

Ultra-High Purity Fittings

Cross Reference Guide

ENGINEERING YOUR SUCCESS.

UHP fittings designed for cost-effective performance in critical applications

As original equipment manufacturers and system integrators are challenged by lead time and pricing pressures, Parker offers its comprehensive line of UHP fittings designed to provide reliable performance at a lower cost.

Our UHP metal face seal and weld fittings are ideal for semiconductor and microelectronics applications such as tool refurbishing, tool hook up, manifold boxes, gas cabinets and gas sticks. Plus, Parker's proprietary manufacturing process enables all of our fittings to meet SEMI F20 requirements for 316L.

Parker's UHP weld fittings feature a compact design that is ideal for use with orbital weld equipment, and our metal face seal fittings deliver a high-integrity metal-to-metal seal for reliable service in applications ranging from vacuum to positive pressure.

Whether you specify our proprietary Vericlean or cost-effective Parker fittings, you can be assured that they are in stock and ready to ship.

Here are the features that set us apart:

- Ultra-High Purity cleaning, assembly and packaging in a Class 100 cleanroom environment for all wetted components
- Material traceability to original mill certificate
- SEMI F20 compliant material for all face seal glands and weld fittings
- Metal face seal fittings are rated to 1×10^{-9} scc/sec He inboard when installed
- Tube butt weld ends are square and sharp
- For use with orbital welding equipment
- Highly controlled internal wetted surfaces

Please note: Columns headed with “Parker Veriflo” encompass those parts that use our proprietary Vericlean material specs. Columns labeled “Parker” encompass the cost competitive line that meets Semi F20 standards.
