheen at all locations.

2.05 ACCESSORY MATERIALS

A. Accessory Materials: Cleaning agents, cleaning cloths, sanding materials, and clean-up materials as required for final completion of finished surfaces.

B. Patching Material: Latex filler.

C. Fastener Head Cover Material: Latex filler.

PART 3 EXECUTION

3.01 INSTALLERS

A. Acceptable Applicators:

3.02 EXAMINATION

A. Do not begin application of stains and finishes until substrates have been properly prepared.

B. Verify that surfaces are ready to receive work as instructed by the product manufacturer.

C. Examine surfaces scheduled to be finished prior to commencement of work. Report any condition that may potentially effect proper application.

D. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

E. Measure moisture content of surfaces using an electronic moisture meter. Do not apply finishes unless moisture content of surfaces are below the following maximums:

1. Wood: 15 percent, measured in accordance with ASTM D4442.

3.03 PREPARATION

A. Clean surfaces thoroughly and correct defects prior to application.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

C. Remove or repair existing finishes that exhibit surface defects.

D. Remove or mask surface appurtenances, including electrical plates, hardware, light fixture trim, escutcheons, and fittings, prior to preparing surfaces or finishing.

E. Seal surfaces that might cause bleed through or staining of topcoat.

F. Wood Surfaces to Receive Opaque Finish: Wipe off dust and grit prior to priming. Seal knots, pitch streaks, and sappy sections with sealer. Fill nail holes and cracks after primer has dried; sand between coats. Back prime concealed surfaces before installation.

G. Wood Surfaces to Receive Transparent Finish: Wipe off dust and grit prior to sealing, seal knots, pitch streaks, and sappy sections with sealer. Fill nail holes and cracks after sealer has dried; sand lightly between coats. Prime concealed surfaces with gloss varnish reduced 25 percent with thinner.

H. Wood Doors to be Field-Finished: Seal wood door top and bottom edge surfaces with clear sealer.

3.04 APPLICATION

A. Apply products in accordance with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual".

B. Do not apply finishes to surfaces that are not dry. Allow applied coats to dry before next coat is applied.

C. Apply each coat to uniform appearance in thicknesses specified by manufacturer.

D. Sand wood surfaces lightly between coats to achieve required finish.

E. Vacuum clean surfaces of loose particles. Use tack cloth to remove dust and particles just prior to applying next coat.

F. Wood to Receive Transparent Finishes: Tint fillers to match wood. Work fillers into the grain before set. Wipe excess from surface.

G. Reinstall items removed prior to finishing.

3.05 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for general requirements for field inspection.

B. Owner will provide field inspection.

C. Inspect and test questionable coated areas in accordance with industry standards & requirements.

3.06 CLEANING

A. Collect waste material that could constitute a fire hazard, place in closed metal containers, and remove daily from site.

3.07 PROTECTION

A. Protect finishes until completion of project.

B. Touch-up damaged finishes after Substantial Completion.

END OF SECTION

SECTION 09 9300
STAINING AND TRANSPARENT FINISHING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Surface preparation.

B. Field application of stains and transparent finishes.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 09 9113 - Exterior Painting: Stains and transparent finishes for concrete substrates.

C. Section 09 9123 - Interior Painting: Stains and transparent finishes for concrete substrates.

1.03 DEFINITIONS

A. Comply with ASTM D16 for interpretation of terms used in this section.

1.04 REFERENCE STANDARDS

A. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings; U.S. Environmental Protection Agency current edition.

B. ASTM D16 - Standard Terminology for Paint, Related Coatings, Materials, and Applications 2016.

C. ASTM D4442 - Standard Test Methods for Direct Moisture Content Measurement of Wood and Wood-Based Materials 2016.

D. MPI (APSM) - Master Painters Institute Architectural Painting Specification Manual Current Edition.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide complete list of products to be used, with the following information for each:

1. Manufacturer's name, product name and/or catalog number, and general product category.

2. Manufacturer's installation instructions.

3. If proposal of substitutions is allowed under submittal procedures, explanation of substitutions proposed.

C. Samples: Submit two samples, illustrating selected colors and sheens for each system with specified coats cascaded. Submit on actual wood substrate to be finished, [8" x 8"] inch ([203 x 203] mm) in size.

D. Certification: By manufacturer that stains and transparent finishes comply with VOC limits specified.

E. Manufacturer's Instructions: Indicate special surface preparation procedures.

F. Manufacturer's Qualification Statement.

G. Applicator's Qualification Statement.

H. Maintenance Data: Submit data including finish schedule showing where each product/color/finish was used, product technical data sheets, safety data sheets (SDS), care and cleaning instructions, touch-up procedures and color samples of each color and finish used.

I. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.

2. Extra Stain and Transparent Finish Materials: 1 gallon (4 L) of each color and type; from the same product run, store where directed.
3. Label each container with color and type in addition to the manufacturer's label.

1.06 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified, with minimum three years documented experience.

B. Applicator Qualifications: Company specializing in performing the type of work specified with minimum three years experience and approved by manufacturer.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to site in sealed and labeled containers; inspect to verify acceptability.

B. Container Label: Include manufacturer's name, type of stain or transparent finish, brand name, lot number, brand code, coverage, surface preparation, drying time, cleanup requirements, color designation, and instructions for mixing and reducing.

C. Stain and Transparent Finish Materials: Store at minimum ambient temperature of 45 degrees F (7 degrees C) and a maximum of 90 degrees F (32 degrees C), in ventilated area, and as required by manufacturer's instructions.

1.08 FIELD CONDITIONS

A. Do not apply materials when surface and ambient temperatures are outside the temperature ranges required by manufacturer of stains and transparent finishes.

B. Follow manufacturer's recommended procedures for producing best results, including testing of substrates, moisture in substrates, and humidity and temperature limitations.

C. Do not apply materials when relative humidity exceeds 85 percent; at temperatures less than 5 degrees F (3 degrees C) above the dew point; or to damp or wet surfaces.

D. Minimum Application Temperature: 50 degrees F (10 degrees C) unless required otherwise by manufacturer's instructions.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Provide finishes from the same manufacturer to the greatest extent possible.

1. In the event that a single manufacturer cannot provide specified products, minor exceptions will be permitted provided approval by Architect is obtained using the specified procedures for substitutions.
2. Substitution of other products by the same manufacturer is preferred over substitution of products by a different manufacturer.
3. Substitution of a different system using MPI-approved products by the same manufacturer will be considered.

B. Transparent Finishes:

1. Base Manufacturer: .
2. PPG Paints Deft Interior Clears/Polyurethanes: www.ppgpaints.com/#sle.
3. PPG Paints ProLuxe Transparent Finishes: www.perfectwoodstains.com/#sle.

C. Stains:

1. Base Manufacturer:
2. PPG Paints Deft Interior Stains: www.ppgpaints.com/#sle.
3. PPG Paints ProLuxe Stains: www.perfectwoodstains.com/#sle.

D. Substitutions: See Section 01 6000 - Product Requirements.

2.02 STAINS AND TRANSPARENT FINISHES - GENERAL

A. Finishes:

1. Provide finishes capable of being readily and uniformly dispersed to a homogeneous coating, with good flow and brushing properties, and capable of drying or curing free of streaks or sags.
2. Provide materials that are compatible with one another and the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.
3. Supply each finish material in quantity required to complete entire project's work from a single production run.
4. Do not reduce, thin, or dilute finishes or add materials unless such procedure is specifically described in manufacturer's product instructions.

B. Volatile Organic Compound (VOC) Content:

1. Provide stains and transparent finishes that comply with the most stringent requirements specified in the following:
   a. 40 CFR 59, Subpart D--National Volatile Organic Compound Emission Standards for Architectural Coatings.
   b. Ozone Transport Commission (OTC) Model Rule, Architectural, Industrial, and Maintenance Coatings; www.otcair.org; specifically:
      1) Opaque, Flat: 50 g/L, maximum.
      2) Opaque, Nonflat: 150 g/L, maximum.
      3) Opaque, High Gloss: 250 g/L, maximum.
      4) Varnishes: 350 g/L, maximum.
   c. Architectural coatings VOC limits of Maryland.
   d. USGBC LEED Rating System; for interior wall and ceiling finish (all coats), clear wood stains and finishes, sanding sealers, other sealers, shellac, and floor coatings.
2. Determination of VOC Content: Testing and calculation in accordance with 40 CFR 59, Subpart D (EPA Method 24), exclusive of colorants added to a tint base and water added at project site; or other method acceptable to authorities having jurisdiction.

C. Flammability: Comply with applicable code for surface burning characteristics.

D. Sheens: Provide the sheens specified; where sheen is not specified, sheen will be selected later by Architect from the manufacturer's full line.

E. Colors: To be selected from manufacturer's full range of available colors.

1. Selection to be made by Architect after award of contract.
2. Extend colors to surface edges; colors may change at any edge as directed by Architect.

2.03 EXTERIOR STAIN AND TRANSPARENT FINISH SYSTEMS

A. Finish on Wood:
   1. 2 coat(s) stain.
   2. 2 coat(s) varnish.
   3. Stain: Exterior Solid Stain for Wood, Water Based; MPI #16.
   4. Stain: Exterior Semi-Transparent Stain for Wood, Water Based; MPI #156.
   5. Stain: Exterior Semi-Transparent Stain for Wood, Solvent Based; MPI #13.
   6. Stain: Exterior Semi-Transparent Stain for Wood Decks, Solvent Based or Water Based; MPI #33.
   7. Top Coat(s): Exterior Clear Water Based Varnish with UV Inhibitor.
   8. Top Coat(s): Exterior Clear Alkyd Varnish with UV Inhibitor.
   9. Top Coat Sheen:
      a. Flat: MPI gloss level 1; use this sheen at all locations.
      b. Eggshell: MPI gloss level 3; use this sheen at all locations.
      c. Satin: MPI gloss level 4; use this sheen at all locations.
      d. Semi-Gloss: MPI gloss level 5; use this sheen at all locations.
      e. Gloss: MPI gloss level 6; use this sheen at all locations.
      f. High Gloss: MPI gloss level 7; use this sheen at all locations.

2.04 INTERIOR STAIN AND TRANSPARENT FINISH SYSTEMS

A. Finish on Wood - Vertical Surfaces:
   1. 2 coat(s) stain.
   2. 2 coat(s) sealer.
   3. 2 coat(s) varnish.
   4. 2 coat(s) varnish over 1 coat(s) stain.
   5. Stain: Semi-Transparent Stain for Wood, Solvent Based; MPI #90.
   6. Stain: Semi-Transparent Stain for Wood, Water Based; MPI #186.
   7. Sealer: Alkyd, Sanding Sealer, Clear; MPI #102.
   8. Sealer: Lacquer, Sanding Sealer, White; MPI #24.
   9. Top Coat(s): Polyurethane Varnish, Oil Modified; MPI #56 or 57.
   10. Top Coat(s): Alkyd Varnish; MPI #73 or 75.
   11. Top Coat(s): Clear Water Based Varnish; MPI #128, 129, or 130.
   12. Top Coat(s): Clear Lacquer; MPI #85, 86, or 87.
   13. Top Coat Sheen:
      a. Flat: MPI gloss level 1; use this sheen at all locations.
      b. Eggshell: MPI gloss level 3; use this sheen at all locations.
      c. Satin: MPI gloss level 4; use this sheen at all locations.
      d. Semi-Gloss: MPI gloss level 5; use this sheen at all locations.
      e. Gloss: MPI gloss level 6; use this sheen at all locations.

f. High Gloss: MPI gloss level 7; use this sheen at all locations.

B. Finish on Wood - Floors.

1. Stain: Semi-Transparent Stain for Wood; MPI #90.
2. Top Coat(s): Polyurethane Varnish, Oil Modified; MPI #56 or 57.
3. Top Coat Sheen:
   a. Eggshell: MPI gloss level 3; use this sheen at all locations.
   b. Semi-Gloss: MPI gloss level 5; use this sheen at all locations.
   c. Gloss: MPI gloss level 6; use this sheen at all locations.

2.05 ACCESSORY MATERIALS

A. Accessory Materials: Cleaning agents, cleaning cloths, sanding materials, and clean-up materials as required for final completion of finished surfaces.

B. Patching Material: Latex filler.

C. Fastener Head Cover Material: Latex filler.

PART 3 EXECUTION

3.01 INSTALLERS

3.02 EXAMINATION

A. Do not begin application of stains and finishes until substrates have been properly prepared.

B. Verify that surfaces are ready to receive work as instructed by the product manufacturer.

C. Examine surfaces scheduled to be finished prior to commencement of work. Report any condition that may potentially effect proper application.

D. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

E. Measure moisture content of surfaces using an electronic moisture meter. Do not apply finishes unless moisture content of surfaces are below the following maximums:

1. Wood: 15 percent, measured in accordance with ASTM D4442.

3.03 PREPARATION

A. Clean surfaces thoroughly and correct defects prior to application.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

C. Remove or repair existing finishes that exhibit surface defects.

D. Remove or mask surface appurtenances, including electrical plates, hardware, light fixture trim, escutcheons, and fittings, prior to preparing surfaces or finishing.

E. Seal surfaces that might cause bleed through or staining of topcoat.

F. Wood Surfaces to Receive Opaque Finish: Wipe off dust and grit prior to priming. Seal knots, pitch streaks, and sappy sections with sealer. Fill nail holes and cracks after primer has dried; sand between coats. Back prime concealed surfaces before installation.

G. Wood Surfaces to Receive Transparent Finish: Wipe off dust and grit prior to sealing, seal knots, pitch streaks, and sappy sections with sealer. Fill nail holes and cracks after sealer has dried; sand lightly between coats. Prime concealed surfaces with gloss varnish reduced 25 percent with thinner.

H. Wood Doors to be Field-Finished: Seal wood door top and bottom edge surfaces with clear sealer.

3.04 APPLICATION

A. Apply products in accordance with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual".

B. Do not apply finishes to surfaces that are not dry. Allow applied coats to dry before next coat is applied.

C. Apply each coat to uniform appearance in thicknesses specified by manufacturer.

D. Sand wood surfaces lightly between coats to achieve required finish.

E. Vacuum clean surfaces of loose particles. Use tack cloth to remove dust and particles just prior to applying next coat.

F. Wood to Receive Transparent Finishes: Tint fillers to match wood. Work fillers into the grain before set. Wipe excess from surface.

G. Reinstall items removed prior to finishing.

3.05 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for general requirements for field inspection.

B. Owner will provide field inspection.

C. Inspect and test questionable coated areas in accordance with industry standards & requirements.

3.06 CLEANING

A. Collect waste material that could constitute a fire hazard, place in closed metal containers, and remove daily from site.

3.07 PROTECTION

A. Protect finishes until completion of project.

B. Touch-up damaged finishes after Substantial Completion.

END OF SECTION

SECTION 09 9600
HIGH-PERFORMANCE COATINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. High performance coatings.

B. Surface preparation.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 09 9113 - Exterior Painting.

C. Section 09 9123 - Interior Painting: Requirements for mechanical and electrical equipment surfaces.

1.03 REFERENCE STANDARDS

A. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings; U.S. Environmental Protection Agency current edition.

B. CARB (SCM) - Suggested Control Measure for Architectural Coatings; California Air Resources Board 2007.

C. SCAQMD 1113 - Architectural Coatings 1977 (Amended 2016).

D. SSPC-SP 1 - Solvent Cleaning 2015, with Editorial Revision (2016).

E. SSPC-SP 3 - Power Tool Cleaning 1982, with Editorial Revision (2004).

F. SSPC-SP 5 - White Metal Blast Cleaning 2007.

G. SSPC-SP 7 - Brush-Off Blast Cleaning 2007.

H. SSPC-SP 13 - Surface Preparation of Concrete 1997 (Reaffirmed 2003).

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide complete list of all products to be used, with the following information for each:

1. Manufacturer's name, product name and/or catalog number, and general product category (e.g. "alkyd enamel").

2. MPI product number (e.g. MPI #47).

3. Cross-reference to specified coating system(s) product is to be used in; include description of each system.

4. Manufacturer's installation instructions.

C. Samples: Submit two samples 8 by 8 inch (203 by 203 mm) in size illustrating colors available for selection.

PART 2 PRODUCTS

2.01 TOP COAT MATERIALS

A. Coatings - General: Provide complete multi-coat systems formulated and recommended by manufacturer for the applications indicated, in the thicknesses indicated; number of coats specified does not include primer or filler coat.

1. Lead Content: Not greater than 0.06 percent by weight of total nonvolatile content.

2. Chromium Content, as Hexavalent Chromium, Zinc Chromate, or Strontium Chromate: None.

END OF SECTION

G. SCAQMD 1113 - Architectural Coatings 1977 (Amended 2016).

H. SSPC-SP 1 - Solvent Cleaning 2015, with Editorial Revision (2016).

I. SSPC-SP 3 - Power Tool Cleaning 1982, with Editorial Revision (2004).

J. SSPC-SP 5 - White Metal Blast Cleaning 2007.

K. SSPC-SP 7 - Brush-Off Blast Cleaning 2007.

L. SSPC-SP 13 - Surface Preparation of Concrete 1997 (Reaffirmed 2003).

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide complete list of all products to be used, with the following information for each:

1. Manufacturer's name, product name and/or catalog number, and general product category (e.g. "alkyd enamel").
2. MPI product number (e.g. MPI #47).
3. Cross-reference to specified coating system(s) product is to be used in; include description of each system.
4. Manufacturer's installation instructions.
5. If proposal of substitutions is allowed under submittal procedures, explanation of all substitutions proposed.

C. Samples: Submit two samples 8 by 8 inch (203 by 203 mm) in size illustrating colors available for selection.

D. Manufacturer's Certificate: Certify that high-performance coatings comply with VOC limits specified.

E. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

F. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

G. Maintenance Data: Include cleaning procedures and repair and patching techniques.

H. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Extra Coating Materials: 1 gallon (4 liters) of each type and color.
3. Label each container with manufacturer's name, product number, color number, and room names and numbers where used.

1.05 QUALITY ASSURANCE

A. Maintain one copy of each referenced document that applies to application on site.

B. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with minimum three years documented experience.

C. Applicator Qualifications: Company specializing in performing the work of this section with minimum 5 years documented experience.

1.06 MOCK-UP

A. See Section 01 4000 - Quality Requirements, for general requirements for mock-up.

B. Provide mock-up illustrating coating , for each specified coating.

C. Locate where directed.

D. Mock-up may remain as part of the work.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to site in sealed and labeled containers; inspect to verify acceptability.

B. Container Label: Include manufacturer's name, type of coating, brand name, lot number, brand code, coverage, surface preparation, drying time, cleanup requirements, color designation, and instructions for mixing and reducing.

C. Coating Materials: Store at minimum ambient temperature of 45 degrees F (7 degrees C) and a maximum of 90 degrees F (32 degrees C), in ventilated area, and as required by manufacturer's instructions.

1.08 FIELD CONDITIONS

A. Follow manufacturer's recommended procedures for producing best results, including testing of substrates, moisture in substrates, and humidity and temperature limitations.

B. Do not apply exterior coatings during rain or snow, or when relative humidity is outside the humidity ranges required by the coating product manufacturer.

C. Do not install materials when temperature is below 55 degrees F (13 degrees C) or above 90 degrees F (32 degrees C).

D. Maintain this temperature range, 24 hours before, during, and 72 hours after installation of coating.

E. Provide lighting level of 80 ft candles (860 lx) measured mid-height at substrate surface.

F. Restrict traffic from area where coating is being applied or is curing.

1.09 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a five year period after Date of Substantial Completion.

C. Warranty: Include coverage for bond to substrate.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Only materials (primers, coatings, etc.) listed in the latest edition of the MPI Approved Product List (APL) are acceptable for use on this project.

B. Provide high performance coating products from the same manufacturer to the greatest extent possible.

1. In the event that a single manufacturer cannot provide specified products, minor exceptions will be permitted provided approval by Architect is obtained using the specified procedures for substitutions.

2. Substitution of MPI-approved products by a different manufacturer is preferred over substitution of unapproved products by the same manufacturer.

3. Substitution of a different high performance coating system using MPI-approved products by the same manufacturer will be considered.

C. High-Performance Coatings:

1. Dow Chemical Company: consumer.dow.com/en-us/industry/ind-building-construction.html/#sle.

2. PPG Paints: www.ppgpaints.com/#sle.

3. Sherwin-Williams Company: www.protective.sherwin-williams.com/industries/#sle.

4. Substitutions: Section 01 6000 - Product Requirements.

2.02 HIGH-PERFORMANCE COATINGS

A. Provide coating systems that meet the following minimum performance criteria, unless more stringent criteria are specified:

1. NFPA 101, Class A rated.

2.03 TOP COAT MATERIALS

A. Coatings - General: Provide complete multi-coat systems formulated and recommended by manufacturer for the applications indicated, in the thicknesses indicated; number of coats specified does not include primer or filler coat.

1. Lead Content: Not greater than 0.06 percent by weight of total nonvolatile content.

2. Chromium Content, as Hexavalent Chromium, Zinc Chromate, or Strontium Chromate: None.

3. Volatile Organic Compound (VOC) Content: Comply with Section 01 6116.

B. Shellac: Pure, white type.

2.04 PRIMERS

A. Primers: Provide the following unless other primer is required or recommended by coating manufacturer.

1. Primer Sealer, Interior, Institutional Low Odor; MPI #149.

2. Block Filler, Epoxy; MPI #116.
3. Block Filler, Latex; MPI #4.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

B. Do not begin application of coatings until substrates have been properly prepared.

C. Verify that substrate surfaces are ready to receive work as instructed by the coating manufacturer. Obtain and follow manufacturer's instructions for examination and testing of substrates.

D. Examine surfaces scheduled to be finished prior to commencement of work. Report any condition that may potentially affect proper application.

E. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

F. Test shop-applied primer for compatibility with subsequent cover materials.

G. Measure moisture content of surfaces using an electronic moisture meter. Do not apply finishes unless moisture content of surfaces are below the following maximums:

1. Cementitious Substrates: Do not begin application until substrate has cured 28 days minimum and measured moisture content is not greater than 12 percent.
2. Plaster and Stucco: 12 percent.
3. Masonry, Concrete, and Concrete Unit Masonry: 12 percent.
4. Concrete Floors and Traffic Surfaces: 8 percent.
5. Wood: Do not begin application if substrate has moisture content over 12 percent.

H. Masonry: Verify masonry joints are struck flush.

I. Proceed with coating application only after unacceptable conditions have been corrected.

1. Commencing coating application constitutes Contractor's acceptance of substrates and conditions.

3.02 PREPARATION

A. Clean surfaces of loose foreign matter.

B. Remove substances that would bleed through finished coatings. If unremovable, seal surface with shellac.

C. Remove finish hardware, fixture covers, and accessories and store.

D. Existing Painted and Sealed Surfaces:

1. Strip existing paint and coatings from surface.
2. Clean with mixture of trisodium phosphate and water to remove surface grease and foreign matter.

E. Concrete:

1. Remove release agents, curing compounds, efflorescence, and chalk. Do not coat surfaces if moisture content or alkalinity of surfaces to be coated exceeds that permitted in manufacturer's written instructions.
2. Clean surfaces with pressurized water. Use pressure range of 1,500 to 4,000 psi (10,350 to 27,580 kPa) at 6 to 12 inches (150 to 300 mm). Allow to dry.
3. Clean concrete according to ASTM D4258. Allow to dry.

4. Prepare surface as recommended by coating manufacturer and according to SSPC-SP 13.

F. Masonry:

1. Remove efflorescence and chalk. Do not coat surfaces if moisture content or alkalinity of surfaces or if alkalinity of mortar joints exceed that permitted in manufacturer's written instructions. Allow to dry.

2. Prepare surface as recommended by coating manufacturer.

3. Clean surfaces with pressurized water. Use pressure range of 600 to 1,500 psi (4,140 to 10,350 kPa) at 6 to 12 inches (150 to 300 mm). Allow to dry.

G. Protect adjacent surfaces and materials not receiving coating from spatter and overspray; mask if necessary to provide adequate protection. Repair damage.

3.03 PRIMING

A. Apply primer to all surfaces, unless specifically not required by coating manufacturer. Apply in accordance with coating manufacturer's instructions.

B. Concrete: Prior to priming, patch with masonry filler to produce smooth surface.

C. Concrete Masonry: Apply masonry filler to thickness required to fill holes and produce smooth surface; minimum thickness of 30 mils (0.8 mm).

D. Wood Items to Receive Transparent Finish: Wipe off dust and grit, sealing, seal knots, pitch streaks, and sappy sections as directed by coating manufacturer. Fill nail holes and cracks with matching tinted filler.

3.04 COATING APPLICATION

A. Apply coatings in accordance with manufacturer's written instructions, to thicknesses specified and recommendations in "MPI Architectural Painting and Specification Manual".

B. Apply in uniform thickness coats, without runs, drips, pinholes, brush marks, or variations in color, texture, or finish. Finish edges, crevices, corners, and other changes in dimension with full coating thickness.

3.05 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for general requirements for field inspection.

B. Owner will provide field inspection.

C. Inspect and test questionable coated areas in accordance with [_____].

D. Dry Film Thickness Testing: Owner will engage the services of a qualified testing and inspecting agency to inspect and test coatings for dry film thickness.

1. Touch up and restore coated surfaces damaged by testing.

2. If test results show that dry film thickness of applied coating does not comply with coating manufacturer's written recommendations, and specified thickness, Contractor shall pay for retesting and apply additional coats as needed to provide dry film thickness that complies with coating manufacturer's written recommendations, and specified thickness.

3.06 CLEANING

A. Collect waste material that could constitute a fire hazard, place in closed metal containers, and remove daily from site.

B. Clean surfaces immediately of overspray, splatter, and excess material.

C. After coating has cured, clean and replace finish hardware, fixtures, and fittings previously removed.

3.07 PROTECTION

A. Protect finished work from damage.

END OF SECTION

SECTION 09 9723
CONCRETE AND MASONRY COATINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Moisture resistant textured concrete and masonry coatings.

B. Moisture resistant smooth concrete and masonry coatings.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 09 9113 - Exterior Painting.

1.03 REFERENCE STANDARDS

A. ASTM D522/D522M - Standard Test Methods for Mandrel Bend Test of Attached Organic Coatings 2017.

B. ASTM D714 - Standard Test Method for Evaluating Degree of Blistering of Paints 2002 (Reapproved 2009).

C. ASTM D968 - Standard Test Methods for Abrasion Resistance of Organic Coatings by Falling Abrasive 2017.

D. ASTM D2243 - Standard Test Method for Freeze-Thaw Resistance of Water-Borne Coatings 1995 (Reapproved 2014).

E. ASTM D4803 - Standard Test Method for Predicting Heat Buildup in PVC Building Products 2018.

F. ASTM D6904 - Standard Practice for Resistance to Wind-Driven Rain for Exterior Coatings Applied on Masonry 2003 (Reapproved 2013).

G. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials 2016.

H. SSPC-SP 2 - Hand Tool Cleaning 1982, with Editorial Revision (2004).

I. SSPC-SP 3 - Power Tool Cleaning 1982, with Editorial Revision (2004).

J. SSPC-SP 6 - Commercial Blast Cleaning 2007.

K. SSPC-SP 7 - Brush-Off Blast Cleaning 2007.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data indicating coating materials and [_____].

C. Samples: Submit two samples 8" x 8" in size illustrating colors available for selection.

D. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

1.05 QUALITY ASSURANCE

A. Maintain one copy of each referenced document that applies to application on site.

B. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with minimum three years documented experience.

C. Applicator Qualifications: Company specializing in performing the work of this section with minimum three years documented experience.

1.06 MOCK-UP

A. Provide mock-up of each type of coating, illustrating coating, color and surface sheen, for each specified coating.

B. Locate where directed.

C. Mock-up may remain as part of the Work.

1.07 FIELD CONDITIONS

A. Do not install materials when temperature is below 55 degrees F (13 degrees C) or above 90 degrees F (32 degrees C).

B. Maintain this temperature range, 24 hours before, during, and 72 hours after installation of coating.

C. Restrict traffic from area where coating is being applied or is curing.

1.08 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a five year period after Date of Substantial Completion.

C. Warranty: Include coverage for bond to substrate.

PART 2 PRODUCTS

2.01 CONCRETE AND MASONRY COATINGS

A. Provide high-build, weather resistant coating systems that meet the following minimum performance criteria, unless more stringent criteria are specified:

1. Salt Spray Resistance: Passes when tested according to ASTM B117 for 2000 hours.
2. Surface Burning Characteristics: Flame spread/Smoke developed index of 0/0, maximum, when tested in accordance with ASTM E84.
3. Accelerated Outdoor Exposure: Passes when tested according to ASTM G153 for 5,000 hours.

2.02 MATERIALS

A. Coatings - General: Provide complete systems formulated and recommended by manufacturer for the applications indicated, in the thicknesses indicated.

1. Maximum volatile organic compound (VOC) content: As required by applicable regulations.

B. High Build, One Coat, Water Based Textured Coating for 'Green' Concrete: Water based, epoxy-acrylic resin with graded perlite aggregate.

1. Stated by manufacturer as suitable for installation on visibly damp surfaces and concrete that has hardened but is not fully cured ("green" concrete) without requiring a primer.
2. Dry Film Thickness: 15 mils (0.381 mm), minimum.
3. Flexibility Test: Passing, when tested according to ASTM D522/D522M with a 1 inch (25 mm) mandrel.
4. Abrasion Resistance: Passing, when tested according to ASTM D968 with 792 gallons (3,000 L) of falling sand.
5. Freeze Thaw Resistance: Passing, when tested according to ASTM D2243 for 50 cycles.
6. Wind Driven Rain Resistance: Passing, when tested according to ASTM D6904 at 98 miles per hour (158 km/h) for 24 hours.
7. Water Vapor Transmission: 20 perms (1149 ng/Pa s sq m), maximum, when tested in accordance with ASTM E96/E96M.

C. High Build, Water Based Textured Coating System for Masonry: Water based styrene-acrylic resin primer; acrylic terpolymer (elastomeric) top coat and graded perlite aggregate.

1. Stated by manufacturer as suitable for masonry and concrete surfaces cured 28 days, minimum; cement plaster, cement fiber board, and metal.
2. Dry Film Thickness: 15 mils (0.381 mm), minimum.
3. Flexibility Test: Passing, when tested according to ASTM D522/D522M with a 1 inch (25 mm) mandrel.
4. Freeze Thaw Resistance: Passing, when tested according to ASTM D2243 for 50 cycles.
5. Water Vapor Transmission: 4.2 perms (240 ng/Pa s sq m), maximum, when tested in accordance with ASTM E96/E96M.

D. High Build, Water Based Solar Reflective Textured Coating System: Water based, acrylic latex textured primer with graded perlite aggregate and acrylic copolymer solar reflective color top coat.

1. Stated by manufacturer as suitable for masonry and concrete surfaces cured 28 days, minimum; cement plaster, cement fiber board, and metal.
2. Dry Film Thickness: 13 to 18 mils (0.330 to 0.457 mm), minimum.
3. Blistering Resistance: Passing, when tested according to ASTM D714 for 100 hours.
4. Abrasion Resistance: Passing, when tested according to ASTM D968 using 218 gallons (825 L) of falling sand.
5. Freeze Thaw Resistance: Passes when tested according to ASTM D2243 for 50 cycles.
6. Surface Temperature Reduction Based on Solar Reflectance: ASTM D4803; reduction in surface temperature increase above ambient temperature when compared to control sample of conventional acrylic paint.
    a. Light colors: 25 to 35 percent.
    b. Medium colors: 55 to 65 percent.
    c. Dark colors: 100 percent.

E. Water Based Super-Hydrophobic Smooth Coating: Single component acrylic coating, color pigments, and acrylic polymer.

F. Water Based Weather Resistant Smooth Coating: Single component acrylic coating, color pigments, and acrylic polymer.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that substrate surfaces are ready to receive work as instructed by the coating manufacturer. Obtain and follow manufacturer's instructions for examination and testing of substrates.

C. Cementitious Substrates: Do not begin application until substrate has cured 28 days minimum and measured moisture content is not greater than 16 percent.

D. Masonry: Verify masonry joints are struck flush.

3.02 PREPARATION

A. Clean surfaces of loose foreign matter.

B. Remove substances that would bleed through finished coatings.

C. Remove finish hardware, fixture covers, and accessories and store.

D. Existing Painted and Sealed Surfaces:

1. Strip existing paint and coatings from surface.

2. Remove loose, flaking, and peeling paint. Feather edge and sand smooth edges of chipped paint.

3. Clean with mixture of trisodium phosphate and water to remove surface grease and foreign matter.

E. Galvanized Surfaces: Remove surface contamination and oils and wash with solvent.

F. Ferrous Metal:

1. Solvent clean.

2. Remove loose rust, loose mill scale, and other foreign substances using hand tools according to SSPC-SP 2, power tools according to SSPC-SP 3 or blast cleaning according to SSPC-SP 6 or -SP 7.

G. Protect adjacent surfaces and materials not receiving coating from spatter and overspray; mask if necessary to provide adequate protection. Repair damage.

3.03 PRIMING

A. Apply primer to all surfaces, unless specifically not required by coating manufacturer. Apply in accordance with coating manufacturer's instructions.

B. Concrete and Masonry: Prior to priming, patch holes and indentations and fill cracks with manufacturer's recommended crack repair material.

3.04 COATING APPLICATION

A. Apply coatings in accordance with manufacturer's instructions, to thicknesses specified.

B. Apply in uniform thickness coats, without runs, drips, pinholes, brush marks, or variations in color, texture, or finish. Finish edges, crevices, corners, and other changes in dimension with full coating thickness.

3.05 CLEANING

A. Collect waste material that could constitute a fire hazard, place in closed metal containers, and remove daily from site.

B. Clean surfaces immediately of overspray, splatter, and excess material.

C. After coating has cured, clean and replace finish hardware, fixtures, and fittings previously removed.

3.06 PROTECTION

A. Protect finished work from damage.

END OF SECTION

SECTION 09 9723
CONCRETE AND MASONRY COATINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Moisture resistant textured concrete and masonry coatings.

B. Moisture resistant smooth concrete and masonry coatings.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 09 9113 - Exterior Painting.

1.03 REFERENCE STANDARDS

A. ASTM D522/D522M - Standard Test Methods for Mandrel Bend Test of Attached Organic Coatings 2017.

B. ASTM D714 - Standard Test Method for Evaluating Degree of Blistering of Paints 2002 (Reapproved 2009).

C. ASTM D968 - Standard Test Methods for Abrasion Resistance of Organic Coatings by Falling Abrasive 2017.

G. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials 2016.

H. SSPC-SP 2 - Hand Tool Cleaning 1982, with Editorial Revision (2004).

I. SSPC-SP 3 - Power Tool Cleaning 1982, with Editorial Revision (2004).

J. SSPC-SP 6 - Commercial Blast Cleaning 2007.

K. SSPC-SP 7 - Brush-Off Blast Cleaning 2007.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data indicating coating materials and [_____].

C. Samples: Submit two samples 8" x 8" in size illustrating colors available for selection.

D. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

E. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

F. Maintenance Data: Include cleaning procedures and repair and patching techniques.

1.05 QUALITY ASSURANCE

A. Maintain one copy of each referenced document that applies to application on site.

B. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with minimum three years documented experience.

C. Applicator Qualifications: Company specializing in performing the work of this section with minimum three years documented experience.

1.06 MOCK-UP

A. Provide mock-up of each type of coating, illustrating coating, color and surface sheen, for each specified coating.

B. Locate where directed.

C. Mock-up may remain as part of the Work.

1.07 FIELD CONDITIONS

A. Do not install materials when temperature is below 55 degrees F (13 degrees C) or above 90 degrees F (32 degrees C).

B. Maintain this temperature range, 24 hours before, during, and 72 hours after installation of coating.

C. Provide lighting level of 80 ft candles (860 lx) measured mid-height at substrate surface.

D. Restrict traffic from area where coating is being applied or is curing.

1.08 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a five year period after Date of Substantial Completion.

C. Warranty: Include coverage for bond to substrate.

PART 2 PRODUCTS

2.01 CONCRETE AND MASONRY COATINGS

A. Provide high-build, weather resistant coating systems that meet the following minimum performance criteria, unless more stringent criteria are specified:

1. Salt Spray Resistance: Passes when tested according to ASTM B117 for 2000 hours.
2. Surface Burning Characteristics: Flame spread/Smoke developed index of 0/0, maximum, when tested in accordance with ASTM E84.
3. Accelerated Outdoor Exposure: Passes when tested according to ASTM G153 for 5,000 hours.

2.02 MATERIALS

A. Coatings - General: Provide complete systems formulated and recommended by manufacturer for the applications indicated, in the thicknesses indicated.

1. Maximum volatile organic compound (VOC) content: As required by applicable regulations.

B. High Build, One Coat, Water Based Textured Coating for 'Green' Concrete: Water based, epoxy-acrylic resin with graded perlite aggregate.

1. Stated by manufacturer as suitable for installation on visibly damp surfaces and concrete that has hardened but is not fully cured ("green" concrete) without requiring a primer.
2. Dry Film Thickness: 15 mils (0.381 mm), minimum.
3. Flexibility Test: Passing, when tested according to ASTM D522/D522M with a 1 inch (25 mm) mandrel.
4. Abrasion Resistance: Passing, when tested according to ASTM D968 with 792 gallons (3,000 L) of falling sand.
5. Freeze Thaw Resistance: Passing, when tested according to ASTM D2243 for 50 cycles.

6. Wind Driven Rain Resistance: Passing, when tested according to ASTM D6904 at 98 miles per hour (158 km/h) for 24 hours.
7. Water Vapor Transmission: 20 perms (1149 ng/Pa s sq m), maximum, when tested in accordance with ASTM E96/E96M.

C. High Build, Water Based Textured Coating System for Masonry: Water based styrene-acrylic resin primer; acrylic terpolymer (elastomeric) top coat and graded perlite aggregate.
1. Stated by manufacturer as suitable for masonry and concrete surfaces cured 28 days, minimum; cement plaster, cement fiber board, and metal.
2. Dry Film Thickness: 15 mils (0.381 mm), minimum.
3. Flexibility Test: Passing, when tested according to ASTM D522/D522M with a 1 inch (25 mm) mandrel.
4. Freeze Thaw Resistance: Passing, when tested according to ASTM D2243 for 50 cycles.
5. Water Vapor Transmission: 4.2 perms (240 ng/Pa s sq m), maximum, when tested in accordance with ASTM E96/E96M.

D. High Build, Water Based Solar Reflective Textured Coating System: Water based, acrylic latex textured primer with graded perlite aggregate and acrylic copolymer solar reflective color top coat.
1. Stated by manufacturer as suitable for masonry and concrete surfaces cured 28 days, minimum; cement plaster, cement fiber board, and metal.
2. Dry Film Thickness: 13 to 18 mils (0.330 to 0.457 mm), minimum.
3. Blistering Resistance: Passing, when tested according to ASTM D714 for 100 hours.
4. Abrasion Resistance: Passing, when tested according to ASTM D968 using 218 gallons (825 L) of falling sand.
5. Freeze Thaw Resistance: Passes when tested according to ASTM D2243 for 50 cycles.
6. Surface Temperature Reduction Based on Solar Reflectance: ASTM D4803; reduction in surface temperature increase above ambient temperature when compared to control sample of conventional acrylic paint.
    a. Light colors: 25 to 35 percent.
    b. Medium colors: 55 to 65 percent.
    c. Dark colors: 100 percent.

E. Water Based Super-Hydrophobic Smooth Coating: Single component acrylic coating, color pigments, and acrylic polymer.

F. Water Based Weather Resistant Smooth Coating: Single component acrylic coating, color pigments, and acrylic polymer.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that substrate surfaces are ready to receive work as instructed by the coating manufacturer. Obtain and follow manufacturer's instructions for examination and testing of substrates.

C. Cementitious Substrates: Do not begin application until substrate has cured 28 days minimum and measured moisture content is not greater than 16 percent.

D. Masonry: Verify masonry joints are struck flush.

3.02 PREPARATION

A. Clean surfaces of loose foreign matter.

B. Remove substances that would bleed through finished coatings.

C. Remove finish hardware, fixture covers, and accessories and store.

D. Existing Painted and Sealed Surfaces:

1. Strip existing paint and coatings from surface.
2. Remove loose, flaking, and peeling paint. Feather edge and sand smooth edges of chipped paint.
3. Clean with mixture of trisodium phosphate and water to remove surface grease and foreign matter.

E. Galvanized Surfaces: Remove surface contamination and oils and wash with solvent.

F. Ferrous Metal:

1. Solvent clean.
2. Remove loose rust, loose mill scale, and other foreign substances using hand tools according to SSPC-SP 2, power tools according to SSPC-SP 3 or blast cleaning according to SSPC-SP 6 or -SP 7.

G. Protect adjacent surfaces and materials not receiving coating from spatter and overspray; mask if necessary to provide adequate protection. Repair damage.

3.03 PRIMING

A. Apply primer to all surfaces, unless specifically not required by coating manufacturer. Apply in accordance with coating manufacturer's instructions.

B. Concrete and Masonry: Prior to priming, patch holes and indentations and fill cracks with manufacturer's recommended crack repair material.

3.04 COATING APPLICATION

A. Apply coatings in accordance with manufacturer's instructions, to thicknesses specified.

B. Apply in uniform thickness coats, without runs, drips, pinholes, brush marks, or variations in color, texture, or finish. Finish edges, crevices, corners, and other changes in dimension with full coating thickness.

3.05 CLEANING

A. Collect waste material that could constitute a fire hazard, place in closed metal containers, and remove daily from site.

B. Clean surfaces immediately of overspray, splatter, and excess material.

C. After coating has cured, clean and replace finish hardware, fixtures, and fittings previously removed.

3.06 PROTECTION

A. Protect finished work from damage.

END OF SECTION

SECTION 09 9730
DECORATIVE CEMENTITIOUS COATINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Cementitious textured coating.

B. Cementitious micro-topping.

C. Coloring of decorative cementitious coatings.

1.02 RELATED REQUIREMENTS

A. Section 03 0100 - Maintenance of Concrete: Cleaning and resurfacing existing concrete.

B. Section 03 3000 - Cast-in-Place Concrete: Concrete mix design; bonding and chemical admixtures; mixing; placement; finishing of concrete surface to tolerance: floating, troweling, and similar operations; frequency and treatment of control joints.

C. Section 03 3511 - Concrete Floor Finishes: Colored coatings and stains.

D. Section 32 1313 - Concrete Paving: Concrete mix design; concrete placement; ambient conditions; finishing of concrete surface to tolerance: floating, troweling, and similar operations; frequency and treatment of control joints; expansion joint treatment.

1.03 REFERENCE STANDARDS

A. ASTM C979/C979M - Standard Specification for Pigments for Integrally Colored Concrete 2016.

B. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring 2017.

C. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride 2016a.

D. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes 2017.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.

C. Shop Drawings: Indicate location of construction and control joints.

D. Samples: Submit two samples of coating , [8" x 8"] inch ([203 x 203] mm) in size, illustrating texture, color and sealing .

E. Installer's Qualification Statement.

F. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing the work of this section with minimum five years documented experience.

1. Submit installer's list of completed decorative cementitious coating projects, including project name and location, name of Architect, and type and quantity of materials applied.

1.06 MOCK-UP

A. Construct mock-up of decorative cementitious coating.
   1. Use same materials and methods for use in the work.
   2. Locate where directed.
   3. Minimum Size: 4 by 4 feet (1220 mm by 1220 mm).
B. Obtain approval of mock-up by Architect before proceeding with work.
C. Mock-up may remain as part of the Work.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to site in manufacturer's original, unopened containers and packaging, with labels clearly identifying product name and manufacturer.
B. Store and handle materials according to manufacturer's instructions.
C. Keep materials in manufacturer's original, unopened containers and packaging until application.
D. Store materials in clean, dry area indoors and out of direct sunlight.
E. Keep materials from freezing.
F. Protect materials during storage, handling, and application to prevent contamination or damage.

1.08 FIELD CONDITIONS

A. Do not install materials when air and surface temperatures are below 50 degrees F (10 degrees C) or above 90 degrees F (32 degrees C).
B. Do not install materials when rain, snow, or excessive moisture is expected during application or within 24 hours after application.

1.09 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.
B. Correct defective Work within a five year period after Date of Substantial Completion.
C. Provide five year manufacturer warranty for material and workmanship.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Decorative Cementitious Coatings:
   1. AVM Industries, Inc: www.avmindustries.com/#sle.
   2. BRICKFORM: www.brickform.com/#sle.
   3. Concrete Solutions by Rhino Linings: www.concretesolutions.com/#sle.
   4. Substitutions: See Section 01 6000 - Product Requirements.

2.02 DECORATIVE CEMENTITIOUS COATING SYSTEMS

A. Cementitious Textured Coating: Polymer-modified concrete consisting of cement and sand aggregate mixed with acrylic admixture.
   1. Application(s): All indicated exterior locations.

2. Application Method: Trowel.
3. Texture: Trowel knock down.

B. Cementitious Micro-Topping: Thin decorative polymer-modified concrete coating consisting of cement and sand aggregate mixed with water.

1. Application(s): All indicated interior locations.
2. Application Method: Trowel.
3. Texture: Smooth.
4. Color: Stain specified in Section 03 3511.
5. Confirm compatibility of products if supplied from multiple manufacturers.
6. Products:
    a. Substitutions: See Section 01 6000 - Product Requirements.

2.03 MATERIALS

A. Primer: Water-based epoxy as recommended by decorative cementitious coating manufacturer; compatible with substrate and coating.

B. Concrete Mix: Manufacturer's standard sand and Portland cement mix.

C. Acrylic Admixture: Manufacturer's recommended liquid polymer.

D. Integral Colorant: Dry powder mineral pigments for mixing into concrete coating.

E. Concrete Stain: Translucent penetrating compound for interior or exterior use, intended to be finished with a sealer.

1. Do not use hydrochloric acid products.
2. Application Method: Spray or brush.

F. Sealer: Suitable for interior and exterior application.

1. Composition: Acrylic, water-based.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine surfaces and areas to receive decorative cementitious coatings.

B. Verify that concrete sub-floor surfaces are ready for cementitious coating by testing for moisture and alkalinity; obtain instructions if test results are not within the following limits:

1. Moisture Vapor Emission: Maximum of 5.0 pounds (2.26 kg) per 1000 square feet (92.9 square meters) over a 24 hour test period, tested according to ASTM F1869.
2. Relative Humidity: Maximum of 75 percent, tested according to ASTM F2170.
3. Alkalinity: pH range of 5 to 9, tested according to ASTM F710.

C. Notify Architect of conditions that would adversely affect application or subsequent use.

D. Do not begin preparation or application until unacceptable conditions are corrected.

3.02 PREPARATION

A. Protect adjacent non-coated areas from drips, overflow, and overspray.

B. See Section 03 0100 for cleaning and resurfacing of existing concrete.

C. Profile concrete substrate to surface profile according to manufacturer's instructions.

3.03 INSTALLATION

A. Prepare joints and repair damaged or deteriorated concrete. Fill cracks, bugholes, spalls, and infill low areas according to coating manufacturer's instructions.

B. Mix and install coating according to with manufacturer's instructions.

C. Match approved mock-ups for color, texture, sealing and workmanship.

D. Add integral concrete pigment to concrete mixture where indicated. Mix according to pigment and coating manufacturers' instructions.

E. Protect recently placed materials from premature drying, excessive hot or cold temperatures and mechanical injury until fully cured.

F. Do not use curing compounds on decorative cementitious coatings; air cure according to manufacturer's instructions.

G. Ventilate interior spaces to remove excess moisture.

H. Cure decorative cementitious coating for a minimum of 24 hours before applying stain. Apply concrete stain according to manufacturer's instructions.

I. Apply sealer uniformly over entire surface and according to manufacturer's instructions.

3.04 PROTECTION

A. Do not allow traffic on finished surfaces for the following periods after application:

1. Foot Traffic: Minimum 24 hours.
2. Heavy Traffic: Minimum 72 hours.

B. Protect finished work from damage during construction and ensure that, except for normal weathering, work will be without damage or deterioration at time of Substantial Completion.

END OF SECTION

SECTION 09 9730
DECORATIVE CEMENTITIOUS COATINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Cementitious textured coating.

B. Cementitious micro-topping.

C. Coloring of decorative cementitious coatings.

1.02 RELATED REQUIREMENTS

A. Section 03 0100 - Maintenance of Concrete: Cleaning and resurfacing existing concrete.

B. Section 03 3000 - Cast-in-Place Concrete: Concrete mix design; bonding and chemical admixtures; mixing; placement; finishing of concrete surface to tolerance: floating, troweling, and similar operations; frequency and treatment of control joints.

C. Section 03 3511 - Concrete Floor Finishes: Colored coatings and stains.

D. Section 32 1313 - Concrete Paving: Concrete mix design; concrete placement; ambient conditions; finishing of concrete surface to tolerance: floating, troweling, and similar operations; frequency and treatment of control joints; expansion joint treatment.

1.03 REFERENCE STANDARDS

A. ASTM C979/C979M - Standard Specification for Pigments for Integrally Colored Concrete 2016.

B. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring 2017.

C. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride 2016a.

D. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes 2017.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Conduct a preinstallation meeting one week prior to start of work of this section; require attendance by all affected installers.

1. Review mock-ups, material sequence, preparation and application, cleaning, protection and coordination with other work.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Preparation instructions and recommendations.

2. Storage and handling requirements and recommendations.

3. Installation methods.

C. Shop Drawings: Indicate location of construction and control joints.

D. Samples: Submit two samples of coating , [8" x 8"] inch ([203 x 203] mm) in size, illustrating texture, color and sealing .

E. Pre-Installation Test Reports: Submit test results to Architect for evaluation.

F. Installer's Qualification Statement.

G. Testing Agency Qualification Statement.

H. Maintenance Data: Provide manufacturer's data on maintenance and renewal of applied finishes.

I. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing the work of this section with minimum five years documented experience.

1. Submit installer's list of completed decorative cementitious coating projects, including project name and location, name of Architect, and type and quantity of materials applied.

B. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of the type specified in this section.

1.07 MOCK-UP

A. Construct mock-up of decorative cementitious coating.

1. Use same materials and methods for use in the work.
2. Locate where directed.
3. Minimum Size: 4 by 4 feet (1220 mm by 1220 mm).

B. Obtain approval of mock-up by Architect before proceeding with work.

C. Mock-up may remain as part of the Work.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to site in manufacturer's original, unopened containers and packaging, with labels clearly identifying product name and manufacturer.

B. Store and handle materials according to manufacturer's instructions.

C. Keep materials in manufacturer's original, unopened containers and packaging until application.

D. Store materials in clean, dry area indoors and out of direct sunlight.

E. Keep materials from freezing.

F. Protect materials during storage, handling, and application to prevent contamination or damage.

1.09 FIELD CONDITIONS

A. Do not install materials when air and surface temperatures are below 50 degrees F (10 degrees C) or above 90 degrees F (32 degrees C).

B. Do not install materials when rain, snow, or excessive moisture is expected during application or within 24 hours after application.

1.10 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a five year period after Date of Substantial Completion.

C. Provide five year manufacturer warranty for material and workmanship.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Decorative Cementitious Coatings:

1. AVM Industries, Inc: www.avmindustries.com/#sle.
2. BRICKFORM: www.brickform.com/#sle.
3. Concrete Solutions by Rhino Linings: www.concretesolutions.com/#sle.
4. Substitutions: See Section 01 6000 - Product Requirements.

2.02 DECORATIVE CEMENTITIOUS COATING SYSTEMS

A. Cementitious Textured Coating: Polymer-modified concrete consisting of cement and sand aggregate mixed with acrylic admixture.
   1. Application(s): All indicated exterior locations.
   2. Application Method: Trowel.
   3. Texture: Trowel knock down.

B. Cementitious Micro-Topping: Thin decorative polymer-modified concrete coating consisting of cement and sand aggregate mixed with water.
   1. Application(s): All indicated interior locations.
   2. Application Method: Trowel.
   3. Texture: Smooth.
   4. Color: Stain specified in Section 03 3511.
   5. Confirm compatibility of products if supplied from multiple manufacturers.
   6. Products:
      a. Substitutions: See Section 01 6000 - Product Requirements.

2.03 MATERIALS

A. Primer: Water-based epoxy as recommended by decorative cementitious coating manufacturer; compatible with substrate and coating.

B. Concrete Mix: Manufacturer's standard sand and Portland cement mix.

C. Acrylic Admixture: Manufacturer's recommended liquid polymer.

D. Integral Colorant: Dry powder mineral pigments for mixing into concrete coating.

E. Concrete Stain: Translucent penetrating compound for interior or exterior use, intended to be finished with a sealer.
   1. Do not use hydrochloric acid products.
   2. Application Method: Spray or brush.

F. Sealer: Suitable for interior and exterior application.
   1. Composition: Acrylic, water-based.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine surfaces and areas to receive decorative cementitious coatings.

B. Verify that concrete sub-floor surfaces are ready for cementitious coating by testing for moisture and alkalinity; obtain instructions if test results are not within the following limits:
   1. Moisture Vapor Emission: Maximum of 5.0 pounds (2.26 kg) per 1000 square feet (92.9 square meters) over a 24 hour test period, tested according to ASTM F1869.

2. Relative Humidity: Maximum of 75 percent, tested according to ASTM F2170.
3. Alkalinity: pH range of 5 to 9, tested according to ASTM F710.

C. Notify Architect of conditions that would adversely affect application or subsequent use.

D. Do not begin preparation or application until unacceptable conditions are corrected.

3.02 PREPARATION

A. Protect adjacent non-coated areas from drips, overflow, and overspray.

B. See Section 03 0100 for cleaning and resurfacing of existing concrete.

C. Profile concrete substrate to surface profile according to manufacturer's instructions.

3.03 INSTALLATION

A. Prepare joints and repair damaged or deteriorated concrete. Fill cracks, bugholes, spalls, and infill low areas according to coating manufacturer's instructions.

B. Mix and install coating according to with manufacturer's instructions.

C. Match approved mock-ups for color, texture, sealing and workmanship.

D. Add integral concrete pigment to concrete mixture where indicated. Mix according to pigment and coating manufacturers' instructions.

E. Protect recently placed materials from premature drying, excessive hot or cold temperatures and mechanical injury until fully cured.

F. Do not use curing compounds on decorative cementitious coatings; air cure according to manufacturer's instructions.

G. Ventilate interior spaces to remove excess moisture.

H. Cure decorative cementitious coating for a minimum of 24 hours before applying stain. Apply concrete stain according to manufacturer's instructions.

I. Apply sealer uniformly over entire surface and according to manufacturer's instructions.

3.04 PROTECTION

A. Do not allow traffic on finished surfaces for the following periods after application:

1. Foot Traffic: Minimum 24 hours.
2. Heavy Traffic: Minimum 72 hours.

B. Protect finished work from damage during construction and ensure that, except for normal weathering, work will be without damage or deterioration at time of Substantial Completion.

END OF SECTION

SECTION 10 1101
VISUAL DISPLAY BOARDS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Chalkboards, Markerboards and Tackboards.

1.02 RELATED REQUIREMENTS

A. Section 06 1000 - Rough Carpentry: Blocking and supports.

B. Section 06 2000 - Finish Carpentry: Wood frame and chalkrails.

C. Section 09 2116 - Gypsum Board Assemblies: Concealed supports in metal stud walls.

D. Section 09 2216 - Non-Structural Metal Framing: Concealed supports in metal stud walls.

E. Section 09 9123 - Interior Painting: Finishing of wood frame and chalkrail.

F. Section 10 2239 - Folding Panel Partitions: Installation of visual display boards on operable partitions.

1.03 REFERENCE STANDARDS

A. ANSI A135.4 - American National Standard for Basic Hardboard 2012.

B. ANSI A208.1 - American National Standard for Particleboard 2009.

C. ASTM A424/A424M - Standard Specification for Steel, Sheet, for Porcelain Enameling 2018.

D. ASTM C208 - Standard Specification for Cellulosic Fiber Insulating Board 2012.

E. ASTM C1396/C1396M - Standard Specification for Gypsum Board 2017.

F. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

G. ASTM F793/F793M - Standard Classification of Wall Coverings by Use Characteristics 2015.

H. PS 1 - Structural Plywood 2009.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's data on chalkboard, markerboard, tackboard, tackboard surface covering, trim and accessories.

C. Shop Drawings: Indicate wall elevations, dimensions, joint locations , special anchor details.

D. Samples: Submit color charts for selection of color and texture of chalkboard, markerboard, tackboard, tackboard surface covering and trim.

E. Test Reports: Show compliance to specified surface burning characteristics requirements.

F. Manufacturer's Qualification Statement.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

1.06 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Provide five year warranty for chalkboard and markerboard to include warranty against discoloration due to cleaning, crazing or cracking and staining.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Visual Display Boards:

1. Claridge Products and Equipment, Inc; [____]: www.claridgeproducts.com/#sle.
2. MooreCo, Inc; [____]: www.moorecoinc.com/#sle.
3. Polyvision Corporation (Nelson Adams); [____]: www.polyvision.com/#sle.
4. Substitutions: See Section 01 6000 - Product Requirements.

2.02 VISUAL DISPLAY BOARDS

A. Markerboards: Porcelain enamel on steel, laminated to core.

1. Color: As selected from manufacturer's full range.
2. Steel Face Sheet Thickness: 24 gage, 0.0239 inch (0.61 mm).
3. Core: Particleboard, manufacturer's standard thickness, laminated to face sheet.
4. Backing: Aluminum foil, laminated to core.
5. Size: As indicated on drawings.
6. Frame Profile: As indicated on drawings
7. Accessories: Provide chalk tray and map rail.

B. Tackboards: [____].

1. Cork Thickness: 1/8 inch (3 mm).
2. Fabric: Vinyl coated fabric.
3. Backing: Hardboard, 1/4 inch (6 mm) thick, laminated to tack surface.
4. Surface Burning Characteristics: Flame spread index of 25, maximum, and smoke developed index of 450, maximum, when tested in accordance with ASTM E84.
5. Size: As indicated on drawings.
6. Frame: Extruded aluminum , with concealed fasteners.
7. Frame Profile: As indicated on drawings
8. Frame Finish: Anodized, natural.
9. Accessories: Provide map rail.

C. Combination Units and Units Made of More Than One Panel: Factory-assembled chalkboards, markerboards and tackboards in a single frame, of materials specified above.

1. Join panels of different construction with H-shaped extruded aluminum molding finished to match frame.
2. Configuration: As indicated on drawings.
3. Units Too Large to Ship Assembled: Fully assembled in factory, then disassembled for shipping.

2.03 MATERIALS

A. Porcelain Enameled Steel Sheet: ASTM A424/A424M, Type I, Commercial Steel, with fired-on vitreous finish.

B. Hardboard for Chalk Surface: ANSI A135.4 Tempered type.

C. Vinyl Coated Fabric: ASTM F793 Category VI.

D. Burlap: Tightly woven, flame retardant treated.

E. Plywood: PS 1 Grade C-D , softwood.

F. Hardboard for Cores: ANSI A135.4, Class 1 - Tempered, S2S (smooth two sides).

G. Particleboard: ANSI A208.1; wood chips, set with waterproof resin binder, sanded faces.

H. Gypsum Board: ASTM C1396/C1396M, paper/foil faced, plain type.

I. Fiber Board: ASTM C208, cellulosic fiber board.

J. Foil Backing: Aluminum foil sheet, 0.005 inch thick (0.13 mm thick).

K. Aluminum Sheet Backing: 27 gage, 0.014 inch (0.36 mm) thick.

L. Steel Sheet Backing: 28 gage, 0.0149 inch (0.38 mm), galvanized.

M. Adhesives: Type used by manufacturer.

2.04 ACCESSORIES

A. Wood Frames: See Section 062000.

B. Map Rail: Extruded aluminum, manufacturer's standard profile, with cork insert and runners for accessories; 1 inch wide overall (; 25 mm wide overall) , full width of frame.

C. Map Supports: Formed aluminum sliding hooks and roller brackets to fit map rail.

D. Temporary Protective Cover: Sheet polyethylene, 8 mil (0.2 mm) thick.

E. Flag Holders: Cast aluminum bored to receive 1 inch (25 mm) diameter flag staff, bracketed to fit top rail of board.

F. Chalk Tray: Wood; species and finish to match frame, style as indicated on drawings.

G. Mounting Brackets: Concealed.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that internal wall blocking is ready to receive work and positioning dimensions are as indicated on shop drawings.

C. Verify flat wall surface for frameless adhesive-applied boards.

3.02 INSTALLATION

A. Install boards in accordance with manufacturer's instructions.

B. Secure units level and plumb.

C. Butt Joints: Install with tight hairline joints.

D. Carefully cut holes in boards for thermostats.

3.03 CLEANING

A. Clean board surfaces in accordance with manufacturer's instructions.

B. Cover with protective cover, taped to frame.

C. Remove temporary protective cover at Date of Substantial Completion.

3.04 SCHEDULE

A. Classroom 312: Two 48 by 96 inch (1200 mm by 2400 mm) chalkboards with chalkrails, two map hooks and one flag holder on the north wall; one 48 by 96 inch (1200 mm by 2400 mm) chalkboard without chalkrail on the east wall; one 48 by 96 inch (1200 mm by 2400 mm) tackboard on the south wall.

B. Classroom 313: Same as Classroom 312 except no tackboard.

C. Lecture 314: One 48 by 96 inch (1200 mm by 2400 mm) markerboard with chalkrail, one 48 by 96 inch (1200 mm by 2400 mm) markerboard without rail on the east wall.

END OF SECTION

SECTION 10 1124
TACKABLE WALL SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Site fabricated, fabric-covered tackable wall system.

B. Accessories as required for complete installation.

C. Maintenance.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 09 7200 - Wall Coverings: Fabric wall coverings for adhesive application to solid wall surfaces.

C. Section 10 1101 - Visual Display Boards: Prefabricated, framed tackboards and markerboards.

1.03 REFERENCE STANDARDS

A. ANSI A208.2 - American National Standard for Medium Density Fiberboard for Interior Use 2009.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.
4. Specimen warranty.

C. Shop Drawings: Elevations indicating proposed locations of fabric seams and details indicating typical transitions to other finish surfaces.

D. Verification Samples:

1. Actual samples of all track profiles to be employed, including transitions between dissimilar profiles.
2. Tackable core backing material, minimum 12 inches (300 mm) square.
3. Accessory package.

E. Test Reports: Certified test data from an independent test agency verifying that wall systems meet specified requirements for fire performance.

F. Maintenance Contract.

G. Warranty: Submit manufacturer's warranty and ensure that forms have been completed in Owner 's name and registered with manufacturer.

H. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Provide components of tackable wall systems by single manufacturer, including recommended primers, adhesives, and sealants.

B. Installer Qualifications: Firm specializing in site-fabricated wall systems, with not less than five years of documented experience in installing wall systems of the type specified, and approved by the

manufacturer.

C. Mock-Up: Provide a mock-up for evaluation of application workmanship.

1. Finish areas designated by Architect .
2. Do not proceed with remaining work until workmanship and overall appearance are approved by Architect .
3. Refinish mock-up area as required to produce acceptable workmanship.
4. Approved mock-up may remain as part of the completed Work.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Protect fabric, core, and track from excessive moisture in shipment, storage, and handling. Do not deliver materials to project until wet work such as concrete and plaster has been completed.

B. Store products in manufacturer's unopened packaging until ready for installation.

C. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.

1.07 FIELD CONDITIONS

A. Do not begin installation until interior conditions have reached temperature and humidity that will be maintained during occupancy. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.08 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Tackable Wall Systems:

1. Fabricmate Systems: www.fabricmate.com/#sle.
2. FabriTRAK Systems, Inc; [_____]: www.fabritrak.com/#sle.
3. Fabric Wall; [_____]: www.fabric-wall.com/#sle.
4. Substitutions: See Section 01 6000 - Product Requirements.

2.02 TACKABLE WALL SYSTEM

A. Tackable Wall System: Site-installed stretched fabric over tackable core and continuous perimeter and intermediate mounting extrusions applied directly to wall surface; designed to permit removal and replacement of fabric in individual panels without affecting adjacent panels.

1. Surface Burning Characteristics: Flame Spread Index of 25, maximum; Smoke Developed Index of 450, maximum; when whole system is tested in accordance with ASTM E84 using mounting specified in ASTM E2573 for stretched systems.
2. Prefabricated framed panels are not acceptable.
3. Fabric must be installed over tackable substrate without adhesives, tapes, or fasteners.
4. Seams in fabric are not permitted; adjust the layout of frames to suit fabric width; obtain approval of Architect.

B. Verify that all adhesives and sealants employed in installation of tackable wall systems are low-emission types, with low VOC ratings.

2.03 MATERIALS

A. Frame: Extruded polymer track system with serrated jaws of sufficient strength to hold fabric in place after repeated applications.

1. Track Size: 3/8 inch (9.5 mm) protrusion from wall with minimum 1 inch (25 mm) base leg.
2. Track Shape: Square at perimeter; square at intermediate abutting joints.
3. Wall Thickness of Track: Minimum 0.062 inch (1.575 mm).
4. Color: As selected from manufacturer's standards.

B. Core: Same thickness as track.

1. Material: Multi-density fiberglass board, consisting of a facing sheet of 12 pounds per cubic foot (192 kg/cu m) density board laminated over 3 pounds per cubic foot (48 kg/cu m) density board.
2. Material: Medium density wood fiberboard, 14 to 16 pcf (224 to 256 kg/cu m) density, fire-retardant, complying with ANSI A208.2.

C. Fabric: Heavy-duty fire-retardant commercial fabric, as provided by manufacturer of tackable wall system; color, pattern, and texture as selected from manufacturer's standards.

D. Fasteners: As recommended by manufacturer of tackable wall system for project conditions.

E. Adhesives: Low VOC or water-based, approved by wall system manufacturer, and complying with requirements of Section 01 6116.

PART 3 EXECUTION

3.01 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. Verify that all casework, markerboards, door and window jambs, finished ceiling, and other finished items abutting tackable wall systems have been installed.

C. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.02 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

C. Remove wall plates and other obstacles, and prepare substrates to receive core material in accordance with manufacturer's instructions.

3.03 INSTALLATION

A. Install tackable wall systems at locations indicated, complying with manufacturer's instructions.

B. Track: Install perimeter and intermediate track using fasteners appropriate to substrate, securing firmly to prevent track separation from substrate.

1. Follow contours of wall and scribe to adjoining work at borders, penetrations, and imperfections.
2. Install track around openings and penetrations.
3. Allow for spacing to accommodate insertion of installation tool.

C. Core Material: Cut core material to fit snugly within frame perimeter. Apply manufacturer's recommended, non-toxic, low-vapor, clay-base adhesive, and press core material into place, maintaining constant plane.

Staple core material to prevent air gaps and to maintain secure contact for full adhesion.

1. At fixtures mounted within area of tackable wall system, install MDF for backing and to maintain fixture surface flush with tackable panels.

D. Fabric: Stretch fabric over core material, locking fabric edges into track's serrated jaws using manufacturer's recommended tool. Keep fabric weave plumb, level, and true, in proper relation to building lines, without ripples, waviness, hourglass, or other deleterious effects.

1. Seams are not permitted.
2. In installing fabric, do not employ adhesives or mechanical fasteners of any type, assuring that the fabric is free-floating and in firm contact with core material.
3. Tension fabric sufficiently to prevent sagging under anticipated changes in temperature and humidity.

3.04 CLEANING

A. Clean exposed surfaces of tackable wall system, complying with manufacturer's instructions for cleaning and repair of minor finish damage. Remove and replace work that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

3.05 PROTECTION

A. Protect installed products until completion of project, using methods that will ensure that the finished work will be without damage or deterioration at Date of Substantial Completion.

3.06 MAINTENANCE

A. See Section 01 7000 - Execution and Closeout Requirements, for additional requirements relating to maintenance service.

B. Replace damaged, soiled, or vandalized tackable wall panels for up to three years from Date of Substantial Completion.

