# LAFAYETTE HE-15 CITIZENS BAND 11 METER 2-WAY SUPERHETERODYNE TRANSCEIVER

MADE IN U.S.A.

COMPLETE TWO-WAY COMMUNICATION FOR HOME, BUSINESS, FARM AND BOAT

CITIZENS BAND — The New Two-Way Personal Communications Method For Everyone — Fill out the FCC form enclosed with each Lafayette Transceiver. No examination or technical knowledge required — Any citizen 18 years or older is eligible for a license.

## Outstanding Performance And Design . . . The Greatest Value In The Citizens Band Field!

Just think . . . now you can have economical, efficient 2-way radio telephone communication from your home, office, store, auto, truck or boat . . . literally hundreds of uses. The Lafayette HE-15 Superheterodyne Transceiver is both a compact precision transmitter and receiver designed to operate on the new 11 meter "Citizens Band." Two or more of these units will furnish you with your own communications system with coverage up to a 20 mile or more radius depending on antenna height and terrain.

The Lafayette HE-15 meets all FCC requirements and operates in much the same manner as police and other short wave communications systems. The Transceiver features 5 crystal controlled transmitting channels operating at a maximum legal power input of 5 watts fully modulated, RF stage in both transmitter and receiver. Any one of 5 transmitting frequencies may be instantly selected by the 5 position crystal selector on the front panel. These 5 crystals are readily accessible by means of a removable front plate and these may be easily interchanged with any 5 crystals of the remaining 22 allocated citizens band frequencies. The Superheterodyne receiver is tuneable over the full 22 channel band with 3 watts audio output and AVC. Controls include a 3 position function switch (transmit, receive, and transmit with spring return), planetary vernier tuning plus automatic noise limiting switch. All coils are ferrite tuned. Output impedance matches 52 and 72 ohm antenna with Amphenol type coax connector for operating into dipole, ground plane or rod antenna. Has large 4" PM speaker; input jack for crystal or ceramic microphone; power receptacle in rear for AC line and 6 or 12 volt external power supply. Transceiver is supplied with single transmitting crystal for channel 9. Complete with high output crystal microphone, and brackets for easy mounting of unit in auto, boat, etc. Operates on 115 volts AC. Addition of 6 or 12 volt power supply (separately supplied) adapts transceiver for mobile operation. Size 10 1/4" W x 5 1/2" H x 6 3/8" D. Tube complement: 2-6U8A/6EAB, 1-6AL5, 1-6V6, 1-12AX7, 1-6AU8. Shpg. wt., 11 lbs.

## STEREO AUDIO ANALYST SINGLE NEEDLE—DUAL CHANNEL VU BALANCE METER

TM-66

# 11.95

- UNIQUE TWO COIL GALVANOMETER TYPE PRECISION METER MOVEMENT
- SEVEN RANGES OF METER SENSITIVITY
- EFFORTLESS BALANCING OF STEREO SYSTEMS
- PROVISION FOR USE AS VU METER AND TAPE RECORDER LEVEL INDICATOR
- MAXIMUM METER SENSITIVITY 120 ua

The TM-66 provides the solution to all stereo balancing problems. This unique precision meter movement utilizes 2 separate coils yet in a single magnetic field. Each stereo channel feeds a separate coil through a full wave bridge rectifier. When both signals are equal and balanced the resultant deflection on the scale will measure 0. Unlike conventional stereo indicators having two unrelated movements, calibration of one meter against the other (channel A vs. channel B) is unnecessary. Since the two separate coils interact within a single magnetic field, the single needle movement acts upon channel A and channel B simultaneously, automatically maintaining the unit in constant calibration. Individual channels may be measured by

means of the two slide switches. An extremely stable meter action and protection from peak voltages is provided by special damping networks. Since the unit is in continuous calibration the need for individual range controls are eliminated. The single seven step range control serves for both channels and facilitates the use of the meter with all amplifier power levels. By properly positioning this control the movements may be used as VU meters when terminated across the 600-ohm load. The scales are calibrated in "Volume Units". Sensitivity is 1.2 volts, for 0 vu or 100 percent indication. The metal case is finished in a rich satin gold. Overall size is 4¾" x 5½" x 4-3/16". TM-66 Audio Analyst Net 11.95

