A good catalog is always right at your fingertips. It's easy-to-use and you can find all the phone numbers, product descriptions and SKU numbers you want. And because it's so handy, sometimes it makes a really good coffee cup coaster. A wholesale distributor relationship with DiversiTech is like that: Easy and useful, flexible and reliable. A DiversiTech relationship links products, service and support so that everyone involved can grow their business.

COMPETITIVE PRODUCTS AT YOUR FINGERTIPS

First and foremost, a catalog is about products. With over 8,000 SKUs included, the product you are looking for is certain to be inside. And because DiversiTech also manufactures many of its own products and chemicals, you can be assured of their quality, consistency and reliability.

In order to stay competitive, it's important to know what's new in the market. To help with that, we've added 45 new items. How did these new products come about? Some are developed in partnership, from ideas submitted through DiversiTech's Inventors Portal (www.diversitech.com/invent). It was an Inventor Portal idea that produced the DiversiTech Dolly Strap (Catalog No. DS-1). The Dolly Strap securely attaches the condenser unit box to the dolly. This makes it easier and safer to move the unit around at the factory or on the job site. A simple idea? Perhaps. But it's an idea that can make a contractor's day a bit easier.

Sometimes a new product is a case of "something new from something old." That's how the SOS Switch (Catalog No. SOS-1) was developed. Safety overflow switches are not new devices. But when a wholesale distributor approached us about producing a switch, DiversiTech took a new view to the solution. The DiversiTech SOS Switch uses a completely exterior, non-intrusive technology to sense when a drain line is clogged. So installing an SOS Switch means there's no drilling, holding or stopping the line. And slime and sludge don't affect its reliability because there are no moving parts. Once the switch is tripped, a small, yellow light remains on until the problem has been corrected. The SOS Switch is another example of how DiversiTech products add value and simplify the work for both wholesale distributors and contractors.

COMMUNICATION, SALES AND SUPPORT

The DiversiTech 2007 catalog represents more than just physical products. It's part of a process that includes sales, ordering, shipping, cost and inventory management, purchase orders and payments. At DiversiTech, a wholesale distributor can truly consolidate the entire purchasing process and conveniently maintain a wide variety of product close at hand.

DiversiTech uses industry-leading technology and processes to manage the details. But technology doesn't replace people. Our independent representatives are regularly in the door because that's the best way to ensure the best service. Our Customer Service team believes that your question is their personal responsibility to resolve. DiversiTech programs such as the Inventors Portal and Co-pilot programs put wholesalers, HVAC contractors and DiversiTech employees into real-time contact. Then we use the information to make new products, refine existing products and tailor our services to better support wholesale distributors and their customers.

It's a lot of interaction. But it is this kind of interaction that makes DiversiTech products and services more useful and more reliable. Just like the DiversiTech 2007 Catalog. Just like the DiversiTech Wholesale Distributor relationship: Easy and useful, flexible and reliable.

And if the coffee spills, we'll gladly send you another DiversiTech Catalog!

DiversiTech's invention submission portal provides an easy but effective method for you to submit new product ideas. The cleverest of products that save time, money, and labor come from you — the person in the field actually working with HVACR systems.

Welcome to DiversiTech's invention submission portal. Here you may confidently submit your invention or product concept in total confidence that it will be treated professionally and courteously. DiversiTech embarks on commercializing unique ideas from personnel with in the HVACR industry. A component of this commercialization is a fair compensation program for you - the inventor.

This portal is designed to collect some very basic information about your idea. The information and general ideas you provide here will be reviewed by our senior corporate personnel. If we believe your concept has potential, we will contact you, and be prepared to provide you with written assurances to protect your idea.

DiversiTech Corporation is North America's largest manufacturer of equipment pads and a leading supplier of components and related products for the heating, ventilating, air conditioning, and refrigeration (HVACR) industry.

Headquartered in Decatur, GA, DiversiTech manufactures a suite of products, which includes a wide range of mechanical, electrical, chemical, and structural parts for HVACR systems. The company maintains manufacturing and distribution facilities in several states in the U.S. and has manufacturing alliances in the Far East. DiversiTech has enjoyed a continued history of successful growth and has acquired industry-recognized brand names including Wagner and Specialty Chemical. The company maintains a forward looking business strategy, integrating emerging technologies with an existing solid business base. The company's growth has been possible through its unique technology and its energized and committed team.

DiversiTech's position as a leader in flexible composite concrete products is fortified with numerous patents and an advanced materials research and development department. These composite products include mounting pads for air conditioners, utility power transformers, cable television, telecommunications equipment, and swimming pool filters. Unlike traditional solid concrete pads, DiversiTech's composite fiber cement pads are stronger, lighter weight, and resist stress from weather and age effectively.

DiversiTech manufactures the perfect pad for *your* installation.

DiversiTech is North America's largest manufacturer of equipment pads. The company maintains manufacturing and distribution facilities in key locations to bring the HVACR industry the broadest selection of equipment pads available from any manufacturer.

UltraLite™ Pads - the industry-leading lightweight concrete equipment pad unmatched by any other manufacturer.

CladLite® Pads - an industry standard since 1971.

E-Lite® Pads - a plastic alternative pad competitive with other plastic pads.

UltraLite™ Earthquake Pads – a variant of UltraLite™ specifically designed for geographic areas subject to special earthquake code requirements.

CladLite™ Hurricane Pads – a variant of CladLite™ specifically designed for geographic areas subject to special hurricane code requirements.

Heater Pads – an engineered concrete pad specifically designed for swimming pool pumps and heaters.

ULTRALITE™

FEATURES & BENEFITS

LIGHTWEIGHT At an average weight of 2-1/2 pounds per square foot (12 kg. per square metre), the UltraLite concrete pad is one of the lightest equipment mounting products available.

DUCTILE UltraLite's skin and core are specifically engineered for flexibility and ductility demanded on the job site. The outer skin's ductility allows conformance to slight ground contours without fracture.

DURABLE UltraLite's exterior is engineered for outdoor weather resistance.

