INTRODUCTION

Sources of Statistics.—The tables in this Bulletin are compiled from semi-monthly and monthly reports issued by the Bureau of the Census. These source publications are listed below:

Report on Cotton Ginning.—Number of bales ginned to the close of business July 31, August 15 and 31, September 15 and 30, October 17 and 31, November 13 and 30, December 12, January 15, and February 28. Issued on eighth day following end of period, or on first succeeding workday when the eighth day falls on Saturday, Sunday, or a holiday.

Cotton and Linters: Consumption, Stocks, Imports and Exports, and Cotton System Spinning Activity (Facts for Industry series M22P).—Issued 3 weeks after the close of the period. An annual supplement, Supply and Distribution of Cotton and Linters in the United States, is released about August 17.

United States Imports for Consumption of Merchandise: Commodity by Country of Origin (Report No. FT 110).—Issued on or about the twenty-eighth of each month.

United States Exports of Domestic and Foreign Merchandise: Commodity by Country of Destination (Report No. FT 410).—Issued on or about the twenty-eighth of each month.

Fats and Oils: Vegetable Oil Crushers (Facts for Industry series M28-1a).—Issued monthly.

Fats and Oils: Factory Production, Consumption, and Factory and Warehouse Stocks (Facts for Industry series M28-1b).—Issued monthly.

Fats and Oils: Consumption by Uses (Facts for Industry series M28-2).—Issued monthly.

Data on world production, consumption, and stocks of cotton are taken from the quarterly statistical bulletin issued by the International Cotton Advisory Committee, Washington, D. C.

Some of the statistics appearing in this Bulletin are revisions of preliminary data previously published in the foregoing releases and reports.

Units of Measure.—American cotton is reported in these tables in running bales, except that production and consumption for 1870 and prior years are expressed in equivalent 500-pound gross bales. No round bales have been reported since 1941; prior to 1941, round bales were counted as half bales.

Foreign cotton is shown in equivalent 500-pound gross bales. Consumption and stocks of foreign cotton were reported to the Census Bureau in running bales; in converting these data to 500-pound bale equivalents, the average bale weight of Egyptian cotton is assumed to be 725 pounds; Sudanese cotton, 435 pounds; Indian cotton, 400 pounds; Peruvian cotton, 375 pounds in 1946 and prior years, 587 pounds thereafter; and other foreign cotton, 500 pounds.

Cottonseed is reported in tons of 2,000 pounds, and cottonseed products (except linters) are expressed in pounds or in tons. Linters are reported in running bales, except that imports of linters are shown in equivalent 500-pound gross bales.

The term "cotton" excludes linters except as noted.

The "Cotton Year."—Cotton grown in the northern hemisphere is ordinarily planted in March, April, and May, and the bulk of the crop is picked during September, October, and November. Cotton production is reported in this

Bulletin by "year of growth"—that is, the calendar year in which the crop is planted and picked.

Ginning of each cotton crop begins in mid-July, continues through the autumn and winter, and is substantially completed by the following February. The crop grown in any calendar year thus moves into consumption or into stocks during the 12 months beginning on August 1 of the year of growth. The 1945 crop, for instance, was ginned and passed into consumption during the year which began August 1, 1945.

To conform to this timetable, annual statistics on consumption and stocks of cotton and linters, and on cottonseed and cottonseed products, are shown in this Bulletin for the 12-month period ending with July, rather than for the calendar year. Data for 1914 and prior years relate to the year ending August 31.

Annual stocks data in the following tables relate to stocks at the end of July (prior to 1915, August 31). Monthly figures show stocks on the last day of the period specified.

Stocks of cotton or linters on hand at the end of July, are commonly called "carryover." Stocks are generally at their lowest level at this time; 12 months have elapsed since the previous harvest, and only an insignificant share of the new harvest has yet been ginned.

Prior to 1950, cotton and linters consumption and stocks data were collected on a calendar month basis. Beginning with January 1950, the monthly data are for 4- or 5-week periods closely corresponding with the calendar month period. This change was made as a result of a survey of mills, warehouses and compresses which indicated that the majority of these establishments kept their records on a weekly basis rather than on a calendar month basis.

The 1959-60 and 1958-59 periods are listed below:

COTTON PRODUCTION IN THE UNITED STATES

More detailed information on cotton production and ginnings is published in the bulletin "Cotton Production in the United States: Crop of 1958," compiled by the Agriculture Division of the Census Bureau.

CONSUMPTION AND STOCKS OF COTTON AND LINTERS IN THE UNITED STATES

State and area breakdowns of consumption and stocks of cotton and linters, in tables 11-19, show the locality in which the cotton or linters is actually consumed or stored. They do not show the locality of growth.

Stocks exclude cotton and linters in transit, in private warehouses, or in the hands of producers, merchants, or buyers.

COTTON SPINDLES IN THE UNITED STATES

Prior to August 1, 1945, the term "cotton spindles" included all spindles used exclusively for spinning cotton, including cotton waste and linters. It did not include spindles consuming other fibers or cotton mixed with other fibers. With the increasing use of cotton-system spindles for synthetic and mixed-fiber yarns, data covering spindles used exclusively on cotton no longer gave adequate coverage of the industry. Accordingly, data collected since August 1945 relate to the number of cotton-system spindles in place and the number active at the end of the month on cotton, synthetics, and other fibers and blends.

¹Total cotton system spindles in place at all manufacturing establishments at the end of 1954 and 1947 was 22,561,000 and 23,727,000 respectively. The difference between these figures which are shown in other tables in this Bulletin and those shown in this table are accounted for by establishments which were not requested to report spindle data including those classified in industries excluded from this table, such as knitting mills and cordage and twine mills.

¹ Beginning in January 1950 data were collected on a four or five week basis instead of the calendar month. The number of days in each monthly period is shown in Table 26 on page 45.

² Cotton-system spindles consuming 100 percent cotton on the last working day of the period.

¹ Crop of preceding year.

² 600 pound bales for 1959; Running bales of varying weights for prior years. Production of linters, as shown here and in the following tables, includes oil mill production only. Excludes linters obtained from planting seed at gins and other delinting plants. Prior to 1942, production of linters at gins, etc., was negligible. During the year ending July 31, 1942, such production amounted to 994 running bales; 1943, 1,477; 1944, 5,657; 1945, 3,916; 1946, 4,610; 1947, 4,977; 1948, 6,099; 1949, 7,127; 1950, 6,737; 1951, 18,314; 1952, 20,096; 1953, 22,808; 1954, 18,552; 1955, 17,688; 1956, 15,288; 1957, 11,523; 1958, 10,130. During the year ending July 31, 1959, it amounted to 11,422 running bales.

WORLD PRODUCTION, CONSUMPTION, AND STOCKS OF COTTON

Statistics on world cotton production, consumption, and stocks have been collected by the International Cotton Advisory Committee, with headquarters in Washington, D. C. Insofar as possible, these data are based on the official statistics of the governments concerned; unofficial estimates are shown where such statistics are unavailable.

No statistics on cotton spindles are included, in view of the incompleteness of the information presently available.
