Welcome to the 1994 GAVIN Directory. We have some fresh innovations this year: The main new feature is a whole new Sho-Biz section designed to provide a handy, year-round show prep reference for programmers and air talent.

In last year's Directory, I wrote of challenge as the focus of 1993. This year's "C" words are undoubtedly computers, confidence and, most of all, change. Last year's challenges for the business included coping with the upheaval of a fresh administration, wrestling with a still-troubled economy, a continued concentration of control in fewer, larger companies (both in the music business and in duopoly radio situations), plus the onset of new technologies designed to revolutionize the business.

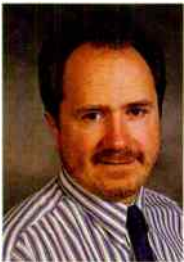

Some of those challenges continue through 1994. Computers, certainly are much more an everyday factor in all our lives. The main worry here is that computers could become such a dominant factor in determining programming options, and even the popularity and success of music, that creative flair gets pushed into the background. That should never be allowed to happen.

For many, 1994 will be a test of confidence. Companies still awaiting that elusive breakthrough will be required to stick with the chosen formula or make a bold change: new entrepreneurs will have to believe that their particular venture can succeed in today's intensely competitive marketplace; even the very largest enterprises will have to commit yet more money to back bigger gambles, just to stay competitive. Yet, in 1994, confidence should not be the problem. The general business climate is improving; radio's beginning to enjoy enhanced results; and record companies are doing better than ever.

However, confidence isn't an excuse for simply pursuing the same old course. Rather, it should be used as a springboard for positive change and further innovation. The approach to measuring airplay has undergone a revolution, with terms such as "detections" and "impressions" the new buzzwords. But we shouldn't get carried away with quantitative analysis at the expense of qualitative analysis. Therefore more than ever in 1994 you can continue to rely on GAVIN for detecting what the hit records are long before anyone else, and for giving you our impressions of the hits that will ignite the airwaves.

GAVIN will be responsible for its share of innovation in 1994. For instance, a Bay Area music convention in May will provide a much-needed renewed focus on America's most fertile breeding ground for new talent.

One thing at GAVIN will stay the same, though. We will not just rely on computers to tell us what's happening. We will continue to listen to the music, listen to radio, listen to the programmers who put music on the radio and, above all, listen to you, the reader.

Thank you.