### THESE ARE THE GAUGES DETROIT LEFT OUT!

Lafayette AMMETER  
& OIL PRESSURE GAUGES

**4<sup>65</sup>**

DON'T trust flashing indicator lights—a burned out bulb can ruin your motor or strand you with a dead battery. All cars with warning lights for oil and battery need these precision gauges. Lights only indicate when oil pressure falls below 15 lbs. or whether or not the generator is working. These Lafayette gauges are not a replacement but an addition to the panel lights and are designed to keep a constant check on the condition and performance of your car's electrical and oil pressure systems. The ammeter calibrated in a 60-0-60 scale measures the actual rate of current flow... helps prevent generators from burning out and overcharging or discharging the battery. Exact oil pressure from 0 to 80 lbs. is indicated by the calibrated oil pressure gauge thus assuring safe engine

operation. Easily installs in any 6 or 12 volt car below the dash, without drilling or can be mounted right in the dash. Both meters are mounted in an attractive chrome panel. Easy to read meters feature 1 3/4" diam. black dial faces with calibrations in white. Size: 5 1/8" W x 2 7/8" H x 2 1/8" D. Supplied with all necessary fittings and wire plus full instructions. ### LAFAYETTE TAPE HEAD DEMAGNETIZER

- REMOVABLE POLEPIECES
- EXTRA CONVENIENT

Lafayette Tape Head Demagnetizer uses removable polepieces. Three complete sets are furnished: straight, 45°, and 90° (right angle), permitting quick and easy use with any tape head. Far from being a luxury, a tape head demagnetizer is necessary for best tape recorder performance. Although unmagnetized when new, tape heads gradually become magnetized by sharp switching pulses occurring while switching the recorder from play to record or vice versa. The solution is to use a demagnetizer to re-

move this permanent magnetism from the head, thus reducing the noise level. Periodic head demagnetization is required for all tape recorders to insure optimum signal-to-noise ratio. Now Lafayette enables anyone with even the most modest budget to perform this necessary demagnetization with a minimum of effort. For 110 volts 60 cycles. Shpg. wt., 1 lb. **"Let Your Own Ears be the Judge"**

The best "independent testing laboratory" in the whole world is your own living room—because it represents the actual conditions under which you will listen to your hi-fi system.

The best instruments for you to judge sound quality are your own ears—because sound is a very personal thing. So, if you wish, read the so-called "Best Buy Reports," remembering that they do not consider your desires, your ears, the characteristics of your home and your pocket book.

We at Lafayette are conscious of all these factors and invite you to either visit our sound salons if you are able to do so, or to avail yourself of Lafayette's "LISTEN AT HOME GUARANTEE" described on the right.

## ELIPTOFLEX

PHENOMENAL ELIPTOFLEX  
PERFORMANCE  
DUE TO:

The loudspeaker is mounted on a recessed baffle board extending partially across the front surface of the cabinet forming ducts or tubes. The elliptical cutout varies the effective length of the duct across its area and provides an extremely smooth transition from duct to free air; broadens frequency response, and provides better transient response. A triangular shaped diffracting ring virtually eliminates undesirable cancellation effects and acts as a "lens," changing relative particle velocities and consequently, phase relationships so as to produce a smooth transition from front to rear radiation.