TIME/LABOR SAVINGS Time is money — the UltraLite lightweight concrete pad literally installs in seconds while providing a solid foundation for the condensing unit.

CONCRETE SURFACE The pad's outer skin is not subject to ultraviolet degradation or weathering discoloration.

VIBRATION ABSORBING The engineered polystyrene core absorbs and dampens vibration associated with normal operation of a condensing unit.

FREEZE/THAW RESISTANT The pad is vapor permeable. Water vapor evaporates through the pad, thus the concrete outer skin is not subject to expansion cracks.

FLAME RESISTANT The pad's concrete outer skin is resistant to heating caused by the compressor. The surface also resists heat from incidental torch flame during installation.

OUTSIDE STORAGE This pad is intended for life outdoors and is suitable for exterior storage prior to installation.

TECHNICAL DATA

LOADING

To achieve maximum permissible pad load capacity, the earth under the pad must be able to support the transmitted compression load of the UltraLite pad. All values tabulated assume the earth has a bearing capacity of at least 1000 pounds per square foot (48 kPa).

The allowable loads assume a uniformly distributed loading on the pad surface (that is, a relatively flat-bottomed condenser unit in contact with the pad). For condenser units with footpads or other point loads, the maximum concentrated load

for any size UltraLite pad is 125 pounds per 2" (56 kg per 50 mm) diameter (or equivalent surface area) footpad.

FREEZE/THAW TESTING

The UltraLite pad has been independently tested to the rigorous freeze-thaw regimen specified by ASTM C67. This standard dictates a twenty-five cycle freeze-thaw sequence. The freeze portion of the sequence takes place with the top surface of the UltraLite pad under 1/2" (12 mm) of water. Once twenty-five cycles are complete, the pad is examined using visual magnification. No cracks or crazing is permitted. UltraLite has performed flawlessly.

CHEMICAL RESISTANCE

In normal usage conditions, an equipment pad can be exposed to a variety of chemicals. The UltraLite pad has been fully tested in accordance with ASTM D2299 for resistance against:

- R-22 and R-134a
- Compressor oil
- Salt solution, 20 percent by volume
- Synthetic canine urine

The UltraLite pad performs extraordinarily well — it does not craze, soften, delaminate, or spall under exposure in this test.

E-LITE®

E-Lite® is a plastic pad designed as a mounting base for air conditioning condensers. Injection molded from polypropylene, E-Lite® is gray – providing a subtle but elegant base for the condenser. Surface texturing in the pad helps prevent the condenser from sliding, and sizes molded right into the pad make selection easy.

FEATURES & BENEFITS

- Lightweight, yet rugged
- Drillable for securing unit
- Uniform ribbing transfers load evenly
- Unaffected by UV or weather
- Subtle texture resists unit slide
- High recycled plastic content

- Synthetic canine urine
- Compressor oil
- Salt solution, 20% by volume

CLADLITE®

Consistent quality. Enduring strength. Trusted for over 30 years.

When DiversiTech introduced CladLite, the first foam-core concrete A/C pad, installers loved the light weight. Today, we make lighter pads with different materials, but one thing has never changed. Homeowners still expect and prefer concrete pads.

Once it's set, both the CladLite pad and the unit will stay in place. That permanence and the solid concrete look are what matter to the homeowner. Cladlite is available in over 70 sizes.

FEATURES & BENEFITS

- Concrete is highly valued by homeowners
- 80% lighter than solid concrete
- Continuous steel reinforcement
- Full foam bottom resists settling and vibration
- Impervious to weather

HURRICANE PAD

DiversiTech's CladLite™ Hurricane and CladLite™ Hurricane T-Class pads are designed to Florida's tough standards for hurricane strength. These pads meet the new Florida code (see below). Limited shipping area. Please see item description for further details.

FEATURES & BENEFITS

- Steel reinforced
- 9,000 PSI fiber-concrete
- Much lighter than solid concrete
- CladLite™ Hurricane pads keep units from sliding or blowing over in 150 MPH winds when properly attached

MEET THE NEW CODE

DiversiTech's CladLite™ Hurricane and CladLite™ Hurricane T-Class equipment pads meet the 4" height requirement of the [Florida Building Code, Mechanical Volume](#), effective March 2003.

Section 304.7 Clearance from grade. Equipment and appliances installed at grade level shall be supported on a level concrete slab or other approved material extending above adjoining grade a minimum of 4 inches (102mm). Suspended equipment and appliances shall be installed a minimum of 6 inches (152 mm) above adjoining grade.

CladLite™ Hurricane and CladLite™ Hurricane T-Class equipment pads have been designed specifically to meet the intent of the [Florida Building Code, Chapter 16](#), with respect to wind resistance. Method of attachment tested per ASCE 7.

DiversiTech's CladLite™ pads have been declared by the Florida Building Commission to be an acceptable alternative material to solid concrete slabs for use in specific applications from Tallahassee to Miami. Approval of the pad is within the discretion of the local building inspector. DCA02-DEC-183

CladLite™ pads are approved by ICBO No. PFC-5112

EARTHQUAKE PAD

California UltraLite Pads are manufactured with a built-in attachment system for earthquake-proof installations. These UltraLite pads are manufactured with metal straps around the perimeter for secure, easy attachment of the a/c unit to the pad. Limited shipping area. Please see item description for further details.

FEATURES & BENEFITS

- Very lightweight – this pad averages 2-1/2 pounds per square foot (12 kg. per square metre).
- Durable pad exterior is specifically engineered for long-term outdoor weather resistance.
- Skin and core are engineered for flexibility and ductility demanded of job site handling.
- This pad installs in seconds while providing a solid foundation for the condensing unit.
- The concrete outer skin is not subject to ultraviolet degradation or weathering discoloration.
- The engineered polystyrene core absorbs and dampens vibration associated with normal operation of a condensing unit.
- Vapor permeable – water vapor evaporates through the pad, hence the concrete outer skin is not subject to expansion cracks.
- The outer skin resists heating caused by the compressor; skin also resists heat from incidental torch flame during installation.
- This pad is intended for life in the outdoors, thus is suitable for exterior storage prior to site installation.

