### INFORMATION ON MEASURES AND POLICIES AFFECTING TRADE IN AGRICULTURE

Submitted by

SOUTH AFRICA

#### Classification of Agricultural Trade Measures Applied According to Relevant GATT Articles

#### Explanatory notes

1. The South African policy regarding the marketing of agricultural products is based on the original Marketing Act of 1937. Since then numerous amendments were made to the Act and in 1969 the Act was consolidated in a new Marketing Act. The primary objective of this Act is to promote orderly marketing and create stability - including price stability - in the agricultural sector.

The objectives are pursued through marketing schemes introduced under the Marketing Act and administered by Marketing Boards. Full details regarding the functioning of these Marketing Boards are contained in GATT document L/5104/Add.10.

2. In the attached schedules of measures affecting production and trade, imports and exports, the classification denoted in column 23 opposite tariffs and bindings (column 8), have been done in accordance with the guidelines suggested by the GATT secretariat and in accordance with the example given on page 9 of document MTN.GNG/NG5/W/1. Compliance with these guidelines should, however, not be construed as an acknowledgement by South Africa that it does not observe or apply certain provisions of the General Agreement.

3. All symbols used are in accordance with those exemplified in document MTN.GNG/NG5/W/1.

4. The following products are being notified as agricultural products in addition to those classified in Chapters 1 to 24:

41.01	Raw hides and skins
43.01	Raw fur skins
53.01	Sheep's or lamb's wool
53.02	Animal hair
53.03	Waste of sheep's or lamb's wool or animal hair
53.04	Waste of sheep's or lamb's wool or animal hair
53.05	Sheep's or lamb's wool or animal hair

54.01	Flax.
54.02	Ramie (ex)
55.01	Cotton (ex)
55.02	Cotton linters (ex)
55.03	Cotton waste (ex)

5. Additional information

5.1 Research and development

In the South African agricultural sector, research and development is primarily carried out at State level at eleven research institutes plus a number of research stations located throughout the country. An official agricultural extension service, complimentary to the research service, aims to promote the broader development of agriculture based on the research done and optimum utilization of natural resources.

5.2 Subsidies

(i) Transport subsidy

This subsidy was introduced for the exportation of certain perishable agricultural products by air during a period of surge in airfreight rates. It was paid out for the first time during 1974 as a temporary concession.

The objective of the scheme is to enable exporters to reap the benefit of high prices during the beginning and at the end of a marketing season when the market prices in the northern hemisphere especially are, as a rule, high; to establish and develop new markets; and to assist the producers of those products which are not suited for conveyance by sea.

Approximately 9,000 tonnes of perishable products are exported by air annually and the subsidy payable in this regard is reviewed annually. During 1986/87 the total subsidy amounts to R 6 million. As this subsidy is paid out on a differential basis, the assistance ranges between 15 and 23 per cent of the air transport cost, depending on the product and destination. Considering the small quantities of agricultural products involved, this subsidy can hardly have any effect on trade.

(ii) Other assistance

Other assistance includes domestic support programmes, the financing or part financing of trade missions, market research, the development of export markets, storage costs abroad and exhibitions.

Because payments in this regard are made on an export institutional basis, it is not possible in all cases to indicate the assistance per four digit C.C.C.N.-heading. However, again considering the limited quantities of agricultural products exported from South Africa, this assistance can at most have a marginal effect on international trade.