C. Replacement of up to 10 percent of the originally installed panels shall be at no additional cost to Owner .

D. Replacement of defective panels covered under warranty provisions is not included in this maintenance service.

END OF SECTION

SECTION 10 1400
SIGNAGE

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Cash allowance for signs.

B. Room and door signs.

C. Interior directional and informational signs.

D. Luminous egress path marking and other "glow-in-the-dark" signs.

E. Emergency evacuation maps.

F. Building identification signs.

G. Plaque.

H. Traffic signs.

1.02 RELATED REQUIREMENTS

A. Section 05 5100 - Metal Stairs: Photoluminescent stair nosings.

B. Section 05 5213 - Pipe and Tube Railings: Photoluminescent handrail strips.

C. Section 22 0553 - Identification for Plumbing Piping and Equipment.

D. Section 26 0553 - Identification for Electrical Systems.

E. Section 26 5100 - Interior Lighting: Exit signs required by code.

1.03 REFERENCE STANDARDS

A. 36 CFR 1191 - Americans with Disabilities Act (ADA) Accessibility Guidelines for Buildings and Facilities; Architectural Barriers Act (ABA) Accessibility Guidelines current edition.

B. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design 2010.

C. ICC A117.1 - Accessible and Usable Buildings and Facilities 2017.

D. ASTM E2072 - Standard Specification for Photoluminescent (Phosphorescent) Safety Markings 2014.

E. UL 1994 - Luminous Egress Path Marking Systems Current Edition, Including All Revisions.

1.04 SUBMITTALS

A. See Section 01 3300 – Submittal Procedures, for submittal procedures.

B. Product Data: Manufacturer's printed product literature for each type of sign, indicating sign styles, font, foreground and background colors, locations, overall dimensions of each sign.

C. Signage Schedule: Provide information sufficient to completely define each sign for fabrication, including room number, room name, other text to be applied, sign and letter sizes, fonts, and colors.

1. When room numbers to appear on signs differ from those on drawings, include the drawing room number on schedule.

2. When content of signs is indicated to be determined later, request such information from Owner through Architect at least 2 months prior to start of fabrication; upon request, submit preliminary schedule.

3. Submit for approval by Owner through Architect prior to fabrication.

D. Samples: Submit two samples of each type of sign, of size similar to that required for project, illustrating sign style, font, and method of attachment.

E. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. Curved Sign Media Suction Cups: One for each 100 signs; for removing media.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years of documented experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Package signs as required to prevent damage before installation.

B. Package room and door signs in sequential order of installation, labeled by floor or building.

C. Store tape adhesive at normal room temperature.

1.07 FIELD CONDITIONS

A. Do not install tape adhesive when ambient temperature is lower than recommended by manufacturer.

B. Maintain this minimum temperature during and after installation of signs.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Flat Signs:

1. Best Sign Systems, Inc: www.bestsigns.com.
2. Cosco Industries (ADA signs); ADA Series 1: www.coscoarchitecturalsigns.com.

3. Inpro www.inprocorp.com.
4. Substitutions: See Section 01 2500 – Substitution Procedures.

D. Plaques:

1. Cosco Industries; Cast Aluminum: www.coscoarchitecturalsigns.com.
2. FASTSIGNS; [____]: www.fastsigns.com.
3. [_____].
4. Substitutions: See Section 01 2500 – Substitution Procedures.

E. Photoluminescent Marking and Signage:

1. Ecoglo, Inc; [___]: www.us.ecoglo.com.
2. Safe-T-Nose, LLC; [_____]: www.safetnose.com.
3. [_____].

2.02 SIGNAGE APPLICATIONS

A. Accessibility Compliance: Signs are required to comply with ADA Standards and ICC A117.1, unless otherwise indicated; in the event of conflicting requirements, comply with the most comprehensive and specific requirements.

B. Room and Door Signs: Provide a sign for every doorway, whether it has a door or not, not including corridors, lobbies, and similar open areas.

1. Sign Type: Flat signs with engraved panel media as specified.
2. Provide "tactile" signage, with letters raised minimum 1/32 inch (0.8 mm) and Grade II braille.
3. Character Height: 1 inch (25 mm).
4. Sign Height: 2 inches (50 mm), unless otherwise indicated.
5. Office Doors: Identify with room numbers to be determined later, not the numbers indicated on drawings; in addition, provide "window" section for replaceable occupant name.
6. Conference and Meeting Rooms: Identify with room numbers to be determined later, not the numbers indicated on drawings; in addition, provide "window" section with sliding "In Use/Vacant" indicator.
7. Service Rooms: Identify with room names and numbers to be determined later, not those indicated on drawings.
8. Rest Rooms: Identify with pictograms, the names "MEN" and "WOMEN", room numbers to be determined later, and braille.

C. Interior Directional and Informational Signs:

1. Sign Type: Curved signs with engraved panel media as specified.
2. Sizes: As indicated on drawings.
3. Wording of signs is scheduled on drawings.
4. Where suspended, ceiling mounted, or projecting from wall signs are indicated, provide two-sided signs with same information on both sides.

D. Luminous Egress Path Marking and Other "Glow-in-the-Dark" Signs: Photoluminescent media.

1. Provide luminous egress path marking as required by local authority having jurisdiction.
2. Provide one numbered seat marker for each seat in auditorium and one numbered row marker for each row, each side of aisles.

E. Emergency Evacuation Maps:

1. Allow for one map per elevator lobby.
2. Map content to be provided by Owner.

F. Building Identification Signs:

1. Use individual metal letters.
2. Mount on outside wall in location indicated on drawings.

G. Other Dimensional Letter Signs: Wall-mounted.

H. Plaque: See Allowance for details.

I. Traffic Signs: To match campus standards; locate where indicated on drawings.

2.03 SIGN TYPES

A. Flat Signs: Signage media without frame.

1. Edges: Square.

2. Corners: Square.
3. Wall Mounting of One-Sided Signs: Tape adhesive.
4. Wall and Ceiling Mounting of Two-Sided Signs: Aluminum wall bracket, powder coated, color selected from manufacturer's standard colors, attached with screws in predrilled mounting holes, set in clear silicone sealant.
5. Suspended Mounting: Stainless steel suspension cables, cable clamps, and ceiling fastener suitable for attachment to ceiling construction indicated.

B. Radius / Curved Signs: One-piece, curved extruded aluminum media holder securing flat, flexible sign media by curved lip on two sides; other two sides closed by end caps; concealed mounting attachment.
1. Sizes: As indicated on drawings.
2. Finish: Natural (clear) anodized.
3. Sign Orientation: Curved in horizontal section.
4. Wall Mounting of One-Sided Signs: Mechanical anchorage, with predrilled holes, and set in clear silicone sealant.
5. Wall and Ceiling Mounting of Two-Sided Signs: Aluminum wall bracket, powder coated, color selected from manufacturer's standard colors, attached with screws in predrilled mounting holes, set in clear silicone sealant.
6. Suspended Mounting: Stainless steel suspension cables, cable clamps, and ceiling fastener suitable for attachment to ceiling construction indicated.

C. Color and Font: Unless otherwise indicated:
1. Character Font: Helvetica, Arial, or other sans serif font.
2. Character Case: Upper case only.
3. Background Color: Clear.
4. Character Color: Contrasting color.

2.04 TACTILE SIGNAGE MEDIA

A. Engraved Panels: Laminated colored plastic; engraved through face to expose core as background color:
1. Total Thickness: 1/16 inch (1.6 mm).

2.05 PLAQUES

A. Metal Plaques:
1. Metal: Aluminum casting.
2. Metal Sheet Thickness: 1/8 inch (3 mm), minimum.

2.06 DIMENSIONAL LETTERS

A. Metal Letters:
1. Mounting: Tape adhesive.

B. Plastic Letters:
1. Mounting: Tape adhesive.

2.07 PHOTOLUMINESCENT MEDIA

A. Extruded Aluminum Guidance Strips:
1. Complies with UL 1994 and ASTM E2072.
2. Mounting: As recommended by manufacturer for material selected.

B. Sheet Aluminum Guidance Strips:

1. Complies with UL 1994 and ASTM E2072.
2. Mounting: As recommended by manufacturer for material selected.

C. High-Impact Plastic Guidance Strips:

1. Complies with ASTM E2072.
2. Width: 1 inch (26 mm).
3. Mounting: As recommended by manufacturer for material selected.

D. Polyester Tape Guidance Strips:

1. Complies with UL 1994 and ASTM E2072.
2. Width: 1/2 inch (12.5 mm).

E. Obstruction Strips: Black/luminous stripe marking on sheet aluminum.

1. Complies with UL 1994 and ASTM E2072.
2. Width: 1/2 inch (12.5 mm).
3. Mounting: As recommended by manufacturer for material selected.

F. Photoluminescent Stair Nosings: Factory fabricated aluminum extrusion with replaceable embedded photoluminescent and slip-resistant strip.

1. Complies with UL 1994 and ASTM E2072.
2. Finish: Anodized.
3. Mounting: Provide manufacturer approved field applied adhesive, factory applied adhesive and mechanical fasteners.

2.08 ACCESSORIES

A. Concealed Screws: Stainless steel, galvanized steel, chrome plated, or other non-corroding metal.

B. Tape Adhesive: Double sided tape, permanent adhesive.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that substrate surfaces are ready to receive work.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install neatly, with horizontal edges level.

C. Locate signs and mount at heights indicated on drawings and in accordance with ADA Standards and ICC A117.1.

D. Protect from damage until Substantial Completion; repair or replace damaged items.

3.03 SCHEDULE

A. The following Schedule of Signage indicates description, quantity and type of signage required.

B. Sign Type: A

1. Description: Acrylic sign and backplate with tactile room name, number and braille, with 2" high x 9" wide window for printed paper insert, one standard background and contrasting copy color.
2. Size: 6" high x 9" wide
3. Quantity: 8

4. Locations: Offices

C. Sign Type: B

1. Description: Acrylic plaque, with backplate with tactile room name, number and braille
2. Size: 6" high x 9" wide
3. Quantity: 70
4. Locations: Classrooms, Instructional Rooms, Staff Rooms

D. Sign Type: C

1. Description: Acrylic plaque, with backplate with tactile room name, number and braille
2. Size: 6" high x 6" wide.
3. Quantity: 60
4. Locations: Secondary Room Signs, Mechanical, Custodial

E. Sign Type: D

1. Description: Same as Type B but with sliding “In-Use”/ “Vacant” window
2. Size: 6" high x 9" wide
3. Quantity: 2
4. Locations: Conference Rooms

F. Sign Type: E1

1. Description: Either Men or Women accessible toilet room, with accessibility pictogram and male or female pictogram
2. Size: 9" high x 6" wide
3. Quantity: 6
4. Locations: Male or Female Toilet Rooms

G. Sign Type E2

1. Description: accessible gender-neutral toilet room, with accessibility pictogram only
2. Size: 9" high x 6" wide
3. Quantity: 45
4. Locations: Unisex or Gender-neutral Toilet Rooms

H. Sign Type: F

1. Description: Stair Entrance with stair pictogram
2. Size: 9" high x 9" wide
3. Quantity: 10
4. Locations: Stairs

I. Sign Type: G

1. Description: In Case of Fire Do Not Use Elevator Use Stair with pictogram
2. Size: 9" high x 9" wide
3. Quantity: 2
4. Locations: Elevator

J. Sign Type: H

1. Description: Occupancy Capacity Signs
2. Size: 3" high x 9" wide.
3. Quantity: 6
4. Locations: Provide one occupancy capacity sign at mounted at the main entrance to each assembly space below the room name and number. Verify location with the Architect.

K. Sign Type: J

1. Description: All visitors must report to the administration office prior to entry to building.
2. Size: 8" high x 12" wide.
3. Quantity: 10
4. Locations: All exterior doors of building

L. Sign Type: K

1. Description: Digitally produced and laminated sign with building foot print, indicating major areas of the building and direction arrows.
2. Size: 22" high x 28" wide.
3. Quantity: 8
4. Locations: to be determined by the Architect and Owner
5. Framed sign equal to Display-World sign frame SEO-5107. Wall hung, one sided, with rounded corners, silver in color. Display-World (800)733-3545

M. Sign Type: L

1. Description: Tactile Exit Signs
2. 9” high x 9” wide
3. Quantity: 50
4. Locations: Provide one tactile exit sign mounted on the wall adjacent to each door to an egress, stairwell, exit passage and exit discharge.

N. Sign Type: M

1. Description: Fire Evacuation with Floor Plan
2. Size: 11" high x 11" wide sleeve to include 8-1/2" x 11" paper insert.
3. Quantity: 57
4. Locations: Classrooms, Teaching Areas, Assembly Spaces

END OF SECTION

SECTION 10 1400
SIGNAGE

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Cash allowance for signs.

B. Room and door signs.

C. Interior directional and informational signs.

D. Luminous egress path marking and other "glow-in-the-dark" signs.

E. Emergency evacuation maps.

F. Building identification signs.

G. Plaque.

H. Traffic signs.

1.02 RELATED REQUIREMENTS

A. Section 05 5100 - Metal Stairs: Photoluminescent stair nosings.

B. Section 05 5213 - Pipe and Tube Railings: Photoluminescent handrail strips.

C. Section 22 0553 - Identification for Plumbing Piping and Equipment.

D. Section 26 0553 - Identification for Electrical Systems.

E. Section 26 5100 - Interior Lighting: Exit signs required by code.

1.03 REFERENCE STANDARDS

A. 36 CFR 1191 - Americans with Disabilities Act (ADA) Accessibility Guidelines for Buildings and Facilities; Architectural Barriers Act (ABA) Accessibility Guidelines current edition.

B. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design 2010.

C. ICC A117.1 - Accessible and Usable Buildings and Facilities 2017.

D. ASTM E2072 - Standard Specification for Photoluminescent (Phosphorescent) Safety Markings 2014.

E. UL 1994 - Luminous Egress Path Marking Systems Current Edition, Including All Revisions.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's printed product literature for each type of sign, indicating sign styles, font, foreground and background colors, locations, overall dimensions of each sign.

C. Signage Schedule: Provide information sufficient to completely define each sign for fabrication, including room number, room name, other text to be applied, sign and letter sizes, fonts, and colors.

1. When room numbers to appear on signs differ from those on drawings, include the drawing room number on schedule.

2. When content of signs is indicated to be determined later, request such information from Owner through Architect at least 2 months prior to start of fabrication; upon request, submit preliminary schedule.

3. Submit for approval by Owner through Architect prior to fabrication.

D. Samples: Submit two samples of each type of sign, of size similar to that required for project, illustrating sign style, font, and method of attachment.

E. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. Curved Sign Media Suction Cups: One for each 100 signs; for removing media.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years of documented experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Package signs as required to prevent damage before installation.

B. Package room and door signs in sequential order of installation, labeled by floor or building.

C. Store tape adhesive at normal room temperature.

1.07 FIELD CONDITIONS

A. Do not install tape adhesive when ambient temperature is lower than recommended by manufacturer.

B. Maintain this minimum temperature during and after installation of signs.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Flat Signs:

1. Best Sign Systems, Inc: www.bestsigns.com/#sle.
2. Cosco Industries (ADA signs); ADA Series 1: www.coscoarchitecturalsigns.com/#sle.
3. Cosco Industries (non-ADA signs); Changeable Message Signs: www.coscoarchitecturalsigns.com/#sle.
4. FASTSIGNS: www.fastsigns.com/#sle.
5. Substitutions: See Section 01 6000 - Product Requirements.

B. Curved Signs:

1. FASTSIGNS: www.fastsigns.com/#sle.
2. Vista System, www.vistasystem.com/#sle.
3. Substitutions: See Section 01 6000 - Product Requirements.

C. Dimensional Letter Signs:

1. Cosco Industries; Cast Aluminum: www.coscoarchitecturalsigns.com/#sle.
2. FASTSIGNS: www.fastsigns.com/#sle.
3. Inpro www.inprocorp.com/#sle.
4. Substitutions: See Section 01 6000 - Product Requirements.

D. Plaques:

1. Cosco Industries; Cast Aluminum: www.coscoarchitecturalsigns.com/#sle.
2. FASTSIGNS; [_____]: www.fastsigns.com/#sle.
3. [_____].
4. Substitutions: See Section 01 6000 - Product Requirements.

E. Photoluminescent Marking and Signage:

1. Ecoglo, Inc; [____]: www.us.ecoglo.com/#sle.
2. Safe-T-Nose, LLC; [_____]: www.safetnose.com/#sle.
3. [_____].

2.02 SIGNAGE APPLICATIONS

A. Accessibility Compliance: Signs are required to comply with ADA Standards and ICC A117.1, unless otherwise indicated; in the event of conflicting requirements, comply with the most comprehensive and specific requirements.

B. Room and Door Signs: Provide a sign for every doorway, whether it has a door or not, not including corridors, lobbies, and similar open areas.

1. Sign Type: Flat signs with engraved panel media as specified.
2. Provide "tactile" signage, with letters raised minimum 1/32 inch (0.8 mm) and Grade II braille.
3. Character Height: 1 inch (25 mm).
4. Sign Height: 2 inches (50 mm), unless otherwise indicated.
5. Office Doors: Identify with room numbers to be determined later, not the numbers indicated on drawings; in addition, provide "window" section for replaceable occupant name.
6. Conference and Meeting Rooms: Identify with room numbers to be determined later, not the numbers indicated on drawings; in addition, provide "window" section with sliding "In Use/Vacant" indicator.
7. Service Rooms: Identify with room names and numbers to be determined later, not those indicated on drawings.
8. Rest Rooms: Identify with pictograms, the names "MEN" and "WOMEN", room numbers to be determined later, and braille.

C. Interior Directional and Informational Signs:

1. Sign Type: Curved signs with engraved panel media as specified.
2. Sizes: As indicated on drawings.
3. Wording of signs is scheduled on drawings.
4. Where suspended, ceiling mounted, or projecting from wall signs are indicated, provide two-sided signs with same information on both sides.

D. Luminous Egress Path Marking and Other "Glow-in-the-Dark" Signs: Photoluminescent media.

1. Provide luminous egress path marking as required by local authority having jurisdiction.
2. Provide one numbered seat marker for each seat in auditorium and one numbered row marker for each row, each side of aisles.

E. Emergency Evacuation Maps:

1. Allow for one map per elevator lobby.
2. Map content to be provided by Owner .

F. Recognition/Donor Panels: Engraved panel media; individual name signs attached with magnetic tape to fixed panel.

1. Dimensions and Number of Name Signs: As indicated on drawings.

2. Provide all name signs whether engraved or not, for uniform overall appearance.
3. Color: Color as selected.

G. Building Identification Signs:
1. Use individual metal letters.
2. Mount on outside wall in location indicated on drawings.

H. Other Dimensional Letter Signs: Wall-mounted.

I. Plaque: See Allowance for details.

J. Traffic Signs: To match campus standards; locate where indicated on drawings.

2.03 SIGN TYPES

A. Flat Signs: Signage media without frame.
1. Edges: Square.
2. Corners: Square.
3. Wall Mounting of One-Sided Signs: Tape adhesive.
4. Wall and Ceiling Mounting of Two-Sided Signs: Aluminum wall bracket, powder coated, color selected from manufacturer's standard colors, attached with screws in predrilled mounting holes, set in clear silicone sealant.
5. Suspended Mounting: Stainless steel suspension cables, cable clamps, and ceiling fastener suitable for attachment to ceiling construction indicated.

B. Radius / Curved Signs: One-piece, curved extruded aluminum media holder securing flat, flexible sign media by curved lip on two sides; other two sides closed by end caps; concealed mounting attachment.
1. Sizes: As indicated on drawings.
2. Finish: Natural (clear) anodized.
3. Sign Orientation: Curved in horizontal section.
4. Wall Mounting of One-Sided Signs: Mechanical anchorage, with predrilled holes, and set in clear silicone sealant.
5. Wall and Ceiling Mounting of Two-Sided Signs: Aluminum wall bracket, powder coated, color selected from manufacturer's standard colors, attached with screws in predrilled mounting holes, set in clear silicone sealant.
6. Suspended Mounting: Stainless steel suspension cables, cable clamps, and ceiling fastener suitable for attachment to ceiling construction indicated.

C. Color and Font: Unless otherwise indicated:
1. Character Font: Helvetica, Arial, or other sans serif font.
2. Character Case: Upper case only.
3. Background Color: Clear.
4. Character Color: Contrasting color.

2.04 TACTILE SIGNAGE MEDIA

A. Engraved Panels: Laminated colored plastic; engraved through face to expose core as background color:
1. Total Thickness: 1/16 inch (1.6 mm).

2.05 NON-TACTILE SIGNAGE MEDIA

2.06 PLAQUES

A. Metal Plaques:

1. Metal: Aluminum casting.
2. Metal Sheet Thickness: 1/8 inch (3 mm), minimum.

2.07 DIMENSIONAL LETTERS

A. Metal Letters:

1. Mounting: Tape adhesive.

B. Plastic Letters:

1. Mounting: Tape adhesive.

2.08 PHOTOLUMINESCENT MEDIA

A. Extruded Aluminum Guidance Strips:

1. Complies with UL 1994 and ASTM E2072.
2. Mounting: As recommended by manufacturer for material selected.

B. Sheet Aluminum Guidance Strips:

1. Complies with UL 1994 and ASTM E2072.
2. Mounting: As recommended by manufacturer for material selected.

C. High-Impact Plastic Guidance Strips:

1. Complies with ASTM E2072.
2. Width: 1 inch (26 mm).
3. Mounting: As recommended by manufacturer for material selected.

D. Polyester Tape Guidance Strips:

1. Complies with UL 1994 and ASTM E2072.
2. Width: 1/2 inch (12.5 mm).

E. Obstruction Strips: Black/luminous stripe marking on sheet aluminum.

1. Complies with UL 1994 and ASTM E2072.
2. Width: 1/2 inch (12.5 mm).
3. Mounting: As recommended by manufacturer for material selected.

F. Photoluminescent Stair Nosings: Factory fabricated aluminum extrusion with replaceable embedded photoluminescent and slip-resistant strip.

1. Complies with UL 1994 and ASTM E2072.
2. Finish: Anodized.
3. Mounting: Provide manufacturer approved field applied adhesive, factory applied adhesive and mechanical fasteners.

2.09 ACCESSORIES

A. Concealed Screws: Stainless steel, galvanized steel, chrome plated, or other non-corroding metal.

B. Tape Adhesive: Double sided tape, permanent adhesive.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that substrate surfaces are ready to receive work.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install neatly, with horizontal edges level.

C. Locate signs and mount at heights indicated on drawings and in accordance with ADA Standards and ICC A117.1.

D. Protect from damage until Substantial Completion; repair or replace damaged items.

SECTION 10 1500
VIDEO DISPLAY SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Panelized LED video display systems.

1.02 RELATED REQUIREMENTS

A. Section 05 5000 - Metal Fabrications: Support structure.

B. Section 26 0526 - Grounding and Bonding for Electrical Systems.

C. Section 26 0533.16 - Boxes for Electrical Systems.

D. Section 26 4113 - Lightning Protection for Structures.

1.03 REFERENCE STANDARDS

A. ANSI/Infocomm 10 - Audiovisual Systems Performance Verification 2013.

B. UL 879 - Electric Sign Components Current Edition, Including All Revisions.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's data sheets on panelized LED display systems including recommendations for preparation, storage and handling, and installation.

C. Shop Drawings: Indicate cable routing, connections between equipment, anchor and support details, and adjacent construction.

D. Manufacturer's Certificates: Certify products meet or exceed specified requirements.

E. Project Record Documents: Provide quantities, type, and location for components, cabling and accessories.

F. System Setting Backup: Provide an electronic file of all system settings.

G. Security Items:

1. Provide one set of keys for each locked equipment enclosure.

2. Provide passwords to access control functions for hardware and software user interfaces.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years of documented experience.

B. Authorized Manufacturer Representative: System shall be configured and commissioned by an authorized manufacturer representative.

C. Installer Qualifications: Company specializing in performing the work of this section with minimum [____] years of experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store products in compliance with manufacturer instructions.

1.07 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Provide two-year manufacturer warranty for replacement.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Barco, Inc: www.barco.com/#sle.

B. Epson, www.epson.com

C. LG Electronics: www.lg.com/us/business/#sle.

D. SMART Technologies: www.smarttech.com

E. Substitutions: See Section 01 6000 - Product Requirements.

2.02 PANELIZED LED VIDEO DISPLAY

A. Performance Requirements:

1. Comply with performance standards based on tests conducted in accordance with ANSI/Infocomm 10.
2. Provide products that are listed and labeled as complying with UL 879, where applicable.

B. System Type: [_____].

1. Pixel Pitch: 9.5 mm
2. Refresh Rate: [_____] [_____].
3. Horizontal Viewing Angle: [_____].
4. Vertical Viewing Angle: [_____].
5. Brightness: 1000 Nits [_____]
6. Mount Type: Free Standing/Self Supporting.
7. Location: Indoor and Outdoor.
8. Total Height: [_____] ft ([_____] m).

2.03 CONTROLS

A. Interface Unit:

1. With the following abilities; scale media, rotate media, adjust brightness, loop output, input selection and [_____].
2. Input source supports DVI, HDMI, PC, VGA, S-Video and [_____].
3. Output to Cat5.
4. Working Voltage: 120 VAC / 240 VAC at 60Hz.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that substrates and support structure is in place and properly prepared.

B. Verify that required power and data sources are provided.

C. Verify that space is available for centrally located components.

D. Notify Architect of unsatisfactory preparation before proceeding.

3.02 PREPARATION

A. Prepare substrates using the methods recommended by the manufacturer for achieving the best result under the project conditions.

B. Do not proceed with installation until support structure and substrates have been prepared using the methods recommended by the manufacturer and deviations from manufacturer's recommended tolerances are corrected. Commencement of installation constitutes acceptance of conditions.

3.03 INSTALLATION

A. Install in accordance with manufacturer's instructions .

B. Install message center and signs level and plumb with fasteners reccommended by the manufacturer.

C. Custom Mounting: Coordinate with support structure specified in 05 5000 and indicated on drawings for mounting and support.

D. Record any necessary changes to the system design.

3.04 CLOSEOUT ACTIVITIES

A. See Section 01 7800 - Closeout Submittals, for closeout submittals.

B. See Section 01 7900 - Demonstration and Training, for additional requirements.

C. Demonstrate proper operation and maintenance of equipment to Owner's designated representative.

D. Review service and support contacts.

3.05 PROTECTION

A. Protect installed products from subsequent construction operations.

END OF SECTION

SECTION 10 2113.13
METAL TOILET COMPARTMENTS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Metal toilet compartments.

B. Urinal and Vestibule screens.

C. Shower compartments.

1.02 RELATED REQUIREMENTS

A. Section 05 1200 - Structural Steel Framing: Concealed steel support members.

B. Section 05 5000 - Metal Fabrications: Concealed steel support members.

C. Section 10 2800 - Toilet, Bath, and Laundry Accessories.

1.03 REFERENCE STANDARDS

A. ASTM A424/A424M - Standard Specification for Steel, Sheet, for Porcelain Enameling 2018.

B. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process 2017.

C. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar 2015.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate partition plan, elevation views, dimensions, details of wall, floor and ceiling supports, door swings.

C. Product Data: Provide data on panel construction, hardware, and accessories.

D. Samples: Submit two samples of partition panels, illustrating panel finish, color, and sheen.

E. Manufacturer's Installation Instructions: Indicate special procedures.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Metal Toilet Compartments:

1. All American Metal Corp - AAMCO: www.allamericanmetal.com/#sle.
2. General Partitions Mfg. Corp: www.generalpartitions.com/#sle.
3. Global Steel Products Corp: www.globalpartitions.com/#sle.
4. Metpar Corp: www.metpar.com/#sle.
5. Substitutions: Section 01 6000 - Product Requirements.

2.02 MATERIALS

A. Steel Sheet: Hot-dipped galvanized steel sheet, ASTM A653/A653M, with G90/Z275 coating.

2.03 COMPONENTS

A. Toilet Compartments: Powder coated steel, floor-mounted unbraced.

B. Doors, Panels, and Pilasters: Sheet steel faces, pressure bonded to sound deadening core, formed and closed edges; corners made with corner clips or mitered, welded, and ground smooth.

1. Panel Faces: 20 gage, 0.0359 inch (0.91 mm).
2. Door Faces: 22 gage, 0.0299 inch (0.76 mm).
3. Pilaster Faces: 20 gage, 0.0359 inch (0.91 mm).
4. Reinforcement: 12 gage, 0.1046 inch (2.66 mm).
5. Internal Reinforcement: Provide in areas of attached hardware and fittings. Mark locations of reinforcement for partition mounted washroom accessories.

C. Door and Panel Dimensions:

1. Door Width for Handicapped Use: 36 inch (915 mm) , out-swinging.
2. Height: 58 inch (1473 mm).

D. Pilasters: 1-1/4 inch (32 mm) thick, of sizes required to suit compartment width and spacing.

E. Urinal Screens: Wall mounted with two panel brackets, and floor-to-ceiling vertical upright consisting of pilaster anchored to floor and ceiling.

2.04 ACCESSORIES

A. Pilaster Shoes: Formed chromed steel with polished finish, 3 inch (175 mm) high, concealing floor fastenings.

1. Provide ceiling attachment using two adjustable hanging studs, attached to above-ceiling framing.

B. Head Rails: Hollow chrome-plated steel tube, 1 by 1-5/8 inch (25 by 41 mm) size, with anti-grip strips and cast socket wall brackets.

C. Brackets: Polished chrome-plated non-ferrous cast metal.

D. Attachments, Screws, and Bolts: Stainless steel , tamper proof type.

1. For attaching panels and pilasters to brackets: Through-bolts and nuts ; tamper proof.

E. Hardware: Polished chrome plated non-ferrous cast metal:

1. Pivot hinges, gravity type, adjustable for door close positioning; two per door.
2. Thumb turn or sliding door latch with exterior emergency access feature.
3. Door strike and keeper with rubber bumper; mounted on pilaster in alignment with door latch.
4. Coat hook with rubber bumper; one per compartment, mounted on door.
5. Provide door pull for outswinging doors.

2.05 FINISHING

A. Powder Coated Steel Compartments: Clean, degrease, and neutralize. Follow immediately with a phosphatizing treatment, prime coat and two finish coats powder coat enamel.

B. Baked Enamel Steel Compartments: Clean, degrease, and neutralize. Follow immediately with a phosphatizing treatment, prime coat and two finish coats baked enamel.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that field measurements are as indicated.

C. Verify correct spacing of and between plumbing fixtures.

D. Verify correct location of built-in framing, anchorage, and bracing.

3.02 INSTALLATION

A. Install partitions secure, rigid, plumb, and level in accordance with manufacturer's instructions.

B. Maintain 3/8 to 1/2 inch (9 to 13 mm) space between wall and panels and between wall and end pilasters.

C. Attach panel brackets securely to walls using anchor devices.

D. Attach panels and pilasters to brackets. Locate head rail joints at pilaster center lines.

3.03 TOLERANCES

A. Maximum Variation From True Position: 1/4 inch (6 mm).

B. Maximum Variation From Plumb: 1/8 inch (3 mm).

3.04 ADJUSTING

A. Adjust and align hardware to uniform clearance at vertical edge of doors, not exceeding 3/16 inch (5 mm) .

B. Adjust hinges to position doors in partial opening position when unlatched. Return out swinging doors to closed position.

C. Adjust adjacent components for consistency of line or plane.

END OF SECTION

SECTION 10 2123
CUBICLE CURTAINS AND TRACK

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Suspended overhead curtain track and guides.

B. Surface mounted overhead curtain track and guides.

C. Cubicle curtains.

D. Blackout curtains.

1.02 RELATED REQUIREMENTS

A. Section 01 1000 - Summary: Owner-installed curtains.

B. Section 05 5000 - Metal Fabrications: Track supports above ceiling.

C. Section 06 1000 - Rough Carpentry: Blocking and supports for track.

D. Section 09 5100 - Acoustical Ceilings: Suspended ceiling system to support track.

1.03 REFERENCE STANDARDS

A. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

B. NFPA 701 - Standard Methods of Fire Tests for Flame Propagation of Textiles and Films 2015.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data for curtain fabric characteristics.

C. Samples: Submit two fabric samples,12 by 12 inches in size illustrating fabric color.

D. Manufacturer's Installation Instructions: Indicate special procedures, perimeter conditions requiring special attention.

E. Maintenance Data: Include recommended cleaning methods and materials and stain removal methods.

F. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Extra Curtains: Two of each type and size.
3. Extra Carriers: Ten.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Accept curtain materials on site and inspect for damage.

B. Store curtain materials on site and deliver to Owner for installation when requested.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Cubicle Track and Curtains:

1. A. R. Nelson Co: www.arnelson.com/#sle.
2. C/S General Cubicl www.c-sgroup.com/cubicle-track-curtains/#sle.
3. Imperial Fastener Co., Inc.: www.imperialfastener.com/#sle.
4. Substitutions: See Section 01 6000 - Product Requirements.

2.02 TRACKS AND TRACK COMPONENTS

A. Tracks: Extruded aluminum sections; one piece per track run.

1. Profile: Channel.
2. Mounting: Surface.
3. Track End Stop: To fit track section.
4. Finish on Exposed Surfaces: Clear anodized.

B. Curtain Carriers: Nylon rollers, size and type compatible with track; designed to eliminate bind when curtain is pulled; fitted to curtain to prevent accidental curtain removal.

C. Wand: Plastic, attached to lead carrier, for pull-to-close action.

D. Installation Accessories: Types required for specified mounting method and substrate conditions.

2.03 CURTAINS

A. Cubicle Curtains:

1. Flame spread index of 25, maximum; smoke developed index of 450, maximum; when tested in accordance with ASTM E84.
2. Inherently flame resistant or flameproofed; capable of passing NFPA 701 test.
3. Material: Close weave polyester; anti-bacterial, self deodorizing, sanitized, and preshrunk.
4. Open Mesh Cloth: Open weave to permit air circulation; flameproof material, manufacturer's standard color.
5. Attachment of Curtain Fabric to Open Mesh Cloth: Manufacturer's standard sewn seam.

B. Blackout Curtains:

1. Inherently flame resistant or flameproofed; capable of passing NFPA 701 test.
2. Material: Polyester.
3. Valance: Same material and color as blackout curtain, adhered to face of track with hook and loop fastener strip, 12 inch (305 mm) drop.

C. Curtain Fabrication:

1. Width of curtain to be 10 percent wider than track length.
2. Include open mesh cloth at top 20 inches (508 mm) of curtain for room air circulation, attached to curtain as specified above.
3. Seams and Hems: Manufacturer's standard fabrication method for securely sewn and finished seams and hems.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that surfaces and supports above ceiling are ready to receive work of this Section.

B. Verify that field measurements are as indicated.

3.02 INSTALLATION

A. Install curtain track to be secure, rigid, and true to ceiling line.

B. Secure track to ceiling system.

C. Install end cap and stop device.

D. Install curtains on carriers ensuring smooth operation.

E. Install blackout curtain valance on face of track.

END OF SECTION

SECTION 10 2219.63
DEMOUNTABLE GLASS PARTITIONS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Metal stud framing system.

B. Acoustic insulation.

C. Partition panels.

D. Frames for doors and glazed openings.

E. Doors and door hardware.

F. Glazing.

G. Wall base.

1.02 RELATED REQUIREMENTS

A. Section 08 1213 - Hollow Metal Frames.

B. Section 08 7100 - Door Hardware.

C. Section 09 9123 - Interior Painting: On-site painting.

1.03 REFERENCE STANDARDS

A. ASTM C645 - Standard Specification for Nonstructural Steel Framing Members 2014, with Editorial Revision (2015).

B. ASTM C665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing 2017.

C. ASTM C1036 - Standard Specification for Flat Glass 2016.

D. ASTM C1048 - Standard Specification for Heat-Strengthened and Fully Tempered Flat Glass 2018.

E. ASTM C1172 - Standard Specification for Laminated Architectural Flat Glass 2014.

F. ASTM C1396/C1396M - Standard Specification for Gypsum Board 2017.

G. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements 2009 (Reapproved 2016).

H. ASTM E413 - Classification for Rating Sound Insulation 2016.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Acceptable Manufacturer; Avanti Systems USA: www.avantisystemsusa.com/#sle.

1. Phone: Toll Free (877) AVANTI-3; (877) 282-6843.

B. Substitutions: Section 01 6000 - Product Requirements.

2.02 DEMOUNTABLE GLASS PARTITIONS

A. Full-Height Glazed Partition System: Avanti Systems USA; Transverso Monoblock Modular Partition, double glazed, framed glass hinged doors, with integral blinds, hardware, and accessories.

B. Full-Height Glazed Partition System: Avanti Systems USA; Solare Double Glazed Frameless Partition System, straight, double-glazed, dry jointed, extruded aluminum top and bottom glazing channels, frameless glass pivot doors, with integral blinds, hardware, and accessories.

C. Double Glazed Stackable Glass Partitions: Avanti Systems USA; Elevare Stacking Double Glazed High Wall System, straight, double-glazed, dry jointed, pivot glass doors, hardware, and accessories.

D. Point Supported Glass Partitions: Avanti Systems USA; Elevare Point Support Single Glazed High Wall System, straight, single-glazed, dry jointed, pivot glass doors, hardware, and accessories.

E. Full-Height Vertical Mullion Glass Partitions: Avanti Systems USA; Elevare Mullion High Wall System, straight, single-glazed, dry jointed, pivot glass doors, hardware, and accessories.

F. Tension Supported Demountable Glass Partitions: Avanti Systems USA; Elevare Tension High Wall System, straight, single-glazed, dry jointed, pivot glass doors, hardware, and accessories.

G. Partition System: Demountable, non-progressive, capable of four direction lateral expansion with reusable components.

1. Module Width: As indicated on drawings.
2. Partition Height: As indicated on drawings.
3. Nominal Partition Thickness: 4 inches (100 mm).
4. Joints: Vertical, butt joint.
5. Utility Raceways: Provide access through posts, studs, cap channels, verticle support profiles, floor and base channels.

H. Performance Requirements:

1. Acoustic Attenuation: STC of 35 calculated in accordance with ASTM E413, based on tests conducted in accordance with ASTM E90.
2. Fire Rating: Comply with applicable code.

2.03 MATERIALS

A. Glass:

1. Tempered Glass: Annealed flat glass meeting requirements of ASTM C1036, Type 1-Transparent Flat, Class 1-Clear, Quality Q3, and fully tempered in accordance with ASTM C1048, Kind FT.
   a. Thickness: 3/8 inch (9.5 mm).
   b. Prepare glazing panels for indicated fittings and hardware before tempering.
   c. Temper glass materials horizontally; visible tong marks or tong mark distortions are not permitted.
2. Laminated Glass: Fully tempered float glass laminated in accordance with ASTM C1172, with eased and polished edges.
   a. Plastic Interlayer: 0.060 inch (1.52 mm) thick, minimum.
   b. Thickness: 7/16 inch (11.1 mm).

B. Standard Gypsum Board: ASTM C1396/C1396M, 3/8 inch (10 mm) thick, maximum permissible length; ends square cut, square edges.

C. Fire Rated Gypsum Board: ASTM C1396/C1396M Type X, UL rated; 1/2 inch (13 mm) thick, maximum practical length; ends square cut, square edges.

D. Acoustic Insulation: ASTM C665, preformed mineral wool, friction fit type.

E. Acoustic Sealant: Acrylic emulsion latex or water-based elastomeric sealant; do not use solvent-based non-curing butyl sealant.

2.04 PARTITION COMPONENTS

A. Studs and Tracks: ASTM C645, sheet steel, 26 gage, 0.0179 inch (0.45 mm) minimum thickness, C shaped, with serrated faces.

B. Resilient Channels: Formed sheet steel, Z profile, [____] gage, [___] inch ([____] mm) thick.

C. Solid Panels: Gypsum board, standard, fire rated and [_____] laminated to [_____] core, panel thickness [____] inches ([____] mm); with facing of wall covering.

D. Base: Extruded aluminum.

2.05 DOOR AND WINDOW COMPONENTS

A. Frames: Extruded aluminum, manufacturers standard profile and thickness.

1. Finish: Integral finish.

2. Prepare and reinforce door frames for door hardware; provide resilient silencers color matched to frame color.

B. Sliding Glass Doors: Specified in Section 08 4126.

C. Pivoting Glass Doors: Specified in Section 08 4126.

D. Hollow Metal Doors and Panels: Specified in Section 08 1113.

E. Door Hardware: Manufacturer's standard; finish as selected by Architect.

1. Locksets, lock cylinder master keyed to building keying system.

2. Hinges: [_____].

F. Glazing: Manufacturer's standard.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that building conditions are ready to receive partitions and that field measured dimensions are as indicated on shop drawings.

B. Verify that required utilities are available, in proper location, and ready for use.

3.02 INSTALLATION

A. Install partitions before placement of carpet.

B. Metal Stud Framing System:

1. Construct framing as indicated on drawings.

2. Install studs in accordance with partition system manufacturer's installation instructions.

3. Install double studs at jambs of door frames, glazed frames and [_____].

4. Coordinate installation of anchors, wall mounted reinforcement, electrical, and mechanical work placed within framing.

C. Acoustic Components:

1. Install acoustic sealant within partition system in accordance with sealant manufacturer's instructions and as required to achieve specified STC rating.
2. Install resilient channels on center on metal studs, and locate ends over framing members.
3. Install acoustic insulation in partitions tight within spaces, around openings, behind and around electrical and mechanical items, within or behind adjoining partitions, and tight to items passing through partitions.

D. Partition Panels:

1. Install panels in accordance with partition system manufacturer's instructions.

E. Frames: Install in accordance with partition system manufacturer's instructions; erect vertical members plumb, and horizontal members level.

F. Doors: Install in accordance with partition system manufacturer's instructions; hang to fit square within frame and to swing freely, without binding.

G. Door Hardware: Install in accordance with partition system manufacturer's instructions.

H. Glazing: Install in accordance with partition system manufacturer's instructions.

I. Wall Base: Install in accordance with partition system manufacturer's instructions.

J. Field Finishing:

1. Frames: Specified in Section 09 9123.
2. Doors: Specified in Section 09 9123.
3. Edge Trim: Specified in Section 09 9123.

3.03 TOLERANCES

A. Maximum Variation from True Plane of Partition Surfaces: 1/8 inch in 10 feet (3 mm in 3 m) in any direction.

B. Maximum Variation from Dimensioned Locations: 1/4 inch (6 mm) in any direction.

3.04 ADJUSTING

A. Adjust doors and frames to provide smooth door operation from open to closed position without gravity movement of door from any position.

3.05 PROTECTION

A. Do not permit subsequent construction activities to cause damage to appearance or operation of installed partition components until Date of Substantial Completion.

END OF SECTION

SECTION 10 4400
FIRE PROTECTION SPECIALTIES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Fire extinguishers.

B. Fire blankets.

C. Fire extinguisher cabinets.

D. Accessories.

1.02 RELATED REQUIREMENTS

A. Section 09 9123 - Interior Painting: Field paint finish.

B. Section 21 1200 - Fire-Suppression Standpipes: Cabinet enclosure for extinguishers.

1.03 REFERENCE STANDARDS

A. ASTM E814 - Standard Test Method for Fire Tests of Penetration Firestop Systems 2013a (Reapproved 2017).

B. FM (AG) - FM Approval Guide current edition.

C. NFPA 10 - Standard for Portable Fire Extinguishers 2017.

D. UL (DIR) - Online Certifications Directory Current Edition.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide extinguisher operational features.

C. Shop Drawings: Indicate locations of cabinets and cabinet physical dimensions.

D. Manufacturer's Installation Instructions: Indicate special criteria and wall opening coordination requirements.

E. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

F. Maintenance Data: Include test, refill or recharge schedules and re-certification requirements.

1.05 FIELD CONDITIONS

A. Do not install extinguishers when ambient temperature may cause freezing of extinguisher ingredients.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Fire Extinguishers:

1. Ansul, a Tyco Business; [____]: www.ansul.com/#sle.
2. Nystrom, Inc; [_____]: www.nystrom.com/#sle.
3. Oval Brand Fire Products; Oval Dry Chemical Fire Extinguisher - Multipurpose ABC: www.ovalfireproducts.com/#sle.
4. Pyro-Chem, a Tyco Business; [_____]: www.pyrochem.com/#sle.
5. Substitutions: See Section 01 6000 - Product Requirements.

B. Fire Extinguisher Cabinets and Accessories:

1. Ansul, a Tyco Business: www.ansul.com/#sle.
2. Kidde, a unit of United Technologies Corp: www.kidde.com/#sle.
3. Nystrom, Inc; [_____]: www.nystrom.com/#sle.
4. Oval Brand Fire Products; Cabinets for Low Profile Extinguishers: www.ovalfireproducts.com/#sle.
5. Pyro-Chem, a Tyco Business: www.pyrochem.com/#sle.
6. Substitutions: See Section 01 6000 - Product Requirements.

2.02 FIRE EXTINGUISHERS

A. Fire Extinguishers - General: Comply with product requirements of NFPA 10 and applicable codes, whichever is more stringent.
   1. Provide extinguishers labeled by UL (DIR) or FM (AG) for purpose specified and as indicated.

B. Water Type Fire Extinguishers: Stainless steel tank, pressurized, with premixed antifreeze solution, including hose and nozzle.
   1. Class: 2-A type.
   2. Size and classification as scheduled.

C. Multipurpose Dry Chemical Type Fire Extinguishers: Carbon steel tank, with pressure gauge.
   1. Class: A:B:C type.
   2. Size and classification as scheduled.
   3. Temperature range: Minus 40 degrees F (Minus 40 degrees C) to [___] degrees F ([___] degrees C).

D. Dry Chemical Type Fire Extinguishers: Stainless steel tank, with pressure gauge.
   1. Class: K type.
   2. Size and classification as scheduled.
   3. Temperature range: Minus 20 degrees F (Minus 29 degrees C) to 120 degrees F (49 degrees C).

2.03 FIRE EXTINGUISHER CABINETS

A. Fire Rating: Listed and labeled in accordance with ASTM E814 requirements for fire resistance rating of walls where being installed.

B. Cabinet Construction: Non-fire rated.

C. Fire Rated Cabinet Construction: One-hour fire rated.
   1. Steel; double wall or outer and inner boxes with 5/8 inch (15.9 mm) thick fire barrier material.

D. Cabinet Configuration: Semi-recessed type OR Recessed OR Surface Mounted
   1. Size to accommodate accessories.
   2. Exterior nominal dimensions of [____] inch ([____] mm) wide by [____] inch ([____] mm) high by [____] inch ([____] mm) deep.

E. Door: 0.036 inch (0.9 mm) metal thickness, reinforced for flatness and rigidity with nylon catch. Hinge doors for 180 degree opening with two butt hinge.

F. Door Glazing: Float glass, clear, 1/8 inch (3 mm) thick, and set in resilient channel glazing gasket.

G. Cabinet Mounting Hardware: Appropriate to cabinet, with pre-drilled holes for placement of anchors.

2.04 ACCESSORIES

A. Fire Blanket: Fire retardant treated wool; red, 62 by 84 inch (1575 by 2135 mm) size.

B. Extinguisher Brackets: Formed steel, chrome-plated.

C. Extinguisher Theft Alarm: Battery operated alarm, 10 second delay for disarming, activated by opening cabinet door.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify rough openings for cabinet are correctly sized and located.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install cabinets plumb and level in wall openings, [____] inches ([____] mm) from finished floor to inside bottom of cabinet.

C. Secure rigidly in place.

D. Place extinguishers and accessories in cabinets.

E. Position cabinet signage at As directed by Fire Marshall.

END OF SECTION

SECTION 10 5113
METAL LOCKERS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Metal lockers.

B. Locker benches.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Concrete base construction.

B. Section 06 1000 - Rough Carpentry: Wood base construction.

1.03 REFERENCE STANDARDS

A. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design 2010.

B. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process 2017.

C. ICC A117.1 - Accessible and Usable Buildings and Facilities 2017.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's published data on locker construction, sizes and accessories.

C. Shop Drawings: Indicate locker plan layout, numbering plan, combination lock code, key codes and locker fillers, trim, base, sloping tops and accessories..

D. Samples: Submit two samples showing color and finish of metal locker material.

E. Shop Drawings: Include plans, elevations, sections, details, and attachments to other Work.

F. Show locker fillers, trim, base, sloping tops, and accessories. Include locker-numbering sequence.

G.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Protect locker finish and adjacent surfaces from damage.

PART 2 PRODUCTS

2.01 LOCKER APPLICATIONS

A. Student Lockers: Metal lockers, recessed mounted.

1. Configuration: Single tier.
2. Fittings: Size and configuration as indicated on drawings.
    a. Hooks: One single prong.
3. Ventilation: Louvers at top and bottom of door panel.
4. Locking: Built-in combination locks.

B. Athletic Lockers: Metal lockers, free-standing with matching closed base.

1. Configuration: Single tier.
2. Fittings: Size and configuration as indicated on drawings.
    a. Upper shelf.

b. Lock box.

c. Hooks: One single prong.

3. Ventilation: Perforated side panels and doors.

4. Locking: Built-in combination locks.

C. Locker Benches: Stationary type; bench top of laminated birch; painted steel pedestals.

1. Accessibility: Comply with ICC A117.1 and ADA Standards.

2.02 METAL LOCKERS

A. Accessibility: Comply with ICC A117.1 and ADA Standards.

B. Lockers: Factory assembled, made of formed sheet steel, ASTM A653/A653M SS Grade 33/230, with G60/Z180 coating, stretcher leveled; metal edges finished smooth without burrs; baked enamel finished inside and out.

1. Where ends or sides are exposed, provide flush panel closures.

2. Provide filler strips where indicated, securely attached to lockers.

3. Color: To be selected by Architect.

C. Locker Body: Formed and flanged; with steel stiffener ribs; electric spot welded.

1. Body and Shelves: 24 gage, 0.0239 inch (0.61 mm).

2. Base: 20 gage, 0.036 inch (0.9 mm).

3. Metal Base Height: 4 inch (100 mm).

D. Frames: Formed channel shape, welded and ground flush, welded to body, resilient gaskets and latching for quiet operation.

1. Door Frame: 16 gage, 0.0598 inch (1.52 mm), minimum.

E. Doors: Hollow double pan, sandwich construction, 1-3/16 inch (30 mm) thick; welded construction, channel reinforced top and bottom with intermediate stiffener ribs, grind and finish edges smooth.

1. Door Outer Face: 18 gage, 0.0478 inch (1.21 mm), minimum.

2. Door Inner Face: 20 gage, 0.0359 inch (0.91 mm), minimum.

3. Form recess for operating handle and locking device.

F. Hinges: Continuous piano hinge with powder coat finish to match locker color.

G. Trim: 20 gage, 0.0359 inch (0.91 mm).

H. Coat Hooks: Stainless steel or zinc-plated steel.

I. Number Plates: Provide oval shaped aluminum plates. Form numbers [____] inch ([____] mm) high of block font style with ADA designation, in contrasting color.

J. Locks: Locker manufacturer's standard type indicated above.

K. Built-In Lock Boxes: Same material as locker, manufacturer's standard size, with padlock hasps, for padlocks provided by Owner.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that prepared bases are in correct position and configuration.

B. Verify bases and embedded anchors are properly sized.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Place and secure on prepared base.

C. Install lockers plumb and square.

D. Secure lockers with anchor devices to suit substrate materials. Minimum Pullout Force: 100 pounds (445 N).

E. Bolt adjoining locker units together to provide rigid installation.

F. Install end panels, filler panels and sloped tops.

G. Install fittings if not factory installed.

H. Replace components that do not operate smoothly.

3.03 CLEANING

A. Clean locker interiors and exterior surfaces.

END OF SECTION

SECTION 10 5613
METAL STORAGE SHELVING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Four post shelving.

B. Case type shelving.

C. Case type cabinets.

D. Cantilevered shelving.

E. Shelving accessories.

1.02 RELATED REQUIREMENTS

A. Section 06 1000 - Rough Carpentry: Blocking and reinforcement in walls for anchoring shelving units.

B. Section 09 2116 - Gypsum Board Assemblies: Blocking and reinforcement in walls for anchoring shelving units.

C. Section 10 5626 - Mobile Storage Shelving: Installation of metal storage shelving on mobile carriages.

1.03 REFERENCE STANDARDS

A. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures Most Recent Edition Cited by Referring Code or Reference Standard.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Rated uniform shelf loads.
2. Details of shelving assemblies, including reinforcement.
3. Accessories.
4. Substrate preparation instructions and recommendations.
5. Storage and handling requirements and recommendations.
6. Installation methods.
7. Specimen warranty.
8. Maintenance methods.

C. Test Reports: Provide independent agency test reports documenting compliance with specified structural requirements.

1. In lieu of test reports, detailed drawings stamped and sealed by a Professional Engineer licensed in Maryland will be acceptable.

D. Shop Drawings: Indicate location, type, and layout of shelving, including lengths, heights, and aisle layout, and relationship to adjacent construction.

1. Indicate methods of achieving specified anchoring requirements.

E. Selection Samples: For each finish product specified, color chips representing manufacturer's full range of available colors and finishes.

F. Warranty: Submit manufacturer warranty and ensure that forms have been completed in Owner 's name and registered with manufacturer.

G. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.

2. Extra Shelves: Two of each size with shelf brackets.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years of documented experience.

B. Installer Qualifications: Company specializing in performing the work of this section with minimum three years of documented experience and approved by manufacturer.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Inspect for dents, scratches, or other damage. Replace damaged units.

B. Store in manufacturer's unopened packaging until ready for installation.

C. Store under cover and elevated above grade.

1.07 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Provide one year manufacturer warranty covering defects of manufacturing and workmanship and rust and corrosion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Four Post Shelving:

1. Hallowell: www.hallowell-list.com/#sle.

2. List Industries, Inc: www.listindustries.com/#sle.

3. Montel; SmartShelf: www.montel.com/#sle.

4. Penco Products, Inc: www.pencoproducts.com/#sle.

5. SpaceSaver Corporation: www.spacesaver.com/#sle.

6. Substitutions: See Section 01 6000 - Product Requirements.

B. Case Type Shelving and Cabinets:

1. List Industries, Inc; Case Shelving: www.listindustries.com/#sle.

2. Penco Products, Inc; [_____]: www.pencoproducts.com/#sle.

3. SpaceSaver Corporation; [_____]: www.spacesaver.com/#sle.

4. Tennsco Storage; Q-Line Shelving: www.tennsco.com/#sle.

5. Substitutions: See Section 01 6000 - Product Requirements.

C. Cantilevered Shelving:

1. Montel; Aetnastak: www.montel.com/#sle.

2. SpaceSaver Corporation: www.spacesaver.com/#sle.

3. Tennsco Storage; Estey Designer Series Library Shelving: www.tennsco.com/#sle.

4. Substitutions: See Section 01 6000 - Product Requirements.

2.02 SHELVING - GENERAL

A. See drawings for layout and sizes.

1. Clear Aisle Widths: [32] inches ([815] mm), minimum.

B. Seismic Design: Design for Seismic Zone 3, in accordance with ASCE 7, Section 9.

C. Anchors: Provide anchoring hardware to secure each shelving unit to floor and wall.

1. Provide hardware of type recommended by manufacturer for substrate.
2. See drawings for additional details of anchorage.

2.03 FOUR POST SHELVING

A. Four Post Shelving: Steel post-and-beam type with sway bracing, shelving brackets, shelving surfaces, and accessories as specified.

1. Unit Width: 24 inches (610 mm), center to center of posts.
2. Shelf Capacity: Uniform distributed load of 50 psf (2.4 kPa), minimum.
3. Shelf Deflection: 1/4 inch (6 mm) in 36 inches (914 mm), maximum, under specified uniform load.
4. Shelf Deflection: L/140, maximum, under specified uniform load.
5. Adjustability of Shelving: At intervals of 6 inches (150 mm) on center, minimum.
6. Shelves per Unit: As indicated on drawings.
7. Finish: Baked enamel, medium gloss.
8. Color: As selected by Architect from manufacturer’s standard range.
9. Provide single-face and double-face units where indicated.
10. Number of Units: As indicated on drawings.

B. Posts and Beams: Formed sheet members; perforations exposed on face of members are not acceptable.

1. Metal Thickness: 16 gage, 0.0598 inch (1.52 mm).
2. Post Shape: Tee intermediate posts, angle end posts forming corners.
3. Post Face Width: 2 inches (51 mm), maximum.
4. Connecting Hardware: Manufacturer's standard.

C. Bracing: Formed sheet members.

1. Back Sway Bracing: Either strap or panel; at back of each unit.
2. Side Sway Bracing: Either strap or panel; at each side of each unit.
3. See drawings for additional details of bracing.

D. Shelves: Formed sheet, finished on all surfaces , with slots for dividers.

1. Metal Thickness: 16 gage, 0.0598 inch (1.52 mm).
2. Shelf Connection to Posts: Manufacturer's standard.

2.04 CASE TYPE SHELVING AND CABINETS

A. Case Type Shelving: Steel, closed sides and backs, with shelving brackets, shelving surfaces, and accessories as specified.

1. Unit Width: 24 inches (610 mm), overall.
2. Shelf Capacity: Uniform distributed load of 50 psf (2.4 kPa), minimum.
3. Shelf Deflection: 1/4 inch (6 mm) in 36 inches (914 mm), maximum, under specified uniform load.
4. Adjustability of Shelving: At intervals of 6 inches (150 mm) on center.
5. Shelf Depth: 14-1/2 inches (610 mm), minimum.
6. Shelves per Unit: As indicated on drawings.
7. Unit Height: [__] inches ([__] mm), overall , maximum.
8. Finish: Baked enamel, medium gloss.
9. Color: As selected by Architect from manufacturer’s standard range.
10. Number of Units: As indicated on drawings.

B. Case Construction: Formed sheet metal comprising vertical support members and enclosure panels.
1. Shelf Support Members: 16 gage, 0.0598 inch (1.52 mm), minimum; manufacturer's standard profile.
2. Face Width of Exposed Vertical Supports: 2 inches (51 mm), maximum.
3. Panels: 24 gage, 0.0239 inch (0.61 mm), minimum.
4. Provide panels at intermediate divisions as well as ends and backs.
5. Connecting Hardware: Manufacturer's standard.
6. Post Bases: Flat steel foot plate , with manufacturer’s recommended adjustable leveling device.

C. Shelves: Formed sheet metal, finished on all surfaces with slots for dividers.
1. Thickness: 16 gage, 0.0598 inch (1.52 mm), minimum.
2. Shelf Edge Profile: Extending 3/4 inch (19 mm), maximum, below top surface of shelf.
3. Shelf Connection to Posts: Manufacturer's standard.

D. Cabinet Doors: Manufacturer's standard welded steel.
1. Style: Solid panel.
2. Hinges: Four-knuckle type.
3. Pulls: Recessed.
4. Locks: Manufacturer's standard keyed lock.

2.05 CANTILEVERED SHELVING

A. Cantilevered Shelving: Freestanding formed steel post frame with slots for cantilevered shelving brackets, sufficiently rigid not to require sway bracing, shelving brackets, shelving surfaces, and accessories as specified.
1. Unit Width: 24 inches (610 mm), center to center of posts.
2. Shelf Capacity: Uniform distributed load of 50 psf (2.4 kPa), minimum.
3. Shelf Deflection: 1/4 inch (6 mm) in 36 inches (914 mm), maximum, under specified uniform load.
4. Adjustability of Shelving: At intervals of 1 inches (25 mm) on center, minimum.
5. Shelf Depth: 14.5 inches (610 mm), minimum.
6. Finish: Baked enamel, medium gloss.

B. Frame: Formed steel members comprising posts, horizontal spreaders at top and bottom, and base brackets resisting overturning; frame configuration providing full face height and width available for adjustable shelves.
   1. Sheet Metal Thickness: 16 gage, 0.0598 inch (1.52 mm), minimum.
   2. Base Brackets Height from Floor: 9 inches (229 mm), maximum.
   3. Connecting Hardware: Manufacturer's standard.
   4. Provide manufacturer's standard adjustable leveling devices.

C. Shelf Brackets: Combination shelf support and bookend, formed steel; full depth of shelves and minimum 6 inches (150 mm) height above shelf surface; rounded outer edges and corners for safety.
   1. Thickness: 16 gage, 0.0598 inch (1.52 mm), minimum.
   2. Connection to Posts: Two hooks at top, safety lug at bottom.

D. Shelves: Formed steel, finished on all surfaces.
   1. Thickness: 18 gage, 0.0478 inch (1.21 mm), minimum.
   2. Bottom Shelf Edge Profile: 1 inch (25 mm) with integral kickplate.
   3. Upper Shelves Edge Profile: Extending 3/4 inch (19 mm), maximum, below top surface of shelf.
   4. Shelf Connections: Tab interlock with brackets ; positive bolt connection between shelf and bracket.

E. End Panels: Formed steel, finished on all surfaces.
   1. Thickness: 24 gage, 0.0239 inch (0.61 mm), minimum.
   2. Panel Faces: Flush, flat, without oil-canning.
   3. Provide end panels on all exposed ends of shelving runs.

2.06 ACCESSORIES

A. Kick Plates: Formed sheet metal; enclose open space between bottom shelf and floor on all front sides and open ends; finished to match.

B. Drawers: Formed steel, with mounting brackets and earthquake stops.
   1. Width: 5-5/8 inch (143 mm).
   2. Height: 4-5/8 inch (117 mm).
   3. Depth: Shelf depth.

C. Shelf Partitions: Steel, full height.
   1. Height: 3 inches (75 mm).

D. Sliding Shelf Supports: Plastic slider block with chrome plated wire, sliding along back rail.
   1. Height: 3 inches (75 mm).

E. Label Holders: Steel, attached to front face of shelf.
   1. Size: 2-1/4 by 3/4 inches (56 by 20 mm).

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that substrate is level and that clearances are as specified.

B. Verify that walls are suitable for shelving attachment.

C. Do not begin installation until substrates have been properly prepared.

D. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.02 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.03 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Anchor and reinforce as specified, as indicated on drawings, and as recommended by manufacturer.

C. Install shelving with shelf surfaces level and vertical supports plumb; adjust feet and bases as required.

D. Out-Of-Square Tolerance - Four Post Shelving: Maximum of 1/8 inch (3 mm) difference in distance between bottom shelf and canopy top, measured along any post in any direction.

3.04 CLEANING

A. Clean shelving and surrounding area after installation.

3.05 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Date of Substantial Completion.

END OF SECTION

SECTION 10 5617
WALL MOUNTED STANDARDS AND SHELVING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Shelf standards, brackets, and accessories.

B. Closet rods for mounting on brackets.

C. Shelves.

D. See drawings for locations and configurations.

1.02 RELATED REQUIREMENTS

A. Section 06 1000 - Rough Carpentry: Wood blocking in walls for attachment of standards.

B. Section 06 2000 - Finish Carpentry: Wood shelves.

C. Section 09 2116 - Gypsum Board Assemblies: Blocking in metal stud walls for attachment of standards.

1.03 REFERENCE STANDARDS

A. NEMA LD 3 - High-Pressure Decorative Laminates 2005.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used.

C. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Extra Brackets: Ten of each size of standard straight bracket.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years of documented experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Store products under cover and elevated above grade.

B. Store products in manufacturer's unopened packaging until ready for installation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Shelf Standards and Brackets:

1. Knape & Vogt Manufacturing Company; 87™/187™ Series: www.knapeandvogt.com/#sle.
2. Substitutions: See Section 01 6000 - Product Requirements.

2.02 MATERIALS

A. Super-Duty Shelf Standards and Brackets: Single-slotted channel standards for brackets adjustable in 1 inch (25 mm) increments along entire length of standard, drilled and countersunk for screws.

1. Load Capacity: Recommended by manufacturer for loading of 540 to 1,060 pounds (245 to 480 kg) per pair of standards.
2. Face Width: 5/8 inch (16 mm), single slotted.

3. Finish: Electroplated, chrome-look.
4. Brackets: 12 gage, 0.1046 inch (2.66 mm) sheet steel, reinforced, locking into slots with molded nylon cam lock lever; size to suit shelves; same finish as standards.
5. Bracket Quantity: Provide one bracket for each 12 inches (305 mm) of standard length.

B. Extra-Duty Shelf Standards and Brackets: Double-slotted channel standards for brackets adjustable in 1 inch (25 mm) increments along entire length of standard, drilled and countersunk for screws.

1. Load Capacity: Recommended by manufacturer for loading of 300 to 680 pounds (135 to 310 kg) per pair of standards.
2. Finish: Electroplated, chrome-look.
3. Brackets: Double tab type, locking into slots; size to suit shelves; same finish as standards.
4. Bracket Quantity: Provide one bracket for each 12 inches (305 mm) of standard length.

C. Heavy-Duty Shelf Standards and Brackets: Double-slotted channel standards for brackets adjustable in 1 inch (25 mm) increments along entire length of standard, drilled and countersunk for screws.

1. Load Capacity: Recommended by manufacturer for loading of 300 to 450 pounds (135 to 200 kg) per pair of standards.
2. Brackets: Double tab type, locking into slots; size to suit shelves; same finish as standards.
3. Provide snap-in cover strips to hide unused slots and screw holes.
4. Bracket Quantity: Provide one bracket for each 12 inches (305 mm) of standard length.

D. Heavy-Duty Shelf Standards and Brackets: Single-slotted channel standards for brackets adjustable in 1 inch (25 mm) increments along entire length of standard, drilled and countersunk for screws.

1. Load Capacity: Recommended by manufacturer for loading of 300 to 450 pounds (135 to 200 kg) per pair of standards.
2. Brackets: Double tab type, locking into slots; size to suit shelves; same finish as standards.
3. Bracket Quantity: Provide one bracket for each 12 inches (305 mm) of standard length.

E. Regular-Duty Shelf Standards and Brackets: Single-slotted channel standards for brackets adjustable in 1 inch (25 mm) increments along entire length of standard, drilled and countersunk for screws.

1. Load Capacity: Recommended by manufacturer for loading of 120 to 320 pounds (55 to 145 kg) per pair of standards.
2. Face Width: 5/8 inch (16 mm).
3. Material: 16 gage, 0.0598 inch (1.52 mm) sheet steel.
4. Finish: Electroplated, chrome-look.
5. Brackets: 16 gage, 0.0598 inch (1.52 mm) sheet steel, reinforced, locking into slots; size to suit shelves; same finish as standards unless not available.
6. Bracket Quantity: Provide one bracket for each 12 inches (305 mm) of standard length.

F. Shelf Standard Accessories:

1. At shelves indicated as sloping provide adjustable slant brackets.
2. Where cornices are indicated as part of shelving provide cornice brackets.
3. Where shelves are indicated to be fastened to brackets provide brackets with flanges for screwing into end of shelf, steel shelf rests, or flanged brackets; fasten with screws.

4. At glass shelves provide clear plastic shelf rests, front and back, with rubber cushions.

G. Closet Rods: Steel tubing for wall mounting in flange fittings.

1. Length: As required for application, up to 12 feet (3655 mm).
2. Provide mounting fittings to suit application.

H. Laminate Faced Shelves: Particleboard or medium density fiberboard covered with high pressure decorative laminate on both sides.

1. Edge Finish: Matching laminate, all four edges.
2. Substrate Thickness: 3/4 inch (19 mm), nominal.
3. Laminate: NEMA LD 3 Type HGL.
4. Shelf Quantity: Provide one shelf for each 12 inches (305 mm) of length of standard, per pair of standards, unless otherwise indicated.

I. Wood Shelves: Hardwood veneer plywood with matching solid wood glued edges on all four edges.

1. Species and Cut: [_____].
2. Thickness: 3/4 inch (19 mm), nominal.
3. Length: 36 inches (915 mm).
4. Finish: Polyurethane varnish.

J. Glass Shelves: Fully tempered float glass, clear, 1/4 inch (6 mm) thick.

1. Length: 36 inches (915 mm).

K. Fasteners: Screws as recommended by manufacturer for intended application or as otherwise required by project conditions.

PART 3 EXECUTION

3.01 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.02 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.03 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Mount standards to solid backing capable of supporting intended loads.

C. Install brackets, shelving, and accessories.

3.04 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION

SECTION 10 5723
CLOSET AND UTILITY SHELVING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Wall mounted wire closet shelving.