TECHNICAL DATA

The UltraLite Earthquake pad shares the same testing results as the UltraLite pad. Please refer to page 2 for Loading, Chemical Resistance, and Freeze/Thaw Testing results.

HEATER PAD

DiversiTech's Heater Pad is specifically designed for the pool and spa industry. Remember, the safest heater installation is with a pad made of concrete. The Heater Pad is concrete and contains NO COMBUSTIBLE MATERIAL. Limited shipping area. Please see item description for further details.

FEATURES & BENEFITS

- The Heater Pad offers many advantages over solid concrete:
- Waffled or hollowed out bottom reduces weight by more than 50%
 - Generous ribbing on bottom maintains strength
 - Millions of microscopic air bubbles in the concrete mix lightens the pad and increases durability
 - Textured, sandblasted surface promotes water drainage and prevents unit from sliding off
 - Dual-reinforcement with steel wire and polymer fibers prevents breakage and adds strength and durability.

The Heater Pad weighs less than half of a solid concrete pad.

PAD SIZES AVAILABLE FOR 2" AND 3" ULTRALITE™, E-LITE®, AND CLADLITE®

ULTRALITE™ Lightweight Equipment Pads

UltraLite™ is a true concrete equipment pad at the weight of plastic (about 2.5 lbs. per square foot). UltraLite™ is strengthened by miles of fiber in each square foot of fiber-cement coating. This fiber allows the pad to flex instead of cracking or breaking. The textured surface prevents the condensing unit or portable generator from sliding, and allows water drainage, while the engineered encapsulated polystyrene (EPS) core prevents warping and provides a solid bottom to resist settling. UltraLite™ is unaffected by soil conditions, ultraviolet (UV) light, temperature extremes, and other weather conditions.

2" UltraLite™ Pads

The 2" thick UltraLite™ pad is the industry standard. Used across a wide variety of applications, unless a thicker pad (3") is required by the local building code.

ULTRALITE™ Earthquake Code Compliant Pads

Required nearly exclusively in Southern California, the UltraLite™ pad is available for compliance with strict attachment provisions detailed in earthquake prone local building codes.

UltraLite™ earthquake code compliant pads are only available for sale in regions where local codes mandate installation of pads with these particular characteristics. Currently these locales include most of Southern California, portions of Washington, and portions of Oregon.

E LITE® Plastic Equipment Pads

E Lite's rugged design provides uniform and generous ribbing for optimum, self-leveling ground support without inserts. The result is a pad that is lightweight, but not too light. A subtle texture prevents unit slide and presents a classic appearance, which is enhanced by rounded edges and a concrete gray color. Each pad is molded with a size label and a symbol representing content of recycled material.

2" E Lite® Pads

The 2" thick E Lite® pad is the choice for plastic pads, unless a thicker pad (3") is required by the local building code.

CLADLITE® Lightweight Equipment Pads

Concrete surface and superior performance at 20% the weight of conventional concrete pads. The cladding provides superior resistance to sun, moisture and freeze-thaw conditions; the engineered encapsulated polystyrene (EPS) core is virtually impervious to water, soil conditions, fungus and bacteria. CladLite® is further strengthened by continuous steel reinforcement throughout the cladding. CladLite® is code approved for installation throughout the U.S.

2" CladLite® Pads

The 2" thick CladLite® pad is the choice for equipment pads, unless a thicker pad (3") is required by the local building code.

CLADLITE® Hurricane Pads

CladLite® Hurricane Pads

Designed specifically for the hurricane prone regions of Florida and the Gulf Coast, the CladLite® Hurricane pad meets stringent local code requirements for wind resistance. Heavier than a normal concrete pad, this pad provides sufficient weight to meet code. These pads have been designed specifically to meet the intent of the Florida Building Code, Chapter 16, with respect to wind resistance. Method of attachment tested per ASCE 7. CladLite® Hurricane pads are suitable for all 130 mph and most 150 mph installations. For certain taller equipment, the CladLite® Hurricane T pad is needed. CladLite® Hurricane pads have been declared by the Florida Building Commission to be an acceptable alternative material to solid concrete slabs for use in specific applications from Tallahassee to Miami. Approval of the pad is within the discretion of the local building inspector. DCA02-DEC-183. Due to their extra weight, standard freight terms only apply for shipments to Florida. All other shipments are shipped FOB Conyers, GA.

CladLite® Hurricane T Pads

The CladLite® Hurricane T pad is even heavier than the CladLite® Hurricane pad and is designed to meet the higher wind loads of taller equipment. The taller the piece of equipment mounted to the pad, the greater the wind load on the pad. These pads provide sufficient weight to meet code for these tall condensing units. CladLite® Hurricane equipment pads have been designed specifically to meet the intent of the Florida Building Code, Chapter 16, with respect to wind resistance. Method of attachment tested per ASCE 7. CladLite® Hurricane pads are suitable for all 130 mph and most 150 mph installations. For certain taller equipment, the CladLite® Hurricane T pad is needed. Permanent Air Filters

DiversiTech Permanent Air Filters

Every filter makes trade-offs between letting too much air through (good for the unit) and trapping too much “stuff” (good for the homeowner). Where is the right balance? What is best for the homeowner and their unit? DiversiTech offers two permanent air filters. Choose the Red Label Filter for a good balance between ample air flow and ability to trap dust. Choose the Blue Label Filter if you feel greater air flow is needed, perhaps for older units.

LIMITED LIFETIME WARRANTY

DiversiTech hereby guarantees to the original purchaser that this DiversiTech permanent air filter will remain free of defects in materials and workmanship, when used in accordance with the recommended guidelines, for the life of the unit on which it is installed. Should this air filter be found to be defective, the remedies of the original purchaser are expressly limited to having DiversiTech replace the filter free of charge. To obtain the replacement filter, the original purchaser must return the defective filter to DiversiTech, 2175 East Park Drive, Conyers, GA 30013, with postage charges prepaid.