# NEW! REVOLUTIONARY HIGH-FREQUENCY SPEAKER

## THE NEW LAFAYETTE HIGH FREQUENCY SUPER TWEETER

### SK-131

**19.50**

THE MOST SIGNIFICANT ADVANCE IN TWEETER DESIGN OF THE STEREO AGE

- FREQUENCY RESPONSE FROM 3,000 CPS TO BEYOND 40,000 CPS.
- UNIFORM DISPERSION OVER 120° IN ALL DIRECTIONS
- HIGH-SENSITIVITY ALLOWS USE WITH ANY 4-16 OHM SPEAKER
- UNIQUE DOMED PHONELIC DIAPHRAGM
- POWER CAPACITY 30 WATTS
- REQUIRES NO HIGH VOLTAGE OR POWER SUPPLY

At long last the breakthrough in High-Frequency Speaker design. Here is a tweeter with unequalled performance, engineered for today's high compliance stereo speaker systems. The Lafayette Sphericon represents a complete departure from Electrostatic tweeters, which are extremely inefficient — indeed so much so that it is often necessary to utilize an L-pad on the woofer in order to hear the tweeter properly, thereby lowering the efficiency of the woofer to the same level as that of the Electrostatic tweeter. In the case of many high compliance low effi-

ciency units this is disastrous, as an already inefficient speaker is made even less efficient. The Lafayette Sphericon, due to its high sensitivity may be coupled to any speaker system with no loss in speaker efficiency. As a result less amplification is needed assuring lower distortion. Equipped with a built-in 3000 cycle crossover network the Sphericon produces a smooth linear response from 3,000 cps to beyond 40,000 cps; within plus or minus 1 db from 3000 cps to supersonic frequencies. A specially designed domed phenolic diaphragm delivers

phenomenally smooth, silky, faithful highs radiating a pattern of 120° in all directions, vertically as well as horizontally—with no trace of stridency or harshness. Power capacity is 30 watts. May be used with any 4-16 ohm speaker. Beautifully styled with an acoustically designed gold anodized aluminum grill set in a sturdy satin black plastic case. Shpg. wt., 3 1/2 lbs.

**SPHERICON DESIGNED SPECIFICALLY FOR MEDIUM AND LOW EFFICIENCY SPEAKER SYSTEM:**  
This is essentially the same as the SK-131 (listed above),

but supplied with a built-in attenuator. This attenuator will not lower the efficiency of the woofer, yet provides precise matching of the "Sphericon" with today's popular

low and medium efficiency speaker and speaker systems. Shpg. wt., 4 lbs.

8" **20.95**  
12" **25.50**

THE VERY SAME STUDIO QUALITY WOOFERS EMPLOYED IN THE LAFAYETTE CELESTIAL-SATELLITE STEREO SPEAKER SYSTEMS

Acoustical studies have shown that low frequency response is not directional... indeed the stereo effect we hear is determined by frequencies above 350 cps. This dual voice coil woofer features two electrically separate voice coils on a single woofer chassis. Each voice coil receives low frequencies from its respective stereo channel. Both of these signals are blended through the single woofer cone. This advance in woofer design now makes possible 3-channel stereo without the need of complicated costly control filters or adapter networks.

Now Lafayette offers these advanced design dual voice coil woofers for the high-fidelity enthusiast who wishes to build his own 3-channel stereo speaker system—or use it as the basis of a manual system now and eventually work into a 3-channel stereo system.

Lafayette research and engineering facilities have evolved a new conception in stereo speaker systems. Research has established that the low bass frequencies are nondirectional. By employing a newly designed high compliance 12" dual voice coil woofer with 2 lb. Alnico V magnet, Lafayette engineers have utilized this phenomenon. Bass frequencies below 300 cps. are directed from respective stereo channels to two electrically separate voice coils. In this manner both bass signals are blended through the single woofer cone assembly, while the two satellite speakers consisting of 2 SK-98 dual cone 8" speakers reproduce all the bass overtones, middle and high frequencies.

stereo speaker systems. A large symphony orchestra spreads across the entire area, while a soloist or small musical group is properly located near the center. Conventional stereo speaker systems require large areas of space with the distance between speaker and location of the listening area in relation to these speakers extremely critical — Not so the Lafayette Celestial-Satellite Stereo system. Complete balance controls are provided for balancing low, middle and high frequency contours to individual listening tastes and room acoustics. Satellites may be placed in any position along the room (high or low) and may be separated by as much as 20 feet, with the Celestial low frequency bookshelf unit located any distance between Satellites as room decor permits. ## NEW! LAFAYETTE 8" HI-FI SPEAKER