B. Laminated shelves associated with wire shelving.

C. Accessories.

1.02 RELATED REQUIREMENTS

A. Section 06 1000 - Rough Carpentry: Blocking in walls for attachment of shelving.

B. Section 09 2116 - Gypsum Board Assemblies: Blocking in metal stud walls for attachment of standards.

1.03 REFERENCE STANDARDS

A. NEMA LD 3 - High-Pressure Decorative Laminates 2005.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, with installation instructions.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Store products under cover and elevated above grade.

C. Store flat to prevent warpage and bending.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Wire Storage Shelving:

1. ClosetMaid Corporation : www.closetmaid.com/#sle.
2. RubberMaid Closet and Organization Products : www.rubbermaidcloset.com/#sle.
3. [_____].
4. Substitutions: See Section 01 6000 - Product Requirements.

2.02 SHELVING APPLICATIONS

A. Shelf Depth: 12 inches (305 mm), unless otherwise indicated.

B. Storage Closets:

1. Wall-to-wall storage shelves, close-mesh cross wire spacing, stacked at 13 inch (330 mm) vertically, not less than 12 inch (305 mm) deep.

2.03 MATERIALS

A. Wire Shelving: Factory-assembled coated wire mesh shelf assemblies for wall-mounting, with all components and connections required to produce a rigid structure that is free of buckling and warping.

1. Construction: Cold-drawn steel wire with average tensile strength of 100,000 psi (690 MPa) resistance welded into uniform mesh units, square, rigid, flat, and free of dents or other distortions, with wires trimmed smooth.

2. Coating: PVC or epoxy, applied after fabrication, covering all surfaces.
3. Standard Mesh Shelves: Cross deck wires spaced at 1 inch (25.4 mm).
4. Close-Mesh Shelves: Cross deck wires spaced at 1/2 inch (12.7 mm).
5. Shelf and Rod Units: Integral hanging rod at front edge of shelf.

B. Laminated Shelves: Particleboard with thermal-fused melamine surface on top and bottom.
1. Edge Finish: Hot-melt PVC edge banding, matching color.
2. Substrate Thickness: 3/4 inch (19 mm), nominal.

C. Mounting Hardware: Provide manufacturer's standard mounting hardware; include support braces, wall brackets, back clips, end clips, poles, and other accessories as required for complete and secure installation; factory finished to match shelving.

D. Fasteners: As recommended by manufacturer for mounting substrates.

PART 3 EXECUTION

3.01 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions, with shelf surfaces level.

B. Cap exposed ends of cut wires.

C. Install back clips, end clips at side walls, and support braces at open ends. Install intermediate support braces as recommended by manufacturer.

D. Mounting Heights:
1. Single Hanging Rod Units: Install shelf at 68 inches (1727 mm) above floor.
2. Double Hanging Rod Units: Install shelves at 42 inches (1067 mm) and 84 inches (2134 mm) above floor.
3. Other Shelves: See drawings.

3.03 CLEANING

A. Clean soiled surfaces after installation.

3.04 PROTECTION

A. Protect installed work from damage.

B. Touch-up, repair, or replace damaged products before Substantial Completion in a manner that eliminates evidence of replacement.

END OF SECTION

SECTION 10 7113.43
FIXED SUN SCREENS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Modular, shop fabricated, extruded aluminum sun screens to be mounted on structure provided by others.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Mounting substrates.

B. Section 04 2000 - Unit Masonry: Mounting substrates.

C. Section 05 1200 - Structural Steel Framing: Mounting substrates.

D. Section 07 4213 - Metal Wall Panels: Mounting substrates.

E. Section 08 4313 - Aluminum-Framed Storefronts: Mounting substrates.

F. Section 08 4413 - Glazed Aluminum Curtain Walls: Mounting substrates.

G. Section 08 5113 - Aluminum Windows: Mounting substrates.

H. Section 10 7113 - Exterior Sun Control Devices: Operable sun control devices.

1.03 REFERENCE STANDARDS

A. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength 2014 (Editorial 2017).

B. ASTM A792/A792M - Standard Specification for Steel Sheet, 55% Aluminum-Zinc Alloy-Coated by the Hot-Dip Process 2010 (Reapproved 2015).

C. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate 2014.

D. ASTM B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate (Metric) 2014.

E. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes 2014.

F. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric) 2013.

G. ASTM F593 - Standard Specification for Stainless Steel Bolts, Hex Cap Screws, and Studs 2017.

1.04 SUBMITTALS

A. Shop Drawings: Prior to commencement of fabrication, submit detailed shop drawings, showing all profiles, sections of all components, finishes, fastening details, and manufacturer's technical and descriptive data. Include field dimensions of openings and elevations on shop drawings.

B. Design Data: Submit comprehensive structural analysis of design for the specified loads. Stamp and sign calculations by professional engineer.

C. Samples: 10 inches (254 mm) by 10 inches (254 mm) minimum illustrating design, workmanship and finish color.

D. Sample of Louver: For review of shape only.

1.05 QUALITY ASSURANCE

A. Designer Qualifications: Perform structural design under direct supervision of a Professional Engineer experienced in design of this type of work licensed in Maryland.

B. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with no less than five years of documented experience.

C. Installer Qualifications: Company specializing in performing the work of this section.

1. With minimum five years of documented experience.

2. Approved by manufacturer.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to project site ready for erection.

B. Package using methods that prevent damage during shipping and storage on site.

C. Store materials under cover and elevated above grade.

1.07 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Sun Screens: Correct defective work within a one year period after Date of Substantial Completion.

C. Finish Warranty: Provide manufacturer's [_____] warranty on factory finish against cracking, peeling, and blistering.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Fixed Sun Screens:

1. Same manufacturer as curtain wall to which sun screens are to be attached.

2. Architectural Grilles & Sunshades, Inc; [_____]: www.agsshade.com/#sle.

3. DAMS Incorporated; RA Series: www.damsinc.com/#sle.

4. Industrial Louvers, Inc; [_____]: www.industriallouvers.com/#sle.

5. Metalwerks; Sunshades: www.metalwerksusa.com/#sle.

6. [_____].

7. [_____].

8. Substitutions: See Section 01 6000 - Product Requirements.

2.02 SUN SCREENS

A. Sun Screens: Shop fabricated, shop finished, extruded aluminum outriggers, louvers, and fascia, free of defects impairing strength, durability or appearance.

1. Configuration: As indicated on drawings.

2. Louver Type: Bar.

3. Outrigger Shape: Straight.

4. Design Criteria: Design and fabricate to resist the following loads without failure, damage, or permanent deflection:

a. Wind: [___] psf ([___] kPa) positive, [___] psf ([___] kPa) negative; minimum

b. Snow: [___] psf ([___] kPa); minimum.

c. Live: [___] psf ([___] kPa); minimum.

d. Thermal Movement: Plus/minus 1/8 inch (3.175 mm), maximum.

5. Sizes: As indicated on drawings.

6. Exposed Aluminum Finish: Match Aluminum-Framed Storefront framing, refer to section for finish information.

7. Provide a complete system ready for erection at project site.

2.03 MATERIALS

A. Aluminum Extrusions: ASTM B209 (ASTM B209M) or ASTM B221 (ASTM B221M).

B. Aluminum Coated Steel Sheet: ASTM A792/A792M.

C. Concealed Structural Supports: Aluminum, or steel coated for corrosion resistance and dissimilar metal isolation.

D. Fasteners: ASTM F593 stainless steel or ASTM A307 carbon steel.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates and site area for conditions that might prevent satisfactory installation.

B. Verify that dimensions of supporting structure are within plus/minus 1/8 inch (3.175 mm) of dimensions indicated on shop drawings.

C. Verify that all adjacent painting, roofing, masonry work, and other work that might damage sun screen finish has been completed prior to installation of sun screens.

D. Do not install until after all adjacent painting, roofing and masonry have been completed.

E. Do not proceed with installation until all conditions are satisfactory.

3.02 INSTALLATION

A. Install in accordance with manufacturer's installation instructions.

B. Set units level, plumb, with uniform joints, and aligned with building elements.

C. Separate dissimilar metals using concealed bituminous paint or non-absorbent gasket.

D. Anchor units to structure as indicated on drawings.

E. Do not cut or trim aluminum members without approval of manufacturer; do not install damaged members.

F. Touch-up damaged finish coating using material provided by manufacturer to match original coating.

3.03 TOLERANCES

A. Maximum Variation from Level: Plus/Minus 1/8 inch (3.175 mm).

3.04 CLEANING

A. Clean exterior surfaces units of dust and debris; follow manufacturer's cleaning instructions for the finish used.

3.05 PROTECTION

A. Protect units after installation to prevent damage due to other work until Date of Substantial Completion.

END OF SECTION

SECTION 10 7113
EXTERIOR SUN CONTROL DEVICES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Operable sun control devices for exterior applications:

1. Sun control louvers.
2. Retractable exterior blinds.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Mounting substrates.

B. Section 04 2000 - Unit Masonry: Mounting substrates.

C. Section 05 1200 - Structural Steel Framing: Mounting substrates.

D. Section 07 4213 - Metal Wall Panels: Mounting substrates.

E. Section 08 4313 - Aluminum-Framed Storefronts: Mounting substrates.

F. Section 08 4413 - Glazed Aluminum Curtain Walls: Mounting substrates.

G. Section 08 5113 - Aluminum Windows: Mounting substrates.

H. Section 10 7113.43 - Fixed Sun Screens: Non-operable exterior sun screens.

1.03 REFERENCE STANDARDS

A. AAMA 2604 - Voluntary Specification, Performance Requirements and Test Procedures for High Performance Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix) 2017a.

B. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets including materials, finishes, fabrication details, dimensions, profiles, mounting requirements, and accessories.

1. Motorized Sun Control Devices: Include power requirements and standard wiring diagrams.

C. Shop Drawings: Prior to commencement of fabrication, submit detailed shop drawings, showing all profiles, sections of all components, finishes, fastening details, and manufacturer's technical and descriptive data. Include field dimensions of openings and elevations on shop drawings.

1. Motorized Sun Control Devices: Include schematic system riser diagram indicating component interconnections, detailed sequence of operations describing system functions, and requirements for interface with other systems.

D. Manufacturer's Instructions: Include instructions for storage, handling, protection, examination, preparation, and installation of product.

E. Project Record Documents: Record actual locations of control systems and show interconnecting wiring.

F. Specimen Warranty: Furnish a copy of manufacturer's standard warranty.

1.05 QUALITY ASSURANCE

A. Motorized Sun Control Devices: Comply with requirements of NFPA 70.

B. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with no less than five years of documented experience.

C. Installer Qualifications: Company specializing in performing the work of this section.

1. With minimum five years of documented experience.

2. Approved by manufacturer.

1.06 MOCK-UP

A. Mock-Up: Provide [___] feet wide by [___] feet high, minimum ([___] m wide by [___] m high, minimum) mock-up of sun control device assembly at project site.

1. Obtain Architect's approval before proceeding with installation of remaining work.

2. Full-sized mock-up may become part of the final installation.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to project site ready for erection.

B. Package using methods that prevent damage during shipping and storage on site.

C. Store materials under cover and elevated above grade.

1.08 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Sun Control Devices: Correct defective work within a five year period after Date of Substantial Completion.

C. Finish Warranty: Provide manufacturer's [_____] warranty on factory finish against cracking, peeling, and blistering.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Sun Control Louvers:

1. Basis of Design: Draper, Inc as indicated under product description below; www.draperinc.com/#sle.

2. Other Acceptable Manufacturers:

a. Skyshield International, Inc: www.skyshieldlouverblinds.com/#sle.

b. [_____] .

c. [_____].

3. Substitutions: See Section 01 6000 - Product Requirements.

B. Retractable Exterior Blinds:

1. Basis of Design: Draper, Inc as indicated under product description below; www.draperinc.com/#sle.

2. Other Acceptable Manufacturers:

a. Construction Specialties, Inc: www.c-sgroup.com/#sle.

3. Substitutions: See Section 01 6000 - Product Requirements.

C. Source Limitations: Furnish sun control devices and associated controls produced by a single manufacturer and obtained from a single supplier.

2.02 SUN CONTROL LOUVERS

A. Description: Non-retractable, factory-finished rack arm assembly with operable louver tilt function; size and configuration as indicated on drawings.

B. General Requirements:

1. Rack Arm: Extruded aluminum, factory assembled with pivot arms and associated hardware for operation of louvers.

C. Sun Control Louver - Basis of Design: Draper, Inc; FlexLouver Rack Arm System; www.draperinc.com/#sle.

1. Rack Arm Style: Standard profile; 1-3/8 by 7/8 inch (35 by 20 mm).
2. Louvers: Aluminum, perforated rolled edge; 3-1/8 inches (80 mm) wide nominal; Model 80R.
    a. Perforations: To be selected.
3. Mounting Brackets: Adjustable, with threaded stainless steel rod attached to rack arm and to aluminum plates.
4. Frames: Aluminum, fixed.
    a. Light Penetration Prevention: Provide baffles and black nylon brushes between louvers and frame and black nylon brushes between frame and structure.
5. Operator: Manual, with gearbox operating mechanism.
    a. Manual Gearbox Operating Mechanism: Operated by crank handle.

2.03 RETRACTABLE EXTERIOR BLINDS

A. Description: Horizontal slats hung from full-width headrail with full-width bottom rail and side guides or wires for slat stability; motorized operation; size and configuration as indicated on drawings.

B. General Requirements:

1. Motors: Size and configuration as recommended by manufacturer for the type, size, and arrangement of sun control devices to be operated; integrated into device operating components and concealed from view; fully compatible with controls to be installed.

C. Retractable Exterior Blinds - Basis of Design: Draper, Inc; Venetian Blinds by Warema; www.draperinc.com/#sle.

1. Headrail: Extruded aluminum; 2-3/8 inch (60mm) deep by 2-1/8 inch (54mm) tall, suitable for blinds with drop of up to 23 feet 7 inches (719 cm). Headrail to be open on the underside.
2. Headrail Box: Custom fabricated sheet aluminum box to protect blinds in raised position. Size as required to cover stack of retracted blinds and with depth 2-3/8 inch (60 mm) greater than slat width.
3. Bottom Rail: Extruded aluminum with plastic end caps; 2 inch by 7/8 inch (50 mm by 20 mm).
4. Slats: Aluminum; 0.012 inch (0.30 mm) thickness, nominal.
5. Lifting/Ladder Tape: Tear resistant terylene yarn configured to support, tilt, and lift slats.
6. Side Guides:
7. Mounting: Direct-mounted utilizing keyhole slots in headrail.
8. Motor: Tubular, 110 VAC .

2.04 PERFORMANCE REQUIREMENTS

A. Design and size components to support assembly dead loads, and to withstand live loads caused by positive and negative wind pressure acting normal to plane of window wall.

2.05 MOTOR CONTROLS

A. Unless specifically indicated to be excluded, provide all required equipment, conduit, boxes, wiring, connectors, hardware, supports, accessories, software, system programming, etc. as necessary for a complete operating system that provides the control intent indicated.

B. Provide all components and connections necessary to interface with other systems as indicated.

C. Control Requirements:

1. Sun Control Louvers: Control tilt function.
2. Retractable Exterior Blinds: Control raise/lower and tilt functions.
3. Provide for alignment of positions for sun control devices operated by separate motors.
4. Provide capability of reassigning sun control devices to inputs and groups without rewiring.
5. User Control: Utilize wall controls for individual and group control of sun control devices as indicated.
6. Automatic Light Level Control: Utilize photo sensors to automatically adjust position of sun control devices according to available light.
7. Automatic Timer Control: Utilize programmable timer to automatically adjust position of sun control devices according to selected schedule.
8. Automatic Wind Control: Utilize anemometer to automatically adjust position of sun control devices in response to wind speeds in excess of maximum allowable values.
9. Automatic Solar-Tracking Controls:
    a. Description: Utilize calculated position of sun based on building location, date, and time to automatically adjust position of sun control devices.
    b. Manual Override Capability: Allow temporary override of designated sun control devices using wall controls and computer interface.
    c. Automatic Override Capability: Utilize photo sensors to detect cloudy conditions and automatically adjust position of sun control devices to maximize view and available daylight.
10. Interface with building automation system as specified in Section [_____].

2.06 MATERIALS

A. Aluminum Extrusions: ASTM B221 (ASTM B221M).

B. Sheet Aluminum: ASTM B209 (ASTM B209M).

2.07 FINISHES

A. High Performance Organic Coatings: AAMA 2604; multiple coats, thermally cured fluoropolymer system.

B. Concealed aluminum components, mill finish.

C. Factory Finishes: Uniform, smooth and without blemishes.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates and site area for conditions that might prevent satisfactory installation.

B. Do not install until after adjacent painting, roofing and masonry work has been completed.

C. Do not proceed with installation until related conditions are satisfactory.

3.02 INSTALLATION

A. Install in accordance with manufacturer's installation instructions.

B. Set units level, plumb, with uniform joints, and aligned with building elements.

C. Separate dissimilar metals using concealed bituminous paint or non-absorbent gasket.

D. Anchor units to structure as indicated on drawings.

3.03 TOLERANCES

A. Maximum Variation from Level: Plus/minus 1/8 inch (3.175 mm).

3.04 ADJUSTING

A. Motorized Sun Control Devices:

1. Set limit switches for uniform range of motion according to project requirements.

2. Program control system parameters according to requirements of Owner.

3.05 CLEANING

A. Clean exterior surfaces units of dust and debris; follow manufacturer's cleaning instructions for the finish used.

B. See Section 01 7419 - Construction Waste Management and Disposal, for additional requirements.

3.06 CLOSEOUT ACTIVITIES

A. See Section 01 7800 - Closeout Submittals, for closeout submittals.

B. See Section 01 7900 - Demonstration and Training, for additional requirements.

C. Demonstration: Demonstrate operation and maintenance of exterior sun control devices to Owner's personnel.

D. Training: Train Owner's personnel on operation and maintenance of system.

1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.

3.07 PROTECTION

A. Protect units after installation to prevent damage due to other work until Date of Substantial Completion.

END OF SECTION

SECTION 10 7316.13
METAL CANOPIES

PART 1 GENERAL

1.01 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Concrete footings.

B. Section 07 7123 - Manufactured Gutters and Downspouts.

1.02 REFERENCE STANDARDS

A. AISC 303 - Code of Standard Practice for Steel Buildings and Bridges 2016.

B. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures Most Recent Edition Cited by Referring Code or Reference Standard.

C. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength 2014 (Editorial 2017).

D. ASTM A572/A572M - Standard Specification for High-Strength Low-Alloy Columbium-Vanadium Structural Steel 2015.

E. ASTM A924/A924M - Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process 2017a.

F. ASTM A992/A992M - Standard Specification for Structural Steel Shapes 2011 (Reapproved 2015).

G. ASTM C1107/C1107M - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink) 2014a.

H. ASTM E2950 - Standard Specification for Metal Canopy Systems 2014.

I. ASTM F593 - Standard Specification for Stainless Steel Bolts, Hex Cap Screws, and Studs 2017.

J. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts, Steel and Alloy Steel, Heat Treated, 120 ksi (830 MPa) and 150 ksi (1040 MPa) Minimum Tensile Strength, Inch and Metric Dimensions 2015a.

K. AWS D1.1/D1.1M - Structural Welding Code - Steel 2015, with Errata (2016).

1.03 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Submit product data sheets, including material descriptions and finishes, and preparation instructions and recommendations.

C. Shop Drawings: Prior to commencement of fabrication, submit detailed shop drawings, showing profiles, sections of components, finishes, and fastening details.

D. Design Data: Submit comprehensive structural analysis of design for the specified loads. Stamp and sign calculations by professional engineer.

E. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

1.04 QUALITY ASSURANCE

A. Designer Qualifications: Perform design under direct supervision of a Professional Engineer experienced in design of this type of work and licensed in Maryland.

1. Comply with applicable code for submission of design calculations as required for acquiring permits.

B. Perform work in accordance with AISC 303.

C. Erector Qualifications: Company specializing in performing the work of this section.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to project site ready for erection.

B. Package using methods that prevent damage during shipping and storage on site.

C. Store materials under cover and elevated above grade.

1.06 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Metal Canopies: Correct defective work within a two year period after Date of Substantial Completion.

C. Finish Warranty: Provide manufacturer's one year warranty on factory finish against cracking, peeling, and blistering.

PART 2 PRODUCTS

2.01 METAL CANOPIES

A. Shop Fabricated Metal Canopy Type: [_____] .

1. Pre-engineered system complying with ASTM E2950.

2. Design and fabricate metal canopy system to resist wind, snow, live and seismic loads without failure, damage, or permanent deflection in accordance with ASCE 7:

   a. Loads: As indicated on drawings.

3. Thermal Movement: Design canopy system to accommodate thermal movement caused by ambient temperature range of 120 degrees F (49 degrees C) and surface temperature range of 180 degrees F (82 degrees C) without buckling, failure of joint seals, undue stress on fasteners or other detrimental effects on assembly components.

2.02 COMPONENTS

A. Structural Steel Framing:

1. Columns: ASTM A500/A500M, Grade B, round or rectangular tubing, sized to suit project design load requirements.

2. Base and Top Plates: ASTM A36/A36M, with pre-drilled bolt holes.

3. Beams: Wide flange, ASTM A572/A572M Grade 50.

4. Other Structural Steel Members: ASTM A36/A36M.

B. Covering:

1. Sheet Metal Decking: Interlocking metal panels.

   a. Panel Size: 16 inches wide by 3 inches deep (406 mm wide by 76 mm deep); 20 gauge, 0.0359 inch (0.91 mm) thickness.

   b. Provide canopy manufacturer's standard clip type fasteners for attaching covering to structural beams.

C. Fascia: Manufacturer's standard flat profile.

D. Anchor Bolts: ASTM A307 or ASTM A572/A572M, formed with bent shank, assembled with template for casting into concrete.

1. Minimum exposed thread of 7 inches (178 mm) above footing and 23 inch (584 mm) minimum embedment.
2. Provide nuts and washers as required for column leveling and plumbing.

E. Concrete Footings: Refer to Section 03 3000 for additional requirements.

F. Exposed Gutters and Downspouts: Galvanized steel with baked enamel finish, color to match canopy covering, manufacturer's recommended size for canopy specified.

1. Refer to Section 07 7123 for additional requirements.

2.03 SHOP FABRICATION

A. Provide a complete system ready for erection at project site.

B. Shop fabricate to the greatest extent possible; disassemble if necessary for shipping.

C. Perform welding in accordance with AWS D1.1/D1.1M.

D. Fabricate connections for bolt, nut, and washer connectors.

2.04 FINISHES

A. Structural Steel Framing:

1. Shop Primer: Rust-inhibitive red oxide.

B. Steel Decking: Polyester baked enamel finish; color as selected from manufacturer's standard range.

C. Fascia: Polyester baked enamel finish; color as selected from manufacturer's standard range.

2.05 ACCESSORIES

A. Structural Bolts: ASTM F3125/F3125M, Grade A325, minimum 3/4 inch (19 mm) diameter.

B. Trim, Closure Pieces and Flashings: Same material, thickness and finish as sheet metal decking; factory-fabricated to required profiles.

1. Exposed Fasteners: Not permitted.

C. Grout: ASTM C1107/C1107M; non-shrinking; premixed compound consisting of non-metallic aggregate, cement, water-reducing and plasticizing agents.

D. Fasteners, Non-Structural: ASTM F593 stainless steel or ASTM A307 carbon steel.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates and site area for conditions that might prevent satisfactory installation.

B. Verify that foundation, electrical utilities, and placed anchors are in correct position.

C. Do not proceed with installation until all conditions are satisfactory.

3.02 INSTALLATION - FRAMING

A. Erect framing in accordance with AISC 303.

B. Provide for erection and wind loads. Provide temporary bracing to maintain structure plumb and in alignment until completion of erection and installation.

C. Set column base plates with non-shrink grout to achieve full plate bearing.

D. Fasten columns to anchor bolts.

E. Do not field cut or alter structural members without approval.

F. After erection, prime welds, abrasions, and surfaces not shop primed.

3.03 INSTALLATION - CANOPY COVERING

A. Install in accordance with manufacturer's instructions.

B. Fasten metal decking to steel support members, aligned level and plumb.

C. Install fascia panels, trim and flashing.

D. Separate dissimilar metals using concealed bituminous paint.

E. Touch-up damaged finish coating using material provided by manufacturer to match original coating.

3.04 TOLERANCES

A. Maximum Variation from Level: Plus/Minus 1/8 inch (3.175 mm).

3.05 CLEANING

A. Clean surfaces of dust and debris; follow manufacturer's cleaning instructions for the finish used.

END OF SECTION

SECTION 10 7500
FLAGPOLES

PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes a ground-set flagpole made from aluminum.

1.02 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide flagpole assemblies, including anchorages and supports, capable of withstanding the effects of wind loads, determined according to NAAMM FP 1001, "Guide Specifications for Design of Metal Flagpoles" unless governing jurisdiction provides other requirements.

1. Base flagpole design on nylon or cotton flags of maximum standard size suitable for use with flagpole or flag size indicated, whichever is more stringent.
2. Basic Wind Speed: 100 mph; 3-second gust speed at 33 feet aboveground.

1.03 SUBMITTALS

A. Product Data: For type of flagpole required.

B. Shop Drawings: Include elevations and details showing general arrangement, jointing, fittings and accessories, grounding, and anchoring and supporting systems.

1. Include details of foundation system for ground-set flagpole.

C. Structural Calculations: Include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

D. Qualification Data: For professional engineer.

1.04 QUALITY ASSURANCE

A. Source Limitations:

1. Obtain flagpole as a complete unit, including fittings, accessories, bases, and anchorage devices, from a single manufacturer.
2. Obtain flagpole through one source from a single manufacturer.

1.05 DELIVERY, STORAGE, AND HANDLING

A. General: Spiral wrap flagpole with heavy paper and enclose in a hard fiber tube or other protective container.

1.06 COORDINATION

A. Provide anchoring devices to precast concrete manufacturer for casting.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. American Flagpole; a Kearney-National Inc. Company.
2. Baartol Company Inc. (The)
3. Concord Industries, Inc.
4. Ewing International.
5. Lingo Inc.; Acme Flagpole Division.

6. Michigan Flagpole Inc.
7. Morgan-Francis Div.; Original Tractor Cab Co., Inc.
8. Pole-Tech Company Inc.

2.02 FLAGPOLE

A. Flagpole Construction, General: Construct flagpole in one piece if possible. If more than one piece is necessary, comply with the following:
   1. Fabricate shop and field joints without using fasteners, screw collars, or lead calking.
   2. For tapered flagpoles, provide flush hairline joints using self-aligning, snug-fitting, internal sleeves.

B. Exposed Height: 30 feet.

C. Aluminum Flagpole:
   1. Provide cone-tapered flagpole fabricated from seamless extruded tubing complying with ASTM B 241, Alloy 6063, with a minimum wall thickness of 3/16 inch.
   2. Heat treat after fabrication to comply with ASTM B 597, Temper T6.

D. Foundation Tube: Galvanized corrugated-steel foundation tube, 0.064-inch minimum nominal wall thickness. Provide with 3/16-inch steel bottom plate and support plate; 3/4-inch diameter, steel ground spike; and steel centering wedges all welded together. Galvanize steel parts, including foundation tube, after assembly. Provide loose hardwood wedges at top of foundation tube for plumbing pole.
   1. Provide flashing collar of same material and finish as flagpole.
   2. Provide steel ground protectors extending 12 inches aboveground and 6 inches belowground for steel flagpoles where flashing collars are not provided.

2.03 FITTINGS

A. Finial Ball: Manufacturer's standard flush-seam ball, sized as indicated or, if not indicated, to match flagpole-butt diameter.
   1. 3-inch spun aluminum, finished to match flagpole.

B. Internal Halyard, Cam Cleat System: 5/16-inch- diameter, braided polypropylene halyard; cam cleat; and concealed revolving truck assembly with plastic-coated counterweight and sling. Provide flush access door secured with cylinder lock. Finish truck assembly to match flagpole.
   1. Halyard Flag Snaps: Provide two chromium-plated bronze swivel snap hooks per halyard.
   2. Provide with neoprene or vinyl covers.

2.04 MISCELLANEOUS MATERIALS

A. Concrete: Comply with requirements in Division 3 Section "Building Cast-in-Place Concrete" for normal-weight, air-entrained, ready-mix concrete with a minimum 28-day compressive strength of 3000 psi.

B. Sand: ASTM C 33, fine aggregate.

C. Elastomeric Joint Sealant: Multicomponent urethane joint sealant complying with requirements in Division 7 Section "Joint Sealers" for Use NT (nontraffic) and for Use M, G, A, and, as applicable to joint substrates indicated, O joint substrates.

2.05 FINISHES

A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.

1. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.

PART 3 - EXECUTION

3.01 PREPARATION

A. Prepare uncoated metal flagpole that is set in a foundation tube by painting below-grade portions with a heavy coat of bituminous paint.

B. Foundation Excavation: Excavate to neat clean lines in undisturbed soil. Remove loose soil and foreign matter from excavation and moisten earth before placing concrete.

C. Provide forms where required due to unstable soil conditions and for perimeter of flagpole base at grade. Secure and brace forms and foundation tube, sleeve, or anchor bolts in position, to prevent displacement during concreting.

D. Place concrete immediately after mixing. Compact concrete in place by using vibrators. Moist-cure exposed concrete for not less than seven days or use nonstaining curing compound.

E. Trowel exposed concrete surfaces to a smooth, dense finish, free of trowel marks, and uniform in texture and appearance. Provide positive slope for water runoff to perimeter of concrete base.

3.02 FLAGPOLE INSTALLATION

A. General: Install flagpole where shown and according to Shop Drawings and manufacturer's written instructions.

B. Foundation-Tube Installation: Install flagpole in foundation tube, seated on bottom plate between steel centering wedges. Plumb flagpole and install hardwood wedges to secure flagpole in place. Place and compact sand in foundation tube and remove hardwood wedges. Seal top of foundation tube with a 2-inch layer of elastomeric joint sealant and cover with flashing collar.

END OF SECTION

SECTION 10 8200
GRILLES AND SCREENS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Aluminum grilles attached to structure.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Mounting substrates.

B. Section 04 2000 - Unit Masonry: Mounting substrates.

C. Section 05 1200 - Structural Steel Framing: Mounting substrates.

D. Section 07 4213 - Metal Wall Panels: Mounting substrates.

E. Section 08 4313 - Aluminum-Framed Storefronts: Mounting substrates.

F. Section 08 4413 - Glazed Aluminum Curtain Walls: Mounting substrates.

1.03 REFERENCE STANDARDS

A. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix) 2017a.

B. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength 2014 (Editorial 2017).

C. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes 2014.

D. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric) 2013.

E. ASTM F593 - Standard Specification for Stainless Steel Bolts, Hex Cap Screws, and Studs 2017.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Submit detailed shop drawings, indicating component profiles, sections, finishes, fastening details, special details, and manufacturer's technical and descriptive data.

C. Samples: Submit samples for color verification, 10 inches (254 mm) by 10 inches (254 mm) minimum.

D. Samples: Submit assembled sample 24 inches by 24 inches (610 mm by 610 mm) minimum size to illustrate design, fabrication techniques, workmanship and finish color.

E. Design Data: Submit comprehensive structural analysis of design for the specified loads. Stamp and sign calculations by professional engineer.

1.05 QUALITY ASSURANCE

A. Designer Qualifications: Perform structural design under direct supervision of a Professional Engineer experienced in design of this type of work and licensed in Maryland.

B. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than five years of documented experience.

C. Installer Qualifications: Company specializing in performing work of the type specified and with minimum three years of documented experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Store materials indoors, protected from moisture, humidity, and extreme temperature fluctuations.

PART 2 PRODUCTS

2.01 ALUMINUM GRILLES

A. Aluminum Grilles: Provide shop fabricated, shop finished grilles assembled into panels.

1. Grill Type: Flat bar/egg crate .
2. Grille Type: Tubular shape.
3. Grille Type: Perforated metal sheet.
4. Panel Size and Configuration: As indicated on drawings.
5. Frame/Support: Extruded aluminum tube or flat aluminum bar.
6. Wind Load Resistance: Design to resist positive and negative wind load, [____] psf ([____] kPa), without damage or permanent deformation.

2.02 MATERIALS

A. Aluminum Extrusions: ASTM B221 (ASTM B221M) alloy 6063, temper T5, 1/8 inch (3 mm) minimum wall thickness.

B. Concealed Structural Supports: Aluminum, or steel coated for corrosion resistance and dissimilar metal isolation.

2.03 FABRICATION

A. Shop fabricate grilles to the greatest extent possible.

B. Disassemble as neccessary for shipping and handling, clearly mark units for proper reassembly.

C. Provide supports, anchorages, and accessories as required for complete assembled system.

2.04 FINISHES

A. Superior Performing Organic Coatings: AAMA 2605 multiple coats, thermally cured polyvinylidene fluoride system.

B. Finish Color: As indicated on drawings.

2.05 ACCESSORIES

A. Fasteners: ASTM F593 stainless steel or ASTM A307 carbon steel, sizes to suit installation conditions.

B. Anchors and Inserts: Corrosion resistant; type, size, and material required for loading and installation as indicated.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify dimensions, tolerances, and method of attachment with other work.

B. Verify that painting, roofing, masonry work, and other adjacent work that might damage grille finish has been completed prior to start of installation.

3.02 INSTALLATION

A. Install in accordance with manufacturer's written installation instructions.

B. Set grilles level, plumb, with uniform joints, and in alignment with adjacent work as indicated.

C. Mechanically secure grilles to supporting structure.

D. Do not cut or trim aluminum members without approval of manufacturer; do not install damaged members.

3.03 TOLERANCES

A. Maximum Variation From True Position: 1/8 inch (3 mm).

B. Maximum Offset From True Alignment: 1/8 inch (3 mm).

3.04 CLEANING

A. Clean finished surfaces as recommended by manufacturer and maintain clean condition until Date of Substantial Completion.

B. Touch-up damaged finish coating using material provided by manufacturer to match original coating.

C. Replace grilles that have been damaged beyond touch-up repair.

3.05 PROTECTION

A. Provide protection of installed grilles to ensure grilles are without damage until Date of Substantial Completion.

END OF SECTION

SECTION 101419 - DIMENSIONAL LETTER SIGNAGE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Cut dimensional characters.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. LEED Submittals:

1. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regionally manufactured materials. Include statement indicating cost for each regionally manufactured material.

a. Include statement indicating location of manufacturer and distance to Project for each regionally manufactured material.

2. Product Data for Credit IEQ 4.1: For adhesives, documentation including printed statement of VOC content.
3. Laboratory Test Reports for Credit IEQ 4.1: For adhesives, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Shop Drawings: For dimensional letter signs.

1. Include fabrication and installation details and attachments to other work.
2. Show sign mounting heights, locations of supplementary supports to be provided by others, and accessories.
3. Show message list, typestyles, graphic elements, and layout for each sign at least half size.

D. Samples for Initial Selection: For each type of sign assembly, exposed component, and exposed finish.

1. Include representative Samples of available typestyles and graphic symbols.

E. Samples for Verification: For each type of sign assembly showing all components and with the required finish(es), in manufacturer's standard size unless otherwise indicated and as follows:

1. Dimensional Characters: Full-size Sample each type of dimensional character.
2. Exposed Accessories: Full-size Sample of each accessory type.

F. Sign Schedule: Use same designations specified or indicated on Drawings or in a sign schedule.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For signs to include in maintenance manuals.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1.7 FIELD CONDITIONS

A. Field Measurements: Verify locations of electrical service embedded in permanent construction by other installers by field measurements before fabrication, and indicate measurements on Shop Drawings.

1.8 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Deterioration of finishes beyond normal weathering.
b. Separation or delamination of sheet materials and components.

2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 DIMENSIONAL LETTER SIGNS, GENERAL

A. Regional Materials: Dimensional letter signs shall be manufactured within 500 miles of Project site.

2.2 DIMENSIONAL CHARACTERS

A. Cutout Characters: Characters with uniform faces; square-cut, smooth, edges; precisely formed lines and profiles; and as follows:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

    a. ASI Sign Systems, Inc.
    b. Gemini Incorporated.
    c. InPro Corporation.
    d. Metal Arts; Division of L & H Mfg. Co.
    e. Metallic Arts.
    f. Nelson-Harkins Industries.

2. Character Material: Sheet or plate aluminum.
3. Character Height: As indicated on drawings.
4. Thickness: Manufacturer's standard for size of character.
5. Finishes:

    a. Integral Aluminum Finish: Clear Anodized or Baked Enamel finish. Refer drawings for locations of various finishes.

6. Mounting: Projecting studs
7. Typeface: Arial.

2.3 DIMENSIONAL CHARACTER MATERIALS

A. Aluminum Sheet and Plate: ASTM B 209 (ASTM B 209M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.

2.4 ACCESSORIES

A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of signage, noncorrosive and compatible with each material joined, and complying with the following:

1. Use concealed fasteners and anchors unless indicated to be exposed.
2. Sign Mounting Fasteners:
    a. Projecting Studs: Threaded studs with sleeve spacer, welded or brazed to back of sign material, screwed into back of sign assembly, or screwed into tapped lugs cast integrally into back of cast sign material, unless otherwise indicated.

2.5 FABRICATION

A. General: Provide manufacturer's standard sign assemblies according to requirements indicated.

1. Comply with AWS for recommended practices in welding and brazing. Provide welds and brazes behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded and brazed connections of flux, and dress exposed and contact surfaces.

2.6 GENERAL FINISH REQUIREMENTS

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. Directional Finishes: Run grain with long dimension of each piece and perpendicular to long dimension of finished trim or border surface unless otherwise indicated.

D. Organic, Anodic, and Chemically Produced Finishes: Apply to formed metal after fabrication but before applying contrasting polished finishes on raised features unless otherwise indicated.

2.7 ALUMINUM FINISHES

A. Clear Anodic Finish: AAMA 611, Class I, 0.018 mm or thicker.

B. Baked-Enamel Finish: AA-M4xC12C42R1x (Mechanical Finish: Manufacturer's standard, other nondirectional textured; Chemical Finish: Chemical conversion coating, acid chromate-fluoride-phosphate pretreatment; Organic Coating: as specified below). Apply baked enamel in compliance with paint manufacturer's specifications for cleaning, conversion coating, and painting.
1. Organic Coating: Thermosetting-modified acrylic enamel primer/topcoat system complying with AAMA 603.8 except with a minimum dry film thickness of 1.5 mils, medium gloss.

    a. Color: As selected by the Architect from the manufacturer's full range of colors or as indicated.

C. Refer drawings for locations of various finishes.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of signage work.

B. Verify that sign-support surfaces are within tolerances to accommodate individual characters without irregularities between backs of individual characters and support surfaces unless otherwise indicated.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install signs using mounting methods indicated and according to manufacturer's written instructions.

1. Install signs level, plumb, true to line, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.
2. Before installation, verify that sign surfaces are clean and free of materials or debris that would impair installation.
3. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

B. Mounting Methods:

1. Projecting Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.

a. Masonry Substrates: Fill holes with adhesive. Leave recess space in hole for displaced adhesive. Place spacers on studs, place sign in position, and push until spacers are pinched between sign and substrate, embedding the stud ends in holes. Temporarily support sign in position until adhesive fully sets.

3.3 ADJUSTING AND CLEANING

A. Remove and replace damaged or deformed characters and signs that do not comply with specified requirements. Replace characters with damaged or deteriorated finishes or components that cannot be successfully repaired by finish touchup or similar minor repair procedures.

B. Remove temporary protective coverings and strippable films as signs are installed.

C. On completion of installation, clean exposed surfaces of signs according to manufacturer's written instructions, and touch up minor nicks and abrasions in finish. Maintain signs in a clean condition during construction and protect from damage until acceptance by Owner.

END OF SECTION 101419

SECTION 11 1313
LOADING DOCK BUMPERS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Loading dock bumpers of reinforced rubber pads with attachment frame.

1.02 RELATED REQUIREMENTS

A. Section 03 1000 - Concrete Forming and Accessories: Placement of loading dock bumper frame anchors into concrete.

1.03 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Submit data on unit dimensions, method of anchorage, and details of construction.

C. Manufacturer's Installation Instructions: Submit installation requirements.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Loading Dock Bumpers:

1. Blue Giant Equipment Corporation: www.bluegiant.com/#sle.
2. Chalfant Sewing Fabricators, Inc: www.chalfantusa.com/#sle.
3. Durable Corp: www.durablecorp.com/#sle.
4. Substitutions: See Section 01 6000 - Product Requirements.

2.02 COMPONENTS

A. Loading Dock Bumpers: Molded rubber, ozone resistant, nylon reinforced, Shore A Durometer of 70, minimum, and tensile strength of 950 to 1050 psi (6550 to 7240 kPa), minimum.

1. Projection From Wall: 3 inches (76 mm), minimum.
2. Vertical Height: 10 inches (254 mm), minimum.
3. Width: 5 inches (127 mm), minimum.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that anchor placement is acceptable prior to installation.

3.02 INSTALLATION

A. Install dock bumpers in accordance with manufacturer's instructions.

B. Set plumb and level.

C. Secure angled end frames to concrete; refer to Section 03 1000 for additional information.

D. Weld angled end frames to steel dock frame, and touch up welds with primer.

END OF SECTION

SECTION 11 4001
CUSTOM FABRICATED FOODSERVICE EQUIPMENT

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Custom fabricated stainless steel units, including:

1. Serving counters and casework.
2. Pot and pan washing sinks.

B. Removal and reinstallation of existing fabricated food service equipment, including:

1. Serving counters and casework.
2. Dishwashers.

1.02 RELATED REQUIREMENTS

A. Section 01 1000 - Summary: Limitations on use of existing facilities and disruption of operation; equipment to be salvaged or removed for re-installation.

B. Section 07 9200 - Joint Sealants: Sealing joints between equipment and adjacent walls, floors, and ceilings.

C. Section 11 4000 - Foodservice Equipment: General requirements covering all food service equipment work; manufactured equipment items.

1.03 REFERENCE STANDARDS

A. ASTM A240/A240M - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications 2016.

B. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar 2015.

C. ASTM B88 - Standard Specification for Seamless Copper Water Tube 2016.

D. NSF 2 - Food Equipment 2018.

E. SMACNA (KVS) - Kitchen Ventilation Systems and Food Service Equipment Fabrication and Installation Guidelines 2001.

F. SMACNA (SRM) - Seismic Restraint Manual Guidelines for Mechanical Systems 2008.

G. UL (DIR) - Online Certifications Directory Current Edition.

1.04 SUBMITTALS

A. Product Data: Submit manufacturer's data sheets on each manufactured product to be used, including:

1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
    a. Coordinate with PGCPS Environmental department for removal of asbestos containing materials.
3. Installation methods.
4. Configuration, sizes, materials, finishes, locations, utility connections and locations.

B. Shop Drawings: Submit floor plans, elevations, cross-sections, and construction details for fabricated units specified, including:

1. Layout and anchorage of equipment and accessories, including clearances for maintenance and operation and required electrical or plumbing connections.
2. Size, type, and location of equipment drain lines and floor drains.
3. Special conditions, including required slab depressions, cores, wall openings, blockouts, ceiling pockets, access panels, and above ceiling hanger assemblies.
4. Wiring, piping, and schematic diagrams.

C. Certificates: Certify that products of this section meet or exceed specified requirements.

D. Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

E. Operation and Maintenance Data: Provide maintenance manual listing routine maintenance procedures, possible breakdowns, repairs, and troubleshooting guides; include instructions for maintenance of stainless steel fabrications and components and simplified diagrams for equipment as installed.

F. Warranty: Submit manufacturer's warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

G. Project Record Documents: Record actual locations of utility connections.

1.05 QUALITY ASSURANCE

A. Manufacturer/Fabricator Qualifications: Company specializing in manufacture of commercial food services equipment with minimum three years documented experience and NSF certified for type of equipment specified.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver fixed equipment that is not to be integrated into structure until after completion of finished ceilings, floor and walls, painting, and lighting.

B. Store products in manufacturer's unopened packaging until ready for installation.

C. Tape fiberboard or plywood to surfaces as required by equipment shape and installation access requirements.

D. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.

1.07 FIELD CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results, and do not install products under environmental conditions outside manufacturer's absolute limits.

1.08 WARRANTY

A. Correct defective Work within a two year period after Date of Substantial Completion.

PART 2 PRODUCTS

2.01 PGCPS PREAPPROVED VENDORS: (NO SUBSTITUTION IS ALLOWED; UNLESS THE EQUIPMENT SAYS APPROVED EQUAL). All approved equal items shall be considered as pre-bid approved vendor(s);

2.02 MATERIALS

A. Stainless Steel: 18-8 percent chromium-nickel composition, minimum; alloy Type 302, 304, or 316; No. 4 - Brushed finish on exposed surfaces.

1. Sheets: ASTM A240/A240M or ASTM A666.

2. Tubing: ASTM A269/A269M or ASTM A270/A270M; of true roundness with seams and welds ground smooth.
3. Bars: ASTM A276/A276M.

B. Copper Tubing: ASTM B88; Type L, hard drawn.
1. Fittings: ASME B16.18, ASME B16.22, or ASME B16.26.
2. Solder: ASTM B32, lead-free.
3. Brazing Alloy: AWS A5.8M/A5.8 silver solder.

C. Glass: Fully tempered float glass, 3/8 inch (9.5 mm) thick, minimum.

D. Sound Deadening Material: Bituminous paint or other water resistant mastic.

E. Manufactured Components:
1. Finish Hardware: Manufacturer's standard; stainless steel with polished finish.

F. Bolts, Screws, and Rivets: Stainless steel; do not use on exposed surfaces unless specifically indicated or unavoidable.
1. Bolt and Screw Caps: Provide lock washer and chromium-plated brass/bronze acorn nut to cap visible or exposed threads on inside of fixtures.

G. Anchoring Devices: Stainless steel, of type appropriate for use; provide seismic anchorage as specified in SMACNA (KVS).

2.03 CUSTOM FABRICATED UNITS - GENERAL REQUIREMENTS

A. See drawings for dimensions and configurations; ensure proper fit by taking field measurements prior to fabrication.

B. Provide fully shop assembled units complying with SMACNA (KVS) and NSF 2 and stainless steel components, unless otherwise indicated.
1. Where details are referenced as "SMACNA" details, refer to SMACNA (KVS).
2. Stainless Steel Sheet: For surfaces up to 12 feet (3.7 m) in length provide one continuous sheet without joints or welds, including back and end splashes.
3. Joints: Provide welded joints unless specifically indicated or not possible; do not solder or braze stainless steel; do not use bolts, screws, or other fasteners on work surfaces, food contact surfaces, or wet surfaces.
4. Drainage of Surfaces: Provide distinct pitch of top surfaces toward waste or drain outlets while maintaining level tops of rolled and marine edges and back and end splashes.
5. Drainage of Equipment: Provide drain piping as indicated; where compartments or pans are intended to hold liquids or catch drips and no drain piping is indicated, provide drain fitting and gravity draining piping terminating over nearest floor drain.
6. Where cut-outs are indicated for equipment to be set into countertop, provide cut-out in top and back of case body, maintaining continuous counter front; size to fit equipment with sanitary joint.
7. Wiring: Concealed in enclosed portions or corner posts.
8. Shop prepare openings for plumbing fixtures, fittings, and other service components.
9. Sound Deadening: Apply sound deadening material to accessible internal surfaces of metal work and underside of metal counters and sinks.

C. Sneeze Guards: Fully tempered float glass mounted in stainless steel channel frames; provide adjustable brackets allowing easy loading of food trays.

D. Tray Slides:

1. Construction: Closed, solid stainless steel 14 gage, 0.0747 inch (1.9 mm) thick, with three lengthwise inverted "V" ridges of solid stainless steel, front edge rolled, back edge turned up behind counter top turndown, and ends closed.

2. Support Brackets: Stainless steel.

E. Flatware Dispensers: Removable stainless steel containers recessed into counter top.

1. Containers: Rectangular compartments; stainless steel, 18 gage, 0.0478 inch (1.2 mm) thick.

2. Size and Quantity: As indicated on drawings.

2.04 SERVING COUNTERS

A. Serving Counter Height:

1. Self-Service: 27 inch (685 mm).

2. Non-Self-Service: 36 inch (905 mm).

B. Tray Slide Height: 30 inch (762 mm).

C. Tray Stands: Tray storage surface 15 inches (381 mm) above floor; constructed as integral part of counter top.

2.05 FABRICATION

A. Joints, Bends, and Edges: Make each joint close fitting, especially butt and contact joints.

1. Make brake bends free of open-texture or orange peel appearance.

2. Make sheared edges free of burrs, projections, and fins.

3. Neatly finish mitered and bullnosed corners with under edge of material ground to uniform condition, without overlapping materials or cracks.

B. Welding: Make each welded joint smooth, ductile, and watertight, without gaps, holes, or discoloration or marring of surface adjacent to welds.

1. Use welding processes and filler metal compatible with material being welded. Do not use carbon arc welding on surfaces that will be exposed to view in finished work.

2. Grind exposed welds flush with adjacent material; finish and polish to match adjacent surface.

a. Avoid excessive heating of metal and metal discoloration.

b. When grinding, use iron-free abrasives, wheels, and belts that have not been used on carbon-steel.

c. Remove pits, runs, sputter, cracks, low spots, voids, buckles, and other imperfections.

d. Remove grain of rough grinding by several successively finer polishings until specified finish is attained.

3. When welding sheet, penetrate entire thickness for entire length of joint; make joints flat, continuous and homogeneous with sheet metal without reliance on straps under seams, filling with solder, or spot welding.

4. When stainless steel is joined to dissimilar materials, use stainless steel for fastening devices and welding material.

5. Protection Against Corrosion: Eliminate possibility of corrosion wherever welding occurs on stainless steel, and minimize possibility of carbide precipitation in welding bolts and screws.
6. When welding galvanized steel, thoroughly clean and repair damaged galvanizing and coat welds with polyurethane coating.
7. Where bolts or screws are welded to underside of tops or trim, finish and undepress the exposed side of welds.
8. Coat welds and discolorations that are not exposed to view in finished work with metallic-based paint to prevent the possibility of progressive corrosion of joints, unless welds are ground and polished smooth.

C. Brazing of Copper Tubing to Brass and Bronze Fittings: Use silver solder, and do not braze stainless steel.

PART 3 EXECUTION

3.01 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. Owner shall fully inspect all equipment prior to install for defects and report back to vendor.

C. Verify correct locations of utility connections, floor drains, ventilation connections, and supports.

D. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.02 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using methods recommended by manufacturer for achieving best result for substrate under project conditions.

3.03 INSTALLATION

A. Install in accordance with fabricator's instructions and recommendations, plumb and level and in proper locations, ready for utility connections.

B. Lay out work in advance to prevent damage to building, piping, wiring, or equipment; cut, fit, and patch where necessary; coordinate work with others.

C. Do not cut or fit units in the field; if adjustments are necessary due to inadequate field measurement prior to fabrication, take unit back to shop and perform modifications there.

D. Do not field weld unless absolutely necessary; weld and grind field joints in accordance with specified fabrication procedures.

E. Securely anchor and attach non-mobile or adjustable-leg equipment to walls, floors, or bases with stainless steel bolts.

F. Follow SMACNA (SRM) seismic restraint recommendations for project location.

G. Reinstall existing equipment in same manner as for new.

3.04 ADJUSTING

A. Adjust new and existing equipment to ensure proper operation.

3.05 CLOSEOUT ACTIVITIES

A. Demonstrate operation of foodservice equipment and identify potential operational problems. Contractor shall also demonstrate proper repair techniques to Owner.

3.06 CLEANING

A. Remove masking or protective covering from stainless steel and other finished surfaces.

B. Clean equipment to condition suitable for food preparation use.

3.07 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Date of Substantial Completion.

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and General Provisions of Contract, including General Conditions and other Division 1 Specification Sections, apply to the Work of this Section.

1.02 DESCRIPTION OF WORK

A. The extent of food service equipment provided is indicated on the Drawings and in the equipment schedule of this Section.

B. All food service equipment shall be set in place, ready for final connection to all required plumbing, electrical and ventilating rough-ins.

1.03 RELATED WORK

A. Refer to applicable Sections of Divisions 22, 23 and 26, covering rough-in work necessary for final connections and proper function of equipment provided under this Section.

B. All plumbing fittings and accessories, unless specifically called for in the equipment list, shall be provided under Division 23 specifications. All final plumbing connections shall be performed under Division 23 specifications.

C. All fans and ductwork, including final connections of equipment to such items, shall be provided under the provisions of Division 23 specifications, unless specifically called for in this Section.

D. All electrical devices shall be provided under Division 26 specifications, unless specifically called for in the equipment list, and unless such devices are integral to the equipment item. All final electrical connections shall be performed under Division 26 specifications.

1.04 QUALITY ASSURANCE

A. Food service equipment suppliers shall demonstrate satisfactory evidence of compliance with the following qualifications and conditions:

1. Successful completion of projects of comparable scope for a period of not less than three (3) years.
2. Possess manufacturer's authorization to distribute specified factory produced equipment items.
3. Maintain or have access to readily available stock of repair and replacement parts for factory produced equipment items.
4. Maintain or have access to factory authorized personnel in the metropolitan Washington, D.C. area for repair and maintenance of factory produced equipment.
5. Maintain or have access to fabrication shop complying with National Sanitation Foundation (NSF) requirements for custom fabricated items specified in the equipment list.

B. Standards for Food Service Equipment:

1. NSF Standards: Comply with applicable NSF standards and recommended criteria. All food service equipment shall bear the NSF Seal of Approval.
2. U.L. Labels: Provide U.L. labels on those equipment items possessing prime electrical components. Provide U.L. Recognized Marking on other items with electrical components, signifying U.L. listing.
3. ANSI Standards: Comply with applicable ANSI standards (ANSI Z21; B57.1, A40.6 and A40.4).
4. Comply with the National Electrical Code, latest adopted edition, and with NFPA No. 96 for exhaust system equipment.

5. ASME Boiler Code: For steam generating and steam heated equipment, comply with applicable ASME requirements, including inspections, stamps and equipment registration with the National Board.
6. American Gas Association Laboratories: Comply with applicable AGA standards and recommendations for gas-fired equipment.

1.05 SUBMITTALS

A. Product Data: Submit manufacturer's product specifications and installation instructions for each item. Include the following:
   1. Elevations of equipment showing rough-in dimensions, equipment size, and locations of service connections.
   2. Types of service connections and utility requirements.
   3. Performance characteristics.

B. Shop Drawing Submittals: Submit plans, elevations, sections and details of custom fabricated items and of assembled units made up of manufactured equipment. Submit rough-in plan showing required services and connections by size and locations.

C. Samples: Submit samples of exposed finishes for both manufactured and custom fabricated equipment.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store food service equipment in undamaged condition, in original packaging, protected from weather, construction hazards, and unauthorized access.

B. Wrapping and protective coverings shall remain on all items until ready for final placement. Stainless steel equipment shall remain covered until installation is complete.

1.07 EQUIPMENT DEMONSTRATION

A. Subsequent to final connection, provide demonstration of operable equipment to Owner’s food service personnel. Demonstration shall be conducted by equipment manufacturer’s authorized representative in order to ensure proper and safe function and operation.

1.08 OPERATION AND MAINTENANCE DATA

A. Comply with Division 0 requirements for operation and maintenance manuals.

1.09 WARRANTIES

A. All manufactured and custom fabricated food service equipment shall be warranted against defects in workmanship for a period of two (2) years. Parts shall be warranted for a minimum period of two (2) years. List each item of equipment along with the authorized service agency. Refer to food service equipment list for additional warranties.

B. PGCPS Authorized Service Agencies:
   1. Electric Motor Repair, Company (EMR)
   2. Ocean Air Refrigeration

PART 2 - PRODUCTS

2.01 APPROVED VENDORS

A. PGCPS PREAPPROVED VENDORS: (NO SUBSTITUTION IS ALLOWED; UNLESS THE EQUIPMENT SAYS APPROVED EQUAL). All approved equal items shall be considered as pre-bid approved vendor(s);
   1. Ashland Equipment

2. American Energy
3. Acme Paper (Milk Coolers)
4. Sam Tell and Sons (Utility Carts)

2.02 MATERIALS

A. Metals:

1. AISI type 302/304, hardest workable temper; No. 4 directional polish.
2. Galvanized Steel Sheet: ASTM A 526, except ASTM A 527 for extensive forming; ASTM A 525, G90 zinc coating, chemical treatment.
    a. Where painted finish is indicated, provide mill phosphatized treatment in lieu of chemical treatment.
3. Steel Sheet: ASTM A 569 hot-rolled carbon steel.
4. Galvanized Steel Pipe: ASTM A 53 or ASTM A 120, welded or seamless, Schedule 40, galvanized.
5. Steel Structural Members: Hot-rolled or cold formed, carbon steel (unless stainless steel is indicated).
6. Galvanized Finish: ASTM A 123, apply after fabrication.
7. Aluminum: ASTM B 209/B221 sheet, plate and extrusions as indicated. Alloy, temper and finish: 0.40 mill natural anodized finish unless indicated otherwise.

B. Plastic Laminate:

1. NEMA LD3 general purpose, high-pressure type, minimum 0.05" thick, except 0.042" for post-forming, non textured. Color: As selected by Architect. Comply with NSF No. 35 where applicable.

C. Insulation:

1. Cooling component type: Rigid, closed cell polyurethane foam; slab stock for adhesive lamination with face sheets, or foamed in place. K- value = 0.15 maximum.
2. Heating component type: Rigid board, semi-rigid blanket of glass fiber or mineral fiber insulation, certified for long term heat exposure without deterioration; K-value = 0.30 maximum.

D. Joint Materials:

1. Sealants: One-part polyurethane or silicone based liquid elastomeric sealant complying with FS TT-S-00277 or FS-TT-S-00230; non-solvent release type, mildew-resistant, Shore A hardness of 45 minimum.
2. Backer Rod: Polyethylene rod stock, diameter larger than width of joint.
3. Gaskets: Solid or hollow (not cellular) neoprene or PVC; shore A hardness of 40 minimum, self-adhesive or designed for adhesive application or mechanical anchoring.

E. Paints and coatings:

1. Painting and coating materials shall be suitable and approved for use in conjunction with food service operations; durable, non-toxic, non-dusting and non-flaking, mildew-resistant, complying with USDA and NSF recommendations for food service.
2. Colors: As selected by Architect from manufacturers full range of standard colors.

2.03 FABRICATED EQUIPMENT

A. General: Provide manufacturers' standard equipment, except as modified; in no case shall compliance be less than the standards of ANSI A156.9 (BHMA Standard 201), Type 2 Institutional; satin finish stainless

steel or dull chrome finish.

B. Plumbing Fittings, Trim and Accessories: Where exposed or semi-exposed to view, provide bright chrome-plated brass or polished stainless steel units. Where not exposed to view, provide copper or brass.

1. Vacuum Breakers: Provide with food service equipment, including locations where water outlets are outfitted with hose attachment.
2. Water outlets: Include manual shut-off valves and connecting stem pipes to permit outlet servicing without shutdown of water piping supply systems.

C. Electrical Materials:

1. Controls and Signals: Provided commercial grade signals, "on-off" push buttons or switches, speed and temperature controls, pilot lights, graphics, etc., for items as indicated, complete with steel cover plates.
2. Connections: Equip electrically operated items with either a terminal box for permanent connection, or standard gray grounded cord and plug for interruptible connection, based upon equipment specification. Coordinate with Division 16 for correct electrical rough-ins and matching receptacles.
3. Motors: Enclosed type, except drip-proof type where not exposed to dust or moisture. Windings shall be impregnated to resist moisture. Provide proper horsepower and duty-cycle ratings for the service required.
4. Nameplates: Locate nameplates and labels in accessible location, out of customer view where possible. Custom fabricated items require only those labels required to indicate compliance with regulations or performance.

2.04 METALWORK FABRICATION

A. General Requirements: Remove burrs from cut edges of metal, ease corners and make smooth to eliminate cutting hazard. Bend metal sheets at not less than minimum radius required to avoid grain separation. Maintain flat, smooth surfaces.

B. Reinforce metal at locations of hardware, anchorages, and accessory attachment, where metal is of less than 14 gauge, or mortised condition exists. Conceal reinforcement.

C. Fastenings: Machine screws capped with acorn nuts unless fully concealed. Provide nuts and lockwashers unless metal to be fastened is at least 12 gauge. Fastener heads and nuts shall be of the same alloy as the metal to be fastened.

D. Welding: Arc-weld fabricated items using stainless steel electrodes. Welds to be free of pits and flaws, peened to remove flux, and ground smooth.

1. Where components of metal work are to be galvanized, and involve welding or machining of minimum 16 gauge metal, hot-dip galvanize such components subsequent to fabrication to the greatest extent possible. Comply with applicable requirements of ASTM A 123.

E. Provide removable panels for access to concealed mechanical and electrical service connections, where such connections are not otherwise accessible.

F. Minimum metal gauges: Except as otherwise specified, fabricate exposed metal work of stainless steel, and of the following gauges; in no case shall metal be less than 20 gauge:

1. Table tops: 14 gauge
2. Table frames: 1 5/8" O. D. tubing
3. Counter tops: 14 gauge

4. Shelves: 16 gauge, except 18 gauge if less than 12 wide
5. Front Drawer/Door Panels: 18 gauge, double pan type
6. Single pan Doors and Drawer Fronts: 16 gauge
7. Enclosed base cabinets: 18 gauge
8. Enclosed wall cabinets: 18 gauge
9. Sinks and drainboards: 14 gauge
10. Sink compartment covers: 16 gauge
11. Exhaust Hoods: 18 gauge
12. Pan type Insets and Trays: 16 gauge
13. Removable covers and panels: 18 gauge
14. Skirts/Enclosure panels: 18 gauge
15. Closures and trim strips: 18 gauge
16. Hardware reinforcement: 12 gauge
17. Gusset plates: 10 gauge
18. Tray Slide: 14 gauge

G. Work Surfaces: Fabricate to provide seamless construction, ground and polished. Reinforce work surfaces 30" o. c. both ways. Reinforce edges not self-reinforced by forming. Sound-deaden the underside of work surfaces, including sinks.

H. Structural Framing: Except as otherwise specified, provide framing of minimum 1" round pipe or tube, with mitered and welded joints and gusset plates, ground smooth. Use stainless steel tube for exposed framing and galvanized steel tube for concealed areas.

I. Shop Painting: Clean and prepare metal surfaces to be painted; remove rust and dirt. Apply treatment to zinc-coated surfaces that have not been mill• phosphatized. Coat welded and abraded areas of zinc-coated surfaces with galvanized touch-up paint.

PART 3 - EXECUTION

3.01 INSPECTION AND PREPARATION

A. Rough-in Work: Food Service Equipment Drawings are diagrammatic. Coordinate with General Contractor for the following field conditions:

1. Types and locations of roughed-in utilities and direct utility connections designed to serve specified equipment.
2. Conditions of floor, wall, column and ceiling installations that may affect placement of specified equipment.
3. Dimensions and clearances affecting correct placement of specified equipment.

B. Notify Architect and Owner’s Representative in writing of any deficiencies and discrepancies that would affect final placement, utility connection, and proper operation of specified equipment. Do not proceed with fabrication and placement until such conditions have been corrected, or until request for corrective changes have been submitted, reviewed and approved by the Architect and Owner’s Representative.

3.02 INSTALLATION

A. Set each item of equipment securely in place, ready for final utility connection, leveled and adjusted to correct height. Anchor where indicated and required for sustained operation and use without shifting.

Conceal anchorages. Adjust counter tops and other work surfaces to a level tolerance of 1/16" maximum offset, and maximum variation from level or specified slope of 1/16" per foot.

B. Work Surfaces: Fabricate to provide seamless construction, ground and polished. Reinforce work surfaces 30" o. c. both ways. Reinforce edges not self-reinforced by forming. Sound-deaden the underside of work surfaces, including sinks.

C. Complete field assembly of those joints that cannot be shop fabricated.

D. Where conditions require submerged water inlets, equip plumbing fixtures with a vacuum breaker and check valve (See Division 23).

E. Treat enclosed spaces that are inaccessible after installation with powdered borax at a rate of 4 ounces per square foot on horizontal spaces.

F. Install closure plates and trim strips where required.

G. Install sealants and gaskets all around each unit to make joints airtight, waterproof, vermin-proof, and sanitary for cleaning purposes. Provide sealant filled (rod backed) or gasketed joints where joints are 3/4" or less; provide metal closures for wider joints, with sealant each side of strip. At internal corner joints, apply sealant or gaskets to form a sanitary cove, of not less than 3/8" radius.

3.03 CLEANING AND REPAIR OF FINISHES

A. After completion of installation, and completion of other major work in food service area, remove protective coverings and thoroughly clean equipment inside and out. Restore exposed and semi-exposed finished where abraided or otherwise damaged; polish exposed metal surfaces and touch-up painted surfaces. Any work that cannot be restored to a smooth, even finish shall be replaced.

3.04 START-UP, TESTING, INSTRUCTION AND DEMONSTRATION

A. Do not start-up or test food service equipment until utility service lines have been tested, balanced and adjusted for pressure, voltage and similar performance characteristics. Water and steam lines shall be clean and sanitation treated prior to start-up and testing.

B. Test each item of operational equipment in the presence of the Owners Representative, to demonstrate proper performance and to show that controls and safety devices are functioning correctly. Provide burn-in time for all equipment as required by equipment manufacturer. Repair or replace equipment that is found to be defective, including items, which are below capacity or operating with excessive noise or vibration. Start-up and re-test or test repaired or replaced equipment.

C. Instruct Owners' operating personnel in proper operating and maintenance procedures for each item of operational equipment.

1. Contractor shall provide Owner a minimum of twenty (20) hours of training on equipment at the conclusion of installation of all kitchen equipment.

2. Contractor shall provide Owner a minimum of thirty-six (36) hours of training on all combination ovens, refrigeration, and exhaust equipment at the conclusion of install.

3.05 FINAL CLEANING

A. After testing and start-up, and prior to Owner acceptance, clean and sanitize all food service equipment, and leave in condition ready for operation by Owners' food service personnel.

END OF SECTION

SECTION 11 5119
BOOK THEFT PROTECTION EQUIPMENT

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes library security system.

B. Related Section include the following:

1. Division 26 Sections for electrical service.

1.02 SUBMITTALS

A. Product Data: For each type of product indicated. Include manufacturer's standard details and installation and maintenance instructions.

B. Shop Drawings: Include plans, elevations, and details of typical members and other components. Show layout and installation details, including anchorage details.

1. Wiring Diagrams: Detail wiring for control equipment operator, signal, and control systems and differentiate between manufacturer-installed and field-installed wiring. Show locations of connections to electrical service provided in other Sections.

C. Maintenance Data: For library security system components to include in maintenance manuals.

1.03 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced installer who is an authorized representative of the library security system manufacturer for both installation and maintenance of the type of units required for this Project, and who installations have resulted in construction with a record of successful in-service performance.

B. Source Limitations: Obtain library security control equipment through one source from a single manufacturer.

C. Product Options: Specifications indicate basis of design product for establishing aesthetic and performance requirements. Aesthetic effects are dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Performance characteristics are criteria subject to verification by one or more methods including preconstruction testing, field testing, and in-service performance. Refer to Division 1 Section "Product Requirements."

1. Do not modify intended aesthetic effects or performance characteristics, as judges solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.

D. Listing and Labeling: Provide internal electrical components required as part of library security system specified in this Section that are UL-listed and labeled.

E. Regulatory Requirements: Comply with the Americans with Disabilities Act Accessibility Guidelines.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. In other Part 2 articles where subparagraph titles below introduce lists, the following requirements apply for product selection:

1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the products specified.

2.02 LIBRARY SECURITY SYSTEM

A. Detection System: Single-corridor system with audible and visible alarms; 43-inch-wide aisles; mounted directly to floor, complete with all magnetic media; with 10-foot power cord complying with the following requirements:

1. Connecting cables buried in concrete floor.
2. Remote digital electronics.
3. Very low frequency system.
4. Adjustable height detection zone.
5. Keyed on/off switch.
6. Provide a remote re-set switch at the circulation desk.
7. Available Products: 3M Library Systems; Detection System Model 3501.