The warranty does not include the cost of installing the DiversiTech permanent air filter or any other costs, all of which shall be borne by the original purchaser. This warranty does not cover damage due to abuse, improper installation, installation in other than standard residential air conditioning and/or heating units, cleaning by high pressure hose or sprays or by use of highly caustic or corrosive cleaning agents.

DiversiTech makes no other warranty whatsoever and all other warranties of merchantability and fitness whether expressed or implied are limited to the life of the original air conditioning or heating unit on which the DiversiTech permanent air filter is installed.

DiversiTech Condensate Pumps

Condensate Pumps – 22' Lift

Vertical type pumping unit, with high impact ABS tank, ABS motor and tank covers, volute and impeller. Thermally protected motor and stainless steel shaft. Equipped with snap action switch, 6' cord with 3-prong molded plug. Pump engages in 2.5" of water, disengages in 1.125" of water. Includes safety switch and a removable check valve with 3/8" discharge. Rubber feet dampen vibration which reduces noise. Four inlets provide greater installation versatility. Suitable for use with condensing furnaces and boilers which produce acidic condensate. Lab tested for durability and long life with both acidic and high temperature condensates. Available in 115 V.

Replacement Compressor Leads

Extreme heat within compressors typically causes failure of wiring insulation. This can cause corrosion to the inner strands of copper within the wire used for compressor hook-up. This reduces the power flow to the compressor causing the unit to overheat and can prevent the compressor from starting. A MINIMUM of 12" of wire must be removed. The DiversiTech Replacement Compressor Leads are ideal for replacing this corroded wiring. 24" leads also available for replacing wire all the way to the contactor and capacitor.

Refrigerant Charging

Insta-Charge

Faster, safer and more economical method for charging LIQUID refrigerant through the low pressure side of an air conditioning or refrigeration system, without damaging the compressor. Insta-Charge's unique internal restrictor reduces liquid flow to a level below the capacity of the compressor. Converts liquid refrigerant to a saturated vapor for fast entry. Insta-Charge connects directly to the refrigerant can or cylinder valve. Adds liquid tracing dye faster. Eliminates heating of refrigerant cylinder. Made of light weight aluminum. Sold at a fraction of the cost of other fast charging devices.

CATALOG NO.	DESCRIPTION	STANDARD PACK
RC-1	Insta-Charge	1

Oil Transfer System by Gauge-Pro

A quick and easy way to change refrigerant oil with no spillage or mess. Unique hand pump creates a powerful vacuum for the transfer of oil to or from the compressor crankcase at a faster rate. Oil transfers back and forth between the compressor and waste oil tank by creating a vacuum. Oil never touches the pump, thus preventing cross contamination. Pump, durable waste oil container and all hoses are included.

CATALOG NO.	DESCRIPTION	STANDARD PACK
GOTS-1	Oil Transfer System – 1-1/4 Gallon	1
GOTS-2	Oil Transfer System – 2-1/2 Gallon	1

Refrigerant Recovery Products

Refrigerant Recovery Cylinders

DOT Classified for recovery, recycling, service and reclaim. Liquid and vapor valves ("Y" valve or separate valve configurations) are installed in all cylinders. Painted yellow/gray per ARI guidelines. Float switches have 3-pin Brad Harrison connectors.

CATALOG NO.	DESCRIPTION	DOT CLASS	3/4" NPT PLUG	FLOAT SWITCH	WATER CAP.	TARE WT.
02033	30 lb.	4BA400	YES	NO	26.2 lbs.	17 lbs.
02035	30 lb.	4BA400	NO	YES	26.2 lbs.	17 lbs.
02053	50 lb.	4BA400	YES	NO	47.7 lbs.	28 lbs.
02055	50 lb.	4BA400	NO	YES	47.7 lbs.	28 lbs.
02100	100 lb.	4BW400	YES	NO	123 lbs.	48 lbs.
02255	250 lb.	4BW260	YES	NO	239 lbs.	85 lbs.

Caution: Never overfill cylinders. Maximum refrigerant capacity is limited to 80% of the water capacity of the cylinder in lbs. (see table above). DOT requires cylinders to be retested every five years. Some recovery equipment uses weight scales to cut off refrigerant fill at 80% of capacity. Be sure cylinder tare weight is correct for this type of equipment.

DOT Classification Example: 4BA400: 400 psi working pressure; 800 psi test pressure (double the working pressure); 1,600 psi minimum burst pressure (double the test pressure). Pressure relief/safety valve is set to release at between 75-100% of the test pressure. For example, in the 4BA400 tanks which have a 800 psi test pressure, the relief valve opens at between 600 psi and 800 psi.

Refrigerant Labels

DiversiTech Refrigerant ID Labels

These 3" x 4" self-adhesive vinyl labels use a high-tack acrylic adhesive and UV cured screen printing. Color coded to conform to refrigerant labeling convention. Each label indicates the type of refrigerant (eg. R-11), the chemical name (eg. Trichloromonofluoromethane) and the UN No. (eg. UN 1078). Avoid costly mistakes by properly identifying the type of refrigerant contained in recovery cylinders and air conditioning and refrigeration equipment.

Self Tapping Water Tap Valve

Installs on all copper tube lines from 3/8" O.D. to 1-1/8" O.D. Installs without shutting off water. No drilling required. Features 1/4" compression fitting. Stainless steel piercing needle. Special molded gasket seals on both tubing and valve. Will not slip or turn on tubing.

“MAC” – The Ultimate in Line Piercing Valves

Install valve. Connect charging hose. Service. That's all there is to it! MAC features uniport: 1 connection for piercing and servicing. Sealed with refrigerant resistant “O” rings. Needle automatically back seats after servicing, leaving line free of restriction. Connect to tubing with 2 socket-head screws. (Hex wrench is included with each valve.) Needle depressor is inserted into head of needle. Wing cap is turned down easily by hand until line is pierced. Wing cap is removed and system may be serviced with any charging hose with built-in depressor. When hose is removed, spring loaded needle back-seats forming a leak proof seal. Needle depressor is discarded and wing cap forms extra precautionary seal.