"MECHANICAL 2-WAY" SPEAKER OF UNUSUAL DESIGN • EXTRA-HEAVY MAGNETS, EXTREMELY HIGH FLUX • RESPONSE 40-16,000 CPS • SPECIAL PATENTED CONE CONSTRUCTION AND MATERIAL FOR SMOOTH, DISTORTION-FREE RESPONSE • EXCELLENT FOR STEREO

A most unusual dual-cone construction is used in these extra-high-quality 8" speakers to economically provide the same type of wide-range frequency response normally found only in true coaxial speakers or multiple speaker systems. There are 2 separate cones, acting through a common voice coil. The outer edge of the tweeter cone is attached to the mid-section of the woofer cone; both cones "float" on flexible, corrugated edges. This mounting, plus apertures provided behind the woofer cone, results in mechanical crossover so that both cones operate in phase at low frequencies, but only the tweeter cone operates at high frequencies. This gives improved high frequency directional

characteristics and minimum distortion. The patented cone materials provide extremely smooth reproduction. Magnets are large and heavy, with flux density of 10,500 gauss and total flux of 56,000 maxwells. Their high efficiency means good transient characteristics, low distortion, and good response at either high or low sound levels. Terminals are screw-type for solderless connections. Sensitivity is 99.5 db/watt; resonance is 55-70 cps; voice coil is 8 ohms. Size is 8" diam., 4 1/4" deep; requires 6 1/2" diam. baffle opening. Shpg. wt., 5 1/2 lbs.

### KLH MODEL SIX 2-WAY SPEAKER SYSTEM

129.00 5.00 Down

An outstanding 2-way speaker system that achieves superlative bass response and provides extremely smooth performance from 32 to over 16,000 cps. Low frequency 12" speaker employs acoustic suspension principle. The high frequency can-type direct radiator, utilizes a liquid butyl rubber suspension. Unusual mounting—the woofer frame and magnet assembly are, cast right on to the front panel of the cabinet. This casting is constructed of a fiberglass-reinforced epoxy resin material and steel tubing. In addition the tweeter

is completely encapsulated into the front panel by means of an epoxy resin. Thus the woofer and tweeter are integrated into the front panel which actually functions as part of the frames of both speakers. When the grillecloth is mounted and the panel is glued under pressure into the fiberglass filled cabinet, the cabinet itself becomes a structural part of the system. In addition to the woofer and tweeter, the speaker utilizes a 1500 cps LC crossover network with air-cane and oil-filled capacitors. A 3-position switch permits a 5 db variation in balance between the high and low frequency sections. Power handling capacity is 75 watts. Impedance 8 ohms. Cabinet is constructed of 3/4" veneer plywood and measures 12 1/2 x 23 1/2 x 11 1/2. Shpg. wt. 36 lbs.

### NEW! 440 BI-PHONIC COUPLER

- Wafer-Thin—Only 4 1/2" Deep
- Response—30 cps to Beyond Audibility
- Constructed Like a Fine Musical Instrument
- Flexible—Use In Any Position or Location

