There are many ways to reach ZF Marine Aftersales

1 Create a ticket

Go to www.zf.com/contact and select "technical inquiries". You will find a web-form to enter the data of your vessel and your request.

A screenshot of the ZF Marine website's 'Contact Technical Inquiries' page. The page features a header with the ZF logo and navigation tabs for 'Home', 'Propulsion', and 'Technology'. Below the header is a 'Contact' section with a form containing fields for Name, Surname, Email, Phone, and a large text area for the inquiry. There are also dropdown menus for 'Country' and 'Product'.

2 Look for the nearest service location

Go to www.zf.com/marine-service. Select "Find us" and then "Service Network for marine" to get a map with the nearest ZF Marine Service locations.

3 Call the technical support line

ZF Marine Propulsion Systems is a leader in the marine market

ZF Marine supplies propulsion systems and components for all types of vessels – motor yachts, defense craft, high-speed ferries, workboats and commercial vessels, in a power range from 10 to 12,000 kW – to customers including major shipyards and engine manufacturers worldwide.

The product portfolio includes a comprehensive range of transmissions (reversing, non-reversing and hybrid), propellers, steering systems and CANbus-compatible, electronic control systems, azimuth thrusters, tunnel thrusters and sail drives.

This selection guide is intended to help the reader select an appropriate ZF Marine product. Contact ZF for assistance in determining an appropriate product in case of particular applications and requirements.

Please read the respective comments that apply to the selected product. Model numbers, ratings, text and data contained in this brochure are subject to change without notification.

You can find online our Product Selection Guide in the following link: www.zf.com/marine/matran to easily find the right product for you, and its specifications. Here you can find more information like drawings, among others, always up to date. Should you find any difference, our online portal has the most updated information

For further information about the ZF Marine Group, please refer to www.zf.com/marine

Sales, Aftersales and Service Competence Centers

ZF utilizes a global network of factory owned locations and independent business partners to support our customers. Approximately 400 partners worldwide are dedicated to Sales, Aftersales and Service of ZF Marine products.

To find your nearest ZF product support, please contact your Regional Competence Center from the list below or visit: www.zf.com and follow: Products & Services/Service Network to find a ZF partner in your country.

ZF duty classification definitions

P Pleasure Duty

Highly intermittent operation with very large variations in engine speed and power.

- Average engine operation hours limit: 500 hours/year (for mechanical (“M”) transmissions: 300 hours/years)
- Typical hull forms: Planing
- Applications: Private, non-commercial, non-charter, leisure activities, no racing

L Light Duty

Intermittent operation with large variations in engine speed and power.

- Average engine operation hours limit: 2500 hours/year (for hydraulic transmissions smaller than ZF 2000 series: 2000 hours/year)
- Typical hull forms: Planing and semi-displacement
- Typical applications: Private and charter, sport/leisure activities, government applications, no racing

M Medium Duty

Intermittent operation with some variations in engine speed and power.

- Average engine operation hours limit: 4000 hours/year (for transmissions smaller than ZF 2000 series and workboat ZF W2300 series: 3500 hours/year)
- Typical hull forms: Semi-displacement and displacement
- Typical applications: Charter and commercial craft (example: crew boats) sport/leisure activities, government applications

C Continuous Duty

Continuous operation with little or no variations in engine speed and power.

- Average engine operation hours limit: unlimited
- Typical hull forms: Displacement
- Typical applications: Heavy duty commercial vessels

Application engineering data

Torsional Vibration and Torsional Couplings

The responsibility for ensuring complete propulsion system torsional vibration and stress analysis compatibility rests with the overall propulsion system integrator. The analysis must include excitations induced by the engine governor.

ZF cannot accept any liability for gearbox noise or for damage to the gearbox, the flexible coupling or to other parts of the drive unit caused by torsional vibrations. Contact ZF for further information and assistance.

For single engine powered boats, where loss of propulsion can result in loss of control, ZF recommends and Survey Societies normally require the use of a torsional limit stop.

It is the buyer’s responsibility to specify this option. ZF cannot accept any liability for personal injury, loss of life or damage or loss of property due to the failure of the buyer to specify a torsional limit stop. ZF selects torsional couplings on the basis of nominal input torque at commonly rated engine speeds. Consult ZF for details concerning speed limits of standard offered torsional couplings, which can be below transmission limits. Special torsional couplings may be required for Survey Society requirements.