Quick-Tap

Features a valve core in the 1/4” male port. Simply pierce the line and back seat the needle. Flow starts when depressor type charging hose is connected. Flow shuts off automatically when hose is removed. If valve core is not desired, it may be removed. Connect hose, pierce line and back seat needle. This method offers full unrestricted flow. Valve core can be removed or changed at any time without loss of refrigerant if needle is front seated.

Line Tap and Swivel Valves

The quick, safe and easy option for charging, discharging and testing a line. Simply clamp on the DLT valve, attach the DCV-1G control valve and pierce the line. The control valve features a port for connecting charging lines or gauges. The valve can be swivelled to any position and can also be removed and re-used. These line tap valves are also difficult to tamper with as the line can only be accessed by using the special DCV-1G valve. The valves also feature a specially formulated gasket which can withstand heat up to 302° F. The DLT series is available in four sizes from 3/16” OD tube size to 3/8”. The DCV-1G control valve is designed for use with all four sizes. DLT series line taps are also compatible with existing A-1 Components CV-1G valves and likewise DCV-1G valves are compatible with A-1 Components LT-series line taps.

Universal Spun Copper Driers

Manufactured with the latest generation molecular sieves compatible with more than 20 different types of refrigerants, including R-134A. They can be used in all hermetic and open refrigeration systems using CFC, HCFC and HFC gases and mixes such as commercial and domestic refrigerators, freezers and air conditioners ranging from 1/8 to 2.0 HP. Hermetically sealed with extended ends.

Liquid Line Driers

High moisture and acid capacity. Maximum filtration capacity. Exceptional compatibility with new polyester oils. Compatible with all existing and new refrigerants and blends including 134a, 401A/B, 402A/B, 404A, 407A/B/C, 410A, 502, 507A. Spring loaded, molecular sieve and activated alumina. Solid copper sweat fittings. Powder paint exterior coating surpasses 500 hour ASTM salt spray test and resists corrosion. Eliminates concern of additive stripping. 032 MF liquid line dryer features 1/4" SAE steel female flare outlet. 500 psig design pressure.

Suction Line Driers

The solid-core clean-up dryer was developed for use in a system suction line. The compact design incorporates a large outside diameter shell, which results in a shorter lay-in length, and a larger core, which provides a greater filtration area for maximum operating efficiency. The core material has controlled porosity which effectively removes and holds a maximum amount of contaminants with a minimum of pressure drop. It collects and holds inorganic acids and other harmful contaminants from a motor burnout. This binding process protects the core from acid decomposition. Access valves on both the inlet and outlet sides make it easy to measure pressure accurately. Occasionally, enough contaminant matter may collect in the filter core to cause a slight pressure drop. The access valves on the SLD make it easy to determine if a pressure drop exists and to measure the amount of the drop. The original DSLD, solid core, activated alumina suction line filter dryer. High acid capacity. Low pressure drop – exceptionally high flow rates. Designed for system clean-up. 500 hours salt spray protection. Shortest system cut-out lengths allow installation in tight areas. Two access valves simplify pressure drop measurement. Flare or solid copper sweat fittings.

Bi Flow Driers

The "DBF" Series is designed specifically for heat pump or reverse cycle application. External check valves are not required since they are incorporated within the filter dryer shell. The core design filters out contaminant particles down to 25 microns. 100% copper sweat or nickel plated flare fittings. Desiccant core provides reliable and effective, removal of solid contaminants, acid and moisture. Provides three times the filtration as the standard bi-flow. Core is cushioned in fiber gaskets to protect core and to insure trouble-free performance. Powder paint exterior coating surpasses 500 hour ASTM salt spray test and resists corrosion.

Sight Glasses

Sight Glass and Moisture Indicator provides a quick visual diagnosis of refrigerant and moisture levels within a system. The sight glass indicates if the system has the proper refrigerant level, a restricted dryer or excessive pressure-drop. The moisture indicator recognizes moisture within the system. Provides early warning that a potential failure exists resulting in corrosion, chemical damage, restricted flow, or even compressor failure. Etch-resistant glass with a simple color comparison provides easy viewing and quick diagnostics. Flare models feature forged brass body and fittings for corrosion resistance. Sweat models feature copper fittings to permit solder installation without disassembly. Leak-proof design is compact and short in length to easily fit within a unit and provide accuracy in performance.

Time Delays

Adjustable Delay on Break Timer

Adjusts from 6 seconds to 8 minutes. Spin-proof knob. Works with 24, 120 or 240 VAC control circuits. Supports up to 1.5 Amps. Two wire hookup for easy installation. Solid state with quick disconnect terminals. Mounts with one self-tapping screw. Conformal coated circuitry protects against moisture and shock. UR recognized for USA and Canada. Works with anticipator type thermostats.

HOW IT WORKS: Immediately upon application of power, the Delay on Break timer enables circuit operation. Once power is interrupted, the circuit opens for the time set on the dial. After the time period elapses, the circuit closes, allowing the protected motor or compressor to start. For typical HVAC applications, the operation of the timer is transparent and will go unnoticed.

Adjustable Delay on Make Timer

Ideal for random starting of multiple units. Adjusts from 6 seconds to 8 minutes. Spin proof knob. Works with 24, 120 or 240 VAC control circuits. Supports up to 1.5 Amps. Two wire hookup for easy installation. Solid state with quick-disconnect terminals. Mounts with one self-tapping screw. Conformal coated circuitry protects against moisture and shock. UR recognized for US and Canada. Works with anticipator type thermostats.

HOW IT WORKS: These timers delay circuit closure upon application of power. Only after the set time period elapses and power remains ON will the circuit close, allowing the protected motor or compressor to start. For typical HVAC installations, timers are adjusted to random times to prevent power circuit overloads. They are sometimes called random start timers.

Monitors

Digital Three Phase Line Voltage Monitor

Offers continuous protection against voltage anomalies which can damage compressors, motors and other sensitive electrically operated devices.

PROTECTION: Loss of Phase, Phase Reversal, Voltage Imbalance, Low Voltage, High Voltage

DISPLAY: Large custom LCD display indicates all operating conditions at a glance. Three large sets of digits provide easy system troubleshooting.

VOLTMETER: Three independent voltmeters read both line and contactor load (backside) voltages.