B. Accessories: Provide the following:

1. Desensitizer Unit for Print Material: Desktop unit for desensitizing security strips on nonmagnetic materials.
    a. Available Product: 3M Library Systems; Model 930.
2. Book Check Unit: Desensitizes or resensitizes security strips on nonmagnetic materials.
    a. Available Product: 3M Library Systems; Model 955.
3. Desensitizer and Resensitizer Unit for Non-print Materials: Desensitizes and resensitizes security strips on videocassettes, DVDs, and CDs without removing from cases.
4. Provide the following security strips:
    a. For Hardcover Books: 4 cases of 5,000 strips per case.
    b. For Periodicals: 1 case of 5,000 strips.
    c. For CDs, CD-ROMs, and Single-sided DVDs: 1 case of 1,000 strips.
    d. For Videocassettes: 1 case of 1,000 strips.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas to receive library security system equipment, with Installer present, for conditions affecting performance. Verify that critical dimensions are correct and conditions are acceptable. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. General: Install library security system equipment according to manufacturer’s written instructions and shop drawings.

3.03 CLEANING AND PROTECTION

A. Clean finished surfaces after completing installation.

B. Provide final protection and maintain conditions in a manner acceptable to manufacturer and Installer, that ensure library security system equipment is without damage or deterioration at the time of Substantial Completion.

3.04 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain library security system. Train personnel on procedures to follow if operation fails or malfunctions.

B. Refer to Division 1 Section "Closeout Procedures."

END OF SECTION

SECTION 11 5123
LIBRARY STACK SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes the following types of library stack shelving systems:

1. Wood end and intermediate panels; steel shelves.

1.02 SUBMITTALS

A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for library stack systems and accessories specified.

B. Shop Drawings: Show fabrication and installation details for library stack systems and methods of anchoring to building structure. Include clear aisle widths from face of units.

C. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.

1. Size: 6 inches square.

D. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each type of steel bracket shelving used.

E. LEED Submittals:

1. Credit EQ 4.1: Manufacturers' product data for installation adhesives, including printed statement of VOC content.
2. Credit EQ 4.4:
    a. Composite wood manufacturer's product data for each composite wood product used indicating that the bonding agent contains no urea formaldehyde.
    b. Adhesive manufacturer's product data for each adhesive used indicating that the adhesive contains no urea formaldehyde.
3. Credit MR 4: Recycled content data designating percentages of post-consumer and post-industrial material.
    a. Include statement indicating costs for each product having recycled content.
4. Credit MR 7 (Alternate Bid): Certificates of chain-of-custody signed by manufacturers certifying that products specified to be made from certified wood were made from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC 1.2, "Principles and Criteria." Include evidence that mill is certified for chain-of-custody by an FSC-accredited certification body.
5. Credit MR 5.1 and 5.2:
    a. Include statement indicating cost and distance from manufacturer to Project for each regionally manufactured material.
6. Include statement indicating cost and distance from point of extraction, harvest, or recovery to Project for each raw material used in regionally manufactured materials.

F. Maintenance Data: For library stack systems to include in maintenance manuals.

G. Warranty: Special warranty specified in this Section.

1.03 QUALITY ASSURANCE

A. Installer Qualifications: An employer of workers trained and approved by manufacturer for installation of units required for this Project.

B. Source Limitations: Obtain library stack systems through one source from a single manufacturer.

C. Product Options: Drawings indicate size, profiles, and dimensional requirements of library stack systems and are based on the specific system indicated. Refer to Division 1 Section "Product Requirements."

1. Do not modify requirements, as judged solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.

D. Forest Certification: Provide wood made from forests certified by an FSC□accredited certification body. All non□FSC wood in assemblies with FSC□certified wood shall meet the FSC Controlled Wood (CW) criteria.

1.04 PROJECT CONDITIONS

A. Field Measurements: Indicate measurements on Shop Drawings.

1.05 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of library stack system that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Deterioration of metals, metal finishes, and other materials beyond normal wear.

2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 STEEL MATERIALS

A. Steel Sheet: Uncoated, cold-rolled, steel sheet substrate complying with ASTM A 1008, Commercial Steel (CS), exposed.

2.02 WOOD MATERIALS

A. Solid Wood: Clear hardwood lumber, selected for compatible grain and color.

1. Wood Species and Veneer Cut: Northern Grown Hard Maple.

B. Veneer-Faced Panels: HPVA HP-1, with face veneer of species indicated, with Grade A faces, urea-formaldehyde free.

1. Wood Species and Veneer Cut: Northern Grown Hard Maple.

C. High-Pressure Decorative Laminate (Work Surfaces): NEMA LD 3, Grade HGL, urea-formaldehyde free.

1. Colors, Textures, and Patterns: As selected by Architect from manufacturer's full range.

2.03 WOOD CASE SHELVING

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Community.

2. Brodart Co.; Contract Library Furniture Division.

3. Jasper Library.

4. Library Bureau; a ModuForm Company.

5. Worden Company (The).

B. Wood Case Library Shelving: Shelving designed for library use and consisting of full end, top, and back panels, with end panels made to receive pins to support adjustable shelves.

1. Configuration: Starter/adder units.

C. Vertical Panels: Panels consisting of solid hardwood boards glued together, 3/4 inch thick, or urea-formaldehyde free veneer panels, 5 ply, 1-inch thick, with 1/4-inch solid-wood banding. Provide 2 rows of holes at 1-1/4-inch intervals for 5/16-inch shelf support pins on 1 side of end panels and both sides of intermediate panels.

D. Base Frames: Solid hardwood toe kick, back rail, and 2 end cleats, 3 to 4 inches high, designed to support bottom shelf and fabricated to attach and tie together vertical panels.

E. Steel Shelves: Manufacturer's standard 0.048-inch- thick, cold-rolled steel shelves.

F. Back and Divider Panels: Urea-formaldehyde free veneer-faced panels, 0.25 inch thick.

G. Bookstack Units:

1. Type: Single-faced units as indicated.
2. Width: 36 inches, unless indicated otherwise on Drawings.
3. Height: 30, 42, and 63 inches as indicated.
4. Number of Shelves: As indicated on Drawings.
5. Shelf Depth: 12 inches nominal; 24 inch nominal for picture and big books.
6. Shelf Styles: As indicated, including the following:
    a. Flat.
    b. Picture books.
    c. Big books.

2.04 ACCESSORIES

A. Shelf Label Holders: Clear plastic, 5 inches long, designed to snap over adjustable shelves.

1. Provide one per shelf.

2.05 STRUCTURAL SUPPORT

A. Floor Anchorage: Galvanized steel, post-installed expansion anchors or power-actuated fasteners. Provide number per unit recommended by manufacturer.

B. Wall Anchorage: Manufacturer's standard, galvanized steel anchor designed to secure shelving to adjacent wall. Provide one per shelving unit for each shelving unit adjacent to a wall.

2.06 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating metal finishes.

B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.07 STEEL FINISHES

A. Baked-Enamel/Powder-Coated Finish: Immediately after cleaning and pretreating, apply manufacturer's standard baked-on finish. Comply with coating manufacturer's written instructions for applying and baking.

1. Color and Gloss: As selected by Architect from manufacturer's full range.

2.08 WOOD FINISHES

A. Preparation: Sand shelving units after assembling for uniform smoothness at least equivalent to that produced by 220-grit sanding and without machine marks, cross sanding, or other surface blemishes.

B. Staining: Remove fibers and dust and apply wash-coat sealer and stain to exposed and semiexposed surfaces as required to provide uniform color and to match approved samples.

C. Finishing: Apply manufacturer's standard, baked, clear finish consisting of a sealer and a conversion varnish or nitrocellulous lacquer topcoat. Sand and wipe clean between applications of sealer and topcoat.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine conditions, with Installer present, for conditions affecting performance of library stack systems.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Vacuum finished floor over which shelving is to be installed.

3.03 INSTALLATION, GENERAL

A. Install library stack systems according to manufacturer's written instructions.

B. Level bookstack units with integral adjustable leveling devices to a tolerance of 1/8 inch in 96 inches for level and plumb.

C. Install the following with concealed fasteners:

1. End panels.
2. Canopy tops.
3. Countertops.

D. Install shelves at spacing indicated or, if not indicated, at equal spacing in each unit.

END OF SECTION

SECTION 11 5215
INTERACTIVE WHITEBOARDS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Interactive whiteboards/markerboards.

1.02 RELATED REQUIREMENTS

A. Section 06 1000: Rough Carpentry

B. Section 09 2116: Gypsum Board Assemblies

C. Section 09 2216: Non-Structural Metal Framing

D. Section 26 0530: Conduits, Raceways, Fitting and Cable Trays

E. Section 26 0537: Wire, Cable and Connectors

F. Section 27 0500: LAN Wiring Specifications

1.03 REFERENCE STANDARDS

A. ANSI A135.4 – American Standard for Basic Hard Board; 2012

B. ASTM C1396/C1396M – Standard Specification for Gypsum Board; 2017

C. ASTM E84 – Standard Test Methods for Surface Burning Characteristics of Building Materials; 2018b

D. PS 1 – Structural Plywood; 2009.

E. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

F. UL (DIR) - Online Certifications Directory Current Edition.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Conduct a preinstallation meeting one week prior to the start of the work of this section; require attendance by all affected installers.

B. Sequencing: Ensure that utility connections are achieved in an orderly and expeditious manner.

C. The work covered by this section of the specifications shall include all material, labor, hardware, software, firmware and programming to install interactive whiteboards as described herein and shown on the drawings.

D. System shall utilize PGCPS shared data network, and not require the use of any proprietary switches, routers or other network components. Physical network connections shall be provided by PGCPS' specified contractor.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate wall elevations, dimensions, joint locations, special anchoring details.

C. Cut sheets: indication specific manufactures information on software, model and accessories (mobile stand, pens, remote, etc.).

D. Manufacturer’s printed installation instructions and quality statement.

E. Installer's Qualification Statement.

F. Maintenance Contracts.

G. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

H. Project Record Documents: Record actual locations of all boards locations and model numbers.

I. Software: Copy of software provided under this section.

J. Maintenance Materials: Furnish the following for Owner's use in the maintenance of project:

1. Extra Stock Materials: Provide 5% attic stock of equipment or replacement bulbs, fuses, etc. for all equipment provided under this section.

2. Tools: One each of every special tool required for maintenance of specified equipment.
3. Maintenance Data: Include data on regular upkeep cleaning, thorough cleaning, removing permanent marker ink, sensor cleaning, etc.

1.06 **QUALITY ASSURANCE**

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with at least five years of documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least five years of documented experience.

C. Copies of Documents at Project Site: Maintain at the project site a copy of each referenced document that prescribes execution requirements.

D. Testing and Certification: Interactive display provider must invest in accelerated life testing (ALT) to demonstrate expected failure rate, life of the product and make design changes to mitigate risk

1.07 **MOCK-UP**

A. See Section 01 4000 - Quality Requirements for additional requirements.

B. Locate where directed.

C. Mock-up may remain as part of the Work.

1.08 **DELIVERY, STORAGE, AND HANDLING**

A. Deliver products to project site in factory packaging.

1.09 **WARRANTY**

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a five year period after Date of Substantial Completion.

C. Provide five year manufacturer warranty for warranty against pixilation; backlight power issues, general electrical defects, or manufacturer’s defects, etc.

D. Warranty upgrade: Three (3) year upgrade to onsite support with remote support.

E. Provide one-year warranty for floor stands, speakers, and mobile stands from date of purchase.

PART 2 PRODUCTS

2.01 **MANUFACTURERS**

A. Boxlight (www.boxlight.com).

B. Smart (www.smarttech.com).

C. Viewsonic (www.viewsonic.com).

2.02 **EQUIPMENT REQUIREMENTS**

A. Basis of Design Manufacturer: reference BOD.

B. General:
1. At a minimum, interactive display models must be available with a 75-inch screen size (diagonal).
2. Board/Panel can function without a supplementary device (laptop, tablet) Runs an independent operating system preferably Microsoft Windows
3. Must be a Stand-alone panel
4. Board can be mobile on cart or mounted to wall/structure
5. Unit shall carry Energy Star certification
6. Display must integrate with other products from the display provider, including software, document cameras, speakers and classroom audio systems
7. Unit shall be provided with all required cables including USB, HDMI, power, audio, etc.
8. Must feature 4K UHD (ultra-high definition) resolution as well ass support 4K UHD 60Hz digital input.

C. Performance:
1. Units shall be equipped with the following:
   a. Wired ethernet and wireless internet connection
   b. Bluetooth connection

c. Auxiliary remote control
d. Ease of connection and display with PC, Apple and Android devices
e. HDMI connections
f. Interactive pens or other tools including ability to draw or activate features by finger
g. Automatic software updates for ease of function
h. Touch screen
i. Video conferencing
j. Integrated speaker system and ability to output audio through external speakers
k. Memory and Storage capabilities (including storage to Google Drive)

D. Information Technology Hardware and Software Requirements
1. Prouduct must be capable of running an independent Operating System (i.e. - Chrome OS).
2. Shall have ability to connect to a hardwired network via ethernet port.
3. Software shall have ability to support enterprise wireless - 802.11x
4. Unit shall support user installed SSL certificates.
5. Unit shall have a minimum of three (3) USB inputs.
6. Unit shall have two (2) HDMI inputs.
7. Unit shall have one (1) 3.5 mm audio input.
8. Unit shall have one (1) 3.5 mm audio output.
9. Corded power cable connection only; no hard wired equipment.

E. Mounting Carts
1. Legs on mobile stand shall not be tripping hazard.
2. Owner preferred option: shelving below board.
3. Mounting carts shall be adjustable such that unit height should be easily adjustable for variable student heights.

2.03 **SOURCE QUALITY CONTROL**

A. See Section 01 4000 - Quality Requirements, for additional requirements.

B. Non-Complying Work: See Section 01 4000 - Quality Requirements.

PART 3 EXECUTION

3.01 **INSTALLATION**

A. Install in accordance with manufacturer's instructions.

B. Examine the areas and conditions under which work of this Section will be performed. Correct conditions detrimental to timely and proper completion of the Work. Do not proceed until unsatisfactory conditions are corrected.
1. Verify that internal wall blocking is ready to receive work and positioning dimensions are as indicated on shop drawings.
2. Verify flat wall surface

C. Refer to educational specifications for mounting heights of boards in classrooms.

D. Systems Integration:
1. All connections to PGCPS network shall be done in accordance with Section 27 0500 - LAN Wiring Specifications.
2. Verify in field that equipment is installed plum and level.
3. Mounting system shall include all necessary accessories and devices for complete installation and operation. Finch/color shall be coordinated with the architect. Ensure all equipment is hung on manufacturer approved brackets, etc. according to equipment weights. All connections to walls shall be coordinated with wall types outlined in architectural drawings.
4. Connection ports shall be coordinated with in-school staff and PGCPS Information Technology.

3.02 **CLEANING**

A. Clean board surfaces in accordance with manufacturer's instructions.

B. Cover with protective cover, taped to frame.

C. Remove temporary protective cover at Date of Substantial Completion.

3.03 **CLOSEOUT ACTIVITIES**

A. See Section 01 7800 - Closeout Submittals, for closeout submittals.

B. See Section 01 7900 - Demonstration and Training, for additional requirements.

C. Demonstration: Demonstrate operation of system to Owner's personnel.
   1. Use operation and maintenance data as reference during demonstration.
   2. Briefly describe function, operation, and maintenance of each component.

D. Training: Train Owner's personnel on operation and maintenance of system.
   1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
   2. Provide minimum of two hours of training.
   3. Instructor: Manufacturer's training personnel.
   4. Location: At project site.

3.04 **PROTECTION**

3.05 **MAINTENANCE**

A. See Section 01 7000 - Execution and Closeout Requirements, for additional requirements relating to maintenance service.

B. Provide a separate maintenance contract for specified maintenance service.

END OF SECTION

SECTION 11 5300
LABORATORY EQUIPMENT

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Contractor-furnished laboratory equipment including CFOI equipment installed by Owner.

B. Installation of Contractor-furnished (CFCI) equipment.

C. Installation of Owner-furnished (OFCI) equipment.

D. Coordination with Owner-furnished Owner-installed (OFOI) equipment.

1.02 REFERENCE STANDARDS

A. NEMA MG 1 - Motors and Generators 2017.

B. SMACNA (SRM) - Seismic Restraint Manual Guidelines for Mechanical Systems 2008.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate installation of laboratory equipment with laboratory casework and Owner-furnished, Owner-installed laboratory equipment.

B. Preinstallation Meeting: Convene one week before starting work of this section.

C. Sequencing: Ensure that utility connections are achieved in an orderly and expeditious manner.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide equipment dimensions and construction; equipment capacities; physical dimensions; utility and service requirements, clearances, and locations; required accessories and optional features; point loads.

C. Shop Drawings: Indicate equipment locations, large scale plans, elevations, cross sections, rough-in and anchor placement dimensions and tolerances, installation and servicing clearances required.

D. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

E. Manufacturer's Qualification Statement.

F. Installer's Qualification Statement.

G. Operation Data: Include description of equipment operation and required adjusting and testing.

H. Maintenance Data: Identify system maintenance requirements, servicing cycles, lubrication types required and local spare part sources.

I. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

J. Project Record Documents: Record actual locations of concealed utility connections.

1.05 QUALITY ASSURANCE

A. Manufacturer: Company specializing in manufacturing the types of products specified in this section, with minimum three years of documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified and with minimum three years of documented experience and approved by manufacturer.

C. Preconstruction Testing: Factory-test each type of equipment.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Package each piece of equipment to ensure protection from damage during shipment and delivery. Legibly indicate on the exterior of each container or crate, the shipping address and a brief description of its contents. Outside of the container, fasten a waterproof envelope containing a packing list and complete instructions for uncrating and setting the equipment in place.

B. Protect finished surfaces during handling and installation with protective covering of polyethylene film or another suitable material.

1.07 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a two year period after Date of Substantial Completion.

C. Provide ten year manufacturer warranty for materials, parts, and labor for sterilizer chamber.

PART 2 PRODUCTS

2.01 REGULATORY REQUIREMENTS

A. Comply with applicable codes for all equipment.

B. Comply with UL requirements for fabrication and installation of all equipment.

2.02 EQUIPMENT

A. Each item energized by a single switch.

B. Prewire and prepipe each unit of equipment complete with trim and fittings. Include reduced pressure or atmospheric type backflow preventer fitting to prevent backflow of polluted water or waste into water supply system or equipment. Comply with applicable code requirements.

C. Affix a securely attached plate which includes the manufacturer's name, address, and catalog or serial number to each equipment item. If applicable, include pressure vessels bearing the ASME stamp and pressure rating, indicating compliance with applicable code requirements.

D. Installation Accessories: Provide all rough-in frames, anchors, supports, accessories and closure trim required for complete installation.

E. Use corrosion-resistant materials for all rivets, bolts, nuts, studs, spacers, and welding metal.

F. Fully assemble equipment in factory, except for those items which cannot be moved to their final locations as single item due to new construction space restrictions.

2.03 STERILIZERS

A. Sterilizer: (CFCI) Medium scientific sterilizer.

1. General: High-performance sterilizer (autoclave) specifically designed for sterilizing or decontaminating laboratory items of many sizes and types, with programmable treatment options.
    a. UL listed and/or approved electrical devices and components, bearing NEMA MG 1, IEC or other recognized International ratings, as appropriate for the use intended. Low-voltage DC outputs external to the electrical box.
2. Cabinet Enclosure: Yes.
3. Mounting: On floor, free-standing.
4. Chamber Interior Dimensions: 26 inches wide by 26 inches high by 39 inches front-to-back (660 mm wide by 660 mm high by 991 mm front-to-back).
5. Doors: Number, type, and construction indicated.
6. Operator Controls: Digital type, with touch screen controls and multi-level menus.

7. Control and Monitoring System: Controller, gauges, and wiring.
8. Personnel Safety: Design units to integrate personnel safety features typical to the industry including, but not limited to:
9. Utility Requirements:
    a. Steam: 1 inch NPS FPT (25 mm DN); 50-80 psi (345-551 kPa); 255 pounds per hour (116 kg per hour) maximum flow ,and 148 pounds per hour (67 kg per hour) average flow. Condensate free, and 97 percent to 100 percent vapor quality.
    b. Condensate: 1 inch NPS FPT (25 mm DN).
    c. Hot Water: 1 1/2 inch NPS FPT (40 mm DN); 35 psi (241 kPa); 120-180 degrees F (48.9-82.2 degrees C); 200 gallons per load (757 liters per load) maximum.
    d. Drain Outlet: 2 inch NPS FPT (50 mm DN); 140 degrees F (60 degrees C) maximum; 120 GPM (454 l/min) maximum.
    e. Exhaust: 12 inches (305 mm) diameter; 600 CFM (17 m^3/min); 180 degrees F (82.2 degrees C), saturated.
    f. Compressed Air: 1/2 inch NPS FPT (15 mm DN); 80 psi (551 kPa); 4 CFM (0.11 cubic m/min).

2.04 GLASSWARE WASHERS

A. Glassware Washer: (CFCI) Undercounter capacity.
    1. General: High-performance commercial-quality washer specifically designed for cleaning laboratory glassware of many sizes and types, with programmable treatment options and controlled intake of chemicals.
    2. Cabinet Enclosure: Yes.
    3. Heating: Steam.
    4. Doors: Number, type, and construction indicated.
        a. Number of Doors: One.
        b. Double-pane tempered glass viewing panel.
        c. Gaskets: Manufacturer's standard for type door specified, manufactured to withstand temperatures and pressures generated.
    5. Interior Illumination: Manufacturer’s standard luminaire(s) located on top of the Washer, complete with electronic ballast, gasketed tempered safety glass diffuser, and using fluorescent lamps.
    6. Washing System: Manufacturer's standard, configured for two-level loading and washing, and rinse-water source options.
    7. Operator Controls: Digital type, with touch screen controls and multi-level menus.
    8. Personnel Safety: Integrated personnel safety features typical to the industry.

2.05 ICE MAKERS

A. Ice Maker: (CFCI) Ice machine(s) and storage bin combination unit.
    1. General: High-performance commercial-quality ice machine and storage bin combo specifically designed for making ice of selected sizes and shapes for laboratory use.
    2. Ice Shape: Cubes.
    3. Production: 24-hour volume of 233 pounds (106 kg).

4. Storage Bin Capacity: 370 pounds (168 kg).
5. Condenser Type: Air-cooled.
6. Mounting: Floor-mounted storage bin on legs with levelers, bin-mounted ice machine, with bin adapter.
7. Ice machine:
    a. Front-located air filter.
    b. Anti-microbial agent protection.
    c. Flush cycle operation for sediment removal.
    d. Controls: Digital.
        1) Status Indication: Showing status of critical equipment operation.
        2) Operational Data Handling: Electronic storage and display.
        3) On/off switch.
        4) Ice/drain switch.
        5) Alarm conditions signaling.
8. Utility Requirements Ranges:
    a. Ambient Air Temperatures: 50 to 100 degrees F (10 to 38 degrees C).
    b. Incoming Water Temperature: 40 to 100 degrees F (4.4 to 38 degrees C).
    c. Electrical Voltage Fluctuation: Minus 5 percent to plus 10 percent.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that utility connections, rough-in frames, anchors and supports are accurately placed and deliver building services at specified characteristics and/or within acceptable functional ranges.

B. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of equipment.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install in accordance with standards required by authority having jurisdiction.

C. Large Components: Ensure that large components can be moved into final position without damage to other construction.

D. Mounting: Anchor equipment securely in place.

1. Mount equipment in compliance with SMACNA (SRM) requirements.

E. Sequence installation to ensure utility connections are achieved in an orderly and expeditious manner, and their locations are coordinated with equipment rough-in requirements.

1. Make connections between ferrous and nonferrous metallic pipe with dielectric waterways and flanges having temperature and pressure rating equal to or greater than that specified for the connecting piping. Use dielectric waterways internally lined with an insulator specifically designed to prevent current flow between dissimilar metals.

F. Touch-up minor damaged surfaces caused during installation. Replace damaged components as directed by Architect .

3.03 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for additional requirements.

B. Provide manufacturer's field representative to inspect all newly installed equipment.

C. Perform functional testing in accordance with referenced specification requirements. Test one item or similar model, as necessary or appropriate, to ensure that it is operational and installation complies with specification requirements.

3.04 ADJUSTING

A. Adjust operating equipment to efficient operation.

3.05 CLOSEOUT ACTIVITIES

A. See Section 01 7800 - Closeout Submittals, for closeout submittals.

B. See Section 01 7900 - Demonstration and Training, for additional requirements.

C. Demonstrate proper operation of equipment to Owner's designated representative.

D. Demonstration: Demonstrate operation of system to Owner's personnel.

1. Use operation and maintenance data as reference during demonstration.
2. Briefly describe function, operation, and maintenance of each component.

E. Final Acceptance: Remove labels, fingerprints, and clean all surfaces both inside and out. Repair any marred or damaged surfaces that affect appearance, such as both interior and exterior of cabinets in a manner acceptable to Owner. Replace any parts that cannot be repaired in such a manner.

3.06 MAINTENANCE

A. See Section 01 7000 - Execution and Closeout Requirements, for additional requirements relating to maintenance service.

END OF SECTION

SECTION 11 5313
LABORATORY FUME HOODS

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes the following:

1. Bench-top laboratory fume hoods.
2. Fume hood base stands with countertops.
3. Laboratory cup sinks in fume hoods.
4. Water, laboratory gas, and electrical service fittings in fume hoods.
5. Piping and wiring within fume hoods for service fittings, light fixtures, blower switches, and other electrical devices.

B. Related Sections include the following:

1. Division 12 Section "Wood Laboratory Casework" for laboratory cabinets, including countertops, sinks, and service fittings.
2. Division 23 Sections for fume hood duct connections, including ducts.
3. Division 22 and 26 Sections for installing service fittings in fume hoods, including piping and wiring within fume hoods, and for other wiring in fume hoods, including connecting light fixtures, blower switches, and other electrical devices.
4. Division 22 and 26 Sections for connecting service utilities at back of fume hoods. Piping and wiring within fume hoods are specified in this Section.

1.02 PERFORMANCE REQUIREMENTS

A. Containment: Provide fume hoods that comply with the following when tested according to ASHRAE 110 as modified below at a release rate of 4.0 L/min.:

1. Average Face Velocity: 100 fpm plus or minus 10 percent with sashes fully open.
2. Face Velocity Variation: Not more than 10 percent of average face velocity.
3. Sash Position: Fully open.
    a. Test hoods with horizontal sashes with maximum opening on one side, with maximum opening in the center, and with one opening at each side equal to half of maximum opening.
    b. Test hoods with combination sashes fully raised, with maximum opening on one side, with maximum opening in the center, and with one opening at each side equal to half of maximum opening.
4. As-Manufactured (AM) Rating: AM 0.10.

B. Static-Pressure Loss: Not more than 3/8-inch wg at 100-fpm) face velocity when tested according to Paragraph 6.4.2.4 in SEFA 1.2, "Laboratory Fume Hoods--Recommended Practices."

1.03 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: For laboratory fume hoods. Include plans, elevations, sections, details, and attachments to other work.

1. Indicate details for anchoring fume hoods to permanent building construction including locations of blocking and other supports.

2. Indicate locations and types of service fittings together with associated service supply connection required.
3. Indicate duct connections, electrical connections, and locations of access panels.
4. Include roughing-in information for mechanical, plumbing, and electrical connections.
5. Show adjacent walls, doors, windows, other building components, laboratory casework, and other laboratory equipment. Indicate clearances from above items.
6. Include coordinated dimensions for laboratory equipment specified in other Sections.

C. Samples for Initial Selection: For factory-applied finishes epoxy sinks.

D. Product Test Reports: Based on evaluation of comprehensive tests according to SEFA 1.2, "Laboratory Fume Hoods--Recommended Practices" and ASHRAE 110 performed by manufacturer and witnessed by a qualified independent testing agency, for fume hoods.

1.04 QUALITY ASSURANCE

A. Source Limitations: Obtain laboratory fume hoods through one source from a single manufacturer.

B. Product Designations: Drawings indicate sizes and configurations of laboratory casework by referencing designated manufacturer's catalog numbers. Unless modified by notation on Drawings, or otherwise specified, catalog description for designated product constitutes requirements for each product and establishes a standard of design and quality for materials, construction and workmanship. Other acceptable manufacturers' laboratory casework of similar sizes, similar door and drawer configurations, and complying with the Specifications will be accepted.

C. Product Standard: Comply with SEFA 1.2, "Laboratory Fume Hoods--Recommended Practices."

D. Safety Glass: Products complying with testing requirements in 16 CFR 1201 for Category II materials.

1. Subject to compliance with requirements, permanently mark safety glass with certification label of Safety Glazing Certification Council or another certification agency acceptable to authorities having jurisdiction.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

F. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Administrative Requirements."

1.05 DELIVERY, STORAGE, AND HANDLING

A. Protect finished surfaces during handling and installation with protective covering of polyethylene film or other suitable material.

1.06 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install fume hoods until building is enclosed, wet work and utility roughing-in are complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

1.07 COORDINATION

A. Coordinate installation of fume hoods with laboratory casework, fume hood exhaust ducts, and plumbing and electrical work.

1.08 EXTRA MATERIALS

A. Furnish complete touchup kit for each type and color of fume hood finish provided. Include fillers, primers, paints, and other materials necessary to perform permanent repairs to damaged fume hood

finish.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Kewaunee Scientific Corporation, Laboratory Products Group; (Basis-of-Design) Product, Model 48 inch wide Supreme Air LV Fume Hood LV05.
2. Fisher Hamilton L.L.C.
3. Campbell Rhea
4. Labconco Corporation.
5. Collegedale Casework, LLC.

2.02 MATERIALS

A. Steel Sheet: Cold-rolled commercial steel sheet, complying with ASTM A 1008/A 1008M; matte finish; suitable for exposed applications.

B. Glass-Fiber-Reinforced Polyester: Polyester laminate complying with ASTM D 4357, with a chemical-resistant gel coat on the exposed face, and having a flame-spread index of 25 or less per ASTM E 84.

C. Epoxy: Factory molded of modified epoxy-resin formulation with smooth, nonspecular finish.

1. Physical Properties:
   a. Flexural Strength: Not less than 10,000 psi.
   b. Modulus of Elasticity: Not less than 2,000,000 psi.
   c. Hardness (Rockwell M): Not less than 100.
   d. Water Absorption (24 Hours): Not more than 0.02 percent.
   e. Heat Distortion Point: Not less than 260 deg F.
2. Flame-Spread Index: 25 or less per ASTM E 84.
3. Chemical Resistance: Epoxy-resin material has the following ratings when tested with indicated reagents according to NEMA LD 3, Test Procedure 3.4.5:
   a. No Effect: Acetic acid (98 percent), acetone, ammonium hydroxide (28 percent), benzene, carbon tetrachloride, dimethyl formamide, ethyl acetate, ethyl alcohol, ethyl ether, methyl alcohol, nitric acid (70 percent), phenol, sulfuric acid (60 percent), and toluene.
   b. Slight Effect: Chromic acid (60 percent) and sodium hydroxide (50 percent).

D. Laminated Safety Glass: ASTM C 1172, Kind LT, Condition A, Type I, Class I, Quality q3 with clear, polyvinyl butyral interlayer.

2.03 CONVENTIONAL FUME HOODS

A. Provide conventional fume hoods without bypass. With sash closed, hood maintains a slight negative pressure to confine fumes.

B. Variable-Air-Volume Control: Equip fume hoods with an electronic control unit with a sensing device that monitors face velocity, and a motorized damper on the exhaust connection that maintains a constant face velocity by controlling air volume in response to control unit. Equip units with manual override switch that opens motorized damper to provide maximum exhaust capacity regardless of sash position.

2.04 FABRICATION

A. General: Preassemble fume hoods in factory to greatest extent possible. Disassemble fume hoods only as necessary for shipping and handling limitations. Fume hoods shall be capable of being partly disassembled as necessary to permit movement through a 35-by-79-inch door opening.

B. Steel Exterior: Fabricate from steel sheet, not less than 0.0478 inch thick, with component parts screwed together to allow removal of end panels, front fascia, and airfoil and to allow access to plumbing lines and service fittings. Apply chemical-resistant finish to interior and exterior surfaces of component parts before assembly.

C. Ends: Fabricate with double-wall end panels without projecting corner posts or other obstructions to interfere with smooth, even airflow. Close area between double walls at front of fume hood and as needed to house sash counterbalance weights, utility lines, and remote-control valves.

D. Interior Lining: Provide the following, unless otherwise indicated:

    1. Glass-fiber-reinforced polyester, not less than 1/4 inch thick.

E. Molded Glass-Fiber-Reinforced Polyester Lining: Molded unit consisting of end panels, back panel, preset rear baffle, and top bonded together into a single piece; reinforced to form a rigid assembly to which exterior is attached.

    1. Punch fume hood lining side panels to receive service fittings and remote controls. Provide removable plug buttons for holes not used for indicated fittings.

F. Exhaust Plenum: Full width of fume hood and with adequate volume to provide uniform airflow from hood, of same material as hood lining, and with duct stub for exhaust connection.

    1. Duct-Stub Material: Epoxy-coated steel, stainless steel, or glass-fiber-reinforced polyester.

G. Sashes: Provide operable sashes of type indicated.

    1. Fabricate from 0.0478-inch- minimum thickness steel sheet, with chemical-resistant finish. Form into four-sided frame with bottom corners welded and finished smooth. Make top member removable for glazing replacement. Set glazing in chemical-resistant, U-shaped gaskets.

    2. Glaze with laminated safety glass, with 3-mm-thick plies.

    3. Counterbalance vertical sliding sash with sash weight and stainless-steel cable system. Provide ball-bearing sheaves, plastic glides in stainless-steel guides, and stainless-steel lift handles. Provide rubber bumpers at top and bottom of each sash unit.

    4. Provide sash opening height of 27 to 30 inches, unless otherwise indicated.

    5. Sash to be self-closing to 18 inches.

H. Provide airfoil at bottom of sash opening to direct airflow across countertop from 1-inch space between airfoil and countertop.

I. Light Fixtures: Provide vaporproof, two-tube, rapid-start, fluorescent light fixtures, of longest practicable length; complete with tubes at each fume hood. Shield tubes from hood interior with 1/4-inch- thick laminated glass or 3-mm-thick tempered glass, sealed into hood with chemical-resistant rubber gaskets. Provide units with fluorescent tubes easily replaceable from outside of fume hood.

    1. Provide fluorescent tubes with color temperature of 3500 K and minimum color-rendering index of 85.

J. Fume Hood Base Stands: Fabricated from 0.0625- and 0.0500-inch-thick furniture grade, cold-rolled steel. Weld frame to form a rigid assembly with pipe chases at one side. The chase end panel is attached with screws and is removable for installation of plumbing and electrical services. Provide a removable enclosure panel at the rear of the base assembly. Finish entire assembly with chemical-resistant finish. Provide leveling device at each corner of base stand at floor.

1. Provide clear floor space not less than required to comply with Americans with Disabilities Act Architectural Guidelines ADAAG.

K. Countertops and Cup Sinks:

1. Resin Countertops: Fabricate with front overhang of 1 inch over base cabinets, continuous drip groove on underside 1/2 inch from edge, and factory cutouts for sinks.

a. Countertop Material: Epoxy composition, uniform throughout full thickness.

2. Cup Sinks: Epoxy, 3-by-6-inch nominal size.

a. Provide with stainless-steel strainers and integral tailpieces.

L. Comply with requirements in Divisions 15 and 16 Sections for installing water and laboratory gas service fittings, piping, electrical devices, and wiring. Install according to Shop Drawings. Securely anchor fittings, piping, and conduit to fume hoods, unless otherwise indicated.

2.05 CHEMICAL-RESISTANT FINISH

A. Preparation: Clean steel surfaces, other than stainless steel, of mill scale, rust, oil, and other contaminants. After cleaning, apply a conversion coating suited to the organic coating to be applied over it.

B. Chemical-Resistant Finish: Immediately after cleaning and pretreating, apply fume hood manufacturer's standard two-coat, chemical-resistant, baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of 2 mils.

1. Chemical and Physical Resistance of Finish System: Finish complies with acceptance levels of cabinet surface finish tests in SEFA 8. Acceptance level for chemical spot test shall be no more than four Level 3 conditions.

2. Colors for Fume Hood Finish: As selected by Architect from manufacturer's full range.

2.06 ACCESSORIES

A. Service Fittings: Comply with requirements in Division 12 Section "Wood Laboratory Casework."

1. Provide service fittings with exposed surfaces, including fittings, escutcheons, and trim, finished with acid- and solvent-resistant, baked-on plastic coating in manufacturer's standard color as approved by Architect.

B. Mobile Flammable Storage Cabinet: Safety cabinet constructed 1-inch, 9-ply high density plywood, finished in standard caution yellow, with “flammable diamonds” on each door and “KEEP FIRE AWAY” in red

C. Airflow Indicator: Provide fume hoods with airflow indicator of the following type:

1. Indicator Type: Direct-reading aneroid (Magnehelic-type) gage that measures fume hood exhaust duct static pressure as an indication of airflow.

2. Indicator Type: Thermal anemometer that measures fume hood face velocity and indicates whether it is below normal, normal, or above normal.

3. Indicator Type: Thermal anemometer that measures fume hood face velocity and displays data as digital readout.

4. Indicator Type: Any indicator type above.

D. Airflow Alarm: Provide fume hoods with audible and visual alarm that activates when airflow sensor reading is outside of preset range.

1. Provide with either thermal-anemometer or aneroid (Magnehelic-type) gage airflow sensor.
2. Provide with reset and test switches.
3. Provide with switch that silences audible alarm and automatically resets when airflow returns to within preset range.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of fume hoods. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. General: Install fume hoods according to Shop Drawings and manufacturer's written instructions. Install level, plumb, and true; shim as required, using concealed shims, and securely anchor to building and adjacent laboratory casework. Securely attach access panels, but provide for easy removal and secure reattachment. Where fume hoods abut other finished work, apply filler strips and scribe for accurate fit, with fasteners concealed where practical.

B. Comply with requirements in Divisions 15 and 16 Sections for installing water and laboratory gas service fittings, piping, electrical devices, and wiring. Install according to Shop Drawings and manufacturer's written instructions. Securely anchor fittings, piping, and conduit to fume hoods, unless otherwise indicated.

3.03 ADJUSTING AND CLEANING

A. Adjust moving parts for smooth, near silent, accurate sash operation with one hand. Adjust sashes for uniform contact of rubber bumpers. Verify that counterbalances operate without interference.

B. Clean finished surfaces, including both sides of glass; touch up as required; and remove or refinish damaged or soiled areas to match original factory finish, as approved by Architect.

END OF SECTION

SECTION 11 5353
BIOLOGICAL SAFETY CABINETS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Biological Safety Cabinets, Class II, Type A2.

B. Biological Safety Cabinets, Class II, Type B2.

C. Connection to utilities.

1.02 RELATED REQUIREMENTS

A. Section 12 3553.13 - Metal Laboratory Casework for service fittings.

B. Section 22 6005 - Medical Air, Gas, and Vacuum Systems: Laboratory gas connections.

C. Section 23 3300 - Air Duct Accessories: Ductwork connections.

D. Section 26 0583 - Wiring Connections: Electrical connections.

1.03 REFERENCE STANDARDS

A. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials current edition.

B. NEMA MG 1 - Motors and Generators 2017.

C. NSF 49 - Biosafety Cabinetry: Design, Construction, Performance, and Field Certification 2016.

D. SEFA 2 - Installations 2010.

E. SEFA 8M - Laboratory Grade Metal Casework 2016.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Conduct preinstallation meeting one week prior to the start of the work of this section; require attendance by all affected installers.

B. Sequencing: Ensure that utility connections are achieved in an orderly and expeditious manner.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Show complete construction details, fittings, electrical connection, filters and other information necessary to fully describe each unit and its installation. Include plans and elevations. Include CFM and static pressure requirements. Indicate required installation, operational, and maintenance clearances to wall and ceilings.

1. Submit coordination drawings for cabinets which interface via canopy hood, canopy exhaust (thimble) connection assembly, or are hard-connected to the building's exhaust system.

C. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

D. Manufacturer's Installation Instructions: Indicate special installation requirements.

E. Installer's Qualification Statement.

F. Operation Data: Include description of equipment operation and required adjusting and testing.

G. Maintenance Data: Identify maintenance requirements, servicing cycles, recertification requirements, and local spare part sources.

H. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

I. Project Record Documents: Record actual locations of concealed utility connections.

J. Field Reports: Start-up report(s) prepared by independent qualified certifier, accredited by NSF to test and balance biological safety cabinets.

K. Maintenance Materials: Furnish the following for Owner's use in maintenance of project:

1. See Section 01 6000 - Product Requirements, for additional provisions.

2. Furnish complete touchup kit for each type and color biological safety cabinet finish provided. Include fillers, primers, paints and other materials necessary to perform permanent repairs to any damaged biological safety cabinets' finishes.

1.06 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the types of products specified in this section, with minimum three years of documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified and with minimum three years of documented experience and approved by manufacturer.

C. Structural Performance: Provide cabinet components capable of withstanding the following loads without permanent deformation, excessive deflection, or binding of cabinet walls and viewscreen:

1. Channel Base Stands: 50 pounds per foot (74 kg/m) plus weight of cabinet, complying with SEFA 8M requirements.

D. Safety Glass: Comply with testing requirements of 16 CFR 1201 for Category II materials.

E. Preinstallation Conference: Conduct at project site with manufacturer’s representative present to confirm site is prepared for acceptance of equipment.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Package each piece of equipment to ensure protection from damage during shipment and delivery.

B. Protect finished surfaces during handling and installation with protective covering of polyethylene film or another suitable material.

1.08 FIELD CONDITIONS

A. Environmental Limitations: Do not deliver or install biological safety cabinets until building is enclosed, wet work and utility roughing-in is complete, gypsum board, spackling, painting, flooring installation is completed, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

1.09 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a five year period after Date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE/DESIGN CRITERIA

A. Design meeting requirements of the particular class and type of cabinet.

1. Class II Type A2: Suitable for testing and experimentation with low to moderate risk biological agents and (when connected by canopy "thimble" connection to HVAC) treated with minute quantities of toxic chemicals and trace quantities of radionuclide that will not interfere with the work if recirculated in the downflow air.

2. Class II Type B2: Suitable for testing and experimentation with low to moderate risk biological agents may be used for work with volatile toxic chemicals and radionuclide required as part of

microbiological research.

2.02 BIOLOGICAL SAFETY CABINETS - CLASS II, TYPE A2

A. General: Enclosed, ventilated cabinet designed to offer personnel, product and/or environmental protection, while limiting cross-contamination between biological agents inside the cabinet and in surrounding environment.

B. Biological Safety Cabinet Classification: Class II, Type A2.

C. Performance Specifications: NSF 49.

D. Nominal Size: 6 foot (1.8 m).

E. Cabinet Style: Benchtop/Console with base stand.

F. Work Zone: Provide minimum dimensions complying with performance specifications of specified unit.

1. Width: 70-3/8 inches (1788 mm).
2. Height: 60-7/8 inches (1546 mm).
3. Front-to-Back (Measured at 10 inches (254 mm) Window Height): 28-1/2 inches (724 mm).

G. Front View Window Opening Height: Fully-closed to 21 inches (533 mm) high opening.

H. Work Access Opening Height:

1. Biological Safety Cabinet: 8 inches (203 mm).

I. Controls: Microprocessor-based control system with cleanable membrane touch-screen control panel mounted on the front of the cabinet and facing down towards operator while seated.

1. Audible alarm and flashing LED to indicate unsafe condition.
2. Alarm mute switch on the front of the cabinet to allow a brief time for equipment loading in the work zone. Automatic reactivation of audible alarm after five minutes if the viewscreen sash remains at the improper height. The visible alarm to stay on until safe conditions are reestablished.
3. Delay-Off Timer: For lights, outlets and optional ultraviolet lights. Capable of 15-minute interval settings.

J. Illumination: Externally-mounted fluorescent lighting fixture with solid state ballasts producing an average of 100 footcandles (1076 lux) at work surface.

K. Filters: One supply and one exhaust, scan-tested, zero-probe HEPA Filter, 99.99 percent efficient on 0.3 micron particles by DOP test, serviceable and removable from front of unit. Exhaust filter also accessible from top of unit. Air balancing damper in filter housing with external control.

L. Electrical Requirements: Dedicated 115V, 20 amp, 60 Hz single phase circuit required. Pre-wired cabinet with a 14 foot (4.27 m) power cord terminated with a NEMA 5-20P plug.

M. Electrical Receptacles: GFCI duplex receptacles in the work area protected by an independent self-resetting breaker.

1. Configuration: Flush-mounted with slow-closing cover.
2. Number of Receptacles: One.

N. Bulkhead Fittings: Connectors with easily and cleanly removable and reusable elastomeric seals. Penetrations using applied sealants are not permitted. Seal standard blank-out plugged penetrations for future fittings gas-tight.

O. Gaskets: Manufacturer's standard closed cell Neoprene, forming airtight seals to suit installation conditions and cabinet function.

P. Drain Pan: Unitized pan with radius corners on all sides to facilitate cleaning. Removable work surface and supports facilitating cleaning of the drain pan. Stainless ball valve at drain outlet.

Q. Cable Port: Through negative pressure sidewalls to allow passage of tubes or cables, with design meeting Class 100 (ISO Class 5) air cleanliness immediately inside opening in the work area (as verified by a particle counter).

R. Ergonomic Armrest: Flow-through bypass armrest fitted over airfoil, with a closed cell neoprene pad for operator comfort.

S. Service fittings and fixtures, including escutcheons and trim, on left sidewall inside the work area. Provide two fitting locations per each side of cabinet.

T. Standard Accessories:

1. One stainless steel ball valve from drain pan located in knee space on left side.
2. Airflow Indicator: Magnehelic.

2.03 BIOLOGICAL SAFETY CABINETS - CLASS II, TYPE B2

A. General: Enclosed, ventilated cabinet designed to offer personnel, product and environmental protection, while limiting cross-contamination between biological agents inside the cabinet and in surrounding environment. May be used for work with volatile toxic chemicals and radionuclide required as adjunct to microbiological studies.

1. 100 percent exhausted from cabinet to building exterior.

B. Biological Safety Cabinet, Classification: Class II, Type B2.

C. Performance Specifications: NSF 49.

D. Nominal Size: 6 foot (1.8 m).

E. Cabinet Style: Benchtop/Console with base stand.

F. Work Zone: Minimum dimensions complying with performance specifications for unit specified.

1. Width: 70-3/8 inches (1788 mm).
2. Height: 25-3/16 inches (640 mm).
3. Front-to-back (measured at 10 inches (254 mm) Window Height: 26 inches (660 mm).

G. Front View Window Opening Height: Fully-closed to 18-1/2 inches (470 mm) high opening.

H. Work Access Opening Height:

1. Biological Safety Cabinet,: 8 inches (203 mm).

I. Controls: Microprocessor based control system with cleanable membrane touch-screen control panel mounted on the front of the cabinet and facing down towards operator while seated.

1. Alarm mute switch on the front of the cabinet to allow a brief time for equipment loading in the work zone. Automatic reactivation of audible alarm after five minutes if the viewscreen sash remains at the improper height. The visible alarm to stay on until safe conditions are reestablished.
2. Delay-Off Timer: For lights, outlets and optional ultraviolet lights. Capable of 15-minute interval settings.

J. Illumination: Externally-mounted fluorescent lighting fixture with solid state ballasts producing an average of 100 footcandles (1076 lux) at work surface, with a minimum of 90 footcandles (968 lux).

K. Electrical Requirements - Dedicated 115V, 20 amp, 60 Hz single phase circuit required. Pre-wired cabinet with a 14 foot (4.27 m) power cord terminated with a NEMA 5-20P plug. Two GFCI outlets in the

work area protected by an independent self-resetting breaker.

L. Cable Port: Through negative pressure sidewalls to allow passage of tubes or cables, with design meeting Class 100 (ISO Class 5) air cleanliness immediately inside opening in the work area (as verified by a particle counter).

M. Ergonomic Armrest: Manufacturer's standard flow-through bypass armrest fitted over airfoil, with a closed cell neoprene pad for operator comfort.

N. Service fittings and fixtures, including escutcheons and trim, on left sidewall inside the work area.

1. As specified in 12 3553.13 - Metal Laboratory Casework.

O. Standard Accessories:

1. One stainless steel ball valve from drain pan located in knee space on left side.

2. Airflow Indicator: Magnehelic.

2.04 FABRICATION

A. General: Assemble each biological safety cabinet in factory to greatest extent possible. Disassemble cabinets only as necessary for shipping and handling limitations, or as necessary to permit movement through a 35 inches by 79 inches (889 by 2007 mm) clear door opening.

B. Cabinet Construction: Double-wall construction, with negative pressure airflow between the walls from drain pan to top surrounding sides and back of work area. High-velocity return air slots in side walls and top adjacent to front access opening for enhanced containment and reduction of air turbulence.

C. Cabinet Assembly: Welded, gasketed and/or hermetically sealed joints for cabinet components, capable of achieving a soap-bubble-tested seal when completely assembled.

D. Cabinet Exterior: 16 gage, 0.063 inches (1.52 mm), cold rolled steel, with baked enamel white finish.

1. Component parts bolted or screwed together to allow removal of end panels and front fascia.

E. Cabinet Interior: One piece, fully-welded 16 gage, 0.063 inches (1.59 mm) stainless-steel sheet, type 304, no.4 finish, side walls and rear walls with radiused rounded corners. Perforated metal diffuser top of work zone, protecting supply filter.

F. Front View Window: Vertical sliding, frameless, with 1/4 inch (6 mm) thick laminated safety glass at a 10 degree angle from the vertical.

G. Airfoil: Aerodynamic design at bottom of access opening, directing airflow into front grille.

H. Gaskets: Manufacturer's standard closed cell Neoprene, forming airtight and soap-bubble-tight seals to suit installation conditions and cabinet function.

I. Work Surface: Removable dished work surface tray with integral supports.

J. Drain Pan: Unitized pan with radiused corners on every side to facilitate cleaning, with a minimum liquid holding capacity of 1 gal (3.79 L). Stainless ball valve at pan drain outlet.

K. Motor-Blower: Complying with NEMA MG 1; Variable speed, constant airflow 3/4 horsepower ECM motor with VFD controller. Position within BSC unit to promote even filter loading.

L. Supply Air Plenum: Telescoping design air plenum of steel construction with acid-resistant finish. HEPA filters to be front loading, directly clamped, uniformly loaded, and sealed by closed-cell neoprene gaskets.

M. Air Diffuser and Filter Protector: Stainless steel assembly on top of the cabinet.

N. Filters: One supply and one exhaust, scan-tested, zero-probe HEPA Filters, 99.99 percent efficient on 0.3 micron particles by DOP test, serviceable and removable from front of unit.

1. Type A2 Cabinets: Exhaust filter also accessible from top of unit.
2. Type B2 Cabinets: Exhaust filter located below.

O. Exhaust Plenum: All steel construction, with acid-resistant finish. Size for adequate volume to provide unidirectional airflow from cabinet.

1. Type A2 Cabinets:
    a. Duct-Stub: 10 inch (254 mm) diameter. Steel, with powder-coated finish, in manufacturer's standard color.
2. Type B2 Cabinets:
    a. Exhaust Transition Collar: 12 inch (305 mm) diameter. Type 304 stainless steel, with manufacturer's standard finish.

P. Sashes: Front view window guides incorporating a counterweighted pulley system allowing up and down movement, with one-hand low-effort operation.

1. Glass edges covered with metal extruded channel.
2. Glaze with laminated safety glass.
3. Guide rails capable of holding the sash in place regardless of position.
4. Rubber bumpers to cushion sash when fully opened or closed.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of biological safety cabinets.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install biological safety cabinets in compliance with shop drawings and manufacturer's written instructions.

B. For ducted (canopy and hard-connected) exhaust installations, set cabinet stand at the appropriate height in compliance with coordination drawings.

C. Large Components: Ensure that large components can be moved into final position without damage to other construction.

D. Comply with indicated requirements for installing laboratory gas service fittings, and electrical devices.

1. Install fittings in compliance with installation requirements in SEFA 2.

E. Connect to facility utilities.

1. Coordinate laboratory gas connections with work of section 22 6005.
2. Coordinate ductwork connections with work of section 23 3300.
3. Coordinate electrical connections with work of section 26 0583.

3.03 FIELD QUALITY CONTROL

A. Owner will employ independent testing agency to test and/or inspect installed biological safety cabinets; provide access and assistance as required to accommodate timely performance of testing.

3.04 ADJUSTING

A. Adjust moving parts for smooth, near silent, accurate sash operation with one hand. Verify that counterbalances operate without interference.

3.05 CLEANING

A. Clean finished surfaces, including both sides of glass; touch up as required; and remove or refinish damaged or soiled areas to match original factory finish, as approved by Architect.

B. Clean adjacent construction and surfaces that may have been soiled or damaged in the course of installation of work in this section.

C. See Section 01 7419 - Construction Waste Management and Disposal, for additional requirements.

3.06 CLOSEOUT ACTIVITIES

A. See Section 01 7800 - Closeout Submittals, for closeout submittals.

B. See Section 01 7900 - Demonstration and Training, for additional requirements.

C. Training: Train Owner's personnel on operation and maintenance of system.

1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.

2. Provide minimum of two hours of training.

END OF SECTION

SECTION 11 6140
STAGE CURTAINS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 and Division 26 Specification sections, apply to work of this section.

1.02 GOVERNING CLAUSE

A. For the sake of brevity these specifications shall omit phrases such as "Contractor shall furnish and install", "unless otherwise indicated or specified", etc., but these phrases are nevertheless implied. Mention of materials and operations requires the Contractor to furnish and install such materials and perform such operations completely to the satisfaction of the Owner.

1.03 SCOPE OF WORK

A. One company shall be responsible for the installation or coordination of the installation of all aspects of the stage equipment. Work under this section shall include the furnishing of all labor, materials, tools, transportation services, supervision, etc., necessary to complete installation of new stage equipment as well as any other items as herein listed, all as described in these specifications, as illustrated on the accompanying drawings; or as directed by the Architect or his Representative.

B. Work specifically included in this section for the Auditorium and Black Box Theatre:

1. Motorized Rigging
2. Dead Hung Rigging
3. Stage Curtains & Tracks
4. Lighting System Circuit raceways on Flying Battens

C. Work related but not included in this section

1. Structural steel, gridiron, structural support steel, in wall blocking
2. Galleries, ladders, catwalks, railing
3. Stage flooring
4. Electrical connections, disconnect and service equipment, Conduit, Boxes, Wiring
5. Division 26 – Electrical contractor installation of theatre electrical equipment.

1.04 CONTRACTOR’S QUALIFICATIONS:

A. The Contractor shall be fully experienced in the fabrication and installation of the stage equipment as specified.

B. The Contractor shall have been in business for ten (10) full years preceding the date of this bid doing work similar to the type specified and under the same name.

C. The Contractor shall employ only fully trained stage riggers and mechanics for the erection of the stage equipment.

D. The contractor shall employ a full time project manager who shall be available for multiple field site visits for coordination with other trades as required by the project General Contractor at no additional cost to the project.

E. The stage riggers shall be completely familiar with the type of equipment to be installed. A competent Job Superintendent shall be on the job at all times when work is in progress.

F. The Stage equipment contractor shall have a qualified person on staff that has successfully completed OSHA 500/501 training.

G. The Stage Equipment contractor must be able to provide Bid, Payment, and Performance bonds if required.

1.05 SUBSTITUTIONS:

A. See section 01 60 00 for requirements.

B. It has been determined that these are the particular items establish a standard of quality, equipment function and/or process.

1.06 DEFECTIVE OR NON-APPROVED MATERIALS

A. Should any stage equipment be found defective, not meeting specifications, or that which has not been approved in writing by the Owner shall, upon discovery (including any time within the period of the guarantee), be replaced with the specified equipment or material at no additional cost.

1.07 GUARANTEE

A. The Contractor shall guarantee all of the work that is performed under this contract, including all materials, and workmanship, for a period of one (1) year from the date of full acceptance of the work.

B. Lamps for lighting fixtures shall be guaranteed against failure for thirty (30) days.

C. Nothing in this guarantee shall cause repair or replacement by the Contractor where negligence, neglect or improper operation by the Owner has caused the failure of any equipment installed under this contract.

1.08 DISCREPANCIES

A. All equipment shall be sized to fit properly. The exact measurements are the responsibility of the Contractor. If there are discrepancies in the specifications, the Contractor shall ask for a clarification from the Owner. If no clarification is requested, the Owner's judgment shall rule.

1.09 PRE-APPROVED STAGE EQUIPMENT CONTRACTORS

A. One company shall be responsible for the installation of all aspects of the stage equipment as specified in this section. This shall include but not be limited to all rigging, curtains, tracks, motors and control, stage lighting fixtures, stage/house dimming, and dimming controls and miscellaneous equipment. The Stage Equipment Contractor shall be an approved manufacture or an authorized dealer of an approved manufacture.

B. The following companies have prior approval as STAGE EQUIPMENT CONTRACTORS:

1. Texas Scenic Company, Inc., San Antonio, Texas. – Mid Atlantic Office, 611A Lofstrand Lane Rockville MD, 20850 Phone: 301-309-1490, Fax: 301-309-1492

2. Pook Diemont & Ohl – 701 East 132nd st. Bronx NY 10454 Phone: 718-402-2677 Fax:718-402-2859

3. The Specialty Group, LuXout Stage Curtains, 1221 Admiral Street, Richmond, VA 23220, Office 800-817-1204; www.luxout.com.

4. Others approved by addendum:

a. In order to be considered as a Stage Equipment Contractor on this project, each Contractor requesting approval must submit to the Architect, prior to the date of bid opening, a letter expressing his intent to bid. This letter shall include a list of at least five (5) projects of similar size and scope completed by this firm within the last five (5) years. Included with this letter shall be a brief written description of the contractors operation including facilities, financial capabilities, and experience of key personnel. If motorized line-shaft rigging is required on this

project, the letter shall indicate the number of line-shaft set provided and installed and the manufacturer of the equipment on each of the five projects. Inspection of one completed installation may be requested by the Architect/Architect's Representative prior to consideration of request to bid. Companies, which have no experience in the installation and operation of line-shaft rigging, will not be considered. The stage equipment contractor shall have been in business under the same name for ten (10) full years preceding the date of this bid doing work similar to the type specified. The decision of the Architect as to the capability of the Bidder to successfully complete and maintain the system, based on this pre-qualification information shall be final.

b. Sale representatives of manufacturers and Jobbers are not considered stage equipment contractors & shall not be approved to bid this project.

c. Stage Equipment Contractor shall employ a full time project manager who shall be assigned to the this project and shall provide onsite coordation as necessary. The project manager shall live and be based within 100 miles of the project site. IF requested the Stage Equipment contractor shall provide the name, resume, and pertinete qualification for his work on the project.

d. Pre-Bid request letter shall include a statement that all major items of equipment shall be bid and supplied as specified, or shall contain details of all proposed substitute equipment for review by the Architect/Architect's Representative. Substitute equipment items to include specifications, parts numbers, and details of interconnection to proposed system. The decision of the Architect/Architect's Consultant as to the acceptability of substitute equipment shall be final.

e. The Stage Equipment Contractor shall employ only fully trained stage riggers and mechanics, assisted by common laborers, for the erection of the stage equipment. The stage riggers shall be completely familiar with the type of equipment to be installed. A competent Job Superintendent shall be on the job at all times when work is in progress. He shall represent the Stage Equipment Contractor and all directions given by him shall be as binding as if given by the Stage Equipment Contractor.

1.10 DOCUMENTATION

A. Shop Drawings: Shop drawings and equipment data sheets shall be submitted in accordance with Section 01 30 00. If shop drawings are rejected, correct and resubmit in the manner as specified. All shop drawing information shall be submitted at the same time; no partial submittal will be accepted. Drawings shall indicate complete details, dimensions, product types and locations of all equipment, clearances required, guides, cables, sets, Contractor fabricated equipment, and all other details required to completely describe the work to be performed. Submittals drawings shall be presented at a scale of not less than 1/8" = 1'-0" for conduit plans, 1/4" for equipment layouts, ½" = 1'-0" for mounting details, and ½" = 1'-0" for plate and panel details. Each sheet to allow space for approval stamps and have the name of the project, the contractors and/or the supplier's name, address telephone number, and the date submitted. Submit the following items for Owner's approval, prior to fabrication:

1. Stage plan view.
2. Stage side section view.
3. Gridiron layout indicating all stage equipment.
4. Electrical riser diagrams indicating the necessary control wiring for all dimming, distribution, and controls wire tag number for every connection. Show all terminal blocks with wire numbers and location.
5. Plan and elevation views indicating all electrical hardware locations and layout.

6. Provide full dimensions for panel layouts with finishes and materials for all custom panels.
7. Provide details of installation and erection, including adjoining conditions and necessary clearances.
8. Indication by arrow and boxed caption of each variation from contract drawing and specifications, except those indicated as acceptable in specifications or on drawings

B. Fabric Samples: Submit sample books of each fabric specified, containing standard colors available in the quality of the material specified for selection of color and approval. More than one color may be selected. After selection, upon request, submit one square foot samples of each material in each color for final review.

C. Record Drawings and Data: Submit in accordance with General Provisions. Also within 30 days of final test and completion of the installation, submit the following to the Owner:

1. Three (3) complete sets of "as built and approved" drawings (rolled, not folded) showing systems and elements as installed, including field modifications and adjustments.
2. Three (3) sets of maintenance data including a list indicating replacement parts lists for all items of equipment, wiring diagrams, control diagrams, any and all keys for cabinets, racks, key operated switches etc. and complete operation manuals.
3. Three (3) notarized Certificates of Flameproofing for each fabric used.
4. Three (3) Certificates of Guarantee

D. Instruction of Owner Personnel:

1. This contractor or his representative, fully knowledgeable and qualified in systems operation, shall provide eight (8) total hours of instruction to the Owner-designated personnel on the use and operation of this System in 2 sessions.
2. Designated instruction times shall be arranged through the Owner.
3. Training shall be recorded on video and 2 copies shall be saved to DVD and turned over to Owner.

E. Permits: Obtain all permits necessary for the execution of any work pertaining to the installation, and conform in all trades with all applicable local codes and with the National Electric Code. Obtain all permits necessary for operation of any equipment by the Owner.

F. Clean Up: It shall be the responsibility of this Contractor to remove all debris from the building or site caused by his operations to a common trash point or receptacle on the job site, as determined by the Owner.

PART 2 - PRODUCTS

2.01 ACCEPTABLE RIGGING EQUIPMENT MANUFACTURERS

A. For the purposes of establishing a standard of quality desired on this project, the rigging hardware products of H & H Specialties, Inc. of South El Monte, California are specified. Other stage equipment hardware with prior approval for bidding shall be any and all companies (not an individual) that are contributing members or sustaining members in good standing with United States Institute of Theatre Technology (USITT) at the time of the bid will be considered. Specific items of hardware by any approved manufacturer must still meet the criteria established in these specifications for those items. The rigging hardware products of other manufactures who are not members of USITT may not be used in the construction of this project.

B. Manufacturers whose equipment has prior approval to be used on this project include the following companies:

1. Texas Scenic Company, Inc.

2. Electronic Theatre Controls
3. H&H Specialties
4. SSRC inc

C. All other companies must receive prior approval to bid this project. Please refer to the section regarding substitutions.

2.02 ACCEPTABLE DIMMING/CONTROL EQUIPMENT MANUFACTURERS

A. Specified herein shall be the sole responsibility of a single manufacturer who shall fabricate all assemblies and major sub-assemblies in his own shops. The manufacturer shall have been producing theatrical lighting and SCR control equipment for at least five consecutive years. Specific hardware and item of equipment are specified by trade names as it has been determined by the Owner that these particular items establish a standard of quality, equipment function and/or process which is desired. It is neither the purpose nor intent of these documents to eliminate competitive bids. A contractor may submit his bid based on equipment different from that specified only if that Contractor has received prior approval in writing from the Owner. In order that they have sufficient time to evaluate the proposed deviation from specification, all requests of this nature shall be in the Owner’s office no less than ten (10) working days prior to the bid date. The following manufacturers are considered approved for use on this project. This approval is only based on the model/catalog numbers, series or type detailed herein for each item.

1. Dimming & Controls: Strand Lighting, Electronic Theatre Controls, Inc.
2. Distribution: SSRC, Inc. Electronic Theatre Controls Inc.
3. Lighting Fixtures:
    a. Ellipsoidal: Electronic Theatre Controls, Inc., Altman Lighting
    b. Pars: Electronic Theatre Controls, Inc.
    c. Fresnel: Electronic Theatre Controls, Inc., Strand Lighting
    d. Work lights: SSRC, Inc.,
    e. Cyc Lights: Altman Stage Lighting, Electronic Theatre Controls
    f. Followspot: Lycian, Strong Lighting

B. Listing as Acceptable manufacture does not allow companies to provide substitution of equipment that do not performe to specifcations or meet requirments of equipment as set forth this bid document.

C. All other companies must receive prior approval to bid this project. Please refer to the section regarding substitutions.

2.03 THEATRICAL RIGGING EQUIPMENT

A. General Standards:

1. Paint as required under this section shall be the manufacturer's standard finish and color except as noted.
2. All equipment items shall be new and conform to applicable provisions of Underwriters' Laboratories and American Standards Association.
3. Where acceptable equipment items are specified by catalog number only, device shall meet all published manufacturer's specifications. Where quantities are not given, refer to drawings. Where two or more products are listed, contractor may use either, at his discretion. Equipment shall not be substituted without specific written approval by the Architect/Architect's Representative under the substitution paragraphs of these specifications.

B. General Rigging Standards:

1. All pipe battens shall be fabricated from 1.5" schedule 40 pipe.
2. All turnbuckles, clips, tracks, chains and other items of incidental hardware shall be furnished plated or painted. Wire rope shall be galvanized. Fasteners, chain, and other miscellaneous hardware shall be either cadmium or zinc plated.
3. All materials used in this project shall be new, unused and of the latest design. Refurbished materials are not permitted.
4. In order to establish minimum standards of safety, a minimum factor of 8 shall be used for all equipment and hardware used on this project. In addition, the following factors shall be used:
    a. Cables and fittings: 8 Safety Factor.
    b. Cable bending ratio: 30 times diameter.
    c. fleet angle: 1 ½ degrees.
    d. Steel: 1/5 of yield.
    e. Bearings: Two times required load at full for 2000 hours.

2.04 MOTORIZED RIGGING REQUIREMENTS

A. General

1. Furnish and install Motorized Lineshaft winches, both fixed and variable speed, to raise and lower the stage battens as specified herein.
2. The batten shall travel from a low trim of 4’-0” above stage floor to approximately 1’-0” below the winch assemble.
3. Each batten winch shall operate at a fixed speed
4. Each lineshaft winch shall have drums alternately grooved for right and left hand winding to prevent the batten from traveling.
5. Drums shall be supported on each side with a flange block assembly.
6. Miscellaneous hardware such as battens, cable, etc. shall follow USITT standards and specifications.
7. Motorized lineshaft assembly shall have integral continuous frame, running parallel to the driveshaft, designed to support and align each drum and drum housing. Systems not using an integral frame to align and support the lineshaft assembly shall not be acceptable.
8. Electrical installation of motor starter & control panel by division 26
9. Bidders proposing alternate motorized rigging systems will bear the cost of additional engineering and steel structure necessary for systems that produce horizontal and lateral loading to the infrastructure or require additional mounting beams. Bidders will be required to provide engineered drawings Stamped by a Maryland PE detailing their proposed system and its impact on the structure.