Special oil cooler

For gearbox orders without oil cooler or cooler supplied as loose part it is the integrator’s responsibility to respect cooler oil side interface data. Customer to ask ZF factory for information. ZF is not responsible for inadequate cooling, if integral original components are disconnected and replaced by others or assembly is modified.

Ratings

Ratings apply to marine diesel engines at the indicated speeds, unless mentioned differently (e.g. “gasoline”). At other engine speeds, the respective power capacity (kW) of the transmission can be obtained by multiplying the Power/Speed ratio by the speed.

NOTE: The maximum rated input power and maximum speed must not be exceeded. For some products max power is limited independent of speed (see columns “max. kW”, “max. hp”, “max. rpm”).

Approximate conversion factors:

1 kW	=	1.36 metric hp
1 kW	=	1.34 U.S. hp (SAE)
1 U.S. hp	=	1.014 metric hp
1 Nm	=	0.74 lb.ft

Ratings apply to right hand turning engines, i.e. engines having

counterclockwise rotating flywheels when viewing the flywheel end of the engine. These ratings allow full power through forward and reverse gear trains, unless otherwise stated. Contact your nearest ZF Sales and Service office for ratings applicable to gas turbines, as well as left hand turning engines, and marine transmissions for large horsepower capacity engines. Ratings apply to marine transmissions currently in production or in development and are subject to change without prior notice.

Surface Drive Propellers

For applications with surface-drive propellers limitations apply. Please contact ZF Marine for maximum allowed rating.

Safe Operation Notice

The safe operation of ZF products depends upon adherence to technical data presented in our brochures. Safe operation also depends upon proper installation, operation and routine maintenance and inspection under prevailing conditions and recommendations set forth by ZF. Damage to transmission caused by repeated or continuous emergency manoeuvres or abnormal operation is not covered under warranty. It is the responsibility of users and not ZF to provide and install guards and safety devices, which may be required by recognized safety standards of the respective country (e.g. for U.S.A. – the Occupational Safety Act of 1970 and its subsequent provisions).

Non-Standard Ratios (*)

Where non-standard ratios are indicated (*) these are available on request and may incur additional price/longer delivery compared to standard ratios. Consult ZF for details.

Monitoring Notice

The safe operation of ZF products depends upon adherence to ZF monitoring recommendations presented in our operating manuals, etc. It is the responsibility of users and not ZF to provide and install monitoring devices and safety interlock systems as may be deemed prudent by ZF. Consult ZF for details and recommendations.

Survey Society Classification

In most cases, the ratings permitted by ZF are accepted by major classification societies. If classification is required, contact ZF regarding proper procedures (also for yacht service and ice classification service).

Trolling Valves

Trolling valves are available as an option on most models of marine transmissions. In most cases, trolling valves are easily retrofitted. A thermostatic oil by-pass valve may be required to maintain proper operation and recommended oil temperature. Consult ZF for details and limits.

Standard / Non-Reversing / U-Drive Option

Standard configurations are reversing transmissions with three shafts and parallel vertical offsets (output shaft / input shaft). In principle, all transmissions are also available as non-reversing units (for instance, for controllable pitch propeller applications). Some parallel shaft transmissions can also be supplied with input and output on the same side (U-Drive). Consult ZF for details.

Power Take-Offs (PTO'S)

All PTO'S are retrofittable except where stated otherwise. Most transmissions can be offered with clutchable or permanently driven (live) PTO'S. Consult ZF for details and limits.

Power Take In (PTI)

Many gearbox types are available with PTI accessory. PTI can be used for different options, also in hybrid applications. Depending on operation modes (boost, generator operation, etc.) and torque rate of main engine versus auxiliary drive, limitations may apply. These limitations are documented in respective installation drawings and have to be verified by application engineering for each project.

Dimensions, Weight and Oil Filling

Dimensions and weights refer to transmissions with bell housing (where appropriate) but excluding options such as: trolling valves, power take-offs, propeller shaft companion flanges, torsional couplings etc. Selection Guide data relative to dimensioning, weight and (oil) filling values are "approximate" values. Values indicated in installation drawings are the binding values.