MONITORED VOLTAGE: 160 to 600 Volts 50-60 Hz.

POWER SUPPLY: Power for the WPC-500 is automatically derived from any active phase. System operation is not dependent on the control voltage or a specific phase for power.

CONTROL VOLTAGE: 19-277 VAC. Anticipator load is provided for operation with 24 volt electronic and mechanical thermostats.

OPERATING VOLTAGE SET POINT: 175 to 650 VAC. Digitally adjustable in one volt increments.

VOLTAGE TRIP POINT: Adjustable in 1% increments between 6% and 18% of selected operating voltage. Restart voltage set point (hysteresis) fixed at cutout voltage + 3%.

VOLTAGE SYMMETRY: Adjustable imbalance trip point from 2% to 25% of selected operating voltage.

RESPONSE TIMES:

Phase Loss/Reversal:	100 mS max.
Imbalance:	Adjustable Response Timer
Over or Under Voltage:	Adjustable Response Timer

LOCKOUT DELAY TIMER: Fully adjustable 0 to 720 Seconds (0 to 12 minutes). Digital display shows remaining time and user set points.

SEQUENTIAL START TIMER: 0 to 30 seconds in one second increments.

RESPONSE TIMER: 0.1 to 20 Seconds. Digital display shows remaining time and user set points.

MEMORY: Up to 25 past fault conditions are stored for later retrieval and analysis. The faults may be displayed or cleared by the front panel buttons.

CATALOG NO.	DESCRIPTION	STANDARD PACK

Digital Single Phase Line Voltage Monitor

Automatic voltage monitor and control system. Continuously measures incoming line voltage, allowing detection of any voltage outside the tolerances that you set. If these limits are exceeded, the response timer begins counting. You may also set response time – a short time for a quick response or a long time to avoid nuisance tripping. If the voltage remains outside the tolerance after the time has elapsed, the DSP-1 will turn off its output relay and protect your device. While output is off, an additional delay timer activates to avoid rapid restarts.

FEATURES: Digital voltmeter displays instantaneous line voltage
 Automatic voltage tester adjusts from 90 to 300 volts
 Adjustable response timer (0.1 to 10 sec.) prevents nuisance tripping
 Adjustable delay timer (1 to 720 sec.) prevents rapid restarts
 Digital display makes for easy viewing and operation

SPECIFICATIONS: Voltmeter: 70 to 325 Volts
 Voltage Set Point: 90 to 300 Volts
 Tolerance Limits: 6 to 18%
 Response Timer: 0.1 to 10 seconds
 Delay Timer: 1 to 720 seconds
 Output Relay: 10 Amps, 250 VAC resistive, single-pole/double-throw
 Control Input: 18 to 250 VAC with anticipator load for 24 volt thermostats

007 Control Checker

A lifetime tool for monitoring and checking safety controls and operating controls. One unit for all voltages 24-460 VAC or DC without switching dials or meters. Compact, 4 oz, reliable. Saves troubleshooting. For normally closed controls, 007 connects in parallel with safety control. When the safety control opens in response to a problem in the system, 007 red LED turns on and remains on until reset manually. With intermittent problem, the LED remains on indicating the control is open. For operating controls, 007 verifies the status of all types indicating if there is power to the holding coil, the NC contact is open or closed, the thermostat contacts are open or closed, there is power to the contactor or starting holding coil, the overloads are open or closed, or there is a bad connection either on control or power side. NOTE: May use with lockout relays. Features battery check and reset switch. Includes 9-volt battery. 007 may be used over and over.

Tattle-Tale Control Monitor

Identifies open controls in seconds. A single use monitoring device for determining which safety control has opened in response to a malfunction. Saves wasted hours tracing a safety control shutdown, even if intermittent. A quick, inexpensive way to visually spot where the problem is. Simply install in parallel with each safety control. When a control opens, the red indicator flag pops up. You will know immediately which area of the system is experiencing problems. Disposable, safe, simple to use, and pocket sized. Monitors safety controls, fuses, overload relays, motor protectors, freeze controls, limit controls, safety switches, fusible links, or steam control. CAUTION: Not to be used with lockout relays, use TC-007.

Condensate Drain Line Switches

Condensate Cop™

Condensate Cop™ is a unique clamp on float switch intended for HVAC drain pan installation. The Condensate Cop™ features a large over clamping area that fits easily over the edge of all types of drain pans; including formed plastic and galvanized sheet metal.

A separate float/probe assembly swivels to accommodate drain pans having sloped sides. The swivel action allows the installer to position the float switch for best operation and then clamp it into place. The probe features an inlet grill which prevents the float from being blocked or damaged by insulation or other debris. Sealed inside the probe is a magnetically actuated normally closed switch. The switch opens when rising water presents a potential flooding condition. Two wire connection for easy hook up to a thermostat "Y" (compressor) circuit. Provided complete with 5' (1.5 meter) leads, wire nuts, and clamping screws. Small size, 24V/1.5 amp NC reed switch.

Safety Overflow Switch (SOS)

The SOS is designed for use on 3/4" PVC condensate drain line. The SOS snaps easily over existing drain line tubing and can be glued in place using PVC cement if desired. The SOS works by electronically sensing water near the inside wall of the PVC drain tubing. By locating the SOS with its body away from the normal flow it can be used to detect a possible overflow condition when the PVC drain line becomes full with water. Like a culvert, condensate drain line is normally mostly empty with a small amount of water flowing in the lower parts of the horizontal run. Since the sensor component of the SOS only covers part of the tubing, a low volume of flowing water does not activate the switch. The pipe must be full or near full to activate the switch. The SOS can be mounted horizontally, vertically, or at any angle.

The SOS works with 24 VAC control circuits and typical contactors. When not detecting water the SOS is normally closed and allows normal air conditioner operation. When water approaches the SOS's sensor the switch triggers and the control circuit is opened. The LED indicator lights to show that there may be system trouble, and the SOS is doing its job.

Furnished complete with switch, 5' (1.5 meter) 18 AWG, 2 wire lead, and a 3/4" PVC male fitting adaptor for direct coupling to a primary pan drain line connection. Now available with Push to Test button.