2.05 PRODIGY LOW PROFILE HOIST

A. General:

1. Prodigy Low Profile Hoist shall be purpose-designed and fabricated for overhead lifting of theatre lights, curtains and scenic elements. The systems shall incorporate mechanical, electrical and safety features that shall be inherent to this equipment and shall provide an engineered, efficient device for overhead lifting. The mechanical, electrical and safety features of this hoisting and control

system shall establish the standard of quality, performance and safety by which hoisting systems of other manufacture shall be evaluated.

2. Each wire rope liftline shall adhere to a design factor of 10:1 with an ultimate strength of 4200 pounds. All load path components between the building structure and the batten shall exceed the breaking strength of the wire rope. The motor brake shall be rated at least at 150% of the motor torque.
3. The standard configured P1500E hoist shall be capable of lifting up to 1500 pounds suspended below the connector strip and pipe batten. The standard configured P1300G hoist shall be capable of lift up to 1300 pounds suspended from the pipe batten.
4. The standard hoist shall consist of the following major components: 1) powerhead, 2) compression tube with beam clamps, cable management system, loft blocks, lift line and lift line terminations and 3) pipe batten and power/control distribution strip.
5. The hoist shall include the following features:
    a. A powerhead containing the gearmotor, motor brake, load brake, limit switches operating electronics, load sensor, slack line detector and wire rope.
    b. The powerhead shall be no larger than 18” wide x 14” high x 55” long.
    c. The powerhead shall weigh no more than 400 pounds.
    d. A compression tube structure shall prevent any lateral forces from transferring to the building. Hoists or hoisting systems that impose a lateral load on the building structure shall not be acceptable for this project.
    e. The hoist shall incorporate a built-in load cell.
    f. The hoist shall incorporate a built-in slack line sensor.
    g. The hoist shall incorporate the emergency contactor.
6. The hoist shall be manufactured from UL Listed components and shall be UL Listed and tested as a complete system (not just UL listed parts).

B. Powerhead:

1. The powerhead shall be a fully enclosed sheet metal housing which shall prevent contact with moving and electrical parts and shall provide protection against dirt, dust and debris collecting on the operating parts of the machine, the electrical and electronic components and the wire rope lift lines on the lifting drum.
2. The powerhead housing shall be fabricated from powder coated sheet metal. It shall be punched and formed to enclose and support the gearmotor, motor brake, load brake, limit switch assembly, limit switch adjustment system, reversing contactor, emergency contactor, wire rope drum, wire rope (cable) keeper, load cell, slack line detector and motor electronics.
3. The rear hinged cover of the powerhead shall support connectors, switches and LED lights for the following functions: local operating switch, power and control connector outlets, indicator lights for operating mode, limit switch indicator, limit switch override button, indicators for power, status and communication. Each of these functions shall be clearly labeled to identify their purpose.

C. Gearmotor and Motor Brake: The gearmotor and motor brake shall be an integral unit from a single manufacturer. It shall produce 2 horsepower and shall operate on 208 volt, 60 Hz, 3 phase power.

1. The gearmotor shall operate the hoist at a fixed speed yielding a line speed averaging 30 feet per minute.

2. The gearmotor shall drive a monolithic double output shaft that extends from each side of the gearbox through the support bearings without couplings.
3. The integral motor brake shall be spring applied and electrically released.
4. The brake shall be capable of holding 150% of the motor full load torque.
5. On one side of the gearbox, the Prodigy Hybrid Drum™ shall be mounted. Up to eight 3/16” dia. 7 x 19 wire ropes, ASTM Specification 81023/A1023M-02, commonly referred to as galvanized aircraft cable, shall be wrapped on that drum.
6. The portion of the shaft protruding from the opposite side of the gearbox shall support the load brake.

D. Load Brake: The rotary disk load brake shall bring the moving load to a complete stop and shall hold the load in position in the event of a mechanical failure of the motor, motor brake or gearbox.
1. The load brake shall not generate noise at any time in the operational cycle.
2. At no time shall normal hoist operation be limited by heat or noise caused by the load brake.
3. When lowering the load the Load Brake shall partially disengage to allow movement. In the absence of rotational torque on the gearbox, the load brake will not release.

E. Wire Rope Drum: The Prodigy Hybrid Drum™ shall allows the lift lines to be wrapped in a compact manner that prevents wire rope damage.
1. A wire rope shall not cross over other wire ropes, nor lie vertically on top of another wire rope nor be allowed to stack in a single pile as on a yoyo drum.
2. The drum shall have been tested for wear, durability, strength, service and integrity by an independent testing lab.
3. The sloped drum shall be capable of safely wrapping up to eight pieces of 3/16” diameter wire rope lift lines.
4. An assembly of wire rope (cable) keepers shall assure that the lift lines wrap appropriately on the drum.

F. Limit Switch: The limit switch assembly shall be mounted within the powerhead. The limit switch shall establish hard “normal” end of travel limits and hard “ultimate” end of travel limits for movement in either direction. In addition, software shall establish resettable “normal up” and “normal down” end of travel limits, typically redundant for the normal end of travel limits. This combination of hard limits and soft limits shall provide each hoist with a total of three “up” and three “down” limits to assure that the hoist does not exceed the maximum allowable travel in either direction.
1. The hard end of travel limits shall be set or adjusted at the time of installation via a screw adjustment on the bottom/rear of the powerhead cover.
2. An indicator light shall be visible on the bottom panel of the powerhead cover and shall illuminate when the setting screw is adjusted to the current position of the batten.
3. Any system that indicates that the limit has been set by audible or tactile means only shall not be acceptable.

G. Load Sensor/Load Profiling:
1. A load sensor shall be built into the powerhead. It shall be possible to create a profile of the actual load on the hoist as it travels through its normal cycle. The profile may be changed by “re-training” the profiling system whenever the suspended load is changed on the batten by activating a key-switch operated training cycle. The load sensor shall continuously monitor the load.

H. Slack Line Detector:

1. The slack line detector shall be built into the hoist. When a slack line condition develops, the slack line detector shall remove power from the hoist and prevent hoist movement.

I. Cable Management:

1. The load circuits and control wiring shall be fed to the hoist by a built-in cable management system that allows the flat feeder cable to fold and store along the top of the connector strip.
2. At high trim, the entire system shall be store in no more than 30” of vertical space.
3. The cable management system shall be integral to the hoist system.
4. Hoisting systems utilizing cable management systems from third-party vendors shall not be acceptable for this installation.

J. Compression Tube and Beam Clamps:

1. The compression tube shall be a continuous channel of extruded aluminum engineered to neutralize the horizontal forces on the building.
2. The tube shall support the loftblocks mounted within the spacing limits of the system.
3. Compression tube sections shall be joined into a continuous assembly by dedicated splicing plates at each tube joint.
4. The tube shall be installed only by means of dedicated beam clamps that allow the compression tube to snap into place.
5. Beam clamps shall be capable of attaching to horizontal beams, joist flanges or flat steel plates measuring from 3/8” thick up to 1” thick and from 4” wide up to 14” wide.
6. Hoist systems that do not neutralize the lateral forces on the building shall not be accepted for this project.

K. Loft Blocks:

1. Each loft block shall be an assembly of steel side plates, a wire rope idler, sheave and support hardware. Each loft block shall be inserted into a slot on the bottom of the compression tube. The blocks shall be positioned in the compression tube within 6’-0” of a beam clamp, and no closer than 3’-0” from each other
2. Loft blocks shall measure 5” in diameter and contain a pair of press fit sealed ball bearings. Lift lines shall travel in a groove shaped and sized for 3/16” diameter wire rope per the latest edition of the Wire Rope Users’ Manual as published by the Wire Rope Technical Board. The loft block sheave shall be concentric about the hub and shall be evenly balanced for ease of rotation.
3. An idler shall be incorporated into the top assembly of the loft block to guide and support lift lines as they pass the block.
4. Hoisting systems requiring the loft blocks to be mounted directly to the facility steel shall not be accepted for this project.

L. Hangers:

1. Raceway hangers shall be specially shaped flat bar that shall support the wire rope termination hardware and secure the raceway and the pipe batten.

M. Liftline Terminations:

1. Each lift line shall be terminated at the powerhead via a standard thimble and a copper oval compression sleeves installed at the factory.

2. Liftlines shall be terminated at the load hanger with a low profile Right Angle Cable Adjuster (RACA)™, thimble and copper oval compression sleeve. The RACA and cable terminations shall be installed at the time of hoist installation.
3. The batten trim shall be adjusted up to 6” at the RACA.
4. Systems utilizing turnbuckles or chain to trim the batten shall not be accepted for this installation.

N. Connector Strip - Distro:

1. Power to the connector strip shall be fed via UL listed flat cable especially designed and fabricated for this system.
2. The flat cable shall be UL listed. The flat cable shall provide one ground and one data cable plus an individual hot and an individual neutral for each of six 120 volt circuits.
3. The strip shall be built to the length specified with outlets or pigtails located as specified or shown on the construction drawings.
4. Flat feed wire shall enter a terminal box at the designated end of the raceway. The wiring and all components shall meet UL requirements and NEC codes, as appropriate.

O. Pipe Batten:

1. The pipe batten shall be I ½” (nom.) schedule 40 grade A, seamless pipe fabricated in the largest possible lengths without splices, typically 21’-0” long. Battens of greater length shall be spliced by means of .120 x 1 9/16 dia DOM tube 18” long with 9” of tube inserted into each half of the splice. The tight fitting splice tube shall be held in place by a pair of 3/8 x 2 ½” grade 5 hex bolts on each side of the joint. The bolts shall pass through the pipe at an angle of 90° to each other. There shall be two bolts on each side of the joint spaced 1” and 8” from the joint. Alternatively, one pair of bolts on one side of the joint may be replaced with either plug welds or tight fitting rivets. Pipes shall be straight and painted flat black.
2. A safety-yellow batten cap shall be installed at each end of each pipe batten.

P. Power and Control Distribution:

1. Each hoist shall receive power and control via a pair of 8’-0” long jumper cables extending from the powerhead to the source outlets. The receptacles shall be installed in a sheet metal junction box located less than 8’-0” away from each hoist powerhead and shall include a power and control outlet. Inclusion of a 20 amp 3 phase breaker in the distribution box is optional. The wiring and connectors shall be barriered between high and low voltage. The power/distribution channel shall be UL listed for this application.

2.06 QUICKTOUCH CONTROL SYSTEM

A. General:

1. The entire hoisting system shall be operated by a Quicktouch Group 8 fixed speed controller. It shall be purpose-designed and fabricated to manage and operate hoists specifically designed for overhead lifting of theatre lights, curtains and scenic elements. The systems shall incorporate mechanical, electrical and safety features that shall be inherent to this equipment and shall provide an engineered, efficient device to control the equipment. The mechanical, electrical and safety features of this control system shall establish the standard of quality, performance and safety by which hoisting systems of other manufacture shall be evaluated.
2. The Quicktouch Control System shall consist of a surface or flush mounted primary control panel and up to three remote E-stop stations. The hoisting system shall also include one Quicktouch Fixed Speed Remote control device with 35’ of flexible cable that may be attached to the system at the primary operating station, the Quicktouch Group 8 control panel.

3. The controller shall include the following features:
    a. Key operated power switch
    b. LCD display with feedback/operating information
    c. Key operated hoist load profile training/enable switch
    d. Latching hoist selection buttons with rear illuminated naming tabs
    e. Rear illuminated hold-to-operate (deadman) up and down operation buttons
    f. Dedicated E-stop button
    g. Outlet for wired remote
    h. Optional door
    i. Optional rack mount kit
4. The controller shall be UL Listed and shall be fabricated from UL Listed components.

B. Enclosure:
1. The back box and face panel shall be fabricated from 16ga powder coated sheet steel specially formed to provide support for installation as well as all components installed within the housing.
2. The Quicktouch face panel shall be printed with complete labeling information to identify the function each of the buttons in the control station.
3. The face panel shall identify the system as a Quicktouch controller for stage rigging.
4. The face panel shall be shades of grey. The ring surrounding the E-stop button shall be safety yellow and shall be rear illuminated
5. The face panel shall be removable. The steel panel to which all switches are mounted shall be removable via screws in the surface located underneath the face panel.

C. LCD Screen:
1. The liquid crystal display shall be purpose designed to communicate all information in human readable text.
2. The screen shall be rear illuminated.
3. During system start up the screen shall show the progress of the hoists diagnostics self tests. Upon completion of the start up sequence the screen shall indicate that the system is “OK” or shall provide specific information should a fault be detected. Fault conditions shall be reported in human readable text. System that report fault conditions in a series of blinking lights shall not be acceptable for this installation.
4. When a hoist is selected the LCD screen shall readout the hoist name or number, its current position above the floor, the amount of weight suspended from the batten, preset position recorded, as well as a bar graph scale that shows the current position of the hoist, top and bottom limits and the current weight suspended by the hoist.

D. Hoist Selection/Operation Buttons:
1. There shall be 8 rear illuminated hoist selection buttons. When the button is selected it shall be rear illuminated. The button shall remain illuminated until it is de-selected.
2. Up to four hoists may be selected to move at one time. When the up or down button is pushed and held each hoists shall move to its next stop location. If the stop location is the adjustable preset, the hoist can be made to continue to travel in the selected direction by releasing and re-pressing the up or down hold-to-operate button until the next stop for the hoist(s) is reached.

3. Only four hoists may move at one time and they may only move in one direction at a time.
4. All buttons shall fit neatly within each of the metal and cover panel cutouts on the controller.

E. Key Switches:

1. A key switch shall control power to the control system. The key must be in the lock and the key turned to the on position for the hoisting system to operate.
2. A separate key is required to turn on the load profiling system. That key must be in the lock and turned to the “ON” position for load profiling to be functional.
3. When load profiling is turned on the hoist will know the amount of weight that is supposed to be supported by the batten at any location in the path of travel. Should the weight exceed or be reduced below the profiled weight, the hoist will stop operation until the fault is cleared.

F. Slack Line Detector:

1. The slack line detector is located in the power head. When a slack line condition occurs, power will be disconnected from the hoist and the hoist will cease to operate until the slack line condition has been cleared. The condition will result in a fault message on the LCD screen on the controller.

G. E-Stop:

1. The E-stop button on the Quicktouch controller shall be a mushroom button with a rear illuminated ring surrounding the button. The light shall always be on. During normal operation the E-stop button shall be in the out position. An E-stop can be activated via this button by firmly pressing the button in. the button will latch and will immediately cause a class zero stop of all hoists in the system. The LCD screen shall report the E-stop as an E-stop fault. To continue system operation the E-stop button must be cleared by twisting the button to release the latch.
2. Up to three remote E-stop stations may be connected to the system. Each remote E-stop station shall operate in the same way as the primary E-stop at the Quicktouch control panel.

H. System Diagnostics:

1. Upon energization the control system shall perform a series of diagnostic tests that shall assure that all system safety functions are working. Should an error in the safety functions be determined the controller shall report back a fault condition in the LCD display window and shall identify the nature of the fault.
2. Monthly, the system shall perform an additional series of diagnostic tests to determine if there are any problems with any portion of the hoisting control system safety features. In the event of a problem, the controller shall report back a fault condition in the LCD display window and shall identify the nature of the fault.
3. 11 months after a system inspection has been performed , system will remind the user to schedule full system maintenance/inspection. The reminder will remain in the system until it is turned off by the factory authorized and trained inspector.

I. Remote Control Pendant:

1. An optional remote control pendant with 35’-0” long attached cable and plug shall be provided for the system. The remote control must be plugged to the Quicktouch control panel. When the remote control is plugged in the E-stop on the remote is active.
2. The remote control provides up/down control for those hoists that have been preselected at the Quicktouch controller.

J. Support Cables And Fittings

1. All support cables unless otherwise noted shall be 7 x 19 construction, galvanized aircraft cable with a breaking strength of 7000 lbs.
2. Damaged of deformed cable shall not be used.
3. Cable fittings and clips shall conform to wire rope manufacturer's recommendations as to size, number, and method of installation.
4. Clips shall be drop forged "Crosby" or "Malleable".
5. There shall be two cable clips for each lift line tie-off.
6. Pressed sleeve fittings shall be Nicopress Copper sleeves.
7. Eyes shall be formed over wire rope thimbles of correct sizes.
8. All wire rope rigging shall be installed so as to prevent abrasion or rubbing of the wire rope against any part of the building construction or other equipment; pulleys and sheaves shall be so aligned as to provide a maximum fleet angle of two degrees; mule blocks, cable rollers, guides and sag bars shall be installed as required to provide proper alignment.

K. Trim Chains

1. Trim chains shall be 1/4" grade 30 proof coil chains 30" long with a 1/4" screw pin anchor shackle on one end.
2. The threaded connector shall be rated at not less than 800 lbs. capacity and shall have the rating stamped on each unit.
3. Trim chains shall be installed on batten end of each support line.

L. Pipe Battens

1. Pipe battens shall be 1-1/2" in diameter schedule 40 pipe.
2. All battens shall be painted black to prevent rusting.
3. Where splicing is required, a pin, 18" long and the same diameter as the inside diameter as the pipe shall be used. This pin shall be held in place with no less than four 3/8 hex bolts and lock nuts. Pins or rivets shot into pipe shall not be acceptable.
4. Mark the center of each batten with a 1” wide yellow stripe
5. Paint the last 3’0” of each end of each pipe batten yellow.

M. Provide Motorized Rigging Set per drawings, consisting of (but not limited to) the following:

1. Capacity: As noted in drawings.
2. Speed: 20 fpm.
3. Batten Travel: 45 feet.
4. Drum Diameter: 8 inches.
5. Cable Size: 3/16 inch.
6. Number of Drums: Eight.
7. Type of Limit Switches: 4 Pos Overtravel.

2.07 DEAD HUNG RIGGING

A. Support chains:

1. Support chains shall be 3/16” electro galvanized grade 30 proof coil chain.

2. Chain shall be attached to overhead building structures or bridging steel using ¼” forged screw pin anchor shackle and rated beam clamp
3. Chains shall be attached to pipe battens with one and one half wrap around batten and attached back with to the chain with a ¼” forged screw pin anchor shackle.
4. Provide and install a 3/8” diameter safety bolt, one Nylock nut, and two flat washers per trim chain after batten is leveled
5. Each hanging point shall include enough additional chain to lower the batten 3 feet below the scheduled trim

B. Pipe Battens:

1. Pipe battens shall be 1-1/2" in diameter schedule 40 pipe.
2. All battens shall be painted black to prevent rusting.
3. Where splicing is required, a pin, 18" long and the same diameter as the inside diameter as the pipe shall be used. This pin shall be held in place with no less than four 3/8 hex bolts and lock nuts. Pins or rivets shot into pipe shall not be acceptable.
4. Mark the center of each batten with a 1” wide yellow stripe
5. Paint the last 3’0” of each end of each pipe batten yellow.

C. Provide the following:

1. Dead hung rigging battens for scenery and curtain tracks as detailed on theatrical rigging layout drawings.

2.08 RIGGING SCHEDULE

A. Provide and install in types and quantities as detailed on drawings.

2.09 PIPE GRID

A. Provide stationary 41’ x 44’ pipe grid where indicated on the drawings.

1. Pipe grid spacing is to be 4'-0" by 4'-0" on center and installed 18’-0” off the finished floor.
2. Grid pipe is to be 1-1/2" schedule 40 pipe painted black. Where splices are required, provide sleeve of the same diameter as the inside of the pipe, minimum 18" long. The sleeve will be held in place by four (4) bolts.
3. Hanger spacing will not exceed 8'-0" and each pipe will be supported by a hanger at least 2'-0" from the end of each pipe. Each hanger will be constructed from 3/8" all thread rod and power strut #3200-1-1/2" pipe hanger. Each hanger will be designed for a 300 pound load with a 5 to 1 safety factor. All beam clamps are to have a safety anchor and shall be B-Line #B3690-1-1/2” pipe hanger or equal.
4. Grid brackets will be required at each joint where the sections of 1-1/2" pipe cross around the perimeter of the grid and at every other junction on the interior. Brackets are to be #308 1-1/2' by 1-1/2" grid brackets or Roto Lock by Upright Scaffolding.
5. The entire grid will be attached to the vertical side walls in at minimum three equal points on each side of the grid by extending the pipe to the side wall and attaching it to a wall flange. The mounting shall be rigid and in such a way as to secure the entire grid from movement.

2.10 CURTAIN AND SCENERY TRACKS

A. Tracks shall be by H&H Specialties of South El Monte, California. Manufacturer's recommendations on installation of all tracks and related hardware shall be followed. Automatic Devices Inc. of Allentown, PA

shall be considered equal.

B. Track for the Front Curtain shall be H&H Model #400 Steel Track in two (2) unbroken unspliced sections, complete with all necessary accessories for rope operation including #416 neoprene tired carriers, #418 master carriers, #433 6" double end pulley, #434 6" single end pulley, 1/8” rubber bumpers, rear fold guides and #438 floor pulley. Use only pipe brackets and # to secure tracks to battens.

C. Track for the Mid-Stage Curtain shall be the same as specified for the Front Curtain.

D. Track for the Rear Curtain shall be the same as specified for the Front Curtain.

E. Track for the Legs #1, shall be H&H Model #318 walk along track curved as shown in drawings to provide necessary sightlines

F. Track for the Legs #2, shall be H&H Model #418 walk along track in six (2) - 16' long sections complete with all necessary hardware.

G. Track for Rear Cyc Curtain shall be H&H Model # 428 walk along track in single 75’ section

2.11 STAGE CURTAINS

A. Fabrics:

1. Main Curtain, Valance: Provide 25oz. Prestige IFR Velour material as manufactured KM Fabrics, Greenville, South Carolina. Color to be selected by Architect from manufacturers full range.

2. Rear setting curtains: Provide 16oz. Plateau IFR Velour material as manufactured KM Fabrics, Greenville, South Carolina. Color to be selected by Architect from manufacturers full range.

3. All Stage Curtains: Provide 25 ounce Prestige or 16 ounce Plateau (as specifically indicated in curtain schedule), Inherently Flame Retardant Velour (54" width) as manufactured by KM Fabrics, Greenville, and South Carolina. 25 ounce Lyceum Velour from Dazian's, New York, New York, is an acceptable substitute. Color to be selected by Architect from manufacturers full range.

4. Sky Cyclorama: 24'-6" width, seamless flame proofed white muslin and cut down to appropriate size as indicated in bid documents. As supplied by Frankel and Associates of New York, New York or Rose Brand of New York, New York.

B. Flamproofing:

1. Fabrics used in fabrication of draperies shall be chemically flameproof with a formula approved Bureau of Standards U.S. Department of Commerce, and finished fabric, after treatment, shall pass such tests as are required by the Fire Marshall of the local Fire Dept. and Owner.

2. A certificate for each type and color of cloth used shall be furnished to the Owner when request for final payment is made.

3. Certificate shall state name of Stage Equipment Contractor, name of firm doing flameproofing treatment, date of treatment, date re-treatment will be required, method of treatment, and the certificate shall be affixed the signature of an officer or authorized representative of the firm furnishing the draperies.

4. The information on certificate shall be notarized by a Notary Public in the State of Maryland.

C. Fabrication of Standard Stage Draperies:

1. Sew fabrics with box-pleats to 3-1/2" wide heavy-duty upholstery IFR webbing, pleats spaced 12" on centers, unless otherwise specified. Use mercerized cotton thread, minimum weight #16; color to match cloth shall be full length and shall be without splices for entire length of the curtain.

2. Properly join panels smooth and free of puckering at seams, hems, and turnbacks.

3. Where completed curtains are to be operated on a traveler track, equip each pleat with a 2" plated harness snaphook mounted to curtain by means of a strap of web-belting to curtain by riveting with not less than 2 tubular rivets per snaphook. Web-belting straps shall pass over front and back sides of pleats, and rivets shall go completely through the web-belting, jute webbing, and all thickness of curtain fabric. Canvas straps, leather straps, grommets and s-hooks, cotter key hooks, etc., shall not be acceptable.
4. Where completed curtains are to be tied to a pipe batten, each pleat shall be equipped with a 30" long #4 braided nylon tie line through a No. 2, or larger brass grommet, each to be on 12" centers located in the box pleats at the webbing.
5. Bottom hems of all curtains shall be 5" and shall be equipped with a separate canvas pocket sewn inside bottom hems in such manner as to have the bottom of the canvas pocket at least 1-1/2" above bottom of curtain hem. Load canvas pocket with #6 galvanized pump chain, secured to prevent bunching and shifting within the pocket.
6. Off-stage vertical hems and center-facing turnbacks of the front curtain and mid-stage shall be one-half width (27") of material faced back and no sewn hem shall be permitted within these hems. Vertical hems of all masking borders, travelers, and cyclorama curtains shall be 6".
7. Finish curtains properly in the best manner and method of the industry, and after hanging, thoroughly brush to remove dust, visible dirt, loose threads, loose fabric lint, etc. Wrinkles shall be allowed to fall our naturally.
8. Fullness desired for each panel of curtains is indicated by the number of widths specified for each item. Any number of widths less than the number specified will result in re-fabrication of curtains.

D. Fabrication of Sky Drop and Scrim Curtains:

1. Across the top of each unit the fabric shall sewn flat to a 3-1/2" webbing double stitched with #16 mercerize cotton thread.
2. Provide 2" plated harness snaphook on 12” centers mounted to curtain by means of a strap of web-belting to curtain by riveting with not less than 2 tubular rivets per snaphook. Web-belting straps shall pass over front and back sides of pleats, and rivets shall go completely through the web-belting, jute webbing, and all thickness of curtain fabric. Canvas straps, leather straps, grommets and s-hooks, cotter key hooks, etc., shall not be acceptable.
3. Bottom hems of walk along track mounted cyc and scrims shall be equipped with a separate canvas pocket sewn inside bottom hems in such manner as to have the bottom of the canvas pocket at least 1-1/2" above bottom of curtain hem. Load canvas pocket with #6 galvanized pump chain, secured to prevent bunching and shifting within the pocket.
4. In addition to chain pocket for Walk along cyc and scrim in the bottom hem, sew in a canvas pipe pocket large enough to accommodate a 1" pipe. Provide bottom 3/4" rigid conduit in 10' sections with threaded couplings for joints.
5. Side hems shall be 3" wide double folded double stitched hems.

2.12 STAGE CURTAIN SCHEDULE:

A. Note- Contractor responsible for field verification of all curtains dimensions prior to construction.

CURTAIN	FABRIC	SIZE	FULLNESS	INSTALLATION
Valence	25 oz. Velour	1 panel: 59' W x 8' H	75% Added	On Pipe Batten
Front Curtain	25 oz. Velour	2 panels: 36' W x 21' H	75% Added	On Specified Track
Legs #1, 2, 3	16 oz. Velour	6 panels:	50% Added	On Specified

		14' W x 21' H		Track
Borders #1, 2, 3, 4	16 oz. Velour	4 panels: 69' W x 6' H	50% Added	On Pipe Batten
Mid Stage Traveler	16 oz. Velour	2 panels: 36' W x 21' H	50% Added	On Specified Track
Rear Traveler	16 oz. Velour	2 panels: 36' W x 21' H	50% Added	On Specified Track
Cyclorama	Seamless White Muslin	69' W x 24' H	One Seamless Width	On Specified Track
BB Cyc	25 oz. Velour	4 panels: 20' W x 18' H	50% Added	On Specified Track

2.13 STAGE DIMMING AND CONTROL SYSTEM

A. Electrical requirements of the Stage Equipment Contractor: The Stage Equipment Contractor shall be responsible for providing to the electrical contractor all stage lighting and dimming hardware as specifically detailed in these specifications. This shall include:

1. Furnishing all equipment specified.
2. Hanging of connector strips on specified stage rigging hardware.
3. Set-up of the control console.
4. Demonstration of equipment to owner's representatives.
5. Lamping & Hanging all stage lighting fixtures.
6. Low Voltage Specialty Control wire
7. All low voltage lighting control terminations.

B. The Stage Equipment Contractor shall coordinate with the Electrical Contractor to provide the following:

1. Any conduit.
2. Any wiring.
3. Power requirements and termination of same in dimmer rack.
4. Any load wiring, fixtures, or termination at fixtures for house lighting or emergency lighting.
5. Mounting of plugboxes, floor pockets, back boxes and gridiron junction boxes (locations to be coordinated with stage equipment contractor).

C. Factory Check-Out: This contract shall also include the services of a qualified engineer regularly employed by the manufacturer of the system that shall check the installation and ensure its proper operation. No part of the system shall be energized before being so checked and the installation approved.

2.14 DIMMING AND CONTROL SYSTEM

A. Electrical requirements of the Stage Equipment Contractor: The Stage Equipment Contractor shall be responsible for all stage lighting and dimming hardware as specifically detailed in these specifications. This shall include:

1. Furnishing all equipment specified (some to be given to Electrical Contractor for installation)
2. Hanging of connector strips and pantographs on specified stage rigging hardware.
3. Set-up of the control console.
4. Demonstration of equipment to owner's representatives.

B. The Stage Equipment Contractor shall not be responsible for the following:
   1. Any conduit
   2. Any wiring
   3. Power requirements and termination of same in dimmer rack
   4. Any load wiring, fixtures, or termination at fixtures for house lighting or emergency lighting
   5. Mounting of plugboxes, floor pockets, back boxes and gridiron junction boxes (locations to be coordinated with stage equipment contractor)

C. FACTORY CHECK-OUT: This contract shall also include the services of a qualified engineer regularly employed by the manufacturer of the system that shall check the installation and ensure its proper operation. No part of the system shall be energized before being so checked and the installation approved.

2.15 DIMMER RACKS

A. The installation rack shall be the Sensor as manufactured by Electronic Theatre Controls, Inc., or equal. The fully digital dimmer rack shall consist of up to 48 dimmer module spaces. Sensor rack systems shall be UL Listed and CSA Approved, and shall be so labeled when delivered to job site.

B. The dimmer rack shall be provided with wired spaces for all circuits. Dimmers shall be provided for all base circuits and blank modules provided for all expansion circuits. Provide base circuits indicated in bill of materials.

C. The dimmer racks shall house all dimmer modules, control electronics, and branch circuit breakers. Provide module and breaker quantities as indicated below. System shall have the performance features that follow.
   1. Rack shall be UL Listed and labeled.
   2. Rack shall employ dead front construction of code gage steel.
   3. Each rack must have a hinged locking door.
   4. Each rack must have an electrostatic air filter.
   5. Ventilation shall be by a low-noise fan activated by DMX level data.
   6. In the event of an over-temperature situation, each dimmer shall be shut down independently as required. Systems that shut the entire rack down upon over-temp will not be accepted.
   7. Each 48-module dimmer rack shall be provided with a keypad and LCD display for rack configuration, backup and fault indication.
   8. Each rack shall maintain active scene for a user-programmable period after loss of DMX-512 signal from console.
   9. Standard control format shall be USITT DMX-512. Dimmer rack CEM must accept two independent DMX signals concurrently in a highest-takes-precedence manner for each dimmer.
   10. Rack shall store a minimum of thirty-two user-programmable back-up looks which may be activated in case of loss of control signal.
   11. Each dimmer must include discrete "boost" feature to allow over-voltage output to compensate for voltage drop in branch wiring and allow a true 120 volts at the fixture lamp or “trim” maximum voltage output to lengthen lamp life.
   12. Each rack shall include a beacon which shall flash to indicate failures.

2.16 DIMMER MODULES

A. Dimmer modules shall be plug-in type. No more than two dimmers per module will be accepted.

B. Modules shall be assembled of aluminum or steel. Dimmer modules with housings manufactured of plastic or a flammable material will not be accepted.

C. Each dimmer module shall contain fully magnetic circuit breakers(s), solid state switching module(s), choke(s) and connectors.

D. Each dimmer must have the discreet capability to operate in a dimmed or a non-dimmed mode. This function shall be selectable from the control console or the rack-mounted keypad.

E. Each dimmer circuit shall use solid state switching devices consisting of two silicon controlled rectifiers in an inverse parallel configuration, snubber network and all required gating circuitry on the high voltage side of an integral opto-coupled control voltage isolator.

F. Dimmer modules shall include toroidal filters to reduce lamp filament sing and limit the radio frequency interference on line and load conductors. The current rise-time shall be not less than 500 microseconds measured at 90 degree conduction angle from 10-90% of the output wave-form with the dimmer operating at rated load.

G. Power efficiency shall be at least 97% at full load.

H. Dimmer shall accept hot-patching of an incandescent load up to the full capacity of the dimmer.

I. Dimmer output shall be regulated for incoming line voltage variations, except that the output voltage cannot be increased above a level equal to line voltage less dimmer insertion drop. Line regulation shall be +/- 1V over a 90-140 volt range for changes up to 10%. Load regulation shall be +/- 2V for 1-100% of rated current. Dimmers shall employ a scheme for compensation for harmonic distortion of the power line for any variation in load.

J. Response to control shall be less than 25 milliseconds.

2.17 CONTROL ELECTRONICS

A. General:

1. The dimmer rack electronics shall be contained in one plug-in Control Electronics Module (CEM+). Each CEM+ shall plug into a dimming cabinet, with no discrete wire connections. A simple User interface shall be provided for system configuration, testing and diagnostics. There shall only be one model for all rack types.

B. Electronics:

1. The CEM+ shall be provided with an Ethernet control signal input. This input shall be fully configurable with a range of patching and priority programming capabilities.

2. Two optically isolated DMX512 inputs shall also be provided, allowing overlapping or separation of any control level. 2,500V of optical isolation shall be provided between the DMX512 inputs and the CEM+. This shall protect the DMX512 inputs from a failed control module and the CEM+ from failed DMX512 inputs. Systems that do not have optical isolation on a prewired factory plug-in device shall not be acceptable.

3. The CEM+ shall be completely digital, without employing any digital-to-analog de-multiplexing schemes or analog ramping circuits.

4. In the event of data loss each rack shall maintain the last level for a user programmable time of zero to five minutes or indefinitely, or may be programmed to fade to and play an emergency preset. Systems that do not offer this feature shall not be acceptable.

5. The CEM+ shall respond to control changes in less than 25 milliseconds. Dimmer outputs shall exhibit no oscillating or hunting for levels. Dimmers set to the same level shall output within ±1V of

each other, regardless of phase or electronic module control.

6. Dimmer output shall be regulated for incoming line voltages. The regulation shall adjust for both RMS voltage changes and deformations in the incoming AC waveform. The CEM+ shall monitor and adjust each dimmer's output to maintain a constant power to the load. Regulation shall maintain the desired output voltage ±1V for the entire operating range (90-140V AC) with the exception that the maximum output will be no greater than the line voltage minus dimmer insulation loss. The regulation shall compensate for dips and anomalies in the AC waveform on a dimmer-by-dimmer basis. There shall be no interaction between dimmers in the system or any other equipment. The output shall be nominally regulated to 120V, but shall be field adjustable on a dimmer-by-dimmer basis to allow for varying cable length.
7. The entire response to incoming line changes shall take no more than 25 milliseconds. Dimming systems that do not respond to line fluctuations and do not contain wave deformation detection shall not be acceptable.
8. The CEM+ shall contain diagnostic routines to allow the user to test and troubleshoot the system. The CEM+ shall contain a Test/Bypass switch to turn all dimmers on to full for testing. This switch shall bypass all electronics and shall force the fan on.
9. A system wide panic circuit shall be provided. Any dimmer in any rack may be assigned to the panic circuit.
10. The CEM+ shall be able to record up to 128 backup looks. Backup looks shall be programmable by recording current dimmer levels (as set by the console), by entering dimmer levels on the CEM+ directly, or a combination of both methods. When a backup look is active, the DMX512 inputs shall be ignored in the default priority mode.
11. All system functions may be activated by the CEM+'s user interface and shall not require any remote unit. Systems that do not offer this feature shall not be acceptable.
12. The CEM+ shall be able to configure dimmers for ETC Dimmer Doubling, which allows a single dimmer to set two different levels on one dimmer circuit by splitting the AC power into positive and negative halves.

C. User Interface:

1. A backlit 6-button keypad and 2-line-by-20-character backlit LCD shall be provided for system configuration, testing and diagnostics. The backlit design of the panel controls shall provide for ease of use in dark environments.
2. The six buttons shall be Accept, Back, Plus, Minus, Home and Test.
3. The front panel shall have four status LED indicators: a blue LED for power status and three green LEDs for Network, DMX A, and DMX B status.
4. A reset switch shall also be located on the front of the unit.
5. Menu functions:
    a. DMXA/B or EDMX data may be assigned sequentially from a starting control channel (base addressing) or patched per control channel to any dimmer via the user interface.
    b. The dimmer curve shall be capable of being set on a per-channel basis. The default curve shall be the IES modified square law. Additional curves include: Square Law, Linear, and Sensor v2.0. The CEM+ shall also have the capability of storing up to three custom curves and shall have an adjustable Preheat, all assignable on a per dimmer basis.
    c. The dimmer mode shall also be capable of being set on a per-channel basis. Modes shall include: Normal, Dimmer Doubled, Switched (unregulated on/off with adjustable threshold), or

Fluorescent with adjustable threshold.

d. DMX Loss behavior can be set to either Hold Last look, Wait and Fade, or Fade to Preset.

e. Up to 128 presets may be programmed, recording any level, whether set in direct level menu or by a Data input. Presets shall be activated in the default fade time of 2 seconds.

f. The direct level menu shall provide the ability to set a dimmer or groups of dimmers to a level.

6. The CEM+ shall be capable of monitoring and displaying [LCD] incoming line voltage for all three phases. With installed current sensors the same display shall show amperage on each phase. This display shall not timeout.

7. English, French, German and Spanish language support shall be built in.

8. The CEM+ shall contain the following user displays:

a. Status display to show rack identification and errors. Error Messages shall include, but not be limited to, the following:

b. Dimmer has shut down due to over temperature

c. DMX port A or B has an error or has failed

d. Phase A, B or C is below 90 volts

e. Phase A, B or C is above 140 volts

f. Rack has shut down due to air flow loss

g. Ambient temperature is below 0°C/32°F

h. Ambient temperature is above 40°C/104°F

9. Rack has shut down - ambient temperature exceeds 46°C/115°F

10. Ability to program and activate system-wide backup looks from face panel or web User Interface.

11. About display shall allow monitoring of system, rack or dimmer status.

a. About System shall provide information about Panic circuits, Preset looks, and System name.

b. About Network shall provide IP address, gateway and net mask.

c. About Rack General shall provide information about rack name, ambient temperature, air filters and rack type.

d. About Rack Power shall provide information about power type, rack voltages, current per phase (only with current transformers), under voltage warnings.

e. About Rack Data shall provide status for DMXA, DMXB, EDMX and Network activity.

f. About Dimmer shall provide information about dimmer type, location, output level, control source, scale voltage, mode and curve.

12. Setup display shall allow but not be limited to, configuring of rack addresses, dimmer firing mode, and scale voltage values.

D. Dimmer Status Network:

1. The Dimmer Status network shall provide remote monitoring, programming and backup functions for the system through any Sensor compatible console, PC, or hand-held remote device. System information shall also be displayed on any system interface including the CEM+ and the devices listed above. Systems that do not provide both types of user interface shall not be acceptable.

2. Dimmer Status network shall provide an integral link to connect all racks in the system for rack-to-rack communication. Information for all configuration and backup looks shall be stored in all CEM+'s to allow swapping of CEM+'s throughout the system. Systems not storing all configuration data and backup looks for each dimmer in all control modules shall not be acceptable.
3. A technician shall be able to program all parameters onsite, using a laptop personal computer. These parameters shall include, but not be limited to, defining rack type, module type, scale voltage for each dimmer, firing mode, curve, dimmer numbering and DMX512 port assignments. Systems requiring factory programming shall not be acceptable.

E. Advanced Features:

1. Sensor's Advanced Features (AF) option shall add an additional sensor in the individual dimmer modules. The AF option shall allow monitoring of current and output voltage on a dimmer-by-dimmer basis and provide information on lamp burnouts, dimmer status, and input voltages.
2. The CEM+ shall allow the user to record the loads of all AF dimmers in the system. The CEM+ shall, during operation, test each AF dimmer, determine its load, and compare it to the recorded load. Any change from recorded loads greater than five percent shall display an error on the CEM+ and any monitoring device on the ETCLink network.

F. Physical:

1. Dimmer control electronics shall be contained in one plug-in Control Electronics Module, housed in a formed steel body with an injection molded face panel.
2. An airflow sensor shall be provided. In the event of inadequate airflow, the affected rack shall shut down until the error is corrected.
3. If the ambient room temperature drops below 0°C/32°F or rises above 40°C/104°F, a warning shall appear on the dimmer rack LCD. If the temperature rises above 46°C/115°F, the rack shall shut down until the condition is corrected.
4. Dimmer control electronics module shall operate at up to 120/208V, three phase, four wire + ground, 47 to 63 Hz. The CEM+ shall automatically compensate for frequency variations during operation.

2.18 CONTROL CONSOLE- AUDITORIUM

A. General:

1. The lighting control console shall be a microprocessor-based system specifically designed to provide complete control of stage, studio, and entertainment lighting systems. The console shall be the Ion as manufactured by Electronic Theatre Controls, Inc., or equal.
2. The control system shall be Net3 and ETCNet 2 native, with both protocols output simultaneously over the network. The system shall also be able to control third party ACN devices directly. The system shall provide control of 1000 outputs/channels, 1500 outputs/channels or 2000 outputs/channels.
3. A maximum of 10,000 cues, 99 cue lists, 1000 groups, 1000 presets, 4 x 1000 palettes (Intensity, Focus, Color and Beam), 1000 effects, 1000 macros and 99 curves may be contained in non-volatile electronic memory and stored to an onboard hard disk or to any USB storage device.
4. The console may be placed in Tracking or Cue Only mode by the user as a system default and overridden on individual record actions as required.
5. A Master Playback fader pair and dedicated Grand Master/Blackout shall be provided.

6. Up to six USB fader wings may be connected to the console, for a maximum of 240 submasters and or 30 playback faders, with six pages of control. USB fader wings may be rigidly connected to the main console to provide a "single connected unit" with no external cables required. The wings also may be connected via USB cables and used "on the side."
7. A high-resolution level wheel shall be provided to control intensity for selected channels and scrolling within selected displays. Four page-able high-resolution encoders shall be provided for control of other non-intensity parameters. Non-intensity parameters shall be controllable via the encoders or keypad controls, without need of an external pointing device.
8. Rotary encoders for non-intensity parameters shall be labeled by means of an integral LCD display mounted above or below the encoders on the main console. The display shall show the currently loaded functions of the encoders based on the current selections. Systems using encoders with no LCD labeling shall not be acceptable.
9. Control and programming features for automated fixtures shall also include: a standard library of fixture profiles, the ability to edit existing profiles and create new profiles, patch displays including channel and output addressing, 16-bit fade resolution, color characterization allowing color mixing and storing in Hue and Saturation or native device values.
10. System information, including playback status, live output and blind values for all record targets shall be displayed on a maximum of two external high resolution DVI monitors, or one SVGA monitor, which may also be touch-screen(s). Only one display shall be required for operation.
11. The system shall direct user input through on-screen dynamic prompts and integral LEDs on console keys indicating current operating mode. A context sensitive on-line Help feature shall explain and provide an example of the operation of each feature of the system.
12. An optional, fully-functioning, detachable alphanumeric keyboard shall be provided. The keyboard shall allow labeling of channels, cues, presets, groups, palettes, effects, macros, curves and the show. An integral electronic keyboard shall be provided.
13. A row of soft keys shall be provided, which change function based on the selection and context of the console. These soft keys shall be labeled via an adjacent LCD display that shows their current functions at all times. Systems using soft keys with no LCD display shall not be acceptable.
14. Console software upgrades shall be made by the user via a USB port; changing internal components shall not be required.
15. The console operating software shall be loaded into program execution memory from the internal hard drive when the console is powered. In the event of an uncontrolled shutdown, the console shall return to its last output state when power is restored.
16. Show data may be created and modified on a personal computer, using an offline editing application.
17. A PC running a client software application shall be able to connect to a control system via the network and view or modify current show data in an independent display environment. Additional devices on the network shall also be able to act as clients to the main console.
18. Synchronized backup shall be provided via another full console on the network or by use of a remote processor unit. The backup unit (either full console or rack mounted Remote Processor Unit (RPU)) shall maintain synchronized playback with the master and shall take over control of the lighting system upon loss of communication with the master. Use of two RPUs to service and backup system output is also supported. Systems that do not offer this kind of instant backup from multiple sources shall not be acceptable.

19. A maximum of four users may access and interact with show data simultaneously. Each user shall have an individual workspace.
20. The system shall allow remote control from external devices as follows: Client software running on a PC connected to the network, a remote video interface with keyboard, a purpose-built wireless remote focus unit (Radio Focus Remote). Universal fader wings may be attached to any of these devices for local fader control. Systems without these remote control devices shall not be acceptable.
21. The system shall support a Telephone remote control that allows basic functions to be controlled from a standard wireless phone producing touch-tone signals. This allows the use of a standard telephone for a low cost remote control. Systems that do not allow this function shall not be acceptable.
22. The system shall support up to 32 individual Time Code Event lists.

2.19 CONTROL CONSOLE- BLACK BOX THEATRE

A. General:

1. The lighting control console shall be a microprocessor-based system specifically designed to provide complete control of stage, studio, and entertainment lighting systems. The console shall be the SmartFade 1248 as manufactured by Electronic Theatre Controls, Inc., or equal.
2. The system shall provide control of 512, DMX512 controlled dimmers
3. A maximum of 288 memories, may be contained in non-volatile electronic memory.
4. A playback fader pair shall be provided, with highest level operation for intensity between pair and last action operation within pair. Dynamic rate control shall be provided for playback within the memory stack. Device parameters shall always operate with last action operation,
5. 12 overlapping additive channel sliders shall provide access to individual intensity channels, intensity for devices and parameter controls for devices. The console shall provide three modes of operation: Full Control Mode and two playback-only modes (Playback only and Control with Playback). In playback only modes, no recording functions shall be accessible to the user. Selection of the operating mode shall be a menu option in the LCD display.
6. Console shall not require the use of an external monitor for normal use.
7. Console software upgrades shall be made by the user via USB connection to a PC or by SD card. Changing internal components shall not be required.
8. The console shall provide an SD memory card socket allowing show data to be saved for archival or transfer to other consoles or a personal computer.
9. Systems that do not provide the above capabilities shall not be acceptable.

B. Controls and Playback:

1. Programming Section:
    a. The console shall provide LCD display with button and dial controls for navigation. The LCD shall provide system configuration, show data and channel level information.
    b. The console shall provide dedicated buttons for device selection, recording, editing and selecting groups and memories, recording sequences and snapshots, copying memories and sequences, selecting and editing effects, and parameter “fan”.
2. Playback Section:

a. Full Control mode shall provide manual single scene operation and memory operation. Switching among these playback options shall be provided through direct keys.

3. Channel Faders:

a. 12 proportional, fully overlapping faders shall be provided with 45mm potentiometers and bump buttons.

b. The 12 faders shall provide direct manual control of intensity for all channels and devices, as well as direct parameter control for patched devices. Channel levels and parameter settings can be changed at any time by the individual channel sliders.

4. Master faders and Blackout key:

a. A 60mm Master Potentiometer shall be provided that shall master output levels of all intensity channel faders and the crossfader. An alternate action Blackout key shall be located near the Master fader.

b. A 60mm Bumps potentiometer shall be provided that shall master the maximum output level of the intensity channel bump buttons.

C. Operating Modes:

1. Full Control Mode:

a. Full Control mode shall provide 24 intensity channels in two blocks of 12 faders, an additional 12 device channels and two independent channels. Channel faders shall have bump buttons that illuminate proportionally to mimic the output level. Bumps shall operate in pile-on and solo modes.

b. The mode shall provide both 1-to-1 and custom DMX patches. All 1,024 DMX addresses may be patched to the 74 available intensity, device and independent channels.

c. The Next function shall allow manual, preset -style playback of all 72 channels using the two blocks of channel faders and the crossfader GO button.

d. Faders shall also control up to 288 (12 pages of 24) recordable memories. Memories shall record user-selected channel levels.

e. Twelve faders shall provide control of up to 144 sequences (12 pages of 12 faders). Sequences shall include up to 24 steps containing channel levels and/or recorded memories. Steps shall be editable, each with different timing as required, and steps shall be able to be individually deleted and inserted.

f. A cue stack of up to 199 steps shall be provided. Steps may contain a reference to a recorded memory or a direct cue made up of channel levels and parameter settings. Steps shall be editable and steps shall be able to be individually deleted and inserted.

g. The cue stack and sequences shall be able to be played back using manual fades, timed fades, or overridden timed fades using the Rate function.

h. Preview of recorded memories and sequences shall be provided in the LCD display.

i. Snapshot memories shall provide temporary storage of up to 10 looks.

j. An Undo command shall undo the last record command executed.

k. A bump level master shall be provided.

l. A grand master fader and black out button shall be provided.

m. Two independent channels shall be provided with on/off functionality. Independents may be patched like any other channel.

n. Output levels shall be displayed in the LCD menu.

2. Playback Only Mode:
   a. Memories and the stack shall be accessible for playback.
   b. Patch, configuration and editing functions shall be inaccessible in this mode.
   c. Manual control of devices shall be suppressed in this mode.
3. Control with Playback Mode:
   a. Memories and the stack shall be accessible for playback.
   b. Patch, configuration and editing functions shall be inaccessible in this mode.
   c. Manual control of devices shall be available in this mode.
4. MIDI Operation:
   a. The console shall be able to receive MIDI data.
   b. Two consoles shall be able to be connected via MIDI. One unit is set to master and the other to slave.

D. Interface Options
1. The console shall provide connectors for the following:
   a. AC or 12V DC input for external power supply
   b. DMX512/1990 output
   c. MIDI In
   d. MIDI Out
   e. USB input (Series B device connector)
   f. SD Memory Card socket

E. Physical
1. All operator controls and console electronics shall be housed in a single desktop console.
2. SmartFade 1248 console shall be 27" nom. wide x 10" x nom. deep x 2.5" nom. high (including controls). Weight APPROX 3.6kg ~ 8lbs.
3. Console power shall be 12V AC or DC via an external power unit. The power unit shall operate with 90-265VAC line voltage, 50 or 60Hz. Console is provided with a universal power supply and cord set. Consoles that require different power supplies and cord sets for differing power types shall not be acceptable.
4. A vinyl dust cover is available.

2.20 RADIO REMOTE FOCUS UNIT

A. The Remote Focus Unit shall be a rugged hand held remote which will allow the user to set channel levels, check dimmers, or run cues from any location in the theatre. Fade times, channel levels, and cue numbers shall be able to be viewed on three LED displays. Stage and blind modes shall allow for easy cue composition and playback. Unit shall be compact to allow easy interface with the console and is a radio signal remote, using Net3 protocol

2.21 ARCHITECTURAL CONTROL PROCESS (ACP)

A. The Architectural Control Processor shall be the Unison Paradigm P-ACP Series Control Processor as manufactured by Electronic Theatre Controls, Inc.,

1. The Architectural Control Processor (ACP) assembly shall be designed for use in DRd Series Dimming Enclosures and ERn Series Control Enclosures.
2. The processor shall utilize microprocessor based, solid state technology to provide multi-scene lighting and building control.ACP module electronics shall be contained in a plug-in assembly.
3. The module shall be housed in a formed steel body and contain no discrete wire connections.
4. No tools shall be required for module removal or insertion.

B. The ACP shall be convection cooled.

C. User Interface
1. The ACP shall utilize a backlit liquid crystal display capable of graphics and eight lines of text.
2. The ACP shall provide an alpha-numeric keypad for data entry and navigation.
3. The ACP shall provide a touch-sensitive control wheel for navigation.
4. The ACP shall provide shortcut buttons to assist in navigation, selection, and data entry.
5. The ACP keypad, buttons, and wheel shall be backlit for use in low-light conditions.
6. The backlight shall have a user selectable time out, including no time out.

D. The ACP shall provide a front-panel RJ45 jack for Ethernet connection to the processor for configuration, live control, and web-browser-based system access.
1. The Ethernet port shall be secured behind the locking door.

E. The ACP shall provide a Secure Digital (SD) Removable Media slot on the front panel for transfer of configuration data.
1. The SD slot shall be secured behind the locking door.

F. The ACP shall provide a Universal Serial Bus (USB) port on the front panel for transfer of configuration data.
1. The USB port shall be secured behind the locking door.

G. Architectural Lighting System configuration and program information shall be stored in flash memory, which does not require battery backup.
1. The ACP shall provide a Compact Flash (CF) Card as backup flash memory and storage.
2. The CF Card is stored in the back of the ACP, and can be accessed only by removing the ACP.
3. The ACP data can be exchanged by inserting the CF card into another ACP.

H. Electrical
1. The ACP shall require no discrete wiring connections; all wiring shall be terminated into Dimming or Control Enclosure.
2. The ACP shall require low-voltage power supplied by the Dimming or Control enclosure.
3. The ACP shall be hot-swap capable.
4. The ACP shall support Echelon Link Power communications with remote devices, including button stations, button/fader stations, Touchscreen stations, sensors, and third party LonMARK compliant products.
5. The LinkPower network shall utilize polarity-independent, low-voltage Class II twisted pair wiring, type Belden 8471 (unshielded) or Belden 8719 (shielded) or equivalent. One # 14 AWG drain wire will be required for system not using grounded metal conduit. Touchscreen stations, interface

stations and portable stations connectors will also require (2) #16 AWG wires.

a. The LinkPower network shall be topology free. Network wiring may be bus, loop, home run, star or any combination of these.

b. Link power wiring shall permit a total wire run of 1640 ft. (500m) without a repeater. Repeater option modules shall be available to increase wiring maximums in increments of 1640 ft. (500m).

c. Link power wiring between stations shall not exceed 1313 ft. (400m).

d. The ACP shall support 10/100BaseTX, auto MDI/MDIX, 802.3af compliant Ethernet networking using TCP/IP, ESTA BSR E1.17 Advanced Control Networks (ACN) and ESTA BSR E1.31 (sACN) Protocols for internal communication and integration with third-party equipment.

I. The ACP shall support EIA-RS232 serial protocol for bi-directional command and communication with third-party equipment.

J. The ACP shall support two discrete ESTA DMX512A ports, configurable as input or output ports.*

K. *When used in a Dimming Enclosure, the second port is always an output port.

L. The ACP shall provide four onboard dry contact closure inputs for integration with third-party products.

M. The ACP shall provide four onboard contact closure outputs, rated at 1A@30VDC, for integration with third-party equipment.

N. Functional

1. Capacity:

a. Shall support 1024 channels of control

b. Shall support 2 physical DMX ports, each of which may be configured as an input or output

2. System:

a. Runtime application shall utilize support Net3 system interoperability

b. System shall support the use of Network Time Protocol for real time clock synchronization

c. System shall support remote firmware upload an over Ethernet connection from a connected PC running the Light Designer software or another connected processor.

d. System shall support local firmware upload from removable media (SD Card, USB Flash Drive)

3. Diagnostics:

a. Shall output an Event log

b. Standard log shall store a fixed-length history of recent activity

c. Separate critical log shall only store important messages (such as boot-up settings)

4. Configuration Data:

a. Configuration Data can be uploaded over an Ethernet connection from a PC running Light Designer application

b. Configuration Data can be retrieved from another Paradigm Processor

c. A Paradigm Processor shall make its configuration data available for retrieval by another Processor as a backup/recovery mechanism

d. Configuration Data shall be stored on solid-state media that can be removed to facilitate transfer between Processor units

e. Configuration Data may be loaded to and from removable media access provided on front panel

f. Configuration Data for the entire System shall be available for download from any single Processor

g. Shall store configuration data for Dimming enclosure processors and shall make available for download

5. Scalability:

a. Adding additional Processors to a System shall proportionately increase its overall capabilities up to a maximum System size

b. The maximum number of Processors configured as a System shall be at least 12.

c. Multiple Processors shall utilize the Ethernet network to remain time synchronized and share control information

d. Multiple Processors shall utilize the Ethernet network to maintain configuration data synchronization as modifications are made

e. Failure of a single Processor shall not prohibit continuing operation of the remaining Processors

f. It shall be possible for multiple Systems to coexist on the same physical network with logical isolation between Systems

6. Local User Interface:

a. Shall provide access to Processor setup (IP address)

b. Shall provide access to Processor status and diagnostics

c. Where the Processor is installed within a Dimming enclosure, shall provide access to Dimming enclosure setup, status and diagnostics

d. Shall provide control functionality for Control Channels, Zones, Fixtures, Groups, Presets, Macros, Walls and Sequences within the current configuration.

e. Shall provide functionality to schedule astronomical and real time events (add/edit/delete)

f. Shall allow for display of local DMX information

g. Shall allow for transfer of log files to local removable media

h. Shall allow to perform firmware upgrades for connected Dimming enclosures

i. Shall allow for transfer of configuration to and from Dimming enclosures using removable media

j. Shall allow for transfer of configuration to and from LCD Stations using removable media

k. Shall allow for binding of Stations

7. Access Controls:

a. There shall be 2 user accounts - Administrator, and User with separate password protection

b. Account and password settings shall be local to each Processor

c. Access Controls shall be applied to certain areas of the Paradigm Local User Interface and Web Interface

8. Web User Interface:

a. Shall be an internal web server accessible via Ethernet port
b. Shall support common web browsers on Windows and Mac platforms
c. Shall provide functionality to Activate and Deactivate Presets
d. Shall provide functionality to schedule timed events (add/delete)
e. Shall display status information
f. Shall display log files
g. Shall allow for configuration of Processor settings (date, time)
h. Shall allow for upload and download of configuration data
i. There shall be links to other web-enabled devices in the System, including other Paradigm Processors

9. Stations:
    a. Stations shall be connected to a Paradigm Processor via a LinkPower network or Ethernet
    b. Station discovery and binding shall be accomplished from the Local User Interface or Light Designer

O. Net3 and ACN Devices:
1. Net3 Devices shall be connected to and controlled from Paradigm Processors via Ethernet
2. Paradigm Processors shall provide DMX-Net3 gateway functionality
3. It shall be possible to send and receive Macro triggers defined within the System configuration via Net3
    a. There shall be support for Streaming ACN on up to 24 universes per Processor

P. Operation:
1. When contained in an dimming enclosure, a snapshot of the dimming enclosure output data shall be stored in persistent memory so that hardware can access it for immediate output on boot
2. DMX output refresh rate shall be configurable
3. There shall be support for 16-bit DMX Attributes
4. DMX inputs may be patched to DMX and Streaming ACN outputs as external sources
5. Streaming ACN inputs shall be patched to DMX outputs (gateway) as external sources
6. Where there are multiple external sources then priority and HTP shall be used to perform arbitration
7. External and internal sources shall be arbitrated based on user-selection of standard or custom rules
8. On Preset Record, the values of Attributes within the Preset shall be updated to reflect the current output
9. The total output may be the combination of many different Presets running concurrently
10. There shall be no hard limit on number of concurrent cross fades
11. Multiple Presets controlling the same Attribute shall first interact based on priority and second based on Latest Takes Precedence(LTP) or Highest Takes Precedence (HTP)
12. LTP and HTP operation shall be supported simultaneously and interact (at the same priority) using HTP

13. Settings due to LTP Presets may be automatically discarded from operation when overridden
14. It shall be possible to specify that a Preset or Attribute Control will persist when overridden
15. A Preset may be designated as an HTP Override and shall cause HTP values to be discarded
16. It shall be possible to modify the rate of a Preset (Cross fades, Effects) from a Control within the System
17. Each Preset shall have a status that can be Activated, Deactivated or Altered
18. Preset status may be set based on matching levels in the current output as an option
19. On startup the System shall be capable of automatically executing timed events within the previous 24 hours to synchronize its initial output state with the current time of day

Q. Serial Input/output:

1. RS232 shall support 8-bit word length, parity selection and 1 or 2 stop bits
2. RS232 shall support baud rates from 4800 to 115,200 bps
3. Serial input and output messages are fully customizable
4. Serial output messages can be generated by any Control or Event

2.22 ARCHITECTURAL CONTROLS

A. Mechanical

1. Preset/Fader Stations
    a. Unison Preset/Fader stations shall operate using up to twelve programmable buttons and sixteen programmable faders with integral LEDs.
    b. Fader stations shall utilize standard 45 millimeter slide potentiometers.
    c. All Preset and Fader stations shall be available with white, ivory, gray or black faceplates, fader knobs, and buttons. All faceplates shall be designed for flush or surface mounting.
    d. Station faceplates shall be constructed of ABS plastic and shall use no visible means of attachment.
    e. The manufacturer shall supply back boxes for flush mounted half gang stations and for all surface mounted stations.
2. LCD Stations
    a. LCD stations shall consist of a back-lit liquid crystal display (LCD) with a touchscreen interface. The LCD station shall operate using graphic buttons, faders and other images on up to 30 separate programmable control pages.
    b. Flush or surface wall mounted stations shall be available with white, ivory, gray and black faceplates.
    c. Station faceplates shall be constructed of ABS plastic and shall have no visible means of attachment.
    d. The manufacturer shall provide back boxes for all LCD stations.
        1) Flush back box dimensions shall be 5.25H x 8.5W x 3.25D.
        2) Surface back box dimensions shall be 5.75H x 9.12W x 3.25D.
    e. LCD stations shall be available in white and black portable desk top consoles with cable and connector.

f. It shall be possible to adjust LCD contrast and brightness. It shall also be possible to program the station to dim to any level during periods of inactivity.

B. Electrical

1. Unison control station wiring shall be an Echelon® Link power network.
2. Link power shall utilize low-voltage Class II unshielded twisted pair, type Belden 8471 or equivalent, and one #14 ESD drain wire (when not installed in grounded metal conduit).
3. LCD stations shall also require (2) #16 AWG stranded wires for 24Vdc operating power. 24Vdc wiring shall be topology free.
4. Network wiring may be bus, loop, home-run or any combination of these.
5. Network insulation displacement connectors shall be provided with all stations.

C. Functional

1. The Unison Control System shall be designed to allow control of lighting and associated systems via Preset/Fader, LCD, IR or Astronomical time clock controls. System shall allow the programming of presets, macros and time clock events.
2. System presets shall be programmable via Preset/Fader, LCD or Light Manager software.
   a. Presets shall have a discrete fade time, programmable from zero to 1,000 hours with a resolution of one millisecond.
   b. Presets shall be selectable via button, fader, IR transmitter, time clock event, macro activation or switch interface stations.
   c. System time clock events shall be programmable via Light Manager system software.
3. Station (Preset/Fader, LCD or IR) control components shall be designed to operate standard default or custom system functions. Components shall operate default functions unless re-assigned via Light Manager, the Windows-based configuration program.
   a. Optional button functions include: preset selection, manual mode activation, record mode activation, station lockout, raise, lower, macro activation, cue light, or room join/separate.
   b. Optional fader functions include manual master control, individual zone control, fade rate control or preset master control.
4. Stations (Preset/Fader, LCD and IR) shall allow programming of station and component electronic lock-out levels via Light Manager. LCD stations shall also allow programming of page pass-code and visibility levels.
5. LCD stations shall support import of bitmap images files to custom LCD control pages.
6. LCD stations shall support the control of DMX512 automated fixtures via graphic XY faders.

2.23 REMOTE PLUG-IN STATION

A. The Remote Plug-in Stations shall consist of the appropriate connectors required for the system in use. These stations shall be available with DMX input or output, Remote Focus Unit, ETCNet, ETCLink or architectural control connectors. Custom control connectors shall be available.

B. The following standard components shall be available for Remote Plug-in Stations:

1. 5-Pin male XLR connectors for DMX input
2. 5-Pin female XLR connectors for DMX output
3. RJ45 connectors for ETCNet connections - Twisted Pair

C. Custom combinations and custom control connections shall be available.

D. Station faceplates shall be .80” aluminum, finished in fine texture, scratch-resistant black powder coat. Silk screened graphics shall be white.

E. The station panel shall mount into an industry standard back box, depending on size and quantity of connectors. A terminal block shall be supplied for contractor terminations.

2.24 DISTRIBUTION

A. Wiring devices shall be fabricated from 16-gauge cold rolled steel or extruded aluminum. Devices shall be properly cleaned, primed and painted with flat black baked enamel. Circuit numbers shall be 2"high.

B. Individual pigtails and outlets shall be evenly spaced in connector strips, or as otherwise specified. Where a circuit would fall on a joint it shall be moved 3" towards the junction box end of the strip.

C. Pigtails shall be three-wire type "SO" rubber jacketed cable sized for the circuit capacity. Connectors are 20A Grounded Stage Pin connectors. Internal wiring shall be sized to circuit capacity and terminated in feed through compression terminals at one end for ease of installation. Wire shall be rated at 125°.

D. Devices except for wall mounted boxes shall be supplied with appropriate hardware for mounting as shown on the drawings. Connector strips shall have brackets on 5' centers.

E. For connector strips provide pantograph cable management system as required to allow all devices to fly within 4’ above finished floor.

F. Plug boxes shall be mounted as indicated with scheduled circuit outlets.

2.25 FIXTURES

A. Ellipsoidals:

1. The ellipsoidal spotlights shall be the Source Four or Source 4 Jr. as specified.
2. Source Four's high efficiency lamp shall utilize a compact tungsten filament contained in a krypton-filled quartz envelope. The lamp base shall be an integral die cast aluminum heat sink that reduces seal temperature and ensures proper lamp alignment.
3. The lamp shall be 575 Watts with 16,500 lumens, with a color temperature of 3,250 K and have 300 hours of lamp life.
4. Source Four's optical train shall combine a compact filament lamp with a precision molded borosilicate, ellipsoidal reflector and a single aspheric lens to produce an optimum cosine field.
5. Source Four ellipsoidal spotlights are constructed of rugged, die cast aluminum, finished in black, high temperature epoxy paint. Tools are not required for either lamp alignment or cleaning the reflector or lens. Precision tooled mechanical assemblies provide smooth operation, positive locking of adjustments and interchangeable components.
6. Source Four ellipsoidal shall provide, but not be limited to:
    a. Die cast aluminum housings
    b. Integral cable clamp for power leads
    c. Positive locking of lamp focus
    d. Independent lamp alignment controls
    e. High impact, thermally insulated knobs and shutter handles
    f. Reflector secured with shock mounts
    g. Rotating shutter assembly for keystone angles

h. Heavy gauge stainless steel shutters
i. Lens secured with silicone shock mounts
j. Interchangeable lens tubes for different fields
k. Teflon guides for smooth lens tube movement
l. Sturdy gel frame holders with two accessory slots
m. Top mounted, quick release gel frame retainer
n. Rugged steel yoke with two mounting positions
o. 300+ Rotation of fixture within yoke
p. Positive locking, hand operated yoke clutch

B. Pars:
1. The instrument shall be a Source Four Par.
2. The instrument shall utilize a 575 watt HPL lamp which is a compact tungsten filament contained in a krypton-filled quartz envelope.
a. The lamp shall mount axially within the reflector and shall be prefocused within the reflector.
b. The lamp base shall have a integral die cast aluminum heat sink that reduces seal temperature and ensures proper lamp alignment.
c. The lamp socket shall be ATP 220 nickel gold plated.
d. All versions of the instrument shall use only lamp type, the HPL lamp. Fixtures which require the purchasing of multiple lamp types to achieve different field angles shall not be acceptable.
3. The spotlights are constructed of rugged, die cast aluminum, free of burrs and pits, finished in black, high temperature epoxy paint. Tools shall not be required for cleaning the reflector or lens
4. The spotlight shall provide, but not be limited to:
a. Integral cable clamp for power leads
b. High impact, thermally insulated knobs
c. Sealed reflector housing shall prevent all light leaks. Temperature control of reflector is obtained through 17 heat sink fins cast into the housing.
d. Interior of unit shall contain ten baffles to eliminate beam scattering and spill light.
e. Lamp socket shall be held into place by a brass self retaining screw.
f. Lens shall be secured with cast bosses and high temperature bronze spring release. No tools shall be required to change lenses.
g. Sturdy gel frame holders with two accessory slots and a top mounted, quick release gel frame retainer
h. Rugged steel yoke with two mounting positions 300°+ Rotation of fixture within yoke
i. Positive locking, hand operated yoke clutch
j. Each unit shall be provided standard with color frame and 36” bare lead.
k. Unit shall be nominally 11”long by 10” wide
l. Weight without “C” clamp shall be 8 lbs.
5. The spotlight shall be UL and CUL approved

a. It shall be possible to change field type of the spotlight through interchangeable lenses. No tools shall be necessary for lens changing. 360° Beam rotation shall be possible while the unit is active. No tools shall be necessary for lens rotation. Fixtures which require user to touch the lamp or lamp socket to orientate the beam shall not be acceptable.

b. Interchangeable lens sets shall consist of clear, very narrow spot, narrow spot, medium flood, and wide flood. Lenses shall be heat resistant, borosilicate glass.

c. Beam orientation of MFL and WFL lenses shall be possible through rotation of lenses in a rotatable collar housed in the front of the unit. Collar shall be a high temperature heat resistant rotating collar with finger holds for precise movement.

d. The optical train shall combine a compact filament lamp with modified parabolic and multifaceted reflector. Reflector efficiency shall be a minimum of 93%. Reflector shall be cast into a heat sink assembly. Reflector finish shall be an enhanced aluminum deposition. Reflectors of pressed aluminum sheet construction shall not be acceptable.