134.40 5.00 Down

A remarkable new development in loudspeaker design—the Bi-Phonic Coupler does not employ a cone or grille cloth nor does it require a baffle. Conventional high fidelity loudspeakers use freely suspended cones utilizing large motion or long throw, in order to move relatively large amounts of air. The Bi-Phonic Coupler however has been engineered and constructed in the same manner as a true musical instrument—as in a fine bass violin the 15" x 22" wall structure is the reproducing element. This rigid radiating panel is driven by a 7 1/2" diameter high efficiency, high gauss 20 lb. ring magnet assembly, with full electro magnetic coupling of the voice coil structure to the magnetic circuit gap. The vibrations of the front panel are transmitted to the rear panel through the body structure and both panels sound off simultaneously as if they were a single vibrating element producing sound from both sides. High frequencies are reproduced by a polar type, Phenolic diaphragm tweeter. The 440's doubly free-radiating characteristics enables it to reproduce the very deepest bass notes with concert clarity and a naturalness matched only by the original performance. Frequency response is from 30 cps to well beyond audibility. Only 18"W x 24"D the 440 lends itself to an infinite variety of installations. It may be hung on a wall, mounted on the ceiling, installed into a wall, door or backshelf area. Precise adjustment of room acoustics is provided by an exclusive Acoustic Placement Control. Requires only 15 watts amplifier source but will handle up to 50 watts. Impedance is 8 ohms. Shpg. wt., 35 lbs.

SPECIALLY DESIGNED 12" COAXIAL SPEAKER WITH SHEEPSKIN CONE EDGE SUSPENSION AND 1 1/4 LB. MAGNET PROVIDE A RESPONSE FROM BELOW 30 TO 15,000 CPS.

ENCLOSURE FINISHED ON FOUR SIDES IN HAND RUBBED VENEERS.

The "Eliptoflex" is the result of an intensive research program whose 3-fold purpose was to:

- 1 Develop a speaker system that would meet the space requirements of stereo.
- 2 Utilize the full advantages of efficient 12" speaker performance.
- 3 Provide optimum performance without the use of large wattage expensive amplifiers.

The Results Were Remarkable... The Eliptoflex utilizes a unique elliptical port which broadens frequency response and provides better transient response. A specially engineered diffracting ring eliminates cancellation effects between front and rear radiation. These engineering advances are coupled with the famous Lafayette free edge SK-58 12" coaxial speaker with 3" cone type tweeter, 1 1/4 lb. TSK-5 high-flux density magnet special 3/4" wide sheepskin cone-edge suspension and built-in and crossover network level control.

tortion and rich robust bass hitherto found only in large enclosure speaker systems or inefficient bookshelf speakers many times its price requiring high powered amplifiers. Due to its highly efficient design characteristics the "Eliptoflex" does not require costly high wattage amplification.

The "Eliptoflex" speaker system is beautifully finished on 4 sides in a variety of hardwood veneers for attractive room placement either horizontally or vertically. Dimensions are 14"H x 23-7/16"W x 13-5/16"D. Shpg. wt., 35 lbs.

### PERFORMANCE EXPLANATION

The loudspeaker is mounted on a baffle recessed in the cabinet shell with the front-plate extending partially across the front surface of the baffle forming ducts or tubes from the port openings to the outside air. The elliptical cutout changes the effective length of the duct across its area. This variation in path lengths provide an extremely smooth transition from duct to free air; broadens the frequency response and provide better transient response. A triangular shaped diffracting ring mounted on the front of the baffle board virtually eliminates undesirable cancellation effects normally produced by close coupling of front and rear cone radiation. This results in a "lens" effect, changing relative particle velocities and consequently, phase relationships so as to produce a smooth transition from front to rear radiation. Comparative laboratory and listening tests indicate that "Eliptoflex" performance is demonstratively superior throughout the audio spectrum.

Lafayette has indeed wrought a small miracle in engineering such acoustic excellence into so small a package. Smooth, distortion free response with a deep fundamental bass and clean pure highs that give an indication of its small size and price. The perfect speaker for that high quality installation in your home, office or restaurant—two are ideal for stereo. The speaker features unique dual cone construction with extra heavy magnets. Both tweeter and woofer "float" on flexible, corrugated edges with the outer edge of the tweeter cone attached to the mid-section of the woofer cone. This results in a mechanical crossover so that both cones operate in phase at low frequencies, but only the tweeter cone operates at high frequencies. The same type of wide-range frequency response normally found only in true coaxial or multiple speaker systems is provided. Frequency response of 40-16,000 cps. Impedance 8-16 ohms. Cabinet is finished on 4-sides in hand-rubbed mahogany and walnut for attractive horizontal or vertical placement anywhere in the room. Dimensions are 10 3/4" H x 18-7/16" L x 8-7/16" D. • THE MOST FLEXIBLE TUNER EVER DESIGNED!