Wet Switch Flood Detector

A solid state control designed to help prevent flooding, damage to carpets, walls, furniture, ceilings, etc. Now has a built-in test and reset button for easier installation. Turns system off when detecting moisture due to condensate or drain leaks. One or two drops will cause Wet Switch to turn off a unit, alerting a serviceman to a moisture problem. A lit LED indicates the Wet Switch is activated and has turned the unit off. Re-set simply by drying the absorbent pad with a paper towel and pressing the reset switch. Connects to 24 VAC. More than one unit may be connected to a system. 2 amp contact rating. Simple 3 wire installation. Sales displays available.

Hard Start Kits

Torque Plus – DST-5 300% Boost, DST-6 500% Boost

Totally solid state, our DST-5 is just right for all permanent split capacitor (PSC) compressors from 1/2 to 10 H.P. It can be used on units that operate on 120 through 288 Volts. The DST-6 offers a larger capacitor for severely hard-to-start compressors. The DST-6 can be used on all PSC single phase compressors from 1-1/2 to 10 H.P. A unique combination of relay and safety timer. The capacitor is automatically disconnected in 0.5 seconds if the compressor fails to start.

Multi-Head Fin-Tool

Conveniently straightens and cleans condenser and evaporator fins. Each nylon head slides into the master handle and tightens in place. The heads are designed to fit units with fin spacing of 4 – 24 fins per inch. Each head is engraved with its own size and is color coded for fast identification. The heads are angled so that when inserted in the handle, the hand is a safe distance from the sharp fins. Fin-Tool heads may also be reversed in the handle, so that combing with an upward stroke (recommended method) may be done easily, with proper leverage. The master handle rests comfortably in a man-size grip, is rigid and long lasting.

Expando Adjustable Condenser Tube Cleaner

Fast, thorough, economical way to remove mineral scale and sludge from inside water-cooled condenser tubes. Saves time-consuming brushing or flushing. Expando attaches to a threaded rod which fits into an Expando handle or your electric drill. With a reaming action, the tough stainless steel blades scrape everywhere inside the tube, providing a free, unrestricted flow. Virtually clogproof, this tool may be expanded or reduced in diameter to fit scale deposits — not just the tube. Note: Use EC-810 couplings for connecting additional rods.

Dolly Strap™

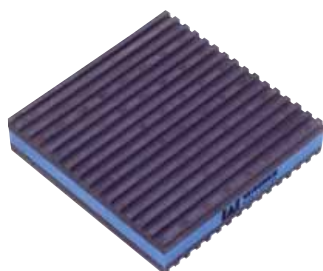

Dolly Strap™ is a woven polypropylene strap featuring a hook on one end and a spring loaded carabiner on the other. Furnished complete with a friction tensioning buckle, the strap is used to secure loads to a two-wheeled dolly. Condensing units – especially higher efficiency units – tend to be awkward to load and maneuver on a hand truck/dolly. The Dolly Strap™ holds the load securely, enabling the contractor to easily move the condensing unit or air handler from their vehicle to the home; or for the distributor or contractor to easily move units around their warehouse.

Anti-Vibration Pads

E.V.A. Anti-Vibration Pad

The latest generation in vibration dampening technology — the EVA Pad. The most effective vibration dampening pad on the market today. The EVA Pad was tested against other pads at four different vibration settings. In the most severe vibration extremes, the EVA Pad outperforms cork and rubber by a margin of greater than 3:1, and outperforms the “waffle” pad by a margin of greater than 8:1! This enhanced performance is due to the special composite foam center which is much more structurally sound than cork. It is not affected by oils or chemicals that can sometimes break down cork and is much more effective at vibration dampening than solid rubber. In essence, the EVA Pad gives you the best of both worlds, at a very competitive price. Designed to withstand 50 PSI.

Iso-Cube Anti-Vibration Pad

Natural rubber pads, designed to reduce vibration and noise emanating from refrigeration and air conditioning equipment. The circular design in each pad offers a suction cup effect, eliminating the need to bolt the pads down. A standard 18" pad is divided into eighty-one 2" segments, each of which may be cut or torn to provide smaller pads. These 50 durometer pads will withstand a load of 180 psi with greater resiliency.

Sealant, Epoxy, Glue

Wagner Adhesive Sealant

For refrigerant sealing. Eliminates fastener loosening, leakage, and corrosion. Cures between thread flanks to seal against leakage and prevents thread corrosion. Offers sealing with maximum solvent resistance to the action of refrigerant (11, 12 and 22), ammonia and sulfur dioxide. Withstands corrosive liquids used in metal finishings and process industries. Ideal sealant for refrigeration, A/C, and process equipment using corrosive chemicals.

3 Easy Steps to Improved Indoor Air Quality

STEP 1: CLEAN

TRIPLE "D"™

Degreaser • Detergent • Deodorant

Clean the evaporator coil and condensate pan with TRIPLE "D"™, a USDA authorized non-foaming alkaline coil cleaner. Cleaning the dirt from the coil and pan not only improves equipment efficiency, but also removes an important source of contamination that can create slime and sludge in the drain pan and cause pan overflow.

STEP 2: DISINFECT

SANI C-N-D™

Coil and Drain Pan Disinfectant

Disinfect and deodorize the evaporator coil and drain pan with SANI C-N-D™, an EPA registered biocide, fungicide, viricide, and mildewstat. The broad spectrum biocide in SANI C-N-D™ assures control of many airborne pathogens that can be spread via contaminated air handling equipment.

STEP 3: MAINTAIN

FLOW-PLUS™

Condensate Pan Treatment

Place FLOW-PLUS™ in the condensate pan (refer to the sizing chart). FLOW-PLUS™ is a totally soluble long term polymer treatment that keeps the drain pan and condensate lines clean for a minimum of three months. This prevents pan overflow problems.