Key to configurations and model designations

Standard Configuration (without name extension)

- Reversing transmissions
- 3-Shaft configuration
- Vertical offset (input above output)
- Parallel offset

Other Configurations / Model Designations

NR:	Non-Reversing *
NR2:	Non-Reversing, two shafts (input above output)
NR2B:	Non-Reversing, two shafts (input below output)
NR2H:	Non-Reversing, two shafts (input horizontal output)
NC:	No clutch *
SG:	Spur Gear
SGDL:	Spur Gear Diagonal Left
SGDR:	Spur Gear Diagonal Right
U:	Remote U-Drive
TS:	2-Speed (power-shifting)
M:	Mechanical clutch actuation
A:	Down-Angle
IV:	Integral Vee-drive (flanged on to engine)
V:	Remote Vee-drive
D:	Diagonal
H:	Horizontal
C:	Coaxial
W:	Workboat
PTI:	Power take in
EW:	Engine wise
CEW:	Counter engine wise

Shaft Rotation

These designations are not part of the model name but the required shaft rotation must be specified when ordering the transmissions. This is particularly important for non-reversing (NR) transmissions.

- Engine-wise (EW): output-shaft rotates in same direction as input shaft, or
- Counter Engine-wise (CEW): output-shaft rotates in opposite direction to input shaft

For standard reversing transmissions full power can be transmitted through either the forward or the reverse gear trains, unless stated otherwise.

* In general NC and NR versions are available for most gearbox models in the range of ZF 2000 and above (technical data on request).

* Special Order Ratio.

'A' POS = continuous running position (normally AHEAD).

'B' POS = reverse position.

B/W = Borg Warner adaptor.

¹ For ZF 45 C, ZF 45 IV, ZF 45-1 IV, ZF 48 IV and ZF 63 C
- full power in 'A' POS only, 'B' POS for docking and low speed.

Pleasure Duty Single Speed Gasoline

Power Range of Electric Motors for PTI Transmissions

The matching of power take in (PTI), transmission with optional spur gear, frequency converter and e-motor is project-specific. Therefore consultancy by ZF is required for the final matching.

You can find details on our hybrid-ready transmissions in the respective section.

Electric Motors

(Permanent Magnet Machines)

600 kW	2260x840x2170	89.0x33.1x85.4	1600	3527
750 kW	2260x840x2170	89.0x33.1x85.4	1600	3527

The dimensions and weights mentioned here are standard values for the electric drive mode, generator mode and boost mode. If required, adaptations can be arranged. The size and weight of the cabinet depends mainly on the requirements for filters and short circuit current protection .

*Only for non classified applications available.

