

## **Gustav Bernard**

Gustav Bernard is an Associate Director at IQVIA who has been with the company for 18 years.

His work focuses on the implementation of CDISC Standards (SDTM, ADaM and Define-XML) within IQVIA.

He is currently Leading ADaM Innovation @iqvia.

He has also created the Define-XML 2.0 automation process within IQVIA, the ADaM Spec Generator application and the ADaM Designer application.

Gustav earned a Bachelor of Business in computer science from the University of the Orange Free State in South Africa in 2004.

# Why have a Tool \ Application

# Automation Implementation

## *Tool vs Process vs Macro*

- Tool
  - Specification Metadata
  - Should be setup to be able to handle SAS \ R \ Python
- Process
  - For Example, Macro that Runs over all SDTM datasets to create SDTM Evaluation that feeds into Tool.
  - Macro that runs over SDTM Evaluation and Create Excel Output with recommended assignment of Parameters from SDTM → ADaM
    - Output Read in by SAS programs to create Parameter variables
    - Output Read by tool to create VLM Metadata
- Macros
  - Macro that uses Metadata from either Tools or Processes to create variables or add additional rows of data.

# Innovation

## Macro Management

Global ADaM Macros

Project\Client Specific Macros

Global ADaM Processes

Project\Client Specific Processes

# Innovation - Setting up a Macro in a Global Macro Registry

## ADaM Macros

- # of Parameters
- Name and Description for each Parameter
- Set allowed contents for parameter (Restricted vs not)
  - Restricted when Set of expected values allowed
    - › Add Restricted list of allowed Values (e.g., 0 or 1)
  - Free Text
  - Selection from Metadata \ Where Clause
  - Default Values
- Variable(s) to be derived using Macro
  - What variables should be auto assigned (All Predecessor variable handled by one macro)
- Expected Single call or Multiple call
  - Datetime macro that will create DTN, TM, DTM and DY variables only needs to be called once.
- Expected Code Level / Should always be called
- Code Levels
  - Initialize
  - Customize
  - Formalize \ Standardize
  - Finalize
- Each macro should have adequate defensive programming for each macro parameter with clear messaging if parameter used incorrectly.
- Version Control of each Macro
- Creating software dependent macros that are controlled via parameter calls

# Innovation

## Code Management (Code Creation and Maintenance)

### Within a controlled system?

- Code maintenance becomes a concern and can lead to rework.
- Highly controlled

### Outside of a system?

- Tried and tested works but uncontrolled

### Best of Both Worlds

- System Controls Certain code levels
  - Initialize
  - Formalize \ Standardize
  - Finalize
- Output each level per dataset
- User calls each Level to execute in program and can add Customized Level.

# Innovation

## Decision Tree

### Variable Level

- Variable Derivation Sequence
- Variable Dependencies
- Automated until User takes control
- Code Level and Variable Priority

### VLM Level

- Test Level Derivation Sequence
- Test Level Dependencies
- Automated until User takes control
- Code Level and Test Priority

# Traditional vs Automated

## Traditional (AOCC01FL)

### Initial Creation

- **Explain** Derivation in Specification
- **Code** Derivation in Production Program
- **Code** Derivation in QC Program

### Maintenance (Rework)

- **Update** Derivation in Specification
- **Update** Derivation in Production Program
- **Update** Derivation in QC Program

## Automated (AOCC01FL)

### Initial Creation

- **Explain** Derivation in Specification
- Macro **Extracts** Derivation in Prod Prog
- QC Macro **Extracts** Derivation in QC Prog

### Maintenance (Rework)

- **Update** Derivation in Specification
- **Rerun** Production Program
- **Rerun** QC Program

### Edit Variable

Variable Name: AOCC01FL    Variable Label: 1st Occurrence of max. grade QT prol. FI    Variable Suffix: \_\_\_\_\_

Category: OCCDS Occurrence Flag V    Codelist: Y     Data Driven Codelist    [Codelists](#)

Source: Derived    Domain Name: \_\_\_\_\_    Variable Name: \_\_\_\_\_    Origin: Domain.Variable

| Type | TypeODM | Length | Display Format |
|------|---------|--------|----------------|
| Char | text    | 1      | 1              |

Auto Populate: \_\_\_\_\_

Programming Derivation  
Set to Y for: First Within: [First]; Where: [Where]; Using Sort Order: [Sort].