Indoor Air Quality

3-Step IAQ Demo Kit with Triple "D"

Specialty Chemical presents 3 easy steps to improve indoor air quality. The first step is to clean the evaporator coil and condensate pan with our Triple "D"[™], a USDA authorized non-foaming alkaline coil cleaner. This removes contamination and improves equipment efficiency. Next, disinfect and deodorize the evaporator coil and drain pan with SANI C-N-D[™], an EPA registered biocide, fungicide, viricide, and mildewstat. Finally, place FLOW-PLUS[™] in the condensate pan in order to prevent pan overflow problems. FLOW-PLUS[™] will also help to maintain cleanliness for a minimum of three months. Try the 3-step IAQ demo kit — your evaporator coil and condensate pan will thank you.

Coil Cleaners

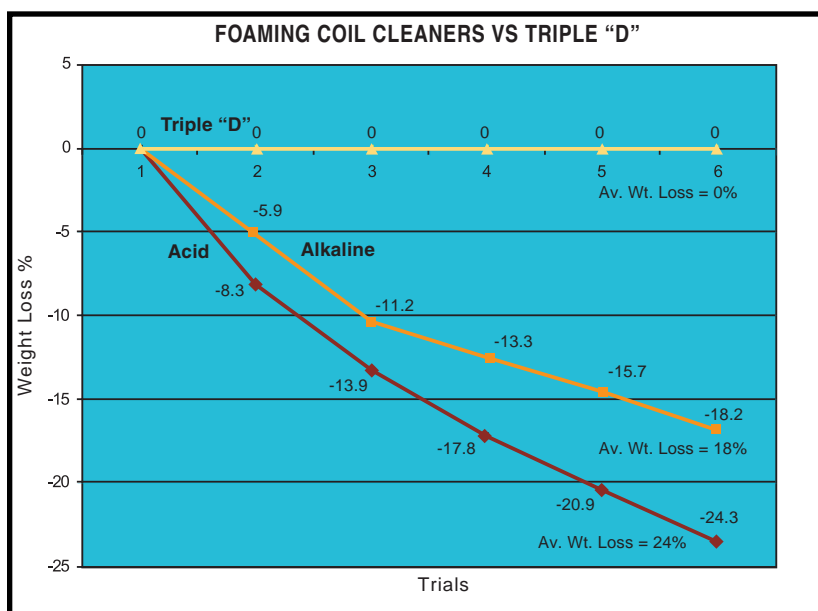

Triple "D"[™] Premium Alkaline Coil Cleaner

Unique, triple-action degreaser, detergent, deodorant. Non-foaming condenser, evaporator and electronic air filter cleaner. A concentrated minimum 6-1 mix ratio provides full, effective cleaning power at low-use cost. Non-toxic, biodegradable, and contains no hazardous acids which reduces workers' compensation and liability. USDA AUTHORIZED

SCM-707-30	Triple "D" [™] Premium Alkaline Coil Cleaner – 30 Gallon Drum	1
SCM-707-55	Triple "D" [™] Premium Alkaline Coil Cleaner – 55 Gallon Drum	1

This chart shows the relative safety of Triple "D"[™] when compared to typical acid and alkaline foaming coil cleaners. Through the course of 5 cleaning cycles, a typical coil cleaner may cause up to 25% of the cooling fin mass to be lost. With this loss of metal, heat transfer efficiency will be lost as well. Triple "D"[™]'s inhibited formula, on the other hand, provides effective cleaning but does not attack the cooling fin metal, so heat transfer efficiency is preserved.

Power-Plus™ Alkaline Evaporator Coil Cleaner

Power-Plus™ is inhibited, thus will not attack aluminum or other soft metals when mixed as directed. It is also self-rinsing, saving cleaning time. Power-Plus™ is fragrance-free, making it the product of choice in hypoallergenic situations. USDA AUTHORIZED

Flow-Plus™ Tablets for Condensate Pumps

This unique polymer pan treatment is available in a tablet form for use exclusively in DiversiTech's condensate pump. The tablet dispensing drawer in the pump holds 3 tablets. A dosage lasts up to 3 months depending on the volume of condensate generated. Even when fully dissolved, the tablets provide a lasting treatment in the pump and downstream drain line. Flow-Plus™ provides long-lasting treatment that controls slime growth over time and can extend the life of the pump.

Refrigeration Oils

Pro-Lube™ Mineral Oil

Specialty Chemical mineral oil (by Calumet) is a superior mineral naphthenic refrigeration oil designed to meet the operating requirements of modern residential and commercial air conditioning and refrigeration compressors. These oils have a low pour point, low wax floc temperature and are chemically and thermally stable in the presence of refrigerants. OEM approved by Copeland, Carlyle, Trane, and other major compressor manufacturers. Always follow compressor manufacturer's oil viscosity recommendations. Mineral oil is specially recommended for lubrication of compressors containing ammonia, R-11, 12, 13, 22, 113, 114, 123, 500 and 502 refrigerants in residential, industrial and commercial service. DO NOT USE WITH HFC REFRIGERANTS SUCH AS R-134A.

Industrial Coolants and Heat Transfer Products

Specialty Chemical produces the most complete line of industrial coolant and heat transfer products in the HVAC/R Industry. Our product line includes ProTek PG propylene glycol products formulated with good-grade corrosion inhibitors and ProTek EG ethylene glycol products for industrial applications. Both product groups are designed to provide freeze and burst protection and are formulated with inhibitors and antifoam agents to provide long-term stability against system corrosion and fouling.

ProTek™ Closed Loop Heat Transfer Fluid

ProTek™ for closed loop water recirculation systems is a blue liquid. Available in three concentrations – original ProTek-100™, ProTek-50™, and ProTek-Plus™. Each concentration may be further diluted to alter freeze and burst temperatures. Refer to the technical data sheet for specific information.

Coil Treatments

Coil Guard

Ideal for coastal areas where salt air accelerates rust and decay. Highly recommended for use in all geographical areas to prolong the life of a unit. When applied properly, Coil Guard dries quickly and immediately resists salt spray, alcohol, acids, and soap solutions. Weather will not blacken it. Coil Guard has high dielectric properties and has no effect on heat transfer. Our blue tinted product is used to ensure complete coverage of coating.