C. Fresnel Spotlight

1. General:

a. The luminaire shall be a Source Four Fresnel spotlight as manufactured by Electronic Theatre Controls, Inc., or approved equal

2. Lamp

a. The luminaire shall utilize only the HPL lamp, which shall consist of a compact tungsten filament contained in a krypton-filled quartz envelope

b. The lamp base shall have an integral die cast aluminum heat sink that reduces seal temperature and ensures proper lamp alignment

c. Luminaires that use lamps other than the HPL lamp shall not be acceptable

d. The lamp socket shall be ATP 220 nickel gold plated

e. The lamp shall be prefocused in relation to the reflector

f. The lamp shall be removable from the bottom of the fixture for re-lamping

3. Optical

a. Luminaire shall use a Fresnel lens and provide soft-edged, but well-defined beam shaping with a barn door attachment

b. Luminaire shall provide a field angle zoom range of 20 degrees to 65 degrees

c. The optical train shall utilize a compact filament lamp with a modified spherical reflector

d. The luminaire shall output no less than 10,000 field lumens in full flood setting when fitted with 750W, 115V high out-put HPL lamp

e. Luminaires producing less than 10,000 field lumens in full flood setting with a 750W lamp shall not be acceptable

f. Reflector shall be molded borosilicate glass with multiple dichroic layers

g. Reflector efficiency shall be a minimum of 93%

h. Reflectors of pressed aluminum or other sheet metal construction shall not be acceptable

4. Physical

a. The luminaire shall be constructed of rugged, die cast aluminum, free of burrs and pits, finished in black, high temperature paint

b. The luminaire shall provide, but not be limited to:

1) 36” power lead with bare-ends

2) Integral cable clamp for power leads

3) Sealed housing with no light leaks

4) Zoom adjustment by means of a large, side-mounted knob with integral locking lever

5) Bottom-access lamp removal

6) Lamp socket access door shall use a tool-free ¼-turn closure device

7) Two accessory slots and a top mounted locking door for gel frames and beam control accessories

8) Accessory slots shall be completely surrounded by a rugged metal housing for elimination of light leaks around gel frames and other beam control accessories

9) Accessory slots shall be compatible with 7.5” beam control accessories, i.e. barn doors, gel frames, top hats, etc, such as used by Source Four PAR luminaires and other similarly-sized fixtures

c. Rugged steel yoke

d. Adjustable yoke mounting position for variable fixture balance point

e. Positive locking, hand operated yoke clutch

f. Large, rugged handle on rear of fixture

g. Integrated safety cable mounting ring

h. Color frame

5. Unit shall be nominally 12.5”long by 9.5” wide

6. Weight without “C” clamp shall be 13.25 lbs.

7. The luminaire shall be capable of utilizing ETC Dimmer Doubling technology

8. The luminaire shall be ETL and cETL listed to UL 1573 – the standard for stage and studio use and so labeled

D. Cyc Fixtures

1. Luminaire shall be compact lightweight cyclorama light constructed of 18-gauge steel. Construction shall employ all corrosion-resistant materials and hardware.

2. The luminaire shall be for use with 300 to 1500-watt tungsten halogen lamps. Each unit shall have adjustable lamp holder, which allow the luminaire to accept T-3 to T-8 lamps of three different lengths:4-11/16” (119mm), 5-5/8” (143mm), and 6-9/16” (167mm). Units not incorporating this feature shall not be acceptable.

3. Luminaire shall be provided with a highly polished and peened reflector with heat sink. Units not incorporating this feature shall not be acceptable.

4. A super thin safety screen is specially designed to allow maximum light output, and is readily removable for easy access to the lamp for quick installation and replacement.

5. Luminaire shall be provided with a rugged 18-gauge steel joining bracket, which allow multiple units to be safely locked together. Units not incorporating this feature shall not be acceptable.

6. Luminaire shall accept a wide selection of yokes and other hanging hardware to accommodate virtually all sky cyc mounting configurations.

7. Luminaire shall accept a hinged color frame, which is removable without the use of tools.
8. The luminaire shall be U.L., c.U.L. Listed and CE Certified and labeled for use with up to 1500-watt lamps. Luminaire shall have a New York City Calendar Number.
9. The luminaire shall be #EC-1, as manufactured by Altman Lighting, Inc., Yonkers, NY.

E. Work Light Fixture

1. The worklight fixture shall be a die cast aluminum housing with a high temperature lens enclosing the lamp.
2. The fixture produces a wide uniform beam for general illumination of stage area.
3. Optional features include wire lens guard and top and side visors.
4. Fixture shall be a complete assembled fixture with the following items included:
    a. Gray housing with high temperature lens
    b. 36” pigtail with your choice of plug installed:
        1) 2P&G stage pin plug
        2) L520 twist lock plug
        3) 520 parallel blade plug
    c. Halogen T-3, 500W, 120V lamp
    d. Mounting c-clamp•
    e. Safety cable and safety cable eye bolt
5. Fixture shall be optionally available with the following:
    a. Wire lens guard
    b. Top and side visors•
    c. 1,000 watt unit available (contact factory)
6. Fixture shall be the SSRC SWLF-1-QL505 Worklight Fixture with 500 watt lamp

F. Canto 700w Followspot

1. General
    a. The instrument shall be a CANTO 1200 followspot, as marketed by Strong Entertainment Lighting, a division of Ballantyne of Omaha, Inc. or approved equal.
2. Physical
    a. The unit frame and enclosure shall be constructed of cold rolled steel and sturdy aluminum extrusions, free of burrs and protected by a black powder coat finish.
3. The following shall be provided:
    a. Spotlight head mounting by means of 1.125 inch (28mm) diameter spigot
    b. Separate, easily exchanged metal halide power supply with quick-disconnect receptacle
    c. Uninterrupted operation cycle
    d. Lamphouse is forced-air cooled by internally wired blower
    e. Manual dimming control
    f. Nichrome steel iris

g. Spot edge focus adjustment capability

h. Weight of head unit not to exceed 37 pounds (16.4kg)

i. Factory options shall include both a height-adjustable tripod floor stand and a five-color self-canceling boomerang with (5) color filters

4. Optical

a. The unit shall combine a 1200 watt metal halide lamphouse with reflector and double condenser optical system and variable focus lens system which increases light intensity as spot diameter is decreased.

b. Reflector and double condenser optics operating in a fixed position

c. Provision for plug-interchangeable, socket mounted 575 watt single-ended metal halide bulb

d. Drop-down lamp holder to permit bulb replacement without use of hand tools

e. Bulb positioning controls accessible from exterior of lamphouse

5. Electrical

a. Metal halide bulb system; input 110-120 V.AC, 50/60 Hertz, single phase, 7 ampere sustaining and fused for 16 amperes

b. Metal halide power supply separate from spotlight unit and easily interchanged

c. Metal halide bulb (furnished separately) shall be 1200w manufactured by Philips Lighting or approved equal

2.26 BILL OF MATERIALS – LIGHTING, DIMMING CONTROL AND DISTRIBUTION

A. Main Theater - Unless otherwise indicated on the drawings provide the following:

1. (3) SR 48 Sensor3 Dimming Cabinets w/CEM3 control module
2. (2) BK 48
3. (1) ELTS as shown in drawings
4. (144) D20 Modules
5. (1) "DCP" Equipment rack19" Wall mount w/

a. (1) Architectural processor

b. (1) POE 24 port switch

c. (1) 24 way Cat 5patch bay

d. (1) cable management panel

e. (24) 12" Cat 5 patch cables

f. (1) Rack storage dwg

g. (as nec) Blank Filler plates

h. (1) UPS

6. (1) Ion 1000 Control Console
7. (1) Ion Fad 2x 20 Fader Wing
8. (2) 19" Flat Screen LCD Video Monitors
9. (1) radio remote focus

10. (4) Portable 2 port Touring Node
11. (2) 25' cat 5 net cables
12. (2) 10' cat 5 net cables
13. (1) Lot Architectural control station as detailed on dwg
14. (1) Lot Lighting System control plug in stations as detailed on drawings
15. (1) Lot distribution raceways and boxes as detailed in drawings
16. (12) 419 sc4 Ellipsoidal Spots -CWANA
17. (24) 426 sc4 Ellipsoidal Spots- CWANA
18. (12) 436 Sc4 Ellipsoidal Spots- CWANA
19. (12) 450 Ellipsoidal Spots- CWANA
20. (30) Sc4 Fresnel- CWANA
21. (12) Sc4 Par EA CWANA
22. (10) Altman Econo Cyc -4 cell
23. (10) FC2x2y 2 over 2 mounting bracket and hardware for Econo Cyc
24. (12) SSRC Worklight w/500 watt lamp
25. (1) Canto FS
26. (20%) Spare lamps for all fixtures listed above
27. (10) 12/3 SO Molded stage pin two-fers
28. (10) 5' 12/3 SO Stage Pin Jumpers
29. (10) 10' 12/3 SO Stage Pin Jumpers
30. (10) 25' 12/3 SO Stage Pin Jumpers
31. (2) 50' 12/3 SO Stage Pin Jumpers
32. (1) Lighting Plot Layout
33. (1) Fixture Hang and Focus
34. CWANA = with C-Clamp, Safety cable, Color frame, and manufacturer installed 20A. Stage Pin Connector (unless otherwise noted)

B. Black Box - Unless otherwise indicated on the drawings provide the following:

1. (1) SR 48 Sensor3 with CEM3 control module
2. (48) D20 Dimming modules
3. (1) ETC Smart fade 24/48 control console
4. (1) 10' DMX control Cable
5. (1) 50' DMX Control Cable
6. (1) Lot Architectural control station as detailed on dwg
7. (1) Lot Lighting System control plug in stations as detailed on drawings
8. (1) Lot distribution raceways and boxes as detailed in drawings
9. (24) SC 4 junior zoom 25 -50 CWANA

10. (12) Sc 4 Par EA CWANA
11. (6) SSRC Worklight
12. (12) Barn Doors for Sc4 Par
13. (5) 10' 12/3 SO Stage Pin Extension Cables
14. (5) 25' 12/3 SO Stage Pin Extension Cables
15. (20%) Spare lamps for all fixtures listed above
16. CWANA = with C-Clamp, Safety cable, Color frame, and 20A. Stage Pin Connector

PART 3 - EXECUTION

3.01 GENERAL

A. Verify that job conditions are ready to receive work of this section. Notify Architect of any existing condition which will adversely affect execution. Beginning of execution will constitute acceptance of existing conditions.

B. Verify that field measurements are as shown on shop drawings.

C. Verify that mechanical, electrical, and other items affecting work of this section are in place and ready to receive the work

D. Some equipment to be turned over to others for installation as indicated herein All other equipment detailed in this section to be installed by this contractor.

3.02 INSTALLATION

A. This contractor shall be responsible for installation of all equipment unless noted as turn over to other

3.03 SOME EQUIPMENT TO BE TURNED OVER TO OTHERS FOR INSTALLATION AS INDICATED HEREIN ALL OTHER EQUIPMENT DETAILED IN THIS SECTION TO BE INSTALLED BY THIS CONTRACTOR.

A. This contractor shall be responsible for coordination and tracking of all material indicated as turn over to others for installation.

B. Install using skilled workmen in accordance with manufacturer's printed instructions and recommendations.

C. Install work in accordance highest industry standards. Handle materials to avoid dents and other damages.

D. All Equipment shall be installed using only properly load rated hardware

E. Set and secure materials and components rigid, plumb, and square

F. Equipment and materials sensitive to dirt, dust, moisture- including but not limited to Stage Curtains, lighting fixtures, and any motorized equipment shall only be installed after building is suitability dry and conditions and dust free. Curtains and light fixtures shall only be installed after temporary C/O has been issued and building has been final cleaned.

END OF SECTION

SECTION 11 6623
GYMNASIUM EQUIPMENT

PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes the following gymnasium equipment:

1. Basketball equipment.
2. Physical Education equipment.
3. Safety pads.
4. Floor sleeves for pipe standards.
5. Mat hoists.

B. Related Sections include the following:

1. Division 11 Section "Gymnasium Dividers."
2. Division 16 Electrical.

1.02 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Include plans, elevations, sections, details, attachments to other work, and the following:

C. Structural analysis data signed and sealed by the qualified professional engineer registered in the Commonwealth of Virginia responsible for their preparation including loads, point reactions, and locations for attachment of gymnasium equipment to structure.

D. Samples for Initial Selection: For each type of gymnasium equipment indicated.

E. Samples for Verification: For the following products:

1. Pad Fabric: Not less than 3 inches square, with specified treatments applied. Mark face of material.

F. Qualification Data: For Installer and professional engineer.

G. Operation and Maintenance Data: For gymnasium equipment to include in emergency, operation, and maintenance manuals.

H. Warranty: Special warranty specified in this Section.

1.03 QUALITY ASSURANCE

A. Installer Qualifications: An employer of workers trained and approved by manufacturer.

B. Source Limitations: Obtain each type of gymnasium equipment through one source from a single manufacturer.

1.04 PROJECT CONDITIONS

A. Environmental Limitations: Do not install gymnasium equipment until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

B. Field Measurements: Verify position and elevation of floor inserts and layout for gymnasium equipment.

1.05 COORDINATION

A. Coordinate layout and installation of overhead-supported gymnasium equipment and suspension system components with other construction including light fixtures, HVAC equipment, fire-suppression-system components, and partition assemblies.

1.06 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of gymnasium equipment that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Basketball backboard failures including glass breakage.

2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Equipment Wall-Mounting Board: Wood, neutral-color painted finish, size, and quantity as required to mount gymnasium equipment according to manufacturer's written instructions.

B. Anchors, Fasteners, Fittings and Hardware: Manufacturer's standard corrosion-resistant or noncorrodible units; concealed; tamperproof, vandal- and theft-resistant design.

2.02 BASKETBALL EQUIPMENT

A. Manufacturer - Basis-of-Design: Porter Athletic Equipment Company; refer to equipment schedule at end of section.

1. Other Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Draper Inc.

b. Jaypro Sports, LLC.

c. Performance Sports Systems.

d. Porter Athletic Equipment Company.

B. Protruding fasteners or exposed bolt heads on front face of backboards are not permitted.

C. Winch: Hoist, consisting of heavy-duty, fully enclosed worm-gear, brake, cable drum, cable, and fittings, for mounting on wall with equipment mounting board; designed to move and hold backboard in any raised or lowered position.

1. Operation: Manual winch with detachable hand crank.

2. Portable Winch Operator: One portable electric motor-drive device(s), including adaptor to fit crank mechanism.

2.03 PHYSICAL EDUCATION EQUIPMENT

A. Manufacturer - Basis-of-Design: Porter Athletic Equipment Company; refer to equipment schedule at end of section.

1. Other Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Draper Inc.

b. Jaypro Sports, LLC.

c. Performance Sports Systems.

d. Porter Athletic Equipment Company.

2.04 SAFETY PADS

A. Manufacturer - Basis-of-Design: Porter Athletic Equipment Company.

1. Other Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Draper Inc.

b. Jaypro Sports, LLC.

c. Performance Sports Systems.

d. Porter Athletic Equipment Company.

B. Pad Coverings: Provide safety pad fabric covering fabricated from puncture- and tear-resistant, not less than 14-oz./sq. yd PVC-coated polyester or nylon-reinforced PVC fabric treated with fungicide for mildew resistance; with surface-burning characteristics indicated.

C. Wall Safety Pads: Padded wall wainscot panels designed to be attached in a continuous row; each panel section consisting of fill laminated to backer board with visible surfaces fully covered by seamless fabric covering, free of sag and wrinkles and firmly attached to back of backer board.

1. Backer Board: Not less than 3/8-inch- thick plywood.

2. Fill: Multiple-impact-resistant foam not less than 2-inch- thick polyurethane; minimum 3.5-lb/cu. ft. density.

3. Size: Each panel section, 24 inches wide by not less than 72 inches long.

4. Number of Panel Sections: As indicated modular panel sections.

5. Installation Method:

a. Walls: Concealed mounting Z-clips.

b. Bleachers: Velcro wall storage strips.

1) Extruded, anodized aluminum mounting strip and semi-rigid velcro, hook-type fastener strip, complying with the following requirements:

(a) Mounting Strip: Aluminum, mounted to bleachers with #12 x 1 lg. phillips pan head srews provided with storage strip.

(b) Strip Lengths: Standard 4 ft; cut to special lengths as required for end conditions and to wrap exposed bleacher corners.

(c) Strip Width: 2-13/16 inches.

(d) Velcro Fastener Width: 1-1/2 inches.

2) Representative Product: Porter No. 00144-440 Wall Stor-Strip.

6. Fabric Covering Color: As selected by Architect from manufacturer's full range for one color.

2.05 FLOOR SLEEVES FOR PIPE STANDARDS

A. Floor Sleeves with Chrome Covers: Similar to Porter Model No. 870; an adaptor must be available for floor sleeve, allowing it to be utilized for 2-3/8 inch diameter and 3-1/2 inch diameter pole stands.

B. Cover plate consists of molded plastic recessed mounting flange, cork gasket and a 5-inch diameter chrome plated cover.

C. Cover shall be equipped with a swivel type retainer pin to prevent theft.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for play court layout, alignment of mounting substrates, installation tolerances, operational clearances and other conditions affecting performance.

1. Verify critical dimensions.
2. Examine supporting structure.
3. Examine wall assemblies, where reinforced to receive anchors and fasteners, to verify that locations of concealed reinforcements have been clearly marked. Locate reinforcements and mark locations.
4. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION, GENERAL

A. General: Comply with manufacturer's written installation instructions. Complete equipment field assembly, where required.

B. Unless otherwise indicated, install gymnasium equipment after other finishing operations, including painting, have been completed.

C. Permanently Placed Gymnasium Equipment and Components: Rigid, level, plumb, square, and true; anchored securely to supporting structure; positioned at locations and elevations indicated on Shop Drawings; in proper relation to adjacent construction; and aligned with court layout.

1. Operating Gymnasium Equipment: Verify clearances for movable components of gymnasium equipment throughout entire range of operation and for access to operating components.

D. Wall Safety Pads: Mount with bottom edge at 4 inches above finished floor.

E. Anchoring to In-Place Construction: Use anchors and fasteners where necessary for securing built-in and permanently placed gymnasium equipment to structural support and for properly transferring load to in-place construction.

3.03 ADJUSTING

A. Adjust movable components of gymnasium equipment to operate safely, smoothly, easily, and quietly, free from binding, warp, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Lubricate hardware and moving parts.

3.04 CLEANING

A. After completing gymnasium equipment installation, inspect components. Remove spots, dirt, and debris and touch up damaged shop-applied finishes according to manufacturer's written instructions.

B. Replace gymnasium equipment and finishes that cannot be cleaned and repaired, in a manner approved by Architect, before time of Substantial Completion.

3.05 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain gymnasium equipment. Refer to Division 1 Section "Demonstration and Training."

3.06 EQUIPMENT SCHEDULE - BASKETBALL

A. Suspended Forward Fold Offset Mast Basketball Backstops: Similar to Porter Model No. 950.

1. Vertical front drop frame assembly consists of a main, center mast minimum 6-5/8 inch O.D. heavy wall structural steel tube with diagonal side sway braces.
2. Offset design frame assembly with main stem of the drop frame suspended diagonally from the superstructure with an angle and vertical member for attachment of a fan or rectangular backboard.

3. Top horizontal mast hinge spreader to be a minimum 4 inch structural channel to support adjustable suspension hangers.
4. Goal mounts directly through backboard and into a heavy structural steel weldment clamped to the vertical center support to eliminate any strain on backboard (conforms to the NCAA latest rules).
5. Provide the official NCAA and NFSHSA regulation of 6 inches from the front of the weldment to the face of the backboard with upper bankboard extension assembly.
6. Suspend drop frame by special adjustable hangers (2) to provide for precise plumbing of frame during installation.
7. The camber of the offset main drop frame will properly weight lock unit in the playing position.
8. Backstop to operate with a minimum 1-7/8 inch O.D. front brace assembly with a folding knee joint; knee joint to be adjustable for ease of installation and field adjustment; knee joint locks brace in playing position for maximum rigidity by means of a torsion spring and is easily disengaged by upward force of hoist cable.
9. Support backstop from minimum 3-1/2 inch O.D. pipe anchored to roof framing members by means of heavy formed, die-cut steel support fittings.
10. Each attachment to building roof framing must be capable of supporting a load exceeding 10,000 pounds with sufficient attachment points to acquire a 60:1 safety factor for support of entire backstop support system (certified test results shall be furnished upon request).
11. Reinforce superstructure pipes with special truss-type bridging or bracing when truss centers exceed spans of 14 feet.
12. Provide hoist cable of 1/4-inch diameter galvanized aircraft cable with 7,000 pound ultimate breaking strength.
13. Furnish swivel pulleys with a 4 inch diameter cast (ductile iron) pulley sheave with a maintenance free, oil-impregnated bearing for proper hoist cable routing to winch.
14. Pulley assembly and attachment to 3-1/2 inch O.D. support structure to be rated at a minimum 9,000 pound load rating (certified test results shall be furnished upon request).
15. Goal Height Adjustment:
    a. Provide backstops for rectangular backboards with Porter Model No. 00900-506 height adjustment system.
    b. Height adjustment feature must permit goal height settings from 8 feet to the official 10 feet.
    c. Height adjustment accomplished with a threaded rod equipped with precision, hardened steel roller thrust bearings for ease of operation from the playing floor by means of an awning crank type mechanism.
16. Supporting frame work to be cleaned and given factory coat of enamel matching building framework color, as approved by the Architect.

B. Rectangular Glass Backboard - Main Court: Similar to Porter Model No. 208.
1. Provide backboard 3 feet-6 inches x 6 feet to meet all NCAA, NFHSA and professional requirements.
2. Provide backboard frame of a welded, unitized construction fabricated from heavy wall rectangular steel tubing.
3. Design frame to allow the bottom two goal mount holes to pass beneath the glass section to further alleviate stress on the glass.

4. Provide backside of goal mount structure with two mounting holes and hardware to independently secure backboard to a direct mount goal feature, which relieves all stress and shock on the backboard frame conforming to the latest NCAA Rules.
5. Glass provided in 1/2 inch thick, fully tempered (heat treated) glass section with uniform load and impact strength.
6. Official white border and target area must be "fired in" permanently on front side of glass section.
7. Secure glass section to unitized rear frame by means of an aluminum extrusion.
8. Secure front perimeter frame to unitized rear frame.
9. Fit glass section with shock absorbing neoprene material to cushion and protect the glass section.

C. Goal - Main Court: Similar to Porter Model No. 223.

1. Goal designed to absorb shock loads due to slam dunking or hanging on the rim.
2. Shock absorption feature provided by means of a special offset hinge arrangement rim and backplate mounting housing and a concealed molded rubber shock absorber.
3. Position hinge to place goal return impact forces in shear (parallel) to minimize oscillation induced into the face of the backboard.
4. Mold shock absorber from a rubber formulation to dampen and minimize vibrations and fatigue in the backboard.
5. Front of rim to deflect downward up to 2-1/16 inches when a static load or 250 pounds is applied and instantly return to playing position when load is released.
6. Function of goal must meet the NCAA specifications on movable rims, which state: AA moveable basket ring shall have rebound characteristics identical to those of a non-moveable ring; goal shall be set at factory for proper flex and rebound requirements.
7. Fabricate rim from 5/8-inch diameter cold drawn alloy steel, round formed to an 18 inch inside diameter ring.
8. Position inside diameter of ring 6 inches from face of backboard by a heavy formed steel, hinged type housing with a removable cover to conceal mounting bolts and entire shock absorption mechanism of goal, and also protect against finger entrapment.
9. Provide goal mounting plate with hardware and a 5 inch x 4 inch mounting hole pattern for front mounting on standard glass, wood and fiberglass type backboards.
10. Rim rigidly braced by means of special, formed, die cut steel braces on underside; rim provided with twelve "no-tie" net attachment clips for net attachment.
11. Goal furnished in a durable, official orange powder coat finish.
12. Goal furnished complete with plated mounting hardware and a high quality cotton net.

D. Backboard Padding Kit - Main Court:

1. Pad consists of two pieces with molded type square corners.
2. Pads molded from Polyurethane Foam (minimum 9 pound density) with integral skin (self-skinning).
3. Provide a positive bolt-on type attachment system; glue or peel and stick tape type attachment methods are not permitted.
4. Pad sections provided with internal, molded in steel attachment channel sections that are secured to the backboard with self-drilling, self-tapping attachment hardware.

5. Pad meets all competition requirements of the NBA, NCAA, NFSHSA, and international requirements of FIBA.
6. Color to be selected.

E. Fan Fiberglass Backboard - Side Courts: Similar to Porter Model No. 267-698.

1. Molded fiberglass board shall be official size and shape, with orange perimeter and target area markings.
2. Tensile strength of board to be minimum 8,900 to 11,700 psi with 23 to 27 percent fiberglass content by weight.

F. Goal - Side Courts: Similar to Porter Model No. 00201-H00.

1. Rim fabricated from 5/8 inch diameter cold drawn alloy steel round formed to an 18 inch inside diameter ring.
2. Inside of ring shall be positioned 6 inches from face backboard with heavy L-shaped, formed steel mounting plate.
3. Rim to be rigidly braced with minimum 1/2 inch diameter cold drawn alloy steel round formed and welded in position.
4. Orange powder coat finish.
5. Provide with nylon net.

END OF SECTION

SECTION 11 6653
GYMNASIUM DIVIDERS

PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes gymnasium divider curtain.

B. Related Sections include the following:

1. Division 26 Sections for electrical service for motor operators, controls, and other powered devices for motorized gymnasium divider.

1.02 SUBMITTALS

A. Product Data: For each type of product indicated.

1. If applicable, include assembly, disassembly, and storage instructions for removable equipment.
2. Motors: Show nameplate data, ratings, characteristics, and mounting arrangements.

B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

C. Structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation including loads, point reactions, and locations for attachment of gymnasium dividers to structure.

D. Samples for Initial Selection: For each type of gymnasium divider curtain fabric indicated.

E. Samples for Verification: For divider curtain fabric, not less than 12 inches square of open mesh, and of opaque fabric.

F. Product Certificates: For each type of gymnasium divider, signed by product manufacturer.

G. Qualification Data: For installer and professional engineer.

H. Operation and Maintenance Data: For gymnasium dividers to include in emergency, operation, and maintenance manuals.

I. Warranty: Special warranty specified in this Section.

1.03 QUALITY ASSURANCE

A. Installer Qualifications: An employer of workers trained and approved by manufacturer.

B. Source Limitations: Obtain each type of gymnasium divider from a single manufacturer.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.04 PROJECT CONDITIONS

A. Environmental Limitations: Do not install gymnasium divider until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

B. Field Measurements: Verify position for gymnasium divider.

1.05 COORDINATION

A. Coordinate installation of overhead-supported gymnasium divider and suspension system components with other construction including light fixtures, HVAC equipment, fire-suppression-system components, and partition assemblies.

1.06 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of gymnasium divider that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, faulty operation of gymnasium dividers.
2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.

1. Extruded Bars, Profiles, and Tubes: ASTM B 221.
2. Cast Aluminum: ASTM B 179.
3. Flat Sheet: ASTM B 209.

B. Steel: Comply with the following:

1. Steel Plates, Shapes, and Bars: ASTM A 36.
2. Steel Tubing: ASTM A 500 or ASTM A 513, cold formed.
3. Steel Sheet: ASTM A 1011.

C. Support Cable: Manufacturer's standard galvanized steel aircraft cable with a breaking strength of 7000 lb. Provide fittings complying with cable manufacturer's written instructions for size, number, and method of installation.

D. Support Chain and Fittings: Grade 80 hardened alloy steel chain rated for overhead lifting, ASTM A 391/A 391M, with commercial-quality, hot-dip galvanized steel connectors and hangars.

E. Castings and Hangers: Malleable iron, ASTM A 47, grade required for structural loading.

F. Anchors, Fasteners, Fittings and Hardware: Manufacturer's standard corrosion-resistant or noncorrodible units; concealed; tamperproof, vandal- and theft-resistant design.

2.02 DIVIDER CURTAIN

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Draper Inc.
2. Jaypro Sports, LLC.
3. Performance Sports Systems.
4. Porter Athletic.

B. Divider Curtain: Electrically operated, folding, and as follows:

1. Upper Curtain, Mesh: Woven fabric of 100 percent polyester yarn coated with PVC weighing not less than 6.5 oz./sq. yd.
    a. Mesh Color: White.
2. Lower Curtain, Solid: Woven polyester coated with PVC, minimum 18 oz./sq. yd, embossed, 8-foot height above floor.
    a. Fabric Color: As selected by Architect from manufacturer's full range.
3. Top Hem: Reinforce with double thickness mesh for grommets and continuous pipe batten.

C. Accessories:

1. Grommets: Manufacturer's standard size and spacing, for snaps or S-hooks.
2. Proof Coil Chain: Grade 30, No. 8, zinc plated, 3/16 inch, ASTM A 413.
3. Curtain Battens: Fabricate battens from steel pipe with a minimum number of joints. As necessary for required lengths, connect pipe with drive-fit pipe sleeve not less than 18 inches long, and secure with 4 flush rivets, plug welds, threaded couplings, or another equally secure method. Shop-paint completed pipe battens with black paint.
    a. Steel Pipe: ASTM A 53, Grade A, standard weight (Schedule 40), black, 1-1/2-inch nominal diameter, unless otherwise indicated.

D. Divider Curtain Operator: Drive pipe.

E. Divider Curtain Electric Operator: Provide operating machine of size and capacity recommended by manufacturer for equipment specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, and remote controls. Coordinate wiring requirements and electrical characteristics with building electrical system.
1. Operator Type: Electric motor, enclosed gear-head-reduction drive, with chain and sprocket secondary drive.

F. Motor Characteristics: Sufficient to start, accelerate, reverse, and operate connected loads at designated speeds within installed environment and with indicated operating sequence, and without exceeding nameplate rating or considering service factor. Comply with NEMA MG 1, and the following:
1. Voltage: Coordinate with Electrical Construction Documents.
2. Horsepower: 3/4 hp.
3. Enclosure: Manufacturer's standard.
4. Duty: Continuous duty at ambient temperature of 105 deg F and at altitude of 3300 feet above sea level.
5. Remote-Control Station: Key pad control system; NEMA ICS 6, Type 1 enclosure for recessed or flush mounting.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for alignment of mounting substrates, installation tolerances, operational clearances, accurate locations of connections to building electrical system, and other conditions affecting performance.
1. Verify critical dimensions.
2. Examine supporting structure.
3. Examine wall assemblies, where reinforced to receive anchors and fasteners, to verify that locations of concealed reinforcements have been clearly marked. Locate reinforcements and mark locations.
4. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION, GENERAL

A. General: Comply with manufacturer's written installation instructions. Complete field assembly, where required.

B. Unless otherwise indicated, install gymnasium dividers after other finishing operations, including painting, have been completed.

C. Gymnasium Divider and Components: Rigid, level, plumb, square, and true; anchored securely to supporting structure; positioned at locations and elevations indicated on Shop Drawings; in proper relation to adjacent construction; and aligned with court layout.

1. Verify clearances for movable components of gymnasium divider throughout entire range of operation and for access to operating components.

D. Connections: Connect automatic operators to building electrical system.

3.03 ADJUSTING

A. Adjust movable components of gymnasium divider to operate safely, smoothly, easily, and quietly, free from binding, warp, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Lubricate hardware and moving parts.

B. After completing gymnasium divider installation, inspect components. Remove spots, dirt, and debris and touch up damaged shop-applied finishes according to manufacturer's written instructions.

C. Replace gymnasium divider components and finishes that cannot be cleaned and repaired, in a manner approved by Architect, before time of Substantial Completion.

3.04 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain gymnasium divider. Refer to Division 1 Section "Demonstration and Training."

END OF SECTION

SECTION 11 6813
MODULAR PLAYGROUND EQUIPMENT

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of contract, including General Conditions and Supplementary Conditions and Division 1 Specification Sections, apply to the Work of this Section.

1.02 RELATED WORK

A. Section 02300 "Earthmoving”

1.03 DESCRIPTION OF WORK

A. This Section shall be used as a standard of quality for equipment. Actual types of apparatus shall be noted on the drawings.

B. Provide and install modular playground structure, complete with all play components, fasteners, supports and footings, ground cover and timber edging. Locate in area indicated on Drawings. Provide ground cover and edging in profile and extent as indicated.

1.04 QUALITY ASSURANCE

A. Safety Requirements: Design playground components to avoid snagging of clothing and entrapment of hands, arms, or other body parts. Equipment shall conform to the following:

1. US Consumer Product Safety Commission (US CPSC) Guidelines: Handbook for Public Playground Safety.

B. Single Source Responsibility: All playground components and accessories shall be supplied by one manufacturer.

C. Erection of the equipment shall be performed by an installer authorized and approved by the Manufacturer.

1.05 SUBMITTALS

A. Product Data: Submit Manufacturer's technical data for materials, including catalog information for major components, anchors, fasteners and other accessories along with information on finishes. Provide Manufacturer's standard installation procedures.

1. Submit recycled-content data, designating percentages of post-consumer and post-industrial recycled material.

B. Shop Drawings: Submit shop drawings indicating layout of specified components, details for anchoring and fastening of individual components, details of support and foundations, and any other fabrication or erection information not fully described by the product literature.

1.06 WARRANTIES

A. Provide Manufacturer's standard warranty on main support components to cover structural failure due to corrosion, deterioration or defects in workmanship.

B. Provide Manufacturer's standard one (1) year warranty covering defects in materials and workmanship for playground components except as noted below:

1. Structural (Main Components): ten (10) years

2. Plastic: five (5) years

PART 2 – PRODUCTS:

2.01 APPROVED MANUFACTURERS

A. Iron Mountain Forge KB 26996 Modular Playground Unit shall be the basis of this Specification.

B. Game Time "Power Scape" (Fort Payne, AL).

C. Other manufacturers meeting the requirements of this Section, and subject to the approval process outlined in Specifications, shall be acceptable. Manufacturers using recycled plastic components include:

1. Amazing Recycled Products, Inc., Denver, CO, 800-241-2174, www.amazingrecycled.com
2. Children's Playstructures, Inc., Littleton, CO, 800-874-9943, www.childrensplaystructures.com
3. Landscape Structures Inc., Delano, MN, 888-438-6574, www.playlsi.com
4. Playworld Systems, Lewisburg, PA, 800-233-8404, www.playworldsystems.com
5. Recreation Creations, Inc., Hillsdale, MI, 800-766-9458, www.rec-creations.com
6. The Plastic Lumber Co., Akron, OH, 800-886-8990, www.plasticlumber.com

2.02 MATERIALS

A. General Design Requirements

1. Straight Slides (including pipe slides) without transition sections at the base of the slide shall not exceed 30 degrees of incline. Slide "fall zones" shall comply with US CPSC guidelines.
2. Provide adequate "no encroachment zone" around entire perimeter of playground area.
3. Overall height of equipment shall not exceed 6'-6", except for fireman's poles which shall not exceed 10 feet in height.
4. Fastening, Fabrication and Finish details: Protruding bolts, sharp or jagged edges, non-capped open-ended pipes or other openings shall not be acceptable. Piping or other supports shall not extend more than 2" beyond a locking collar.
5. Foundations: The minimum specifications for the diameter, depth and excavation of footings shall be as follows:
    a. Poles up to and including 6" in diameter: 12" in diameter and 3 feet in depth.
    b. Poles exceeding 6" in diameter: Diameter shall be twice the pole diameter and 3 feet in depth.

B. Ground Cover and Drainage: Provide treated wood mulch over the entire area indicated on the drawings, to a minimum depth of 12". Coordinate with drawings to ensure adequate drainage under the ground cover, and to avoid ponding. Maximum allowable slope shall be 2%.

1. Acceptable ground covers: "Surflex", "Fibar", "Wood Carpet", or approved equal.

C. Edging: Provide timber border around entire perimeter. Timber shall be pressure treated for ground contact with non-CCA treatment materials (0.40 #2 or better; ACQ is an acceptable wood treatment)); recycled and/or creosoted timber shall not be acceptable.

1. All edges shall be 1/2" radius.
2. All lumber shall be free from splinters.
3. Two tiers of lumber shall be provided with rowlock or half-lapped joints. Bottom tier of lumber shall be staked to the ground with steel rods reinforcing bars, 1/2" round, 36" on center, and 24" deep.
4. Top and bottom tiers shall be spiked together using galvanized fasteners.

D. Support Posts: 5" O. D., 11 gauge minimum galvanized steel with plastic coated end caps.

E. Fasteners: Provide self-locking nuts or other devices to prevent loosening of assemblies. All fasteners shall be galvanized, cadmium plated, or otherwise treated to prevent rusting.

F. Metal Decks: Perforated, non-skid.

G. Fireman's Pole (Sliding Pole): Fabricated from 1 5/8" O. D. galvanized steel pipe.

H. Spiral Slide: Polyethylene composition with the following features:

1. Center Tube: 3 1/2" O. D. 11 gauge minimum galvanized steel.

2. Front Leg: 1 1/2" O. D. 11 gauge minimum galvanized steel.

3. Slide shall rest flush on the upper platform.

I. "Ring Trek" Traveling Rings: Provide six (6) high tensile strength aluminum rings, plastic coated, with swivel joint and clamp attachment to supports. Beam: 2 3/8" O. D., galvanized.

J. "Curly" Climber:

1. General: Climber shall have no gaps greater than 3 1/2", and less than 9" between coils. Design shall not allow passage of children into the interior of the coil.

2. Coils shall be fabricated from not less than 1 5/6" O. D. galvanized steel pipe.

3. Center support post shall be fabricated from not less than 1 5/8" O. D. galvanized steel pipe.

K. Double Wide Plastic Slide: Single piece, UV stabilized molded polyethylene with average thickness of 5/16" and integral color. Sides shall be 8" high above the slide surface; center divider shall not have gaps. Width of slide bedway shall be 16" minimum.

L. Horizontal "Challenge" Ladder: 2 3/8" O. D. galvanized plastic-covered outside rails, with eight (8) rungs consisting of 1 1/4" O. D. galvanized steel welded to the rails at 12" on center.

M. Arched Chain Climber: One-piece, all welded construction. Side rails shall be 1 5/8" O.C. galvanized steel pipe, arched, and spaced 30" center to center. Chain: 4/0 steel with oven cured PVC "no pinch coating"; or galvanized coating.

N. Recycled-plastic: Recycled HDPE or other recycled plastic components may be used if approved in advance by PGCPS.

PART 3 – EXECUTION:

3.01 INSPECTION

A. Installer and Owner's Representative shall examine the area and conditions under which the playground equipment will be installed. Do not proceed until all conditions, which would be detrimental to the installation, are corrected.

3.02 INSTALLATION

A. General: Install the playground equipment in accordance with the Manufacturer's recommended procedures and installation sequence. All equipment shall be rigid, straight, plumb and level. Secure all equipment with Manufacturer's fastening devices.

B. Foundations: All support holes shall be filled with concrete to the full-required depth. The top of the concrete shall be 6" below finished grade. All primary supports shall be temporarily supported until concrete has sufficiently cured.

C. Secure timber edging in place by spiking as specified herein. Rods shall not protrude beyond the face of the timber.

D. Fasteners: All in-place bolts shall be cut flush with the nut, and peened and filed. Self- locking nuts or other devices must be provided to prevent nut and bolt assemblies from loosening or coming apart.

E. Welds: Ensure that all welds are protected with rust inhibiting paint.

F. Metal Connectors: Secure with pins or spot welding to prevent loosening of the connection.

3.03 CLEAN-UP

A. Remove all debris, excess materials, tools and excess excavation spoils from the project area and dispose of legally.

3.04 WASTE MANAGEMENT:

A. Recycle waste materials in accordance with Division 1 “Construction Waste Management” requirements.

END OF SECTION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Horizontal slat louver blinds.

B. Operating hardware.

1.02 RELATED REQUIREMENTS

A. Section 06 1000 - Rough Carpentry: Concealed wood blocking for attachment of headrail brackets.

B. Section 10 7113 - Exterior Sun Control Devices: Exterior horizontal louver blinds.

C. Section 12 2116 - Vertical Louver Blinds.

1.03 PRICE AND PAYMENT PROCEDURES

A. Allowances: See Section 01 2100 - Allowances, for cash allowances affecting this section.

1.04 REFERENCE STANDARDS

A. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

B. WCMA A100.1 - Safety of Window Covering Products 2018.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Coordinate the placement of concealed blocking to support blinds. See Section 06 1000.

1.06 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data indicating physical and dimensional characteristics.

C. Shop Drawings: Indicate opening sizes, tolerances required, method of attachment, clearances, and operation.

D. Samples: Submit two samples illustrating slat materials and finish, cord type and color.

E. Manufacturer's Installation Instructions: Indicate special procedures.

F. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Extra Blind Assemblies: One of each size.
3. Extra Slats: 20 of each type and size.
4. Extra Lift Cords, Control Cords, and Wands: One of each type.

1.07 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Horizontal Louver Blinds:

1. Substitutions: See Section 01 6000 - Product Requirements.

B. Horizontal Louver Blinds With Side Guides:

1. Basis of Design: Draper, Inc; Venetian Blinds by Warema; www.draperinc.com/#sle.
2. Other Acceptable Manufacturers:
3. Substitutions: See Section 01 6000 - Product Requirements.

C. Source Limitations: Furnish blinds and associated controls produced by a single manufacturer and obtained from a single supplier.

2.02 BLINDS

A. Description: Horizontal slat louvers hung from full-width headrail with full-width bottom rail.

B. Manual Operation: Control of raising and lowering by cord with full range locking; blade angle adjustable by control wand.

C. Metal Slats: Spring tempered pre-finished aluminum; square slat corners, with manufacturing burrs removed.

1. Width: 2 inch (50 mm).
2. Color: As selected by Architect.

D. Wood Slats: square slat corners.

1. Width: 2 inch (50 mm).
2. Pre-finished, color as selected by Architect.

E. Slat Support: Woven polypropylene cord, ladder configuration.

F. Head Rail: Pre-finished, formed aluminum box, with end caps; internally fitted with hardware, pulleys, and bearings for operation; same depth as width of slats.

1. Color: Same as slats.

G. Bottom Rail: Pre-finished, formed steel; with end caps.

1. Color: Same as headrail.

H. Lift Cord: Braided nylon; continuous loop; complying with WCMA A100.1.

1. Free end weighted.
2. Color: As selected by Architect.

I. Control Wand: Extruded hollow plastic; hexagonal shape.

1. Non-removable type.
2. Length of window opening height less 3 inch (76 mm).
3. Color: Clear.

J. Headrail Attachment: Wall brackets.

K. Accessory Hardware: Type recommended by blind manufacturer.

2.03 BLINDS WITH SIDE GUIDES

A. Description: Horizontal slat louvers hung from full-width headrail with full-width bottom rail and side guides for slat stability.

B. Manual Operation: Control of raising, lowering, and tilting blades by crank operator. Gear box concealed in headrail; fixed handle.

C. Headrail: Extruded aluminum, size according to length of drop of blinds.

D. Headrail Box: Custom fabricated sheet aluminum box to protect blinds in raised position. Size as required to cover stack of retracted blinds.

E. Bottom Rail: Extruded aluminum with plastic end caps, size according to width of slat.

F. Metal Slats: Pre-finished aluminum; square slat corners, with manufacturing burrs removed.

1. Width: 2 inch (50 mm).

G. Slat Support: Heavy-duty, tear-resistant terylene yarn, ladder configuration.

H. Side Guides:

1. Extruded aluminum side channels with plastic inserts.

I. Headrail Attachment: Direct-mounted.

J. Finish/Color:

1. Other exposed aluminum components: Color to match slats.

2.04 FABRICATION

A. Determine sizes by field measurement.

B. At openings requiring multiple blind units, provide separate blind assemblies with space as specified by architect between blinds, located at window mullion centers.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that openings are ready to receive the work.

B. Ensure structural blocking and supports are correctly placed. See Section 06 1000.

3.02 INSTALLATION

A. Install blinds in accordance with manufacturer's instructions.

B. Secure in place with flush countersunk fasteners.

3.03 TOLERANCES

A. Maximum Variation of Gap at Window Opening Perimeter: 1/4 inch (6 mm).

B. Maximum Offset From Level: 1/8 inch (3 mm).

3.04 ADJUSTING

A. Adjust blinds for smooth operation.

3.05 CLEANING

A. Clean blind surfaces just prior to occupancy.

B. See Section 01 7419 - Construction Waste Management and Disposal, for additional requirements.

END OF SECTION

PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes room darkening roller shades and motorized shade operators.

1. Location of manual or electrical shades as indicated on Drawings.

1.02 SUBMITTALS

A. Product Data: For each type of product indicated. Include styles, material descriptions, construction details, dimensions of individual components and profiles, features, finishes, and operating instructions.

1. Motorized Shade Operators: Include operating instructions.
2. Motors: Show nameplate data, ratings, characteristics, and mounting arrangements.

B. Shop Drawings: Show location and extent of roller shades. Include elevations, sections, details, and dimensions not shown in Product Data. Show installation details, mountings, attachments to other work, operational clearances, and relationship to adjoining work.

1. Motorized Shade Operators: Show locations and details for installing operator components, switches, and controls. Indicate motor size, electrical characteristics, drive arrangement, mounting, and grounding provisions.
2. Wiring Diagrams: Power, system, and control wiring.

C. Samples for Initial Selection: For each colored component of each type of shade indicated.

1. Include similar Samples of accessories involving color selection.

D. Samples for Verification:

1. Complete, full-size operating unit not less than 16 inches wide for each type of roller shade indicated.
2. For the following products:
    a. Shade Material: Not less than 3 inches square, with specified treatments applied. Mark face of material.
    b. Fascia: Full-size unit, not less than 12 inches long.
    c. Complete parts box containing motorized shade hardware.

E. Product Certificates: For each type of roller shade, signed by product manufacturer.

F. Qualification Data: For Installer.

G. Product Test Reports: For each type of roller shade.

H. Maintenance Data: For roller shades to include in maintenance manuals. Include the following:

1. Methods for maintaining roller shades and finishes.
2. Precautions about cleaning materials and methods that could be detrimental to fabrics, finishes, and performance.
3. Operating hardware.
4. Motorized shade operator.

1.03 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who has completed installation of roller shades similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction

with a record of successful in-service performance.

B. Source Limitations:

1. Obtain roller shades through one source from a single manufacturer.

2. To control the responsibility for performance of motorized roller shade systems, assign the design, engineering, and installation of motorized roller shade systems, motors, controls, and low voltage electrical control wiring specified in this Section to a single manufacturer and their authorized installer/dealer. The Architect will not produce a set of electrical drawings for the installation of control wiring for the motors, or motor controllers of the motorized roller shades. Power wiring (line voltage), shall be provided by the roller shade installer/dealer, in accordance with the requirements provided by the manufacturer. Coordinate the following with the roller shade installer/dealer:

a. Contractor shall provide power panels and circuits of sufficient size to accommodate roller shade manufacturer’s requirements, as indicated on the Electrical Drawings.

b. Contractor shall coordinate with requirements of roller shade installer/dealer, before inaccessible areas are constructed.

c. Roller shade installer/dealer shall run line voltage as dedicated home runs (of sufficient quantity, in sufficient capacity as required) terminating in junction boxes in locations designated by roller shade dealer.

d. Roller shade installer/dealer shall provide and run all line voltage (from the terminating points) to the motor controllers, wire all roller shade motors to the motor controllers, and provide and run low voltage control wiring from motor controllers to switch/ control locations designated by the Architect. All above-ceiling and concealed wiring shall be plenum-rated, or installed in conduit, as required by the electrical code having jurisdiction.

e. Contractor shall provide conduit with pull wire in all areas, which might not be accessible to roller shade contractor due to building design, equipment location or schedule.

C. Fire-Test-Response Characteristics: Provide roller shade band materials with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

1. Flame-Resistance Ratings: Passes NFPA 701.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. Product Standard: Provide roller shades complying with WCMA A 100.1.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Deliver shades in factory packages, marked with manufacturer and product name and location of installation.

1.05 PROJECT CONDITIONS

A. Environmental Limitations: Do not install roller shades until construction and wet and dirty finish work in spaces, including painting, is complete and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

B. Store, handle, protect and install absorptive materials, including fabrics materials, in accordance with the Construction IAQ Management Plan required by Division 1 specifications.

C. Field Measurements: Where roller shades are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Allow clearances for operable glazed units' operation hardware throughout the entire operating

range. Notify Architect of discrepancies. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.06 WARRANTY

A. Motorized Components (exclusive of shade motors and motor logic control systems and components): Twenty-five Years Fit for (intended) use per published terms and conditions, from the Date of Substantial Completion and contain provisions that installation is to remain operational without fault for the warranty period; and, include all operating parts, including shade band.

B. Shade motors and motor logic control systems: Five years from Date of Substantial Completion for shade motors and motor logic control systems and components. Motorized shade installation will remain operational without fault for the warranty period and include all operational parts.

C. Installation: Provide roller shade installer's warranty that installation shall be free of defects for a period of not less than 1 year.

D. In the event of a warranted product failure, the roller shade installer will, at no cost to Owner, facilitate acquisition and delivery of all necessary components to the Owner. Owner will provide roller shade dealer/installer with direct access to the work, during dealer/installer's normal business hours.

1.07 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Rollers Shades: Before installation begins, for each size, color, texture, and pattern indicated, full-size units equal to 5 percent of amount installed, or portion thereof.

2. Shade Motors: 5 additional.

PART 2 - PRODUCTS

2.01 ROLLER SHADES

A. Basis-of-Design Products:

1. Roller Shades: Subject to compliance with requirements, provide MechoShade and ElectroShade by MechoShade Systems or equivalent products by Draper or Lutron.

B. Shade Bands: Construction of shade band includes the fabric, the hem weight, hem-pocket, shade roller tube, and the attachment of the shade band to the roller tube. Sewn hems and open hem pockets are not acceptable.

1. Hem Pockets and Hem Weights: Fabric hem pocket with RF-welded seams (including welded ends) and concealed hem weights. Hem weights shall be of appropriate size and weight for shade band. Hem weight shall be continuous inside a sealed hem pocket. Hem pocket construction and hem weights shall be similar, for all shades within one room.

2. Shade band and Shade Roller Attachment:

a. Use extruded aluminum shade roller tube of a diameter and wall thickness required to support shade fabric without excessive deflection. Roller tubes less than 1.55 inch in diameter for manual shades, and less than 2.55 inches for motorize shades are not acceptable.

b. Provide for positive mechanical engagement with drive / brake mechanism.

C. Access and Material Requirements:

1. Provide shade hardware allowing for the removal of shade roller tube from brackets without removing hardware from opening and without requiring end or center supports to be removed.

2. Provide shade hardware that allows for removal and re-mounting of the shade bands without having to remove the shade tube, drive or operating support brackets.
3. Use only Delrin engineered plastics by DuPont for all plastic components of shade hardware. Styrene based plastics, and /or polyester, or reinforced polyester will not be acceptable.

D. Shade Brackets: Provide shade hardware constructed of minimum 1/8-inch thick plated steel, or heavier, thicker, as required to support 150 percent of the full weight of each shade.

E. Motorized Shade Hardware and Shade Brackets:
1. Provide shade hardware constructed of minimum 1/8-inch thick plated steel, or heavier, thicker, as required to support 150 percent of the full weight of each shade.
2. Provide shade hardware system that allows for field adjustment of motor or replacement of any operable hardware component without requiring removal of brackets, regardless of mounting position (inside, or outside mount).
3. Basis-of-Design: ElectroShade II; six-sided box units for recessed installation with bottom slot opening.

F. Manual Shade Bracket: Mecho/5.

G. Fascia: Provide where indicated on Drawings.
1. Continuous removable extruded aluminum fascia that attaches to shade mounting brackets without the use of adhesives, magnetic strips, or exposed fasteners.
2. Fascia shall be able to be installed across two or more shade bands in one piece.
3. Fascia shall fully conceal brackets, shade roller and fabric on the tube.
4. Provide bracket / fascia end caps where mounting conditions expose outside of roller shade brackets.

H. Mounting: Wall extension brackets mounting permitting easy removal and replacement without damaging roller shade or adjacent surfaces and finishes.

I. Shade Operation - Motorized operator: Locations indicated.
1. Shades for each area shall function as one group; all shades and all sides raising and lowering simultaneous, as Thermoveil Shadecoloth.
2. Shades on same local switch.

2.02 ROLLER SHADE FABRICATION

A. Fabricate units to completely fill existing openings from head to sill and jamb-to-jamb, unless specifically indicated otherwise.

B. Fabricate shadecloth to hang flat without buckling or distortion. Fabricate with heat-sealed trimmed edges to hang straight without curling or raveling. Fabricate unguided shadecloth to roll true and straight without shifting sideways more than 1/8 inch in either direction per 8 feet of shade height due to warp distortion or weave design. Fabricate hem as follows:
1. Concealed hem tube (Translucent Shades).

C. Provide battens in standard shades as required to assure proper tracking and uniform rolling of the shadebands. Contractor shall be responsible for assuring the width-to-height (W:H) ratios shall not exceed manufacturer's standards or, in absence of such standards, shall be responsible for establishing appropriate standards to assure proper tracking and rolling of the shadecloth within specified standards. Battens shall be roll-formed stainless steel or tempered steel, as required.

2.03 MANUAL OPERATED CHAIN DRIVE HARDWARE AND BRACKETS

A. Provide for universal, regular and offset drive capacity, allowing drive chain to fall at front, rear or non-offset for all shade drive end brackets. Universal offset shall be adjustable for future change.

B. Provide hardware capable for installation of a removable fascia, for both regular and/or reverse roll, which shall be installed without exposed fastening devices of any kind.

C. Provide shade hardware system that allows for removable regular and/or reverse roll fascias to be mounted continuously across two or more shade bands without requiring exposed fasteners of any kind.

D. Provide positive mechanical engagement of drive mechanism to shade roller tube. Friction fit connectors for drive mechanism connection to shade roller tube are not acceptable

E. Provide shade hardware constructed of minimum 1/8-inch (3.18 mm) thick plated steel or heavier as required to support 150 percent of the full weight of each shade.

F. Drive Bracket / Brake Assembly:

1. The braking mechanism shall be applied to an oil-impregnated hub on to which the brake system is mounted. The oil impregnated hub design includes an articulated brake assembly, which assures a smooth, non-jerky operation in raising and lowering the shades. The assembly shall be permanently lubricated. Products that require externally applied lubrication and or not permanently lubricated are not acceptable.

2. The entire assembly shall be fully mounted on the steel support bracket, and fully independent of the shade tube assembly, which may be removed and reinstalled without effecting the roller shade limit adjustments.

G. Drive Chain: #10 qualified stainless steel chain rated to 90 lb. (41 kg) minimum breaking strength. Nickel plate chain shall not be accepted.

2.04 MOTORIZED ROLLER SHADE OPERATORS

A. Basis-of-Design Product: Specifications and design of shade motors and motor control system are based on the IQ/MLC motor logic control system manufactured by MechoShade Systems, Inc. Other systems may be acceptable provide that all of the following performance capabilities are provided. Motor logic control systems not in complete compliance with these performance criteria shall not be accepted as equal systems.

B. General: Provide factory-assembled motorized shade operation systems designed for lifting shades of type, size, weight, construction, use, and operation frequency indicated. Provide operation systems of size and capacity and with features, characteristics, and accessories suitable for Project conditions and recommended by shade manufacturer, complete with electric motors and factory-prewired motor controls, remote-control stations, power disconnect switches, enclosures protecting controls and all operating parts, and accessories required for reliable operation without malfunction. Include wiring from motor controls to motors.

1. Coordinate operator wiring requirements and electrical characteristics with the building electrical system.

C. Comply with NFPA 70.

D. Control Equipment:

1. Provide power to each shade motor via individual 3 conductor line voltage circuits connecting each motor to the relay based motor logic controllers (IQ/MLC).

2. Control system components shall provide appropriate (spike and brown out) over-current protection (+/- 10 percent of line voltage) for each of the four individual motor circuits and shall be rated by UL

or ETL as a recognized component of this system and tested as an integrated system.

3. Control system shall allow for automatic alignment of shade hem bars in stopped position at 25 percent, 50 percent, and 75 percent of opening heights, and up to three user-defined intermediate stopping positions in addition to all up / all down, regardless of shade height, for a total of five positions. Control system shall allow shades to be stopped at any point in the opening height noting that shades may not be in alignment at these non-defined positions).
4. Control system shall have two standard operating modes: Normal mode allowing the shades to be stopped anywhere in the window's opening height and uniform mode, allowing the shades to only be stopped at the predefined intermediate stop positions. Both modes shall allow for all up / all down positioning.
5. Control system shall allow high rpm motors for shades over means of egress doors to be raised by input from building life safety system (at a speed / rpm determined by building code having jurisdiction), in addition to other modes of operation described in this specification.

E. Electric Motors: UL-approved or -recognized, totally enclosed, insulated motor, complying with NEMA MG 1, with thermal-overload protection, brake, permanently lubricated bearings, and limit switches; sized by shade manufacturer to start and operate size and weight of shade considering service factor or considering Project's service conditions without exceeding nameplate ratings.

1. Service Factor: According to NEMA MG 1, unless otherwise indicated.
2. Motor Characteristics: Single phase, 110 V, 60 Hz.
3. Motor Mounting: Within manufacturer's standard roller enclosure.

F. Remote Controls: Electric controls with NEMA ICS 6, Type 1 enclosure for recessed or flush mounting. Provide the following devices for remote-control activation of shades:

1. Control Stations:
   a. Three-button architectural flush mounted switches with metal cover plate and no exposed fasteners.
   b. Connect local wall switches to control system components via low voltage (12V DC) 4-conductor modular cable equipped with RJ-11 type connectors supplied, installed and certified under Division 16 - Electrical.

2.05 SHADE CLOTH

A. Translucent Single-Fabric Shadecloth: MechoShade Systems, Inc., EcoVeil group, 100 percent thermoplastic olefin.

1. Shading:
   a. Roller Shades: EcoVeil "1550 Series", 3 percent open.

B. Color: Selected from manufacturer's standard colors.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, operational clearances, accurate locations of connections to building electrical system, and other conditions affecting performance.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 ROLLER SHADE INSTALLATION

A. Install roller shades level, plumb, and aligned with adjacent units according to manufacturer's written instructions. Allow clearances for window operation hardware.

B. Connections: Connect motorized operators to building electrical system.

3.03 ADJUSTING

A. Adjust and balance roller shades to operate smoothly, easily, safely, and free from binding or malfunction throughout entire operational range.

3.04 CLEANING AND PROTECTION

A. Clean roller shade surfaces after installation, according to manufacturer's written instructions.

B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that roller shades are without damage or deterioration at time of Substantial Completion.

C. Replace damaged roller shades that cannot be repaired, in a manner approved by Architect, before time of Substantial Completion.

3.05 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain roller shades.

END OF SECTION

SECTION 12 24 13
ROLLER SHADES
Display hidden notes to specifier. (Don't know how? Click Here)

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Sunscreen roller shades.

B. Room darkening roller shades.

C. Room darkening and sunscreen double roller shades.

D. Zipper shade system with side channels.

1.2 RELATED SECTIONS

A. Section 06 10 00 - Rough Carpentry: Wood blocking and grounds for mounting roller shades and accessories.

B. Section 09 21 16 - Gypsum Board Assemblies: Coordination with gypsum board assemblies for installation of shade pockets, closures and related accessories.

C. Section 09 51 00 - Acoustical Ceilings: Coordination with acoustical ceiling systems for installation of shade pockets, closures and related accessories.

D. Division 16 - Electrical: Electric service for motor controls.

1.3 REFERENCES

A. ASTM G 21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

B. NFPA 70 - National Electrical Code.

C. NFPA 701 - Fire Tests for Flame-Resistant Textiles and Films.

1.4 SUBMITTALS

A. Submit under provisions of Section 01 30 00.

B. [Product Data]: Manufacturer's data sheets on each product to be used, including:
1. Preparation instructions and recommendations.
2. Styles, material descriptions, dimensions of individual components, profiles, features, finishes and operating instructions.
3. Storage and handling requirements and recommendations.
4. Mounting details and installation methods.
5. Typical wiring diagrams including integration of motor controllers with building management system, audiovisual and lighting control systems as applicable.

C. Shop Drawings: Plans, elevations, sections, product details, installation details, operational

clearances, wiring diagrams and relationship to adjacent work.
1. Prepare shop drawings on Autocad or Microstation format using base sheets provided electronically by the Architect.

D. Window Treatment Schedule: For all roller shades. Use same room designations as indicated on the Drawings and include opening sizes and key to typical mounting details.

E. Selection Samples: For each finish product specified, one set of shade cloth options and aluminum finish color samples representing manufacturer's full range of available colors and patterns.

F. Verification Samples: For each finish product specified, one complete set of shade components, unassembled, demonstrating compliance with specified requirements. Shadecloth sample and aluminum finish sample as selected. Mark face of material to indicate interior faces.

G. Maintenance Data: Methods for maintaining roller shades, precautions regarding cleaning materials and methods, instructions for operating hardware and controls.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Obtain roller shades through one source from a single manufacturer with a minimum of twenty years experience in manufacturing products comparable to those specified in this section.

B. Installer Qualifications: Installer trained and certified by the manufacturer with a minimum of ten years experience in installing products comparable to those specified in this section.

C. Fire-Test-Response Characteristics: Passes NFPA 701 small and large-scale vertical burn. Materials tested shall be identical to products proposed for use.

D. Electrical Components: NFPA Article 100 listed and labeled by either UL or ETL or other testing agency acceptable to authorities having jurisdiction, marked for intended use, and tested as a system. Individual testing of components will not be acceptable in lieu of system testing.

E. Anti-Microbial Characteristics: 'No Growth' per ASTM G 21 results for fungi ATCC9642, ATCC 9644, ATCC9645.

F. Mock-Up: Provide a mock-up (manual shades only) of one roller shade assembly for evaluation of mounting, appearance and accessories.
1. Locate mock-up in window designated by Architect.
2. Do not proceed with remaining work until, mock-up is accepted by Architect.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver shades in factory-labeled packages, marked with manufacturer and product name, fire-test-response characteristics, and location of installation using same room designations indicated on Drawings and in the Window Treatment Schedule.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Install roller shades after finish work including painting is complete and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

1.8 WARRANTY

A. Roller Shade Hardware and Chain Warranty: Manufacturer's standard non-depreciating twenty-five year limited warranty.

B. Standard Shadecloth: Manufacturer's standard twenty-five year warranty.

C. Ecoveil Shadecloth: Manufacturer's standard ten year warranty.

D. Roller Shade Motors and Motor Control Systems: Manufacturer's standard non-depreciating five year warranty.

E. Roller Shade Installation: One year from date of Substantial Completion, not including scaffolding, lifts or other means to reach inaccessible areas.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturer: Mecho, which is located at: 42-03 35th St.; Long Island City, NY 11101; Tel: 718-729-2020; Fax: 718-729-2941; Email: communications@mechoshade.com; http://www.mechoshade.com

B. Substitutions: Not permitted.

C. Requests for substitutions will be considered in accordance with provisions of Section 01 60 00.

D. Alternates: The following products and manufacturers may be bid as an alternate product in accordance with Section 01 23 00 - Alternates. Any pricing for alternate products shall be listed separately from the base bid specified product. Any alternate pricing must include line-by-line compliance or non-compliance with the specifications. If the alternate product is acceptable to the Architect, the specified manufacturer will be given the opportunity to provide an equivalent proposal.
1. Suburban/2 Shade System by Mecho.
2. ((List other manufacturer or product here.))

2.2 ROLLER SHADE TYPE AND SHADECLOTH

A. Manually Operated Shades:
1. Mounting: Surface mounted.
2. Mounting: Surface mounted with pocket.
3. Mounting: Surface mounted with fascia.
4. Mounting: Recess mounted with ceiling pocket.
5. Mounting: Recess mounted without ceiling pocket.
6. Configuration: Single solar shadecloth.
7. Configuration: Single blackout shadecloth.
8. Configuration: Double solar and blackout shadecloth.
9. Solar Shadecloths:
   a. Fabric: ThermoVeil 0900, 0-1 percent visually translucent extra-dense linear weave pattern.
   b. Fabric: ThermoVeil 1000, 2-3 percent open, dense linear-weave pattern.
   c. Fabric: ThermoVeil 1300, 5 percent open, 2 by 2 dense basket-weave pattern, colors match 1500 (3 percent open), also 126 inches (3200 mm) wide.
   d. Fabric: ThermoVeil 1500, 3 percent open, 2 by 2 dense basket-weave pattern, colors match 1300 (5 percent open), also 126 inches (3200 mm) wide.
   e. Fabric: ThermoVeil 2100, 10 percent open, 2 by 2 open basket-weave pattern, colors match 1300 (5 percent open) and 1500 (3 percent open).
   f. Fabric: ThermoVeil 3000 satin, twill-weave pattern at 1 to 2 percent open, with

an alternating predominant color in the warp and weft (fill). Reverse side can be used facing interior if specified.

g. Fabric: ThermoVeil 3200 satin twill weave pattern at 1 to 2 percent open, with an alternating predominant color in the warp and weft (fill). Reverse side can be used facing interior if specified.
h. Fabric: ThermoVeil 3300 diamond earthtone twill-weave pattern at 1 to 2 percent open, with an alternating predominant color in the warp and weft (fill). Reverse side can be used facing interior if specified.
i. Fabric: EuroVeil 5300, thin, fine, screen cloth in broad range of colors in basket weave pattern at 5 percent open.
j. Fabric: EuroTwill 6000, finely woven Reversible Weave at 3 percent open. Reverse side can be used facing interior if specified.
k. Fabric: EuroTwill 6200, distinctive, tightly woven twill design, comprised of fine polyester with PVC coating at 1 to 2 percent open. Reverse side can be used facing interior if specified.
l. Fabric: EuroTwill 6450, a broke twill-weave design comprised of fine polyester with PVC coating at 3 percent open. Reverse side can be used facing interior if specified.
m. Fabric: EcoVeil 0950, TPO Cradle to Cradle Certified, fabric, non-PVC, 1 x 1 basket-weave pattern at 1 percent open. Colors match 1350 (5 percent open) and 1550 (3 percent open).
n. Fabric: EcoVeil 1350, TPO Cradle to Cradle Certified, fabric, non-PVC, 1 x 1, basket-weave pattern at 5 percent open. Colors match 0950 (1 percent open) and 1550 (3 percent open).
o. Fabric: EcoVeil 1550, TPO fabric, Cradle to Cradle Certified, non-PVC, 1 x 1, basket-weave pattern at 3 percent open. Colors match 0950 (1 percent open) and 1350 (5 percent open).
p. Fabric: SoHo 1100, (1 percent open), 2 x 2 basket-weave pattern of fine yarn PVC and polyester blend, same colors as in 1600 (3 percent open) and 1900 series, (5 percent open).
q. Fabric: SoHo 1600, (3 percent open), 2 x 2 basket-weave pattern of fine yarn PVC and polyester blend, same colors as in 1100 (1 percent open) and 1900 series, (5 percent open).
r. Fabric: SoHo 1900, (5 percent open), 2 x 2 basket-weave pattern of fine yarn, PVC and polyester blend, same colors as in 1100 (1 percent open) and 1600 series, (3 percent open).
s. Fabric: EcoVeil Sheer 6750, Cradle to Cradle Certified, woven 100 percent polyester, PVC-free, reversible face, (3 percent open). The first shadecloth to pass NFPA 701 flame tests without added chemical flame retardants.
t. Fabric: EcoVeil Sheer 6850, Cradle to Cradle Certified, woven 100 percent polyester, PVC-free, reversible face, (1 percent open). The first shadecloth to pass NFPA 701 flame tests without added chemical flame retardants.
u. Color: Selected from manufacturer's standard colors.
v. Color: Custom color.

