lights and reflective units

PLASTIC PROGRESSING PLANT **WAŚ** Józef i Leszek Waś located in Godzikowice has been running the business for over 30 years now.

The company deals with the production of lights and reflective units for passenger cars, lorries, trucks, buses, tractors, trailers, semi-trailers and farm machines.

All our products possess European homologation. Thanks to this fact, our goods are attractive for both big companies producing tractors, farm machines, buses and lorries, as well as for individual customers. Since our products were introduced to foreign markets, the dynamic export growth enabled us to join markets of European Union and Asia.

Waś Company owns a stock of machinery which consists of 16 modern injection moulding machines. Furthermore, we use ultrasonic welders to join plastics when producing reflective units. Thanks to managing the cycle of ultrasound emission via microprocessor we reach the best quality of our products.

Waś Company gained Polish Infrastructure Ministry Homologation for all produced goods and also after a busy implementation period the quality system was certified with the ISO 9001:2001 as far as designing, producing and selling of car lights, reflective units and other plastic products is concerned. Innovativeness and advanced technological level of products made by Waś Company were awarded Gold Medals during International Motor Fairs in Poznań in 2003, 2005 and 2007.

The Company has been continually developing in all directions by introducing the latest technologies into new products. The Company's employees are well trained to perform their duties.

All lights have european homologations