Use it as a Stereophonic FM-AM Tuner

Use it as simultaneous Monaural FM & AM Tuners

Use it as separate Monaural FM or AM Tuner

Over a year of research, planning and engineering went into the design of this superb Stereophonic Tuner. Designed against obsolescence, it incorporates every practical and worthwhile feature necessary for all present and future types of broadcasting. The KT-500 will receive simultaneous FM and AM stereo broadcasts or since the two sections are completely independent it may be utilized for normal FM or AM reception. The Tuner also provides an output for the new multiplex FM stereophonic reception. Apart from its unique flexibility, the KT-500 offers noise-free, drift-free, distortion-free performance the equal and in many instances superior to the highest priced tuners. It has been engineered without compromise of any kind—only the finest component parts have been employed. Each FM & AM section is tuned with its own 3-gang tuning capacitor and is provided with individual cathode follower outputs. This means that long output cables can be used

to connect tuner to amplifier or control center without fear of high frequency loss. Also, separate volume controls are provided for each channel so that when used for stereophonic reception, a proper balance between channels can be achieved. Convenient front panel switch changes from stereo to monaural use. Simplified accurate knife-edge tuning is provided by magic eye which operates independently on FM and AM. Automatic frequency control "locks in" FM signal permanently. Ferrite rod antenna with loading ring is supplied to bring in weak AM stations for quality reproduction. Designed for easy assembly, the kit is built around two printed circuit boards and prealigned IF's insuring fast accurate construction even for the beginner. Beautifully styled, the KT-500 is finished with a copper anodized aluminum front panel plus matching maroon knobs with copper inserts set in a beige finished vinyl enclosure.

RESPONSE 5-40,000 cps • AMAZING NEW BRIDGE CONTROL PROVIDES VARIABLE 3rd CHANNEL OUTPUT FOR 3-SPEAKER STEREO • VARIABLE CROSS CHANNEL SIGNAL FEED ELIMINATES "HOLE-IN-THE-MIDDLE" EFFECTS • HIGHLY PRECISE "NULL" BALANCING & CALIBRATING SYSTEM FURNISHES MORE ACCURATE STEREO BALANCE THAN METERS • TAPE HEAD PLAYBACK EQUALIZATION FOR NEW 4-TRACK STEREO

The KT-600 represents one of the most brilliant audio achievements since the advent of stereo. This "no compromise" stereo preamplifier and control unit offers unlimited versatility... includes every feature necessary for the very finest reproduction. Already in use professionally, the LA-600 has been overwhelmingly acclaimed by those who own it as the finest stereo preamplifier available—at any price! It has a total of 12 input packs (6 stereo pairs) for program sources of any type and any level—all of which may be selected by a front panel control. Separate Turnover and Roll-Off switches provide 24 positions of correct equalization—independently adjustable on each channel. A dual concentric Stereo Function selector provides extreme flexibility in the control of your selected program sources—there is practically no mode of operation which cannot be provided by

these two switches. A unique Bridge Control provides continuously variable channel separation from full monoaural to full stereo, or it can optionally be used to regulate the 3rd channel output. A clutch-operated Volume Balance control provides independent or simultaneous level adjustment of channels. Additionally, this control may be used to balance channels by means of an audible "null"—far more accurate than meters! Low impedance cathode follower outputs are provided for connection to two basic amplifiers (or stereo amplifier) and in addition to the 3rd channel output, there are two tape output jacks for recording purposes. Other features include: 4 dual concentric input level controls; Presence Rise switch; Individual Bass and Treble controls for each channel; Rumble Filter; Scratch Filter; Loudness switch; Tape Play-Monitor switch.