Define-XML Comment  
The first occurrence of any [First] within [Where].

CDISC ADaM IG Comment  
Additional flag variables as needed for analysis. Derivation rules for these flags need to be described in the metadata.

Document 1 Title: \_\_\_\_\_    Document 1 - Page Numbers: \_\_\_\_\_

Document 2 Title: \_\_\_\_\_    Document 2 - Page Numbers: \_\_\_\_\_

# Derivation = Variable Calculation

Programming Derivation

Set to Y for: First Within: [First]; Where: [Where]; Using Sort Order: [Sort].

Define-XML Comment

The first occurrence of any [First] within [Where]

Programming Derivation

Set to Y for: First Within: AEBODSYS; Where: TRTEMFL="Y"; Using Sort Order: USUBJID AEBODSYS.

Define-XML Comment

The first occurrence of any AEBODSYS within TRTEMFL="Y"

Utilize Spec Metadata  
Call %adam\_initialize

Call %adam\_flags

Identify all Flag variables

Identify if automated syntax present

Extract Metadata:  
variable, first,  
where, sort

Calculate Variable

# Study Library

- Each Completed Study becomes a Library Project that can be Reused by any other Study.
- Client Specific Libraries
- Safety Libraries
- Therapeutic Area Libraries
  
- Using Libraries to startup code
- After having enough connected metadata (500+ studies) can start using AI \ ML to help identify best fit to startup new studies

# Building the COVID19 Library

SDTM VLM Metadata + TLF VLM Metadata → Classify BDS ADaM Datasets

## Inputs for Domain

- Parameters Assigned from SDTM Only
- Parameters Assigned from SDTM and New Derived Tests
- New Derived Parameters Only

