Safety

Please read all of the safety and operating instructions before using your device:

1. Do not open the device or attempt to repair or service it.
2. When the micro-USB power connector cover is opened, only operate the device in a dry location.
3. Do not submerge the devices in liquid or attempt to clean them with liquids or solvents. To clean the devices, disconnect from the power outlet and use a damp towel.

Before you Begin

Plan the location of your cameras:

1. Fully charge the cameras before mounting. Do not charge the cameras outdoors.
2. Make sure the cameras are placed in a location that have a consistent and adequate wireless signal to the hub.

Wireless Installation Considerations

The mydlink Wire-Free Camera Kit lets you monitor locations from virtually anywhere. Keep in mind that the number, thickness and location of surrounding buildings, foliage, or other nearby objects that the wireless signals must pass through may limit the range. Typical ranges vary depending on the types of materials and background RF (radio frequency) noise in your home or business area. The key to maximizing wireless range is to follow these basic guidelines:

1. Keep the number of walls and ceilings between the camera and the hub to a minimum.
2. Building materials make a difference. A solid metal door or aluminum studs may have a negative effect on range. If placing a camera indoors, try to position it so that the signal passes through drywall or open doorways. Materials and objects such as glass, steel, metal, walls with insulation, water (fish tanks), mirrors, file cabinets, brick, and concrete will degrade your wireless signal.
3. Keep your product at least 1 to 2 meters (3 to 6 feet) from electrical devices or appliances that generate RF noise.

Camera Placement Precautions

Caution:

Please make sure that the camera is not directly facing the sun or a source of heat.

Proper Placement:

Place the camera at least **2.2 m (7 ft)** or higher from the ground. The minimum recommended viewing distance for the motion detection is **60 cm (24 in)**, and the maximum is **7.5 m (25 ft)**.

Note: The camera can be placed on a ceiling.

Improper Placement:

Do not place the camera directly on top of a surface or in a spot where there is something directly below it as this will obstruct its view.

Getting Started

To mount your camera on a wall or ceiling, please follow the steps below. It is recommended that you configure the camera before mounting.

Mounting the Camera Snap Mount

Step 1

Identify and mark the location where you want to install the bracket, ensuring that it is at least 20 cm from the ceiling.

Step 2

Using a 6 mm drill bit, drill a 25 mm deep hole over the mark. For a plaster, drywall, or concrete wall, insert the plastic anchor to support the screw first.

Step 3

Twist the supplied screw into the wall or anchor, making sure to leave enough clearance between the screw head and the wall.

Step 4

Align the screw with the largest hole on the snap mount. Slide the mount down to lock it into place.

Step 5

Attach the back of the camera to the mount. Adjust the angle as desired.

Mounting the Camera

Wall Mount

Step 1

Place the mount at the desired location. Use a pencil to mark the holes.

Step 2

Using a 6.35 mm drill bit, drill three 25 mm deep holes over the pencil marks. For a plaster, drywall, or concrete wall, insert the plastic anchors to support the screws first.

Step 3

Place the baseplate over the holes. Use the supplied screws to attach the baseplate to the wall.

Step 4

Rotate the wing nut counterclockwise with your fingers to slightly loosen it. Then move the bracket to the approximate desired position.

Step 5

Screw the camera onto the mounting screw by tightening the plastic finger nut.

Step 6

Adjust the angle of the arm on the mounting bracket as required. Tighten the wing nut to lock the camera's position into place.

Installation

Connecting The Hub

Plug the supplied Ethernet cable from your router or gateway into the port marked 'LAN'. Plug the power adapter into the hub. Make sure the power button is pressed down into the 'ON' position.