## 20,000 OHMS PER VOLT MULTITESTER

- 20,000 OHMS PER VOLT DC—10,000 OHMS PER VOLT AC
- 40 MICROAMPERE 3" D'ARSONVAL METER MOVEMENT
- HIGH INPUT RESISTANCE ON ALL DC AND AC RANGES

**13.50**

This new multimeter incorporates the extra luxury features found in the most costly instruments. Easy visibility is provided by the large 3" meter with two color scales. The 40 micro-ampere meter movement permits a high input resistance on all ranges: 20,000 ohms per volt on DC; 10,000 ohms per volt on AC. This plus 1% tolerance resistors allow the measuring of voltages without unduly loading the circuit, thus preserving the accuracy of the readings.

Besides the extreme sensitivity and versatility of this instrument, it features ranges not found on other competitively priced VOM's. Measures 0-10-50-250-500-1000 DC volts, 0-10-50-250-500-1000 AC volts, 0-10K-100K-1 meg ohms, 0-500 microamperes, 0-10-250 milliamperes, -20 to +36 decibels, PLUS two special ranges 0-5000 henrys inductance and 250 mmf to .02 mfd capacity. Employs one standard 1 1/2 volt penlight battery. Size 3 3/4" x 5 3/4" x 1 7/8". Shpg. wt., 3 lbs. Model RW-60 Multi-Tester.....Net 13.50

## TELESCOPES, BINOCULARS & CELESTIAL GLOBE

### NEW Achromatic BARLOW LENS

- Makes Any Good Telescope Better!
- Doubles Your Telescope's Power!
- Provides Greater Eye Relief!
- Improves Definition!
- Greater Illumination—Wider Field!

The Barlow Lens is a negative (diverging) lens which can increase the range of magnification of any given set of eyepieces. Greater eye relief is provided—even on short focal length eyepieces. Sharpens definition and reduces image deterioration by permitting use of low-power eyepieces to achieve high magnification. This also provides for greater illumination and a wider field. By increasing the effective focal length of the objective—and reducing its relative aperture—it greatly reduces aberrations present in poorly corrected eyepieces. Lafayette's Barlow lens will make any good telescope perform like a much larger one. Fits all Lafayette telescopes except F-330 Explorer. Accepts eyepieces of 24.5mm (.97") O.D. and fits draw tubes of that size. Shpg. wt., 1 lb. F-423

A true "mechanical universe." Designed for and dedicated to those who recognize the challenge and adventure that lie on the frontiers of space. The concept of the celestial sphere is the most convenient means of illustrating and discussing the common motions of the stars and the individual motions of the members of the solar system. It offers an easily used and easily understood working model of our universe. An invaluable aid in visualizing and identifying the stars and constellations and their relationship to each other, to terrestrial positions and to times and dates. Permits comprehensive explorations in time and space beyond the earth atmosphere. The Lafayette celestial sphere may be defined as a sphere of infinite radius with its center located at the center of the earth. This system of geocentric coordinates will illustrate the true geographic zeniths of the sun and stars at any time on any day. All systems of astronomical spherical coordinates, such as this equatorial, galactic, ecliptic, etc., which are based on the celestial sphere, rotate with the sphere. The apparent contra-rotation of the stars, actually due to the earth rotating about an axis is clearly demonstrated. The sphere will illustrate how the sky will appear at any hour—on any date—from any point on earth. With it you can tell time by the stars—learn to tell time by the sky—clearly illustrate and help solve navigational problems. Traces the orbits of man made satellites and finds their overhead positions. Serves as a superb star chart. Sun and moon positioned by external controls. Artificial satellites automatically circle around the terrestrial globe. The various stars, constellations and their identifications are permanently molded—not printed—on the celestial sphere. The celestial globe is 14" in diameter with the terrestrial globe centered within. Equipped with horizon ring—time ring—fixed meridian ring—swinging meridian ring—sun and moon pointers—fixed ecliptic—detachable "planet"—indications—universal base—and complete instructions. Shpg.