## Baseline Variables Needed

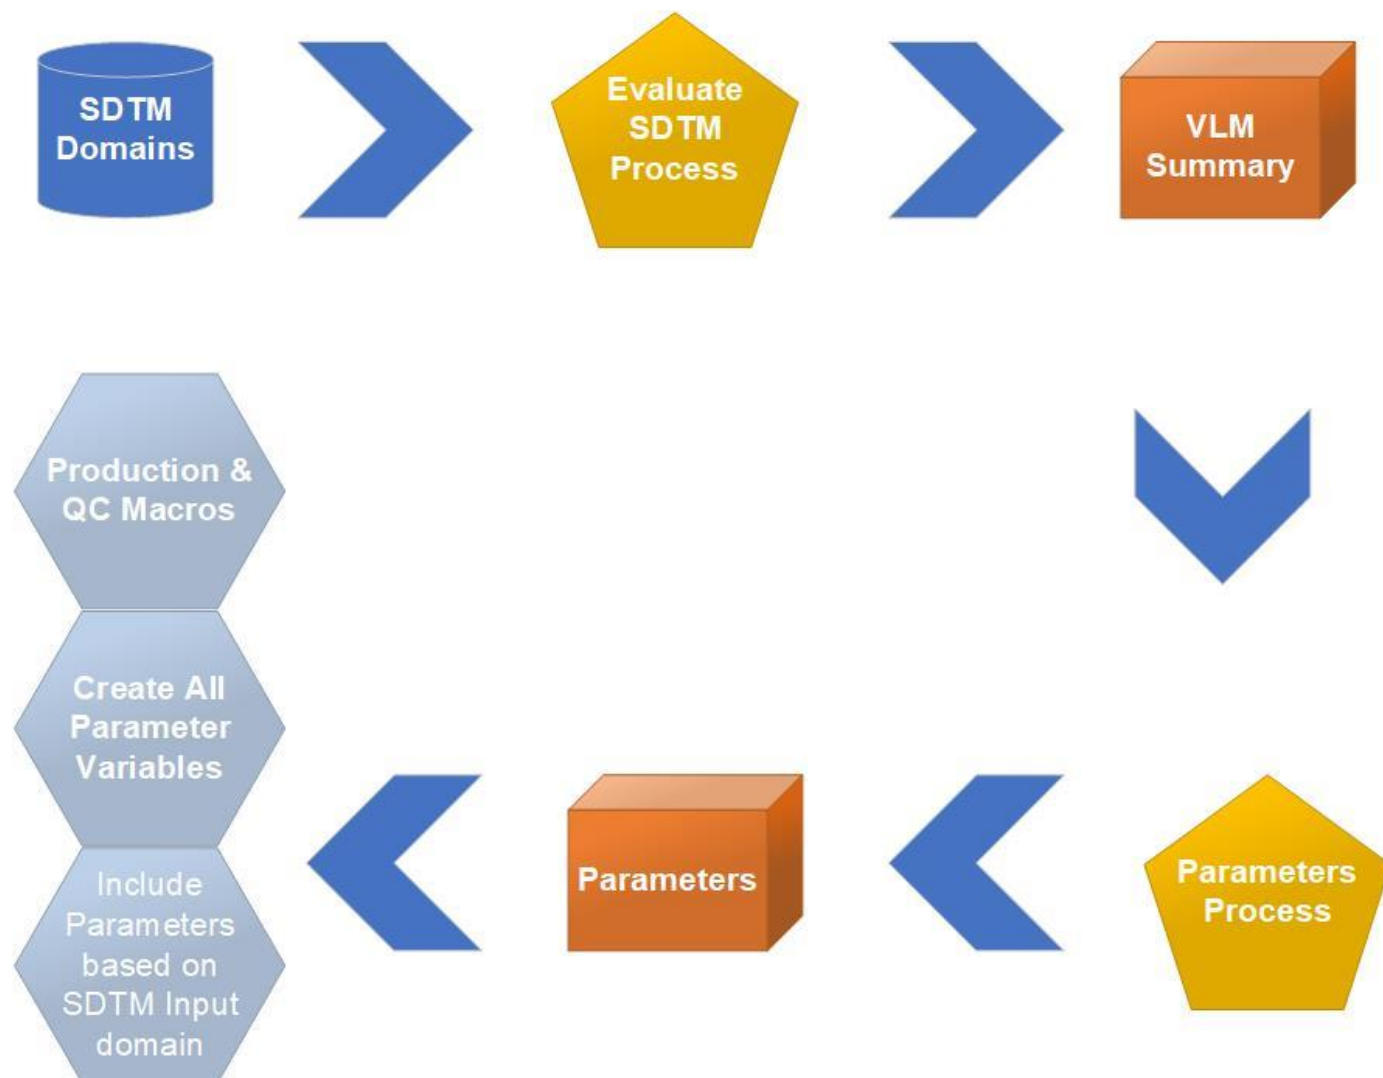

- Yes
- No

## Criteria or CTCAE Variables Needed

- Yes
- No

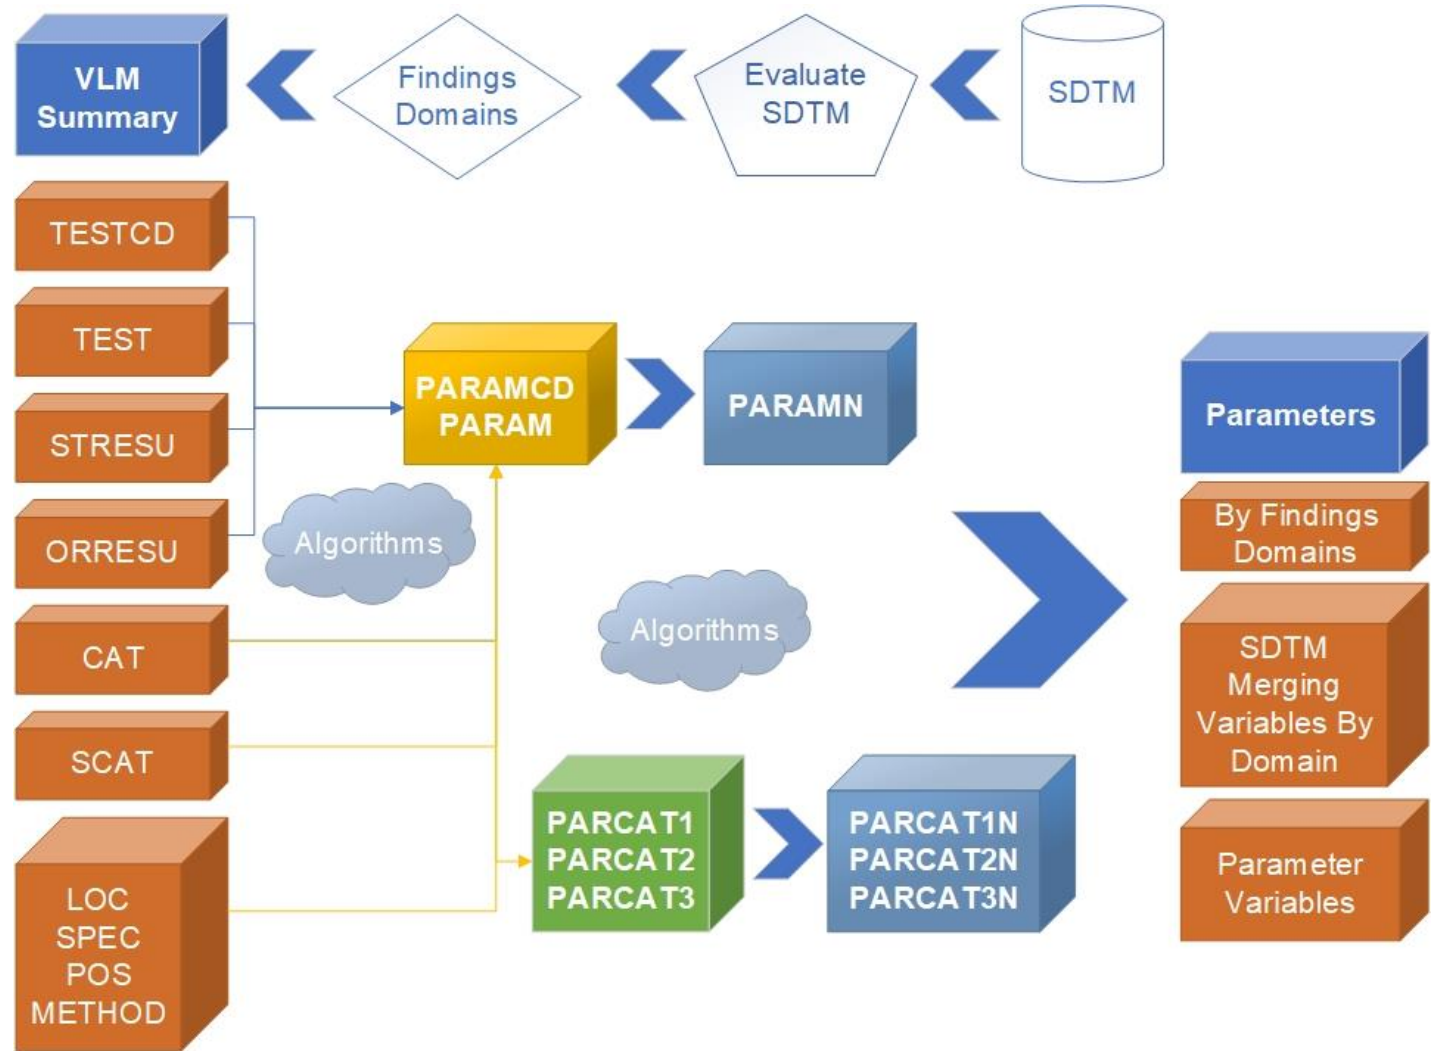

# Automation Processes

## Parameter Process

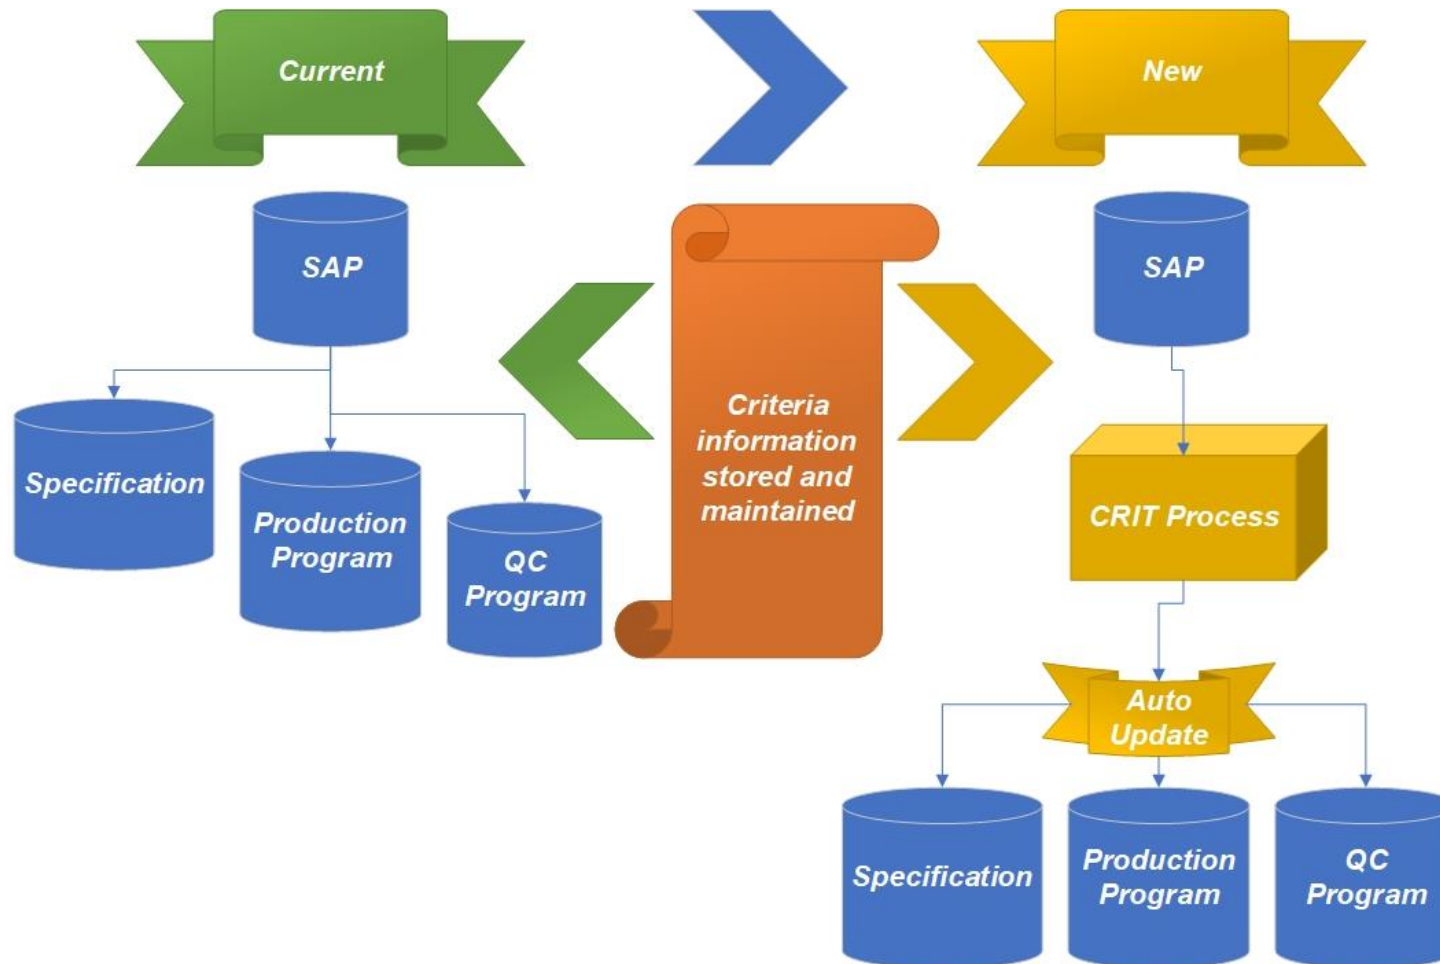

Process to Create Parameter Variables (PARAMCD, PARAMN, PARAM, PARCAT1, PARCAT1N, PARCAT2, PARCAT2N, PARCAT3 and PARCAT3N) using a Data Driven approach along with Algorithms to ensure Consistency.

# Parameter Process

# Automation Processes

## CRIT Process

Process to Decrease the amount of Files that Store and Maintain Criteria information.

# ADaM Automation Roadblocks

## *Common Considerations*

- CDISC Define-XML Standard not very set
- CDSIC ADaM Standards multiple ways to do the same thing
- FDA requesting sas \ r code
- When Automating SAS code
  - Need to still be able to submit to FDA
  - Spec needs to still be in adequate for
