### Danco Company 10909 Aerator Key

- The new multi-use Aerator Key from Danco allows you to remove or install your aerator with ease.
- Overtime, aerators can get clogged with mineral deposits causing erratic or slow water flow creating a need to clean or install a new aerator.
- Danco's Aerator Key Tool has an aerator wrench for internal or external threads, as well as four sizes of keys that fit most popular brand faucets.
- While wrenches and other tools can scratch or cause damage to the housing of the faucet, Danco's Aerator Key was designed specifically for easy, non-abrasive installation and removal of your aerator.

### Danco Company 10672X Hydroseat Flange Repair

- The Hydro Seat offers an easy, one-piece installation that fixes wobbly or leaking toilets and broken or damaged flanges.
- Installed together with a wax ring, the Hydro Seat technology ensures a tight, leak-free seal and features a self-centering rubber funnel that fits any toilet or closet flange.
- Installation is simple and the debris cover helps to prevent sewer gas from escaping and debris from entering the pipe while the toilet is removed.
- Stainless steel bolts are locked into steel at factory set height to prevent movement.

**Danco Company 10718X Perfect Seal Toilet Wax Ring**

- Perfect Seal is an innovative new product that takes the guesswork out of toilet installation.
- Perfect Seal is truly universal and it will work with any toilet installation.
- It fits any drain size and flange depth.
- Whether your flange is above the floor or below the floor due to re-tiling, the Perfect Seal guarantees a perfect seal the first time, every time.
- The patented seal design combines specially designed rubber gaskets with encapsulated wax to form a seal that is three times stronger than a wax ring without the mess.
- Unlike wax rings, the Perfect Seal stabilizes toilet bolts and allows the toilet to be repositioned as needed.
- It accommodates flange heights from 1/2 in. above the floor to 1-1/2 in. below the floor and maintains a tight seal when common toilet and floor movement occurs.
- Depending upon the height of the floor flange and the toilet horn, there may be instances when the toilet may not sit flush to the floor.
- In these situations, the black plastic ring that is inside the gray rubber casing of the Perfect Seal can be removed.
- The removal of this hard plastic ring will allow the Perfect Seal to be fully compressed and the toilet should then sit flush with the floor.