10. Blackout Shadecloths:
    a. Fabric: Classic Blackout 0700, Vinyl coated fabric blackout material same color reverse side (for exterior).
    b. Fabric: ThermoVeil Equinox 0100, blackout shadecloth with opaque acrylic backing, PVC-free, white color reverse side (for exterior). Available 98 inch (24789 mm).
    c. Fabric: Midnite 200, blackout shadecloth with opaque acrylic backing. PVC-free, white color reverse side (for exterior), available 126 inch wide.
    d. Fabric: Distinctive Blackout 0800, blackout shadecloth with laminated 2 x 2 basket weave, opaque fiberglass base with Vinyl coating, heavy-weight construction, white color reverse side (for exterior).
    e. Fabric: Duplex blackout 0250, blackout shadecloth with opaque foam backing

and base polyester cloth, PVC-free, graphite color reverse side (for exterior). Available in 118 inches (2997 mm) wide.

f. Color: Selected from manufacturer's standard colors.

g. Color: Custom color.

11. Specialty Shadecloths:

a. Fabric: ThermoVeil Mirrofilm 0600, transparent, light filtering and heat insulating material

b. Fabric: AcoustiVeil 0890, dimout, 0-1 percent open, fabric, sound-absorbing, with noise reduction coefficient (NRC) of 0.575, to aid in reducing echoes, polyester, PVC-free with a Declare label.

12. Mecho5x, Managed Lift Force, Hardware: Lifts single band or multiband shade assemblies:

a. Lifting Force: 3.5 to 8.5 pounds (1.6 to 3.9 kg) for shade assemblies with a shade band hanging weight, not including mounting hardware, of 35 pounds (16 kg).

b. Backward compatible to Mecho-5 components including facia, regular and reverse roll, pockets, and wall-mounting accessories.

c. Includes offset drive capability, left/right, front, or back to allow for utilization of blackout or ShadeLoc Zipper channels.

d. Allows for ease of operation when obstructions do not allow for direct drive chain access.

e. Offset chain drive shall not cause an increase of friction or pull force when operated up to a 26 degree angle from vertical.

B. Motorized Shades:

1. Mounting: Surface mounted.
2. Mounting: Surface mounted with pocket.
3. Mounting: Surface mounted with fascia.
4. Mounting: Recess mounted with ceiling pocket.
5. Mounting: Recess mounted without ceiling pocket or fascia.
6. Configuration: Single solar shadecloth.
7. Configuration: Single blackout shadecloth.
8. Configuration: Double solar and blackout shadecloth.
9. Solar Shadecloths:

a. Fabric: ThermoVeil 0900, 0 to 1 percent visually translucent extra-dense linear weave pattern.

b. Fabric: ThermoVeil 1000, 2 to 3 percent open, dense linear-weave pattern.

c. Fabric: ThermoVeil 1300, 5 percent open, 2 by 2 dense basket-weave pattern, colors match 1500 (3 percent open), also 126 inches (3200 mm) wide.

d. Fabric: ThermoVeil 1500, 3 percent open, 2 by 2 dense basket-weave pattern, colors match 1300 (5 percent open), also 126 inches (3200 mm) wide.

e. Fabric: ThermoVeil 2100, 10 percent open, 2 by 2 open basket-weave pattern, colors match 1300 (5 percent open) and 1500 (3 percent open).

f. Fabric: ThermoVeil 3000 satin, twill-weave pattern at 1 to 2 percent open, with an alternating predominant color in the warp and weft (fill). Reverse side can be used facing interior if specified.

g. Fabric: ThermoVeil 3200 satin twill weave pattern at 1 to 2 percent open, with an alternating predominant color in the warp and weft (fill). Reverse side can be used facing interior if specified.

h. Fabric: ThermoVeil 3300 diamond earthtone twill-weave pattern at 1 to 2 percent open, with an alternating predominant color in the warp and weft (fill). Reverse side can be used facing interior if specified.

i. Fabric: EuroVeil 5300, thin, fine, screen cloth in broad range of colors in basket weave pattern at 5 percent open.

j. Fabric: EuroTwill 6000, finely woven Reversible Weave at 3 percent open. Reverse side can be used facing interior if specified.

k. Fabric: EuroTwill 6200, distinctive, tightly woven twill design, comprised of fine polyester with PVC coating at 1 to 2 percent open. Reverse side can be used facing interior if specified.
l. Fabric: EuroTwill 6450, a broke twill-weave design comprised of fine polyester with PVC coating at 3 percent open. Reverse side can be used facing interior if specified.
m. Fabric: EcoVeil 0950, TPO Cradle to Cradle Certified, fabric, non-PVC, 1 x 1 basket-weave pattern at 1 percent open. Colors match 1350 (5 percent open) and 1550 (3 percent open).
n. Fabric: EcoVeil 1350, TPO Cradle to Cradle Certified, fabric, non-PVC, 1 x 1, basket-weave pattern at 5 percent open. Colors match 0950 (1 percent open) and 1550 (3 percent open).
o. Fabric: EcoVeil 1550, TPO fabric, Cradle to Cradle Certified, non-PVC, 1 x 1, basket-weave pattern at 3 percent open. Colors match 0950 (1 percent open) and 1350 (5 percent open).
p. Fabric: SoHo 1100, (1 percent open), 2 x 2 basket-weave pattern of fine yarn PVC and polyester blend, same colors as in 1600 (3 percent open) and 1900 series, (5 percent open).
q. Fabric: SoHo 1600, (3 percent open), 2 x 2 basket-weave pattern of fine yarn PVC and polyester blend, same colors as in 1100 (1 percent open) and 1900 series, (5 percent open).
r. Fabric: SoHo 1900, (5 percent open), 2 x 2 basket-weave pattern of fine yarn, PVC and polyester blend, same colors as in 1100 (1 percent open) and 1600 series, (3 percent open).
s. Fabric: EcoVeil Sheer 6750, Cradle to Cradle Certified, woven 100 percent polyester, PVC-free, reversible face, (3 percent open). The first shadecloth to pass NFPA 701 flame tests without added chemical flame retardants.
t. Fabric: EcoVeil Sheer 6850, Cradle to Cradle Certified, woven 100 percent polyester, PVC-free, reversible face, (1 percent open). The first shadecloth to pass NFPA 701 flame tests without added chemical flame retardants.
u. Color: Selected from manufacturer's standard colors.
v. Color: Custom color.

10. Blackout Shadecloths:
    a. Fabric: Classic Blackout 0700, Vinyl coated fabric blackout material same color reverse side (for exterior).
    b. Fabric: ThermoVeil Equinox 0100, blackout shadecloth with opaque acrylic backing, PVC-free, white color reverse side (for exterior). Available 98 inch.
    c. Fabric: Midnite 0200, blackout shadecloth with opaque acrylic backing. PVC-free, white color reverse side (for exterior), available 126 inch (3200 mm) wide.
    d. Fabric: Distinctive Blackout 0800, blackout shadecloth with laminated 2 x 2 basket weave, opaque fiberglass base with Vinyl coating, heavy-weight construction, white color reverse side (for exterior).
    e. Fabric: Duplex blackout 0250, blackout shadecloth with opaque foam backing and base polyester cloth, PVC-free, graphite color reverse side (for exterior). Available in 118 inches (2997 mm) wide
    f. Color: Selected from manufacturer's standard colors.
    g. Color: Custom color.
11. Specialty Shadecloths:
    a. Fabric: ThermoVeil Mirrofilm 0600, transparent, light filtering and heat insulating material
    b. Fabric: AcoustiVeil 0890, dimout, 0 to 1 percent open, fabric, sound-absorbing, with noise reduction coefficient (NRC) of 0.575, to aid in reducing echoes, polyester, PVC-free with a Declare label.
12. Controls: Electrically operated, Quiet Intelligent Encoded Motor System.
13. Controls: Electrically operated, IQ/MLC low voltage control system.

2.3 SHADE BAND

A. Shade Bands: Construction of shade band includes the fabric, the hem weight, hem-pocket, shade roller tube, and the attachment of the shade band to the roller tube. Sewn hems and open hem pockets are not acceptable.
   1. Hem Pockets and Hem Weights: Fabric hem pocket with RF-welded seams (including welded ends) and concealed hem weights. Hem weights shall be of appropriate size and weight for shade band. Hem weight shall be continuous inside a sealed hem pocket. Hem pocket construction and hem weights shall be similar, for all shades within one room.
   2. Shade Band and Shade Roller Attachment:
      a. Use extruded aluminum shade roller tube of a diameter and wall thickness required to support shade fabric without excessive deflection. Roller tubes less than 1.55 inch (39.37 mm) in diameter for manual shades, and less than 2.55 inches (64.77 mm) for motorize shades are not acceptable.
      b. Provide for positive mechanical engagement with drive / brake mechanism.
      c. Provide for positive mechanical attachment of shade band to roller tube; shade band shall be made removable / replaceable with a "snap-on" "snap-off" spline mounting, without having to remove shade roller from shade brackets.
      d. Mounting spline shall not require use of adhesives, adhesive tapes, staples, and/or rivets.
      e. Any method of attaching shade band to roller tube that requires the use of adhesive, adhesive tapes, staples, and/or rivets are not acceptable.

2.4 SHADE FABRICATION

A. Fabricate units to completely fill existing openings from head to sill and jamb-to-jamb, unless specifically indicated otherwise.

B. Fabricate shadecloth to hang flat without buckling or distortion. Fabricate with heat-sealed trimmed edges to hang straight without curling or raveling. Fabricate unguided shadecloth to roll true and straight without shifting sideways more than 1/8 inch (3 mm) in either direction per 8 feet (2438 mm) of shade height due to warp distortion or weave design. Fabricate hem as follows:
   1. Hembar: Concealed hembar.
   2. Hembar: Exposed hembar.
   3. Hembar: Exposed hembar with light seal for blackout shades.
   4. Hembar: Exposed blackout hembar with polybond seal for blackout shades.

C. Provide battens in standard shades as required to assure proper tracking and uniform rolling of the shadebands. Contractor shall be responsible for assuring the width-to-height (W:H) ratios shall not exceed manufacturer's standards or, in absence of such standards, shall be responsible for establishing appropriate standards to assure proper tracking and rolling of the shadecloth within specified standards. Battens shall be roll-formed stainless steel or tempered steel, as required.

D. For railroaded shadebands, provide seams in railroaded multi-width shadebands as required to meet size requirements and in accordance with seam alignment as acceptable to Architect. Seams shall be properly located. Furnish battens in place of plain seams when the width, height, or weight of the shade exceeds manufacturer's standards. In absence of such standards, assure proper use of seams or battens as required to, and assure the proper tracking of the railroaded multi-width shadebands.

E. Provide battens for railroaded shades when width-to-height (W:H) ratios meet or exceed manufacturer's standards. In absence of manufacturer's standards, be responsible for proper use and placement of battens to assure proper tracking and roll of shadebands.

F. Blackout shadebands, when used in side channels, shall have horizontally mounted, roll-formed stainless steel or tempered-steel battens not more than 3 feet (914 mm) on center extending fully into the side channels. Battens shall be concealed in an integrally-colored fabric to match the inside and outside colors of the shadeband, in accordance with manufacturer's published standards for spacing and requirements.
   1. Battens shall be roll formed of stainless steel or tempered steel and concave to match the contour of the roller tube.
   2. Batten pockets shall be self-colored fabric front and back RF welded into the shadecloth. A self-color opaque liner shall be provided front and back to eliminate any see through of the batten pocket that shall not exceed 1-1/2 inches (38 mm) high and be totally opaque. A see-through moire effect, which occurs with multiple layers of transparent fabrics, shall not be acceptable.

2.5 COMPONENTS

A. Access and Material Requirements:
   1. Provide shade hardware allowing for the removal of shade roller tube from brackets without removing hardware from opening and without requiring end or center supports to be removed.
   2. Provide shade hardware that allows for removal and re-mounting of the shade bands without having to remove the shade tube, drive or operating support brackets.
   3. Use only Delrin engineered plastics by DuPont for all plastic components of shade hardware. Styrene based plastics, and /or polyester, or reinforced polyester will not be acceptable.

B. Motorized Shade Hardware and Shade Brackets:
   1. Provide shade hardware constructed of minimum 1/8-inch (3 mm) thick plated steel, or heavier, thicker, as required to support 150 percent of the full weight of each shade.
   2. Provide shade hardware system that allows for field adjustment of motor or replacement of any operable hardware component without requiring removal of brackets, regardless of mounting position (inside, or outside mount).
   3. Provide shade hardware system that allows for operation of multiple shade bands offset by a maximum of 8 to 45 degrees from the motor axis between shade bands (4 to 22.5 degrees) on each side of the radial line, by a single shade motor (multi-banded shade, subject to manufacturer's design criteria).

C. Manual Operated Chain Drive Hardware and Brackets, Mecho5x:
   1. Provide for universal, regular and offset drive capacity, allowing drive chain to fall at front, rear or non-offset for all shade drive end brackets. Universal offset shall be adjustable for future change.
   2. Provide hardware capable for installation of a removable fascia, for both regular and/or reverse roll, which shall be installed without exposed fastening devices of any kind.
   3. Provide shade hardware system that allows for removable regular and/or reverse roll fascias to be mounted continuously across two or more shade bands without requiring exposed fasteners of any kind.
   4. Provide shade hardware system that allows for operation of multiple shade bands (multi-banded shades) by a single chain operator, subject to manufacturer's design criteria. Connectors shall be offset to assure alignment from the first to the last shade band.
   5. Provide shade hardware system that allows multi-banded manually operated shades to be capable of smooth operation when the axis is offset a maximum of 6 degrees on each side of the plane perpendicular to the radial line of the curve, for a 12 degrees total offset.
   6. Provide positive mechanical engagement of drive mechanism to shade roller tube. Friction fit connectors for drive mechanism connection to shade roller tube are not

acceptable

7. Provide shade hardware constructed of minimum 1/8 inch (3 mm) thick plated steel or heavier as required to support 150 percent of the full weight of each shade.
8. Drive Bracket / Brake Assembly:
    a. Mecho Drive Bracket model Mecho5x shall be fully integrated with all Mecho accessories, including, but not limited to: SnapLoc fascia, SnapLoc Zipper channels, room darkening side / sill channels, center supports and connectors for multi-banded shades.
    b. Mecho5x drive sprocket and brake assembly shall rotate and be supported on a welded 3/8 inch (9.5 mm) steel pin.
    c. The brake shall be an over-running clutch design which disengages to 90 percent during the raising and lowering of a shade. The brake shall withstand a pull force of 50 lbs. (22 kg) in the stopped position.
    d. The braking mechanism shall be applied to an oil-impregnated hub on to which the brake system is mounted. The oil impregnated hub design includes an articulated brake assembly, which assures a smooth, non-jerky operation in raising and lowering the shades. The assembly shall be permanently lubricated. Products that require externally applied lubrication and or not permanently lubricated are not acceptable.
    e. The entire Mecho5x assembly shall be fully mounted on the steel support bracket, and fully independent of the shade tube assembly, which may be removed and reinstalled without effecting the roller shade limit adjustments.
    f. Drive Chain: No. 10 qualified stainless steel chain rated to 90 lbs (41 kg) minimum breaking strength. Nickel plate chain shall not be accepted.

2.6 SHADE MOTOR DRIVE SYSTEM

A. Shade Motors:
    1. Tubular, asynchronous (non-synchronous) motors, with built-in reversible capacitor operating at 110 VAC (60 hz), single phase, temperature Class A, thermally protected, totally enclosed, maintenance free with line voltage power supply equipped with locking disconnect plug assembly furnished with each motor.
    2. Conceal motors inside shade roller tube.
    3. Maximum current draw for each shade motor of 2.3 amps.
    4. Use motors rated at the same nominal speed for all shades in the same room.

B. Total hanging weight of shade band shall not exceed 80 percent of the rated lifting capacity of the shade motor and tube assembly.

2.7 MOTOR CONTROL SYSTEMS

A. Quiet Intelligent Encoded Motor System (software, two-way communication): Specifications and design are based on the Intelligent Motor Control System / WhisperShade-IQ Motor System) as manufactured by Mecho. Other systems may be acceptable providing all of the following performance capabilities are provided. Motor control systems not in complete compliance with these performance criteria shall not be accepted as equal systems.
    1. Quiet operation of up to 46 dBa within 3 feet (914 mm), open air.
    2. Upper and lower stopping points (operating limits) of shade bands shall be programmed into motors via a hand held removable program module / configurator.
    3. Intermediate stopping positions for shades shall allow for up to three repeatable and precise aligned positions.
    4. Up to 103 available alignment points including 3 user programmable predefined intermediate positions, for a total of 5 defined and aligned positions. All shades on the same switch circuit with the same opening height shall align at each intermediate stopping position.
    5. Two inherent methods of control:
        a. Cost effective, low voltage, hardwired dry-contact for local switch or 3rd party

control operation.
b. Expandable to 2 way communication network with IQ/485-NI to support whole building low-voltage control and integration.

6. Mecho-RF via Zigby and EnOcean wireless mesh, network communication available to reduce low voltage wiring and field labor associated costs.
7. Uniform or Regular Modes of Operation:
   a. Uniform mode shall allow for shades to only move to intermediate stop positions.
   b. Regular mode shall allow for shades to move to both intermediate stop positions, plus any position desired between the upper and lower limits as set by the installer.
8. Wall Switches:
   a. IQ-Switch: in 5 or 10 button, single gang, low voltage.
9. Provide Wall Switches:
   a. Shades shall be operated by a 4 and 8 button low voltage standard switches or programmable intelligent switches (IS). Standard switch shall be wired to a bus interface and the bus interface will be programmed to transmit an address for the local switch.
   b. Intelligent switches may be installed anywhere on the busline. Each IS shall be capable of storing one control level address to be broadcast along the busline.
   c. An address that is transmitted by either a switch or central controller shall be responded to by those motors with the same address in their control table.
   d. IS shall provide for interface with other low voltage input devices via a set of dry contact terminals located on the switch.
   e. Standard switch or IS may control an individual, sub-group or group of motors in accordance with the address in each motor.

B. IQ/MLC: Specifications and design of shade motors and motor control system are based on the IQ/MLC motor logic control system manufactured by Mecho. Other systems may be acceptable provide that all of the following performance capabilities are provided. Motor logic control systems not in complete compliance with these performance criteria shall not be accepted as equal systems.
   1. Motor Control System:
      a. Provide power to each shade motor via individual 3 conductor line voltage circuits connecting each motor to the relay based motor logic controllers (IQ/MLC).
      b. Control system components shall provide appropriate (spike and brown out) over-current protection (plus or minus 10 percent of line voltage) for each of the four individual motor circuits and shall be rated by UL or ETL as a recognized component of this system and tested as an integrated system.
      c. Motor control system shall allow each group of four shade motors in any combination to be controlled by each of four local switch ports, with up to fourteen possible "sub-group" combinations via local 3 button wall switches and all at once via a master 3 button switch. System shall allow for overlapping switch combinations from two or more local switches.
      d. Multiple "sub-groups" from different IQ/MLC control components shall be capable of being combined to form "groups" operated by a single 3 button wall switch, from either the master port or in series from a local switch port.
      e. Each shade motor shall be accessible (for control purposes) from up to four local switches and one master switch.
      f. Control system shall allow for automatic alignment of shade hem bars in stopped position at 25 percent, 50 percent, and 75 percent of opening heights, and up to three user-defined intermediate stopping positions in addition to all up / all down, regardless of shade height, for a total of five positions. Control system shall allow shades to be stopped at any point in the opening height noting that shades may not be in alignment at these non-defined positions).

g. Control system shall have two standard operating modes: Normal mode allowing the shades to be stopped anywhere in the window's opening height and uniform mode, allowing the shades to only be stopped at the predefined intermediate stop positions. Both modes shall allow for all up / all down positioning.
h. Control system components shall allow for interface with both audiovisual system components and building fire and life safety system via a dry contact terminal block.
i. Control system components shall allow for interface with external analog input control devices such as solar activated controllers, 24 hour timers, and similar items; via a dry contact terminal block.
j. Reconfiguration of switch groups shall not require rewiring of the hardwired line voltage motor power supply wiring, or the low voltage control wiring. Reconfiguration of switch groups shall be accomplished within the motor control device (IQ/MLC).

2. Wall Switches:
a. Three-button architectural flush mounted switches with metal cover plate and no exposed fasteners.
b. Connect local wall switches to control system components via low voltage (12V DC) 4-conductor modular cable equipped with RJ-11 type connectors supplied, installed and certified under Division 16 - Electrical.
c. Connect master wall switches to control system components via low voltage (12V DC) 6-conductor modular cable equipped with RJ-12 type connectors supplied, installed and certified under Division 16 - Electrical.

2.8 ZIPPER SHADE SYSTEM

A. Zipper Shade System: ShadeLoc by Mecho, a zipper shade system that uses side channels to capture the zippered edges of the shadecloth.
1. Description: Zippers welded to the edges of shadecloth to lock it into the channels using SnapLoc assembly that conceals fasteners and plugs.
2. Configuration: Single-shade.
3. Configuration: Double-shade.
4. Assembly: Electro/SL Single with standard bracket.
5. Assembly: Electro/SL Double with standard bracket.
6. Assembly: Electro/SL Double Extended with standard bracket.
7. Assembly: Electro/1 with alternative bracket.
8. Assembly: Electro/2 with alternative bracket.
9. Assembly: Electro/2 Extended with alternative bracket.
10. Side Channels for Standard ElectronicDrive Units: 2 inches (51 mm).
11. Side Channels for IQ ElectronicDrive Units: 1-1/2 inches (38 mm).
12. Center Support Channels: 2-1/2 inches (63.5 mm).
13. Cover: Seamless.

2.9 ACCESSORIES

A. Roller Shade Pocket: ElectroPocket and Non-ElectroPocket from Mecho. For recessed mounting in acoustical tile, or drywall ceilings as indicated on the Drawings. For manual and motorized shades.
1. Provide either extruded aluminum and or formed steel shade pocket with extruded aluminum trim for all exposed components, sized to accommodate roller shades, with exposed extruded aluminum closure, tile support and removable closure panel to provide access to shades. The max roll diameter shall provide a minimum of clearance of 1/4 inch (6 mm) from the top and 2 sides of the pocket and 1/2 inch (13 mm) clear from the inside of the accessible pocket closure.
a. Provide "Vented Pocket" such that there will be a minimum 12 sq inch (7742 sq

mm) of return air per lineal foot allowing the solar gain to flow above the ceiling line into the plenum or over the roller shades into the interior space.

2. Provide ETL/UL 235 Approved extruded aluminum KD ElectroPocket, in 10 ft. (3048 mm) lengths assembled on job site, with an integrated wiring raceway and mounting clips for:
   a. Line Voltage disconnect connectors.
   b. Wireless receivers.
   c. Low Voltage splitters.
   d. Daisy chain non-plenum wiring raceway and integrated pocket assembly.
3. Model: ElectroPocket 4155 with tile support.
   a. Dimensions: (W x H): 5-3/4 x 6-1/4 inch (146 x 159 mm).
   b. Maximum Roll Up Diameter: 4-1/4 inch (108 mm).
4. Model: ElectroPocket Model 4156 without tile support.
   a. Dimensions: (W x H): 5-3/4 x 6-1/4 inch (146 x 159 mm).
   b. Maximum Roll Up Diameter: 4-1/4 inch (108 mm).
5. Model: ElectroPocket Model 4165 with tile support.
   a. Dimensions (W x H): 6-5/8 x 6-1/4 inch (168 x 159 mm).
   b. Maximum Roll Up Diameter: 4-5/8 inch (117.5 mm)
6. Model: ElectroPocket Model 4166 without tile support.
   a. Dimensions (W x H): 6-5/8 x 6-1/4 inch (168 x 159 mm).
   b. Maximum Roll Up Diameter: 4-5/8 inch (117.5 mm).
7. Model: Non-ElectroPocket 4157 with tile support.
   a. Dimensions: (W x H): 5-3/4 x 6-1/4 inch (146 x 159 mm).
   b. Maximum Roll Up Diameter: 4-5/8 inch (117.5 mm).
8. Model: Non-ElectroPocket without tile support.
   a. Dimensions (W x H): 5-3/4 x 6-1/4 inch (146 x 159 mm).
   b. Maximum Roll Up Diameter: 4-5/8 inch (117.5 mm).
9. Model: Non-ElectroPocket with tile support.
   a. Dimensions (W x H): 6-5/8 x 6-1/4 inch (168 x 159 mm).
   b. Maximum Roll Up Diameter: 5-1/8 inch (130 mm).
10. Model: Non-ElectroPocket 4168 without tile support.
    a. Dimensions (W x H): 6-5/8 x 6-1/4 inch (168 x 159 mm).
    b. Maximum Roll Up Diameter: 5-1/8 inch (130 mm).

B. Pocket Accessories: As indicated on the Drawings.

C. Fascia:
1. Continuous removable extruded aluminum fascia that attaches to shade mounting brackets without the use of adhesives, magnetic strips, or exposed fasteners.
2. Fascia shall be able to be installed across two or more shade bands in one piece.
3. Fascia shall fully conceal brackets, shade roller and fabric on the tube.
4. Provide bracket / fascia end caps where mounting conditions expose outside of roller shade brackets.
5. Notching of Fascia for manual chain shall not be acceptable.

D. Room Darkening Channels:
1. Side Channels, Mecho: Extruded aluminum with polybond edge seals and SnapLoc-mounting brackets and with concealed fastening. Exposed fastening is not acceptable. Units 1-15/16 inches (49 mm) wide by 1-3/16 inches (30 mm) deep, two-band center channels, 2-5/8 inches (67 mm) wide by 1-3/16 inches (30 mm) deep. The 2-5/8-inch (67 mm) double-center channels may be installed at center-support positions of multi-band-shade ElectroShades. Mecho side channels 2-5/8 inch (67 mm) may be used as center supports for ElectroShades; shadebands up to 8 high. For shadebands over 8 feet (2438 mm), provide ElectroShade side channels.
   a. Blackout Lightseal Hembar: Channels shall accept one-piece exposed blackout hembar with vinyl seal to assure light control.

2. Side Channels, ElectroShade: Extruded aluminum with polybond edge seals and SnapLoc-mounting brackets and with concealed fastening. Exposed fastening is not acceptable. Units 2-1/2 inches (63.5 mm) wide by 1-3/16 inches (30 mm) deep; two-band center channels 5 inches (127 mm) wide by 1-3/16 inches (30.1 mm) deep. The 2-5/8-inch (67 mm) double-center channels may be installed at center-support positions of multi-band-shade ElectroShades. Mecho side channels 2-5/8 inches (67 mm) may be used as center supports for ElectroShades. Also provide for use with manually operated room darkening Mecho shades over 8 feet (2438 mm) in height.
   a. Blackout Lightseal Hembar: Channels shall accept one-piece exposed blackout hembar with vinyl seal to assure light control.
3. Sill Channels: Extruded aluminum with polybond edge seals and SnapLoc-mounting brackets and with concealed fastening. Exposed fastening is not acceptable.
4. Channel Color: Selected from manufacturer's standard colors.
5. Channel Color: Custom color.

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.3 INSTALLATION

A. Install roller shades level, plumb, square, and true according to manufacturer's written instructions, and located so shade band is not closer than 2 inches (51 mm) to interior face of glass. Allow proper clearances for window operation hardware.

B. Turn-Key Single-Source Responsibility for Motorized Interior Roller Shades: To control the responsibility for performance of motorized roller shade systems, assign the design, engineering, and installation of motorized roller shade systems, motors, controls, and low voltage electrical control wiring specified in this Section to a single manufacturer and their authorized installer/dealer. The Architect will not produce a set of electrical drawings for the installation of control wiring for the motors, or motor controllers of the motorized roller shades. Power wiring (line voltage), shall be provided by the roller shade installer/dealer, in accordance with the requirements provided by the manufacturer. Coordinate the following with the roller shade installer/dealer:
   1. General Contractor shall provide power panels and circuits of sufficient size to accommodate roller shade manufacturer's requirements, as indicated on the mechanical and electrical drawings.
   2. General Contractor shall coordinate with requirements of roller shade installer/dealer, before inaccessible areas are constructed.
   3. General Contractor shall run line voltage as dedicated home runs (of sufficient quantity, in sufficient capacity as required) terminating in junction boxes in locations designated by roller shade dealer.
   4. General Contractor shall provide and run all line voltage (from the terminating points) to the motor controllers, wire all roller shade motors to the motor controllers, and provide and run low voltage control wiring from motor controllers to switch/ control

locations designated by the Architect. All above-ceiling and concealed wiring shall be plenum-rated, or installed in conduit, as required by the electrical code having jurisdiction.

5. General Contractor shall provide conduit with pull wire in all areas, which might not be accessible to roller shade contractor due to building design, equipment location or schedule.

C. Adjust and balance roller shades to operate smoothly, easily, safely, and free from binding or malfunction throughout entire operational range.

D. Clean roller shade surfaces after installation, according to manufacturer's written instructions.

E. Engage Installer to train Owner's maintenance personnel to adjust, operate and maintain roller shade systems.

3.4 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Plastic-laminate-faced wood cabinets for music equipment storage.

1.02 RELATED REQUIREMENTS

A. Section 01 3000 - Administrative Requirements: Submittal procedures, project meetings, progress schedules and documentation, reports, coordination.

B. Section 01 7800 - Closeout Submittals: Project record documents, operation and maintenance (O&M) data, warranties and bonds.

1.03 SUBMITTALS

A. Product Data: For each type of product indicated. Submit manufacturer's specifications, installation instructions, and general recommendations Include data substantiating materials comply with requirements.

B. Shop Drawings: Indicate dimensions, description of materials and finishes, general construction, specific modifications, component connections, anchorage methods, hardware, and installation procedures.

C. See Section 01 3000 - Administrative Requirements, for submittal procedures.

D. Samples for Selection:

1. For cabinet finishes.

E. LEED Submittals: Refer to Division 1 Section “Sustainable Design Requirements.”

1.04 QUALITY ASSURANCE

A. Design Requirements:

1. Provide storage cabinets specifically designed for intended use and meeting minimum performance characteristics specified. Music instrument storage units will be chip and abrasion resistant under heavy usage and will protect instruments and cases from damage under normal use.

2. Provide one-piece high molecular polyethylene instrument shelving with integral ventilation grooves, designed and engineered to withstand continuous use without surface or front edge breakdown. Two part plastic overlay shelf systems will not be allowed.

3. Manufacture individual instrument storage cabinets with thermofused polyester laminated panels, finish both faces all components. Factory jig and drill end panels to accept unit- to-unit through-bolting: wood screw attachment not permitted. Furnish each instrument storage cabinet with an integral base and four (4) steel levelers accessible from within the unit but concealed in final installation. These features combine to provide modularity, on-site rearrangement or future relocation of any music education storage cabinet.

4. Provide inset style solid panel doors, wire grille as shown on drawings, reveal or full overlay style solid or wire grille doors will not be permitted due to inherent weakness of overlay hinges. All hinges shall be structurally attached to vertical panels using engineered and tested through-bolt hardware, and welded to wire grille doors, screw mounted hinges will not be permitted.

B. Manufacturer to provide documentation of following Minimum Performance Requirements:

1. Molded plastic instrument storage shelves shall have static load capacity over 1000 lbs.

2. Full height door to support a minimum vertical dynamic live load of 315 lb., applied at outer edge (door must swing 1800, back and forth, with full weight).

3. Wire grille door welded to door hinge in five places, pull tested to withstand 3,000 lbs.
4. Instrument storage shelf system shall have a factory warranty of ten (10) years against defects in material and/or workmanship.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver music equipment storage casework only after painting, utility roughing-in, and similar operations that could damage, soil, or deteriorate casework have been completed in installation areas. If casework must be stored in other than installation areas, store only in areas where environmental conditions meet requirements specified in “Project Conditions” Article.

B. Keep finished surfaces covered with protective covering during handling and installation.

1.06 FIELD CONDITIONS

A. Environmental Limitations: Do not deliver or install woodwork until building is enclosed, wet work is complete, and HVAC system is operating and will maintaining temperature between 60 and 90 deg F and relative humidity between 25 and 55 percent during the remainder of the construction period.

1.07 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of music equipment storage casework that fail in materials or workmanship within specified warranty period. Failures include, but are not limited to, the following:

1. Delamination of components or other failures of glue bond.

B. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

1. Warping of components.
2. Failure of operating hardware.
3. Deterioration of finishes.

C. Warranty Period:

1. Cabinet Casework: Ten years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Basis-of-Design Product: The design for music equipment storage casework is based on Wenger Corp. (www.wengercorp.com) Subject to compliance with requirements, provide the named product or a comparable prequalified product. Manufacturer requesting prior approval must submit samples of materials, construction features and finishes.

1. Sample cabinet.
2. Typical shelf.
3. Cabinet wall.
4. Door panel.
5. Hinges.
6. Slide bolts. (padlock hasps not acceptable)

B. SUBSTITUTIONS

1. The materials and products of the manufacturer listed above are approved as base bid for this project. All bids shall be submitted on the base bid products and materials. Proposed “write in” or voluntary alternates will not be considered in determining the low bid or the award of the contract.

2. The burden of demonstrating the merit of the proposed substitute is on the proposer. The proposer shall be prepared to supply the specified material or products from the specified supplier if the proposed substitute is not accepted.
3. The materials, products and equipment in the bidding documents establish the required standard of function, dimension, appearance and quality to be met by any proposed substitute.

C. Subject to conformance with specifications, including features not standard to the manufacturer, the following manufacturers may provide products for this project subject to submittal and approval by Owner and Architect of samples of materials, construction features and finishes stipulated in Paragraph 2.1A.

1. Corilam
2. TMI
3. Casework USA.

2.02 STORAGE CASEWORK

A. General: Provide the following music equipment storage plastic laminate clad casework units with solid doors manufactured to AWI specifications for Section 400B, “Custom” grade. Cabinet backs shall be side bound, captured in grooves on cabinet sides, glued and pinned. Provide thermofused polyester facing on minimum 45 lb. particleboard at all panels. Provide minimum 3 mm PVC edges to particleboard elements.

1. Provide casework items equal to models referenced by Wenger catalogue numbers.
2. Composite wood and agrifiber products permanently installed inside the weather- proofing system shall contain no added urea formaldehyde resins or laminating adhesives. Materials considered fixtures, furniture, and equipment are not considered base building elements and are thus excluded from this restriction.

B. Thermofused Polyester Panels: Particleboard finished with thermally fused polyester complying with ALA 1992.

1. Particleboard: ANSI A208.1, Grade M-2.
2. Provide 3.0 mm PVC or polyester edge banding complying with LMA EDG-1 on components with exposed or semi-exposed edges.

C. Instrument Shelves: Provide shelf units that are repairable or replaceable without dismantling case construction. Provide ten year written warranty on shelf units to repair or replace gouged or deteriorated shelf units damaged under normal heavy-use conditions.

1. Cabinets up to 27 inches wide: One-piece blow-molded polyethylene with 1-3/8 inch radius front edge. Mount to cabinet walls with one-piece molded rigid ST nylon clip. Shelf is replaceable without damage to adjacent surfaces. Doweled shelves will not be permitted. Shelf shall not have tight fit to cabinet wall in order to allow air flow through all compartments.
2. Cabinets over 27 inches wide: One-piece formed polyethylene with radius front edge and 3/16" wall thickness. Ribbed for structural integrity. Supported by four structural tubular members 1-1/2" x 1" x 16 gauge wall thickness with 14 gauge welded end plates.

D. Doors: Provide the following:

1. Grille Doors: Wire grille doors of minimum 3/16" diameter steel rod welded; enamel finish; with name/number plate and padlock hasp. Welded steel grille construction with powder coat finish, color oyster. Welds at T-joints must be 3600
    a. Hinges, 5-knuckle institutional type hinge. Hinge will support 315 lbs. dynamic vertical load. Hinge pin shall be 2 3/4 inches long. Hinge welded to door frame in five places, fastened to

cabinet with through-bolt construction using steel threaded inserts. Inserts have angled teeth that bite into the wood as the bolt is tightened; attachment by wood screws not acceptable.

2. Locking slide-bolt. All doors shall be factory provided with locking slide- bolt designed for padlocks, with formed steel strike plate through-bolt connected to cabinet end panel, 12 gauge steel. Padlocks shall be positioned toward the center of the latch, away from the edge in order to all access to locks when adjacent doors are opened. Provide clear plastic label holder for identification card insert. Finish: Powder paint coating, color oyster.

E. Finish Hardware:

1. Joinery Hardware: two inch, 1/4-20 panel connectors with 15mm head diameter, and steel thread inserts. Finish: Powder paint coating, color - oyster. Dowel and glue construction is not allowed.

2. Cabinet levelers: Structural levelers each cabinet, accessible from within the unit when desired, concealed in complete installation. Four leveling glides within minimum 3/8- inch diameter threaded rod in steel corner brackets, six glides for cabinets with divider panels. Cabinets shall not sit on a base, but shall be complete within themselves. Leveling with shims is not allowed.

F. Cabinet Back Panel: Standard cabinet back to be 1/4" thick prefinished hardboard, color oyster to match interior of side and top panels.

2.03 MUSIC STORAGE CASEWORK SCHEDULE

A. Provide casework items equal to models referenced by Wenger catalogue numbers.

B. Refer to “Equipment Schedule – Music Room” on Sheet A7.1.7.

C. All units are 84" height by dimensions indicated, unless noted otherwise. Provide lockable door for cabinet or each compartment of cabinets for all locations.

PART 3 EXECUTION

3.01 CASEWORK INSTALLATION

A. Install casework plumb, level, and true in accordance with manufacturer's printed instructions and recommendations

B. Adjust casework and hardware so doors operate smoothly without warp or bind. Lubricate operating hardware as recommended by manufacturer.

3.02 CLEANING AND PROTECTING

A. Repair or remove and replace defective work as directed on completion of installation.

B. Clean finished surfaces, touch up as required, and remove or refinish damaged or soiled areas to match original factory finish, as approved by Architect.

C. Protection: Provide 6-mil plastic or other suitable water-resistant covering over case tops. Tape covering in place at a minimum of 48 inches o.c. Remove protection at Substantial Completion.

3.03 INSTALLATION

END OF SECTION

PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes the following:

1. Wood laboratory casework.
2. Laboratory countertops.
3. Shelves.
4. Laboratory sinks and troughs.
5. Laboratory fixtures.
6. Accessories.

B. Wood laboratory casework and equipment as specified herein and as scheduled, and noted on the drawings is to be furnished, delivered, and installed in the location required by the drawings, and left ready for connection of plumbing fixtures and electrical fixtures by others.

C. Casework, equipment, service fixtures and related work shall include:

1. Furnishing, delivering to the building, uncrating, setting in place and leveling all casework and equipment listed in this specification or equipment schedule and/or shown on the drawings.
2. Furnishing plumbing fixtures and fittings as defined in this specification, complete with tank nipples and lock nuts for mounting fixtures and fittings to tops or curbs. Fixtures shall be furnished assembled, in properly marked cartons for installation by casework contractor. Final hook up or connection to services shall be by others. Nipples for hot and cold water shall be brass.
3. Furnishing electrical service fixtures directly attached to the casework or equipment as called for in this specification, equipment list and/or shown on the drawings. Fixtures shall be furnished assembled in properly marked cartons for installation and final hook up or connection by others. Rough in boxes for duplex receptacles and data drops located in cabinetry or aprons shall be installed at the factory by the equipment manufacturer.
4. Furnishing of sink bowls and cupsinks, complete with required sink supports, overflows, and outlets with plugs and strainers, as called for in this specification, equipment schedule and/or shown on the drawings. Units shall be assembled and installed by casework contractor. Separate outlets shall not exceed 4” in length. Outlets shall be furnished without couplings required to connect to the drain piping system. Installation of the outlets shall be by casework supplier.
5. Furnish along with specified fume hoods all service fixtures, fittings, remote control rods, escutcheon plates, valve handles and nipples. Service fixtures shall be furnished attached to superstructure and pre-piped below countertop for final connection by others.
6. Furnishing and installing countertops as shown on the drawings, of the size and shape required on all laboratory casework.
7. Remove all debris, dirt and rubbish accumulated as a result of installation of this equipment, leaving premises broom clean and orderly.
8. Final Adjustment: It is recognized that wood doors and drawers will swell and stick because of unusually high ambient moisture in new construction work. Casework installer shall during the first year return after final inspection to make any final adjustments to drawers and doors to eliminate sticking or other problems. Any doors or drawers, which cannot be corrected shall be replaced.

D. Related Sections include the following:

1. Division 6 Section "Rough Carpentry" for wood blocking for anchoring laboratory casework.
2. Division 9 Section "Gypsum Board Assemblies" for reinforcements in metal-framed gypsum board partitions for anchoring laboratory casework.
3. Division 9 Section "Resilient Flooring" for resilient base applied to wood laboratory casework.
4. Division 11 Section "Laboratory Fume Hoods" for fume hoods, including base cabinets and countertops under fume hoods.
5. Division 23 Sections for sinks and fittings in countertops.

E. Division 26 Sections for electrical fittings and outlets.

1.02 DEFINITIONS

A. Exposed Portions of Casework: Surfaces visible when doors and drawers are closed, including bottoms of cabinets more than 48 inches above floor, and visible surfaces in open cabinets or behind glass doors.

1. Ends of cabinets indicated to be installed directly against and completely concealed by walls or other cabinets after installation shall not be considered exposed.

B. Semiexposed Portions of Casework: Surfaces behind opaque doors, such as interiors of cabinets, shelves, dividers, interiors and sides of drawers, and interior faces of doors. Tops of cases 78 inches or more above floor are defined as semiexposed.

C. Concealed portions of casework include sleepers, web frames, dust panels, and other surfaces not usually visible after installation.

1.03 SUBMITTALS

A. Product Data: For each type of product indicated. Include independent certification that applied finish complies with specified chemical and physical resistance requirements.

B. Shop Drawings: For wood laboratory casework. Include plans, elevations, sections, details, and attachments to other work.

1. Indicate locations of blocking and reinforcements required for installing laboratory casework.
2. Include details of exposed conduits, if required, for service fittings.
3. Indicate locations of and clearances from adjacent walls, doors, windows, other building components, and other laboratory equipment.
4. Include coordinated dimensions for laboratory equipment and service fittings specified in other Sections.

C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating compliance of laboratory casework finishes and countertops with requirements specified for chemical and physical resistance.

D. Maintenance Data: For laboratory casework to include in maintenance manuals.

E. Warranty: Special warranty specified in this Section.

1.04 QUALITY ASSURANCE

A. Source Limitations: Obtain laboratory casework, including countertops, sinks, service fittings, and accessories, through one source from a single manufacturer.

1. Obtain through same source from same manufacturer as fume hoods specified in Division 11 Section "Laboratory Fume Hoods."

B. Product Designations: Drawings indicate sizes and configurations of laboratory casework by referencing designated manufacturer's catalog numbers. Unless modified by notation on Drawings, or otherwise specified, catalog description for designated product constitutes requirements for each product and establishes a standard of design and quality for materials, construction and workmanship. Other acceptable manufacturers' laboratory casework of similar sizes, similar door and drawer configurations, and complying with the Specifications will be accepted.

C. Product Standard: Comply with SEFA 8, "Laboratory Furniture--Casework, Shelving and Tables--Recommended Practices."

D. Flammable Liquid Storage: Where cabinets are indicated for solvent or flammable liquid storage, provide units that are listed and labeled as complying with requirements of NFPA 30 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

F. Accessibility Requirements: In addition to local governing regulations, comply with “Americans with Disabilities Act (ADA), Accessibility Guidelines (ADAAG).”

G. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Administrative Requirements."

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver laboratory casework only after wet operations in areas where casework is to be installed are completed.

B. Protect finished surfaces during handling and installation with protective covering of polyethylene film or other suitable material.

C. Store completed laboratory casework in a ventilated place, protected from the weather, with relative humidity of 50 percent or less at 70 deg F.

1.06 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install wood laboratory casework until building is enclosed, wet work and utility roughing-in are complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

1.07 COORDINATION

A. Coordinate layout and installation of framing and reinforcements for support of wood laboratory casework.

B. Coordinate installation of wood laboratory casework with installation of fume hoods and other laboratory equipment.

1.08 WARRANTY

A. Special Warranty: Submit a written warranty executed by the manufacturer agreeing to repair or replace components of laboratory casework systems due to defects of material and workmanship. Warranty shall not cover damage caused by misuse or negligence.

1. Warranty Period: 3years from date of Substantial Completion.

1.09 EXTRA MATERIALS

A. Furnish complete touchup kit for each type and color of wood laboratory casework provided. Include scratch fillers, stains, finishes, and other materials necessary to perform permanent repairs to damaged laboratory casework finish.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Acceptable Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Wood Laboratory Casework:
    a. Campbell Rhea.
    b. Leonard Peterson.
    c. Sheldon Laboratory Systems.
    d. Kewaunee Scientific Corporation, Laboratory Products Group.
2. Epoxy Countertops, Sinks and Troughs:
    a. Durcon Company, Inc. (The).
    b. Epoxyn Products.
    c. Laboratory Tops, Inc.
    d. Prime Industries, Inc.

2.02 CABINET MATERIALS

A. General:

1. Maximum Moisture Content for Lumber: 7 percent for hardwood and 12 percent for softwood.
2. Hardwood Plywood: HPVA HP-1 made with adhesive containing no urea formaldehyde, either veneer core or particle core, unless otherwise indicated.
3. Edgebanding for Wood-Veneered Construction: Minimum 1/8-inch-thick, solid wood of same species as face veneer; laminating glue shall contain no urea-formaldehyde.

B. Exposed Materials:

1. General: Provide materials that are selected and arranged for compatible grain and color. Do not use materials adjacent to one another that are noticeably dissimilar in color, grain, figure, or natural character markings.
2. Wood Species and Veneer Cut: Maple, plain sawn.
3. Stain Colors and Finishes: As selected by Architect from manufacturer's full range.
4. Solid Wood: Clear hardwood lumber.
5. Plywood: Urea-formaldehyde free hardwood plywood; Grade A exposed faces at least 1/50 inch thick, Grade J crossbands, and backs of same species as faces.

C. Semiexposed Materials:

1. Solid Wood: Sound hardwood lumber, selected to eliminate appearance defects, of any species similar in color and grain to exposed solid wood.

2. Plywood: Urea-formaldehyde free hardwood plywood of any species similar in color and grain to exposed plywood. Grade B faces, Grade J crossbands, and backs of same species as faces. Semiexposed backs of plywood with exposed faces shall be same species as faces.

D. Concealed Materials:

1. Solid Wood: Any hardwood or softwood species, with no defects affecting strength or utility.
2. Plywood: Urea-formaldehyde free hardwood plywood. Concealed backs of plywood with exposed or semiexposed faces shall be same species as faces.
3. Particleboard: ANSI A208.1, Grade M-3 Exterior Glue complying with requirements in ANSI A208.1, Grade M-3.
4. Hardboard: AHA A135.4, Class 1 tempered.

E. Glass for Glazed Doors: Clear tempered glass complying with ASTM C 1048, Kind FT, Condition A, Type I, Class 1, Quality q3; not less than 5.5 mm thick.

2.03 CABINET DESIGN

A. As indicated by scheduled product listed on the Drawings.

B. Grain Direction: Vertical on doors, horizontal on drawer fronts.

2.04 CABINET FABRICATION

A. Construction: Provide wood-faced laboratory casework of the following minimum construction:

1. Bottoms and Ends of Cabinets, Shelves, and Tops of Wall Cabinets and Tall Cabinets: 3/4-inch-thick plywood.
2. Base Cabinet Top Frames: 3/4-by-2-inch solid wood with mortise and tenon or doweled connections, glued with urea-formaldehyde free glue and pinned or screwed.
3. Backs of Cabinets: 3/4-inch- thick plywood where exposed, 1/4-inch- thick hardboard dadoed into sides, bottoms, and tops where not exposed.
4. Security Panels: 1/4-inch-thick hardboard panels between drawers and between drawers and doors when base cabinet locks are keyed differently.
5. Drawer Fronts: 3/4-inch- thick plywood or solid hardwood.
6. Drawer Sides and Backs: 1/2-inch- thick solid wood or plywood, with urea-formaldehyde free glued dovetail or multiple-dowel joints.
7. Drawer Bottoms: 1/4-inch- thick plywood glued and dadoed into front, back, and sides of drawers. Use 1/2-inch- thick material for drawers more than 24 inches wide.
8. Doors 48 Inches or Less in Height: 3/4 inch thick, with particleboard or medium-density fiberboard cores, solid hardwood stiles and rails, and hardwood face veneers and crossbands.
9. Doors More Than 48 Inches in Height: 1-1/8 inches thick, with honeycomb cores, solid hardwood stiles and rails, and veneer plywood on both sides.
10. Stiles and Rails of Glazed Doors: 3/4-inch- thick solid hardwood.

B. Leg Shoes: Vinyl or rubber, black, open-bottom type.

1. Provide minimum 1-1/2-inch-diameter, nonmarring floor glides with minimum 5/8-inch height adjustment capability, for open-leg tables.

C. Filler Strips: Provide as needed to close spaces between cabinets and walls, ceilings, and indicated equipment. Fabricate from same material and with same finish as cabinet fronts.

D. Accessibility Requirements: Modify cabinets where indicated, as required to comply with the “Americans with Disabilities Act (ADA).”

2.05 WOOD FINISH

A. Preparation: Sand lumber and plywood for laboratory casework construction before assembling. Sand edges of doors, drawer fronts, and molded shapes with profile-edge sander. Sand casework after assembling for uniform smoothness at least equivalent to that produced by 220 grit sanding and without machine marks, cross sanding, or other surface blemishes.

B. Staining: Remove fibers and dust and apply stain to exposed and semiexposed surfaces as necessary to match approved Samples. Apply stain in a manner that will produce a consistent appearance. Apply wash-coat sealer before applying stain to closed-grain wood species.

C. Chemical-Resistant Finish: Apply laboratory casework manufacturer's standard three-coat, chemical-resistant, transparent finish consisting of sealer and catalyzed topcoat(s). Sand and wipe clean between coats. Topcoat(s) may be omitted on concealed surfaces.

1. Chemical and Physical Resistance of Finish System: Finish complies with acceptance levels of cabinet surface finish tests in SEFA 8. Acceptance level for chemical spot test shall be no more than four Level 3 conditions.

2.06 CABINET HARDWARE

A. General: Provide laboratory casework manufacturer's standard satin-finish, commercial-quality, heavy-duty hardware complying with requirements indicated for each type.

B. Hinges: Stainless-steel, 5-knuckle hinges complying with BHMA A156.9, Grade 1, with antifriction bearings and rounded tips. Provide 2 for doors 48 inches or less in height; 3 for doors more than 48 inches in height.

C. Pulls: Solid aluminum, stainless steel, or chrome-plated brass; fastened from back with two screws. For sliding doors, provide stainless-steel or chrome-plated recessed flush pulls. Provide 2 pulls for drawers more than 24 inches in width.

D. Door Catches: Nylon-roller spring catch or dual, self-aligning, permanent magnet catch. Provide 2 catches on doors more than 48 inches in height.

E. Drawer Slides: Powder-coated, full-extension, self-closing, heavy-duty drawer slides; designed to prevent rebound when drawers are closed; with nylon-tired, ball-bearing rollers; and complying with BHMA A156.9, Type B05091, and rated for 100 lbf.

F. Label Holders: Stainless steel, aluminum, or chrome plated; sized to receive standard label cards approximately 1 by 2 inches, attached with screws or rivets. Provide on all drawers.

G. Locks: Cam type with 5-pin tumbler, brass with chrome-plated finish; complying with BHMA A156.11, Type E07281.

1. Provide minimum of two keys per lock and two master keys.

2. Provide on all drawers and doors.

H. Adjustable Shelf Supports: Pin-type, corrosion-resistant coated shelf support clips for mounting on interior of cabinet work, to retain shelves from accidental removal. Shelves shall be adjustable on 2-inch centers. Surface mounted metal support strips and clips subject to corrosion are not acceptable.

2.07 COUNTERTOPS, TROUGHS, AND SINKS

A. Countertops, General: Provide units with smooth surfaces in uniform plane free of defects. Make exposed edges and corners straight and uniformly beveled. Provide front and end overhang of 1 inch, with continuous drip groove on underside 1/2 inch from edge.

B. Sinks, General: Provide sizes indicated or laboratory casework manufacturer's closest standard size of equal or greater volume, as approved by Architect.

1. Outlets: Provide with strainers and tailpieces, NPS 1-1/2, unless otherwise indicated.

2. Overflows: For each sink except cup sinks, provide overflow of standard beehive or open-top design with separate strainer. Height 2 inches less than sink depth. Provide in same material as strainer.

C. Epoxy Countertops, Troughs, and Sinks: Factory molded of modified epoxy-resin formulation with smooth, nonspecular finish.

1. Physical Properties:

a. Flexural Strength: Not less than 10,000 psi.

b. Modulus of Elasticity: Not less than 2,000,000 psi.

c. Hardness (Rockwell M): Not less than 100.

d. Water Absorption (24 Hours): Not more than 0.02 percent.

e. Heat Distortion Point: Not less than 260 deg F.

2. Chemical Resistance: Epoxy-resin material has the following ratings when tested with indicated reagents according to NEMA LD 3, Test Procedure 3.4.5:

a. No Effect: Acetic acid (98 percent), acetone, ammonium hydroxide (28 percent), benzene, carbon tetrachloride, dimethyl formamide, ethyl acetate, ethyl alcohol, ethyl ether, methyl alcohol, nitric acid (70 percent), phenol, sulfuric acid (60 percent), and toluene.

b. Slight Effect: Chromic acid (60 percent) and sodium hydroxide (50 percent).

3. Color: Black.

4. Countertop Fabrication: Fabricate with factory cutouts for sinks and with butt joints assembled with epoxy adhesive and prefitted, concealed metal splines.

a. Countertop Configuration: Flat, 1 inch thick, with rounded edge and corners, and with drip groove and integral coved backsplash.

b. Countertop Construction: Uniform throughout full thickness.

5. Table Top Configuration: Raised (marine) edge, 1-1/4 inch thick at raised edge, with rounded edge and corners, and with integral coved backsplash.

6. Sink Fabrication: Molded in 1 piece with smooth surfaces, coved corners, and bottom sloped to outlet; 1/2-inch minimum thickness.

a. Provide with polypropylene strainers and tailpieces.

D. Cup Sinks: Material and size as indicated.

1. Provide epoxy cup sinks with polypropylene strainers and integral tailpieces.

E. Troughs: Epoxy. Comply with requirements for materials and construction as specified for countertops and sinks. Pitch to drains not less than 1/8 inch/foot.

1. Outlets: Except where troughs empty into sinks, provide NPS 1-1/2 outlets with strainers and tailpieces.

2. Provide epoxy troughs with polypropylene strainers and tailpieces.

2.08 ACCESSORIES

A. Reagent Shelves: Provide as indicated, fabricated from same material as adjacent countertop, unless otherwise indicated.

B. Pegboards: Polypropylene, epoxy, or phenolic-composite pegboards with removable polypropylene pegs and stainless-steel drip troughs with drain outlet.

2.09 PLUMBING AND ELECTRICAL FIXTURES

A. Plumbing fixtures shall be furnished in laboratory grade chrome plated brass as manufactured by Water Saver Faucet Company, The Chicago Faucet Company, or T & S Brass Works.

1. Fixtures provided with brass tank nipples complete with locknuts and washers for attachment to countertops.

2. Water fixtures to be provided with adjustable volume control (Water Saver BNV200AC or equal) and with atmospheric inline vacuum breakers.

3. Fixtures supplied assembled (tank nipples loose).

B. Safety showers and eyewashes shall be provided in materials as standard with catalog number specified. Safety showers and eyewashes shall be furnished assembled for final installation or mounting by others.

C. Pedestal electric boxes, cast aluminum finished in black textured coating furnished with tank nipples and locknuts for attachment to countertops.

1. Electrical boxes mounted in table or cabinet aprons shall be steel.

2. Electric receptacles, switches, etc., shall be specification grade 20 amp and UL approved. Receptacles located within 6’0” of sinks to be G.F.I. type.

3. Cover plates for receptacles shall be stainless steel.

D. Mounting of electric boxes in table aprons or cabinet units shall be by Casework Manufacturer

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas, with Installer present, for compliance with requirements for installation tolerances, location of reinforcements, and other conditions affecting performance of wood laboratory casework.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION OF CABINETS

A. Install level, plumb, and true; shim as required, using concealed shims. Where laboratory casework abuts other finished work, apply filler strips and scribe for accurate fit, with fasteners concealed where practical.

B. Base Cabinets: Adjust top rails and subtops within 1/16 inch of a single plane. Fasten cabinets to utility-space framing, partition framing, wood blocking, or reinforcements in partitions with fasteners spaced not more than 24 inches o.c. Fasten adjacent cabinets together with joints flush, tight, and uniform. Align similar adjoining doors and drawers to a tolerance of 1/16 inch.

1. Where base cabinets are installed away from walls, fasten to floor at toe space at not more than 24 inches o.c. and at sides of cabinets with not less than 2 fasteners per side.

C. Wall Cabinets: Adjust fronts and bottoms within 1/16 inch of a single plane. Fasten to hanging strips, masonry, partition framing, blocking, or reinforcements in partitions. Fasten each cabinet through back, near top, at not less than 24 inches o.c. Align similar adjoining doors to a tolerance of 1/16 inch.

D. Install hardware uniformly and precisely. Set hinges snug and flat in mortises.

E. Adjust laboratory casework and hardware so doors and drawers align and operate smoothly without warp or bind and contact points meet accurately. Lubricate operating hardware as recommended by manufacturer.

3.03 INSTALLATION OF COUNTERTOPS

A. Abut top and edge surfaces in one true plane with flush hairline joints and with internal supports placed to prevent deflection. Locate joints only where shown on Shop Drawings.

B. Field Jointing: Where possible, make in the same manner as shop jointing using dowels, splines, adhesives, and fasteners recommended by manufacturer. Prepare edges to be joined in shop.

1. Use concealed clamping devices for field joints in plastic-laminate countertops. Locate clamping devices within 6 inches of front and back edges and at intervals not exceeding 24 inches. Tighten according to manufacturer's written instructions to exert a uniform heavy pressure at joints.

C. Fastening:

1. Secure epoxy countertops to cabinets with epoxy cement, applied at each corner and along perimeter edges at not more than 48 inches o.c.

2. Where necessary to penetrate countertops with fasteners, countersink heads approximately 1/8 inch and plug hole flush with material equal to countertop in chemical resistance, hardness, and appearance.

D. Provide required holes and cutouts for service fittings.

E. Seal unfinished edges and cutouts in plastic-laminate countertops with heavy coat of polyurethane varnish.

F. Provide scribe moldings for closures at junctures of countertop, curb, and splash, with walls as recommended by manufacturer for materials involved. Match materials and finish to adjacent laboratory casework. Use chemical-resistant, permanently elastic sealing compound where recommended by manufacturer.

G. Carefully dress joints smooth, remove surface scratches, and clean entire surface.

3.04 INSTALLATION OF SINKS

A. Underside Installation of Epoxy Sinks: Use laboratory casework manufacturer's recommended adjustable support system for table- and cabinet-type installations. Set top edge of sink unit in sink and countertop manufacturers' recommended chemical-resistant sealing compound or adhesive and firmly secure to produce a tight and fully leakproof joint. Adjust sink and securely support to prevent movement. Remove excess sealant while still wet and finish joint for neat appearance.

3.05 INSTALLATION OF ACCESSORIES

A. Install accessories according to Shop Drawings and manufacturer's written instructions.

B. Securely fasten pegboards to partition framing, wood blocking, or reinforcements in partitions.

3.06 CLEANING AND PROTECTING

A. Clean finished surfaces, touch up as required, and remove or refinish damaged or soiled areas to match original factory finish, as approved by Architect.

B. Protect countertop surfaces during construction with 6-mil plastic or other suitable water-resistant covering. Tape to underside of countertop at minimum of 48 inches o.c.

END OF SECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Countertops for architectural cabinetwork.

B. Wall-hung counters and vanity tops.

1.02 RELATED REQUIREMENTS

A. Section 06 41 00 - Architectural Wood Casework.

1.03 REFERENCE STANDARDS

A. ANSI A208.1 - American National Standard for Particleboard.

B. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

C. AWI/AWMAC (QSI) - Quality Standard Illustrated; Architectural Woodwork Institute and Architectural Woodwork Manufacturers Association of Canada.

D. ISSFA-2 - Classification and Standards for Solid Surfacing Material; International Solid Surface Fabricators Association.

E. NEMA LD 3 - High-Pressure Decorative Laminates.

F. PS 1 - Structural Plywood.

1.04 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Specimen warranty.

C. Shop Drawings: Complete details of materials and installation; combine with shop drawings of cabinets and casework specified in other sections.

D. Selection Samples: For each finish product specified, color chips representing manufacturer's full range of available colors and patterns.

E. Verification Samples: For each finish product specified, minimum size 6 inches square, representing actual product, color, and patterns.

F. Test Reports: Chemical resistance testing, showing compliance with specified requirements.

G. LEED Report: Submit for wood products made from sustainably harvested wood, salvaged and reused wood, wood fabricated from recovered timber, and locally-sourced wood, as specified in Section 01 35 15.

H. LEED Submittals: Provide documentation of VOC content in g/L for adhesives and sealants applied within the building waterproofing envelope; document no added urea formaldehyde for composite wood, agrifiber products and laminating adhesives.

I. Maintenance Data: Manufacturer's instructions and recommendations for maintenance and repair of countertop surfaces.

1.05 QUALITY ASSURANCE

A. Fabricator Qualifications: Same fabricator as for cabinets on which tops are to be installed.

B. Installer Qualifications: Fabricator.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.

1.07 FIELD CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

PART 2 - PRODUCTS

2.01 COUNTERTOP ASSEMBLIES

A. Plastic Laminate Countertops: High pressure decorative laminate sheet bonded to substrate.

1. Laminate Sheet, Unless Otherwise Indicated: NEMA LD 3 Grade HGP, for postforming, 9 inch nominal thickness.
    a. Surface Burning Characteristics: Flame spread 25, maximum; smoke developed 450, maximum; when tested in accordance with ASTM E84.
    b. Wear Resistance: In addition to specified grade, comply with NEMA LD 3 High Wear Grade requirements for wear resistance.
    c. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed laminate surfaces complying with the following requirements:
        1) As selected by Architect from laminate manufacturer's full range in solid colors, wood grains, and patterns, including stone, marble and leathers.
        2) Ten different colors may be selected by Architect for this Project.
    d. Manufacturers:
        1) Formica Corporation : www.formica.com.
        2) Lamin-Art, Inc : www.laminart.com.
        3) Panolam Industries International, IncNevamar : www.nevamar.com.
        4) Panolam Industries International, IncPionite : www.pionitelaminates.com.
        5) Wilsonart International, Inc : www.wilsonart.com.
2. Exposed Edge Treatment: Square, substrate built up to minimum 1-1/4 inch thick; covered with 3mm polyvinylchloride (PVC), machine applied with hot melt adhesive, inside/outside length radiused, corner radiused and buffed.
    a. Color selection for PVC edging will be made at a later date; Architect reserves the right to select colors manufactured and offered by Woodtape Edge Banding (at no additional cost to the Owner), when a standard selection offered by the casework manufacturer does not provide a suitable color in the Architect's opinion.
3. Back and End Splashes: Same material, same construction.
4. Fabricate in accordance with AWI/AWMAC Quality Standards Illustrated Premium Grade.

B. Solid Surfacing Countertops: Solid surfacing sheet or plastic resin casting over continuous substrate.

1. Flat Sheet Thickness: 1/4 inch, minimum.

2. Solid Surfacing Sheet and Plastic Resin Castings: Complying with ISSFA-2 and NEMA LD 3; acrylic or polyester resin, mineral filler, and pigments; homogenous, non-porous and capable of being worked and repaired using standard woodworking tools; no surface coating; color and pattern consistent throughout thickness.
    a. Surface Burning Characteristics: Flame spread 25, maximum; smoke developed 450, maximum; when tested in accordance with ASTM E84.
    b. Finish on Exposed Surfaces: Matte, gloss rating of 5 to 20.
    c. Color and Pattern: To be selected from manufacturer's full line.
    d. Manufacturers:
        1) Dupont : www.corian.com.
        2) Formica Corporation : www.formica.com.
        3) Avonite Surfaces : www.avonitesurfaces.com.
        4) Wilsonart International, Inc : www.wilsonart.com.
3. Other Components Thickness: 1/2 inch, minimum.
4. Exposed Edge Treatment: Built up to minimum 1-1/4 inch thick; square edge; use marine edge at sinks.
5. Back and End Splashes: Same sheet material, square top; minimum 4 inches high.
6. Skirts: As indicated on drawings.

C. Composite Wood and Laminating Adhesives: No added urea formaldehyde resins.

2.02 ACCESSORY MATERIALS

A. Wood-Based Components:
1. Wood fabricated from old growth timber is not permitted.
2. Composite Wood and Agrifiber Products: No added urea formaldehyde.

B. Plywood for Supporting Substrate: PS 1 Exterior Grade, A-C veneer grade, minimum 5-ply; minimum 3/4 inch thick; join lengths using metal splines.

C. Particleboard for Supporting Substrate: ANSI A208.1 Grade 2-M-2, 47 pcf minimum density; minimum 3/4 inch thick; join lengths using metal splines.

D. Backer Sheet: Provide substrate with laminate backer sheet.

E. Adhesives: Chemical resistant waterproof adhesive as recommended by manufacturer of materials being joined.
1. Field□applied adhesives: Comply with low□emitting requirements in Section 01 61 16.

2.03 FABRICATION

A. Fabricate tops and splashes in the largest sections practicable, with top surface of joints flush.
1. Join lengths of tops using best method recommended by manufacturer.
2. Fabricate to overhang fronts and ends of cabinets 1 inch except where top butts against cabinet or wall.
3. Prepare all cutouts accurately to size; replace tops having improperly dimensioned or unnecessary cutouts or fixture holes.

B. Provide back/end splash wherever counter edge abuts vertical surface unless otherwise indicated.

1. Secure to countertop with concealed fasteners and with contact surfaces set in waterproof glue.
2. Height: 4 inches, unless otherwise indicated.

C. Solid Surfacing: Fabricate tops up to 144 inches long in one piece; join pieces with adhesive sealant in accordance with manufacturer's recommendations and instructions.

D. Wall-Mounted Counters: Provide skirts, aprons, brackets, and braces as indicated on drawings, finished to match.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

C. Verify that wall surfaces have been finished and mechanical and electrical services and outlets are installed in proper locations.

3.02 INSTALLATION

A. Securely attach countertops to cabinets using concealed fasteners. Make flat surfaces level; shim where required.

B. Attach plastic laminate countertops using screws with minimum penetration into substrate board of 5/8 inch.

C. Seal joint between back/end splashes and vertical surfaces.

3.03 CLEANING AND PROTECTION

A. Clean countertops surfaces thoroughly.

B. Protect installed products until completion of project.

C. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Roll-up mats.

B. Recessed mat frames.

1.02 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data indicating properties of walk-off surface, component dimensions, recessed frame characteristics and profiles, and finishes.

C. Shop Drawings: Indicate dimensions, details for recessed frame, and divisions between mat sections.

1. For recessed frames located within a dimensionally restricted area, show dimensions of space within which the frame will be installed.

