Lg Filters absorb weight very quickly, can see
scale move, experimented with sample.

Landslide - Bull 2/6 - tried sand fraction +
Filter # L3, too large dilution - almost 2 Liters +
couldn't get it. Large filter wouldn't work - gravity feed
put funnel on flask + blew out at hi - vacuum.

Tried coffee filter - gravity - clog immediately

Sample dilution way too large for small filter

Need to borrow Buchner Filter from RSL + experiment
with different coarseness - > 40 micron? coffee filters?