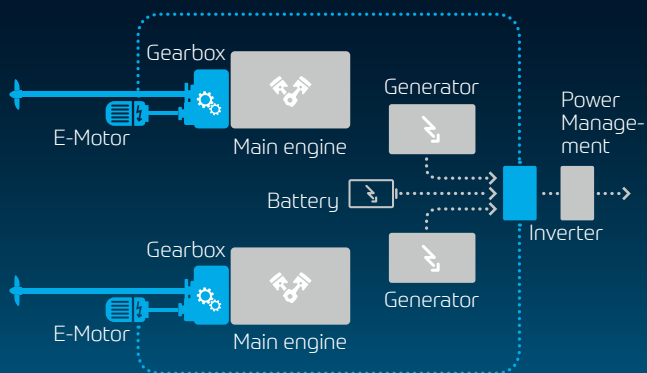

Display

Maneuvering System

Control System

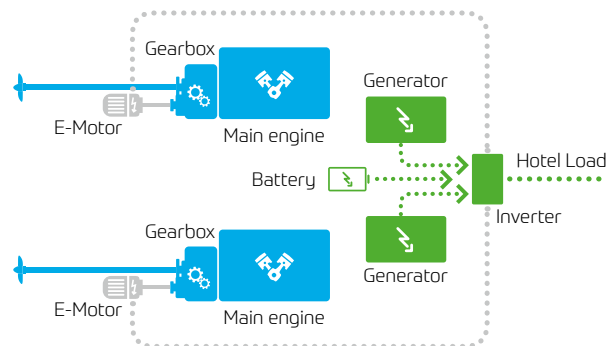

■ ZF Scope of Supply

■ Other Suppliers

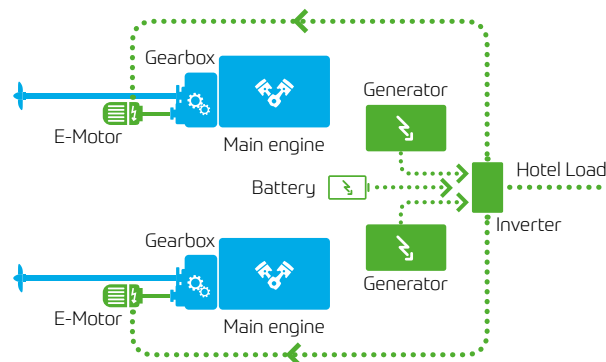

Engines can be operated in different modes depending on priorities

DIESEL DRIVE MODE

- E-Motor off, PTI disengaged
- Propulsion by main engine (diesel)
- Hotel load by main generator or battery*

BOOST MODE

- Main engine (diesel) and main generator on
- Propulsion by E-motor and main engine (diesel)
- Powered by generator or battery*
- Hotel load by main generator or battery*

*if battery available

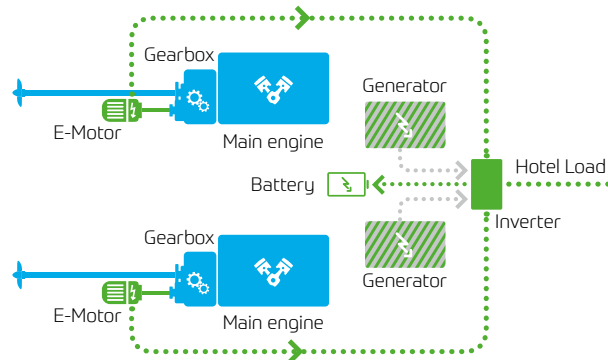

Hybrid Operation Modes

ELECTRIC DRIVE MODE

- Main engine (diesel) off
- Propulsion by E-motor
- Powered by main generator or battery*
- Hotel load by main generator or battery*

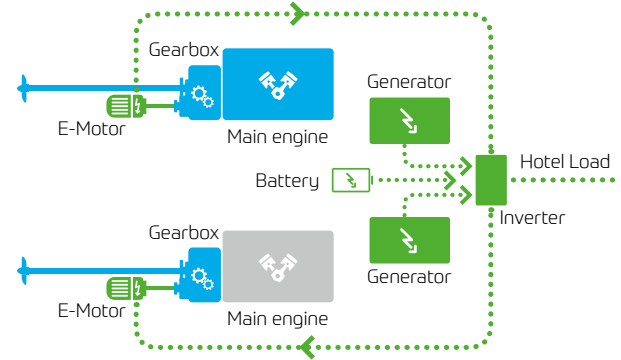

GENERATOR MODE

- Main engine (diesel) on
- Main generator supply only on demand
- Propulsion by main engine (diesel)
- E-motor as generator driven by main engine to load battery* or to supply hotel load

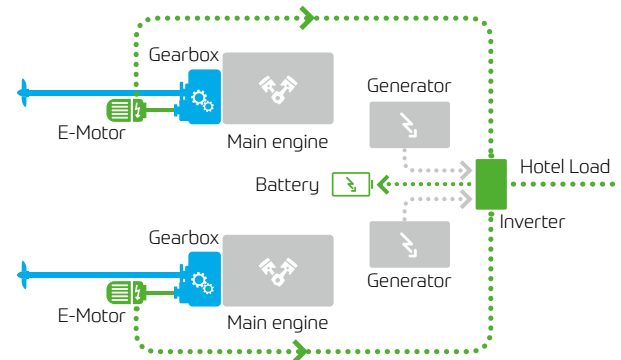

*if battery available

SPLIT MODE

- One main engine (diesel) on
- One main engine (diesel) off
- Main generator on
- One E-motor as generator
- Propulsion by one main engine (diesel) and one E-motor
- Hotel load by main generator or battery*

RECUPERATION MODE

- Main engine (diesel) off
- Main generator off
- Vessel sailing
- E-Motor as generator driven by propeller to load battery* or to supply hotel load

- * Rating, subject to classification and application. Mentioned data for indication purpose only. Consult ZF Marine Krimpen's technical staff to determine applicable power for each specific use.
- ** Also available as WMC (compact type); a space saving design, making it the right choice when reduced installation height is required. It will fit most applications, especially in combination with a permanent magnet electric motor.
- *** Also available as hybrid thruster for a combination of diesel and electric driven upper gearbox (PTI).