D. Samples for Initial Selection: For each type of product indicated.

E. LEED Submittals:

1. Credit MR 4: Product Data and certification letter indicating percentages by weight of post-consumer and pre-consumer recycled content for products having recycled content. Include statement indicating costs for each product having recycled content.

a. Contributions to this Credit include recycled content of aluminum.

F. Maintenance Data: Include cleaning instructions and stain removal procedures.

1.03 QUALITY ASSURANCE

A. Source Limitations: Obtain floor mats and frames through one source from a single manufacturer.

B. Accessibility Requirements: Provide installed floor mats that comply with most stringent requirements of Section 4.5 in the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA), Accessibility Guidelines for Buildings and Facilities (ADAAG)" and Sections 302 and 303 in ICC A117.1.

1.04 PROJECT CONDITIONS

A. Field Measurements: Indicate measurements on Shop Drawings.

1.05 COORDINATION

A. Coordinate size and location of recesses in concrete with installation of finish floors to receive floor mats and frames.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Floor Mats:

1. American Floor Products Company, Inc: www.afco-usa.com.

2. C. Musson Rubber Co: www.mussonrubber.com.

3. Pawling Corporation: www.pawling.com.

4. C/S Group .

2.02 MATS

A. Roll-Up, Aluminum-Rail Hinged Mats: Extruded-aluminum tread rails 1-1/2 inches wide by 3/8 inches thick, sitting on continuous vinyl cushions.

1. Tread Inserts: 32-oz./sq. yd. weight, fusion-bonded solution-dyed polypropylene carpet.
2. Rail Color: Clear.
3. Hinges: Aluminum.
4. Mat Size: As indicated.
5. Products:
    a. American Floor Products Company, Inc.; Stratoflex III Foot Grid System.
    b. C/S Group; Product Pedimat.
    c. Musson, R. C. Rubber Co.; Product EM-800.
    d. Pawling Corporation; Architectural Products Division; Product EM-800 Rol-Dek.

B. Recessed Frame:

1. Extruded Aluminum: ASTM B 221, Alloy 6061-T6 or Alloy 6063-T5, T6, or T52.
2. Color: Clear anodized.

2.03 CONCRETE FILL AND GROUT MATERIALS

A. Provide concrete grout and fill equivalent in strength to cast-in-place concrete slabs for recessed mats and frames. Use aggregate no larger than one-third fill thickness.

2.04 FABRICATION

A. Construct recessed mat frames square, tight joints at corners, rigid. Coat surfaces with protective coating where in contact with cementitious materials.

B. Fabricate mats in single unit sizes; fabricate multiple mats where indicated. Do not exceed manufacturer's recommended maximum sizes for units that are removed for maintenance and cleaning. Where joints in mats are necessary, space symmetrically and away from normal traffic lanes. Miter corner joints in framing elements with hairline joints or provide prefabricated corner units without joints.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates and floor conditions for compliance with requirements for location, sizes, minimum recess depth, and other conditions affecting installation of floor mats and frames.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Mats: Verify size of floor recess before fabricating mats.

B. Vacuum clean floor.

3.03 INSTALLATION

A. Install frames to achieve flush plane with finished floor surface and comply with manufacturer's written instructions.

B. Coordinate top of mat surfaces with bottom of doors that swing across mats to provide clearance between door and mat.

C. Install walk-off surface in floor recess flush with finish floor after cleaning of finish flooring.

1. Install necessary shims, spacers, and anchorages for proper location and secure attachment of frames.
2. Install grout and fill around frames and, if required to set mat tops at proper elevations, in recesses under mats. Finish grout and fill smooth and level.

3.04 PROTECTION

A. After completing frame installation and concrete work, provide temporary filler of plywood or fiberboard in recesses and cover frames with plywood protective flooring. Maintain protection until construction traffic has ended and Project is near Substantial Completion.

END OF SECTION

PART 1 GENERAL

1.01 SUMMARY

A. Deliver and install auditorium chairs complete, with selflifting seat which raises automatically to a uniform 3/4 fold position.

1.02 DESIGN REQUIREMENTS

A. Comply with ADA (Americans with Disabilities Act) Rules and Regulations.

B. Fire Performance Characteristics of Upholstered Seating:

1. Provide upholstered auditorium and theater chairs in compliance with local and national requirements having jurisdiction over this part of Work.

2. Chairs provided shall have been tested and certified as complying with BIFMA Voluntary Upholstered Furniture Flammability Standard F11978 (rev. 1980) sponsored by the Business and Institutional Furniture Manufacturer's Association.

C. Chair Envelope: Consideration of seating efficiency, Building Code regulations, row length, knee room and patron access past seated persons dictates the provision of a chair with an envelope that is as tight as possible in both its occupied and unoccupied conditions, as follows:

1. The depth of the chair between the rear of the chair back to the front of the chair seat in its raised or unoccupied condition and/or the chair arms shall be no greater than 18 inches.

2. The distance between the rear of the chair to the front of the chair seat in its lowered or occupied condition shall be no greater than about 26 inches.

3. It is assumed that conditions 1 and 2 above are best satisfied with a chair back pitch of no greater than about 16 degrees.

D. Seating Layout: Design and install seating to conform with project requirements in manner that produces seating layout with standards spaced laterally in each row so that end standards are in alignment from first to last row, regardless of whether aisles converge or are of constant width, and with backs and seats varied in width so that sightlines are optimized.

1. Seating layout indicated on Drawings is for illustrative purposes, conveying design intent.

1.03 SUBMITTALS

A. Product data for the type of fixed audience seating specified.

B. Shop drawings prepared indicating layout of seating units, chair sizes, and aisle widths; include actual field measurements.

C. Samples for initial selection purposes in form of manufacturer's color charts or samples of actual materials showing full range of standard colors, finishes, patterns, and textures available for each exposed material.

D. Samples for verification purposes of each exposed material from which seating units and accessories are composed, in each color, finish, pattern, and texture indicated; include samples of the following:

1. Fabric.

2. Plastic laminate.

3. Baked enamel finishes for metal components.

4. Integral color plastic parts.

5. Exposed fasteners.

6. End standards shall be cantilevered with wood veneer.
7. Armrests shall be finished hardwood.

E. FullSize Samples:

1. Contractor shall be prepared to submit a sample of each seating offered, which is truly representative in all particulars to the product he will deliver, if alternative seating is accepted.
2. The sample is a prerequisite part of and condition of acceptance of alternative seating, and failure to present samples within five days from date requested shall be considered sufficient reason for rejection.
3. Samples to be submitted shall consist of a complete chair with two end standards, a separate center standard and cutaway hinge.
4. All samples shall be delivered as directed by the Architect with all costs to be prepaid.
5. After inspection, the Contractor may pick up samples, if he so stipulates.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: Engage a manufacturerapproved, locally based, experienced installer who regularly installs and services auditorium and theater seating similar in kind, quality, and extent to that indicated for Project.

B. Single Source Responsibility: Obtain each type of auditorium and theater seating from a single manufacturer, including accessories, and mounting and other installation components.

C. Field Constructed MockUp: Prior to installation of seating, erect mockup consisting of two chairs representing extremes of width to be provided; include at least one aisle unit; build mockup to comply with the following requirements:

1. Locate mockups on site in location and of size indicated or, if not indicated, as directed by Architect.
2. Obtain Architect's acceptance of mockups before beginning production of seating for Project.
3. Retain and maintain mockups during construction in undisturbed condition as a standard for judging completed seating.
4. When directed, demolish and remove mockups from Project site.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Store seating in dry location protected from damage and soiling under environmental conditions acceptable to manufacturer.

B. Handle seating in a manner to prevent damage.

1.06 PROJECT CONDITIONS

A. Examine Work in place on which seating Work is dependent; defects which may influence satisfactory completion and performance of seating Work shall be corrected in accordance with the requirements of the applicable section of Work prior to commencement of seating Work.

B. Field Measurements:

1. Take field measurements to verify or supplement dimensions indicated.
2. Be responsible for accurate fit of Work.

C. Environmental Conditions: Do not install seating until space is enclosed and weatherproof, wetWork in space is complete and nominally dry, installation of finishes, including painting, is complete, other units of Work above ceiling are complete and ambient temperature and humidity conditions will be continuously maintained at values near those indicated for final occupancy.

1.07 WARRANTY

A. Manufacturer's Product Warranty: Submit manufacturer warranty form for fixed upholstered chairs.

1. Warranty Period: 5 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 AVAILABLE MANUFACTURERS

A. Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Citation Chair by Irwin
2. Quattro Chair System by Hussey Seating; modified to be steel standards.
3. Concerto by KI.

2.02 MATERIALS

A. Gray Iron Castings: ASTM A 48, Class 25.

B. Steel Plates, Shapes, and Bars: ASTM A 36.

C. Electrolytic ZincCoated Steel Sheet: ASTM A 591, commercial and drawing quality, Coating Class C, chemically treated for bakedenamel finish; 0.0396 inch minimum thickness unless otherwise indicated.

D. DrilledIn Expansion Anchors: Expansion anchors complying with FX FFS325, Group VIII (anchors, expansion (nondrilling), Type I (internally threaded tubular expansion anchor) and machine bolts complying with FS FFJB575, Grade 5, with type and size selected by manufacturer to suit substrate and installation conditions indicated.

E. Molded Polyurethane Foam Padding:

1. Seat and back padding material shall be of new (prime manufacture) polyurethane foam.
2. Padding material shall comply with the flammability requirements outlined in California Technical Information Bulletin #117, Resilient Cellular Materials, Sections A and D, dated February 1975, when tested in accordance with Federal Test Method Standard 191, Method 5903.2.

F. Exposed Hardwood Lumber: Standard hardwood species, selected for freedom from visible defects, as standard with manufacturer.

1. Red Oak.

G. Plywood, exposed or concealed, shall be hardwood.

1. Interior plies shall be Class 3 or better; exposed exterior plies shall be Class 1.
2. All plywood shall be hot press laminated using high frequency process.

H. Particleboard core shall be 55pound density.

I. Fabric:

1. Upholstery fabric shall of 100% solutiondyed, bulked continuousfilament polyolefin yarn, Olympia pattern by National Contract Associates, minimum weight 19 oz. per lineal yard, minimum of 13 ends and 13 picks per inch.
2. Fabrics shall exhibit superior color fastness, light fastness, tear strength, and break strength and shall be exceptionally resistant to staining, chemicals, and abrasion, and shall offer a 10year warranty by fabric manufacturer.
3. Fabrics shall meet Class 1 flammability requirements of the U.S. Department of Commerce Commercial Standard 19153 per Bulletin #117 (California Code).

J. Injection Molded Plastic:

1. Plastic shall be onepiece high impact, linear polyethylene with built in ultraviolet light inhibitors to retard fading.
2. Plastic shall have a burn rate of 1 inch per minute when tested in accordance with ASTM D635.

2.03 FINISH

A. Metal Parts:

1. All exposed metal parts shall be powder coated with a hybrid powder coat finish.
2. The powder coat finish shall be applied by electrostatic means to a thickness of 23 mils, and shall provide a durable coating having a 2H Pencil hardness.
3. Prior to powder coating, metal parts shall be treated with a fivestage bonderization process for superior finish adhesion, and after coating shall be oven baked to cause proper flow of the epoxy powder to result in a smooth durable finish.
4. Manufacturer's standard color range shall be used.

B. Wood Parts: All exposed surfaces shall be stained to color selectedand coated with lacquer of sufficient film depth to afford wear resistance of institutional quality and oven baked.

C. Plastic Parts: Color of plastic shall be selected from manufacturer's standard color range.

D. Hardware: All assembly hardware shall be rust resistant, black plated.

E. Plastic Laminate:

1. Plastic laminate shall be composed of a core of kraft papers impregnated with phenolic resins, a decorative surface sheet, and overlay sheet containing melamine.
2. Layers are fused together under pressures in excess of 1,000 psi and temperatures over 275 degrees.
3. Plastic laminate shall meet or exceed performance standards as established by NEMA.
4. Thickness:
   a. Horizontal Surfaces: 0.050.
   b. Vertical Surfaces: 0.030.

F. Colors: To be selected from manufacturer's standard.

2.04 FABRICATION GENERAL

A. Fabricate auditorium seating units in contoured form for maximum comfort, using materials, which are carefully selected to be free of defects, objectionable projections, or irregularities.

B. Smoothly round corners, edges, and exposed fasteners, to present least possible snagging and pinching hazards.

C. Fabricate chair backs of seating rows located immediately in front of cross aisles on sloped or tiered floors so that back heights are not less than dimension indicated below, measured from walking surface of cross aisle immediately behind seating.

2.05 MOUNTING

A. Floor Mounting: Fabricate seating units for attachment to the floor slope using standards, which have been manufactured to attach to concrete.

2.06 METAL AISLE STANDARDS

A. Aisle Standards:

1. Pedestal design fabricated from minimum 16 gage steel.
2. Standards shall be fabricated of minimum 16 gage steel to a welded rectangular column.
3. The top of the column shall be provided with two formed steel dovetail lugs for secure attachment of armrests.
4. Brackets for seat attachment shall be of minimum 7 gage steel welded to standard.
5. Decorator Panel Upholstered Seating: Particleboard core surfaced with plastic laminate; match Architect's sample.
6. Aisle Lights: Operate from 24 volts requiring a transform system provided by the seating manufacturer. Low Voltage system approved by Underwriters Laboratories, Inc. Aisle lights to be mounted into the end panel or aisle standard; furnished with a cover as integral part of standard/panel.

B. Floor Mounting:

1. A formed minimum 16 gage steel foot shall be welded to the bottom of the rectangular column.
2. Weldment shall be at all critical stress areas 360 degrees around the column and concealed on the inside, so as not to detract from the clean appearance.
3. The foot dimension shall be 8 inches x 23/4 inches to provide maximum bearing surface to the floor to withstand severe tightening and shock without fracture.
4. The standard shall be fabricated to be compatible with the floor incline, and to maintain proper seat and back height and angle.
5. Weldments shall be gas shielded, arc weld.

2.07 METAL CENTER STANDARDS

A. Center standards shall be of welded steel, modern pedestal design, fabricated of minimum 16 gage steel to a 1 inch x 3 inch rectangular column.

B. Brackets for seat support shall be minimum 7 gage steel for superior strength formed with an integral support buttress, and wing plates for mounting backs shall be minimum 16 gage steel; both MIG welded to the pedestal column shall be provided with two formed steel dovetails for secure attachment of the armrests.

C. Floor Mounted Chairs:

1. A formed minimum 16 gage steel foot shall be welded to the bottom of the rectangular column.
2. Weldment shall be at all critical stress areas 360 degrees around the column and concealed on the inside, so as not to detract from the clean appearance.
3. The foot dimension shall be 8 inches x 23/4 inches to provide maximum bearing surface to the floor to withstand severe tightening and shock without fracture.
4. The standard shall be fabricated to be compatible with the floor incline, and to maintain proper seat and back height and angle.
5. Weldments shall be gas shielded, arc weld.

2.08 MOVABLE BASES

A. To provide for mobility of a given number of chairs shown in the auditorium, chairs located as shown in the Drawings shall be mounted upon moveable steel bases.

B. The steel bases shall accommodate sections of one, two or three chairs.

C. The bases shall be fabricated to manufacturer's standard; welded construction.

D. Holes shall be provided for the attachment of the standards.

2.09 UPHOLSTERED CHAIR CONSTRUCTION

A. General:

1. Fabricate fixed audience seating with padding and fabric covering.
2. Equip each seat with manufacturer's standard selfrising seat mechanisms so that unoccupied seats return to raised position for maximum passing room.
3. Construction:
    a. Backs shall be padded and upholstered, consisting of a onepiece injection molded plastic outer panel, and a 7/16 inch 5ply hardwood inner upholstery panel.
    b. The outer panel shall be injection molded plastic, high impactresistant with textured outer surface, formed to enclose the edges of the inner upholstery panel at the top and both sides of the back, and shall be not less than 26 inches in length, extending below the seat level to protect the seat cushion.
4. Attachment:
    a. There shall be no exposed screws above the armrests. Backwings for attaching the back to the standards shall be minimum 14 gage (0.0747 inch) steel, secured to the inner panel by the use of four machine screws threaded into four threaded washers.
    b. Backwings shall have provision for 16 degree, 20 degree or 24 degree pitch.
5. Upholstery:
    a. The upholstery materials shall be placed over a 2 inch thick polyfoam pad.
    b. The polyfoam pad shall be securely cemented to the plywood inner panel and the upholstery fabric shall be securely fastened to the hardwood inner panel by means of upholstery staples to facilitate ease of reupholstering.

B. Chair Seats:

1. Seats shall be of the upholstered contoured plywood suspension type construction including a waterfall front edge. Seats shall consist of an upper portion consisting of a 5ply minimum plywood base over which padding materials and cover shall be applied. The upper portion of the seat shall be readily removable for reupholstery.
2. The molded plywood base shall be upholstered as follows: Over the base shall be applied a polyurethane foam topper pad, 3” contoured foam, which shall be adhered to the ergonomically profiled plywood base. The cover shall be applied over all of the padding material. The cover shall be secured to the underside of the seat base. The fabric cover shall be of a single piece of material.
3. The seat pan shall be of onepiece, high density polyethylene, polypropylene or equivalent of not less than 3/16” nominal thickness. The closeout shall be throughcolored, textured and selected from a standard range of manufacturer’s colors. The closeout shall be tight to the edge of the base of the upholstered top shall have a smooth edge to eliminate any possibility of snag hazards.
4. The seat shall rotate on two selfcompensating, fully independent, 5/8 inch diameter, high strength, solid steel hinge rods.
5. Seatlift shall be accomplished by dual minimum 13 gage extension springs, providing quiet seat uplift, seat uplift shall be dampened at the 3/4 fold position.

2.10 ARM RESTS

A. Hardwood Armrest:

1. Armrests shall be solid hardwood with all edges well rounded, and shaped to provide a design compatible with other chair components.
2. Armrests shall be furnished with two (2) keyhole slots in the bottom, and shall lock securely to dovetail lugs provided on aisle and center standards.
3. Armrests shall be provided with one (1) security screw inserted from the bottom side to discourage tampering.
4. Hardwood armrests shall be available with natural finish, stained, or decorator lacquered to match other chair components.

2.11 ACCESSORIES

A. Tablet Arm:

1. Size: 11 3/4 inches by 10 1/4 inches with rounded corners.
2. Top and bottom surfaces to be high pressure laminate over solid core plywood.
3. Tablet arm to store within users chair beneath the arm rest.
4. Location: Where indicated on the drawings.

B. Row Letter and Chair Number Plates:

1. A numbering system shall be provided for identification of all chairs.
2. Number and letter plates shall be furnished as shown on the approved seating layout.

2.12 HANDICAPPED ACCESS AISLE STANDARDS

A. Aisle standards designated on the Drawings shall be arranged for easy access by handicapped individuals and shall be designed to allow the individual to transfer easily from a wheelchair to the theatre chair.

1. The aisle standard support column shall be inclined to the rear at the top by 16 degrees.
2. Aisle standard shall be equipped with an armrest capable of lifting to a position parallel with the chair back, opening sideways access to the seat.
3. Aisle standards so equipped shall be provided with a label, displaying an easily recognizable "handicapped" symbol.

2.13 MAINTENANCE MATERIALS

A. Replacement Seat and Back Covers Upholstered Chairs:

1. A quantity of cut and sewn seat and back upholstery covers shall be provided with the upholstered auditorium chairs.
2. Covers shall be produced at the same time, using identical fabric as materials for chair construction and shall be presented, properly packaged, to the Owner upon completion of the seating installation.
3. Size of covers shall be prorated according to sizes of chairs in the seating layout.
4. Quantity of covers to be provided shall be sufficient to reupholster 5 percent of chairs.

B. Provide ten yards of additional fabric.

C. Replacement Armrests: Provide one pair of armrests for every 20 new seats (or portion thereof), of each type.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates and conditions, with installer present, for compliance with requirements for construction tolerances, material properties as they affect anchors and fasteners.

B. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Installation of seating shall be performed by manufacturer’s regularly authorized installer.

B. Locate seating in locations indicated on approved shop drawings, with required clearances, elevations, and sight lines.

C. Install standards in locations conforming to seating layout, with each standard attached to substrate by not less than 2 anchoring devices of size and type required to produce chairs free from rock or instability under conditions of actual use.

D. Install chairs by mounting components to standards or brackets mounted on standards, using manufacturer's recommended hardware and fasteners; ensure that chairs in curved rows are installed at proper radius, and verify that moving components operate smoothly and quietly.

E. Coordinate mounting with floor finish Work.

3.03 ADJUSTING

A. Adjust selfrising seat mechanisms as required to assure that seats in each row are aligned when in upright position.

B. Touchup minor abrasions and imperfections in painted finishes with coating with matched factory applied finish.

C. Replace any upholstery, which has been damaged in installation.

END OF SECTION

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes wall-attached telescoping stands.

1.02 DESIGN REQUIREMENTS

A. Telescopic gymnasium seating will be designed to support a vertical live load of 100 pounds per square foot, but not less than 120 pounds per lineal foot on both seat boards and footboards; seating shall also be designed to carry a horizontal sway force of 24 pounds per lineal foot parallel to the seating and 10 pounds per lineal foot perpendicular to the seating.

B. No section length greater than 25'-6" is permitted.

1.03 SUBMITTALS

A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for telescoping stands.

B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

1. Include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

C. Samples for Initial Selection: For each type of exposed finish required.

D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.

1. Decking: 3-inch- square samples of finished material.
2. Metal Components: 3-inch- square sample of each color and finish indicated.
3. Seating: 3-inch- square sample of each seating material and finish indicated.

E. Qualification Data: For Installer.

F. LEED Report: Accurately document the use of recycled materials and local/regional materials.

G. Operation and Maintenance Data: For telescoping stands to include in emergency, operation, and maintenance manuals.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.

B. Manufacturer's Engineering Responsibility: Preparation of data for telescoping stands, including Shop Drawings, and comprehensive engineering analysis by a qualified professional engineer.

C. Safety Standard: Provide telescoping stands that comply with requirements in NFPA 102.

D. Welding: Qualify procedures and personnel according to AWS D1.1 "Structural Welding Code - Steel" and AWS D1.3 "Structural Welding Code - Sheet Steel."

E. Accessibility Requirements: Provide telescoping stands that comply with requirements in the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA), Accessibility Guidelines for Buildings and Facilities (ADAAG)".

F. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination."

1.05 PROJECT CONDITIONS

A. Field Measurements: Verify actual locations of walls, columns, and other construction that will interface with telescoping stands by field measurements before fabrication and indicate measurements on Shop Drawings.

1.06 EXTRA MATERIALS

A. Provide eight extra seats.

1.07 WARRANTY

A. Manufacturer's Product Warranty: Submit manufacturer's standard warranty form for telescoping bleachers. This warranty is in addition to, and not a limitation of other rights Owner may have under Contract Documents.

1. Warranty Period: Five years from Date of Acceptance.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated in the Work include, but are not limited to, the following:

1. Hussey Seating Company.
2. Interkal LLC.
3. Irwin Folding Bleacher Company.

B. Design to incorporate recoverable seat units at handicapped locations:

1. Hussey Seating Company; Flex Row.
2. Interkal LLC; Vari-Row.
3. Irwin Folding Bleacher Company; MDU.

2.02 MATERIALS

A. Wood:

1. Plywood: APA grade trademarked, DOC PS 1.

B. Steel:

1. Structural Steel Shapes, Plates, and Bars: ASTM A 36/A 36M.
2. Galvanized Steel Sheet: ASTM A 653/A 653M, G90 coating designation.
3. Uncoated Steel Sheet: ASTM A 1008/A 1008M, Designation CS (cold-rolled commercial steel), or ASTM A 1011/A 1011M, Designation CS (hot-rolled commercial steel).
4. Tubing: ASTM A 500, cold formed; ASTM A 501, hot formed; or ASTM A 513, mechanical.

C. Extruded Aluminum: ASTM B 221, alloy as standard for manufacturer.

D. Polyethylene Plastic: High-density polyethylene; molded, color-pigmented, textured, impact-resistant, structural formulation.

2.03 TELESCOPING STANDS

A. Description: Operable systems of multiple-tiered seating on interconnected folding platforms that close, without being dismantled, into a nested stack for storing or moving. Stand units permit opening and closing of adjacent rows, allow individual and collective rows to be locked open for use, and close with vertical faces of upper skirts on the same vertical plane.

B. Wall-attached Telescoping Stands: Rear of understructure permanently attaches to wall construction.

C. Operation - Gymnasium: Manually operated with one pair of operating handles.

D. Depth per Row: (measured horizontally from front edge of one seaboard to front edge of the next seaboard) 22"

E. Tiers:

1. As indicated on the drawings.

F. Net Capacity:

1. As indicated on the drawings.

G. Row Rise: As indicated on the drawings.

H. Aisle Width: 3 at 4'-6" per bleacher

I. Bench Seats and Skirts:

1. Material: Molded polyethylene plastic with contour seat surface.

a. Colors: As selected by Architect from manufacturer's standard.

2. Bench Modules: 18 inches long unitized, interlocking, engineered, high density injection molded polyethylene modules providing scuff-resistant textured 10 inch wide anatomically contoured seat surface, with face designed to accept seat number plates. Seat and face shall incorporate a 2 inch minimum interlock.

3. Profile: Designed with internal reinforcement ribs and cantilevered to the rear to provide not less than 3 inches smooth toe space beneath the seat.

4. End Caps:

a. Each end of row shall be enclosed with matching end caps.

b. End caps shall be designed with concealed attachment and provide indent for row letters.

c. Color to match seat top.

5. Telescopic seating shall have a minimum seat height of 16-1/2" from seat to platform deck.

6. Recoverable units at handicapped locations.

J. Deck: Plywood.

1. Finish: Two coats of polyurethane to provide a clear transparent finish.

K. Risers: Steel sheet with manufacturer's standard rust-inhibiting coating or hot-dip galvanized finish.

L. Rails: Structural steel, finished with manufacturer's standard powder coat system.

1. Color: To match seats, no exceptions.

M. Understructure: Structural steel.

1. Finish: Manufacturer's standard rust-inhibiting finish.

2. Color: Manufacturer's standard.

N. Support Column Wheels: Nonmarring, soft, rubber-face wheel assembly under each support column.

1. Include wheels of size, number, and design required to support stands and operate smoothly without damaging the flooring surface, but not less than four per column or less than 3-1/2 inches in diameter and 1 inch wide.

O. Fasteners: Vibration proof, in manufacturer's standard size and material.

P. Accessories:

1. Slip-resistant, abrasive tread surfaces at vertical aisles.
2. Intermediate aisle steps, fully enclosed, at each vertical aisle.
3. Store-in-place Aisle Handrails: Provide single pedestal mount handrails 34 inches high with terminating mid-rail.
    a. Nose-mounted.
    b. Closed-loop handrail.
4. End rails (guards) that are telescoping and self-storing.
5. Rear fillers including supports for closing openings between top row and rear wall of adjoining construction.

2.04 FABRICATION

A. Fabricate understructure from structural steel members in size, spacing, and form required to support design loads specified in referenced safety standard.

B. Weld understructure to comply with applicable AWS standards.

C. Round corners and edges of components and exposed fasteners to reduce snagging and pinching hazards.

D. Form exposed sheet metal with flat, flush surfaces, level and true in line, and without cracking and grain separation.

E. Seating Supports: Fabricate supports to withstand, without damage to components, the forces imposed by use of stands without failure or other conditions that might impair the usefulness of seating units.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas where telescoping stands are to be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install telescoping stands to comply with referenced safety standard and manufacturer's written instructions.

3.03 ADJUSTING AND CLEANING

A. On completion of installation, lubricate, test, and adjust each telescoping stand unit so that it operates according to manufacturer's written operating instructions.

B. Clean installed telescoping stands on exposed and semiexposed surfaces. Touch up shop-applied finishes or replace components as required to restore damaged or soiled areas.

3.04 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain telescoping stands. Refer to Division 1 Section "Demonstration and Training."

END OF SECTION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Wall-mounted folding cafeteria tables with benches and wall storage pockets.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions: Reporting requirements for VOC content.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordinate fabrication and installation schedule to avoid delaying the work.

1.04 REFERENCE STANDARDS

A. AWS D1.1/D1.1M - Structural Welding Code - Steel 2015, with Errata (2016).

B. AWS D1.3/D1.3M - Structural Welding Code - Sheet Steel 2018.

C. UL (GGG) - GREENGUARD Gold Certified Products Current Edition.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Submit manufacturer's product data and installation instructions for each type of unit specified, including materials, dimensions of components, shapes, and finishes.

C. Shop Drawings: Show details of actual units for the project, including plans, elevations, sections, details of components, profiles, and finishes.

D. Samples for Selection of Colors:

1. Manufacturer's Color Charts: Actual units or sections of the units showing the full range of colors, textures and patterns available for each exposed material involving color choice.
2. High-pressure Plastic Laminate: Samples from the same material to be used for the work.
3. Where finishes involve normal color and texture variations, include sample sets showing the full range of variations expected.

E. Installer's Qualification Statement.

F. Warranty documents.

G. Maintenance Data: Include detailed operation and maintenance procedures.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: Installer experienced in installing built-in tables and seating similar to those required for this project.

1. Certified by the manufacturer of the built-in table/seating system to perform the work.

B. Welder Qualifications: Satisfactorily passed AWS qualifications.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact.

B. Store materials protected from exposure to harmful environmental conditions and at temperature and humidity conditions recommended by manufacturer.

1.08 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Manufacturer's Warranty: Submit manufacturer's standard warranty document executed by authorized company official.

C. Warranty Coverage: To include replacement or repair of any defect on the original material and workmanship, including welds, pockets, tables and benches.

D. Warranty Period: 15 years from Date of Substantial Completion.

PART 2 PRODUCTS

2.01 CAFETERIA TABLES AND BENCHES

A. Cafeteria Tables and Benches: Tables with companion bench seats that fold in the middle lengthwise into wall-mounted storage pockets; unitized understructure not requiring the tops of benches for operation.

1. Design Criteria: Bench undercarriage capable of supporting 200 pounds (91 kg) at any point when top panels are removed.
2. Tables and benches detachable from and interchangeable in storage pockets.
3. Equipped with compression springs to ensure proper counterbalance in any position.
4. Locking automatically when folded into pocket for storage, with field adjustable down latches.
5. Self-actuating safety latches that engage automatically when table/bench is closed.
6. Key operated mullion locks to prevent unauthorized use.
7. Exposed surfaces free of lock holes.
8. Lock Bolts: Two sets: 1/2 inches (13 mm) diameter, solid steel lock bolts:
    a. One set of pins manually activated by means of a remote handle positioned near the center of each table and bench.
    b. Second sets of pins automatically engaged while closing the table and bench.
9. Sheet Steel Welding: In accordance with AWS D1.3/D1.3M.
10. Steel Shapes Welding: In accordance with AWS D1.1/D1.1M.

B. Table Dimensions:

1. Length: 165-1/2 inches (4202 mm).
2. Height: 27 inches (686 mm).
3. Width: 29-1/2 inches (749 mm).

C. Bench Dimensions:

1. Length: 165-1/2 inches (4202 mm).
2. Height: 15 inches (381 mm).
3. Width: 11-1/2 inches (292 mm).

D. Tabletop Frame: Dual 1-1/4 by 2-1/8 inch (32 by 54 mm), 14 gage, 0.075 inch (1.90 mm) steel box channels.

E. Bench Frame: Dual 1-1/2 inch (38 mm), 16 gage, 0.060 inch (1.52 mm) steel angle with returned edges rolled to 11 gage, 0.12 inch (3 mm).

F. Table Top and Bench Construction:

1. Top Panels: 3/4 inch (19 mm) thick, resin wood with density of 45 per cubic foot (721 kilogram per cubic meter).
2. Top Surface Finish: Manufacturer's standard vertical grade high pressure plastic laminate; laminate backing sheet on opposite surface.
3. Finish Color: As selected by Architect from manufacturer's standard colors.
4. Table Edges: Manufacturer's standard bonded polyurea.

G. Tubular Members:

1. Stretcher Bar: 16 gage, 0.060 inch (1.52 mm) diameter steel tubing.
2. Bench End Legs: 16 gage, 0.060 inch (1.52 mm), 1 inch (25.4 millimeter) diameter steel tubing.
3. Center Leg Assembly:
   a. Outer Telescoping Tube: 14 gage, 0.075 inch (1.90 mm), 1-3/8 inch (35 millimeter) diameter steel tubing.
   b. Inner telescoping tube: 14 gage, 0.075 inch (1.90 mm), 1-1/8 inch (29 millimeter) diameter steel tubing.

H. Steel Finish: Epoxy powder coat.

I. Wheels: Manufacturer's standard non-marking wheels.

2.02 WALL STORAGE POCKETS

A. Rough Opening Dimensions:

1. Surface-Mounted:
   a. Single Table:
      1) Height: 89-7/8 inches (2283 mm).
      2) Width: 61-5/8 inches (1565 mm).
      3) Depth: 5-15/16 inches (151 mm).
   b. Double Table:
      1) Height: 89-7/8 inches (2283 mm).
      2) Width: 61-5/8 inches (1565 mm).
      3) Depth: 11-1/2 inches (292 mm).
2. Recessed:
   a. Single Table:
      1) Height: 86-1/2 inches (2197 mm).
      2) Width: 60 inches (1524 mm).
      3) Depth: 6 inches (152 mm).
   b. Double Table:
      1) Height: 86-1/2 inches (2197 mm).
      2) Width: 60 inches (1524 mm).
      3) Depth: 11-1/2 inches (292 mm).

B. Storage Pocket Construction: Steel sheet box, fully welded, with solid back, sides, top and bottom.

1. Material: Sheet steel, 16 gage, 0.060 inch (1.52 mm) unless otherwise indicated.
2. Sill and Top Plates: 11 gage, 0.12 inch (3 mm) sill and top plates.
3. Head Panel: 2-1/2 inches (64 mm) vertical facing to cover masonry opening of 86-1/2 inches (2197 mm).
4. Recessed Pockets: Provide 2 inches (51 mm) side facing to overlap walls.
5. Anchor Holes: Provide at base and back of pocket for fastening unit to floors and walls.
6. Finish: Phosphate coated with sprayed-on epoxy paint with hardener.
7. Finish Color: As selected by Architect from manufacturer's standard colors.
8. Strap Anchors: Provide for pockets built into masonry walls.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates and surfaces where units are to be installed.

B. Ensure compliance with installation tolerance requirements and other conditions affecting performance.

C. Verify that floor surface under fully expanded units is level with no more than 1/8 inch (3 mm) change in height over 10 foot (3 meters).

D. Verify that rough walls at pocket locations are plumb.

E. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Protect previously installed finish materials from damage during installation .

B. Make actual field measurements prior to fabrication and show field measurements on shop drawings.

3.03 INSTALLATION

A. Install units in compliance with manufacturer's instructions and shop drawings.

B. Install with top of pocket sill plate within 1/16 inch (1.5 mm) of top of finished floor level.

C. Provide accessories indicated, including anchors, fasteners, inserts, and other hardware required for installing and attaching units to adjoining construction.

D. Secure sill level on floor with flat-head screws through each hole provided by manufacturer; use lead or patent-type anchors for concrete floors; install screw heads flush with sill.

3.04 ADJUSTING

A. Restore damaged and soiled areas by touching up factory finish to like-new condition.

B. Lubricate, test, and adjust each unit for smooth and easy operation and proper adjustment of controls and safety features In accordance with manufacturer's recommendations.

3.05 CLEANING

A. After installation and adjustment, clean exposed and partially exposed surfaces of each installed unit. Use materials recommended by manufacturer.

3.06 CLOSEOUT ACTIVITIES

A. See Section 01 7800 - Closeout Submittals, for closeout submittals.

B. See Section 01 7900 - Demonstration and Training, for additional requirements.

C. Demonstrate operation of units to Owner 's personnel.

1. Use maintenance data as reference during demonstration.
2. Briefly describe function, operation, and maintenance of each component.
3. Review inspection, service, and maintenance requirements and identify service personnel contact information.

3.07 PROTECTION

A. Protect installed units from damage during subsequent construction.

B. Ensure that units are without damage or deterioration upon Date of Substantial Completion.

END OF SECTION

PART 1 GENERAL

1.01 SUMMARY

A. Provide structural design, labor, material, equipment, and supervision necessary to complete installation of permanent steel pre-engineered grandstands and observation booth and baseball/softball portable bleachers, including, but not limited to the following:

1. Steel Substructure
2. Decking System
3. Exit Steps and Handicap Ramps
4. Safety Rails with ChainLink Fence attached
5. Concrete Foundation System
6. Observation Booth Support Structure
7. Observation Booth
8. Façade closure panels

1.02 PERFORMANCE REQUIREMENTS

A. Structural Performance Characteristics: Engineer, fabricate, and install grandstands, bleachers, and press box capable or withstanding the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:

1. Wind Loads: Determine loads based on the following minimum design wind pressures:
    a. Uniform pressure as required by local authorities having jurisdiction.
2. Snow Loads: As required by local authorities having jurisdiction.
3. Live Loads: 100psf gross horizontal area.
4. Perpendicular Sway Load: 10lbs/lin ft of seat plank.
5. Lateral Sway Load: 24lbs/lin ft of seat plank.
6. Live Load for Seat and Tread Planks: 120lbs/lin.ft to seats and footboards.
7. Top Rails of Guardrails:
    a. Uniform load of 50lbf/ ft. applied in any direction.
    b. Concentrated load of 200lbf applied in any direction.
    c. Uniform and concentrated loads need not be assumed to act concurrently.
8. Infill of Guardrails:
    a. Concentrated load of 50lbf applied horizontally on an area of 1 sq. ft.
    b. Infill load and other loads need not be assumed to act concurrently.

B. Thermal Movements: Provide grandstands and bleachers that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

C. Detailing, fabrication, and installation of grandstands and bleachers shall be in accordance with AISC Specifications for Aluminum Structures.

D. Shop Connections: Welded and capable of carrying stress put upon them.

E. Welding: Comply with AWS Standards.

1.03 SUBMITTALS

A. Manufacturer's Product Data: Submit manufacturer's descriptive product data for project.

B. Shop Drawings: Prepared by or under the supervision of a Registered Professional Engineer, in the Commonwealth of Virginia, detailing fabrication and assembly of grandstands, bleachers, and press box, as well as procedures and diagrams. Submit shop drawings indicating layout of grandstand and bleacher seating systems coordinated with field measurements and including seat heights, row spacing and rise, aisle widths and locations, overall dimensions, connections and relationship to adjoining work, accessories, types of materials and finishes.

1. For installed products indicated to comply with design loads, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

2. Surveyor, at the expense of contractor, shall verify existing conditions prior to submittal drawings. Survey shall be submitted as part of submittal process.

C. Geotechnical Report.:The grandstand manufacture shall employ the services of a geotechnical engineer, registered in the Commonwealth of Virginia for the purpose of determining the soil conditions at the locations where the grandstands are to be installed. A certified copy of the geotechnical report must be provided with the grandstands shop drawing submission.

D. Welding certificates.

E. Manufacturer Certificates: Signed by manufacturers certifying that they comply with requirements.

F. Qualification Data: For Installer.

G. Field Quality-Control Report: Indicate compliance of installed grandstand, bleachers and press box and components with requirements.

H. Maintenance Data: For each product to include in maintenance manuals.

I. Warranties: Special warranties specified in this Section.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Manufacturers must have ten years of experience in the manufacture of bleachers and grandstands; welders must be AWS certified. All grandstand observation booth and portable bleacher manufactures are required to provide written verification that their product is approved by all Loudoun County, VA. permitting and inspecting agencies prior to submittals.

1. Manufacturer’s responsibilities include providing professional engineering services for designing grandstands, bleachers, and press box to comply with performance requirements.

B. Installer Qualifications: Engage an experienced Installer to perform the Work of this Section who has specialized in installing types of grandstands similar to those required for this Project and who is acceptable to, or certified by, manufacturer of grandstands.

C. Professional Engineer Qualifications: A professional engineer who is legally authorized to practice in the Commonwealth of Virginia and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of grandstands and bleachers that are similar to that indicated for this Project in material, design, and extent.

D. Source Limitations: Obtain grandstands and press box through one source from a single manufacturer.

E. Source Quality Control:

1. Mill Test Certification.
2. Code Compliance:
    a. IBC 2006 - International Building Code compliance is required for all construction. Written verification is required as part of the submittal and required to be labeled on the observation booth.
    b. ICCEC compliance and UL labeling is required for all electrical construction. Written verification is required as part of the submittal and required to be labeled on the observation booth.
    c. ICC/ANSI 300 - Bleachers, Folding and Telescopic Seating and Grandstands.

F. Welding: Qualify procedures and personnel according to AWS D1.2, "Structural Welding Code--Aluminum."

G. Accessibility Requirements: In addition to local governing regulations, comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act Architectural Guidelines (ADA), Accessibility Guidelines (ADAAG)."

H. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

I. Safety Glass: Category II materials complying with testing requirements in 16 CFR 1201.

J. Pre-installation Conference: Conduct conference at Project site to comply with requirements in Division 1.

1.05 PROJECT CONDITIONS

A. Field Measurements: Surveyor, at the expense of contractor, shall verify existing conditions prior to submittal drawings. Recorded measurements will be shown on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.06 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of grandstand that fail in materials or workmanship within the specified warranty period. Failures include, but are not limited to, the following:

1. Structural failures including, but not limited to, excessive deflection.
2. Failure of system to meet performance requirements.
3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.

B. Warranty Period: One year from date of Substantial Completion.

C. Warranty Period for Metal Finishes: Five years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Dant-Clayton Corporation.
2. Southern Bleacher Company.
3. Sturdisteel Co.
4. Outdoor Aluminum Inc.

2.02 PERMANENT GRANDSTANDS AND BLEACHERS

A. Materials:
   1. Steel: ASTM A 36.
   2. Aluminum: Extruded alloy 6063-T6.
   3. Foundation Concrete: Minimum compressive strength of 3000psi at 28 days.
   4. Accessories:
      a. Steel Connections: ASTM A 307, galvanized.
      b. Aluminum Components: ASTM A 307, cadmium plated.
      c. Hold-Down Clip Assembly and End Caps: Aluminum Alloy 6063-T6.

B. Steel Members:
   1. Stringers: 6 feet o.c.
   2. Columns: Spaced at 18 feet o.c. longitudinal.
   3. Cross Braces: Steel angles.

C. Guardrail System: Provide guardrails at all sides of grandstands, entry stairs, ramps, and landings.
   1. Material: Anodized aluminum pipe, with end plugs at ends of straight runs and elbows at corners. Secure to angle rail risers with galvanized fasteners.
   2. Top Railing: 42 inches above walkways, entrances, and above center of any adjacent seat.
   3. Chain Link Infill on Side and Back: 6 gage black vinyl coated, galvanized fabric fastened in place with galvanized fittings and aluminum ties.

D. Aluminum Seat boards: Nominal 2 inches by 10 inches, extruded aluminum with minimum wall thickness of 0.094 inches. Matching aluminum end caps shall be furnished at aisles and ends of grandstand. All steel surfaces in contact with aluminum seats shall be treated to prevent electrolytic action. Seat boards shall be secured to their steel supports by means of extruded aluminum clips and 5/16-inch-diameter bolts. All splices shall occur at steel supports. Splices in other locations will not be permitted.

E. Aluminum Footboards: Size per component requirements, non-slip aluminum planks made of 6063-T6 aluminum alloys with minimum wall thickness of 0.094 inches. Footboards shall be secured to their steel supports by means of extruded aluminum clips and 5/16-inch-diameter bolts. All splices shall occur at steel supports. Splices in other locations will not be permitted.
   1. Deck System: Tongue & Groove 2001 Deck
      a. The tread system shall be comprised of aluminum extrusions which interlock or longitudinally welded together lengthwise. The interlocking mechanism or welded deck will minimize deflection and not separate due to loads being applied to individual planks.
      b. The system shall cause the deck planks to react together at all treads and walkways to live load and form the appearance of a single tread system. By design, this system forms a solid, overlapping tread and riser installation.
      c. The nose extrusion shall allow for a 1” extruded aluminum contrasting nose piece to be flush mounted on the leading edge and shall capture the vertical riser plank in an extruded pocket. The heel extrusion shall have a .70” vertical lip at the rear of the plank to allow for placement of vertical riser plank and inhibit fluids from escaping at the rear of the tread.
      d. These extrusions shall be such that the attachment of the seat brackets, step brackets, mid-aisle rails and all other components is accomplished without deck penetrations. No through bolting or drilling of the aluminum tread / riser system shall be permitted.

e. The system shall allow for seat and aisle reconfiguration at any time without evidence of its previous configuration.

f. Aluminum tread / riser system that allows fluids to be contained and gravity flow toward the first tread. This gutter will collect fluids and control them to specific areas.

F. Aluminum Risers: Aluminum planks made of 6063-T6 aluminum alloys with minimum wall thickness of 0.094 inches. Provide continuous aluminum riser closures between all footboards. Through bolting or drilling of the riser board is unacceptable.

G. Stairs: 2-by-12 inch aluminum treads with maximum 7-inch rise.

H. Hardware: All connections for seat boards, guardrails, and guardrail pipe shall be tamperproof and galvanized. Footboard connections shall be made with galvanized fasteners.

I. Concrete Footings: Footings for the grandstand shall provide sufficient bearing area at bottom to support all loads of the grandstand. The grandstand manufacturer is wholly responsible for the design of the footings. Depth and design of footings shall be determined by Owner supplied soil test. Hot-dipped galvanized anchor bolts shall be secured in the concrete footings. Concrete shall attain working strength of 3,000 psi.

1. Footings for the grandstand shall extend not less than 42" below grade, and provide sufficient bearing area at bottom to support all loads of the grandstand. Depth and design of footings shall be determined by local soil conditions. Hot-dipped galvanized 3/4" anchor bolts shall be secured in the concrete footings. Soil bearing pressure for bid purposes will be 2500 psf.

J. Bleacher Understructure: Manufacturer’s standard hot-dipped galvanized steel. Aluminum is unacceptable. Painted steel is unacceptable.

K. Façade closure panels: Pre-finished, non-corrosive panels capable of withstanding minimum impact strength of 40.0 ft/lbs in accordance with ASTM D3029-90.

L. Finishes:

1. Steel: Hot-dipped galvanized after fabrication in accordance with ASTM A 123.

2. Aluminum:

a. Seat boards: Clear anodized aluminum.

b. Aluminum Footboards: Mill finish.

c. Riser Boards: Clear anodized finish.

M. Component Requirements:

1. Permanent Grandstand Seating System at Football Field - Home Side.

a. Size and Capacity as indicated on the drawings.

b. Front Walkway elevation: 48”.

c. Front Walkway Width: 96 inches.

d. Footboard Decking System: Fully closed and interlocking

e. Riser boards: anodized.

f. Seat boards: 2 inches thick and 10 inches wide minimum.

g. Guardrail System at Front and Sides: Three rails with chain link fence, 42 inches high.

h. Handicapped Seating: As indicated on drawings.

i. Number of Handicapped Ramps: Two.

j. Egress stairs as shown on the drawings

2. Permanent Grandstand Seating System at Football Field – Visitor Side.
   a. Size and Capacity as indicated on the drawings.
   b. Front Walkway elevation: 48”.
   c. Front Walkway Width: 96 inches.
   d. Footboard Decking System: Fully closed and interlocking
   e. Riser boards: anodized.
   f. Seat boards: 2 inches thick and 10 inches wide minimum.
   g. Guardrail System at Front and Sides: Three rails with chain link fence, 42 inches high.
   h. Handicapped Seating: As indicated on drawings.
   i. Number of Handicapped Ramps: Two.
   j. Egress stairs as shown on the drawings
3. Non-Elevated Bleacher Seating System at miscellaneous fields.
   a. 33’-0” x (10) rows, capacity 177
   b. Footboard Decking System: Semi-closed
   c. Riser boards: anodized.
   d. Seat boards: 2 inches thick and 10 inches wide minimum.
   e. Guardrail System at Front and Sides: Three rails with chain link fence, 42 inches high.
   f. Handicapped Seating: As indicated on drawings.

2.03 PREFABRICATED OBSERVATION BOOTH

A. Design: All materials shall be new and shall comply with the requirements ASTM specifications. The prefabricated observation booth must be constructed in accordance with IBC 2006 - International Building Code construction "Type VB", IMC, IPC, ICCEC and all state and local codes.

B. Product Description:
   1. Press Box Support Structure: Hot dipped galvanized steel columns and I beams as shown on the contract drawings attaching to concrete foundations.
   2. Press Box Dimensions: 8 feet wide x 36 feet long.
   3. Press Box to be constructed in accordance of approved drawings.
   4. Press Box manufacturer must be registered with the State of Virginia Department of Housing and Urban Development as an authorized supplier of Industrialized Buildings. Authorization must be based on construction methods as described in this section.

C. Materials/Finishes
   1. Press Box Support Structure:
      a. Structural shapes meet one of the following ASTM specifications: A36, A36/A572 grade 50, A572 grade 50, A529-50, or A500 grade B.
      b. Shop connections are seal welds.
      c. After fabrication, all steel is hot-dipped galvanized to ASTM-A-123 specifications.

2. Press Box: All materials shall be new and shall comply with ASTM specifications.
    a. Floor:
        1) Main support to be a galvanized steel floor frame sized to support structure and metal belly pan for support of insulation.
        2) Floor to be INTERLOCK Aluminum Decking System, extruded aluminum alloy 6063-T6, mill finish. Attach Decking System to steel floor frame with mechanical fasteners at end of plank and at intermediate supports. (Tongue & Groove or Standard extrusion is not acceptable.)
        3) Insulation: Kraft faced fiberglass building insulation R-11, 3 1/2 inches thick. Batt or roll as manufactured by Owens-Corning Fiberglass Corp., or equal.
    b. Wall Structure:
        1) 4 inch x 4 inch x 11 gauge square tubing with maximum span of 14 feet on front wall and maximum span of 6 feet on back wall and 4 inch x 2 1/2 inch x 14 gauge steel "cees" with maximum spacing of 5 feet for all walls with siding. Spans greater than these require engineered calculations for design. Front wall frame shall angle out from countertop as shown in the drawings.
        2) Insulation: Kraft faced fiberglass building insulation R-11, 3 1/2 inches thick. Batt or roll as manufactured by Owens-Corning Fiberglass Corp., or equal.
        3) Interior Finish:
            (a) Interior sheathing shall be 5/8" gypsum board, finish prepped, painted with 1 coat of primer and 2 coats of egg-shell, latex paint, color as selected by Architect. Note: Drywall installed after approved County close-in inspection.
            (b) Cove Base: Vinyl 4 inches x 0.080 equal to PRO CB-35 Nubian.
        4) Exterior Finish:
            (a) 26 gauge pre-finished R-Panel paneling as manufactured by MBCI, Signature 200 color series, or equal.
            (b) Wall panels are attached with #12 TEK screws - 6” O.C. at the top and bottom of the panels.
            (c) Lap screws are placed at each end of the panels, at the intermediate supports, and at the mid point between supports (TEK #14).
            (d) All fasteners to be painted same color as exterior paneling.
    c. Roof Structure:
        1) 4 inch x 4 inch x 11 gauge square tubing with maximum spacing of 6 feet on center and 4 inches x 2 1/2 inches x 14 gauge steel "cees" with maximum spacing of 2 feet on center.
        2) Roof: 1/8 inch four-way steel plate roof, continuous welded seams coated with acrylic metal primer and 36 mils of acrylik roof coating as manufactured by Isothermal Protective Coatings, or equal. Plate is welded on both sides of rafters with 1-1/2 inch long 1/8-inch fillet welds on 12-inch centers.
        3) Insulation: Kraft faced fiberglass building insulation, R-19 (minimum) 6 inches thick. Batt or roll as manufactured by Owens-Corning Fiberglas Corp., or equal.
        4) Cornice: 26-gauge steel pre-finished to match metal siding.

5) Ceiling: 24 inch x 24 inch x 5/8 inch acoustical ceiling tile (model #- USG Fissured 560) with USG grid main tee (model # DXL24), cross tee (model # DXL 216), wall angle (model # M7), wind clips and other components as manufactured by USG, or equal.

6) Roof Hatch:

(a) Provide roof hatch as indicated on the drawings and specified in Division 7 Section "Roof Accessories".

(b) Provide alternating tread stairs and platforms where indicated. Fabricate of open type construction with structural steel pipe stringers, pipe handrails, and cast or stamped steel plate cantilevered treads and gratings, unless otherwise indicated. Provide all necessary brackets and fittings for installation. Galvanize all steel construction. Manufacturer/Product: Subject to compliance with requirements, manufacturer's products shall be Lapeyre Stair/56 degree steel stair and platform assemblies as indicated on the Drawings.

(c) Handrails and Guardrails: Provide handrails and guardrails as indicated on the drawings and specified in Division 5 Section "Pipe and Tube Railings".

d. Exterior Doors:

1) Full flush steel construction with honeycomb core. 18 gauge skin sheets. Dimensions: 3 feet 0 inches x 6 feet 8 inches. Color: White.

2) Steel doorframe (16 gauge) complete with ½- inch threshold and weather-stripping.

3) Exterior Hardware: Yale 546F Exterior Trim, or equal. Handles shall be lever- type that allows operation without tight grasping or twisting of the wrist. Keyed alike locks.

4) Interior Hardware: Yale 2100 Exit Device, or equal. Handle shall be panic bar that allows for opening without any grasping, twisting or turning.

e. Interior Doors:

1) Interior Birch Unit. Dimensions: 3 feet 0 inches x 6 feet 8 inches.

2) Hardware: Handles shall be lever type that allows operation without tight grasping or twisting of the wrist.

f. Interior Walls:

1) Framing to be steel galvanized studs (25 gage) 1 1/4 inch x 3 5/8 inch at maximum 2 feet on center.

2) Finishes to be consistent with all other interior finishes.

3) Fixed glass windows (2’0” by 4’8”) shall be located at front of interior walls above counter to allow for better viewing.

g. Exterior Windows:

1) Frame: Extruded aluminum single hung, vertical sliding unit, thermal break.

2) Sash: Tilt toward inside for easy cleaning.

3) Glazing: Clear tempered panes.

4) Dimensions of each unit: Dependent on compartment size. At interior wall locations or structural support locations the dimension between windows shall be no greater than 6 inches.

5) Finish: Electro-statically applied acrylic enamel.

h. Work Bench

1) 24 inch wide workbench constructed of 4 inch x 2 1/2 inch x 14 gauge steel, and 3/4" wood. Countertop heights shall be constructed to allow wheelchair usage at all locations.

2) Plastic laminate top: Equal to Wilson art Laminates. Finish: 2904-60 White Suede. Thickness: 050 (12 mm nominal)

3) Glue: 3M Green Contact Adhesive, or equal.

i. Painting: Materials equal to products specified under Division 9 painting sections.

1) Surfaces: Exterior Doors, Door Frames

(a) Primer: Applied by Door Manufacturer.

(b) Finish: 2 coats acrylic latex semi-gloss enamel applied by press box manufacturer.

2) Surfaces: Interior Doors

(a) Primer: Jones Blair Interior Exterior Oil Primer, or equal.

(b) Finish: 2 coats acrylic latex semi-gloss enamel.

3) Surfaces: Exterior Siding

(a) Primer: Applied by Siding Manufacturer.

(b) Finish: Applied by Siding Manufacturer.

(c) Touchup: If applicable

j. Surfaces: Wall and Roof Structure.

1) Primer: Direct-to-metal industrial acrylic metal primer applied after welding, or equal.

k. Caulking: Polyurethane sealant, all temperature, UV resistant; silicone products are not acceptable.

l. Electrical:

1) Submittal drawing shall indicate devices and circuitry.

2) Fixtures: 2-lamp, 40 watt fluorescent, white strip design as manufactured by Lithonia Lighting, or equal. Fixtures shall be located above countertop and be maximized to full length of compartment space.

3) Wiring to be in non-metallic panduit, or equal. N.E.C. breaker box to be 100- amp surface mounted on wall with 2-inch rigid conduit to be stubbed out at back wall of press box ready for service line to be connected.

4) Electrical outlets installed per NEC shall be standard duty. All outlets shall be surface mounted on wall.

5) Sound, Telephone, Clock, Field Communication: Empty double outlet boxes per N.E.C. with 3/4 inch conduit stubbed out bottom of Press Box for use of Owner. Outlet boxes to be flush mounted into wall. Any wiring completed on-site will be responsibility of such contractor for inspections. Quantity. Two will be provided. Owner shall indicate additional boxes needed.

6) Filming Gallery: Weather-tight outlet box for cameras. Quantity: Three. Owner shall indicate additional outlets needed.

7) Provide baseboard heater only.

2.04 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved samples and are assembled or installed to minimize contrast.

2.05 ALUMINUM FINISHES

A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.

C. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: non-specular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.

2.06 GALVANIZED STEEL FINISHES

A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Surface Preparation: Clean surfaces with non-petroleum solvent so surfaces are free of oil and other contaminants. After cleaning, apply a conversion coating suited to the organic coating to be applied over it. Clean welds, mechanical connections, and abraded areas, and apply galvanizing repair paint specified below to comply with ASTM A 780.

1. Galvanizing Repair Paint: High-zinc-dust-content paint for re-galvanizing welds in steel, complying with SSPC-Paint 20.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for, installation tolerances, and other conditions affecting performance of Work.

B. Verify with Owner's testing company that foundation bearing conditions are in accordance with assumptions made in design calculations and shop drawings.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 ERECTION

A. Install pre-engineered grandstands and bleachers in accordance with manufacturer's instructions and final shop drawings. Provide accessories indicated or required and anchors, inserts and other items required for installation of units and attachment of adjoining construction.

B. Set press box plumb and aligned. Level base plates true to plane.

3.03 FIELD QUALITY CONTROL

A. Arrange for grandstands, bleachers, and press box manufacturer's technical personnel to inspect grandstands, bleachers, and press box and components during installation and at final completion and to

certify compliance with requirements.

B. Notify Architect 48 hours in advance of date and time of final inspection.

C. Obtain Use and Occupancy Inspection from local authority having jurisdiction.

3.04 ADJUSTING AND CLEANING

A. Adjust doors, operable windows, and hardware to operate smoothly, easily, properly, and without binding. Confirm that locks engage accurately and securely without forcing or binding.

B. Lubricate hardware and other moving parts.

C. Clean installed grandstand and bleacher units on exposed and semi-exposed surfaces. Touch-up shop applied finishes to restore damaged or soiled areas.

END OF SECTION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Anodes and attachment to buried metallic components including buried tanks.

1.02 RELATED REQUIREMENTS

A. Section 26 0533.13 - Conduit for Electrical Systems.

B. Section 31 2316 - Excavation.

C. Section 31 2316.13 - Trenching.

D. Section 31 2323 - Fill.

1.03 REFERENCE STANDARDS

A. ASTM B418 - Standard Specification for Cast and Wrought Galvanic Zinc Anodes 2016a.

B. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum) 2014.

C. NACE SP0169 - Control of External Corrosion on Underground or Submerged Metallic Piping Systems 2013.

D. NACE SP0177 - Mitigation of Alternating Current and Lightning Effects on Metallic Structures and Corrosion Control Systems 2014.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate wiring diagrams.

C. Product Data: Provide data for anodes and test panels.

D. Manufacturer's Installation Instructions: Include procedures applicable to protecting differing metals.

E. Designer's Qualification Statement.

F. Installer's Qualification Statement.

G. Project Record Documents: Accurately record actual locations of anodes and test panels.

H. Operation Data: Include periodic test procedures.

1.05 QUALITY ASSURANCE

A. Designer Qualifications: Perform design under direct supervision of a Professional Engineer experienced in design of this type of work and licensed in Maryland.

B. Installer Qualifications: Company specializing in performing the work of this Section with minimum three years experience.

C. Products: Listed, classified, and labeled as suitable for the purpose intended.

D. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

PART 2 PRODUCTS

2.01 CATHODIC PROTECTION

A. Provide a design that complies with recommendations of NACE SP0169 and NACE SP0177.

2.02 MATERIALS

A. Magnesium Anodes: Core of galvanized steel, tape, bare weight of 9 lbs (4 kg), coating alloy content complying with the following:
   1. Aluminum: 0.05 percent, maximum.
   2. Manganese: 0.5 to 1.3 percent, maximum.
   3. Zinc: 0 percent, maximum.
   4. Silicon: 0 percent, maximum.
   5. Copper: 0.02 percent, maximum.
   6. Nickel: 0.001 percent, maximum.
   7. Iron: 0.03 percent, maximum.
   8. Other Impurities: 0.3 percent, maximum.

B. Zinc Anodes: ASTM B418 Type II, cast galvanic zinc, tape, bare weight of 5 lbs (2.3 kg).

C. Anode Lead Wire: Solid copper conductor, 12 AWG, Type TW insulation.

D. Field Wiring: Stranded copper conductor, AWG Type TW insulation.

E. Conduit: Rigid galvanized steel.

F. Backfill at Anodes: Blended granular mixture, 100 percent passing a #10 (150 micro m) sieve mesh screen; composed of the following:
   1. Hydrated Gypsum: 75 percent.
   2. Bentonite Clay: 20 percent.
   3. Sodium Sulphate: 5 percent.

G. Test Boxes: Precast concrete, of sulphate resisting Portland cement concrete.
   1. Concrete cover, with "Cathodic Protection Test" identification markings in letters not less than 1.5 inches (38 mm) high.
   2. Enclosure: NEMA 250 Type 3.
   3. Terminal Board: One piece with screw terminals rated 15 amperes.
   4. Shunt: 0.01 ohm, 6 ampere, accuracy of plus or minus 1 percent.
   5. Current Control Resistor: adjustable slide wire type.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify buried pipe systems are completed and tested.

3.02 INSTALLATION

A. Fasten anode lead wire to anode tape by silver brazing. Provide wire length of 10 feet (3 m). Insulate connection to 600 volts, overlapping lead wire insulation by 1/2 inch (12 mm) minimum.

B. Pack anode and backfill in cloth bag; center anode and firmly pack backfill with mechanical vibrator. Use backfill material of a packaged weight 2.5 times the unit weight of the anode.

C. Provide bonding to ensure protected components are electrically continuous.

D. Connect system to ferrous pipe by exothermic weld methods.

E. Locate test stations as follows:

1. At each location of protected pipe crossing another metallic pipe.
2. At each end of casing under roadway.
3. At each inaccessible insulating pipe joint.
4. At intervals not to exceed 1,000 feet (330 m).

F. Restore corrosion protective coatings and wraps damaged during installation.

G. Coordinate this work with placement of buried site metallic components requiring protection.

3.03 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for additional requirements.

B. Provide services of a manufacturer's authorized representative to observe installation and assist in inspection and testing. Include manufacturer's reports with submittals.

C. Comply with NACE SP0169 and NACE SP0177.

END OF SECTION

PART 1 - GENERAL

1.01 GENERAL

A. Comply with Bidding and Contract Requirements, Division 1 - General Requirements.

1.02 SCOPE

A. Provide elevator renovations as indicated on Statement of Work provided as part of RFP package.

B. Existing Conditions and Building Equipment: Provide new equipment to fit within existing spaces, structural conditions and building constraints. Provide new equipment compatible with retained elevator equipment and existing building systems. Unless noted otherwise, retain existing functions and features.

1.03 QUALITY ASSURANCE

A. Regulatory Requirements: Elevator Contractor is responsible for modifications to the elevator equipment that are required by regulatory authorities as a result of alterations described in this specification. Perform all work in compliance with applicable regulatory requirements of the laws, codes, ordinances, and regulations of Federal, State, and Municipal authorities having jurisdiction.

B. Permits, Inspections and Certifications: Coordinate, obtain and pay for all required inspections, elevator permits, building permits, temporary permits and consultations necessary to complete the work described in this specification.

1.04 SUBMITTALS

A. Refer to General Specifications for requirements.

1.05 WARRANTY

A. Refer to General Specifications for requirements.

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS AND INSTALLERS

A. Products requiring proprietary service will not be acceptable.

2.02 RETAINED EQUIPMENT

A. Reconditioning: All retained equipment is to be reconditioned and refurbished to operate properly, safely and reliably, in accordance with these specifications, or if not specified herein, with original manufacturer specifications. Reconditioning may include, but is not limited to, inspection, testing, cleaning, lubricating, repair, rebuilding, re-insulating, balancing, painting and/ or adjusting. Replace worn, damaged or malfunctioning components. Fastenings and hardware are to be checked, properly tightened, and replaced as required. If a component cannot be reconditioned or refurbished, component is to be replaced with new.

B. Additional Modifications: Elevator Contractor is responsible for any additional modifications to the elevator equipment to conform with regulatory requirements in effect during the performance of this work, and required due to alterations described in this specification.

C. Completion of Work: Complete all required refurbishment and maintenance repairs to retained equipment while elevators are out of service for modernization. Provide a check list for each elevator, indicating completion of this work for each major retained component, prior to final completion of each elevator. Submit check list to Owner for review and approval.

2.03 SYSTEM OPERATING FEATURES

A. Duty: The present capacity, pounds and speed will be retained, unless otherwise noted.

B. Travel: The present travel will be retained, unless otherwise noted.

C. Stops and Openings: The present openings will be retained, unless otherwise noted.

D. Automatic Self-Leveling: The elevator shall be provided with automatic self-leveling that shall typically bring the elevator car level with the floor landings + ¼" regardless of load or direction of travel.

E. Firefighter's Emergency Operation (FEO): Applicable only if existing unit has fire service.

1. Special Emergency Service operation shall be provided in compliance with the latest applicable revision of the ASME/ANSI A17.1 Code.

2. Firefighters' Emergency Operation Phase I to return the elevator(s) non-stop to a designated floor shall be initiated by an elevator smoke detector system or a key switch provided in a lobby fixture.

3. Smoke detector system to be provided by Contractor. Contractor shall provide contacts on the elevator controller to receive signals from the smoke detector system and all associated devices.

4. A FEO cabinet shall be installed in the Car Operating Panel with a key switch for in-car control of each elevator during Phase II of FEO.

5. If an elevator is on independent service when the elevator(s) are recalled on Phase I operation, a buzzer shall sound in the car and a jewel shall be illuminated, subject to applicable codes.

2.04 MACHINE ROOM EQUIPMENT

A. Controller (NEW): a microprocessor-based control system shall be provided to perform all the functions of safe elevator motion and elevator door control. This shall include all the hardware required to connect, transfer and interrupt power, and protect the motor against overloading. The system shall also perform group operational control. Each controller cabinet containing memory equipment shall be properly shielded from line pollution. The microcomputer system shall be designed to accept reprogramming with minimum system downtime.

B. Operation - ONE CAR: Operation shall be automatic by means of the car and landing buttons. Stops registered by momentary actuation of the car or landing buttons shall be made in the order in which the landings are reached in each direction of travel after the buttons have been actuated. All stops shall be subject to the respective car or landing button being actuated sufficiently in advance of the arrival of the car at that landing to enable the stop to be made. The direction of travel for an idle car shall be established by the first car or landing button actuated. "UP" landing calls shall be answered while the car is traveling in the up direction and "DOWN" landing calls shall be answered while the car is traveling down. The car shall reverse after the uppermost or lowermost car or landing call has been answered, then proceed to answer car calls and landing calls registered in the opposite direction of travel. If the car without registered calls arrives at a floor where both up and down hall calls are registered, it shall initially respond to the hall call in the direction that the car was traveling. If no car call or hall call is registered for further travel in that direction, the car shall close its doors and immediately reopen them in response to the hall call in the opposite directions. Direction lanterns, if furnished, shall indicate the change of direction when the doors reopen.

1. An independent service switch shall be provided in the car operating panel which, when actuated, shall cancel previously registered car calls, disconnect the elevator from the hall buttons and allow operation from the car buttons only.

C. Power Supply (RETAINED, IF SUFFICIENT. REPLACE IF REQUIRED): the present power supply will be retained and the new equipment will be arranged for this power supply.

D. Soft Starter (NEW): A new solid-state starter will be provided. It will be of the same power requirement and starting configuration as presently exists.
